About the Authors

DAVID SPICELAND

Courtesy of David Spiceland

David Spiceland is Professor Emeritus in the School of Accountancy where he taught financial accounting at the undergraduate, master's, and doctoral levels for 36 years. He received his BS degree in finance from the University of Tennessee, his MBA from Southern Illinois University, and his PhD in accounting from the University of Arkansas.

David has published articles in a variety of academic and professional journals, including *The Accounting Review*, *Accounting and Business Research*, *Journal of Financial Research*, *Advances in Quantitative Analysis of Finance and Accounting*, and most accounting education journals: *Issues in Accounting Education*, *Journal of Accounting Education*, *Advances in Accounting Education*, *The Accounting Educators' Journal*, *Accounting Education*, *The Journal of Asynchronous Learning Networks*, and *Journal of Business Education.*, and is an author of McGraw-Hill's *Financial Accounting* with Wayne Thomas and Don Herrmann. Professor Spiceland has received university and college awards and recognition for his teaching, research, and technological innovations in the classroom.

MARK NELSON

Courtesy of Jesse Winter LLC

Mark Nelson is the Anne and Elmer Lindseth Dean and Professor of Accounting at Cornell University's Samuel Curtis Johnson Graduate School of Management. He received his BBA degree from Iowa State University and his MA and PhD degrees from The Ohio State University. Professor Nelson has won ten teaching awards, including an inaugural Cook Prize from the American Accounting Association.

Mark's research focuses on decision making in financial accounting and auditing. His research has been published in the *Accounting Review*; the *Journal of Accounting Research*; *Contemporary Accounting Research*; *Accounting, Organizations and Society*; and several other journals. He has received the American Accounting Association's Notable Contribution to Accounting Literature Award, as well as the AAA's Wildman Medal for work judged to make a significant contribution to practice.

Mark served three terms as an area editor of *The Accounting Review* and is a member of the editorial boards of several journals. He also served for four years on the FASB's Financial Accounting Standards Advisory Council.

Mark and his wife Cathy enjoy fitness and kayaking, particularly on Ithaca's Lake Cayuga, and spending time with their daughters Liz and Clara.

WAYNE THOMAS

Courtesy of Shevaun Williams &
Associates

Wayne Thomas is the Senior Associate Dean for Faculty and Research Innovation and the David C. Steed Chair of Accounting at the University of Oklahoma where he teaches introductory financial accounting and intermediate accounting. He received his bachelor's degree in accounting from Southwest Oklahoma State University and his master's and PhD in accounting from Oklahoma State University.

Wayne has won teaching awards at the university, college, and departmental levels and has received the Outstanding Educator Award from the Oklahoma Society of CPAs. He co-authors McGraw Hill's Financial Accounting with David Spiceland and Don Herrmann. He also co-authors McGraw Hill's Financial Accounting for Managers with Michael Drake, Jake Thornock, and David Spiceland.

His primary research interests include accounting information, capital markets, techniques used by managers to manipulate earnings, the importance of financial disclosures, and financial statement analysis. He previously served as an editor of The Accounting Review and has published articles in a variety of journals, including The Accounting Review, Journal of Accounting and Economics, Journal of Accounting Research, Review of Accounting Studies, and Contemporary Accounting Research. He has won several research awards, including the American Accounting Association's Competitive Manuscript Award and the University of Oklahoma's highest research award, being named a George Lynn Cross Research Professor.

Wayne is married to Julee, and they have four kids, Olivia, Jake, Eli, and Luke. He enjoys sports (basketball, tennis, golf, biking, and ping pong), crossword puzzles, the outdoors, and spending time with his family.

JENNIFER WINCHEL

Courtesy of University of Virginia

Jennifer Winchel is the Carman G. Blough Associate Professor of Accounting at the University of Virginia's McIntire School of Commerce, where she teaches courses at both the undergraduate and graduate levels. She received her BA degree from Illinois Wesleyan University, her MAS from Northern Illinois University, and her PhD from the University of Texas at Austin. Prior to joining UVA, she was a faculty member at the University of South Carolina's Darla Moore School of Business. While at SC, she won the Alfred G. Smith Award for excellence in teaching. She has public accounting experience as an audit manager for PwC.

Professor Winchel's research focuses on decision making in financial accounting. Her research has been published in scholarly journals, such as *The Accounting Review*; *Contemporary Accounting Research*; and *Accounting, Organizations, and Society*. She has presented her research at a number of universities and scholarly conferences.

In her free time, Jennifer enjoys various activities with her husband and son. She especially loves traveling with her son for soccer.

Intermediate Accounting Eleventh Edition: The New Standard

Welcome to the new standard in intermediate accounting! Instructors recognize the “Spiceland advantage” in preparing their students for success. *Intermediate Accounting* offers an unrivaled experience by incorporating **current** changes in accounting standards and business practices, providing a **comprehensive** approach to instructor resources and assignment materials, applying a **clear** conversational tone in the text and related videos, and using the marketleading technological innovations of **Connect**[®]. The result—students develop a more complete understanding of Intermediate Accounting topics and are better prepared for their business careers.

“The textbook is readable and easy to follow since the authors present basic concepts and then cover advanced issues. Conceptually-oriented and dependable as the authors are timely in updating new accounting standards.”

—**Hong Pak, California State Polytechnic University, Pomona**

The *Intermediate Accounting* learning system is built around four key attributes: current, comprehensive, clear, and Connect.

Current: The Spiceland team is committed to keeping instructors’ courses up to date. The eleventh edition fully integrates the latest updates in accounting standards, business practices, pedagogy, and instructional resources. The content and resources in Spiceland *Intermediate* address the topics outlined in the new **CPA Evolution Model Curriculum**, and at the same time, focus on giving students the tools they need for the ever-changing skills and competencies required of today’s business professionals.

Content Coverage—A core concept of Spiceland *Intermediate* is to structure its content to offer instructors the most flexibility possible in designing their specific courses. Where practicable, each chapter starts with the basic overview of the chapter’s topic (Part A) and then builds incrementally to more advanced topics. For example, revenue recognition in Chapter 6 provides basic coverage of the 5-step revenue recognition principle in Part A and then dives deeper into each of the five steps in Part B. This “basic + expanded” instructional approach is pedagogically effective, but also provides instructors the flexibility to teach the content to their desired depth of coverage.

Student Skills—To help prepare students for today’s business profession, accounting programs are emphasizing (a) the development of students’ skills related to interpreting data visualizations and dashboards, (b) applying critical and logical thinking, (c) using general ledger software, (d) analyzing financial ratios, (e) interpreting accounting disclosures, (f) researching authoritative guidance, and (g) understanding ethical issues. Spiceland *Intermediate* offers THE MOST COMPREHENSIVE set of assignment material on the market to address these needs. Beyond a full set of Brief Exercises, Exercises, and Problems, you’ll find the following specialized assignments in Connect that address these skills:

- **Data Visualizations** – Students will see static images of bar charts, pie charts, line graphs, etc. that demonstrate an accounting concept. Along with the visual, students are given a series of questions that guide them through interpreting the visual in a purposeful way to reinforce an accounting concept.
- **Tableau Dashboard Activities** – Using a live embedded Tableau dashboard, students gather the information they need to answer accounting and business questions. No prior knowledge of Tableau is needed, and no additional software is needed. Students interact with the dashboards to extract the answers needed.
- **Applying Tableau** – For instructors wanting their students to work directly within Tableau, Applying Tableau assignments are available (Tableau software is free to students and instructors). These assignments provide students with an Excel data file and detailed instructions as well as a guided video tutorial that walks through the necessary steps and functions of creating a Tableau dashboard.
- **Integrated Excel** – These assignments provide a seamless integration of Excel within Connect, allowing students to work in live Excel spreadsheets—no additional logins, no need to upload or download files. Instructors can choose to

grade by formula or solution value, and students receive instant cell-level feedback via integrated Check My Work functionality.

- **Applying Excel** – Students build their Excel skills by using many of the basic functions and formulas within Excel to perform calculations and analysis. Students are presented with many what-if scenarios to help them see the power of Excel and develop their logical thinking skills. Each assignment is provided with video instruction to help ease the requirement for instructors to teach Excel.
- **Codification Exercises** – Most chapters offer one or more assignment exercises, problems and cases designed to develop students' ability to conduct research using the FASB's Accounting Standards Codification.
- **Star Problems** – Particularly rigorous problems, designated by a , require students to combine multiple concepts or require significant use of judgment.
- **Decision Makers' Perspective Cases** – A wide array of cases are available to help your students think more deeply about accounting topics and analyze business situations. Cases include real-world companies, authoritative guidance (codification) research, financial analysis, accounting disclosures, ethics, judgment, and international accounting issues. Students also can follow **Target Corporation** for US GAAP and **Air France-KLM** for IFRS in continuing cases across all chapters. Most Decision Makers' Perspective Cases are now auto-graded in Connect, allowing instructors to conveniently assess students abilities when confronting real-world scenarios.
- **General Ledger Problems** – These accounting software-like assignments allow students to enter transactions in the general journal and see how those measurements flow automatically through the general ledger and trial balance to build the financial statements. Students will see how accounting software allows them to enter transactions and see instantly how financial statements are affected.

Accounting and Reporting Implications of COVID-19

The *Coronavirus Aid, Relief, and Economic Security* (CARES) Act, was designed to provide stimulus relief to businesses affected by COVID-19 in the form of loans, grants, and tax changes. This edition features COVID-19: ACCOUNTING AND REPORTING IMPLICATIONS boxes to explore the effects of the pandemic on businesses.

Comprehensive: The Spiceland team ensures comprehensive coverage and quality throughout the learning system by building content and assets with a unified methodology that meets rigorous standards. Students are challenged through diverse examples and carefully crafted problem sets which promote in-depth understanding and drive development of critical-thinking skills.

The author team is committed to providing a learning experience that fully prepares students for the future by solidifying core comprehension and enabling confident application of key concepts. Students can feel confident that the conceptual underpinnings and practical skills conveyed in the tenth edition will prepare them for a wide range of real world scenarios.

Clear: Reviewers, instructors, and students have all hailed *Intermediate Accounting’s* ability to explain both simple and complex topics in language that is coherent and approachable. Difficult topics are structured to provide a solid conceptual foundation and unifying framework that is built upon with thorough coverage of more advanced topics. For example, see chapters 6 (Revenue Recognition), 15 (Leases), and 16 (Income Taxes). The author team’s highly acclaimed conversational writing style establishes a friendly dialogue—establishing the impression of a conversation with students, as opposed to lecturing at them.

This tone remains consistent throughout the learning system, as authors Spiceland, Nelson, Thomas, and Winchel write not only the primary content but also every major supplement: instructor’s resource manual, solutions manual, and test bank. All end-of-chapter material, too, is written by the author team and tested in their classrooms. *Intermediate Accounting* is written to be the most complete, coherent, and student-oriented resource on the market.

Connect: Today's accounting students expect to learn in multiple modalities. As a result, the eleventh edition of Spiceland's learning system features the following: Connect, **NEW** Data Analytics activities, SmartBook's adaptive learning and reading experience, **NEW** Concept Review Exercises Videos, Concept Overview Videos, Guided Examples, **NEW** Integrated Excel and General Ledger problems.

Quality assessment continues to be a focus of Connect, with over **2,500 questions** available for assignment, including more than 1,125 algorithmic questions.

McGraw Hill Education is continually updating and improving our digital resources. To that end, our partnership with UWorld Roger CPA provides multiple-choice practice questions directly within our Connect banks, as well as assignable links to the UWorld Roger CPA site for complementary access to selected simulations. The authors have also created hundreds of practice multiple-choice questions that are available for each chapter

Spiceland/Thomas Financial Accounting Series

Intermediate Accounting forms a complete learning system when paired with *Financial Accounting* by authors David Spiceland, Wayne Thomas, and Don Herrmann. Now in its sixth edition, *Financial Accounting* uses the same proven approach that has made *Intermediate Accounting* a success—a conversational writing style with real-world focus.

The authors are also proud to introduce a new book in the series, *Financial Accounting for Managers*, for which they are joined by award-winning authors Michael Drake and Jake Thornock. *Financial Accounting for Managers* brings the proven Spiceland/Thomas approach to today's students, either MBAs or undergraduates who aspire to be managers. Featuring modern companies, robust analysis sections, and auto-graded cases, this text focuses on helping students think critically about how accounting information fuels business decisions.

The Spiceland/Thomas Accounting Series is fully integrated with McGraw Hill's Connect, an educational platform that seamlessly joins Spiceland/Thomas superior content with enhanced digital tools to deliver precisely what a student needs, when, and how they need it.

What Keeps SPICELAND Users Coming Back?

In talking with so many intermediate accounting faculty, we heard more than how to improve the book—there was much, much more that both users and nonusers insisted we not change. Here are some of the features that have made Spiceland such a phenomenal success.

Financial Reporting Cases

Each chapter opens with a Financial Reporting Case that places the student in the role of the decision maker, engaging the student in an interesting situation related to the accounting issues to come. Then, the cases pose questions for the student in the role of decision maker. The case questions are answered at the end of the chapter.

Where We're Headed

These boxes describe the potential financial reporting effects of many of the FASB's proposed projects that have not yet been adopted, as well as joint proposed projects with the IASB. Where We're Headed boxes allow instructors to deal with ongoing projects to the extent they desire.

Where We're Headed

"Disclosure overload" is a frequent complaint by companies and investors alike. The notes to the financial statements can be very useful, but they are costly for companies to prepare and difficult for many users to sift through and understand. In response to that concern, the FASB has been developing a framework intended to make disclosures more effective and less redundant. In August of 2010, the FASB issued an addition to Concepts Statement No. 3, titled *Chapter 8: Notes to Financial Statements*, which suggests a series of questions that the FASB and its staff should consider when determining what notes should be required by new standards.¹⁶ A separate part of the project will develop further guidance to help companies apply judgment when meeting disclosure requirements.

Additional Consideration Boxes

These are “on the spot” considerations of important, but incidental or infrequent, aspects of the primary topics to which they relate.

Additional Consideration

In Illustration 5–5, if Sporting Goods Inc. had prepaid The Shoe Company for delivery of the shoes in two years, rather than buying now and paying later, Sporting Goods Inc. would be viewed as providing a two-year loan to The Shoe Company. Assuming that Sporting Goods Inc. pays The Shoe Company \$41,323, the present value of \$50,000 for two periods at 10%, The Shoe Company would record interest expense and Sporting Goods Inc. would record interest revenue of \$8,677 (\$50,000 – \$41,323) over the two-year period. When delivery occurs in two years, The Shoe Company records sales revenue of \$50,000 and Sporting Goods Inc. values the inventory acquired at \$50,000.

Decision Makers' Perspective

These sections appear throughout the text to illustrate how accounting information is put to work in today's firms. With the CPA exam placing greater focus on application of skills in realistic work settings, these discussions help your students gain an edge that will remain with them as they enter the workplace.

Decision Makers' Perspective

RECEIVABLES MANAGEMENT A company's investment in receivables is influenced by several variables, including the level of sales, the nature of the product or service sold, and credit and collection policies. These variables are, of course, related. For example, a change in credit policies could affect sales. In fact, more liberal credit policies—allowing customers a longer time to pay or offering cash discounts for early payment—often are initiated with the specific objective of increasing sales volume.

Management's choice of credit and collection policies often involves trade-offs. For example, offering cash discounts may increase sales volume, accelerate customer payment, and reduce bad debts. These benefits are not without cost. The cash discounts reduce the amount of cash collected from customers who take advantage of the discounts. Extending payment terms also may increase sales volume. However, this creates an increase in the required investment in receivables and may increase bad debts.

The ability to...

Management must evaluate the costs and benefits of any change in credit and collection policies.

Ethical Dilemmas

Because ethical ramifications of business decisions impact so many individuals as well as the core of our economy, Ethical Dilemmas are incorporated within the context of accounting issues as they are discussed. These features lend themselves very well to impromptu class discussions and debates, and are complemented by Ethics Cases found in the Decision Makers' Perspective Case section at the end of each chapter.

Ethical Dilemma 

The Raintree Cosmetic Company has several loans outstanding with a local bank. The debt agreements all contain a covenant stipulating that Raintree must maintain a current ratio of at least 0.9. Jackson Phillips, company controller, estimates that the 2024 year-end current assets and current liabilities will be \$2,100,000 and \$2,400,000, respectively. These estimates provide a current ratio of only 0.875. Violation of the debt agreement will increase Raintree's borrowing costs as the loans are renegotiated at higher rates.

Jackson proposes to the company president that Raintree purchase inventory of \$600,000 on credit before year-end. This will cause both current assets and current liabilities to increase by the same amount, but the current ratio will increase to 0.9. The extra \$600,000 in inventory will be used over the later part of 2025. However, the purchase will cause warehousing costs and financing costs to increase.

Jackson is concerned about the ethics of his proposal. What do you think?

Real-World Examples

Chapter discussion is enhanced by bountiful real company examples and excerpts from actual financial statements to add realism and garner student engagement with the topics being presented.

Disclosure Note Illustrations

Frequent illustrations of actual companies' disclosure notes to demonstrate how so much accounting information is reported outside the financial statements.

Revenue Recognition and Accounts Receivable (in part); Returns
Sales revenue and cost of sales reported in the statement of operations are reduced to reflect estimated returns. We record an estimated right of return liability for returns at the time of sale based on historical trends, current pricing and volume information, other market-specific information, and input from sales, marketing, and other key management personnel. The liability accrued reflects the variable consideration not expected to be received. The estimated value of the return to the customer's inventory is recorded as an asset. These procedures require the exercise of significant judgments. We believe these procedures enable us to make reliable estimates of future returns. Our actual results have historically approximated our estimates. When the product is returned and verified, the customer is given credit against their accounts receivable.

POWERFUL ONLINE TOOLS & ASSESSMENTS

Online Assignments

Connect helps students learn more efficiently by providing feedback and practice material when they need it, where they need it. Connect grades homework automatically and gives immediate feedback on any questions students may have missed. The extensive assignable, gradable end-ofchapter content includes a general journal application that looks and feels like what one would find in a general ledger software package.

End-of-chapter questions in Connect include:

- Brief Exercises
- Exercises
- Problems
- *Star Problems
- Decision Makers' Perspective Cases
- Target and Air France Continuing Cases
- Data Analytics Cases
- Excel assignments
- General Ledger assignments
- Practice quizzes
- Test banks

NEW! Data Analytics

Data analytics is an enormously in-demand skill among employers. Students who can interpret data and effectively communicate their findings to help businesses make better informed decisions are in high-demand. Instructors can visit Connect to find a variety of auto-graded Data Analytics activities to introduce students to seeing data presented in the types of visual formats they'll see in today's business environments. These exercises have been thoughtfully developed and scaffolded to build data analytics exposure and skills. Assignable, auto-gradable materials include:

- Data Visualizations—Familiarize students with data visualizations. Students interpret data in a static visual to answer accounting questions.
- Tableau Dashboard Activities—Easily introduce students to Tableau. Students learn to gather the information they need from a live embedded Tableau dashboard—no prior knowledge of Tableau is needed.
- Applying Tableau cases—Build student's data analytics skills. Students download an Excel file and build a Tableau dashboard with video tutorial guidance. Once they've completed their dashboard, they'll use it to answer auto-graded questions in Connect.

Review the Tableau visualization and then answer the questions that follow.

| Method 1 | |
| Method 2 | |
| Method 3 | |

Req 1 Req 2

In the Chapter 3 Applying Tableau, you compared two companies' profitability. For this case, you continue in your role as an analyst conducting research into the relative merits of investing in one or both of those companies. You will assess the companies' fixed asset turnover ratios to determine which company utilizes its fixed assets most efficiently to generate sales. The fixed-asset turnover ratio is calculated as net sales divided by average fixed assets.

Tableau Instructions:
For this case, you will create a calculation and produce bar charts of the fixed-asset turnover ratio that allow you to compare and contrast the two companies.

Use the following steps to create the charts you'll need for this case:

1. Use the [links to download the Excel case file](#).
2. Open Tableau and connect to the Excel file.
3. Click on the **Sheet1** tab at the bottom of the canvas, to the right of the Data Source at the bottom of the screen.
4. Drag **Company** and **Year** to the Rows shelf. Change **Year** to **discrete** by right-clicking and selecting **discrete**.
5. Drag the **Average Fixed Assets** and **Net sales** under Measure Names to the Rows shelf. Change each to **discrete**.
Note: You must drag accounts into the Rows shelf if you are going to use them in calculated fields and need an aggregation. If this is not done first, your answer will not match the solution.
6. Under the Analysis tab, select **Create Calculated Field**. Create a measure named **Fixed Asset Turnover** by dragging **Net sales** from the Rows shelf to the Calculation Editor window, typing a division sign for division, and then dragging **Average Fixed Assets** from the Rows shelf beside it. Make sure the window says that the calculation is valid and click **OK**.
7. Drag the newly created **Fixed Asset Turnover** from Measure Names to the Rows shelf.
8. Right-click the **Net sales** and **Average Fixed Assets** on the Rows shelf and uncheck **Show header**. This will hide these items from view but still allow them to be used in the formulas.
9. Click on the **Show Marks** tab in the upper right corner and select **bars-by-side bars**. You should now see for each company, bars that represent the Fixed Asset Turnover Ratio for each of the years of the dataset (2012 to 2020). Add labels to the bars by clicking on **Label** under the Marks card and clicking the box **Show mark label**.
10. Change the title of this sheet to be **Fixed Asset Turnover Ratio Bar Chart** by right-clicking and selecting **Edit title**. Change the title of **Sheet 1** to match the sheet title by right-clicking, selecting **Rename** and typing in the new title.
11. Save your work.

Required:
Based upon what you find, answer the following questions:

- A. What is the fixed-asset turnover ratio for Big Stone in 2012 and in 2020? (Round your answers to 2 decimal places.)
- B. What is the fixed-asset turnover ratio for Discount Goods in 2012 and in 2020? (Round your answers to 2 decimal places.)
- C. Comparing the two companies' fixed-asset turnover ratios over the ten-year period, which company exhibits the most favorable fixed-asset turnover?
- D. Comparing Big Stone's fixed-asset turnover ratios over the ten-year period, is the company's turnover (a) generally increasing, (b) roughly the same, or (c) generally decreasing from year to year?

| Assets Used | Tableau |
|-------------|---|
| (1) | 2012 |
| (2) | 2020 |
| B | Fixed-asset turnover ratio for Discount Goods |

General Ledger Problems

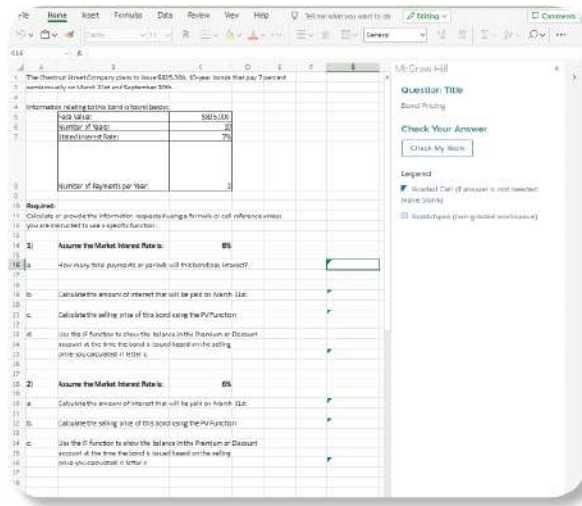

General Ledger Problems allow students to see how transactions flow through the various financial statements. Students can audit their mistakes by easily linking back to their original journal entries. Many General Ledger Problems include an analysis tab that allows students to demonstrate their critical thinking skills and a deeper understanding of accounting concepts.

Integrated Excel

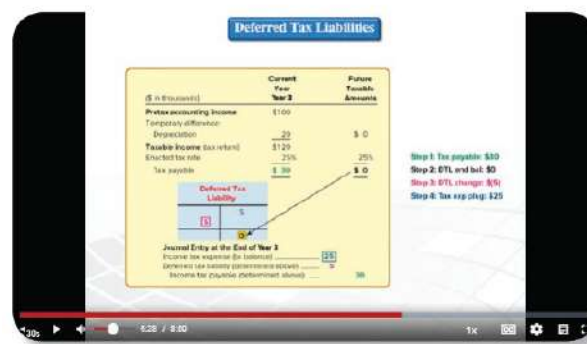

New! Integrated Excel assignments pair the power of Microsoft Excel with the power of Connect. A seamless integration of Excel within Connect, Integrated Excel questions allow students to work in live, auto-graded Excel spreadsheets—no additional logins, no need to upload or download files. Instructors can choose to

grade by formula or solution value, and students receive instant cell-level feedback via integrated Check My Work functionality.

Concept Overview Videos

Concept Overview Videos provide engaging narratives of key topics in an assignable and interactive online format. These videos follow the structure of the text and are available with all learning objectives within each chapter of *Intermediate Accounting*. The Concept Overview Videos provide additional explanation of material in the text, allowing students to learn at their own pace – and test their knowledge with assignable questions.

Guided Example/Hint Videos

The **Guided Examples** in Connect provide a narrated, animated, step-by-step walk-through of select exercises similar to those assigned. These short videos are

presented to students as hints and provide reinforcement when students need it most. Instructors have the option of turning them on or off.

2. On August 31, year 1, the company borrowed \$88,000 from a local bank. The note requires principal and interest at 9% to be paid on August 31, year 2.

| AZMIE WHOLESALE FOOD COMPANY General Journal | | | |
|---|-------------------------------|-------|--------|
| Date year 2 | Account Title and Explanation | Debit | Credit |
| June 30 | Interest expense | 1,980 | |
| | Interest payable | | 1,980 |

$$\begin{array}{r}
 \text{Principal} \times \text{Interest rate} \times \text{Time} \\
 \$88,000 \times 9\% \times \frac{3}{12} \\
 = \$1,980
 \end{array}$$

New Concept Review Exercise Videos

The **Concept Review Exercise videos** relate to select Concept Review sections in the text, showing students how to solve certain exercises. In walking students through a particular scenario or question, these videos model how students can approach problem solving.

The Wyncham Wholesale Company began operations on August 1. The following transactions occur during the month of August:

- The company receives \$50,000 cash from owners and issues 5,000 shares of common stock.
- Equipment is purchased for \$20,000 cash.
- On the first day of August, \$4,000 rent on office space is paid for the months of August, September, and October (\$2,000/month).
- Inventory costing \$38,000 is purchased on account. The company uses the perpetual inventory system.
- \$30,000 is borrowed from a local bank, and a note payable is signed.
- Credit sales for the month are \$40,000. The cost of inventory sold is \$22,000.
- \$15,000 is collected on account from customers.
- \$20,000 is paid on account to suppliers of inventory.
- Cash of \$2,000 was received from a customer for consulting services to be provided later in August and completed in early September.
- Salaries of \$7,000 are paid to employees for August.
- A bill for \$2,000 is received from the local utility company for the month of August.
- \$20,000 cash is loaned to another company, evidenced by a note receivable.
- The company pays its shareholders a cash dividend of \$1,000.

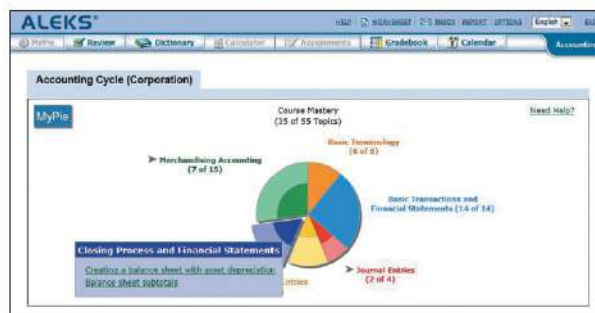

McGraw Hill Education has partnered with UWorld Roger CPA Review, a global leader in CPA Exam preparation, to provide students a smooth transition from the accounting classroom to successful completion of the CPA Exam. While many aspiring accountants wait until they have completed their academic studies to begin preparing for the CPA Exam, research shows that those who become familiar with exam content earlier in the process have a stronger chance of successfully passing the CPA Exam. Accordingly, students using these McGraw Hill materials will have access to sample CPA Exam Multiple-Choice questions and Task-Based Simulations from UWorld Roger CPA Review, with expertwritten explanations and solutions. All questions are either directly from the AICPA or are modeled on AICPA questions that appear in the exam. Task-Based Simulations are delivered via the UWorld Roger CPA Review platform, which mirrors the look, feel, and functionality of the actual exam. McGraw Hill Education and UWorld Roger CPA Review are dedicated to supporting every accounting student along their journey, ultimately helping them achieve career success in the accounting profession. For more information about the full UWorld Roger CPA Review program, exam requirements, and exam content, visit <https://accounting.uworld.com/cpa-review/>.

ALEKS®

ALEKS ACCOUNTING CYCLE

ALEKS Accounting Cycle is a web-based program that provides targeted coverage of prerequisite and introductory material necessary for student success in Intermediate Accounting. ALEKS uses artificial intelligence and adaptive questioning to assess precisely a student's preparedness and deliver personalized instruction on the exact topics the student is **most ready to learn**. Through comprehensive explanations, practice, and immediate feedback, ALEKS enables students to quickly fill individual knowledge gaps in order to build a strong foundation of critical accounting skills. Better prepared students save you valuable time at the beginning of your course!

Use ALEKS Accounting Cycle as a pre-course assignment or during the first weeks of the term to see improved student confidence and performance, as well as fewer drops.

ALEKS Accounting Cycle Features:

- **Artificial Intelligence:** Targets Gaps in Prerequisite Knowledge
- **Individualized Learning and Assessment:** Ensure Student Preparedness
- **Open-Response Environment:** Avoids Multiple-Choice and Ensures Mastery
- **Dynamic, Automated Reports:** Easily Identify Struggling Students

For more information, please visit: www.aleks.com/highered/business.

Read ALEKS Success Stories: www.aleks.com/highered/business/success_stories.

Flexible & Effective Teaching Resources

INSTRUCTOR LIBRARY

The Connect Instructor Library is a repository of additional resources to improve student engagement in and out of class. You can select and use any asset that enhances your lecture. The Connect Instructor Library includes:

In-Class Presentation Tools

- PowerPoints** Three types of PowerPoint decks are available, each responding to a different instructional need:
- **Lecture PowerPoints with Concept Checks:** Allow instructors to intersperse short exercises that students can solve individually or do in groups before an answer is “revealed.”
 - **Lecture PowerPoints without Concept Checks:** No questions included, mirror presentation from book with key illustrations and notes
 - **Accessible PowerPoints:** Allow slide content to be read by a screen reader and provide alternative text descriptions for any image files. Accessible PowerPoints are also designed with high-contrast color palettes and use texture instead of color whenever possible to denote different aspects of imagery.

Digital Image Library High-resolution images of all illustrations from the text.

Instruction Resources

Instructor’s Manual Specific to each chapter, contains *Authors’ Perspectives* sections that offer insights from the authors on how they view the

chapter's key topics and teach them to their students. There are also suggestions for in-class activities including real world scenarios, group research activities, IFRS activities, and professional skills development activities. Assignment charts are provided with topics and estimated completion times.

Solutions

Created by the authors, includes solutions to end-of-chapter content.

Manual

Updates

Stop here for all the most recent updates from FASB. Our authors work tirelessly to keep you current—for instance, within a month of the CARES Act, our authors had posted an updated PowerPoint deck, video walkthrough, and teaching tip material on how to address the new updates. We have your back!

Test Bank

Connect Test Bank

Multiple-choice, true/false, and worksheet questions are all available to help assess students throughout all levels from understanding to evaluation.

Available within Connect, Test Builder is a cloud-based tool that enables instructors to format tests that can be printed or administered within a LMS. Test Builder offers a modern, streamlined interface for easy content configuration that matches course needs without requiring a download.

Test Builder allows you to:

- Access all test bank content from a particular title.
- Easily pinpoint the most relevant content through robust filtering options.
- Manipulate the order of questions or scramble questions and/or answers.
- Pin questions to a specific location within a test.
- Determine your preferred treatment of algorithmic questions.
- Choose the layout and spacing.
- Add instructions and configure default settings.

Test Builder provides a secure interface for better protection of content and allows for just-in-time updates to flow directly into assessments.

Remote Proctoring & Browser-Locking Capabilities

Page xvii

New remote proctoring and browser-locking capabilities, hosted by Proctorio within Connect, provide control of the assessment environment by enabling security options and verifying the identity of the student.

Seamlessly integrated within Connect, these services allow instructors to control students' assessment experience by restricting browser activity, recording students' activity, and verifying students are doing their own work.

Instant and detailed reporting gives instructors an at-a-glance view of potential academic integrity concerns, thereby avoiding personal bias and supporting evidence-based claims.

MCGRAW-HILL EDUCATION CUSTOMER EXPERIENCE GROUP CONTACT INFORMATION

At McGraw Hill Education, we understand that getting the most from new technology can be challenging. That's why our services don't stop after you purchase our products. You can contact our Product Specialists 24 hours a day to get product training online. Or you can search the knowledge bank of Frequently Asked Questions on our support website. For Customer Support, call **800-331-5094**, or visit www.mhhe.com/support. One of our Technical Support Analysts will be able to assist you in a timely fashion.

What's New in the Eleventh Edition?

Spiceland is the new global standard for providing students the most accessible, comprehensive, and current Intermediate Accounting learning system. We take seriously the confidence the marketplace has accorded our text. Each revision carefully considers how the print and digital content work together to coordinate improvements in content and industry-leading technology to provide the most robust learning solution. The Spiceland team implements only those changes that constitute real improvements as identified through extensive research with users. The result is a learning system that enhances our reputation for providing the best preparation for passing the CPA exam and successful accounting careers.

Improvements to this edition include the following:

- Updated and revised **real-world** illustrations, assignments, and discussions.
- Revised Continuing Cases featuring **Target Corporation** financial statements prepared using U.S. GAAP, *auto-gradable in Connect*. A comprehensive version of the case is available in **Appendix B**.
- Revised Continuing Cases featuring **Air France–KLM** financial statements prepared using IFRS, *auto-gradable in Connect*. A comprehensive version of the case is available in **Appendix C**.
- Incorporated the latest technology, including:
 - **NEW! Data Analytics** activities provide students the opportunity to experience the power and efficacy of data analytics in the context of each chapter's topics, using Tableau as a tool, that are *auto-gradable in Connect*. Materials include **Data Visualizations, Tableau Dashboard Activities, and Applying Tableau Cases**.
 - **NEW! Integrated Excel assignments** that allow students to practice their Excel skills within the context of accounting (*auto-gradable in Connect*).

- **NEW! Concept Review Exercise Videos** show students how to solve select review exercises.
- **NEW!** Most **Decision Makers' Perspective** cases are now *auto-gradable in Connect*.
- **General Ledger Problems** that auto-post from journal entries to T-accounts to trial balances (*auto-gradable in Connect*).
- **Concept Overview Videos** that provide engaging narratives of key topics in an assignable and interactive online format (*assignable in Connect*).
- **Guided Example/Hint Videos** in Connect that provide a narrated, animated, step-by-step walk-through of select exercises that provide reinforcement when students need it most (can be turned on or off by instructors).

Chapter 1

ENVIRONMENT AND THEORETICAL STRUCTURE OF FINANCIAL ACCOUNTING

- Revised the discussion of Sarbanes-Oxley to focus on the most important attributes.
- Revised the discussion of financial reporting reforms to include critical audit matters.
- Revised the discussion of measurement attributes included in the conceptual framework.
- Added an IFRS box covering changes in the IFRS conceptual framework.
- Revised the Where We're Headed box covering possible changes in the FASB's conceptual framework.
- Added a Research Case focused on the Accounting Standards Codification.
- Revised multiple Decision Makers' Perspective cases to make them auto-gradable.
- Revised **Target** and **Air France–KLM** cases and made them auto-gradable.

Chapter 2

REVIEW OF THE ACCOUNTING PROCESS

- Added a new unnumbered illustration of the basic accounting equation in LO2–1.
- Revised Illustrations 2–1 and 2–3.

- Revised and shortened discussion of account relationships in LO2–1.
- Modified each Concept Review Exercise to include deferred revenue transaction.
- Revised the discussion of adjusting entries in LO2–5.
- Converted for auto-grading Decision Makers’ Perspective.
- **Target and Air France–KLM** continuing cases are now auto-gradable.

Chapter 3

THE BALANCE SHEET AND FINANCIAL DISCLOSURES

- Updated all real-world illustrations to the most recent information.
- Added a discussion of new disclosures of operating leases to long-term assets.
- Added a discussion of new disclosures of operating leases to current and long-term liabilities.
- Revised Illustration 3–10 to include **Nike**.
- Revised Illustration 3–11 to **Hyatt Hotels**.
- Added an example of impact of COVID-19 on MD&A disclosure for **Darden Restaurants** in Illustration 3–12 and for going concern opinion for **RTW Retailwinds** for Illustration 3–16.
- Added a new section on Sustainability Disclosures, along with new Brief Exercise.
- Converted for auto-grading Decision Makers’ Perspective cases.
- **Air France–KLM** continuing case is now auto-gradable.

Chapter 4

THE INCOME STATEMENT, COMPREHENSIVE INCOME, AND THE STATEMENT OF CASH FLOWS

- Updated all real-world illustrations to the most recent information.
- Changed the feature story to **Campbell Soup Company**.
- Changed Illustration 4–5 to **Estée Lauder Companies**.
- Revised the discussion of non-GAAP earnings and included an example of **Nvidia**.
- Revised the opening example of discontinued operations.
- Revised substantially the entire section on comprehensive income.

- Revised the discussion on statement of cash flows by including an example with successive balance sheets.
- Decision Makers' Perspective cases are now auto-gradable.
- **Air France–KLM** continuing case is now auto-gradable.

Chapter 5

TIME VALUE OF MONEY CONCEPTS

- Updated all real-world illustrations to the most recent information.
- Included Excel functions in the margins for many time value calculations.
- Revised the unnumbered illustration in LO5–2 on future value.
- Revised the unnumbered illustration in LO5–3 on present value.
- Clarified the discussion of ordinary annuity versus annuity due, as well as corresponding unnumbered illustrations.
- Added a new Illustration 5–13 for present value of annuity due.
- Revised the discussion of deferred annuity to improve clarity.
- Added a new Summary section with Excel.
- Added an Excel icon and functions in several places.
- Decision Makers' Perspective cases are now auto-gradable.
- Revised **Target** continuing case to include operating leases.

Chapter 6

REVENUE RECOGNITION

- Revised the introduction to reduce coverage of revenue-recognition standards in place prior to ASC 606.
- Added a discussion of **Peloton Interactive, Inc.**, as offering contracts with multiple performance obligations.
- Revised Illustration 6–16 to show **Emcor Group, Inc.**'s disclosure of variable consideration.
- Revised Illustration 6–18 to show **Amazon**'s disclosure of its roles as a principal and agent.
- Revised Illustration 6–22 to show the **Walt Disney Company**'s disclosure of

revenue recognition with respect to licenses.

- Added a COVID-19 box discussing accounting for revenue associated with vaccines.
- Added a Real World Case concerning determining progress toward completion for **Verizon, Lockheed Martin, and TriNet**.
- Added a Research Case regarding codification.
- Added a Real World Case concerning revenue recognition and time value of money for **Deere & Company**.
- Added a Real World Case concerning estimating stand-alone selling prices for **eBay, Oracle, Lockheed Martin, and EMCOR**.
- Added two Trueblood Cases dealing with identifying performance obligations and principal v. agent considerations.
- Revised multiple Decision Makers' Perspective cases to make them auto-gradable.
- Revised **Target** and **Air France–KLM** cases and made them auto-gradable.

Chapter 7

CASH AND RECEIVABLES

- Added a COVID-19 box discussing delayed CECL implementation under the CARES Act.
- Revised the discussion of sales of accounts receivable (with and without recourse) to enhance clarity.
- Revised the discussion of accounts receivable turnover, and comparison between **NortonLifeLock, Inc.** and **Broadcom, Inc.**
- Added a COVID-19 box discussing suspension of accounting for troubled debt restructurings.
- Added questions with respect to COVID-19 boxes.
- Added a new problem regarding **Dell Technologies'** accounting for bad debts.
- Added a Real World Case regarding accounting for sales returns and receivables by **Toughbuilt Industries, Inc.**
- Added a Trueblood case regarding financing with receivables.

- Revised multiple Decision Makers' Perspective cases to make them auto-gradable.
- Revised **Target** and **Air France–KLM** cases and made them auto-gradable.

Chapter 8

INVENTORIES: MEASUREMENT

- Updated all real-world illustrations to the most recent information.
- Revised Illustration 8–4 to include cost of goods sold entry.
- Revised Illustration 8–7C for greater clarity.
- Revised Illustration 8–7D for greater clarity.
- Created a new Illustration 8–10 and revised discussion of LIFO reserve.
- Revised the Concept Review Exercise on inventory cost flow assumptions.
- Added Analysis Case for **Coca-Cola** and **Pepsico**.
- Decision Makers' Perspective cases are now auto-gradable.

Chapter 9

INVENTORIES: ADDITIONAL ISSUES

- Updated all real-world illustrations to the most recent information.
- Revised the introduction to the retail inventory method.
- Revised Illustration 9–8.
- Decision Makers' Perspective cases are now auto-gradable.

Chapter 10

PROPERTY, PLANT, AND EQUIPMENT AND INTANGIBLE ASSETS: ACQUISITION

- Updated all real-world illustrations to most recent information.
- Changed the feature story to **Microsoft Corporation**.
- Revised Illustration 10–1 and Illustration 10–2 to include **Microsoft Corporation**.
- Added additional intangible assets to Illustration 10–3.
- Revised the discussion of the categories of intangible assets.
- Revised the discussion of deferred payments and Illustration 10–10.
- Clarified the discussion of donated assets and government grants.

- Added Analysis Case for **Darden Restaurants** and Real World Case for **Salesforce.com**.
- Decision Makers' Perspective cases are now auto-gradable.

Chapter 11

PROPERTY, PLANT, AND EQUIPMENT AND INTANGIBLE ASSETS: UTILIZATION AND DISPOSITION

- Updated all real-world illustrations to the most recent information.
- Revised Illustration 11–1 and its discussion.
- Revised Illustration 11–9 to include **Kinder Morgan**.
- Revised Illustration 11–21 to include **Starbucks Corporation** and the impact of COVID-19 on impairment of property, plant, and equipment.
- Revised Illustration 11–24 to include **Carnival Corporation** and the impact of COVID-19 on goodwill impairment.
- Added a COVID-19 box related to impairment of property, plant, and equipment.
- Added a COVID-19 box related to goodwill impairment.
- Decision Makers' Perspective cases 11–1 through 11–9 are now auto-gradable.

Chapter 12

INVESTMENTS

- Revised Illustration 12–15 to better convey calculations relevant to the equity method.
- Revised the discussion of changes in levels of ownership using **SoftBank**, **T-Mobile**, **Toyota**, and **Subaru** as examples.
- Added a COVID-19 box discussing delayed CECL implementation under the CARES Act.
- Added an exercise covering recovery of impairments under IFRS.
- Added a Research Case regarding codification.
- Added a Real World Case regarding **Cisco Systems**' accounting for available-for-sale investments.
- Added a Real World Case regarding **General Motors**' accounting for other comprehensive income related to available-for-sale investments.

- Added a Trueblood case regarding accounting for equity for which fair value is not readily determinable.
- Revised multiple Decision Makers' Perspective cases to make them auto-gradable.
- Revised **Target** and **Air France–KLM** cases and made them auto-gradable.

Chapter 13

CURRENT LIABILITIES AND CONTINGENCIES

- Added a Where We're Headed box discussing potential changes to the definition of a liability in the FASB's conceptual framework.
- Changed Illustration 13–14 to cover **Microsoft's** discussion of a loss contingency.
- Changed Illustration 13–15 to cover **Gilead Sciences, Inc.'s** discussion of a loss contingency.
- Changed Illustration 13–21 to cover **Yum! Brands, Inc.'s** disclosure of a lawsuit.
- Added a COVID-19 box discussing **Dave & Buster's Entertainment, Inc.'s** disclosure of that subsequent event.
- Added a COVID-19 box discussing deferral of FICA taxes.
- Added an exercise including **Marriott International, Inc.'s** classification of debt.
- Added a Real World Case covering **Honda Motor Company, Ltd.'s** disclosure of lawsuits.
- Revised multiple Decision Makers' Perspective cases to make them auto-gradable.
- Revised **Target** and **Air France–KLM** cases and made them auto-gradable.

Chapter 14

BONDS AND LONG-TERM NOTES

- Added a real-world disclosure on callable bonds.
- Revised the discussion of bond issuance to include Google owner **Alphabet, Inc.'s** \$10 billion issue of corporate debt for environment and social endeavors.
- Expanded and highlighted assignment materials focusing on financial statement effects.

- Added a COVID-19 box to discuss the effect of the pandemic on bond accounting issues.
- Revised the Decision Makers' Perspective demonstrating the calculation and interpretation of risk ratios.
- Added two COVID-19 exercises to illustrate accounting for Payroll Protection Program forgivable loans.
- Added a Real World Case on the way long-term debt is reported in **Macy's** financial statements.
- Added an Analysis Case debating two approaches to account for convertible debt.
- Added a Research Case using a disclosure note to illustrate accounting for convertible bonds and find the Codification citation to support that accounting.

Chapter 15

LEASES

- Revised the Financial Reporting Case introducing the chapter.
- Expanded the Decision Makers' Perspective discussion on the motivation for manipulate lease terms to have leases structured as operating leases.
- Expanded the discussion of the effect of a residual value (guaranteed and unguaranteed) on the lessor's accounting for sale-type leases.
- Added a COVID-19 box to discuss the effect of the pandemic on lease accounting issues.
- Added an Exercise using a **Microsoft** disclosure note to examine how leases are reporting in a statement of cash flows.
- Added a Real World Case using a **Microsoft** disclosure note to illustrate differences between finance leases and operating leases.
- Added a Real World Case using information from **Walmart's** financials to illustrate reporting requirements for finance leases and operating leases and lease accounting concepts.
- Added a COVID-19 case to practice the CARES Act impact on accounting for the modification of lease terms.
- Added a Real World Case (**FedEx**) using a disclosure note to illustrate how leases are reporting in a statement of cash flows.

ACCOUNTING FOR INCOME TAXES

- Modified Illustration 16–6 to include **Pier 1 Imports, Inc.**'s Valuation Allowance.
- Modified Illustrations 16–7A–7C and 16–10 to demonstrate deferred tax accounting with the financial statements of **Citi Trends, Inc.**
- Revised an Additional Consideration to discuss taxes on unrepatriated foreign earnings using the financial statements of **Goldman Sachs Group, Inc.** as well as **JPMorgan Chase & Co.**
- Added a COVID-19 box detailing how the CARES Act modified accounting for the tax effects associated with NOLs.
- Modified Illustration 16–14 to show **Walmart, Inc.**'s disclosure of deferred taxes.
- Added questions, brief exercises, exercises, problems, and cases dealing with accounting for the effects of COVID-19.
- Added a brief exercise regarding **Uber Technologies, Inc.**'s valuation allowance.
- Added an exercise showing accounting for net operating loss carryforwards.
- Added Real World Cases to illustrate accounting for taxes for **Buckle, Francesca's Holdings Corporation, CVS Health,** and **Marathon Petroleum Corporation.**
- Added a Research Case regarding codification.
- Revised multiple Decision Makers' Perspective cases to make them auto-gradable.
- Revised **Target** and **Air France–KLM** cases and made them auto-gradable.

Chapter 17**PENSIONS AND OTHER POSTRETIREMENT BENEFIT**

- Expanded the discussion of the financial reporting effects to provide additional emphasis that the PBO and plan assets are netted together on the balance sheet rather than being separately reported.
- Added a real-world disclosure note (**General Mills**) on components of pension expense.
- Added a new problem using a **Clorox** disclosure note to illustrate financial statement effects of actuarial gains and losses.

- Revised and expanded a Real World Case using **FedEx** disclosure notes to illustrate reporting postretirement plans.
- Added a Research Case asking students to research the way changes in postretirement benefit estimates are reported and to find the Codification citation to support that accounting.

Chapter 18

SHAREHOLDERS' EQUITY

- Revised the Financial Reporting Case introducing the chapter.
- Added a discussion of a statement of retained earnings as an alternative for some companies to a statement of changes in shareholder's equity.
- Added a COVID-19 box to discuss the effect of the pandemic on shareholders' equity.
- Replaced a Microsoft Brief Exercise with a **Target** Brief Exercise.
- Added a **Tesla** news release concerning a five-for-one stock split.
- Added a COVID-19 exercise to practice the CARES Act impact on accounting for Payroll Support Program loans.
- Added an Analysis Case using a disclosure note to demonstrate accounting for the issuance of stock and share issue costs.

Chapter 19

SHARE-BASED COMPENSATION AND EARNINGS PER SHARE

- Abbreviated the discussion on the debate leading to the requirement to expense stock options given the time lapse since that debate.
- Replaced a **Facebook** exercise with a **FedEx** Exercise centered on a share-based compensation disclosure note.
- Replaced a **Tesla** exercise with a **Microsoft** Exercise centered on an employee stock purchase plan disclosure note.
- Replaced the **Air France Case** to highlight the similarities and terminology differences in EPS reporting.

Chapter 20

ACCOUNTING CHANGES AND ERROR CORRECTIONS

- Added a disclosure note describing a change in inventories from the FIFO method to the LIFO method by **Mueller Industries**.
- Added a disclosure note describing an error correction by **Kraft Heinz**.
- Added an auto-gradable Judgment Case on reporting a change in inventory method.
- Added an auto-gradable Analysis Case on the impact of an error and its correction.

Chapter 21

STATEMENT OF CASH FLOWS REVISITED

- Revised a **CVS Health Corp.** illustration of presenting cash flows from operating activities by the direct method.
- Revised an **Amazon** illustration of presenting cash flows from operating activities by the indirect method.
- Added a discussion of “free cash flow” analysis.
- Added a Real World Case (**General Mills**) employing “free cash flow” analysis.
- Added a Real World Case (**Microsoft**) using a disclosure note to illustrate how leases are reporting in a statement of cash flows.

Appendix A

DERIVATIVES

- Revised Illustration A–1 and its discussion.
- Added a COVID-19 box to discuss the effect of the pandemic on accounting for derivatives.
- Revised Illustrations A–2, A–3, and A–5 and the related discussion.
- Clarified the discussion of hedge effectiveness.
- Added an exercise for an interest rate swap on a fixed rate investment.
- Added an exercise for a cash flow hedge on a forecasted purchase.
- Replaced P A–1 and P A–2 for clarity and to update for the LIBOR to SOFR transition.
- Added **Target** and **Air France—KLM** cases.

Acknowledgments

Intermediate Accounting is the work not just of its talented authors, but countless faculty reviewers who shared their insights, experience, and insights with us. Our reviewers helped us to build *Intermediate Accounting* into the very best learning system available. A blend of Spiceland users and nonusers, these reviewers explained how they use texts and technology in their teaching, and many answered detailed questions about every one of Spiceland's 21 chapters. The work of improving *Intermediate Accounting* is ongoing—even now, we're scheduling new symposia and reviewers' conferences to collect even more opinions from faculty.

We are especially grateful for the contributions of Eric M. Negangard of the University of Virginia and Charlene Parnell Spiceland of Simmons University in developing the Data Analytics Case sequence that is a key enhancement to the eleventh edition of this textbook.

In addition, we want to recognize the valuable input of all those who helped guide our developmental decisions for the eleventh edition.

We Are Grateful

We would like to acknowledge and thank the following individuals for their contributions in developing, reviewing, and shaping the extensive ancillary package: Jeannie Folk, *Northwestern University*; Jean Bissell; Lauren Merz; Noelle Taddei, *Housatonic Community College*; Beth Kobylarz of *Accuracy Counts*; Mark McCarthy, *East Carolina University*; Jacob Shortt, *Virginia Tech*; Diann Hammon, *Athens State University*; Emily Vera, *University of Colorado–Denver*; and Teri Zuccaro, *Clarke University*, who contributed new content and conducted accuracy checks of Connect and ancillary materials. We greatly appreciate everyone’s hard work on these products!

We are most grateful for the talented assistance and support from the many people at McGraw Hill Education. We would particularly like to thank Tim Vertovec, Vice President, Business, Economics and Computing; Natalie King, marketing director; Rebecca Olson, director; Noelle Bathurst, senior portfolio manager; Christina Sanders, lead product developer; Danielle McLimore and Rachel Hinton, assessment product developers; Lauren Schur, executive marketing manager; Kevin Moran, director of digital content; Xin Lin, lead product manager; Pat Frederickson, lead content project manager; Angela Norris, lead content project manager; Laura Fuller, buyer; Matt Diamond, senior designer; and Traci Vaske, content licensing specialist.

We extend our sincere thanks to Jim Sepe, a former coauthor of this text, whose insight and hard work helped make *Intermediate Accounting* the market leader it is today.

Finally, we extend our thanks to UWorld Roger CPA Review for their assistance developing simulations for inclusion in the end-of-chapter material, as well as Target and Air France–KLM for allowing us to use their Annual Reports throughout the text. We also acknowledge permission from the AICPA to adapt material from the

Uniform CPA Examination, and the IMA for permission to adapt material from the CMA Examination.

David Spiceland *Mark Nelson* *Wayne Thomas* *Jennifer Winchel*

SECTION 1 The Role of Accounting as an Information System

1. Environment and Theoretical Structure of Financial Accounting 2

Contents

1 The Role of Accounting as an Information System

1 CHAPTER

Environment and Theoretical Structure of Financial Accounting 2

Part A: Financial Accounting Environment 3

The Economic Environment and Financial Reporting 5

The Investment-Credit Decision—A Cash Flow Perspective 6

Cash versus Accrual Accounting 7

The Development of Financial Accounting and Reporting Standards 8

Historical Perspective and Standards 9

The Standard-Setting Process 12

Encouraging High-Quality Financial Reporting 14

The Role of the Auditor 14

Financial Reporting Reform 15

A Move Away from Rules-Based Standards? 15

Ethics in Accounting 16

Part B: The Conceptual Framework 17

Objective of Financial Reporting 19

Qualitative Characteristics of Financial Reporting Information 19

Fundamental Qualitative Characteristics 20

Enhancing Qualitative Characteristics 21

Key Constraint: Cost Effectiveness 22

Elements of Financial Statements 22

Underlying Assumptions 22

Economic Entity Assumption 23

Going Concern Assumption 24

Periodicity Assumption 24

Monetary Unit Assumption 24

Recognition, Measurement, and Disclosure Concepts 24

Recognition 25

Measurement 26

Disclosure 30

Evolving GAAP 31

2 CHAPTER

Review of the Accounting Process 44

The Basic Model 46

The Accounting Equation 46

Account Relationships 48

The Accounting Processing Cycle 49

Brief Overview of Accounting Processing Cycle 50

Illustration of Accounting Processing Cycle 52

Journal, Ledger, and Trial Balance 53

Concept Review Exercise: Journal Entries for External Transactions 59

Adjusting Entries 61

Prepayments 62

Accruals 65

Estimates 67

Concept Review Exercise: Adjusting Entries 69

Preparing the Financial Statements 70

The Income Statement and the Statement of Comprehensive Income 70

The Balance Sheet 71

The Statement of Cash Flows 73

The Statement of Shareholders' Equity 74

The Closing Process 74

Concept Review Exercise: Financial Statement Preparation and Closing 76

Conversion from Cash Basis to Accrual Basis 78

APPENDIX 2A: Using a Worksheet 82

APPENDIX 2B: Reversing Entries 83

APPENDIX 2C: Subsidiary Ledgers and Special Journals 85

3 CHAPTER

The Balance Sheet and Financial Disclosures 108

Part A: The Balance Sheet 112

Usefulness 110

Limitations 111

Classification of Elements 111

Assets 112

Liabilities 116

Shareholders' Equity 117

Concept Review Exercise: Balance Sheet Classification 119

Part B: Annual Report Disclosures 120

Disclosure Notes 120

Summary of Significant Accounting Policies 121

Subsequent Events 121

Noteworthy Events and Transactions 122

Management's Discussion and Analysis 123

Management's Responsibilities 123

Compensation of Directors and Top Executives 124

Sustainability Disclosures 126

Auditor's Report 128

Part C: Risk Analysis 130

Using Financial Statement Information 130

Liquidity Ratios 131

Solvency Ratios 133

APPENDIX 3: Reporting Segment Information 138

4 CHAPTER

The Income Statement, Comprehensive Income, and the Statement of Cash Flows 164

Part A: The Income Statement and Comprehensive Income 166

Income from Continuing Operations 166

Revenues, Expenses, Gains, and Losses 166

Operating Income versus Nonoperating Income 168

Income Tax Expense 168

Income Statement Formats 168

Earnings Quality 171

Income Smoothing and Classification Shifting 171

Operating Income and Earnings Quality 171

Nonoperating Income and Earnings Quality 173

Non-GAAP Earnings 174

Discontinued Operations 174

What Constitutes a Discontinued Operation? 175

Reporting Discontinued Operations 175

Accounting Changes 179

Change in Accounting Principle 180

Change in Accounting Estimate 180

Change in Depreciation, Amortization, or Depletion Method 181

Correction of Accounting Errors 181

Prior Period Adjustments 181

Earnings per Share 182

Comprehensive Income 183

Statement of Comprehensive Income 183

Balance Sheet—Accumulated Other Comprehensive Income 184

Concept Review Exercise: Income Statement Presentation; Comprehensive Income 187

Part B: The Statement of Cash Flows 188

Usefulness of the Statement of Cash Flows 188

Classifying Cash Flows 188

Operating Activities 189

Investing Activities 192

Financing Activities 192

Noncash Investing and Financing Activities 194

Concept Review Exercise: Statement of Cash Flows 194

Part C: Profitability Analysis 196

Activity Ratios 196

Profitability Ratios 198

Profitability Analysis—An Illustration 200

APPENDIX 4: Interim Reporting 203

5 CHAPTER

Time Value of Money Concepts 234

Part A: Basic Concepts 235

Time Value of Money 235

Simple versus Compound Interest 236

Future Value of a Single Amount 237

Present Value of a Single Amount 238

Solving for Other Values When FV and PV are Known 239

Concept Review Exercise: Valuing A Single Cash Flow Amount 241

Preview of Accounting Applications of Present Value Techniques—Single Cash Amount 242

Part B: Basic Annuities 244

Future Value of an Annuity 244

Future Value of an Ordinary Annuity 244

Future Value of an Annuity Due 246

Present Value of an Annuity 246

Present Value of an Ordinary Annuity 246

Present Value of an Annuity Due 248

Present Value of a Deferred Annuity 249

Solving for Unknown Values in Present Value Situations 251

- Determining the Annuity Amount When Other Variables Are Known 251
- Determining the Periods When Other Variables Are Known 251
- Determining the Rate When Other Variables Are Known 252
- Determining When Other Variables are Known—Unequal Cash Flows 253

Concept Review Exercise: Annuities 253

Preview of Accounting Applications of Present Value Techniques—Annuities 255

- Valuation of Long-Term Bonds 255
- Valuation of Long-Term Leases 256
- Valuation of Installment Notes 256
- Valuation of Pension Obligations 257

Summary of Time Value of Money with Excel 258

6 CHAPTER

Revenue Recognition 274

Part A Introduction to Revenue Recognition 276

Recognizing Revenue at a Single Point in Time 278

Recognizing Revenue over a Period of Time 278

- Criteria for Recognizing Revenue over Time 279
- Determining Progress toward Completion 280

Recognizing Revenue for Contracts that Contain Multiple Performance Obligations 280

- Step 2: Identify the Performance Obligation(s) 281**
- Step 3: Determine the Transaction Price 282**
- Step 4: Allocate the Transaction Price to Each Performance Obligation 282**
- Step 5: Recognize Revenue When (or as) Each Performance Obligation Is Satisfied 282**

Concept Review Exercise: Revenue Recognition for Contracts with Multiple Performance Obligations 284

Part B: Special Issues in Revenue Recognition 285

Special Issues for Step 1: Identify the Contract 285

Special Issues for Step 2: Identify the Performance Obligation(s) 286

Special Issues for Step 3: Determine the Transaction Price 288

Special Issues for Step 4: Allocate the Transaction Price to the Performance Obligations 294

Special Issues for Step 5: Recognize Revenue When (or as) Each Performance Obligation Is Satisfied 295

Disclosures 299

Part C: Accounting for Long-Term Contracts 300

Accounting for a Profitable Long-Term Contract 302

A Comparison of Revenue Recognized over the Term of the Contract and at the Completion of Contract 307

Long-Term Contract Losses 308

Concept Review Exercise: Long-Term Construction Contracts 312

2 Assets

7 CHAPTER

Cash and Receivables 336

Part A: Cash and Cash Equivalents 337

Internal Control 338

Internal Control Procedures—Cash Receipts 339

Internal Control Procedures—Cash Disbursements 339

Restricted Cash and Compensating Balances 339

Part B: Current Receivables 341

Accounts Receivable 342

Initial Valuation of Accounts Receivable 342

Subsequent Valuation of Accounts Receivable 348

Concept Review Exercise: Uncollectible Accounts Receivable 353

Notes Receivable 354

Short-Term Interest-Bearing Notes 355

Short-Term Noninterest-Bearing Notes 355

Long-Term Notes Receivable 357

Subsequent Valuation of Notes Receivable 358

Financing with Receivables 360

Secured Borrowing 360

Sale of Receivables 361

Transfers of Notes Receivable 363

Deciding Whether to Account for a Transfer as a Sale or a Secured Borrowing 364

Disclosures 365

Concept Review Exercise: Financing with Receivables 367

APPENDIX 7A: Cash Controls 371

APPENDIX 7B: Accounting for a Troubled Debt Restructuring 375

8 CHAPTER

Inventories: Measurement 400

Part A: Recording and Measuring Inventory 401

Types of Inventory 402

Merchandising Inventory 402

Manufacturing Inventories 402

Types of Inventory Systems 403

Perpetual Inventory System 403

Periodic Inventory System 405

A Comparison of the Perpetual and Periodic Inventory Systems 406

What Is Included in Inventory? 406

Physical Units Included in Inventory 406

Transactions Affecting Net Purchases 407

Inventory Cost Flow Assumptions 410

Specific Identification 412

Average Cost 412

First-In, First-Out (FIFO) 414

Last-In, First-Out (LIFO) 415

Comparison of Cost Flow Methods 417

Factors Influencing Method Choice 418

LIFO Reserves and LIFO Liquidation 420

Concept Review Exercise: Inventory Cost Flow Methods 423

Part B: Methods of Simplifying LIFO 427

LIFO Inventory Pools 428

Dollar-Value LIFO 429

Cost Indexes 429

The DVL Inventory Estimation Technique 429

Concept Review Exercise: Dollar-Value LIFO 431

Advantages of DVL 431

9 CHAPTER

Inventories: Additional Issues 456

Part A: Subsequent Measurement of Inventory 457

Lower of Cost or Net Realizable Value (LCNRV) 458

Applying Lower of Cost or Net Realizable Value 459

Adjusting Cost to Net Realizable Value 460

Concept Review Exercise: Lower of Cost or Net Realizable Value 461

Lower of Cost or Market (LCM) 463

Part B: Inventory Estimation Techniques 464

The Gross Profit Method 465

A Word of Caution 465

The Retail Inventory Method 467

Retail Terminology 468

Cost Flow Methods 469

Other Issues Pertaining to the Retail Method 471

Concept Review Exercise: Retail Inventory Method 473

Part C: Dollar-Value LIFO Retail 475

Concept Review Exercise: Dollar-Value LIFO Retail Method 477

Part D: Change in Inventory Method and Inventory Errors 478

Change in Inventory Method 478

Most Inventory Changes 478

Change to the LIFO Method 479

Inventory Errors 480

When the Inventory Error Is Discovered the Following Year 481

When the Inventory Error Is Discovered Two Years Later 482

Concept Review Exercise: Inventory Errors 482

Earnings Quality 483

APPENDIX 9: Purchase Commitments 485

10 CHAPTER

Property, Plant, and Equipment and Intangible Assets: Acquisition 508

Part A: Valuation at Acquisition 510

Types of Assets 510

Costs to Be Capitalized 512

Property, Plant, and Equipment 512

Intangible Assets 517

Lump-Sum Purchases 521

Part B: Noncash Acquisitions 522

Deferred Payments 522

Issuance of Equity Securities 524

Donated Assets 524

Exchanges 527

Fair Value Not Determinable 528

Lack of Commercial Substance 528

Concept Review Exercise: Exchanges 530

Part C: Self-Constructed Assets and Research and Development 531

Self-Constructed Assets 531

Overhead Allocation 531

Interest Capitalization 532

Research and Development (R&D) 537

Determining R&D Costs 537

Software Development Costs 540

R&D Performed for Others 542

R&D Purchased in Business Acquisitions 542

Start-Up Costs 543

APPENDIX 10: Oil and Gas Accounting 545

11 CHAPTER

Property, Plant, and Equipment and Intangible Assets: Utilization and Disposition 566

Part A: Depreciation, Depletion, and Amortization 567

Cost Allocation—An Overview 567

Measuring Cost Allocation 568

Service Life 569

Allocation Base 569

Allocation Method 570

Depreciation 570

Time-Based Depreciation Methods 570

Activity-Based Depreciation Methods 573

Concept Review Exercise: Depreciation Methods 577

Partial Period Depreciation 578

Dispositions 579

Group and Composite Depreciation Methods 582

Depletion of Natural Resources 585

Amortization of Intangible Assets 587

Intangible Assets Subject to Amortization 587

Intangible Assets Not Subject to Amortization 590

Concept Review Exercise: Depletion and Amortization 591

Part B: Additional Issues 592

Change in Estimates 592

Change in Depreciation, Amortization, or Depletion Method 594

Error Correction 595

Impairment of Value 596

Assets Held and Used 596

Assets Held for Sale 605

Impairment Losses and Earnings Quality 606

Concept Review Exercise: Impairment 606

Part C: Subsequent Expenditures 607

Expenditures Subsequent to Acquisition 607

Repairs and Maintenance 608

Additions 608

Improvements 608

Rearrangements 609

Costs of Defending Intangible Rights 610

APPENDIX 11A: Comparison with MACRS (Tax Depreciation) 612

APPENDIX 11B: Retirement and Replacement Methods of Depreciation 613

12 CHAPTER

Investments 638

Part A: Accounting for Debt Investments 640

Example of a Debt Investment 640

Recording the Purchase of a Debt Investment 641

Recording Interest Revenue 641

Three Classifications of Debt Investments 643

Debt Investments to Be Held-to-Maturity (HTM) 644

Unrealized Holding Gains and Losses Are Not Recognized For HTM Investments 644

Sale of HTM Investments 644

Impairment of HTM Investments 645

Financial Statement Presentation 645

Debt Investments Classified as Trading Securities 646

Adjust Trading Security Investments to Fair Value (2024) 647

Sale of Trading Security Investments 648

Financial Statement Presentation 650

Debt Investments Classified as Available-for-Sale Securities 650

Comprehensive Income 650

Rationale for AFS Treatment of Unrealized Holding Gains and Losses 651

Adjust AFS Investments to Fair Value (2024) 651

Sale of AFS Investments 652

Impairment of AFS Investments 654

Financial Statement Presentation 655

Comparison of HTM, TS, and AFS Approaches 656

Transfers between Reporting Categories 657

Fair Value Option 658

Concept Review Exercise: Debt Investment Securities 659

Financial Statement Presentation and Disclosure 662

Part B: Accounting for Equity Investments 663

When the Investor Does Not Have Significant Influence: Fair Value through Net Income 663

Purchase Investments 664

Recognize Investment Revenue 664

Adjust Equity Investments to Fair Value (2024) 664

Sell the Equity Investment 665

Adjust Remaining Equity Investments to Fair Value (2025) 666

Financial Statement Presentation 667

When the Investor Has Significant Influence: The Equity Method 668

Control and Significant Influence 668

Purchase of Investment 669

Recording Investment Revenue 670

Receiving Dividends 670

Further Adjustments 670

Adjustments for Additional Depreciation 671

No Adjustments for Land or Goodwill 672

Adjustments for Other Assets and Liabilities 672

Reporting the Investment 672

When the Investment is Acquired in Mid-Year 673

When the Investee Reports a Net Loss 673

Impairment of Equity Method Investments 673

What If Conditions Change? 674

Fair Value Option 676

Concept Review Exercise: The Equity Method 677

APPENDIX 12A: Other Investments (Special Purpose Funds, Investments in Life Insurance Policies) 681

APPENDIX 12B: Impairment of Debt Investments 682

3 Liabilities and Shareholders' Equity

13 CHAPTER

Current Liabilities and Contingencies 710

Part A: Current Liabilities 712

Characteristics of Liabilities 712

What is a Current Liability? 713

Open Accounts and Notes 714

Accounts Payable and Trade Notes Payable 714

Short-Term Notes Payable 715

Commercial Paper 717

Accrued Liabilities 718

Accrued Interest Payable 718

Salaries, Commissions, and Bonuses 718

Liabilities from Advance Collections 720

Deposits and Advances from Customers 720

Gift Cards 722

Collections for Third Parties 723

A Closer Look at the Current and Noncurrent Classification 724

Current Maturities of Long-Term Debt 724

Obligations Callable by the Creditor 724

When Short-Term Obligations Are Expected to Be Refinanced 724

Concept Review Exercise: Current Liabilities 726

Part B: Contingencies 727

Loss Contingencies 727

Product Warranties and Guarantees 729

Litigation Claims 733

Subsequent Events 734

Unasserted Claims and Assessments 736

Gain Contingencies 737

Concept Review Exercise: Contingencies 738

APPENDIX 13: Payroll-Related Liabilities 742

14 CHAPTER

Bonds and Long-Term Notes 766

The Nature of Long-Term Debt 767

Part A: Bonds 768

The Bond Indenture 768

Recording Bonds at Issuance 769

Determining the Selling Price 769

Bonds Issued at a Discount 771

Determining Interest—Effective Interest Method 772

Amortization Schedule 773

Zero-Coupon Bonds 774

Bonds Issued at a Premium 775

When Financial Statements are Prepared between Interest Dates 776

The Straight-Line Method—A Practical Expediency 777

Concept Review Exercise: Issuing Bonds and Recording Interest 778

Debt Issue Costs 779

Part B: Long-Term Notes 781

Note Issued for Cash 781

Note Exchanged for Assets or Services 781

Installment Notes 784

Concept Review Exercise: Note with an Unrealistic Interest Rate 785

Financial Statement Disclosures 787

Part C: Debt Retired Early, Convertible Into Stock, or Providing an Option to Buy Stock 790

Early Extinguishment of Debt 790

Convertible Bonds 791

When the Conversion Option Is Exercised 793

Induced Conversion 793

Bonds with Detachable Warrants 794

Concept Review Exercise: Debt Disclosures and Early Extinguishment of Debt 795

Part D: Option to Report Liabilities at Fair Value 796

Determining Fair Value 796

Reporting Changes in Fair Value 797

Mix and Match 799

APPENDIX 14A: Bonds Issued Between Interest Dates 801

APPENDIX 14B: Troubled Debt Restructuring 803

15 CHAPTER

Leases 828

Part A: Accounting by the Lessor and Lessee 829

Why Lease? 829

Lease Classification 830

Finance Leases and Installment Notes Compared 833

Finance/Sales-Type Leases 835

Recording Interest Expense/Interest Revenue 836

Recording Amortization of the Right-of-Use Asset 837

Concept Review Exercise: Finance Lease/Sales-Type Lease: No Selling Profit 838

Sales-Type Leases with Selling Profit 840

Operating Leases 841

Recording Lease Expense/Lease Revenue 842

Reporting Lease Expense and Lease Revenue 844

Discount Rate 847

Concept Review Exercise: Operating Lease 847

Short-Term Leases—A ShortCut Method 849

Part B: Uncertainty in Lease Transactions 849

What if the Lease Term is Uncertain? 850

What if the Lease Payments are Uncertain? 851

What if Lease Terms are Modified? 852

Residual Value 853

Purchase Option 860

Summary of the Lease Uncertainties 862

Remeasurement of the Lease Liability 863

Part C: Other Lease Accounting Issues and Reporting Requirements 864

Is It a Lease? 864

Nonlease Components of Lease Payments 866

Concept Review Exercise: Various Lease Accounting Issues: Finance/Sales-Type Lease 869

Statement of Cash Flow Impact 871

Operating Leases 871

Finance Leases—Lessee 871

Sales-Type Leases—Lessor 871

Lease Disclosures 871

Qualitative Disclosures 872

Quantitative Disclosures 872

APPENDIX 15: Sale-Leaseback Arrangements 874

16 CHAPTER

Accounting for Income Taxes 904

Part A: Temporary Differences 905

Conceptual Underpinnings 906

The 4-Step Process 907

Types of Temporary Differences 907

Deferred Tax Liabilities 908

Expense-Related Deferred Tax Liabilities 908

Balance Sheet and Income Statement Perspectives 911

Revenue-Related Deferred Tax Liabilities 912

Deferred Tax Assets 915

Expense-Related Deferred Tax Assets 915

Revenue-Related Deferred Tax Assets 918

Valuation Allowance 921

Disclosures Linking Tax Expense with Changes in Deferred Tax Assets and Liabilities 923

Part B: Permanent Differences 925

Concept Review Exercise: Temporary and Permanent Differences 929

Part C: Other Tax Accounting Issues 930

Tax Rate Considerations 930

When Enacted Tax Rates Differ Between Years 930

Changes in Enacted Tax Laws or Rates 930

Multiple Temporary Differences 932

Net Operating Losses 934

Net Operating Loss Carryforward 934

Financial Statement Presentation 939

Balance Sheet Classification 939

Disclosure Notes 939

Part D: Coping with Uncertainty in Income Taxes 941

Intraperiod Tax Allocation 944

Concept Review Exercise: Multiple Differences and Net Operating Loss 947

17 CHAPTER

Pensions and Other Postretirement Benefits 974

Part A: The Nature of Pension Plans 976

Defined Contribution Pension Plans 978

Defined Benefit Pension Plans 979

Pension Expense—An Overview 980

Part B: The Pension Obligation and Plan Assets 981

The Pension Obligation 981

Accumulated Benefit Obligation 982

Vested Benefit Obligation 982

Projected Benefit Obligation 982

Illustration Expanded to Consider the Entire Employee Pool 987

Pension Plan Assets 988

Reporting the Funded Status of the Pension Plan 990

Part C: Determining Pension Expense 990

The Relationship between Pension Expense and Changes in the PBO and Plan Assets 990

Components of Pension Expense 990

Income Smoothing 994

Part D: Reporting Issues 996

Recording Gains and Losses 996

Recording the Pension Expense 998

Reporting Pension Expense in the Income Statement 998

Recording the Funding of Plan Assets 999

Comprehensive Income 1001

Income Tax Considerations 1002

Putting the Pieces Together 1002

Settlement or Curtailment of Pension Plans 1004

Concept Review Exercise: Pension Plans 1006

Part E: Postretirement Benefits Other Than Pensions 1007

What Is a Postretirement Benefit Plan? 1008

Postretirement Health Benefits and Pension Benefits Compared 1008

Determining the Net Cost of Benefits 1008

Postretirement Benefit Obligation 1009

Measuring the Obligation 1009

Attribution 1010

Accounting for Postretirement Benefit Plans Other Than Pensions 1010

A Comprehensive Illustration 1014

Concept Review Exercise: Other Postretirement Benefits 1014

APPENDIX 17: Service Method of Allocating Prior Service Cost 1017

18 CHAPTER

Shareholders' Equity 1044

Part A: The Nature of Shareholders' Equity 1045

Financial Reporting Overview 1046

Paid-in Capital 1046

Retained Earnings 1047

Treasury Stock 1048

Accumulated Other Comprehensive Income 1048

Reporting Shareholders' Equity on the Balance Sheet 1049

Statement of Shareholders' Equity 1049

The Corporate Organization 1049

Limited Liability 1051

Ease of Raising Capital 1052

Disadvantages 1052

Types of Corporations 1052

Hybrid Organizations 1053

The Model Business Corporation Act 1053

Part B: Paid-in Capital 1054

Fundamental Share Rights 1054

Distinguishing Classes of Shares 1054

Typical Rights of Preferred Shares 1055

Is It Equity or Is It Debt? 1055

The Concept of Par Value 1056

Accounting for the Issuance of Shares 1057

Par Value Shares Issued For Cash 1057

No-Par Shares Issued for Cash 1058

Shares Issued for Noncash Consideration 1058

More Than One Security Issued for a Single Price 1058

Share Issue Costs 1059

Concept Review Exercise: Expansion of Corporate Capital 1059

Share repurchases 1061

Shares Formally Retired or Viewed as Treasury Stock 1062

Accounting for Retired Shares 1062

Accounting for Treasury Stock 1064

Resale of Shares 1064

Concept Review Exercise: Treasury Stock 1066

Part C: Retained Earnings 1067

Characteristics of Retained Earnings 1067

Dividends 1067

Liquidating Dividend 1068

Retained Earnings Restrictions 1068

Cash Dividends 1068

Property Dividends 1069

Stock Dividends and Splits 1069

Stock Dividends 1069

Stock Splits 1071

**Stock Splits Effected in the Form of Stock Dividends (Large Stock Dividends)
1072**

Concept Review Exercise: Changes in Retained Earnings 1075

APPENDIX 18: Quasi Reorganizations 1078

4 Additional Financial Reporting Issues

19 CHAPTER

Share-Based Compensation and Earnings Per Share 1104

Part A: Share-Based Compensation 1103

Restricted Stock Plans 1104

Restricted Stock Awards 1104

Restricted Stock Units 1104

Stock Option Plans 1106

Recognizing the Fair Value of Options 1106

Forfeitures 1107

When Options are Exercised 1109

When Unexercised Options Expire 1109

Plans with Graded Vesting 1111

Plans with Performance or Market Conditions 1112

Employee Share Purchase Plans 1114

Concept Review Exercise: Share-Based Compensation Plans 1115

Part B: Earnings Per Share 1116

Basic Earnings Per Share 1116

Issuance of New Shares 1117

Stock Dividends and Stock Splits 1117

Reacquired Shares 1119

Earnings Available to Common Shareholders 1119

Diluted Earnings Per Share 1120

Potential Common Shares 1120

Options, Rights, and Warrants 1120

Convertible Securities 1123

Convertible Bonds 1123

Convertible Preferred Stock 1124

Antidilutive Securities 1125

Options, Warrants, Rights 1125

Convertible Securities 1127

Order of Entry for Multiple Convertible Securities 1127

Concept Review Exercise: Basic and Diluted Eps 1128

Additional EPS Issues 1130

Components of the “Proceeds” in the Treasury Stock Method 1130

Restricted Stock Awards in EPS Calculations 1130

Contingently Issuable Shares 1131

**Summary of the Effect of Potential Common Shares on Earnings Per Share
1132**

Actual Conversions 1133

Financial Statement Presentation of Earnings Per Share Data 1133

Concept Review Exercise: Additional Eps Issues 1136

APPENDIX 19A: Option-Pricing Theory 1139

APPENDIX 19B: Stock Appreciation Rights 1140

20 CHAPTER

Accounting Changes and Error Corrections 1166

Part A: Accounting Changes 1167

Change in Accounting Principle 1169

The Retrospective Approach: Most Changes in Accounting Principle 1170

The Modified Retrospective Approach 1174

The Prospective Approach 1174

Change in Accounting Estimate 1176

Changing Depreciation, Amortization, and Depletion Methods 1177

Change in Reporting Entity 1178

Errors 1179

Concept Review Exercise: Accounting Changes 1180

Part B: Correction of Accounting Errors 1182

Prior Period Adjustments 1182

Error Correction Illustrated 1183

Error Discovered in the Same Reporting Period That It Occurred 1183

Error Affecting Previous Financial Statements, but Not Net Income 1183

Error Affecting a Prior Year's Net Income 1184

Concept Review Exercise: Correction of Errors 1188

21 CHAPTER

The Statement of Cash Flows Revisited 1210

Part A: The Content and Value of the Statement of Cash Flows 1211

Cash Inflows and Outflows 1212

Structure of the Statement of Cash Flows 1213

Cash, Cash Equivalents, and Restricted Cash 1215

Primary Elements of the Statement of Cash Flows 1215

Cash Flows from Operating Activities 1215

Cash Flows from Investing Activities 1218

Cash Flows from Financing Activities 1219

Reconciliation with Change in Cash Balance 1220

NonCash Investing and Financing Activities 1220

CHAPTER 1

Environment and Theoretical Structure of Financial Accounting

Page 1

Page 2

OVERVIEW

The primary function of financial accounting is to provide useful financial information to users who are external to the business enterprise, particularly investors and creditors. These users make critical resource allocation decisions that affect the global economy. The primary means of conveying financial information to external users is through financial statements and related notes.

In this chapter you explore such important topics as the reason why financial accounting is useful, the process by which accounting standards are produced, and the conceptual framework that underlies financial accounting. The perspective you gain in this chapter serves as a foundation for more detailed study of financial accounting.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO1-1** Describe the function and primary focus of financial accounting. (p. 3)
-  **LO1-2** Explain the difference between cash and accrual accounting. (p. 7)
-  **LO1-3** Define generally accepted accounting principles (GAAP) and discuss the historical development of accounting standards, including convergence between U.S. and international standards. (p. 8)
-  **LO1-4** Explain why establishing accounting standards is characterized as a political process. (p. 12)
-  **LO1-5** Explain factors that encourage high-quality financial reporting. (p. 14)

-  **LO1-6** Explain the purpose of the conceptual framework. (p. 17)
-  **LO1-7** Identify the objective and qualitative characteristics of financial reporting information and the elements of financial statements. (p. 19)
-  **LO1-8** Describe the four basic assumptions underlying GAAP. (p. 22)
-  **LO1-9** Describe the recognition, measurement, and disclosure concepts that guide accounting practice. (p. 24)
-  **LO1-10** Contrast a revenue/expense approach and an asset/liability approach to accounting standard setting. (p. 31)
-  **LO1-11** Discuss the primary differences between U.S. GAAP and IFRS with respect to the development of accounting standards and the conceptual framework underlying accounting standards. (p. 11, 14, and 19)

FINANCIAL REPORTING CASE

skynesher/Getty Images

Misguided Marketing Major

During a class break in your investments class, a marketing major tells the following story to you and some friends:

The chief financial officer (CFO) of a large company is interviewing three candidates for the top accounting position with the firm. Each candidate is asked the same question:

CFO: What is two plus two?
First candidate: Four.
CFO: What is two plus two?
Second candidate: Four.
CFO: What is two plus two?
Third candidate: What would you like it to be?
CFO: You're hired.

After you take some good-natured ribbing from the non-accounting majors, your friend says, "Seriously, though, there must be ways the accounting profession prevents that kind of behavior. Aren't there some laws, or rules, or something? Is accounting based on some sort of theory, or is it just arbitrary?"

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

- 1.** What should you tell your friend about the presence of accounting standards in the United States and the rest of the world? Who has the authority for standard setting? Who has the responsibility?
- 2.** What is the economic and political environment in which standard setting occurs?
- 3.** What is the relationship among management, auditors, investors, and creditors that tends to preclude the "What would you like it to be?" attitude?
- 4.** In general, what is the conceptual framework that underlies accounting principles, and how does it encourage high-quality financial reporting?

PART A

Financial Accounting Environment

LO1-1 Describe the function and primary focus of financial accounting.

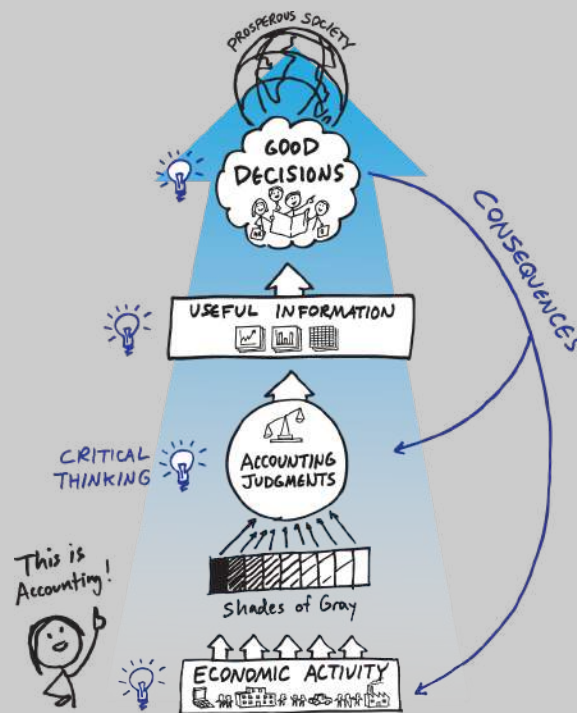

In 1902, George Dayton took ownership of the Dayton Dry Goods Company, the fourth largest department store in Minneapolis, Minnesota. Successive generations of Daytons were innovative managers, flying in inventory to prevent shortages (1920), committing to giving 5 percent of profits back to the community (1946), and creating the nation's first enclosed shopping mall (1956). In 1962, George's grandchildren transformed Dayton's, by then a regional department store chain, into the **Target Corporation**, promising "a quality store with quality merchandise at discount prices."¹ Today Target has grown to be the second largest general merchandise retailer in America, with over 1,800 stores, over 350,000 employees, and www.target.com reaching the online market. However, Target still stands by its "Expect More, Pay Less" motto, and still donates 5 percent of profits back to the community (giving more than \$4 million per week).

Many factors contributed to Target's success. The Daytons were visionary in their move into the upscale discount retail market. The company's commitment to quality products, customer service, and community support also played an important role. But the ability to raise money from investors and lenders at various times also was critical to Target's evolution. Target used proceeds from its 1967 initial public stock offering to expand nationally. Creditors (lenders) also supplied needed capital at various times. In fact, without access to capital, the Target Corporation we know today likely would not exist.

Investors and creditors use many different kinds of information before supplying capital to businesses like Target. They use the information to predict the future risk and potential return of their prospective investments or loans.² For example, information about the enterprise's products and its management is key to this assessment. Investors and creditors also rely on various kinds of accounting information.

Think of accounting as a special “language” that companies like Target use to communicate financial information to help people inside and outside of the business to make decisions. The Pathways Commission of the American Accounting Association developed an illustration to help visualize this important role of accounting.³ As shown in [Illustration 1-1](#), accounting provides useful information about economic activity to help produce good decisions and foster a prosperous society. Economic activity is complex, and decisions have real consequences, so critical thinking and many judgments are needed to produce the most useful accounting information possible.

ILLUSTRATION 1-1 Pathways Commission Visualization: “THIS is accounting!”

This book focuses on **financial accounting**, which is chiefly concerned with providing financial information

The primary focus of **financial accounting** is on the information

to various *external* users.⁴ The chart in

Illustration 1-2 lists a number of groups that provide financial information as well as several external user groups. For these groups, the primary focus of financial accounting is on the financial information provided by *profit-oriented companies to their present and potential investors and creditors*. One external user group, often referred to as *financial intermediaries*, includes financial analysts, stockbrokers, mutual fund managers, and credit rating organizations. These users provide advice to investors and creditors and/or make investment-credit decisions on their behalf.

ILLUSTRATION 1-2 Financial Information Providers and External User Groups

The primary means of conveying financial information to investors, creditors, and other external users is through financial statements and related disclosure notes. The financial statements most frequently provided are (1) the balance sheet, also called the statement of financial position; (2) the income statement, also called the statement of operations; (3) the statement of cash flows; and (4) the statement of shareholders' equity. Also, companies must either provide a statement of other comprehensive income immediately following the income statement or present a combined statement of comprehensive income that includes the information normally contained in both the income statement and the statement of other comprehensive income.⁵ As you progress through this book, you will review and expand your knowledge of the information in these financial statements, the way the elements in these statements are measured, and the concepts underlying these measurements and related disclosures. We use the term **financial reporting** to refer to the

process of providing this information to external users. Keep in mind, though, that external users receive important financial information in a variety of other formats as well, including news releases and management forecasts, prospectuses, and reports filed with regulatory agencies.

Target's financial statements for the fiscal year ended February 1, 2020, and related disclosure notes are provided in Connect. You also can access these statements and notes under the Investor Relations link on the company's website ([Target.com](https://www.target.com)). A Target case is included among the Real-Word Cases that accompany each chapter, so you can see how each chapter's topics relate to a single familiar company.

The Economic Environment and Financial Reporting

In the United States, we have a highly developed free-enterprise economy with the majority of productive resources privately owned rather than government owned. For the economy to operate efficiently, these resources should be allocated to private enterprises that will use them best to provide the goods and services desired by society and not to enterprises that will waste them. The mechanisms that foster this efficient allocation of resources are the **capital markets**. We can think of the capital markets simply as a composite of all investors and creditors.

The *capital markets* provide a mechanism to help our economy allocate resources efficiently.

Businesses go to the capital markets to get the cash necessary for them to function. The three primary forms of business organization are the sole proprietorship, the partnership, and the corporation.

Corporations acquire capital from investors in exchange for ownership interest and from creditors by borrowing.

In the United States, sole proprietorships and partnerships outnumber corporations. However, the dominant form of business organization, in terms of the ownership of productive resources, is the **corporation**. Investors provide resources, usually cash, to a corporation in exchange for an ownership interest, that is, shares of stock. Creditors lend cash to the corporation, either by making individual loans or by purchasing publicly traded debt such as bonds.

What information do investors and creditors need when determining which companies will receive capital? We explore that question next.

The Investment-Credit Decision—A Cash Flow Perspective

While the decisions made by investors and by creditors are somewhat different, they are similar in at least one important way. Investors and creditors are willing to provide capital to a corporation (buy stocks or bonds)

The expected rate of return and the uncertainty, or risk, of that return are key variables in the investment decision.

only if they expect to receive more cash in return at some time in the future. A corporation's shareholders will receive cash from their investment through the ultimate sale of the ownership shares of stock. In addition, many corporations distribute cash to their shareholders in the form of periodic dividends. For example, if an investor provides a company with \$10,000 cash by purchasing stock at the end of 2023, receives \$400 in dividends from the company during 2024, and sells the ownership interest (shares) at the end of 2024 for \$10,600, the investment would have generated a **rate of return** of 10% for 2024, calculated as follows:

$$\frac{\$400 \text{ dividends} + \$600 \text{ share price appreciation}}{\$10,000 \text{ initial investment}} = 10\%$$

All else equal, investors and creditors would like to invest in stocks or bonds that provide the highest expected rate of return. However, there are many variables to consider before making an investment decision. For example, the *uncertainty*, or *risk*, of that expected return also is important. To illustrate, consider the following two investment options:

1. Invest \$10,000 in a savings account insured by the U.S. government that will generate a 5% rate of return.
2. Invest \$10,000 in a profit-oriented company.

While the rate of return from option 1 is known with virtual certainty, the return from option 2 is uncertain.

The amount and timing of the cash to be received in the future from option 2 are unknown. The company in option 2 will be able to provide investors with a

return only if it can generate a profit. That is, it must be able to use the resources provided by investors and creditors to generate cash receipts from selling a product or service that exceed the cash disbursements necessary to provide that product or service. Therefore, potential investors require information about the company that will help them estimate the potential for future profits, as well as the return they can expect on their investment and the risk that is associated with it. If the potential return is high enough, investors will prefer to invest in the profit-oriented company, even if that return has more risk associated with it.

A company will be able to provide a positive return to investors and creditors only if it can generate a profit from selling its products or services.

In summary, the primary objective of financial accounting is to provide investors and creditors with information that will help them make investment and

The objective of financial accounting is to provide investors and creditors with useful information for decision making.

credit decisions. That information should help investors and creditors evaluate the *amounts*, *timing*, and *uncertainty* of the enterprise's future cash receipts and disbursements. The better this information is, the more efficient investor and creditor resource allocation decisions will be. But financial accounting doesn't only benefit companies and their investors and creditors. By providing key information to capital market participants, financial accounting plays a vital role that helps direct society's resources to the companies that will utilize those resources most effectively.

Cash versus Accrual Accounting

LO1-2 Explain the difference between cash and accrual accounting.

Even though predicting future cash flows is the primary goal of many users of financial reporting, the model best able to achieve that goal is **accrual accounting**. A competing model is **cash-basis accounting**. Each model produces a periodic measure of performance that could be used by investors and creditors for predicting future cash flows.

CASH-BASIS ACCOUNTING

Cash-basis accounting produces a measure called **net operating cash flow**. This measure is the difference between cash receipts and cash payments from transactions related to providing goods and services to customers during a reporting period.

Net operating cash flow is the difference between cash receipts and cash disbursements from providing goods and services.

Over the life of a company, net operating cash flow definitely is the measure of concern. However, over short periods of time, operating cash flows may not be indicative of the company's long-run cash-generating ability. Sometimes a company pays or receives cash in one period that relates to performance in multiple periods. For example, in one period a company receives cash that relates to prior period sales, or makes advance payments for costs related to future periods.

To see this more clearly, consider Carter Company's net operating cash flows during its first three years of operations, shown in  **Illustration 1-3**. Carter's operations for these three years included the following:

ILLUSTRATION 1-3 Cash-Basis Accounting

| | Year 1 | Year 2 | Year 3 | Total |
|---------------------------------|--------------------------|------------------|------------------|-------------------------|
| Sales (on credit) | <u>\$100,000</u> | <u>\$100,000</u> | <u>\$100,000</u> | <u>\$300,000</u> |
| Net Operating Cash Flows | | | | |
| Cash receipts from customers | \$ 50,000 | \$125,000 | \$125,000 | \$ 300,000 |
| Cash disbursements: | | | | |
| Prepayment of three years' rent | (60,000) | 0 | 0 | (60,000) |
| Salaries to employees | (50,000) | (50,000) | (50,000) | (150,000) |
| Utilities | (5,000) | (15,000) | (10,000) | (30,000) |
| Net operating cash flow | <u>\$(65,000)</u> | <u>\$ 60,000</u> | <u>\$ 65,000</u> | <u>\$ 60,000</u> |

1. Credit sales to customers were \$100,000 each year (\$300,000 total), while cash collections were \$50,000, \$125,000, and \$125,000. Carter's customers owe Carter nothing at the end of year 3.
2. At the beginning of year 1, Carter prepaid \$60,000 for three years' rent (\$20,000 per year).
3. Employee salaries of \$50,000 were paid in full each year.
4. Utilities cost was \$10,000 each year, but \$5,000 of the cost in year 1 was not paid until year 2.
5. In total, Carter generated positive net operating cash flow of **\$60,000**.

Is the three-year pattern of net operating cash flows indicative of the company's year-by-year performance?

No. Sales to customers and costs of operating the company (rent, salaries, and utilities) occurred evenly over the three years, but net operating cash flows

occurred at an uneven rate. Net operating cash flows varied each year because Carter (a) didn't collect cash from customers in the same pattern that sales occurred and (b) didn't pay for rent and utilities in the same years in which those resources were actually consumed. This illustration also shows why operating cash flows may not predict the company's long-run cash-generating ability. Net operating cash flow in year 1 (negative **\$65,000**)⁶ is not an

Over short periods of time, operating cash flow may not be an accurate predictor of future operating cash flows

accurate predictor of Carter’s future cash-generating ability in year 2 (positive \$60,000) or year 3 (positive \$65,000).

ACCRUAL ACCOUNTING

If we measure Carter’s activities by the accrual accounting model, we get a more accurate prediction of future operating cash flows and a more reasonable portrayal of the periodic operating performance of the company. The accrual accounting model doesn’t focus only on cash flows. Instead, it also reflects other resources provided and consumed by operations during a period. The accrual accounting model’s measure of resources provided by business operations is called *revenues*, and the measure of resources sacrificed to produce revenues is called *expenses*. The difference between revenues and expenses is **net income**, or net loss if expenses are greater than revenues.⁷

Net income is the difference between revenues and expenses.

 **Illustration 1-4** shows how we would measure revenues and expenses in this very simple situation.

ILLUSTRATION 1-4 Accrual Accounting

| CARTER COMPANY | | | | |
|--------------------------|-------------------------|-------------------------|-------------------------|-------------------------|
| Income Statements | | | | |
| | Year 1 | Year 2 | Year 3 | Total |
| Revenues | <u>\$100,000</u> | <u>\$100,000</u> | <u>\$100,000</u> | <u>\$300,000</u> |
| Expenses: | | | | |
| Rent | 20,000 | 20,000 | 20,000 | 60,000 |
| Salaries | 50,000 | 50,000 | 50,000 | 150,000 |
| Utilities | <u>10,000</u> | <u>10,000</u> | <u>10,000</u> | <u>30,000</u> |
| Total expenses | <u>80,000</u> | <u>80,000</u> | <u>80,000</u> | <u>240,000</u> |
| Net Income | <u>\$ 20,000</u> | <u>\$ 20,000</u> | <u>\$ 20,000</u> | <u>\$ 60,000</u> |

Revenue for year 1 is the \$100,000 sales. Given that sales eventually are collected in cash, the year 1 revenue of \$100,000 is a better measure of the inflow of resources from company

operations than is the \$50,000 cash collected from customers. Also, net income of **\$20,000** for year 1 appears to be a reasonable predictor of the company's cash-generating ability, as total net operating cash flow for the three-year period is a positive **\$60,000**.

Net income is considered a better indicator of future operating cash flows than is current net operating cash flow.

Comparing the three-year pattern of net operating cash flows in  **Illustration 1-3** to the three-year pattern of net income in  **Illustration 1-4**, the net income pattern is more representative of Carter Company's steady operating performance over the three-year period.⁸

While this example is somewhat simplistic, it allows us to see the motivation for using the accrual accounting model. Accrual income attempts to measure the resource inflows and outflows generated by operations during the reporting period, which may not correspond to cash inflows and outflows. Does this mean that information about cash flows from operating activities is not useful? No. Indeed, one of the basic financial statements—the statement of cash flows—reports information about cash flows from operating, investing, and financing activities, and provides important information to investors and creditors.⁹ Focusing on accrual accounting as well as cash flows provides a more complete view of a company and its operations.

The Development of Financial Accounting and Reporting Standards

LO1–3 Define generally accepted accounting principles (GAAP) and discuss the historical development of accounting standards, including convergence between U.S. and international standards.

Accrual accounting is the financial reporting model used by the majority of profit-oriented companies and by many not-for-profit companies. The fact that companies use the same model is important to investors and creditors, allowing them to *compare* financial information among companies. To facilitate these comparisons, financial accounting employs a body of standards known as **generally accepted accounting principles**, often abbreviated as **GAAP** (and pronounced *gap*). GAAP is a dynamic set of both broad and specific guidelines that companies should follow when measuring and reporting the information in their financial statements and related notes. The more important concepts underlying GAAP are discussed in a subsequent section of this chapter and revisited throughout this book in the context of particular accounting topics.

Page 9

Historical Perspective and Standards

Pressures on the accounting profession to establish uniform accounting standards began after the stock market crash of 1929. Some felt that insufficient and misleading financial statement information led to inflated stock prices and that this contributed to the stock market crash and the subsequent depression.

The 1933 Securities Act and the 1934 Securities Exchange Act were designed to restore investor confidence. The 1933 Act sets forth accounting and disclosure requirements for initial offerings of securities (stocks and bonds). The 1934 Act applies to secondary market transactions and mandates reporting requirements for companies whose securities are publicly traded on either organized stock exchanges or in over-the-counter markets.¹⁰

The 1934 Act also created the **Securities and Exchange Commission (SEC)**. Congress gave the SEC the

The Securities and Exchange Commission (SEC) has the

authority to set accounting and reporting standards for companies whose securities are publicly traded.

However, the SEC, a government appointed body, has *delegated* the task of setting accounting standards to

the private sector. It is important to understand that the power still lies with the SEC. If the SEC does not agree with a particular standard issued by the private sector, it can force a change in the standard. In fact, it has done so in the past.¹¹

authority to set accounting standards for companies, but it relies on the private sector to do so.

EARLY U.S. STANDARD SETTING

The first private-sector body to assume the task of setting accounting standards was the **Committee on Accounting Procedure (CAP)**. The CAP was a committee of the **American Institute of Accountants (AIA)**. The AIA was renamed the **American Institute of Certified Public Accountants (AICPA)** in 1957, which is the national professional organization for certified professional public accountants.

From 1938 to 1959, the CAP issued 51 *Accounting Research Bulletins (ARBs)* which dealt with specific accounting and reporting problems. No theoretical framework for financial accounting was established. This piecemeal approach of dealing with individual issues without a framework led to criticism.

In 1959 the **Accounting Principles Board (APB)** replaced the CAP. The APB operated from 1959 through 1973 and issued 31 *Accounting Principles Board Opinions (APBOs)*, various *Interpretations*, and four *Statements*. The *Opinions* also dealt with specific accounting and reporting problems. Many *ARBs* and *APBOs* still represent authoritative GAAP.

The APB suffered from a variety of problems. It was never able to establish a conceptual framework for financial accounting and reporting that was broadly accepted. Also, members served on the APB on a voluntary, part-time basis, so the APB was not able to act quickly enough to keep up with financial reporting issues as they developed. Perhaps the most important flaw of the APB was a perceived lack of independence. Because the APB was composed almost entirely of certified public accountants and supported by the AICPA, critics charged that the clients of the represented public accounting firms exerted self-interested pressure on the board and inappropriately influenced decisions. A related complaint was that other interest groups lacked an ability to provide input to the standard-setting process.

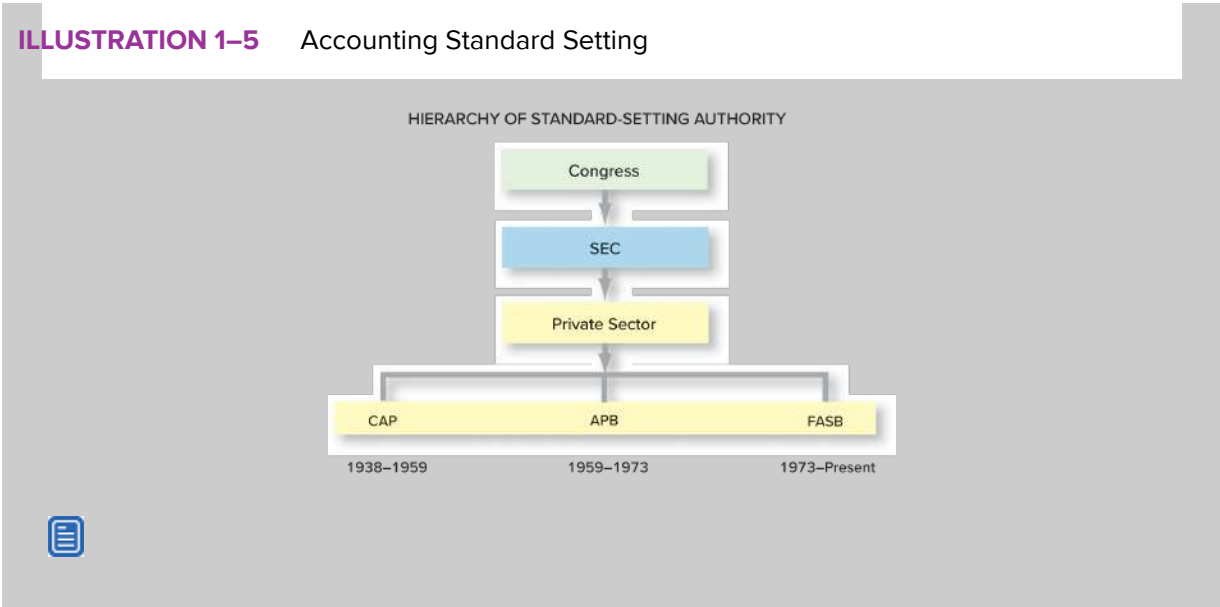

THE FASB

Criticism of the APB led to the creation in 1973 of the **Financial Accounting Standards Board (FASB)** and its supporting structure. There are seven full-time members of the FASB. FASB members represent various constituencies concerned with accounting standards, and have included representatives from the auditing profession, profit-oriented companies, accounting educators, financial analysts, and government. The FASB is supported by its parent organization, the **Financial Accounting Foundation (FAF)**, which is responsible for selecting the members of the FASB and its Financial Accounting Standards Advisory Council (FASAC), ensuring adequate funding of FASB activities and exercising general oversight of the FASB's activities.^{12,13}

The *FASB* was established to set U.S. accounting standards.

In 1984, the FASB's **Emerging Issues Task Force (EITF)** was formed to improve financial reporting by resolving narrowly defined financial accounting issues within the framework of existing GAAP. The EITF primarily addresses implementation issues, thereby speeding up the standard-setting process and allowing the FASB to focus on pervasive long-term problems. EITF rulings are ratified by the FASB and are considered part of GAAP.

 **Illustration 1-5** summarizes this discussion on accounting standards. The graphic shows the hierarchy of accounting standard setting in order of authority.

CODIFICATION

Present-day GAAP includes a huge amount of guidance. The FASB has developed a **conceptual framework** (discussed in Part B of this chapter) that is not authoritative GAAP but provides an underlying structure for the development of accounting standards. The FASB also has issued many accounting standards, currently called *Accounting Standards Updates (ASUs)* and previously called *Statements of Financial Accounting Standards (SFASs)*, as well as numerous *FASB Interpretations, Staff Positions, Technical Bulletins, and EITF Issue Consensuses*. The SEC also has issued various important pronouncements. Determining the appropriate accounting treatment for a particular event or transaction might require an accountant to research several of these sources.

To simplify the task of researching an accounting topic, in 2009 the FASB implemented its *FASB Accounting Standards Codification*. The Codification integrates and topically organizes all relevant accounting pronouncements comprising GAAP in a

The *FASB Accounting Standards Codification* is the only source of authoritative U.S. GAAP, other than rules and interpretive releases of the SEC.

searchable, online database. It represents the single source of authoritative nongovernmental U.S. GAAP, and also includes portions of SEC accounting guidance that are relevant to financial reports filed with the SEC. When the FASB issues a new ASU, it becomes authoritative when it is entered into the Codification. The Codification is organized into nine main topics and approximately 90 subtopics. The main topics and related numbering system are presented in  **Illustration 1-6**.¹⁴ The Codification can be located at www.fasb.org.

Illustration 1-6 FASB Accounting Standards Codification Topics

| FASB Accounting Standards Codification Topics | |
|---|----------|
| Topic | Numbered |
| General Principles | 100–199 |
| Presentation | 200–299 |
| Assets | 300–399 |
| Liabilities | 400–499 |
| Equity | 500–599 |
| Revenues | 600–699 |
| Expenses | 700–799 |

FASB Accounting Standards Codification Topics

| Topic | Numbered |
|--------------------|----------|
| Broad Transactions | 800–899 |
| Industry | 900–999 |

Additional Consideration

Accounting standards and the standard-setting process discussed above relate to profit-oriented organizations and nongovernmental not-for-profit entities. In 1984, the **Governmental Accounting Standards Board (GASB)** was created to develop accounting standards for governmental units such as states and cities. The FAF oversees and funds the GASB, and the Governmental Accounting Standards Advisory Council (GASAC) provides input to it.

Throughout this book, we use the Accounting Standards Codification System (ASC) in footnotes when referencing generally accepted accounting principles (FASB ASC followed by the appropriate number). Each footnote also includes a reference to the original accounting standard that is codified in the ASC.

INTERNATIONAL STANDARD SETTING

LO1–11 Discuss the primary differences between U.S. GAAP and IFRS with respect to the development of accounting standards and the conceptual framework underlying accounting standards.

Most industrialized countries have organizations responsible for determining accounting and reporting standards. In some countries, the United Kingdom, for instance, the responsible organization is a private-sector body similar to the FASB in the United States. In other countries, the organization is a governmental body. Historically, these different organizations often produced different accounting standards, which complicated accounting

by multinational companies, reduced comparability between companies using different standards, and potentially made it harder for companies to raise capital in international markets.

In response to these problems, the **International Accounting Standards Committee (IASC)** was formed in 1973 to develop global accounting standards. The IASC reorganized itself in 2001 and created a new standard-setting body called the **International Accounting Standards Board (IASB)**.

The International Accounting Standards Board (IASB) is dedicated to developing a single set of global accounting standards.

The IASB's main objective is to develop a single set of high-quality, understandable, and enforceable global accounting standards to help participants in the world's capital markets and other users make economic decisions.¹⁵

As shown in [Illustration 1-7](#), the way international standard setting is structured is similar in many respects to the way standard setting is structured in the United States.

Illustration 1-7 Comparison of Organizations of U.S. and International Standard Setters

| | U.S. GAAP | IFRS |
|---|--|---|
| Regulatory oversight provided by: | Securities Exchange Commission (SEC) | Monitoring Board |
| Foundation providing oversight, appointing members, raising funds: | Financial Accounting Foundation (FAF): 14-18 trustees | IFRS Foundation: 22 trustees |
| Standard-setting board: | Financial Accounting Standards Board (FASB): 7 members | International Accounting Standards Board (IASB): 14 members |
| Advisory council providing input on agenda and projects: | Financial Accounting Standards Advisory Council (FASAC): 30-40 members | IFRS Advisory Council: approx. 50 members |
| Group to deal with emerging issues: | Emerging Issues Task Force (EITF): approx. 15 members | IFRS Interpretations Committee: 14 members |

The IASC issued 41 International Accounting Standards (IASs), and the IASB endorsed these standards when it was formed in 2001. Since then, the IASB has revised many IASs

and has issued new standards of its own, called **International Financial Reporting Standards (IFRS)**. More and more countries are basing their national accounting standards on IFRS. By 2018, more than 120 jurisdictions, including Hong Kong, Egypt, Canada, Australia, and the countries in the European Union (EU), require or permit the use of IFRS or a local variant of IFRS.¹⁶

International Financial Reporting Standards are issued by the IASB.

EFFORTS TO CONVERGE U.S. AND INTERNATIONAL STANDARDS

Should the United States also adopt IFRS? Many argue that a single set of global standards would improve comparability of financial reporting and facilitate access to capital. In 2007, the SEC signaled its view that IFRS are of high quality by eliminating a requirement for foreign companies that issue stock in the United States to include in their financial statements a reconciliation of IFRS to U.S. GAAP. However, others argue that U.S. standards should remain customized to fit the stringent legal and regulatory requirements of the U.S. business environment. There also is concern that differences in implementation and enforcement from country to country make accounting under IFRS appear more uniform and comparable than actually is the case. Another argument is that competition between alternative standard-setting regimes is healthy and can lead to improved standards.¹⁷

The FASB and IASB worked for many years to converge to one global set of accounting standards. Much progress has occurred, and in this book you will learn about already-converged standards that deal with such topics as revenue recognition, earnings per share, share-based compensation, nonmonetary exchanges, inventory costs, and the calculation of fair value. **Where We're Headed** boxes throughout the book describe additional ongoing projects.

However, recent events suggest that full convergence will not be achieved in the foreseeable future. For example, as discussed further in Chapter 12, the FASB and IASB eventually concluded that full convergence was not possible with respect to accounting for financial instruments. While it appears likely that the FASB and IASB will continue to work together to converge where possible, some differences between IFRS and U.S. GAAP will remain.

Nonetheless, you should be aware of important differences that exist between U.S. GAAP and IFRS. Therefore, **International Financial Reporting Standards** boxes are included throughout the book to highlight circumstances in which IFRS differs from U.S. GAAP. Throughout this book, and also in the end-of-chapter questions, exercises, problems, and cases, IFRS-related material is marked with the globe icon that you see beside this paragraph. And, similar to the **Target** case, an **Air France-KLM (AF)** case is included among the Real-World Cases that accompany each chapter, so you can see how each chapter's IFRS material relates to a single, familiar company.

The Standard-Setting Process

LO1-4 Explain why establishing accounting standards is characterized as a political process.

DUE PROCESS

When developing accounting standards, a standard setter must understand the nuances of the economic transactions the standards address and the views of key constituents concerning how accounting would best capture that economic reality. Therefore, the FASB undertakes a series of elaborate information-gathering steps before issuing an Accounting Standards Update. These steps include open hearings, deliberations, and requests for written comments from interested parties.  **Illustration 1-8** outlines the FASB's standard-setting process.¹⁸

Page 13

Illustration 1-8 The FASB's Standard-Setting Process

The FASB undertakes a series of information-gathering steps before issuing an Accounting Standards Update.

Step Explanation

1. The Board identifies financial reporting issues based on requests/recommendations from stakeholders or through other means.
2. The Board decides whether to add a project to the technical agenda based on a staff-prepared analysis of the issues.

| Step | Explanation |
|------|---|
| 3. | The Board deliberates at one or more public meetings the various issues identified and analyzed by the staff. |
| 4. | The Board issues an Exposure Draft. (In some projects, a Discussion Paper may be issued to obtain input at an early stage that is used to develop an Exposure Draft.) |
| 5. | The Board holds a public roundtable meeting on the Exposure Draft, if necessary. |
| 6. | The staff analyzes comment letters, public roundtable discussion, and any other information. The Board redeliberates the proposed provisions at public meetings. |
| 7. | The Board issues an Accounting Standards Update describing amendments to the Accounting Standards Codification. |

These steps help the FASB acquire information to determine the preferred method of accounting. However, as a practical matter, this information gathering also exposes the FASB to much political pressure by various interest groups who want an accounting treatment that serves their economic best interest. As you will see later in this chapter, the FASB's concepts statements indicate that standards should present information in a neutral manner, rather than being designed to favor particular economic consequences, but sometimes politics intrudes on the standard-setting process.

POLITICS IN STANDARD SETTING

A change in accounting standards can result in a substantial redistribution of wealth within our economy. Therefore, it is no surprise that the FASB has had to deal with intense political pressure over controversial accounting standards and sometimes has changed standards in response to that pressure.

One example of the effect of politics on standard setting occurred in the mid-1990s with respect to accounting for **employee stock options**. The accounting standards in place at that time typically did not recognize compensation expense if a company paid their employees with stock options rather than cash. Yet, the company was sacrificing something of value to compensate its employees. Therefore, the FASB proposed that companies recognize compensation expense in an amount equal to the fair value of the options, with some of the

expense recognized in each of the periods in which the employee earned the options. Numerous companies (particularly in California's Silicon Valley, where high-tech companies had been compensating employees with stock options to a great extent) applied intense political pressure against this proposal, and eventually the FASB backed down and required only disclosure of options-related compensation expense in the notes to the financial statements. Nearly a decade later, this contentious issue resurfaced in a more amenable political climate, and the FASB issued a standard requiring expense recognition as originally proposed. This issue is discussed at greater length in Chapter 19.

Another example of the political process at work in standard setting is the controversy surrounding the implementation of the **fair value accounting** standard issued in 2007. Many financial assets and liabilities are reported at fair value in the balance sheet, and many types of fair value changes are included in net income. Some have argued that fair values were estimated in a manner that exacerbated the financial crisis of 2008–2009 by forcing financial institutions to take larger than necessary write-downs of financial assets in the illiquid markets that existed at that time. As discussed further in Chapter 12, pressure from lobbyists and politicians influenced the FASB to revise its guidance on recognizing investment losses in these situations, and ongoing pressure remains to reduce the extent to which fair value changes are included in the determination of net income.

LO1–11 Discuss the primary differences between U.S. GAAP and IFRS with respect to the development of accounting standards and the conceptual framework underlying accounting standards.

International Financial Reporting Standards

Politics in International Standard Setting. Political pressures on the IASB's standard-setting process are severe. Politicians from countries that use IFRS lobby for the standards they prefer. The European Union (EU) is a particularly important adopter of IFRS and utilizes a formal evaluation process for determining whether an IFRS

standard will be endorsed for use in EU countries. Economic consequences for EU member nations are an important consideration in that process.

For example, in 2008 the EU successfully pressured the IASB to suspend its due process and immediately allow reclassification of investments so that EU banks could avoid recognizing huge losses during a financial crisis.¹⁹ Commenting on standards setting at that time, Charlie McCreevy, European Commissioner for Internal Markets and Service, stated that “Accounting is now far too important to be left to . . . accountants!”²⁰

Additional Consideration

Private Company Council (PCC). Are the complex, comprehensive standards that are necessary to reflect the activities of a huge multinational conglomerate like **General Electric** also appropriate for a private company that, say, just needs to provide financial statements to its bank to get a loan? Private companies might be able to avoid much of that complexity. They don’t sell securities like stocks and bonds to the general public, and they usually can identify the information needs of the specific users who rely on their financial statements and provide direct access to management to answer questions. Private companies typically also have a smaller accounting staff than do public companies. For those reasons, private companies have long sought a version of GAAP that is less costly to apply and better meets the information needs of the users of their financial statements.

In 2012, the Financial Accounting Foundation responded to this concern by establishing the Private Company Council (PCC). The ten-member PCC determines whether changes to existing GAAP are necessary to meet the needs of users of private company financial statements, but a proposed exception or modification for private companies must be endorsed by the FASB before being issued as an Accounting Standards Update and added to the Codification. The PCC also advises the FASB about its current projects that affect private companies.

Encouraging High-Quality Financial Reporting

LO1–5 Explain factors that encourage high-quality financial reporting.

Numerous factors affect the quality of financial reporting. In this section, we discuss the role of the auditor, recent reforms in financial reporting, and the debate about whether accounting standards should emphasize rules or underlying principles.

The Role of the Auditor

It is the responsibility of management to apply GAAP appropriately. Another group, **auditors**, examine (audit) financial statements to express a professional, independent opinion about whether the statements fairly present the company’s financial position, its results of operations, and its cash flows in compliance with GAAP. Audits add credibility to the financial statements, increasing the confidence of those who rely on the information. Auditors, therefore, play an important role in the capital markets.

Auditors express an opinion on the compliance of financial statements with GAAP.

Most companies receive what’s called an unmodified audit report. For example, **Apple Inc.’s** 2019 audit report by **Ernst & Young LLP** states, “In our opinion, the financial statements present fairly, in all material respects, the financial position of Apple Inc. at September 28, 2019, and September 29, 2018, and the results of its operations and its cash flows for each of the three years in the period ended September 28, 2019, in conformity with U.S. generally accepted accounting principles.” This is known as a clean opinion. Had there been any material departures from GAAP or other problems that caused the auditors to question the fairness of the statements, the report would have been modified to inform readers. Normally, companies correct any material misstatements that auditors identify in the course of an audit, so companies usually receive clean opinions. Starting in 2019, audit reports also include descriptions of critical audit matters (CAMs), including discussion of how the CAM was addressed in the audit. For example, Apple’s audit opinion included discussion of an uncertain tax position and the audit procedures that EY used with respect

to the position.⁴¹ The audit report for public companies also provides the auditors' opinion on the effectiveness of the company's internal control over financial reporting.

In most states, only individuals licensed as **certified public accountants (CPAs)** can represent that the financial statements have been audited in accordance with generally accepted auditing standards.

Certified public accountants (CPAs) are licensed by states to provide audit services.

Requirements to be licensed as a CPA vary from state to state, but all states specify education, testing, and experience requirements. The testing requirement is to pass the Uniform CPA Examination.

Financial Reporting Reform

The dramatic collapse of **Enron** in 2001 and the dismantling of the international public accounting firm of **Arthur Andersen** in 2002 severely shook U.S. capital markets. The credibility of the accounting profession itself as well as of corporate America was called into question. Public outrage over accounting scandals at high-profile companies like **WorldCom**, **Xerox**, **Merck**, **Adelphia Communications**, and others increased the pressure on lawmakers to pass measures that would restore credibility and investor confidence in the financial reporting process.

Driven by these pressures, Congress acted swiftly and passed the *Public Company Accounting Reform and Investor Protection Act of 2002*, commonly referred to as the *Sarbanes-Oxley Act*, or *SOX*, for the two members of Congress who sponsored the bill. SOX applies to public securities-issuing entities. SOX created the Public Company Accounting Oversight Board (PCAOB) to regulate auditors and the types of non-audit services they furnish to clients and requires rotation of the lead partner on an audit every five years. It also increases accountability of corporate executives, addresses conflicts of interest for securities analysts, and provides for stiff criminal penalties for violators.

Section 404 is perhaps the most controversial provision of SOX. It requires that company management document internal controls and report on their adequacy. Auditors also must express an opinion on whether the company has maintained effective control over financial reporting. We revisit Section 404 in [Chapter 7](#) in the context of an introduction to internal controls.

A Move Away from Rules-Based Standards?

The accounting scandals at Enron and other companies involved managers using elaborately structured transactions to try to circumvent specific rules in accounting standards. One consequence of those scandals was a rekindled debate over **principles-based**, or more recently termed **objectives-oriented**,

A principles-based, or objectives-oriented, approach to standard-setting stresses professional judgment, as opposed to following a list of rules.

versus **rules-based accounting standards**. In fact, a provision of the Sarbanes-Oxley Act required the SEC to study the issue and provide a report to Congress on its findings. That report, issued in July 2003, recommended that accounting standards be developed using an objectives-oriented approach.²²

An objectives-oriented approach to standard setting emphasizes using professional judgment, as opposed to following a list of rules, when choosing how to account for a transaction. Proponents of an objectives-oriented approach argue that a focus on professional judgment means that there are few rules to sidestep and we are more likely to arrive at an appropriate accounting treatment. On the other hand, detractors argue that the absence of detailed rules opens the door to even more abuse, because management can use the latitude provided by objectives to justify their preferred accounting approach. Even in the absence of intentional misuse, reliance on professional judgment might result in different interpretations for similar transactions, raising concerns about comparability. Also, detailed rules help auditors withstand pressure from clients who want a more favorable accounting treatment and help companies ensure that they are complying with GAAP and avoid litigation or SEC inquiry. For these reasons, it's challenging to avoid providing detailed rules in the U.S. reporting environment.

Page 16

Regardless of whether accounting standards are based more on rules or on objectives, prior research highlights that there is some potential for abuse, either by structuring transactions around precise rules or opportunistically interpreting underlying principles.²³ The key is whether management is dedicated to high-quality financial reporting. It appears that poor ethical values on the part of management are at the heart of accounting abuses and scandals, so we now turn to a discussion of ethics in the accounting profession.

Ethics in Accounting

Ethics is a term that refers to a code or moral system that provides criteria for evaluating right and wrong.

Ethics deals with the ability to distinguish right from wrong.

An ethical dilemma is a situation in which an individual or group is faced with a decision that tests this code. Many of these dilemmas are simple to recognize and resolve. For example, have you ever been tempted to call your professor and ask for an extension on the due date of an assignment by claiming a pretended illness? Temptation like this will test your personal ethics.

Accountants, like others in the business world, are faced with many ethical dilemmas, some of which are complex and difficult to resolve. For instance, the capital markets' focus on near-term profits may tempt a company's management to bend or even break accounting rules to inflate reported net income. In these situations, technical competence is not enough to resolve the dilemma.

ETHICS AND PROFESSIONALISM

One characteristic that distinguishes a profession from other occupations is the acceptance by its members of a responsibility for the interests of those it serves. Ethical behavior is expected of those engaged in a profession. That expectation often is articulated in a code of ethics. For example, law and medicine are professions that have their own codes of professional ethics. These codes provide guidance and rules to members in the performance of their professional responsibilities.

Public accounting has achieved widespread recognition as a profession. The AICPA, the national organization of certified public accountants, has its own Code of Professional Conduct that prescribes the ethical conduct members should strive to achieve. Similarly, the **Institute of Management Accountants (IMA)**—the primary national organization of accountants working in industry and government—has its own code of ethics, as does the **Institute of Internal Auditors**—the national organization of accountants providing internal auditing services for their own organizations.

ANALYTICAL MODEL FOR ETHICAL DECISIONS

Ethical codes are informative and helpful, but the motivation to behave ethically must come from within oneself and not just from the fear of penalties for violating professional codes.

 **Illustration 1-9** presents a sequence of steps that provide a framework for analyzing

ethical issues. These steps can help you apply your own sense of right and wrong to ethical dilemmas:²⁴

Illustration 1–9 Framework for Resolving an Ethical Dilemma

- Step 1.** Determine the facts of the situation. This involves determining the who, what, where, when, and how.
- Step 2.** Identify the ethical issue and the stakeholders. Stakeholders may include shareholders, creditors, management, employees, and the community.
- Step 3.** Identify the values related to the situation. For example, in some situations confidentiality may be an important value that might conflict with the right to know.
- Step 4.** Specify the alternative courses of action.
- Step 5.** Evaluate the courses of action specified in step 4 in terms of their consistency with the values identified in step 3. This step may or may not lead to a suggested course of action.
- Step 6.** Identify the consequences of each possible course of action. If step 5 does not provide a course of action, assess the consequences of each possible course of action for all of the stakeholders involved.
- Step 7.** Make your decision and take any indicated action.

Ethical Dilemma

You recently have been employed by a large retail chain that sells sporting goods. One of your tasks is to help prepare periodic financial statements for external distribution. The chain's largest creditor, National Savings & Loan, requires quarterly financial statements, and you are currently working on the statements for the three-month period ending June 30, 2024.

During the months of May and June, the company spent \$1,200,000 on a hefty radio and TV advertising campaign. The \$1,200,000 included the costs of producing the commercials as well as the radio and TV time purchased to air the commercials. All of the costs were charged to advertising expense. The company's chief financial officer (CFO) has asked you to prepare a June 30 adjusting entry to remove the costs from advertising expense and to set up an asset called *prepaid advertising* that will be expensed in July. The CFO explained that "This advertising campaign has led to significant sales in May and June and I think it will continue to bring in customers through the month of July. By recording the ad costs as an asset, we can match the cost of the advertising with the additional July sales. Besides, if we expense the advertising in May and June, we will show an operating loss on our income statement for the quarter. The bank requires that we continue to show quarterly profits in order to maintain our loan in good standing."

Ethical dilemmas are presented throughout this book. The analytical steps outlined in  **Illustration 1-9** provide a framework you can use to evaluate these situations.

PART B

The Conceptual Framework

LO1-6 Explain the purpose of the conceptual framework.

Sturdy buildings are built on sound foundations. The U.S. Constitution is the foundation for the laws of our land. The **conceptual framework** has been described as an “Accounting Constitution” because it provides the underlying foundation for U.S. accounting standards. The conceptual framework provides structure and direction to financial accounting and reporting but does not directly prescribe GAAP. It is a coherent system of interrelated objectives and fundamentals that is intended to lead to consistent standards and that prescribes the nature, function, and limits of financial accounting and reporting. The fundamentals are the underlying concepts of accounting that guide the selection of events to be accounted for, the measurement of those events, and the means of summarizing and communicating them to interested parties.²⁵

Page 18

The *conceptual framework* does not prescribe GAAP. It provides an underlying foundation for accounting standards.

The FASB disseminates this framework through *Statements of Financial Accounting Concepts (SFACs)*. *SFAC 8* discusses the objective of financial reporting and the qualitative characteristics of useful financial information. *SFAC 7* describes how cash flows and present values are used when making accounting measurements, *SFAC 6* defines the accounts and accrual accounting concepts that appear in financial statements, and *SFAC 5* discusses recognition and measurement concepts. Earlier *SFACs* either have been superseded or involve nonbusiness organizations that aren’t considered in this book.

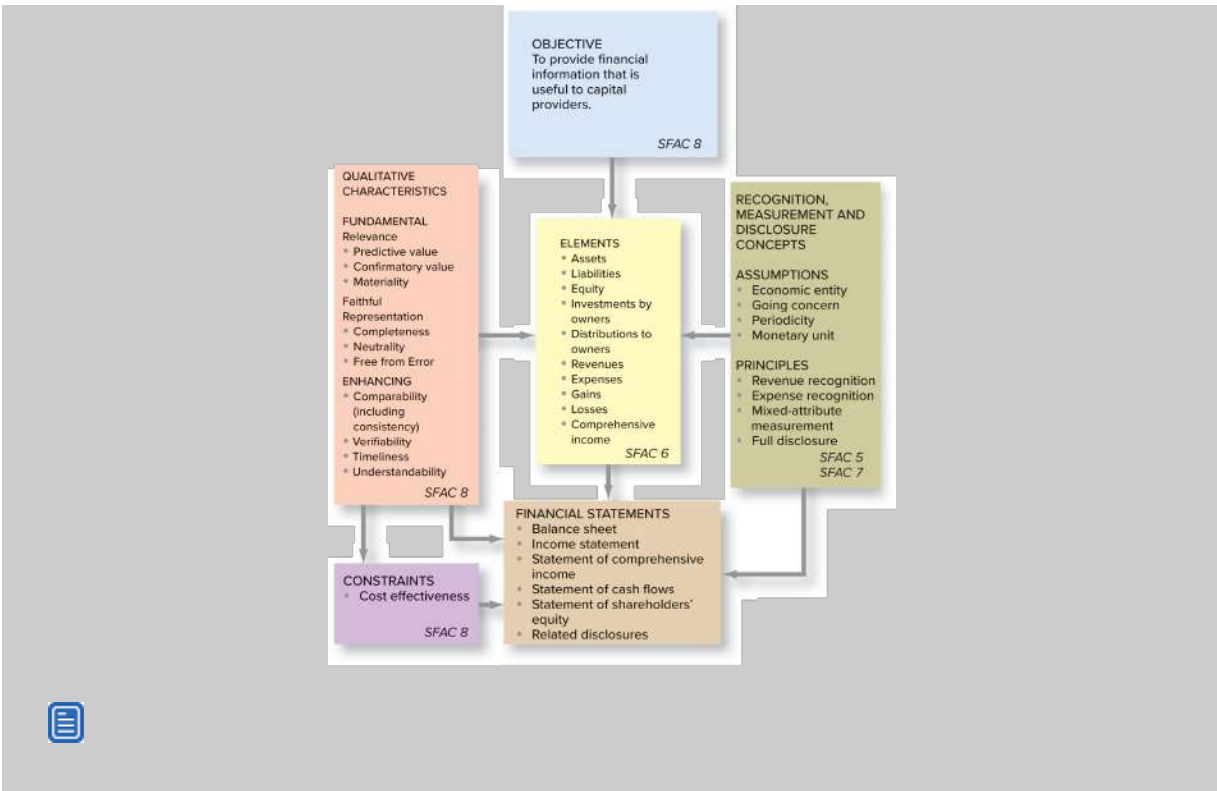

In the remainder of this section we discuss the components of the conceptual framework, as depicted in  **Illustration 1-10**.

ILLUSTRATION 1-10 The Conceptual Framework

International Financial Reporting Standards

Role of the conceptual framework. The conceptual frameworks in U.S. GAAP and IFRS are very similar and are converging even more with ongoing efforts by the FASB and IASB. However, in U.S. GAAP, the conceptual framework primarily provides guidance to standard setters to help them develop high-quality standards. In IFRS, the conceptual framework guides standard setting, but in addition it provides a basis for practitioners to make accounting judgments when another IFRS standard does not apply.

LO1.11 Discuss the primary differences between U.S. GAAP and IFRS with respect to the development of accounting standards and the conceptual

framework underlying accounting standards.

Objective of Financial Reporting

LO1–7 Identify the objective and qualitative characteristics of financial reporting information and the elements of financial statements.

As indicated in  **Part A** of this chapter, the objective of general purpose financial reporting is to provide financial information about companies that is useful to capital providers in making decisions. For example, investors decide whether to buy, sell, or hold equity or debt securities, and creditors decide whether to provide or settle loans. Information useful to capital providers may also be useful to other users of financial reporting information, such as regulators or taxing authorities.

Investors and creditors are interested in the amount, timing, and uncertainty of a company's future cash flows. Information about a company's economic resources (assets) and claims against resources (liabilities) also is useful. Not only does this information about resources and claims provide insight into future cash flows, it also helps decision makers identify the company's financial strengths and weaknesses and assess liquidity and solvency.

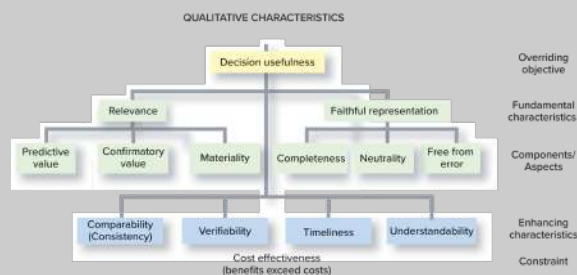

Qualitative Characteristics of Financial Reporting Information

What characteristics should information have to best meet the objective of financial reporting?

 **Illustration 1-11** indicates the desirable qualitative characteristics of financial reporting information, presented in the form of a hierarchy of their perceived importance. Notice that these characteristics are intended to enhance the **decision usefulness** of information.

Decision usefulness requires that information possess the qualities of *relevance* and *faithful representation*.

ILLUSTRATION 1-11 Hierarchy of Qualitative Characteristics of Financial Information

Fundamental Qualitative Characteristics

For financial information to be useful, it should possess the fundamental decision-specific qualities of **relevance** and **faithful representation**. Both are critical. Information is of little value if it's not relevant. And even if information is relevant, it is not as useful if it doesn't faithfully represent the economic phenomenon it purports to represent. Let's look closer at each of these two qualitative characteristics, including the components that make those characteristics desirable. We also consider other characteristics that enhance usefulness.

RELEVANCE

Obviously, to make a difference in the decision process, information must be relevant to the decision. Relevance in the context of financial reporting means that information must possess **predictive value** and/or **confirmatory value**, typically both. For example, current-period net income has predictive

Relevance requires that information have predictive and confirmatory value.

value if it helps users predict a company's future cash flows, and it has confirmatory value if it helps investors confirm or change their prior assessments regarding a company's cash-flow generating ability. Predictive and confirmatory value are central to the concept of "earnings quality," the ability of reported earnings (income) to predict a company's future earnings.

Financial information is **material** if it is probable that including or correcting the information would affect a user's judgment decisions. Materiality is an aspect of relevance that depends on a company's particular situation and is based on the nature or magnitude of the item that is being reported. Recall that **Apple Inc.**'s audit report discussed earlier only expressed an opinion about material items. If information is immaterial, it's not relevant.

Information is *material* if it could affect user's judgment.

The threshold for materiality often depends on the *relative* dollar amount of the transaction. For example, \$10,000 in total anticipated bad debts for a multibillion dollar company would not be considered material. This same \$10,000 amount, however, might easily be material for a neighborhood pizza parlor. Because of the context-specific nature of materiality, the FASB has been reluctant to establish any quantitative materiality guidelines. The threshold for materiality has been left to the subjective judgment of the company preparing the financial statements and its auditors.

Materiality often relates to the nature of the item as well. It has to be evaluated in light of surrounding circumstances, and it depends on qualitative as well as quantitative considerations. For example, an illegal payment of a \$10,000 bribe to an official of a foreign government to secure a valuable contract probably would be considered material qualitatively even if the amount is small relative to the size of the company. Similarly, a small dollar amount that changes a net loss to a net income for the reporting period could be viewed as material to financial statement users for qualitative reasons.

Professional judgment determines what amount is material in each situation.

FAITHFUL REPRESENTATION

Faithful representation exists when there is agreement between a measure or description and the real-world phenomenon it purports to represent. For example, the term *inventory* in the balance sheet of a retail company is understood by external users to represent items that are intended for sale in the ordinary course of business. If inventory includes, say, accounts receivable, it lacks faithful representation.

Faithful representation means agreement between a measure and a real-world phenomenon that the measure is supposed to represent.

To break it down further, faithful representation requires that information be *complete, neutral, and free from error*. A depiction of an economic phenomenon is **complete** if it includes all the information necessary for

A depiction is *complete* if it includes all information necessary for faithful representation.

faithful representation of the economic phenomenon that it purports to represent. Omitting a portion of that information can cause it to be false or misleading.

A financial accounting standard, and the standard-setting process, is **neutral** if it is free from bias. You learned earlier that changes in accounting standards

Neutral implies freedom from bias.

can lead to adverse economic consequences for certain companies and that political pressure is sometimes brought to bear on the standard-setting process in hopes of achieving particular outcomes. Accounting standards should be established with the goal of providing high-quality information and should not try to achieve particular social outcomes or favor particular groups or companies. The FASB faces a difficult task in maintaining neutrality in the face of economic consequences and resulting political pressures.

Representational faithfulness also is enhanced if information is **free from error**, meaning that there are no errors or omissions in the description of the amount or the process used to report the amount.

Information is *free from error* if it contains no errors or omissions.

Uncertainty is a fact of life when we measure many items of financial information included in financial statements. Estimates are common, and some inaccuracy is likely. An estimate is represented faithfully if it is described clearly and accurately as being an estimate, and financial statement users are given enough information to understand the potential for inaccuracy that exists.

Many accountants have recommended that we deal with the potential for error by employing **conservatism**. Conservatism means that accountants require greater

Conservatism requires greater verification for good news than bad news.

verification before recognizing good news than bad news. The result is that losses are reflected in net income more quickly than are gains, and net assets tend to be biased downwards.

SFAC 8 explicitly rejects conservatism as a desirable characteristic of accounting information, stating that conservatism undermines representational faithfulness by being inconsistent with neutrality. Nevertheless, some accounting practices appear to be generated by a desire to be conservative. For example, companies are required to recognize losses for declines in the value of inventory, buildings, and equipment, but aren't allowed to recognize gains for increases in those values. One justification for these practices is that investors and creditors who lose money on their investments are less likely to sue the company if bad news has been exaggerated and good news underestimated. Another justification is that conservative accounting can trigger debt covenants that allow creditors to protect themselves from bad management. So, despite the lack of support for conservatism in the conceptual framework, it is likely to persist as an important consideration in accounting practice and in the application of some accounting standards.

Enhancing Qualitative Characteristics

 **Illustration 1-11** identifies four *enhancing* qualitative characteristics: *comparability* (including *consistency*), *verifiability*, *timeliness*, and *understandability*.

Comparability helps users see similarities and differences between events and conditions. We already have discussed the importance of investors and creditors being able to compare information *among companies* to make their resource allocation decisions. Closely related to comparability is the notion that **consistency** of accounting practices over time permits valid comparisons *among different reporting periods*. The predictive and confirmatory value of information is enhanced if users can compare the performance of a company over time.²⁶ Companies typically include as Note 1 to the financial statements a summary of significant accounting policies and provide full disclosure of any changes in those policies to alert users to the potential for diminished consistency.

Information is **comparable** if similar items are treated the same way and different items are treated differently.

Information is **consistent** if it is measured and reported the same way in each time period.

Verifiability implies that different knowledgeable and independent measurers would reach consensus

Information is **verifiable** if different measurers would reach

regarding whether information is a faithful representation of what it is intended to depict. Direct verification involves observing the item being depicted.

consensus about whether it is representationally faithful.

For example, the historical cost of a parcel of land to be reported in a company's balance sheet usually is highly verifiable. The cost can be traced to an exchange transaction, the purchase of the land. On the other hand, the fair value of that land is much more difficult to verify. Appraisers could differ in their assessment of fair value. Verification of their estimates would be indirect, involving examination of their valuation models and assessments of the reasonableness of model inputs. The term *objectivity* often is linked to verifiability. The historical cost of the land is objective and easy to verify, but the land's fair value is subjective and may be influenced by the measurer's past experience and biases. A measurement that is subjective is more difficult to verify, which may make users doubt its representational faithfulness.

Timeliness also is important for information to be useful. Information is timely when it's available to users early enough to allow them to use it in their decision process. To enhance timeliness, the SEC requires its registrants to submit financial statement information on a quarterly as well as on an annual basis for each fiscal year.

Page 22

Information is *timely* if it is available to users before a decision is made.

Understandability means that users must be able to comprehend the information within the context of the decision being made. This is a user-specific quality because users will differ in their ability to comprehend any set of information. The overriding objective of financial reporting is to provide comprehensible information to those who have a *reasonable understanding* of business and economic activities and are diligent in studying the information.

Information is *understandable* if users can comprehend it.

Key Constraint: Cost Effectiveness

Most of us learn early in life that we can't get everything we want. The latest electronic gadget may have all the qualitative characteristics that current technology can provide, but limited resources may lead us to buy a model with fewer bells and whistles. **Cost ef**

Information is *cost effective* if the benefit of increased *decision usefulness* exceeds the costs of providing that information.

fectiveness constrains the accounting choices we make. The benefits of endowing financial

information with all the qualitative characteristics we've discussed must exceed the costs of doing so.

The costs of providing financial information include those of gathering, processing, and disseminating information. There also are costs to users when interpreting information. In addition, costs include possible adverse economic consequences of

implementing accounting standards. For example, consider the requirement that companies having more than one operating segment must disclose certain disaggregated financial information.²⁷ In addition to the costs of information gathering, processing, and communicating that information, many companies feel that this reporting requirement imposes what could be called *competitive disadvantage costs*. These companies are concerned that their competitors will gain some advantage from having access to the disaggregated data.

The costs of providing financial information include any possible adverse economic consequences of accounting standards.

The perceived benefit from this or any accounting standard is increased *decision usefulness* of the information provided, which, ideally, improves the resource allocation process. It is inherently impossible to quantify this benefit. The elaborate information-gathering process undertaken by the FASB in setting accounting standards is an attempt to assess both costs and benefits of a proposed accounting standard, even if in a subjective, nonquantifiable manner.

Elements of Financial Statements

SFAC 6 defines 10 elements of financial statements.

These elements are “the building blocks with which financial statements are constructed—the classes of items that financial statements comprise.”²⁸ They

focus directly on items related to reporting financial

position and measuring performance. The *accrual accounting* model is embodied in the

element definitions. For now, we list and define the elements in  **Illustration 1-12**. You will learn much more about these elements in subsequent chapters.

The 10 elements of financial statements defined in *SFAC 6* describe financial position and periodic performance.

Illustration 1-12 Elements of Financial Statements

| Elements of Financial Statements | |
|----------------------------------|--|
| Assets | Probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. |
| Liabilities | Probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events. |
| Equity (or net assets) | Called shareholders' equity or stockholders' equity for a corporation, it is the residual interest in the assets of an entity that remains after deducting its liabilities. |
| Investments by owners | Increases in equity of a particular business enterprise resulting from transfers to it from other entities of something of value to obtain or increase ownership interests in it. |
| Distributions to owners | Decreases in equity of a particular enterprise resulting from transfers to owners. |
| Comprehensive income | The change in equity of a business enterprise during a period from transactions and other events and circumstances from nonowner sources. It includes all changes in equity during a period except |

Elements of Financial Statements

| | |
|-----------------|--|
| | those resulting from investments by owners and distributions to owners. |
| Revenues | Inflows or other enhancements of assets of an entity or settlements of its liabilities during a period from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations. |
| Expenses | Outflows or other using up of assets or incurrences of liabilities during a period from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations. |
| Gains | Increases in equity from peripheral or incidental transactions of an entity. |
| Losses | Represent decreases in equity arising from peripheral or incidental transactions of an entity. |

Underlying Assumptions

LO1–8 Describe the four basic assumptions underlying GAAP.

Though not emphasized in the FASB’s concepts statements, four basic assumptions underlie GAAP: (1) the economic entity assumption, (2) the going concern assumption, (3) the periodicity assumption, and (4) the monetary unit assumption. These assumptions identify the entity that is being reported on, the assumption that the entity will continue to exist, and the frequency and denomination in which reports occur.

 **Illustration 1-13** summarizes the four assumptions underlying GAAP.

Illustration 1-13 Summary of Assumptions Underlying GAAP

| Assumptions | Description |
|-----------------|--|
| Economic entity | All economic events can be identified with a particular economic entity. |
| Going concern | In the absence of information to the contrary, it is anticipated that a business entity will continue to operate indefinitely. |
| Periodicity | The life of a company can be divided into artificial time periods to provide timely information to external users. |
| Monetary unit | In the United States, financial statement elements should be measured in terms of the U.S. dollar. |

Economic Entity Assumption

The **economic entity assumption** presumes that all economic events can be identified with a particular *economic entity*. Investors desire information about an economic entity that corresponds to their ownership interest. For example, if you were considering buying

The economic entity assumption presumes that economic events can be identified with a particular economic entity.

some ownership stock in **Alphabet** (the parent company of **Google**), you would want information on the various operating units that constitute Alphabet. You would need information not only about its United States operations but also about its European and other international operations. The financial information for the various companies (subsidiaries) in which Alphabet owns a controlling interest (greater than 50% ownership of voting stock) should be combined with that of Alphabet (the parent) to provide a complete picture. The parent and its subsidiaries are separate *legal* entities but one *accounting* entity.

Another key aspect of this assumption is the distinction between the economic activities of owners and those of the company. For example, the economic activities of a sole proprietorship, the Midori Restaurant, should be separated from the activities of its owner. The owner's personal residence, for instance, is not an asset of the business.

Going Concern Assumption

Another necessary assumption is that, in the absence of information to the contrary, we anticipate that a business entity will continue to operate indefinitely.

The *going concern assumption* presumes that a business will operate indefinitely.

Accountants realize that the **going concern assumption** does not always hold since there certainly are many business failures. However, this assumption is critical to many broad and specific accounting principles. For example, the assumption provides justification for measuring many assets based on their historical costs. If it were known that an enterprise would cease operations in the near future, assets and liabilities would be measured at their current liquidation values. Similarly, when we depreciate a building over an estimated life of 40 years, we assume the business will operate that long.

Periodicity Assumption

The **periodicity assumption** relates to the qualitative characteristic of *timeliness*. External users need *periodic* information to make decisions. This need for periodic information requires that the economic life of a company (presumed to be indefinite) be divided into artificial time periods for financial reporting. Corporations whose securities are publicly traded are required to provide financial information to the SEC on a quarterly and annual

The *periodicity assumption* allows the life of a company to be divided into artificial time periods to provide timely information.

basis.²⁹ Financial statements often are prepared on a monthly basis for banks and others that might need more timely information.

For many companies, the annual time period (the fiscal year) is the calendar year. However, other companies have chosen a fiscal year that does not correspond to the calendar year. The accounting profession and the SEC advocate that companies adopt a fiscal year that corresponds to their natural business year. A natural business year is the 12-month period that ends when the business activities of a company reach their lowest point in the annual cycle. For example, many retailers, such as **Walmart**, have adopted a fiscal year ending around January 31. Business activity in January generally is quite slow following the very busy Christmas period. The **Campbell Soup Company**'s fiscal year ends in July; **Clorox**'s in June; and **Monsanto**'s in August.

Monetary Unit Assumption

The **monetary unit assumption** requires that financial statement elements be measured in nominal units of money, without any adjustment for changes in purchasing power. In the United States, the U.S. dollar is the monetary unit used in financial statements. In the European Union (EU), the euro is the monetary unit. Various countries use other currencies as their monetary units.

The *monetary unit assumption* states that financial statement elements should be measured in a particular monetary unit (in the United States, the U.S. dollar).

One problem with use of a monetary unit like the dollar or the euro is that it is presumed to be stable over time. That is, the value of the dollar, in terms of its ability to purchase certain goods and services, is assumed to be constant over time. This assumption obviously does not strictly hold. The U.S. economy has experienced periods of rapidly changing prices. To the extent that prices are unstable, and machines, trucks, and buildings were purchased at different times, the monetary unit used to measure them is not the same. The effect of changing prices on financial information generally is discussed elsewhere in your accounting curriculum, often in an advanced accounting course.

Recognition, Measurement, and Disclosure Concepts

LO1–9 Describe the recognition, measurement, and disclosure concepts that guide accounting practice.

Now that we have identified the various elements and underlying assumptions of the financial statements, we discuss *when* the elements should be recognized (recorded) and how they should be *measured* and *disclosed*. For example, an asset was previously defined as a probable future economic benefit obtained or controlled by a company as a result of past transactions or events. But *when* should the asset be recorded, at *what* amount, and what other important information about the asset should be provided in the financial statements? *SFAC 5* addresses these issues. **Recognition** refers to the process of admitting information into the financial statements. **Measurement** is the process of associating numerical amounts with the elements. **Disclosure** refers to including pertinent information in the financial statements and accompanying notes.

Page 25

Recognition

GENERAL RECOGNITION CRITERIA

According to *SFAC 5*, an item should be recognized in the basic financial statements when it meets the following four criteria, subject to a cost effectiveness constraint and materiality threshold:

Recognition criteria determine whether items should be included in the financial statements.

1. *Definition*. The item meets the definition of an element of financial statements.
2. *Measurability*. The item has a relevant attribute measurable with sufficient reliability.
3. *Relevance*. The information about it is capable of making a difference in user decisions.
4. *Reliability*. The information is representationally faithful, verifiable, and neutral.³⁰

SFAC 5 provides further guidance with respect to revenue and expense recognition, and you will learn about more specific guidelines throughout this book.

REVENUE RECOGNITION

Revenues are inflows of assets or settlements of liabilities resulting from providing a product or service to a customer. An income statement should report the results of these activities only for the time period specified in the financial statements. Therefore, the

Revenues are inflows of assets or settlements of liabilities as a result of providing goods or services to customers.

timing of revenue recognition is a key element of earnings measurement. Not adhering to revenue recognition criteria could result in overstating revenue and hence net income in one reporting period and, consequently, understating revenue and net income in another period.

Until recently, revenue recognition was guided by the *realization principle*, which requires that two criteria be satisfied before revenue can be recognized:

1. The earnings process is judged to be complete or virtually complete.
2. There is reasonable certainty as to the collectibility of the asset to be received (usually cash).

As discussed further in [Chapter 6](#), *ASU No. 2014-09* changed how we determine the timing and measurement of revenue.³¹ That standard requires that companies recognize revenue when goods or services are transferred to customers for the amount the company expects to be entitled to receive in exchange for those goods or services. Revenue is recognized at a point in time or over a period of time, depending on when goods or services are transferred to customers. For example, revenue for the sale of most goods is recognized upon delivery, but revenue for services like renting apartments or lending money is recognized over time as those services are provided. No revenue is recognized if it isn't probable that the seller will collect the amounts it's entitled to receive. While that standard doesn't rely on the realization principle, you can see that aspects of the realization principle remain—we still focus on the seller fulfilling its obligations to its customers, and before revenue can be recognized we still require a relatively high likelihood that the seller will be paid.

Notice that these criteria help implement the accrual accounting model. Revenue is recognized when the seller transfers goods or services to a customer, which isn't necessarily at the same time the seller is paid by the customer.

The timing of revenue recognition also affects the timing of asset recognition. When revenue is recognized by crediting a revenue account, the corresponding debit typically increases some asset, usually cash or an account receivable.

EXPENSE RECOGNITION

Expenses are outflows or other using up of assets or incurrences of liabilities from providing goods or services. When are expenses recognized? In practice, expense recognition often matches revenues and

Expenses are outflows or other using up of assets or incurrences of liabilities from providing goods or services.

expenses that arise from the same transactions or other events.³² There is a cause-and-effect relationship between revenue and expense recognition implicit in this approach. The net result is a measure—net income—that identifies the amount of profit or loss for the period provided by operations.

Although these concepts are straightforward, their implementation can be difficult, because many expenses are not incurred *directly* to produce a particular amount of revenue. Instead, the association between revenue and many expenses is indirect. Therefore, expense recognition is implemented by one of four different approaches, depending on the nature of the specific expense.³³

- **Based on an exact cause-and-effect relationship.** This approach is appropriate for *cost of goods sold*, as one example. There is a definite cause-and-effect relationship between **PetSmart**'s revenue from selling dog food and its costs to purchase that dog food from suppliers. Commissions paid to salespersons for obtaining revenues also is an example of an expense recognized based on this approach.
- **By associating an expense with the revenues recognized in a specific time period.** Many expenses can be related only to periods of time during which revenue is earned. For example, the monthly salary paid to an office worker is not directly related to any specific revenue event. Instead, the employee provides benefits to the company for that one month that *indirectly* relate to the revenue recognized in that same period.
- **By a systematic and rational allocation to specific time periods.** Some costs are incurred to acquire assets that provide benefits to the company for more than one reporting period, so we recognize expenses over those time periods. For example, straight-line depreciation is a "systematical and rational" way to allocate the cost of equipment to the periods in which that equipment is used to produce revenue.
- **In the period incurred, without regard to related revenues.** Sometimes costs are incurred, but it is impossible to determine in which period or periods, if any, related revenues will occur. For example, let's say **Google** spends \$1 million for a series of television commercials. It's difficult to determine when, how much, or even whether additional

revenues occur as a result of that particular series of ads. As a result, we recognize advertising expenditures as expenses in the period incurred.

The timing of expense recognition also affects the timing of asset and liability recognition and de-recognition. When we debit an expense, the corresponding credit usually either decreases an asset (for example, decreasing cash because it was used to pay an employee's salary) or increases a liability (for example, increasing salaries payable to accrue wages that will be paid at a later date).

Measurement

If an amount is to be recognized, it also must be measured. As indicated in *SFAC 5*, GAAP currently employs a "mixed attribute" measurement model. If you look at a balance sheet, for instance, you might see land measured at historical cost, inventory at net realizable value, a liability at the present value of future cash payments, and an investment at fair value. The attribute chosen to measure a particular item should be the one that maximizes the combination of relevance and representational faithfulness. *SFAC 5* lists five measurement attributes employed in GAAP:

Page 27

1. Historical cost
2. Net realizable value
3. Current cost
4. Present (or discounted) value of future cash flows
5. Fair value

These different measurement attributes often indicate the same amount, particularly when the amount is initially recognized. However, sometimes they differ in important ways.

HISTORICAL COST

We often measure assets and liabilities based on their *original transaction value*, that is, their **historical cost**. Some accountants refer to this practice as applying the *historical cost principle*. For an asset, historical cost equals the value of what is given in exchange (usually cash) for the asset at its initial acquisition. For liabilities, it is the current cash equivalent received in

Historical cost bases measurements on the amount given or received in the original exchange transaction.

Depreciated (or amortized) cost reduces historical cost to reflect

exchange for assuming the liability. Historical cost for long-lived, revenue-producing assets such as equipment typically is adjusted subsequent to its initial measurement by recognizing depreciation or amortization. Such assets are said to be measured at **depreciated (or amortized) cost**.

depreciation (or amortization) recognized to date.

Why base measurement on historical costs? First, historical cost provides important cash flow information as it represents the cash or cash equivalent paid for an asset or received in exchange for the assumption of a liability. Second, because historical cost valuation is the result of an exchange transaction between two independent parties, the agreed-upon exchange value is objective and highly verifiable.

NET REALIZABLE VALUE

Some assets are measured at their **net realizable value**, which is defined by the FASB as the estimated selling price in the ordinary course of business, less reasonably predictable costs of completion, disposal, and transportation. Intuitively, net realizable value is the net amount of cash into which an asset or liability is expected to be converted in the ordinary course of business. For example, a company that uses a first-in, first-out cost flow assumption is required to carry inventory at the lower of FIFO cost or net realizable value.³⁴ If the company's inventory could be sold for \$10,000, and the company would incur additional costs of \$2,000 to complete it and transport it to a customer, the inventory's net realizable value is \$8,000.

Net realizable value bases measurements on the net amount of cash into which the asset or liability will be converted in the ordinary course of business.

CURRENT COST

Companies sometimes report **current costs**, particularly if they operate in inflationary economies. The current cost of an asset is the cost that would be incurred to purchase or reproduce the asset.

Current cost is the cost that would be incurred to purchase or reproduce an asset.

PRESENT VALUE

Because of its importance to many accounting measurements, **present value** is the focus of a FASB concept statement, *SFAC 7*, which provides a

Present value bases measurement on future cash flows discounted for the time value of money.

framework for using future cash flows as the basis for accounting measurement and also indicates that the objective in valuing an asset or liability using present value is to approximate its fair value.³⁵ We explore the topic of present value in depth in  **Chapter 5** and the application of present value in accounting measurement in subsequent chapters.

FAIR VALUE

We measure many financial assets and liabilities at **fair value** (called *current market value* originally in *SFAC 5*). Also, we use fair values when determining whether the value of nonfinancial assets like property, plant, and equipment and intangible assets has been impaired.

Given the complexity and growing importance of this measurement attribute, we discuss it in some detail.

Fair value is defined as the price that would be received to sell assets or paid to transfer a liability in an orderly transaction between market participants at the measurement date. A key aspect of this definition is its focus on the perspective of *market participants*. For instance, if a company buys a competitor's patent, not intending to use it but merely to keep the competitor from using it, the company still will have to assign a value to the asset because a market participant would find value in using the patent.

The FASB has provided a framework for measuring fair value whenever fair value is called for in applying generally accepted accounting principles.³⁶ The IASB uses the same framework.³⁷ In the framework, three types of valuation techniques can be used to measure fair value. *Market approaches* base valuation on market information. For example, the value of a share of a company's stock that's not traded actively could be estimated by multiplying the earnings of that company by the P/E (price of shares/earnings) multiples of similar companies. *Income approaches* estimate fair value by first estimating future amounts (for example, earnings or cash flows) and then mathematically converting those amounts to a single present value. You will see how to apply such techniques in  **Chapter 5** when we discuss time value of money concepts. *Cost approaches* determine value by estimating the amount that would be required to buy or construct an asset of similar quality and condition. A firm can use one or more of these valuation approaches, depending on availability of

Fair value bases measurements on the price that would be received to sell assets or transfer liabilities in an orderly market transaction.

Fair value can be measured using:

1. Market approaches.
2. Income approaches.
3. Cost approaches.

information, and should try to use them consistently unless changes in circumstances require a change in approach.

To increase consistency and comparability in applying this definition, the framework provides a “hierarchy” that prioritizes the inputs companies should use when determining fair value. The priority is based on three broad preference levels. The higher the level (Level 1 is the highest), the more preferable the input. The framework encourages companies to strive to obtain the highest level input available for each situation. [Illustration 1-14](#) describes the type of inputs and provides an example for each level.

Illustration 1-14 Fair Value Hierarchy

| Fair Value Hierarchy | | |
|----------------------------|--|---|
| Level | Inputs | Example |
| 1 Most Desirable | Quoted market prices in active markets for identical assets or liabilities. | In Chapter 12 you will learn that certain investments in marketable securities are reported at their <i>fair values</i> . Fair value in this case would be measured using the quoted market price from the NYSE, NASDAQ, or other exchange on which the security is traded. |
| 2 | Inputs other than quoted prices that are <i>observable</i> for the asset or liability. These inputs include quoted prices for <i>similar</i> assets or liabilities in active or inactive markets and inputs that are derived principally from or corroborated by observable related market data. | In Chapter 10 we discuss how companies sometimes acquire assets with consideration other than cash. In any noncash transaction, each element of the transaction is recorded at its <i>fair value</i> . If one of the assets in the exchange is a building, for instance, then quoted market prices for similar buildings recently sold could be used to value the building or, if there were no similar buildings recently exchanged from which to obtain a comparable market price, valuation could be based on the price per square foot derived from observable market data. |

| Fair Value Hierarchy | | |
|-------------------------|--|---|
| Level | Inputs | Example |
| 3 Least Desirable | <i>Unobservable</i> inputs that reflect the entity's own assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances. | Asset retirement obligations (AROs), discussed in  Chapter 10, are measured at <i>fair value</i> . Neither Level 1 nor Level 2 inputs would be possible in most ARO valuation situations. Fair value would be estimated using Level 3 inputs to include the present value of expected cash flows estimated using the entity's own data if there is no information indicating that market participants would use different assumptions. |

Companies also must provide detailed disclosures about their use of fair value measurements. The disclosures include a description of the inputs used to measure fair value. For recurring fair value measurements that rely on significant *unobservable* inputs (within Level 3 of the fair value hierarchy), companies should disclose the effect of the measurements on earnings (or changes in net assets) for the period.

The use of the fair value measurement attribute is increasing, both under U.S. GAAP and IFRS. This trend, though, is controversial. Proponents of fair value cite its relevance and are convinced that historical cost information may not be useful for many types of decisions. Opponents of fair value counter that estimates of fair value may lack representational faithfulness, particularly when based on inputs from Level 3 in the fair value hierarchy, and that managers might be tempted to exploit the unverifiability of such inputs to manipulate earnings. They argue that accounting should emphasize verifiability by recognizing only those gains and other increases in fair value that actually have been realized in transactions or are virtually certain to exist.

FAIR VALUE OPTION

Usually, the measurement attribute we use for a particular financial statement item is not subject to choice. However, GAAP allows a **fair value option** in

The *fair value option* lets companies choose whether to

some circumstances, which permits companies to choose whether to report specified *financial* assets and liabilities at fair value.³⁸ For example, in  **Chapter 14**

you will learn that a company normally would report bonds payable at historical cost (adjusted for unamortized premium or discount), but the fair value option allows that company to choose instead to report the bonds payable at fair value. If a company chooses the fair value option, future changes in fair value are reported as gains and losses in the income statement.

Why allow the fair value option for financial assets and liabilities and not for, say, buildings or land? Financial assets and liabilities are cash and other assets and liabilities that convert directly into known amounts of cash. These include investments in stocks and bonds of other entities, notes receivable and payable, bonds payable, and derivative securities.³⁹ Some of these financial assets and liabilities currently are *required* under GAAP to be reported at fair value, and others are not, leading to some potential inconsistencies in how similar or related items are treated. The fair value option provides companies a way to reduce volatility in reported earnings without having to comply with complex hedge accounting standards. It also helps in the convergence with international accounting standards we discussed earlier in the chapter as the IASB also has adopted a fair value option for financial instruments.

Disclosure

Remember, the purpose of accounting is to provide information that is useful to decision makers. So, naturally, if there is accounting information not included in the primary financial statements that would benefit users, that information should be provided too. The **full-disclosure principle** means that the financial reports should include any information that could affect the decisions made by external users. Of course, the benefits of that information should exceed the costs of providing the information. Such information is disclosed in a variety of ways, including:

value some financial assets and liabilities at fair value.

The full-disclosure principle requires that any information useful to decision makers be provided in the financial statements, subject to the cost effectiveness constraint.

1. **Parenthetical comments** or **modifying comments** placed on the face of the financial statements.
2. **Disclosure notes** conveying additional insights about company operations, accounting principles, contractual agreements, and pending litigation.
3. **Supplemental schedules and tables** that report more detailed information than is shown in the primary financial statements.

We discuss and illustrate disclosure requirements as they relate to specific financial statement elements in later chapters as those elements are discussed.

 **Illustration 1-15** provides an overview of key recognition, measurement, and disclosure concepts.

Illustration 1-15 Summary of Recognition, Measurement, and Disclosure Concepts

Where We're Headed

“Disclosure overload” is a frequent complaint by companies and investors alike. The notes to the financial statements can be very useful, but they are costly for companies to prepare and difficult for many users to sift through and understand. In response to that concern, the FASB has been developing a framework intended to make disclosures more effective and less redundant. In August of 2018, the FASB issued an addition to Concepts Statement No. 8, titled  **Chapter 8: Notes to Financial Statements**, which suggests a series of questions that the FASB and its staff should consider when determining what notes should be required by new standards.⁴⁰ A separate part of the project will develop further guidance to help companies apply judgment when meeting disclosure requirements.

Evolving GAAP

LO1–10 Contrast a revenue/expense approach and an asset/liability approach to accounting standard setting.

U.S. and international GAAP have been evolving over time from an emphasis on revenues and expenses to an emphasis on assets and liabilities. Of course, you know from introductory accounting that the balance sheet and income statement are intertwined and must reconcile with each other. For example, the revenues reported in the income statement depict inflows of assets whose balances at a particular point in time are reported in the balance sheet. But which comes first, identifying revenues and expenses or identifying assets and liabilities? That emphasis can affect accounting standards in important ways. To help you understand the changes taking place, we start by discussing the revenue/expense approach and then discuss the asset/liability approach.

Under the **revenue/expense approach**, we emphasize principles for recognizing revenues and expenses, with some assets and liabilities recognized as necessary to make the balance sheet reconcile with the income statement. For example, when accounting for sales revenue, our focus would be on whether a good or service has been delivered, and if we determine that to be the case, we would record an asset (usually cash or accounts receivable) that is associated with that revenue.⁴¹ We also would identify the expenses associated with delivering those goods and services and adjust assets and liabilities accordingly.

With the revenue/expense approach, recognition and measurement of revenues and expenses are emphasized.

Under the **asset/liability approach**, on the other hand, we first recognize and measure the assets and liabilities that exist at a balance sheet date and, secondly, recognize and measure the revenues, expenses, gains, and losses needed to account for the changes in these assets and liabilities from the previous measurement date. Proponents of this approach point out that, since revenues and expenses are defined in terms of inflows and outflows of assets and liabilities, the fundamental concepts underlying accounting are assets and liabilities. Therefore, we should try to recognize and measure assets and liabilities appropriately, and as

With the asset/liability approach, recognition and measurement of assets and liabilities drives revenue and expense recognition.

a result will also capture their inflows and outflows in a manner that provides relevant and representationally faithful information about revenues and expenses.

For example, when accounting for a sales transaction, our focus would be on whether a potential accounts receivable meets the definition of an asset (a probable future economic benefit). We would consider such factors as whether the receivable is supported by an enforceable contract and whether the seller has performed its obligations enough to be able to expect receipt of cash flows. The key would be determining if the seller has an asset and then recognizing whatever amount of revenue is implied by the inflow of that asset. Also, we would not attempt to match expenses to revenues. Rather, we would determine those net assets that had decreased as part of operations during the period and recognize those decreases as expenses.

In subsequent chapters you will see that recent standards involving accounting for revenue, investments, and income taxes follow this asset/liability approach. These changes are controversial. It may seem like it shouldn't matter whether standard setters use the revenue/expense or asset/liability approach, given that both approaches affect both the income statement and balance sheet. It is true that these approaches often will result in the same accounting outcomes. However, the particular approach used by a standard setter can affect recognition and measurement in important ways. In particular, the asset/liability approach encourages us to focus on accurately measuring assets and liabilities. It perhaps is not surprising, then, that a focus on assets and liabilities has led standard setters to lean more and more toward fair value measurement. The future changes to the conceptual framework discussed in the following **Where We're Headed** box are likely to continue this emphasis on the asset/liability approach.

International Financial Reporting Standards

In 2018 the IASB issued a revision of the IFRS conceptual framework.⁴² That framework is very similar to the FASB's conceptual framework, but there are notable exceptions. For example, the IFRS conceptual framework provides explicit definitions of concepts like materiality, reporting entity, and executory contracts, and it includes explicit criteria for derecognition of assets and liabilities. The FASB framework relies on other guidance in the Accounting Standards Codification or elsewhere with

respect to those concepts. Also, the definitions of assets and liabilities in the FASB's conceptual framework currently include a consideration of the probability of the related cash inflows and outflows. Probability does not appear in the IFRS definitions.

Where We're Headed

The FASB continues to work on its conceptual framework. Most recently, the focus has been on revising the definitions of some of the elements of financial statements shown in Illustration 1-12. For example, proposed definitions of assets and liabilities do not refer to probable future economic benefits that are obtained or controlled (assets) or sacrificed (liabilities), but instead focus on a present right to receive or obligation to provide economic benefits. Also, proposed definitions of revenues and expenses no longer indicate that they arise from activities that constitute the entity's ongoing major or central operations, and the proposed definitions of gains and losses no longer indicate that they arise from peripheral or incidental transactions. Instead, gains and losses are defined algebraically as increases or decreases in equity that aren't revenues or investments/disinvestments by owners. As can be seen in FASB member Christine Botosan's alternative view at the end of the exposure draft, there is not unanimity that these revised definitions should be implemented.⁴³

skynesher/Getty Images

- 1. What should you tell your friend about the presence of accounting standards in the United States and the rest of the world? Who has the authority for standard setting? Who has the responsibility?** In the United States, we have a set of standards known as generally accepted accounting principles (GAAP). GAAP is a dynamic set of both broad and specific guidelines that companies should follow when measuring and reporting the information in their financial statements and related notes. The Securities and Exchange Commission has the authority to set accounting standards for companies whose securities are publicly traded, but it relies on the private sector to accomplish that task. At present, the Financial Accounting Standards Board is the private-sector body responsible for standard setting.
- 2. What is the economic and political environment in which standard setting occurs?** The setting of accounting and reporting standards often has been characterized as a *political process*. Standards, particularly changes in standards, can have significant differential effects on companies, investors and creditors, and other interest groups. A change in an accounting standard or the introduction of a new standard can result in a substantial redistribution of wealth within our economy. The FASB's due process is designed to obtain information from all interested parties to help determine the appropriate accounting approach, but standards are supposed to be neutral with respect to the interests of various parties. Nonetheless, both the FASB and IASB sometimes come under political pressure that sways the results of the standard-setting process.

3. What is the relationship among management, auditors, investors, and creditors that tends to preclude the “What would you like it to be?” attitude?

It is management’s responsibility to apply accounting standards when communicating with investors and creditors through financial statements. Auditors serve as independent intermediaries to help ensure that the management-prepared statements are presented fairly in accordance with GAAP. In providing this assurance, the auditor precludes the “What would you like it to be?” attitude.

4. In general, what is the conceptual framework that underlies accounting principles, and how does it encourage high-quality financial reporting?

The conceptual framework is a coherent system of interrelated objectives and fundamentals that improves financial reporting by encouraging consistent standards and by prescribing the nature, function, and limits of financial accounting and reporting. The fundamentals are the underlying concepts of accounting, concepts that guide the selection of events to be accounted for, the measurement of those events, and the means of summarizing and communicating them to interested parties. ●

The Bottom Line

-  **LO1-1** Financial accounting is concerned with providing relevant financial information to various external users. However, the primary focus is on the financial information provided by profit-oriented companies to their present and potential investors and creditors. (*p. 3*)
-  **LO1-2** Cash-basis accounting provides a measure of periodic performance called *net operating cash flow*, which is the difference between cash receipts and cash disbursements from transactions related to providing goods and services to customers. Accrual accounting provides a measure of performance called *net income*, which is the difference between revenues and expenses. Periodic net income is considered a better indicator of future operating cash flows than is current net operating cash flows. (*p. 7*)
-  **LO1-3** Generally accepted accounting principles (GAAP) comprise a dynamic set of both broad and specific guidelines that companies follow when measuring and reporting the information in their financial statements and related notes. The Securities and Exchange Commission (SEC) has the authority to set accounting standards in the United States. However, the SEC has always delegated the task to a private sector body, at this time the Financial Accounting Standards Board (FASB). The International Accounting Standards Board (IASB) sets global accounting standards and works with national accounting standard setters to achieve convergence in accounting standards around the world. (*p. 8*)
-  **LO1-4** Accounting standards can have significant differential effects on companies, investors, creditors, and other interest groups. Various interested parties sometimes lobby standard setters for their preferred outcomes. For this reason, the setting of accounting standards often has been characterized as a political process. (*p. 12*)
-  **LO1-5** Factors encouraging high-quality financial reporting include conceptually based financial accounting standards, external auditors, financial reporting reforms (such as the Sarbanes-Oxley Act), ethical management, and professional accounting organizations that prescribe ethical conduct and license practitioners. (*p. 14*)

-  **LO1-6** The FASB's conceptual framework is a set of cohesive objectives and fundamental concepts on which financial accounting and reporting standards can be based. (*p. 17*)
-  **LO1-7** The objective of financial reporting is to provide useful financial information to capital providers. The primary decision-specific qualities that make financial information useful are relevance and faithful representation. To be relevant, information must possess predictive value and/or confirmatory value, and all material information should be included. Completeness, neutrality, and freedom from error enhance faithful representation. The 10 elements of financial statements are assets, liabilities, equity, investments by owners, distributions to owners, revenues, expenses, gains, losses, and comprehensive income. (*p. 19*)
-  **LO1-8** The four basic assumptions underlying GAAP are (1) the economic entity assumption, (2) the going concern assumption, (3) the periodicity assumption, and (4) the monetary unit assumption. (*p. 22*)
-  **LO1-9** Recognition determines whether an item is reflected in the financial statements, and measurement determines the amount of the item. Measurement involves choice of a monetary unit and choice of a measurement attribute. In the United States, the monetary unit is the dollar. Various measurement attributes are used in GAAP, including historical cost, net realizable value, current cost, present value, and fair value. (*p. 24*)
-  **LO1-10** A revenue/expense approach to financial reporting emphasizes recognition and measurement of revenues and expenses, while an asset/liability approach emphasizes recognition and measurement of assets and liabilities. (*p. 31*)
-  **LO1-11** IFRS and U.S. GAAP are similar in the organizations that support standard setting and in the presence of ongoing political pressures on the standard-setting process. U.S. GAAP and IFRS also have similar conceptual frameworks, although the role of the conceptual framework in IFRS is to provide guidance to preparers as well as to standard setters, while the role of the conceptual framework in U.S. GAAP is more to provide guidance to standard setters. (*pp. 11, 14, and 19*)

Questions For Review of Key Topics

- Q 1-1** What is the function and primary focus of financial accounting?
- Q 1-2** What is meant by the phrase *efficient allocation of resources*? What mechanism fosters the efficient allocation of resources in the United States?
- Q 1-3** Identify two important variables to consider when making an investment decision.
- Q 1-4** What must a company do in the long run to be able to provide a return to investors and creditors?
- Q 1-5** What is the primary objective of financial accounting?
- Q 1-6** Define net operating cash flows. Briefly explain why periodic net operating cash flows may not be a good indicator of future operating cash flows.
- Q 1-7** What is meant by GAAP? Why should all companies follow GAAP in reporting to external users?
- Q 1-8** Explain the roles of the SEC and the FASB in setting accounting standards.
- Q 1-9** Explain the role of the auditor in the financial reporting process.
- Q 1-10** List at least three key provisions of the Sarbanes-Oxley Act of 2002.
- Q 1-11** Explain what is meant by *adverse economic consequences* of new or changed accounting standards.
- Q 1-12** Why does the FASB undertake a series of elaborate information-gathering steps before issuing a substantive accounting standard?
- Q 1-13** What is the purpose of the FASB's conceptual framework?
- Q 1-14** Discuss the terms *relevance* and *faithful representation* as they relate to financial accounting information.
- Q 1-15** What are the components of relevant information? What are the components of faithful representation?
- Q 1-16** Explain what is meant by: The benefits of accounting information must exceed the costs.
- Q 1-17** What is meant by the term *materiality* in financial reporting?
- Q 1-18** Briefly define the financial accounting elements: (1) assets, (2) liabilities, (3) equity, (4) investments by owners, (5) distributions to owners, (6) revenues, (7) expenses, (8) gains, (9) losses, and (10) comprehensive income.
- Q 1-19** What are the four basic assumptions underlying GAAP?

- Q 1-20** What is the going concern assumption?
- Q 1-21** Explain the periodicity assumption.
- Q 1-22** What are four key accounting practices that often are referred to as principles in current GAAP?
- Q 1-23** What are two advantages to basing the valuation of assets and liabilities on their historical cost?
- Q 1-24** Describe how revenue recognition relates to transferring goods or services.
- Q 1-25** What are the four different approaches to implementing expense recognition? Give an example of an expense that is recognized under each approach.
- Q 1-26** In addition to the financial statement elements arrayed in the basic financial statements, what are some other ways to disclose financial information to external users?
- Q 1-27** Briefly describe the inputs that companies should use when determining fair value. Organize your answer according to preference levels, from highest to lowest priority.
- Q 1-28** What measurement attributes are commonly used in financial reporting?
- Q 1-29** Distinguish between the revenue/expense and the asset/liability approaches to setting financial reporting standards.
- Q 1-30** What are the functions of the conceptual framework under IFRS?
- Q 1-31** What is the standard-setting body responsible for determining IFRS? How does it obtain its funding?

IFRS

IFRS

Brief Exercises

BE 1-1 Accrual accounting LO1-2

Cash flows during the first year of operations for the Harman-Kardon Consulting Company were as follows: Cash collected from customers, \$340,000; Cash paid for rent, \$40,000; Cash paid to employees for services rendered during the year, \$120,000; Cash paid for utilities, \$50,000.

In addition, you determine that customers owed the company \$60,000 at the end of the year, and no bad debts were anticipated. Also, the company owed the gas and electric company \$2,000 at year-end, and the rent payment was for a two-year period. Calculate accrual net income for the year.

BE 1-2 Financial statement elements LO1-7

For each of the following items, identify the appropriate financial statement element or elements: (1) probable future sacrifices of economic benefits; (2) probable future economic benefits owned by the company; (3) inflows of assets from ongoing, major activities; (4) decrease in equity from peripheral or incidental transactions.

BE 1-3 Basic assumptions and principles LO1-7 through LO1-9

Listed below are several statements that relate to financial accounting and reporting. Identify the accounting concept that applies to each statement.

1. **SiriusXM Radio Inc.** files its annual and quarterly financial statements with the SEC.
2. The president of **Applebee's International, Inc.**, travels on the corporate jet for business purposes only and does not use the jet for personal use.
3. Jackson Manufacturing does not recognize revenue for unshipped merchandise even though the merchandise has been manufactured according to customer specifications.
4. Lady Jane Cosmetics depreciates the cost of equipment over their useful lives.

BE 1-4 Basic assumptions and principles  **LO1-7** through  **LO1-9**

Identify the accounting concept that was violated in each of the following situations.

1. Astro Turf Company recognizes an expense, cost of goods sold, in the period the product is manufactured.
2. McCloud Drug Company owns a patent that it purchased three years ago for \$2 million. The controller recently revalued the patent to its approximate market value of \$8 million.
3. Philips Company pays the monthly mortgage on the home of its president Larry Crosswhite and charges the expenditure to miscellaneous expense.

BE 1-5 Basic assumptions and principles  **LO1-7** through  **LO1-9**

For each of the following situations, (1) indicate whether you agree or disagree with the financial reporting practice employed and (2) state the accounting concept that is applied (if you agree) or violated (if you disagree).

1. Winderl Corporation did not disclose that it was the defendant in a material lawsuit because the trial was still in progress.
2. Alliant Semiconductor Corporation files quarterly and annual financial statements with the SEC.
3. Reliant Pharmaceutical paid rent on its office building for the next two years and charged the entire expenditure to rent expense.
4. Rockville Engineering records revenue only after products have been shipped, even though customers pay Rockville 50% of the sales price in advance.

BE 1-6 IFRS  **LO1-11**

IFRS

Indicate the organization related to IFRS that performs each of the following functions:

1. Obtains funding for the IFRS standard-setting process.
2. Determines IFRS.

3. Oversees the IFRS Foundation.
4. Provides input about the standard-setting agenda.
5. Provides implementation guidance about relatively narrow issues.

Exercises

E 1-1 Accrual accounting LO1-2

Listed below are several transactions that took place during the first two years of operations for the law firm of Perez Associates.

| | Year 1 | Year 2 |
|--|-----------|-----------|
| Amounts billed to clients for services rendered | \$170,000 | \$220,000 |
| Cash collected from clients | 160,000 | 190,000 |
| Cash disbursements: | | |
| Salaries paid to employees for services rendered during the year | 90,000 | 100,000 |
| Utilities | 30,000 | 40,000 |
| Purchase of insurance policy | 60,000 | 0 |

In addition, you learn that the firm incurred utility costs of \$35,000 in year 1, that there were no liabilities at the end of year 2, no anticipated bad debts on receivables, and that the insurance policy covers a three-year period.

Required:

1. Calculate the net operating cash flow for years 1 and 2.
2. Prepare an income statement for each year similar to Illustration 1-4 according to the accrual accounting model.
3. Determine the amount of receivables from clients that the firm would show in its year 1 and year 2 balance sheets prepared according to the accrual accounting model.

E 1-2 Accrual accounting LO1-2

Listed below are several transactions that took place during the second and third years of operations for the RPG Company.

| | Year 2 | Year 3 |
|--|-----------|-----------|
| Amounts billed to customers for services rendered | \$350,000 | \$450,000 |
| Cash collected from credit customers | 260,000 | 400,000 |
| Cash disbursements: | | |
| Payment of rent | 80,000 | 0 |
| Salaries paid to employees for services rendered during the year | 140,000 | 160,000 |
| Utilities | 30,000 | 40,000 |
| Advertising | 15,000 | 35,000 |

In addition, you learn that the company incurred advertising costs of \$25,000 in year 2, owed the advertising agency \$5,000 at the end of year 1, and there were no liabilities at the end of year 3. Also, there were no anticipated bad debts on receivables, and the rent payment was for a two-year period, year 2 and year 3.

Required:

1. Calculate accrual net income for both years.
2. Determine the amount due the advertising agency that would be shown as a liability on RPG's balance sheet at the end of year 2.

E 1–3 FASB codification research  **LO1–3**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

1. Identify the Codification topic number that provides guidance on fair value measurements.
2. What is the specific seven-digit Codification citation (XXX-XX-XX) that lists the disclosures required in the notes to the financial statements for each major category of assets and liabilities measured at fair value?

E 1–4 FASB codification research LO1–3

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific citation for each of the following items:

1. The topic number for business combinations
2. The topic number for related party disclosures
3. The specific seven-digit Codification citation (XXX-XX-XX) for the initial measurement of internal-use software
4. The specific seven-digit Codification citation (XXX-XX-XX) for the subsequent measurement of asset retirement obligations
5. The specific seven-digit Codification citation (XXX-XX-XX) for the recognition of stock compensation

E 1–5 Participants in establishing GAAP LO1–3

Three groups that participate in the process of establishing GAAP are users, preparers, and auditors. These groups are represented by various organizations. For each organization listed below, indicate which of these groups it primarily represents.

1. Securities and Exchange Commission
2. Financial Executives International
3. American Institute of Certified Public Accountants
4. Institute of Management Accountants
5. Association of Investment Management and Research

E 1–6 Financial statement elements LO1–7

For each of the items listed below, identify the appropriate financial statement element or elements.

1. Obligation to transfer cash or other resources as a result of a past transaction
2. Dividends paid by a corporation to its shareholders

3. Inflow of an asset from providing a good or service
4. The financial position of a company
5. Increase in equity during a period from nonowner transactions
6. Increase in equity from peripheral or incidental transaction
7. Sale of an asset used in the operations of a business for less than the asset's book value
8. The owners' residual interest in the assets of a company
9. An item owned by the company representing probable future benefits
10. Revenues plus gains less expenses and losses
11. An owner's contribution of cash to a corporation in exchange for ownership shares of stock
12. Outflow of an asset related to the production of revenue

E 1–7 Concepts; terminology; conceptual framework **LO1–7**

Listed below are several terms and phrases associated with the FASB's conceptual framework. Pair each item from List A (by letter) with the item from List B that is most appropriately associated with it.

| List A | List B |
|----------------------------------|---|
| _____ 1. Predictive value | a. Decreases in equity resulting from transfers to owners |
| _____ 2. Relevance | b. Requires consideration of the costs and value of the information |
| _____ 3. Timeliness | c. Important for making interfirm comparisons. |
| _____ 4. Distribution to owners | d. Applying the same accounting practices over time |
| _____ 5. Confirmatory value | e. Users understand the information in the context of the decision |
| _____ 6. Understandability | f. Agreement between a measure and the phenomenon being measured |
| _____ 7. Gain | g. Information is available prior to the decision. |
| _____ 8. Faithful representation | h. Pertinent to the decision at hand. |
| _____ 9. Comprehensive income | i. Implies consensus among different measurers. |
| _____ 10. Materiality | j. Information confirms expectations. |
| _____ 11. Comparability | k. The change in equity from nonowner transactions |
| _____ 12. Neutrality | l. The process of admitting information into financial statements |
| _____ 13. Recognition | m. The absence of bias. |

| | | |
|-------|------------------------|---|
| _____ | 14. Consistency | n. Increases in equity from peripheral or incidental |
| _____ | 15. Cost effectiveness | o. Information is useful in predicting the future. |
| _____ | 16. Verifiability | p. Concerns the relative size of an item and its effect |

E 1–8 Qualitative characteristics LO1–7

The conceptual framework indicates the desired fundamental and enhancing qualitative characteristics of accounting information. Several constraints impede achieving these desired characteristics. Answer each of the following questions related to these characteristics and constraints.

1. Which component would allow a large company to record the purchase of a \$120 printer as an expense rather than capitalizing the printer as an asset?
2. Donald Kirk, former chairman of the FASB, once noted that “. . . there must be public confidence that the standard-setting system is credible, that selection of board members is based on merit and not the influence of special interests . . .” Which characteristic is implicit in Mr. Kirk’s statement?
3. Allied Appliances, Inc., changed its revenue recognition policies. Which characteristic is jeopardized by this change?
4. National Bancorp, a publicly traded company, files quarterly and annual financial statements with the SEC. Which characteristic is relevant to the timing of these periodic filings?
5. In general, relevant information possesses which qualities?
6. When there is agreement between a measure or description and the phenomenon it purports to represent, information possesses which characteristic?
7. Jeff Brown is evaluating two companies for future investment potential. Jeff’s task is made easier because both companies use the same accounting methods when preparing their financial statements. Which characteristic does the information Jeff will be using possess?
8. A company should disclose information only if the perceived benefits of the disclosure exceed the costs of providing the information. Which constraint does this statement describe?

E 1–9 Basic assumptions, principles, and constraints LO1–7 through LO1–9

Listed below are several terms and phrases associated with the accounting concepts. Pair each item from List A (by letter) with the item from List B that is most appropriately associated with it.

| List A | List B |
|-------------------------------------|--|
| _____ 1. Expense recognition | a. The enterprise is separate from its owners |
| _____ 2. Periodicity assumption | b. A common denominator is the dollar. |
| _____ 3. Historical cost principle | c. The entity will continue indefinitely. |
| _____ 4. Materiality | d. Record expenses in the period the related |
| _____ 5. Revenue recognition | e. The original transaction value upon acquis |
| _____ 6. Going concern assumption | f. All information that could affect decisions |
| _____ 7. Monetary unit assumption | g. The life of an enterprise can be divided into |
| _____ 8. Economic entity assumption | h. Criteria usually satisfied for products at po |
| _____ 9. Full-disclosure principle | i. Concerns the relative size of an item and its |

E 1–10 Basic assumptions and principles LO1–7 through LO1–9

Listed below are several statements that relate to financial accounting and reporting. Identify the accounting concept that applies to each statement.

- Jenna Asare is the sole owner of Asare Appliances. Jenna borrowed \$100,000 to buy a new home to be used as their personal residence. This liability was not recorded in the records of Asare Appliances.
- Apple Inc.** distributes an annual report to its shareholders.
- Hewlett-Packard Corporation** depreciates machinery and equipment over their useful lives.
- Crosby Company lists land on its balance sheet at \$120,000, its original purchase price, even though the land has a current fair value of \$200,000.
- Honeywell International Inc.** records revenue when products are delivered to customers, even though the cash has not yet been received.

- Liquidation values are not normally reported in financial statements even though many companies do go out of business.
- IBM Corporation**, a multibillion-dollar company, purchased some small tools at a cost of \$800. Even though the tools will be used for a number of years, the company recorded the purchase as an expense.

E 1–11 Basic assumptions and principles **LO1–8**, **LO1–9**

Identify the accounting concept that was violated in each of the following situations.

- Pastel Paint Company purchased land two years ago for a price of \$250,000. Because the value of the land has appreciated to \$400,000, the company has valued the land at \$400,000 in its most recent balance sheet.
- Atwell Corporation has not prepared financial statements for external users for over three years.
- The Klingon Company sells farm machinery. Revenue from a large order of machinery from a new buyer was recorded the day the order was received.
- Don Smith is the sole owner of a company called Hardware City. The company recently paid a \$150 utility bill for Smith's personal residence and recorded a \$150 expense.
- Golden Book Company purchased a large printing machine for \$1,000,000 (a material amount) and recorded the purchase as an expense.
- Ace Appliance Company is involved in a major lawsuit involving injuries sustained by some of its employees in the manufacturing plant. The company is being sued for \$2,000,000, a material amount, and is not insured. The suit was not disclosed in the most recent financial statements because no settlement had been reached.

E 1–12 Basic assumptions and principles **LO1–7** through **LO1–9**

For each of the following situations, indicate whether you agree or disagree with the financial reporting practice employed and state the accounting concept applied (if you agree) or violated (if you disagree).

- Wagner Corporation adjusted the valuation of all assets and liabilities to reflect changes in the purchasing power of the dollar.

2. Spooner Oil Company changed its method of accounting for oil and gas exploration costs from successful efforts to full cost. No mention of the change was included in the financial statements. The change had a material effect on Spooner's financial statements.
3. Wei Manufacturing Company purchased machinery having a five-year life. The cost of the machinery is being expensed over the life of the machinery.
4. Rudeen Corporation purchased equipment for \$180,000 at a liquidation sale of a competitor. Because the equipment was worth \$230,000, Rudeen valued the equipment in its subsequent balance sheet at \$230,000.
5. Davis Bicycle Company received a large order for the sale of 1,000 bicycles at \$100 each. The customer paid Davis the entire amount of \$100,000 on March 15. However, Davis did not record any revenue until April 17, the date the bicycles were delivered to the customer.
6. Ganesh Corporation purchased two small calculators at a cost of \$32.00. The cost of the calculators was expensed even though they had a three-year estimated useful life.
7. Taboye Company provides financial statements to external users every three years.

E 1-13 Basic assumptions and principles  **LO1-7 through**
 **LO1-9**

For each of the following situations, state whether you agree or disagree with the financial reporting practice employed, and briefly explain the reason for your answer.

1. The controller of the Dumars Corporation increased the carrying value of land from its original cost of \$2 million to its recently appraised value of \$3.5 million.
2. The president of Vosburgh Industries asked the company controller to charge miscellaneous expense for the purchase of an automobile to be used solely for personal use.
3. At the end of its 2020 fiscal year, Dower, Inc., received an order from a customer for \$45,350. The merchandise will ship early in 2021. Because the sale was made to a long-time customer, the controller recorded the sale in 2020.
4. At the beginning of its 2020 fiscal year, Rossi Imports paid \$48,000 for a two-year lease on warehouse space. Rossi recorded the expenditure as an asset to be expensed equally over the two-year period of the lease.

5. The Reliable Tire Company included a note in its financial statements that described a pending lawsuit against the company.
6. The Hughes Corporation, a company whose securities are publicly traded, prepares monthly, quarterly, and annual financial statements for internal use but disseminates to external users only the annual financial statements.

E 1–14 Basic assumptions and principles  **LO1–7** through  **LO1–9**

Listed below are accounting concepts discussed in this chapter.

- a. Economic entity assumption
- b. Going concern assumption
- c. Periodicity assumption
- d. Monetary unit assumption
- e. Historical cost principle
- f. Conservatism
- g. Expense recognition
- h. Full-disclosure principle
- i. Cost effectiveness
- j. Materiality

Identify by letter the accounting concept that relates to each statement or phrase below.

- _____ 1. Inflation causes a violation of this assumption.
- _____ 2. Information that could affect decision making should be reported.
- _____ 3. Recognizing expenses in the period they were incurred to produce revenue.
- _____ 4. The basis for measurement of many assets and liabilities.
- _____ 5. Relates to the qualitative characteristic of timeliness.
- _____ 6. All economic events can be identified with a particular entity.
- _____ 7. The benefits of providing accounting information should exceed the cost of doing so.
- _____ 8. A consequence is that GAAP need not be followed in all situations.
- _____ 9. Not a qualitative characteristic, but a practical justification for some accounting choices.

_____ 10. Assumes the entity will continue indefinitely.

E 1–15 Multiple choice; concept statements, basic assumptions, principles  **LO1–6** through  **LO1–9**

Determine the response that best completes the following statements or questions.

1. The primary objective of financial reporting is to provide information
 - a. About a firm's management team.
 - b. Useful to capital providers.
 - c. Concerning the changes in financial position resulting from the income-producing efforts of the entity.
 - d. About a firm's financing and investing activities.
2. *Statements of Financial Accounting Concepts* issued by the FASB
 - a. Represent GAAP.
 - b. Have been superseded by *SFASs*.
 - c. Are subject to approval of the SEC.
 - d. Identify the conceptual framework within which accounting standards are developed.
3. In general, revenue is recognized when
 - a. The sales price has been collected.
 - b. A purchase order has been received.
 - c. A good or service has been delivered to a customer.
 - d. A contract has been signed.
4. In depreciating the cost of an asset, accountants are most concerned with
 - a. Conservatism.
 - b. Recognizing revenue in the appropriate period.
 - c. Full disclosure.
 - d. Recognizing expense in the appropriate period.
5. The primary objective of expense recognition is to
 - a. Provide full disclosure.
 - b. Record expenses in the period that related revenues are recognized.

- c. Provide timely information to decision makers.
 - d. Promote comparability between financial statements of different periods.
6. The economic entity assumption states that, in the absence of contrary evidence, all entities will survive indefinitely.
- a. True
 - b. False

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You will also work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Judgment Case 1–1 The development of accounting standards

LO1–3

In 1934, Congress created the Securities and Exchange Commission (SEC).

Required:

1. Does the SEC have more authority or less authority than the FASB with respect to standard setting?
2. Can you think of any reasons why the SEC relies on private sector bodies to set accounting standards, rather than undertaking the task itself?

Research Case 1–2 Accessing SEC information through the Internet LO1–3

The purpose of this case is to introduce you to the information available on the website of the Securities and Exchange Commission (SEC) and its EDGAR database.

Required:

Access the SEC home page on the Internet. The web address is www.sec.gov. Answer the following questions:

1. Choose the subaddress “About the SEC.” What are the two basic objectives of the 1933 Securities Act?
2. Return to the SEC home page and access EDGAR. Which of the following can be searched in EDGAR: company name, ticker symbol, standard industrial classification (SIC) code, or taxpayer ID number?

Research Case 1–3 Accessing FASB information through the Internet LO1–4

The purpose of this case is to introduce you to the information available on the website of the Financial Accounting Standards Board (FASB).

Required:

Access the FASB home page on the Internet. The web address is www.fasb.org. Answer the following questions:

1. The FASB has how many board members?
2. How many board members of the FASB have a background that is primarily drawn from accounting education?
3. Describe the mission of the FASB.

Research Case 1–4 Accessing IASB information through the Internet LO1–3

The purpose of this case is to introduce you to the information available on the website of the International Accounting Standards Board (IASB).

Required:

Access the IASB home page on the Internet. The web address is www.iasb.org. Answer the following questions:

1. The IASB has how many board members?
2. In what city is the IASB located?
3. Describe the mission of the IASB.

Research Case 1–5 FASB codification LO1–3

A key aspect of the Accounting Standards Codification is the structure used to organize content. Understanding that structure will help you utilize the codification efficiently and effectively.

Required:

Access the FASB Accounting Standards Codification at the FASB website (www.fasb.org) and select Basic View for free access.

1. For each of the following seven-digit Codification citations (XXX-XX-XX), indicate the part of the title of the citation associated with the sixth and seventh digits (for example, the part of the title associated with the sixth and seventh digits of Codification citation 310-10-05, “Receivables—Overall—Overview and Background,” is “Overview and Background.”)
 - a. ASC 505-10-50
 - b. ASC 310-10-35
 - c. ASC 730-10-25
 - d. ASC 330-10-45
 - e. ASC 805-10-30
 - f. ASC 320-10-45
 - g. ASC 606-10-25
 - h. ASC 710-10-30
 - i. ASC 718-10-35
 - j. ASC 360-10-50
2. Compare your answers across the assets shown in parts 1a-1j. Does the Codification associate the sixth and seventh digits of a citation with the same categories, regardless of the account or transaction in question? Identify a benefit of this approach.

Judgment Case 1–6 Revenue recognition LO1–9

A new client, the Wolf Company, asks your advice concerning the point in time that the company should recognize revenue from the rental of its office buildings under generally accepted accounting principles. Renters usually pay rent on a quarterly basis at the beginning of the quarter. The owners contend that the critical event that motivates revenue recognition should be the date the cash is received from renters. After all, the money is in hand and is very seldom returned.

Required:

Do you agree or disagree with the position of the owners of the Wolf Company? State whether you agree or disagree, and support your answer by relating it to accrual accounting under GAAP.

Real World Case 1–7 Elements; disclosures; Gap Inc.  **LO1–7,**
 **LO1–9**

Real World Financials

Access the financial statements for the year ended February 1, 2020, for **Gap Inc.**, by downloading them from www.gapinc.com, and use them to answer the following questions.

Required:

1. What amounts did Gap Inc. report for the following items for the fiscal year ended February 1, 2020?
 - a. Total net revenues
 - b. Total operating expenses
 - c. Net income (earnings)
 - d. Total assets
 - e. Total stockholders' equity
2. How many shares of common stock had been issued by Gap Inc. as of February 1, 2020?
3. Does Gap Inc. report more than one year of data in its financial statements? Explain why or why not.

Judgment Case 1–8 Qualitative characteristics  **LO1–7**

A friend asks you about whether GAAP requires companies to disclose forecasts of financial variables to external users. She thinks that information could be very useful to investors.

Required:

1. What are the two primary qualitative characteristics of accounting information?
2. Does GAAP routinely require companies to disclose forecasts of financial variables to external users? Indicate yes or no and explain how your answer relates to the qualitative characteristics of accounting information.

Judgment Case 1–9 Cost effectiveness  **LO1–7**

Assume that the FASB is considering revising an important accounting standard.

Required:

1. What constraint applies to the FASB's consideration of whether to require companies to provide new information?
2. In what Concepts Statement is that constraint discussed?
3. What are some of the possible costs that could result from a revision of an accounting standard?

Communication Case 1–10 Relevance and representational faithfulness  **LO1–7**

Some theorists contend that companies that create pollution should report the social cost of that pollution in income statements. They argue that such companies are indirectly subsidized as the cost of pollution is borne by society while only production costs (and perhaps minimal pollution fines) are shown in the income statement. Thus, the product sells for less than would be necessary if all costs were included.

Assume that the FASB is considering a standard to include the social costs of pollution in the income statement. The process would require considering both relevance and faithful representation of the information produced by the new standard. Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to explain how the concepts of relevance and faithful representation relate to this issue.

Required:

Each group member should consider the question independently and draft a tentative answer prior to the class session for which the case is assigned.

In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.

After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus answer to the question.

Communication Case 1–11 Accounting standard setting

LO1–4

One of your friends is a financial analyst for a major stock brokerage firm. Recently she indicated to you that she had read an article in a weekly business magazine that alluded to the political process of establishing accounting standards. She had always assumed that accounting standards were established by determining the approach that conceptually best reflected the economics of a transaction.

Required:

Write a one to two-page article for a business journal explaining what is meant by the political process for establishing accounting standards. Be sure to include in your article a discussion of the need for the FASB to balance accounting considerations and economic consequences.

Case 1–12 Convergence LO1–11

IFRS

Consider the question of whether the United States should converge accounting standards with IFRS.

Required:

1. Make a list of arguments that favor convergence.
2. Make a list of arguments that favor nonconvergence.
3. Indicate your own conclusion regarding whether the United States should converge with IFRS, and indicate the primary considerations that determined your conclusion.

Ethics Case 1–13 The auditors' responsibility LO1–4, LO1–5

Auditors often earn considerable fees from a company for examining (auditing) its financial statements. In addition, it's not uncommon for auditors to earn additional fees from the company by providing consulting, tax, and other advisory services.

Required:

1. Which party has primary responsibility—auditors or company executives—for properly applying accounting standards when communicating with investors and creditors through financial statements?
2. Are auditors considered employees of the company?
3. Does the fact that clients compensate auditors for providing audits and other consulting services have the potential to jeopardize an auditor's independence?
4. What pressures on a typical audit engagement might affect an auditor's independence?

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO1–9

Target Corporation prepares its financial statements according to U.S. GAAP. Target’s financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company’s website (www.target.com).

Required:

1. What amounts did Target report for the following items for the year ended February 1, 2020?
 - a. Total revenues
 - b. Income from current operations
 - c. Net income or net loss
 - d. Total assets
 - e. Total equity
2. What was Target’s basic earnings per share for the year ended February 1, 2020?
3. What is Target’s fiscal year-end? Why do you think Target chose that year-end?
4. Regarding Target’s audit report:
 - a. Who is Target’s auditor?
 - b. Did Target receive a “clean” (unmodified) audit opinion?
 - c. How many critical audit matters were discussed in Target’s audit report?

Air France–KLM Case LO1–11

IFRS

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF’s financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This

material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. What amounts did AF report for the following items for the year ended December 31, 2019?
 - a. Total revenues
 - b. Income from current operations
 - c. Net income or net loss (Group part)
 - d. Total assets
 - e. Total equity
2. What was AF's basic earnings or loss per share for the year ended December 31, 2019?

CHAPTER 2

Review of the Accounting Process

OVERVIEW

 **Chapter 1** explained that the primary means of conveying financial information to investors, creditors, and other external users is through financial statements and related notes. The purpose of this chapter is to review the fundamental accounting process used to produce the financial statements. This review establishes a framework for the study of the concepts covered in intermediate accounting.

Actual accounting systems differ significantly from company to company. This chapter focuses on the many features that tend to be common to any accounting system.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO2-1** Understand routine economic events—transactions—and determine their effects on a company's financial position and on specific accounts. (p. 46)
-  **LO2-2** Describe the steps in the accounting processing cycle. (p. 49)
-  **LO2-3** Analyze and record transactions using journal entries. (p. 53)
-  **LO2-4** Post the effects of journal entries to general ledger accounts and prepare an unadjusted trial balance. (p. 58)
-  **LO2-5** Identify and describe the different types of adjusting journal entries. (p. 61)
-  **LO2-6** Record adjusting journal entries in general journal format, post entries, and prepare an adjusted trial balance. (p. 62)
-  **LO2-7** Describe the four basic financial statements. (p. 70)

 **LO2-8** Explain the closing process. (p. 74)

 **LO2-9** Convert from cash-basis net income to accrual-basis net income. (p. 78)

FINANCIAL REPORTING CASE

Creativa Images/Shutterstock

Engineering Profits

After graduating from college last year, two of your engineering-major friends started an Internet consulting practice. They began operations on July 1 and felt they did quite well during their first year. Now they would like to borrow \$20,000 from a local bank to buy new computing equipment and office furniture. To support their loan application, the friends presented the bank with the following income statement for their first year of operations ending June 30:

| | | |
|---------------------|--------------|------------------|
| Consulting revenue | | \$ 96,000 |
| Operating expenses: | | |
| Salaries | \$32,000 | |
| Rent | 9,000 | |
| Supplies | 4,800 | |
| Utilities | 3,000 | |
| Advertising | <u>1,200</u> | <u>(50,000)</u> |
| Net income | | <u>\$ 46,000</u> |

The bank officer noticed that there was no depreciation expense in the income statement and has asked your friends to revise the statement after making year-end adjustments. After agreeing to help, you discover the following information:

- a. The friends paid \$80,000 for equipment when they began operations. They think the equipment will be useful for five years.
- b. They pay \$500 a month to rent office space. In January, they paid a full year's rent in advance. This is included in the \$9,000 rent expense.
- c. Included in consulting revenue is \$13,000 they received from a customer in June as a deposit for work to be performed in August.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. What purpose do adjusting entries serve?
2. What year-end adjustments are needed to revise the income statement? Did your friends do as well their first year as they thought?

 **Chapter 1** introduced the theoretical structure of financial accounting and the environment within which it operates. The primary function of financial accounting—to provide financial information to external users that possesses the fundamental decision-specific qualities of relevance and faithful representation—is accomplished by periodically disseminating financial statements and related notes. In this chapter we review the process used to identify, analyze, record, summarize, and then report the economic events affecting a company's financial position. A solid foundation of this process is vital to a sound understanding of intermediate accounting.

To accomplish the accounting process, many large and medium-sized companies have their own company-specific data processing systems. Smaller companies can take advantage of technology with relatively inexpensive desktop and laptop computers and generalized data

software packages such as QuickBooks and Peachtree Accounting Software. Enterprise Resource Planning (ERP) systems are now being installed in companies of all

the basic model that underlies computer software programs.

sizes. The objective of ERP is to create a customized software program that integrates all departments and functions across a company onto a single computer system that can serve the information needs of those different departments, including the accounting department. *In this chapter, we describe and illustrate a manual accounting information system to provide an overview of the basic model that underlies the computer software programs actually used to process accounting information.*

The Basic Model

LO2–1 Understand routine economic events—transactions—and determine their effects on a company’s financial position and on specific accounts.

The first objective of any accounting system is to identify the **economic events** that can be expressed in financial terms by the system.¹ An economic event for accounting purposes is any event that *directly* affects the financial position of the company. Economic events can be classified as either external events or internal events.

Economic events cause changes in the financial position of the company.

External events involve an exchange between the company and a separate economic entity. Examples are transactions involving purchasing merchandise inventory for cash, borrowing cash from a bank, and paying salaries to employees. In each instance, the company receives something (inventory, cash, and services) in exchange for something else (cash, assumption of a liability, or both).

External events involve an exchange between the company and another entity.

Internal events directly affect the financial position of the company but don’t involve an exchange transaction with another entity. Examples are the depreciation of equipment and the use of supplies. As we will see later in the chapter, these events must be recorded to properly reflect a company’s financial position and results of operations in accordance with the accrual accounting model.

Internal events do not involve an exchange transaction but do affect the company’s financial position.

The Accounting Equation

The **accounting equation** underlies the process used to capture the effect of economic events.

The basic accounting equation

$$\text{Assets} = \text{Liabilities} + \text{Shareholders' Equity}$$

(creditors' claims)
(owners' claims)

Resources
Claims to Resources

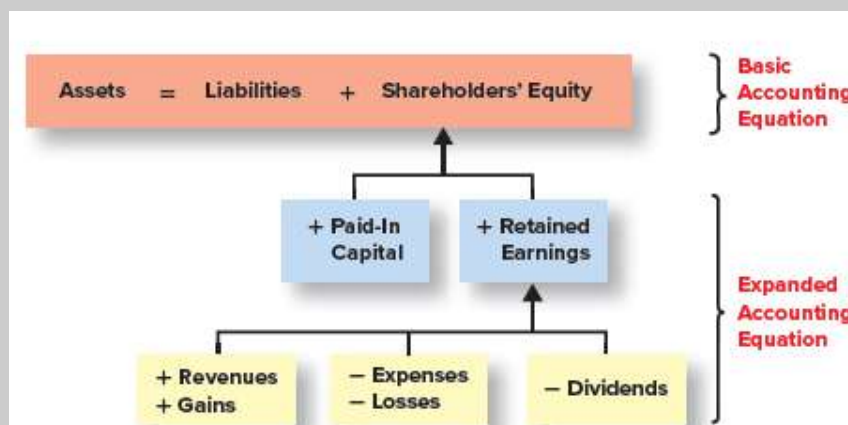

This general expression portrays the equality between the total economic resources of an entity (its assets)—shown on the left side of the equation—and the total claims to those resources by creditors and owners (liabilities and equity)—shown on the right side. Look at that equation again, it's the key to all the discussion that follows.

As discussed in [Chapter 1](#), owners of a corporation are its shareholders, so owners' equity for a corporation is referred to as *shareholders' equity*.

Owners' equity, for a corporation called shareholders' equity, is classified by source as either *paid-in capital* or *retained earnings*.

Shareholders' equity for a corporation arises primarily from two sources: (1) amounts *paid in* by shareholders of the corporation and (2) amounts *earned* by the corporation (on behalf of its shareholders). These are reported as (1) **paid-in capital** and (2) **retained earnings**. Retained earnings equals net income less distributions to shareholders (primarily dividends) since the inception of the corporation. [Illustration 2-1](#) shows the basic accounting equation for a corporation with shareholders' equity expanded to highlight its composition. Revenues and gains add to retained earnings, but expenses, losses, and dividends subtract from retained earnings.

Illustration 2-1 Expanded Accounting Equation for a Corporation

The equation also implies that each economic event affecting this equation will have a dual effect because resources always must equal claims to those resources.

Each event, or *transaction*, has a dual effect on the accounting equation.

For illustration, consider the events (we refer to these throughout the text as **transactions**) in  **Illustration 2-2**. As we analyze each transaction to determine its effect on the equation, we also look at its effect on specific financial elements, which we call **accounts**. Accounts provide a record, or storage area, of all transactions that increase or decrease a particular financial statement element. The balance of each account will be reported in the financial statements.

Illustration 2-2 Transaction Analysis

1. \$50,000 was received from the owner to open the business.

An investment by the owner causes both assets and shareholders' (owners') equity to increase.

| | | | | |
|------------------|---|--------------------|---|-----------------------------|
| Assets | = | Liabilities | + | Shareholders' Equity |
| +\$50,000 (cash) | | | | +\$50,000 (paid-in capital) |

2. \$40,000 was borrowed from a bank and a note payable was signed.

This transaction causes assets and liabilities to increase. A bank loan increases cash and creates an obligation to repay it.

| | | | | |
|------------------|---|--------------------------|---|-----------------------------|
| Assets | = | Liabilities | + | Shareholders' Equity |
| +\$40,000 (cash) | | +\$40,000 (note payable) | | |

3. Supplies costing \$3,000 were purchased on account.

Buying supplies on account increases both assets and liabilities. The term *on account* indicates no cash was paid at the time of the purchase, but a promise to pay later was made.

| | | | | |
|---------------|---|--------------------|---|-----------------------------|
| Assets | = | Liabilities | + | Shareholders' Equity |
|---------------|---|--------------------|---|-----------------------------|

+ \$3,000 (supplies) + \$3,000 (accounts payable)

Transactions 4, 5, and 6 are revenue and expense transactions. Revenues and expenses (and gains and losses) are events that cause shareholders' equity to change. Revenues and gains cause shareholders' equity to increase. Expenses and losses cause shareholders' equity to decrease.

4. Services were performed on account for \$10,000.

| | | | | |
|---------------------------------|---|-------------|---|-----------------------|
| Assets | = | Liabilities | + | Shareholders' Equity |
| +\$10,000 (accounts receivable) | | | | +\$10,000 (revenue ↑) |

5. Salaries of \$5,000 were paid to employees.

| | | | | |
|-----------------|---|-------------|---|----------------------|
| Assets | = | Liabilities | + | Shareholders' Equity |
| -\$5,000 (cash) | | | | -\$5,000 (expense ↑) |

6. \$500 of utilities were incurred but not paid.

| | | | | |
|--------|---|---------------------------|---|----------------------|
| Assets | = | Liabilities | + | Shareholders' Equity |
| | | +\$500 (accounts payable) | | -\$500 (expense ↑) |

7. \$1,000 was paid on account to the supplies vendor in transaction 3 above.

| | | | | |
|-----------------|---|-----------------------------|---|----------------------|
| Assets | = | Liabilities | + | Shareholders' Equity |
| -\$1,000 (cash) | | -\$1,000 (accounts payable) | | |

Now let's see how these accounts are related.

Account Relationships

The **general ledger** contains a list of all accounts in the company's accounting system. For each account, we need to keep track of the increases and decreases to the account's balance caused by transactions of the company. We demonstrated this process with plusses

A general ledger is a collection of storage areas, called accounts, used to keep track of increases, decreases, and balances in financial position elements.

and minuses in [Illustration 2-2](#). Here, we demonstrate the effect of transactions on account balances with **debits** and **credits**. *Debit* and *credit* are the terms used in accounting to signify an increase or decrease to an account balance. For each transaction, we'll have at least one debt and at least one credit (with the amount of total debits equaling the amount of total credits). This dual system of debits and credits is the **double-entry system** used in accounting to process transactions.

For instructional purposes we use **T-accounts** instead of formal general ledger accounts. A T-account has space at the top for the account title and two sides for recording debits and credits. Debits are on the *left* side of the account and credits are on the *right* side, as shown below.

In the double-entry system, *debit* means left side of an account and *credit* means right side of an account.

| Account Title | |
|---------------|-------------|
| Debit side | Credit side |

Whether a debit or a credit represents an increase or a decrease to the account balance depends on the type of account.

- Accounts on the left side of the accounting equation (assets) are *increased (+)* by *debit* entries and *decreased (-)* by *credit* entries.
- Accounts on the right side of the accounting equation (liabilities and shareholders' equity) are *increased (+)* by *credit* entries and *decreased (-)* by *debit* entries.

This arbitrary, but effective, procedure ensures that for each transaction the net impact on the left sides of accounts always equals the net impact on the right sides of accounts.

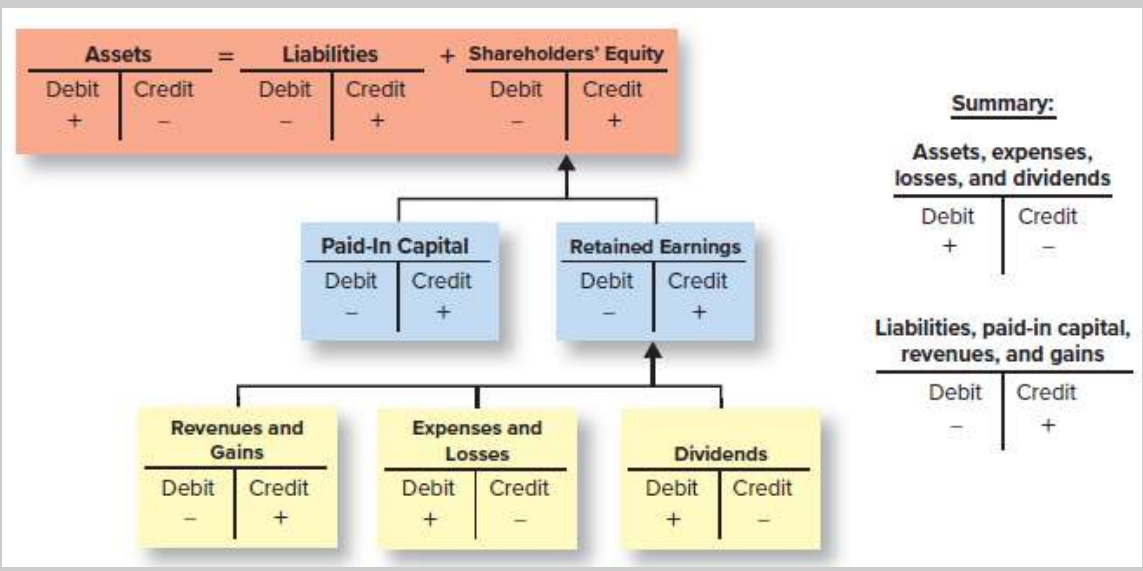

For example, consider the bank loan in our earlier illustration. An asset, cash, increased by **\$40,000**. Increases in assets are *debits (left side)*. Liabilities also increased by **\$40,000**. Increases in liabilities are *credits (right side)*.

| Assets | = | Liabilities | + | Shareholders' Equity |
|----------|---|--------------|---|----------------------|
| Cash | | Note Payable | | |
| Debit | | Debit | | Credit |
| + 40,000 | | | | 40,000 + |

The debits equal the credits in every transaction (dual effect), so both before and after a transaction the accounting equation is in balance.

Illustration 2-3 demonstrates the effects of debits and credits on each element of the expanded accounting equation. As summarized in the illustration, every asset, expense, loss, and dividend account increases with a debit and decreases with a credit. In contrast, every liability, paid-in capital, revenue, and gain account increases with a credit and decreases with a debit.

Illustration 2-3 Expanded Accounting Equation, Debits and Credits, Increases and Decreases

You can understand the logic in this double-entry system by seeing that accounts on the left side of the basic accounting equation (assets) increase with debits, and accounts on the right side (liabilities and shareholders' equity) increase with credits. As long as total debits equal total credits for each transaction, the accounting equation remains in balance. For debits to equal credits, this means that any *component of shareholders' equity* that increases equity must also increase with a credit. Any component that decreases shareholders' equity must do the opposite and increase with a debit. Once you understand the logic of increasing an account balance with a debit or credit, then you simply do the opposite to decrease the balance.

Each general ledger account can be classified as either *permanent* or *temporary*. **Permanent accounts** represent assets, liabilities, and shareholders' equity (paid-in capital and retained earnings) at a point in time. **Temporary accounts** represent changes in the retained earnings component of shareholders' equity for a corporation caused by revenue, expense, gain, loss, and dividend transactions. It would be cumbersome to record each revenue/gain, expense/loss, and dividend transaction directly into the retained earnings account. The different types of events affecting retained earnings should be kept separate to facilitate the preparation of the financial statements. The balances in these temporary accounts are periodically, usually once a year, closed (zeroed out), and the net effect is transferred to the permanent retained earnings account. The temporary accounts need to be zeroed out to measure income on an annual basis. This closing process is discussed in a later section of this chapter.

Permanent accounts represent the basic financial position elements of the accounting equation.

The general ledger accounts serve as control accounts. Subsidiary accounts associated with a particular general ledger control account are maintained in separate subsidiary ledgers. For example, a subsidiary ledger for accounts receivable contains individual account receivable accounts for each of the company's credit customers, and the total of all subsidiary accounts would equal the amount in the control account. Subsidiary ledgers are discussed in more detail in  **Appendix 2C**.

Temporary accounts keep track of the changes in the retained earnings component of shareholders' equity.

The Accounting Processing Cycle

LO2-2 Describe the steps in the accounting processing cycle.

Now that we've reviewed the basics of the double-entry system, let's look closer at the process used to identify, analyze, record, and summarize transactions and prepare financial statements.

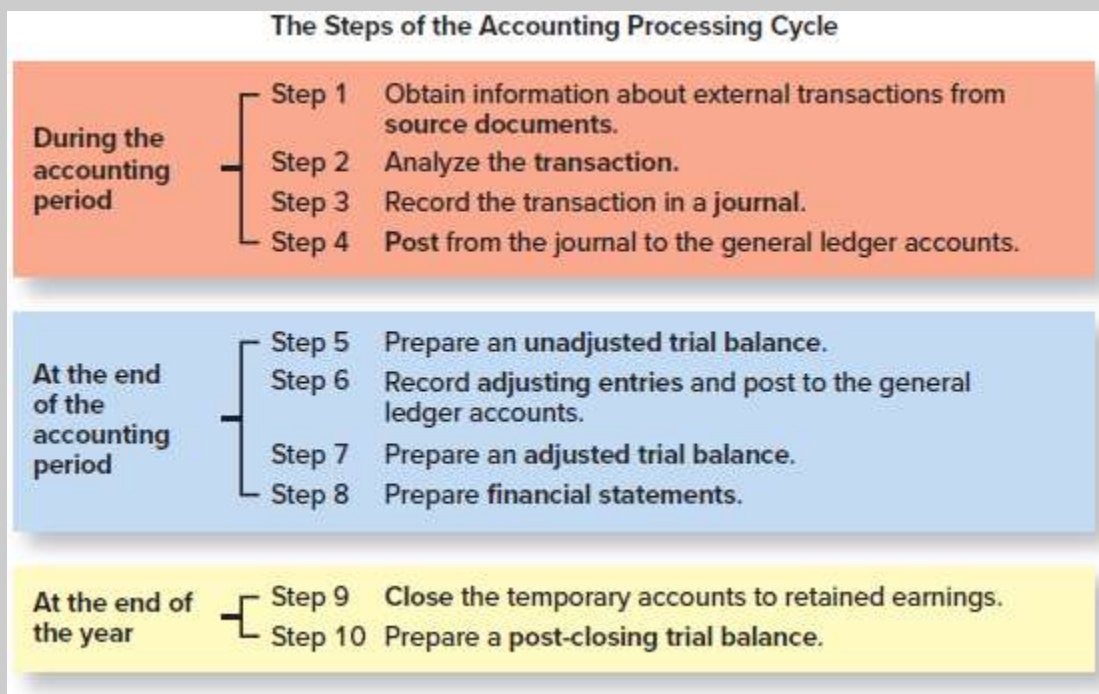

The 10 steps in the accounting processing cycle are listed in  **Illustration 2-4**. Steps 1-4 occur during the accounting period while steps 5-8 are applied at the end of the accounting period. Steps 9 and 10 are needed only at the end of the year.

Illustration 2-4 The Accounting Processing Cycle

Brief Overview of Accounting Processing Cycle

The first step in the process is to *identify* external transactions affecting the accounting equation. An accountant usually does not directly witness business transactions. A mechanism is needed to relay the essential information about each transaction to the accountant. **Source documents** such as sales invoices, bills from suppliers, and cash register tapes serve this need.

STEP 1

Obtain information about transactions from *source documents*.

These source documents usually identify the date and nature of each transaction, the participating parties, and the monetary terms. For example, a sales invoice identifies the date of sale, the customer, the specific goods sold, the dollar amount of the sale, and the payment terms. With this information, the second step in the processing cycle, **transaction analysis**, can proceed. Transaction analysis is the process of reviewing the source documents to determine the dual effect on the accounting equation and the specific elements (which we'll be calling accounts) that will be used to classify the item of analysis.  **Illustration 2-5** provides transaction analysis for the seven events discussed previously in  **Illustration 2-2**.

STEP 2

Analyze the *transaction*.

The third step in the process is to record the transaction in a **journal**. A journal provides a chronological record of all economic events affecting a firm. Each journal entry is expressed in terms of equal debits and credits to accounts affected by the transaction being recorded. As explained earlier, debits and credits represent increases or decreases to specific accounts, depending on the type of account. For example, for credit sales, we record a debit to accounts receivable and a credit to sales revenue in a sales journal.

STEP 3

Record the transaction in a *journal*.

A sales journal is an example of a **special journal** used to record a repetitive type of transaction. In Appendix 2C we discuss the use of special journals in more depth. In this

chapter and throughout the text, we use the **general journal** format to record all transactions.

Any type of transaction can be recorded in a general journal. It has a place for the date of the transaction, a place for account titles, account numbers, and supporting explanations, as well as a place for debit entries and a place for credit entries. A simplified journal entry is used throughout the text that lists the account titles to be debited and credited and the dollar amounts. A common convention is to list the debited accounts first, indent the credited accounts, and use the first of two columns for the debit amounts and the second column for the credit amounts. An explanation is entered for each journal entry (for ease in this example the explanation is located below the entry). For example, the **journal entry** for the bank loan in  **Illustration 2-5**, which requires a debit to cash and a credit to notes payable, is recorded as follows:

| | | |
|---|--------|--------|
| Cash | 40,000 | |
| Notes payable | | 40,000 |
| <i>To record the borrowing of cash and the signing of a note payable.</i> | | |

Illustration 2-5 Transaction Analysis, the Accounting Equation, and Debits and Credits

| | | Accounting Equation | | |
|--|--|---------------------|-----------------|--------------------|
| Transaction | Transaction Analysis | Assets | = Liabilities + | Shareholder Equity |
| 1. \$50,000 was received from the owner to open the business. | Assets (cash) and shareholders' equity each increased by \$50,000. | <u>+50,000</u> | = | <u>+50,0</u> |
| | <i>Cumulative balances</i> | 50,000 | = | 50,0 |
| 2. \$40,000 was borrowed from a bank and a notes payable was signed. | Assets (cash) and liabilities (note payable) each increased by \$40,000. | <u>+40,000</u> | = | <u>+40,000</u> |
| | <i>Cumulative balances</i> | 90,000 | = | 40,000 + 50,0 |

Accounting Equation

| Transaction | Transaction Analysis | Assets | = | Liabilities | + | Shareholder Equity |
|---|---|----------------|---|---------------|---|-----------------------|
| 3. Supplies costing \$3,000 were purchased on account. | Assets (supplies) and liabilities (accounts payable) each increased by \$3,000. | <u>+3,000</u> | | <u>+3,000</u> | | <u> </u> |
| | <i>Cumulative balances</i> | 93,000 | = | 43,000 | + | 50,000 |
| 4. Services were performed on account for \$10,000. | Assets (accounts receivable) and shareholders' equity (revenue) each increased by \$10,000. | <u>+10,000</u> | | | | <u>+10,000</u> |
| | <i>Cumulative balances</i> | 103,000 | = | 43,000 | + | 60,000 |
| 5. Salaries of \$5,000 were paid to employees. | Assets (cash) decreased and shareholders' equity decreased (salaries expense increased) by \$5,000. | <u>-5,000</u> | | | | <u>-5,000</u> |
| | <i>Cumulative balances</i> | 98,000 | = | 43,000 | + | 55,000 |
| 6. \$500 utilities were incurred but not paid | Liabilities (accounts payable) increased and shareholders' equity decreased (utilities expense increased) by \$500. | | | <u>+500</u> | | <u>-500</u> |
| | <i>Cumulative balances</i> | 98,000 | = | 43,000 | + | 54,500 |
| 7. \$1,000 was paid on account to the supplies vendor in transaction 3 above. | Assets (cash) and liabilities (accounts payable) each decreased by \$1,000. | <u>-1,000</u> | | <u>-1,000</u> | | |

| | | Accounting Equation | | |
|-------------|----------------------------|---------------------|-----------------|----------------------|
| Transaction | Transaction Analysis | Assets | = Liabilities + | Shareholder Equity |
| | <i>Cumulative balances</i> | <u>97,000</u> | = | <u>42,000 + 54,5</u> |

STEP 4

Post from the journal to the general ledger accounts.

The fourth step is to periodically transfer or *post* the debit and credit information from the journal to individual ledger accounts. Recall that a ledger is simply a collection of all of the company's various accounts. Each account provides a summary of the effects of all events and transactions on that individual account. **Posting** involves transferring debits and credits recorded in individual journal entries to the specific accounts affected. As discussed earlier in the chapter, most accounting systems today are computerized. For these systems, the journal input information creates a stored journal and simultaneously posts each entry to the ledger accounts.

Page 52

STEP 5

Prepare an unadjusted trial balance.

The fifth step is to prepare an unadjusted trial balance. The general ledger accounts provide the information needed. A trial balance is simply a list of general ledger accounts and their balances at a particular date. The **unadjusted trial balance** allows us to verify that the total of all debits is equal to the total of all credits after recording all transactions during the period but before any adjusting entries (next step).

STEP 6

Record and post adjusting entries.

The sixth step is to record adjusting entries and post those to the general ledger accounts. Before we can prepare the financial statements, we need to bring our account balances up-to-

date. We do this using adjusting entries at the end of the period. **Adjusting entries** are used to record changes in assets and liabilities (and their related revenues and expenses) that have occurred during the period but which we have not yet recorded by the end of the period.

STEP 7

Prepare an *adjusted trial balance*.

The seventh step is to prepare an adjusted trial balance. An **adjusted trial balance** is a trial balance that is prepared after all adjusting entries have been recorded.

STEP 8

Prepare the *financial statements*.

The eighth step is to prepare the **financial statements**. In fact, the purpose of all the steps up to this point is so we have the information needed to do this. These statements include::

- the income statement and statement of comprehensive income,
- the balance sheet,
- the statement of cash flows, and
- the statement of shareholders' equity.

Financial statements are the primary means of providing information to investors and other decision makers, which is the purpose of accounting. The adjusted trial balance supplies the necessary information to produce these statements.

STEP 9

Close the temporary accounts to retained earnings.

The ninth step is to record closing entries and post those to the general ledger accounts. **Closing entries** serve two purposes: (1) to transfer the balances of temporary accounts (revenues, expenses, gains, losses, and dividends) to the retained earnings account, and (2) to reduce the balances of these temporary accounts to zero to “wipe the slate clean” and ready them for measuring activity in the next period.

STEP 10

Prepare a *post-closing trial balance*.

The final step is to prepare a post-closing trial balance. The **post-closing trial balance** is a list of all permanent accounts and their balances after closing entries have been recorded. Because all temporary accounts have been closed to zero, they are not listed. The final balances in permanent accounts will be used to open (begin) the records in the next period.

Illustration of Accounting Processing Cycle

Now that we have looked at a brief overview of the ten steps of the accounting processing cycle, let's take a closer look at each one. We start by illustrating the first four steps in the processing cycle using the external transactions described in  **Illustration 2-6** that occurred during the month of July 2024, the first month of operations for Dress Right Clothing Corporation. The company operates a retail store that sells men's and women's clothing. Dress Right is organized as a corporation so owners' equity is classified by source as either paid-in capital or retained earnings.

Illustration 2-6 External Transactions for July 2024

- | | |
|------|--|
| July | <ul style="list-style-type: none">1 Received cash of \$60,000 from two investors (\$30,000 each). Each investor was issued 3,000 shares of common stock.1 Borrowed \$40,000 from a local bank and signed two notes. The first note for \$10,000 requires payment of principal and 10% interest in six months. The second note for \$30,000 requires the payment of principal in two years. Interest at 10% is payable each year on July 1, 2025, and July 1, 2026.1 Paid \$24,000 in advance for one year's rent on the store building.1 Purchased office equipment from eTronics for \$12,000 cash.3 Purchased \$60,000 of clothing inventory on account from the Birdwell Wholesale Clothing Company.6 Purchased \$2,000 of supplies for cash.4-31 During the month, sold clothing inventory for \$35,000 cash. The inventory cost \$20,000. |
|------|--|

- 9 Sold clothing inventory on account to Briarfield School for \$3,500. The inventory cost \$2,000.
- 16 Subleased a portion of the building to a jewelry store. Received \$1,000 in advance for the first two months' rent beginning on July 16.
- 20 Paid Birdwell Wholesale Clothing \$25,000 on account.
- 20 Paid salaries to employees for the first half of the month, \$5,000.
- 25 Received \$1,500 on account from Briarfield.
- 30 Paid shareholders a cash dividend of \$1,000.

The local bank requires that Dress Right furnish financial statements on a monthly basis. The transactions listed in the illustration are used to demonstrate the accounting processing cycle for the month of July 2024.

Journal, Ledger, and Trial Balance

Now that we've overviewed the ten steps in the accounting processing cycle, we look closer at the process.

STEPS 1, 2, AND 3

Obtain information about transactions from *source documents*, *analyze the transaction* and *record the transaction in a journal*.

For each transaction, a source document provides the necessary information to complete steps two and three in the processing cycle: transaction analysis and recording the appropriate journal entry. Each transaction described in  **Illustration 2-6** is analyzed below, preceded by the necessary journal entry.

JOURNAL ENTRIES

LO2-3 Analyze and record transactions using journal entries.

To record the issuance of common stock.

| July 1 | | |
|--------------|--------|--------|
| Cash | 60,000 | |
| Common stock | | 60,000 |

This first transaction is an investment by owners that increases an asset (cash) and also increases shareholders' equity (common stock). Increases in assets are recorded as debits, and increases in shareholders' equity are recorded as credits. We use the paid-in capital account called common stock because stock was issued in exchange for cash paid in.²

To record the borrowing of cash and the signing of notes payable.

| July 1 | | |
|---------------|--------|--------|
| Cash | 40,000 | |
| Notes payable | | 40,000 |

Borrowing from the bank causes increases in both an asset (cash) and a liability (notes payable). Increases in assets are debits, and increases in liabilities are credits. The notes require repayment of \$40,000 in principal plus 10% interest. At this point, we record only the principal amount borrowed. As time passes, we'll begin to owe interest. We discuss later how interest is recorded.

To record the payment of one year's rent in advance.

| July 1 | | |
|--------------|--------|--------|
| Prepaid rent | 24,000 | |
| Cash | | 24,000 |

Paying rent in advance increases one asset (prepaid rent) and decreases another asset (cash). Increases in assets are recorded as debits, and decreases in assets are recorded as credits. Dress Right acquired the right to use the building for one full year. This right is an asset because it represents a future benefit to the company. As we will see later, this asset expires over the one-year rental period.

To record the purchase of office equipment.

| July 1 | | |
|------------------|--------|--------|
| Office equipment | 12,000 | |
| Cash | | 12,000 |

Purchasing equipment increases one asset (office equipment) and decreases another (cash).

To record the purchase of inventory on account.

| July 3 | | |
|------------------|--------|--------|
| Inventory | 60,000 | |
| Accounts payable | | 60,000 |

Purchasing inventory on account increases an asset (inventory) and increases a liability (accounts payable). Increases in assets are debits. Increases in liabilities are credits.

Dress Right uses the *perpetual inventory system* to keep track of its inventory. This system requires that the cost of inventory purchased be recorded in inventory, an asset account. When inventory is sold, the inventory account is decreased by the cost of the item sold. An alternative method, the *periodic system*, is briefly discussed later in this chapter. We explore the topic of inventory in depth in [📖 Chapters 8](#) and [📖 9](#).

To record the purchase of supplies.

| July 6 | | |
|----------|-------|-------|
| Supplies | 2,000 | |
| Cash | | 2,000 |

Purchasing supplies increases one asset (supplies) and decreases another asset (cash). Supplies are an asset because they represent future benefits. We won't record those supplies as an expense until we use them.

To record the month's cash sales and the cost of those sales.

| July 4-31 | | |
|------------------------------|--------|--------|
| Cash | 35,000 | |
| Sales revenue | | 35,000 |
| Cost of goods sold (expense) | 20,000 | |

| | |
|------------------|--------|
| July 4-31 | |
| Inventory | 20,000 |

We record cash sales to customers in two parts. First, cash sales increase an asset (cash) and increase shareholders' equity for the amount of the sale to the customer. The increase in equity is recorded by a credit to the temporary account, sales revenue.

Second, cash sales decrease another asset (inventory) and decrease shareholders' equity for the cost of the inventory sold. The decrease to shareholders' equity is recorded by a debit to the temporary account, cost of goods sold (an expense).

For both transactions combined, the net increase in assets (cash received minus inventory used) equals the net increase in shareholders' equity (sales revenue minus cost of goods sold).

Both of these transactions are *summary* transactions. Normally each sale made during the month requires a separate and similar entry in a special journal, which we discuss in [Appendix 2C](#).

To record a credit sale and the cost of that sale.

| | |
|---------------------|-------|
| July 9 | |
| Accounts receivable | 3,500 |
| Sales revenue | 3,500 |
| Cost of goods sold | 2,000 |
| Inventory | 2,000 |

Selling inventory on account is similar to the cash sale shown in the previous transaction. The only difference is that the asset acquired is accounts receivable rather than cash.

Additional Consideration

Periodic Inventory System

The principal alternative to the perpetual inventory system is the periodic system. By this approach, we record the cost of inventory purchased in a temporary account called *purchases*. When inventory is sold, the inventory

account is not decreased and cost of goods sold is not recorded. Instead, we determine the balance in the inventory account only at the end of a reporting period (periodically), and then we can determine the cost of goods sold for the period.

For example, the purchase of \$60,000 of inventory on account by Dress Right is recorded as follows:

| | | |
|------------------|--------|--------|
| Purchases | 60,000 | |
| Accounts payable | | 60,000 |

No cost of goods sold entry is recorded when sales are made in the periodic system.

At the end of July, the amount of ending inventory is determined (either by means of a physical count of goods on hand or by estimation) to be \$38,000 and cost of goods sold for the month is determined as follows:

| | | |
|------------------------|--|-----------------|
| Beginning inventory | | \$ 0 |
| Plus: Purchases | | 60,000 |
| Less: Ending inventory | | (38,000) |
| Cost of goods sold | | <u>\$22,000</u> |

We record the cost of goods sold for the period and adjust the inventory account to the actual amount on hand (in this case from zero to \$38,000) this way:

| | | |
|--------------------|--------|--------|
| Cost of goods sold | 22,000 | |
| Inventory | 38,000 | |
| Purchases | | 60,000 |

We discuss inventory in depth in  **Chapters 8** and  **9**.

| | | |
|-----------------------------------|-------|-------|
| July 16 | | |
| Cash | 1,000 | |
| Deferred rent revenue (liability) | | 1,000 |

Receiving cash from a customer prior to the rental services being provided increases an asset (cash) and increases a liability (deferred rent revenue). We don't yet record revenue because services have not yet been provided. Instead, at the time cash is received, we *owe* future services to the customer. We'll recognize the revenue as those services are provided.

To record the payment of accounts payable.

| | | |
|------------------|--------|--------|
| July 20 | | |
| Accounts payable | 25,000 | |
| Cash | | 25,000 |

Paying cash on accounts payable decreases both an asset (cash) and a liability (accounts payable). A debit decreases the liability, and a credit decreases the asset.

To record the payment of salaries for the first half of the month.

| | | |
|------------------|-------|-------|
| July 20 | | |
| Salaries expense | 5,000 | |
| Cash | | 5,000 |

Paying cash to employees for work in the current period decreases an asset (cash) and decreases shareholders' equity. The decrease to shareholders' equity is recorded in the temporary account, salaries expense.

To record receipt of cash on account.

| | | |
|---------------------|-------|-------|
| July 25 | | |
| Cash | 1,500 | |
| Accounts receivable | | 1,500 |

Receiving cash from customers on account is an exchange of one asset (cash) for another asset (accounts receivable).

To record the payment of a cash dividend.

| July 30 | |
|-----------|-------|
| Dividends | 1,000 |
| Cash | 1,000 |

Paying a cash dividend is a distribution to owners that reduces both cash and retained earnings. Dividends is a temporary account that later is closed (transferred) to retained earnings along with the other temporary accounts (revenues, expenses, gains, and losses) at the end of the fiscal year. We discuss and illustrate the closing process later in the chapter.

Additional Consideration

Consideration

An alternative method of recording a cash dividend is to debit retained earnings at the time the dividend is paid rather than reducing retained earnings during the closing process. The entry to record the dividend using this approach is as follows:

| | |
|-------------------|-------|
| Retained earnings | 1,000 |
| Cash | 1,000 |

As an expedient, we apply this approach when discussing dividends in [Chapter 18](#).

 **Illustration 2-7** summarizes each of the transactions as they would appear in a general journal. In addition to the date, account titles, and debit and credit columns, the journal also has a column titled Post Ref. (Posting Reference). In this column we enter the number assigned to the general ledger account that is being debited or credited. For purposes of this illustration, all asset accounts have been assigned numbers in the 100s, all liabilities are 200s, permanent shareholders' equity accounts are 300s, revenues are 400s, expenses are 500s, and dividends are 600.

General Journal

| Date | Account Title and Explanation | Post Ref. | Debit | Credit |
|--------|--|--------------|--------|--------|
| July 1 | Cash | 100 | 60,000 | |
| | Common stock | 300 | | 60,000 |
| | <i>To record the issuance of common stock.</i> | | | |
| 1 | Cash | 100 | 40,000 | |
| | Notes payable | 220 | | 40,000 |
| | <i>To record the borrowing of cash and the signing of notes payable.</i> | | | |
| 1 | Prepaid rent | 130 | 24,000 | |
| | Cash | 100 | | 24,000 |
| | <i>To record the payment of one year's rent in advance.</i> | | | |
| 1 | Office equipment | 150 | 12,000 | |
| | Cash | 100 | | 12,000 |
| | <i>To record the purchase of office equipment.</i> | | | |
| 3 | Inventory | 140 | 60,000 | |
| | Accounts payable | 210 | | 60,000 |
| | <i>To record the purchase of inventory.</i> | | | |
| 6 | Supplies | 125 | 2,000 | |
| | Cash | 100 | | 2,000 |
| | <i>To record the purchase of supplies.</i> | | | |
| 4-31 | Cash | 100 | 35,000 | |
| | Sales revenue | 400 | | 35,000 |
| | <i>To record cash sales for the month.</i> | | | |
| 4-31 | Cost of goods sold | 500 | 20,000 | |
| | Inventory | 140 | | 20,000 |
| | <i>To record the cost of cash sales.</i> | | | |
| 9 | Accounts receivable | 110 | 3,500 | |
| | Sales revenue | 400 | | 3,500 |

| General Journal | | | Page 1 | |
|-----------------|---|------|--------|--------|
| Date | | Post | | |
| 2024 | Account Title and Explanation | Ref. | Debit | Credit |
| | <i>To record a credit sale.</i> | | | |
| 9 | Cost of goods sold | 500 | 2,000 | |
| | Inventory | 140 | | 2,000 |
| | <i>To record the cost of a credit sale.</i> | | | |
| 16 | Cash | 100 | 1,000 | |
| | Deferred rent revenue | 230 | | 1,000 |
| | <i>To record the receipt of rent in advance.</i> | | | |
| 20 | Accounts payable | 210 | 25,000 | |
| | Cash | 100 | | 25,000 |
| | <i>To record the payment of accounts payable.</i> | | | |
| 20 | Salaries expense | 510 | 5,000 | |
| | Cash | 100 | | 5,000 |
| | <i>To record the payment of salaries for the first half of the month.</i> | | | |
| 25 | Cash | 100 | 1,500 | |
| | Accounts receivable | 110 | | 1,500 |
| | <i>To record the receipt of cash on account.</i> | | | |
| 30 | Dividends | 600 | 1,000 | |
| | Cash | 100 | | 1,000 |
| | <i>To record the payment of a cash dividend.</i> | | | |

The ledger accounts also contain a posting reference, usually the page number of the journal in which the journal entry was recorded. This allows for easy cross-referencing between the journal and the ledger.

LEDGER ACCOUNTS

LO2-4 Post the effects of journal entries to general ledger accounts and prepare an unadjusted trial balance.

Step 4 in the processing cycle is to transfer (post) the debit/credit information from the journal to the general ledger accounts.  **Illustration 2-8** contains the ledger accounts (in T-account form) for Dress Right *after* all the general journal transactions have been posted. The reference GJ1 next to each of the posted amounts indicates that the source of the entry is page 1 of the general journal. An alternative is to number each of the entries in chronological order and reference them by number. Note that each account shows the balance that we call a *normal balance*—that is, the balance is the debit or credit side used to increase the account.

Illustration 2-8 General Ledger Accounts

| Balance Sheet Accounts | | | |
|-------------------------------|---------------|------------|---------------------|
| Cash | | 100 | |
| July 1 GJ1 | 60,000 | 24,000 | July 1 GJ1 |
| 1 GJ1 | 40,000 | 12,000 | 1 GJ1 |
| 4-31 GJ1 | 35,000 | 2,000 | 6 GJ1 |
| 16 GJ1 | 1,000 | 25,000 | 20 GJ1 |
| 25 GJ1 | 1,500 | 5,000 | 20 GJ1 |
| | | 1,000 | 30 GJ1 |
| July 31 Bal. | 68,500 | | July 31 Bal. |
| Accounts Receivable | | 110 | |
| July 9 GJ1 | 3,500 | 1,500 | July 25 GJ1 |

| July 20 GJ1 | 5,000 | | |
| July 31 Bal. | 5,000 | | |
| Dividends | | | |
| Dividends | | 600 | |
| July 30 GJ1 | 1,000 | | |
| July 31 Bal. | 1,000 | | |

Before preparing financial statements and adjusting entries at the end of an accounting period, we prepare an **unadjusted trial balance**—step 5. A trial balance is simply a list of the general ledger accounts along with their balances at a particular date, listed in the order that they appear in the ledger. The purpose of the trial balance is to allow us to check for completeness and to verify that the sum of the accounts with debit balances equals the sum of the accounts with credit balances. The fact that the debits and credits are equal, though, does not necessarily ensure that the equal balances are correct. The trial balance could contain offsetting errors. As we will see later in the chapter, this trial balance also helps with preparing adjusting entries. The unadjusted trial balance on July 31, 2024, for Dress Right appears in  **Illustration 2-9**.

STEP 5

Prepare an *unadjusted trial balance*.

Illustration 2-9 Unadjusted Trial Balance

At any time, the total of all debit balances should equal the total of all credit balances.

| DRESS RIGHT CLOTHING CORPORATION | | |
|---|---------------|----------------|
| Unadjusted Trial Balance | | |
| July 31, 2024 | | |
| Account Title | Debits | Credits |
| Cash | \$ 68,500 | |
| Accounts receivable | 2,000 | |
| Supplies | 2,000 | |
| Prepaid rent | 24,000 | |
| Inventory | 38,000 | |
| Office equipment | 12,000 | |
| Accounts payable | | \$ 35,000 |
| Notes payable | | 40,000 |

| Totals | <u>\$174,500</u> | <u>\$174,500</u> |

Concept Review Exercise

JOURNAL ENTRIES FOR EXTERNAL TRANSACTIONS

The Wyndham Wholesale Company began operations on August 1, 2024. The following transactions occur during the month of August.

- The company receives \$50,000 cash from owners and issues 5,000 shares of common stock.
- Equipment is purchased for \$20,000 cash.
- On the first day of August, \$6,000 rent on office space is paid for the months of August, September, and October (\$2,000/month).
- Inventory costing \$38,000 is purchased on account. The company uses the perpetual inventory system.
- \$30,000 is borrowed from a local bank, and a note payable is signed.

- f. Credit sales for the month are \$40,000. The cost of inventory sold is \$22,000.
- g. \$15,000 is collected on account from customers.
- h. \$20,000 is paid on account to suppliers of inventory.
- i. Cash of \$2,000 was received from a customer for consulting services to begin later in August. Services were completed in early September.
- j. Salaries of \$7,000 are paid to employees for August.
- k. A bill for \$2,000 is received from the local utility company for the month of August.
- l. \$20,000 cash is loaned to another company, evidenced by a note receivable.
- m. The corporation pays its shareholders a cash dividend of \$1,000.

Required:

1. Prepare a journal entry for each transaction.
2. Prepare an unadjusted trial balance as of August 31, 2024.

Solution:

1. Prepare a journal entry for each transaction.

- a. The issuance of common stock for cash increases both cash and shareholders' equity (common stock).

| | | |
|--------------|--------|--------|
| Cash | 50,000 | |
| Common stock | | 50,000 |

- b. The purchase of equipment increases equipment and decreases cash.

| | | |
|-----------|--------|--------|
| Equipment | 20,000 | |
| Cash | | 20,000 |

- c. The payment of rent in advance increases prepaid rent and decreases cash.

| | | |
|--------------|-------|-------|
| Prepaid rent | 6,000 | |
| Cash | | 6,000 |

d. The purchase of inventory on account increases both inventory and accounts payable.

| | | |
|------------------|--------|--------|
| Inventory | 38,000 | |
| Accounts payable | | 38,000 |

e. Borrowing cash and signing a note increases both cash and notes payable.

| | | |
|---------------|--------|--------|
| Cash | 30,000 | |
| Notes payable | | 30,000 |

f. The sale of inventory on account increases both accounts receivable and sales revenue. Also, cost of goods sold increases and inventory decreases.

| | | |
|---------------------|--------|--------|
| Accounts receivable | 40,000 | |
| Sales revenue | | 40,000 |
| Cost of goods sold | 22,000 | |
| Inventory | | 22,000 |

g. The collection of cash on account increases cash and decreases accounts receivable.

| | | |
|---------------------|--------|--------|
| Cash | 15,000 | |
| Accounts receivable | | 15,000 |

h. The payment to suppliers on account decreases both accounts payable and cash.

| | | |
|------------------|--------|--------|
| Accounts payable | 20,000 | |
| Cash | | 20,000 |

i. Receiving cash from customers in advance of services to be provided increases cash and increases deferred revenue (a liability).

| | | |
|------------------|-------|-------|
| Cash | 2,000 | |
| Deferred revenue | | 2,000 |

j. The payment of salaries for the period increases salaries expense and decreases cash.

| | | |
|------------------|-------|-------|
| Salaries expense | 7,000 | |
| Cash | | 7,000 |

k. The receipt of a bill for utilities used increases both utilities expense and accounts payable.

| | | |
|-------------------|-------|-------|
| Utilities expense | 2,000 | |
| Accounts payable | | 2,000 |

l. The lending of cash to another entity and the acceptance of a note increases notes receivable and decreases cash.

| | | |
|------------------|--------|--------|
| Notes receivable | 20,000 | |
| Cash | | 20,000 |

m. Cash dividends paid to shareholders increase dividends and decrease cash.

| | | |
|------------------------|-------|-------|
| Dividends ³ | 1,000 | |
| Cash | | 1,000 |

2. Prepare an unadjusted trial balance as of August 31, 2024.

| Account Title | Debits | Credits |
|---------------------|-----------|-----------|
| Cash | \$ 23,000 | |
| Accounts receivable | 25,000 | |
| Prepaid rent | 6,000 | |
| Inventory | 16,000 | |
| Notes receivable | 20,000 | |
| Equipment | 20,000 | |
| Accounts payable | | \$ 20,000 |
| Deferred revenue | | 2,000 |
| Notes payable | | 30,000 |

| Account Title | Debits | Credits |
|----------------------|------------------|------------------|
| Common stock | | 50,000 |
| Retained earnings | | 0 |
| Sales revenue | | 40,000 |
| Cost of goods sold | 22,000 | |
| Salaries expense | 7,000 | |
| Utilities expense | 2,000 | |
| Dividends | 1,000 | |
| Totals | <u>\$142,000</u> | <u>\$142,000</u> |

Adjusting Entries

LO2–5 Identify and describe the different types of adjusting journal entries.

STEP 6

Record *adjusting entries* and post to the ledger accounts.

Step 6 in the processing cycle is to record **adjusting entries** and post them to the ledger accounts. These transactions often do not involve an exchange transaction with another entity and, therefore, are not initiated by a source document.

Adjusting entries are required to implement the *accrual accounting model*. More specifically, these entries help ensure that balances of all assets, liabilities, revenues and expenses are correctly stated by the end of the period, regardless of when cash is received or paid. You might think of adjusting entries as a method of bringing the company's financial information up-to-date before preparing the financial statements.

Page 62

Adjusting entries are necessary for three situations:

1. **Prepayments**, sometimes referred to as *deferrals*
2. **Accruals**
3. **Estimates**

Prepayments

Prepayments occur when the cash flow *precedes* either expense or revenue recognition. For example, a company may buy supplies in one period but use them in a later period. The cash outflow creates an asset (supplies) which then must be expensed in a future period as the asset is used (supplies expense).

Prepayments are transactions in which the cash flow *precedes* expense or revenue recognition.

Similarly, a company may receive cash from a customer in one period but provide the customer with a good or service in a future period. For instance, online subscription

companies usually receive cash in advance from customers. At the time of the cash inflow, a liability (deferred revenue) is created. This liability represents goods or services owed to customers who have paid in advance. Revenue is then recognized (and the liability is settled) over time as the goods or services are provided to customers.

PREPAID EXPENSES

LO2–6 Record adjusting journal entries in general journal format, post entries, and prepare an adjusted trial balance.

Prepaid expenses are the costs of assets acquired in one period and expensed in a future period. Whenever cash is paid, and it is not to (1) satisfy a liability or (2) pay a dividend or return capital to owners, it must be determined whether or not the payment creates future benefits or whether the payment benefits only the current period. The purchase of buildings, equipment, or supplies or the payment of rent in advance are examples of payments that create future benefits and should be recorded as assets. These costs will be recognized as expenses in future periods as the assets are used.

Prepaid expenses represent assets recorded when a cash disbursement creates benefits beyond the current reporting period.

To illustrate this concept, assume that a company paid a radio station \$2,000 in July for advertising. If that \$2,000 were for advertising provided by the radio station during the month of July, the entire \$2,000 would be expensed in the same period as the cash disbursement. However, if the \$2,000 was a payment for advertising to be provided in a future period, say the month of August, then the cash disbursement creates an asset called *prepaid advertising*. Then, an adjusting entry is required at the end of August to increase advertising expense (decrease shareholders' equity) and to decrease the asset, prepaid advertising, by \$2,000. So, the adjusting entry for a prepaid expense is a *debit to an expense* and a *credit to an asset*.

The adjusting entry required for a prepaid expense is a debit to an expense and a credit to an asset.

| Supplies | |
|-----------------|------------|
| Beg. bal. | 0 |
| | 2,000 |
| | 800 |

| Supplies | |
|------------------|-------|
| End bal. | 1,200 |
| Supplies Expense | |
| Beg. bal. | 0 |
| | 800 |
| End. bal. | 800 |

The unadjusted trial balance can provide a starting point for determining which adjusting entries are required for a period, particularly for prepayments. Review the July 31, 2024, unadjusted trial balance for the Dress Right Clothing Corporation in [Illustration 2-9](#) and try to anticipate the required adjusting entries for prepaid expenses.

The first asset that requires adjustment is supplies, \$2,000 of which were purchased during July. This transaction created an asset as the supplies will be used in future periods. The company could either track the supplies used or simply count the supplies at the end of the period and determine the dollar amount of supplies remaining. Assume that Dress Right determines that at the end of July, \$1,200 of supplies remain. This indicates that \$800 of supplies have been used, but the Supplies account in the unadjusted trial balance does not yet reflect this amount. The following adjusting journal entry is required to update account balances.

To record the cost of supplies used during the month of July.

| July 31 | |
|------------------|-----|
| Supplies expense | 800 |
| Supplies | 800 |

The next prepaid expense requiring adjustment is rent. Recall that at the beginning of July, the company paid \$24,000 to its landlord representing one year's rent in advance. As it is reasonable to assume that the rent services provided each period are equal, the monthly rent is \$2,000. At the end of July, one month's prepaid rent has expired and must be recognized as expense.

To record the cost of expired rent for the month of July.

| July 31 | |
|------------------------------|-------|
| Rent expense (\$24,000 ÷ 12) | 2,000 |

| July 31 | |
|--------------|-------|
| Prepaid rent | 2,000 |

| Prepaid Rent | |
|--------------|--------|
| Beg. bal. | 0 |
| | 24,000 |
| | 2,000 |
| End. bal. | 22,000 |

| Rent Expense | |
|--------------|-------|
| Beg. bal. | 0 |
| | 2,000 |
| End bal. | 2,000 |

After this entry is recorded and posted to the ledger accounts, the prepaid rent account will have a debit balance of \$22,000, representing 11 remaining months at \$2,000 per month, and the rent expense account will have a \$2,000 debit balance.

The final prepayment involves the asset represented by office equipment that was purchased for \$12,000. This asset has a long life but, nevertheless, will expire over time. For the previous two adjusting entries, it was fairly straightforward to determine the amount of the asset that expired during the period.

However, it is difficult, if not impossible, to determine how much of the benefits from using the office equipment expired during any particular period. Recall from [Chapter 1](#) that one approach is to recognize an expense “by a systematic and rational allocation to specific time periods.”

Assume that the office equipment has a useful life of five years (60 months) and will be worthless at the end of that period, and that we choose to allocate the cost equally over the period of use. The amount of monthly expense, called *depreciation expense*, is \$200 ($\$12,000 \div 60 \text{ months} = \200), and the following adjusting entry is recorded.

To record depreciation of office equipment for the month of July.

| July 31 | |
|----------------------|-----|
| Depreciation expense | 200 |

The entry reduces an asset, office equipment, by \$200. However, the asset account is not reduced directly. Instead, the credit is to an account called *accumulated depreciation*. This is a contra account to office equipment. The normal balance in a contra asset account will be a credit, that is, “contra,” or opposite, to the normal debit balance in an asset account. The purpose of the contra account is to keep the original cost of the asset intact while reducing it indirectly. In the balance sheet, office equipment is reported net of accumulated depreciation. When we have multiple depreciable assets, it’s helpful to differentiate accumulated depreciation accounts, like accumulated depreciation—office equipment, accumulated depreciation—buildings, etc. This topic is covered in depth in [Chapter 11](#).

After this entry is recorded and posted to the ledger accounts, the accumulated depreciation account will have a credit balance of \$200, and the depreciation expense account will have a \$200 debit balance. If a required adjusting entry for a prepaid expense is not recorded, net income, assets, and shareholders’ equity (retained earnings) will be overstated.

DEFERRED REVENUES

Deferred revenues are created when a company receives cash from a customer in one period for goods or services that are to be provided in a future period. The cash receipt, an external transaction, is recorded as a debit to cash and a credit to a liability. This liability reflects the company’s obligation to provide goods or services in the future.

Deferred revenues represent liabilities recorded when cash is received from customers in advance of providing a good or service.

To illustrate a deferred revenue transaction, assume that during the month of June an online subscription service provider received \$24 in cash from a customer for a 24-month subscription. The subscription begins in July. On receipt of the cash, the company records a liability, deferred-subscription revenue, of \$24. Subsequently, revenue of \$1 is recognized each month. An adjusting entry is required each month to increase shareholders’ equity (revenue) to recognize the \$1 in revenue and to decrease the liability. The adjusting entry for deferred revenues, therefore, is a *debit to a liability*, in this case deferred subscription revenue, and a *credit to revenue*.

The adjusting entry required when deferred revenues are recognized is a debit to a liability and a credit to revenue.

Once again, the unadjusted trial balance provides information concerning deferred revenues. For Dress Right Clothing Corporation, the only deferred revenue in the trial balance is deferred rent revenue. Recall that the company subleased a portion of its building to a jewelry store for \$500 per month. On July 16, the jewelry store paid Dress Right \$1,000 in advance for the first two months' rent. The transaction was recorded as a debit to cash and a credit to deferred rent revenue.

At the end of July, how much of the \$1,000 must be recognized? Approximately one-half of one month's rent service has been provided, or \$250, requiring the following adjusting entry.

To record previously deferred rent revenue recognized during July.

| | |
|-----------------------|-----|
| July 31 | |
| Deferred rent revenue | 250 |
| Rent revenue | 250 |

After this entry is recorded and posted to the ledger accounts, the deferred rent revenue account is reduced to a credit balance of \$750 for the remaining one and one-half months' rent, and the rent revenue account will have a \$250 credit balance.

| Deferred Rent Revenue | |
|-----------------------|--------------|
| | 0 Beg. bal. |
| | 1,000 |
| 250 | 750 End bal. |
| Rent Revenue | |
| | 0 Beg. bal. |
| | 250 |
| | 250 End bal. |

ALTERNATIVE APPROACH TO RECORD PREPAYMENTS

The same end result can be achieved for prepayments by recording the external transaction directly into an expense or revenue account. In fact, some companies prefer this approach. For simplicity, bookkeeping instructions might require all cash payments for expenses to be debited to the appropriate expense accounts and all cash receipts for revenues to be credited

to the appropriate revenue accounts. In the adjusting entry, then, the *unexpired* prepaid expense (asset) or *deferred* revenue (liability) as of the end of the period are recorded.

For example, on July 1, Dress Right paid \$24,000 in cash for one year's rent on its building. The company could have debited rent expense instead of prepaid rent.

| Alternative Approach | |
|----------------------|--------|
| July 1 | |
| Rent expense | 24,000 |
| Cash | 24,000 |

| Rent Expense | |
|--------------|---------------|
| Beg. bal. | 0 |
| | 24,000 |
| | 22,000 |
| End bal. | 2,000 |

The adjusting entry then records the amount of prepaid rent as of the end of July, \$22,000, and reduces rent expense to \$2,000, the cost of rent for the month of July.

| Alternative Approach—Adjusting Entry | |
|--------------------------------------|--------|
| July 31 | |
| Prepaid rent | 22,000 |
| Rent expense | 22,000 |

| Prepaid Rent | |
|--------------|---------------|
| Beg. bal. | 0 |
| | 22,000 |
| End bal. | 22,000 |

The net effect of handling the transactions in this manner is the same as the previous treatment. Either way, the prepaid rent account will have a debit balance at the end of July of \$22,000 to represent 11 months remaining prepaid rent, and the rent expense account will have a debit balance of \$2,000 to represent the one month of rent used in the period of this income statement being prepared. What's important is that an adjusting entry is

recorded to ensure the appropriate amounts are reflected in both the expense and asset *before financial statements are prepared.*

Similarly, the July 16 cash receipt from the jewelry store representing an advance for two months' rent initially could have been recorded by Dress Right as a credit to rent revenue instead of deferred rent revenue (a liability).

| Alternative Approach | |
|----------------------|-------|
| July 16 | |
| Cash | 1,000 |
| Rent revenue | 1,000 |

| Rent Revenue | |
|--------------|--------------|
| | 0 Beg. bal. |
| | 1,000 |
| 750 | |
| | 250 End bal. |

If Dress Right records the entire \$1,000 as rent revenue in this way, it would then use the adjusting entry to record the amount of deferred revenue as of the end of July, \$750 to represent the one and one-half month of rent revenue remaining as collected in advance, and the rent revenue account will have a credit balance of \$250, which is for the one-half month of July that has passed in the current period.

| Alternative Approach—Adjusting Entry | |
|--------------------------------------|-----|
| July 31 | |
| Rent revenue | 750 |
| Deferred rent revenue | 750 |

| Deferred Rent Revenue | |
|-----------------------|--------------|
| | 0 Beg. bal. |
| 750 | |
| | 750 End bal. |

Accruals

Accruals occur when the cash flow comes *after* either expense or revenue recognition. For example, a company often uses the services of another entity in one period and pays for them in a subsequent period. An expense must be recognized in the period incurred and an accrued liability recorded. Also, goods and services often are provided to customers on credit. In such instances, a revenue is recognized in the period goods or services are transferred to customers, and an asset, a receivable, is recorded.

Accruals involve transactions where the cash outflow or inflow takes place in a period subsequent to expense or revenue recognition.

Many accruals involve external transactions that automatically are recorded from a source document. For example, a sales invoice for a credit sale provides all the information necessary to record the debit to accounts receivable and the credit to sales revenue. However, there are some accruals that involve internal transactions and thus require adjusting entries. Because accruals involve recognition of expense or revenue before cash flow, the unadjusted trial balance will not be as helpful in identifying required adjusting entries as with prepayments.

ACCRUED LIABILITIES

For **accrued liabilities**, we are concerned with expenses incurred but not yet paid. Dress Right Clothing Corporation requires two adjusting entries for accrued liabilities at July 31, 2024.

Accrued liabilities represent liabilities recorded when an expense has been incurred prior to cash payment.

The first entry is for employee salaries for the second half of July. Recall that on July 20 the company paid employees \$5,000 for salaries for the first half of the month. Salaries for the second half of July probably will be paid in early August. Nevertheless, an expense is incurred in July for services rendered to the company by its employees. The accrual income statement for July must reflect these services for the entire month regardless of when the cash payment is made.

Therefore, an obligation exists at the end of July to pay the salaries earned by employees for the last half of that month. An adjusting entry is required to increase salaries expense (decrease shareholders' equity) and to increase liabilities for the salaries payable. The adjusting entry for an accrued liability always includes a *debit to an expense* and a *credit to a*

The adjusting entry required to record an accrued liability is a *debit to an expense* and a *credit to a liability*.

liability. Assuming that salaries for the second half of July are \$5,500, the following adjusting entry is recorded.

| July 31 | |
|------------------|-------|
| Salaries expense | 5,500 |
| Salaries payable | 5,500 |

| Salaries Payable | |
|------------------|----------------|
| | 0 Beg. bal. |
| | 5,500 |
| | 5,500 End bal. |
| Salaries Expense | |
| Beg. bal. | 0 |
| July 20 | 5,000 |
| | 5,500 |
| End bal. | 10,500 |

After this entry is recorded and posted to the general ledger, the salaries expense account will have a debit balance of \$10,500 (\$5,000 + 5,500), and the salaries payable account will have a credit balance of \$5,500.

The unadjusted trial balance does provide information about the second required accrued liability entry. In the trial balance we can see a balance in the notes payable account of \$40,000. The company borrowed this amount on July 1, 2024, evidenced by two notes, each requiring the payment of 10% interest. Whenever the trial balance reveals interest-bearing debt, and interest is not paid on the last day of the period, an adjusting entry is required for the amount of interest that has built up (accrued) since the last payment date or the last date interest was accrued. In this case, we calculate interest as follows:

$$\begin{aligned} \text{Principal} &\times \text{Interest rate} \times \text{Time} = \text{Interest} \\ \$40,000 &\times 10\% \times \frac{1}{12} = \$333 \text{ (rounded)} \end{aligned}$$

Interest rates always are stated as the annual rate. Therefore, the above calculation uses this annual rate multiplied by the principal amount multiplied by the amount of time outstanding, in this case one month or one-twelfth of a year.

To accrue interest expense for July on notes payable.

| July 31 | |
|------------------|-----|
| Interest expense | 333 |
| Interest payable | 333 |

After this entry is recorded and posted to the ledger accounts, the interest expense account will have a debit balance of \$333, and the interest payable account will have a credit balance of \$333. Failure to record a required adjusting entry for an accrued liability will cause net income and shareholders' equity (retained earnings) to be overstated and liabilities to be understated.⁴

ACCRUED RECEIVABLES

Accrued receivables involve the recognition of revenue for goods or services transferred to customers *before* cash is received. An example of an internal accrued revenue event is the recognition of interest earned on a loan to another entity. For example, assume that Dress Right loaned another corporation \$30,000 at the beginning of August, evidenced by a note receivable. Terms of the note call for the payment of principal, \$30,000, and interest at 8% in three months. An external transaction records the cash disbursement—a debit to note receivable and a credit to cash of \$30,000.

Accrued receivables involve situations when the revenue is recognized in a period prior to the cash receipt.

What adjusting entry would be required at the end of August? Dress Right needs to record the interest revenue earned but not yet received along with the corresponding receivable. Interest receivable increases, and interest revenue (shareholders' equity) also increases. The adjusting entry for accrued receivables always includes a *debit to an asset*, a receivable, and a *credit to revenue*. In this case, at the end of August, Dress Right recognizes \$200 in interest revenue ($\$30,000 \times 8\% \times 1/12$) and makes the following adjusting entry. If this entry is not recorded, net income, assets, and shareholders' equity (retained earnings) will be understated.

The adjusting entry required to record an accrued revenue is a *debit to an asset*, a receivable, and a *credit to revenue*.

To accrue interest revenue earned in August on a note receivable.

| August 31 | |
|---------------------|-----|
| Interest receivable | 200 |
| Interest revenue | 200 |

There are no accrued revenue adjusting entries required for Dress Right at the end of July.

The required adjusting entries for prepayments and accruals are recapped with the aid of T-accounts in [Illustration 2-10](#). In each case an expense or revenue is recognized in a period that differs from the period in which cash was paid or received. These adjusting entries are necessary to properly measure operating performance and financial position on an accrual basis.

Illustration 2-10 Adjusting Entries

Adjusting Entries

| | | Prepaid Expenses | | Financial Statement Effects | |
|--------------------|--|---------------------|-----------|-----------------------------|---------------|
| | | Asset | Expense | Income Statement | Balance Sheet |
| | | Credit | Debit | | |
| Prepayments | | | | Expense ↑ | Assets ↓ |
| | | | | Income ↓ | Ret. Earn. ↓ |
| | | Deferred Revenues | | | |
| | | Liability | Revenues | | |
| | | Debit | Credit | | |
| | | | | Revenue ↑ | Liabilities ↓ |

| | | Accrued Liabilities | | | |
| | | Expense | Liability | | |
| | | Debit | Credit | | |
| Accruals | | | | Expense ↑ | Liabilities ↑ |
| | | | | Income ↓ | Ret. Earn. ↓ |
| | | Accrued Receivables | | | |
| | | Asset | Revenues | | |
| | | Debit | Credit | | |
| | | | | Revenue ↑ | Assets ↑ |
| | | | | Income ↑ | Ret. Earn. ↑ |

Estimates

A third classification of adjusting entries is **estimates**. Accountants often must make estimates of future events to comply with the accrual accounting model. For example, the calculation of depreciation expense requires an estimate of expected useful life of the asset being depreciated as well as its

Accountants often must make **estimates** in order to comply with the accrual accounting model.

expected residual value. We discussed the adjusting entries for depreciation expense in the context of its being a prepayment, but it also could be thought of as an estimate.

One adjusting-entry situation involving an estimate that does not fit neatly into either the prepayment or accrual classification is bad debts. Accounting for bad debts requires a company to estimate the amount of accounts receivable that ultimately will prove to be uncollectible and to reduce accounts receivable by that estimated amount. This is neither a prepayment nor an accrual because it does not involve the payment of cash either before or after income is reduced. We explore accounts receivable and bad debts in depth in Chapter 7.

 **Illustration 2-11** recaps the July 31, 2024, adjusting entries for Dress Right Clothing Corporation as they would appear in a general journal. The journal entries are numbered (1) to (6) corresponding to the numbers used in the worksheet illustrated in  **Appendix 2A**.

Illustration 2-11 The General Journal—Adjusting Entries

| DRESS RIGHT CLOTHING CORPORATION | | | | | Page |
|---|--|--|-----|--------------|------------------------|
| General Journal | | | | | 2 |
| Date | Account Title and Explanation | | | Post. | |
| 2024 | | | | Ref. | Debit Credit |
| July 31 | Supplies expense | | 520 | 800 | |
| (1) | Supplies | | 125 | | 800 |

| | Interest payable | 240 | | 333 |
| | <i>To accrue interest expense for July on notes payable.</i> | | | |

After the adjusting entries are posted to the general ledger accounts, the next step—step 7—in the processing cycle is to prepare an **adjusted trial balance**. The term adjusted refers to the fact that adjusting entries have now been posted to the accounts. Recall that the column titled Post. Ref. (Posting Reference) is the number assigned to the general ledger account that is being debited or credited.  **Illustration 2-12** shows the July 31, 2024, adjusted trial balance for Dress Right Clothing Corporation.

STEP 7

Prepare an *adjusted trial balance*.

Concept Review Exercise

ADJUSTING ENTRIES

The Wyndham Wholesale Company needs to prepare financial statements at the end of August 2024 for presentation to its bank. An unadjusted trial balance as of August 31, 2024, was presented in a previous Concept Review Exercise.

The following information also is available:

- a. The notes payable account contains one note of \$30,000. The date of the note is August 1, 2024. The note requires interest of 10% to be paid annually on July 31. The principal is due in three years.
- b. Depreciation on the equipment for the month of August is \$500.
- c. The notes receivable account contains one note. It is dated August 16, 2024. The \$20,000 note plus interest at 12% will be received in four months (the loan was outstanding for one-half month during August).
- d. The prepaid rent of \$6,000 represents rent for the months of August, September, and October (\$2,000/month).
- e. By the end of August, consulting services worth \$1,250 have been provided to a customer who previously paid in advance. As consulting is not part of the company's primary operations, these services are recorded as miscellaneous (non-operating) revenue.

Required:

1. Prepare any necessary adjusting entries at August 31, 2024.
2. Prepare an adjusted trial balance as of August 31, 2024.

3. By what amount are assets, liabilities, and net income overstated or understated if the adjusting entries are *not* recorded?

Solution:

1. Prepare any necessary adjusting entries at August 31, 2024.

a. An adjusting entry is required to accrue the interest on the note payable for the month of August. Accrued interest is calculated as follows:

$$\$30,000 \times 10\% \times \frac{1}{12} = \$250$$

| | | |
|------------------|-----|-----|
| Interest expense | 250 | |
| Interest payable | | 250 |

b. An adjusting entry is required to recognize the portion of the equipment that has been depreciated during August.

| | | |
|--------------------------|-----|-----|
| Depreciation expense | 500 | |
| Accumulated depreciation | | 500 |

c. An adjusting entry is required for the one-half month of accrued interest on the note receivable. Accrued interest is calculated as follows:

$$\$20,000 \times 12\% \times \frac{1}{12} \times \frac{1}{2} = \$100$$

| | | |
|---------------------|-----|-----|
| Interest receivable | 100 | |
| Interest revenue | | 100 |

d. An adjusting entry is required to recognize the amount of prepaid rent that expired during August.

| | | |
|--------------|-------|-------|
| Rent expense | 2,000 | |
| Prepaid rent | | 2,000 |

e. An adjusting entry is required to recognized miscellaneous services provided by the end of August related to deferred revenue.

| | |
|-----------------------|-------|
| Deferred revenue | 1,250 |
| Miscellaneous revenue | 1,250 |

2. Prepare an adjusted trial balance as of August 31, 2024.

Page 70

| Account Title | Debits | Credits |
|--------------------------|-----------|---------|
| Cash | \$ 23,000 | |
| Accounts receivable | 25,000 | |
| Prepaid rent | 4,000 | |
| Inventory | 16,000 | |
| Interest receivable | 100 | |
| Notes receivable | 20,000 | |
| Equipment | 20,000 | |
| Accumulated depreciation | | \$ 500 |
| Accounts payable | | 20,000 |
| Deferred revenue | | 750 |
| Interest payable | | 250 |
| Notes payable | | 30,000 |
| Common stock | | 50,000 |
| Retained earnings | | 0 |
| Sales revenue | | 40,000 |
| Interest revenue | | 100 |
| Miscellaneous revenue | | 1,250 |
| Cost of goods sold | 22,000 | |
| Salaries expense | 7,000 | |
| Utilities expense | 2,000 | |
| Interest expense | 250 | |
| Depreciation expense | 500 | |
| Rent expense | 2,000 | |

| Account Title | Debits | Credits |
|----------------------|------------------|-------------------|
| Dividends | 1,000 | |
| Totals | <u>\$142,850</u> | <u>\$ 142,850</u> |

3. By what amount are assets, liabilities, and net income overstated or understated, if the adjusting entries are *not* recorded?

| Adjusting Entry | Assets overstated (understated) | Liabilities overstated (understated) | Income overstated (understated) |
|------------------------|--|---|--|
| Interest expense | \$ – | \$ (250) | \$ 250 |
| Depreciation expense | 500 | – | 500 |
| Interest revenue | (100) | – | (100) |
| Rent expense | 2,000 | – | 2,000 |
| Miscellaneous revenue | <u>–</u> | <u>1,250</u> | <u>(1,250)</u> |
| Net effect | <u>\$2,400</u> | <u>\$1,000</u> | <u>\$1,400</u> |

We now turn our attention to the preparation of financial statements.

Preparing the Financial Statements

LO2-7 Describe the four basic financial statements.

STEP 8

Preparation of *financial statements*.

The purpose of each of the steps in the processing cycle to this point is to provide information for step 8—preparation of the **financial statements**. The adjusted trial balance contains the necessary information. After all, the financial statements are the primary means of communicating financial information to external parties.

The Income Statement and the Statement of Comprehensive Income

The purpose of the **income statement** is to summarize the profit-generating activities of a company that occurred during a particular period of time. It is a *change* statement in that it reports the changes in shareholders' equity (retained earnings) that occurred during the period as a result of revenues, expenses, gains, and losses.  **Illustration 2-13** shows the

income statement for Dress Right Clothing Corporation for the month of July 2024.

The *income statement* is a *change* statement that summarizes the profit-generating transactions that caused shareholders' equity (retained earnings) to change during the period.

Illustration 2-13 Income Statement

| DRESS RIGHT CLOTHING CORPORATION | |
|----------------------------------|---------------|
| Income Statement | |
| For the Month of July 2024 | |
| Sales revenue | \$38,500 |
| Cost of goods sold | <u>22,000</u> |

DRESS RIGHT CLOTHING CORPORATION

Income Statement

For the Month of July 2024

| | | |
|--------------------------|--------------|------------------------|
| Gross profit | | 16,500 |
| Operating expenses: | | |
| Salaries expense | \$10,500 | |
| Supplies expense | 800 | |
| Rent expense | 2,000 | |
| Depreciation expense | <u>200</u> | |
| Total operating expenses | | <u>13,500</u> |
| Operating income | | 3,000 |
| Other income (expense): | | |
| Rent revenue | 250 | |
| Interest expense | <u>(333)</u> | (83) |
| Net income | | <u><u>\$ 2,917</u></u> |

The income statement indicates a profit for the month of July of **\$2,917**. During the month, the company was able to increase its net assets (equity) from activities related to selling its product. Dress Right is a corporation and subject to the payment of income tax on its profits. We ignore this required accrual here and address income taxes in a later chapter.

The components of the income statement usually are classified, that is, grouped according to common characteristics. A common classification scheme is to separate operating items from nonoperating items, as we do in Dress Right's income statement. Operating items include revenues and expenses directly related to the primary revenue-generating activities of the company. For example, operating items for a manufacturing company include sales revenues from the sale of products and all expenses related to this activity. Companies that sell products like Dress Right often report a subtotal within operating income, sales less cost of goods sold, called *gross profit*. Nonoperating items include certain gains and losses and revenues and expenses from peripheral activities. For Dress Right, rent revenue and interest expense are nonoperating items because they do not relate to the primary revenue-generating activity of the company, selling clothes. In [Chapter 4](#) we discuss the format and content of the income statement in more depth.

The *statement of comprehensive income* extends the income statement by reporting all changes in shareholders' equity during the period that were not a result of transactions with owners. A few types of gains and losses, called **other comprehensive income (OCI) or loss** items, are excluded from the determination of net income and the income statement, but are included in the broader concept of **comprehensive income**. Comprehensive income can be reported in one of two ways: (1) in a single, continuous statement of comprehensive income, or (2) in two separate, but consecutive statements.⁵

In the single statement approach, net income is a subtotal within the statement followed by these OCI items, culminating in a final total of comprehensive income. In the two statement approach, a company presents an income statement immediately followed by a statement of comprehensive income. The statement of comprehensive income begins with net income as the first component followed by OCI items to arrive at comprehensive income. Obviously, the approaches are quite similar; in the separate statement approach, we separate the continuous statement into two parts, but the content is the same.

Dress Right has no OCI items so the company presents only an income statement in  **Illustration 2-13**. An entity that has no OCI items is not required to report OCI or comprehensive income. We discuss comprehensive income and the alternative approaches to its presentation in more depth in Chapter 4.

The Balance Sheet

The purpose of the **balance sheet** is to present the financial position of the company on a particular date.

Unlike the income statement, which is a change statement reporting events that occurred *during a period of time*, the balance sheet is a statement that

presents an organized list of assets, liabilities, and shareholders' equity *at a point in time*. To provide a quick overview,  **Illustration 2-14** shows the balance sheet for Dress Right at July 31, 2024.

The *balance sheet* presents an organized list of assets, liabilities, and equity at a particular point in time.

DRESS RIGHT CLOTHING CORPORATION

Balance Sheet

At July 31, 2024

Assets

Current assets:

| | | |
|----------------------|--|---------------|
| Cash | | \$ 68,500 |
| Accounts receivable | | 2,000 |
| Supplies | | 1,200 |
| Inventory | | 38,000 |
| Prepaid rent | | <u>22,000</u> |
| Total current assets | | 131,700 |

Property and equipment:

| | | |
|--------------------------------|------------|------------------|
| Office equipment | \$12,000 | |
| Less: Accumulated depreciation | <u>200</u> | <u>11,800</u> |
| Total assets | | <u>\$143,500</u> |

Liabilities and Shareholders' Equity

Current liabilities:

| | | |
|---------------------------|--|---------------|
| Accounts payable | | \$ 35,000 |
| Salaries payable | | 5,500 |
| Deferred rent revenue | | 750 |
| Interest payable | | 333 |
| Notes payable | | <u>10,000</u> |
| Total current liabilities | | 51,583 |

Long-term liabilities:

| | | |
|---------------|--|--------|
| Notes payable | | 30,000 |
|---------------|--|--------|

Shareholders' equity:

| | | |
|--|---------------|------------------|
| Common stock (6,000 shares issued and outstanding) | \$60,000 | |
| Retained earnings | <u>1,917*</u> | |
| Total shareholders' equity | | <u>61,917</u> |
| Total liabilities and shareholders' equity | | <u>\$143,500</u> |

DRESS RIGHT CLOTHING CORPORATION

Balance Sheet

At July 31, 2024

Assets

| | | | | | |
|------------------------------|---|------------|---|-----------|-----------|
| *Beginning retained earnings | + | Net income | − | Dividends | |
| \$0 | + | \$2,917 | − | \$1,000 | = \$1,917 |

As we do in the income statement, we group the balance sheet elements into meaningful categories. For example, most balance sheets include the classifications of **current assets** and **current liabilities**.

Balance sheet items usually are classified (grouped) according to common characteristics.

Current assets are those assets that are cash, will be converted into cash, or will be used up within one year from the balance sheet date (or operating cycle, if longer). Current liabilities are those liabilities that will be satisfied within one year from the balance sheet date (or operating cycle, if longer). For a manufacturing company, the operating cycle refers to the period of time necessary to convert cash to raw materials, raw materials to a finished product, the finished product to receivables, and then finally receivables back to cash. For most companies, this period is less than a year.

Examples of assets not classified as current include property and equipment and long-term receivables and investments. The only noncurrent asset that Dress Right has at July 31, 2024, is office equipment, which is classified under the property and equipment category.

All liabilities not classified as current are listed as long term. Dress Right's liabilities at July 31, 2024, include the \$30,000 note payable due to be paid in 23 months. This liability is classified as long term.

Shareholders' equity lists the *paid-in capital* portion of equity—common stock—and *retained earnings*. Notice that the income statement we looked at in  **Illustration 2-13** ties in to the balance sheet through retained earnings. Specifically, the revenue, expense, gain, and loss transactions that make up net income in the income statement (\$2,917) become the major components of retained earnings. Later in the chapter, we discuss the closing process we use to transfer, or close, these *temporary* income statement accounts along with the temporary account, dividends, to the *permanent* retained earnings account.

During the month, retained earnings, which increased by the amount of net income, also decreased by the amount of the cash dividend paid to shareholders, \$1,000. The net effect of these two changes is an increase in retained earnings from zero at the beginning of the period to **\$1,917** (\$2,917 – \$1,000) at the end of the period and also is reported in the statement of shareholders' equity in [Illustration 2-16](#).

The Statement of Cash Flows

Similar to the income statement, the **statement of cash flows** also is a change statement. The purpose of the statement is to report the events that caused cash to change during the period. The statement classifies all transactions affecting cash into one of three categories:

The purpose of the *statement of cash flows* is to report the events that caused cash to change during the period.

(1) **operating activities**, (2) **investing activities**, and (3) **financing activities**. Operating activities are inflows and outflows of cash related to transactions entering into the determination of net income. Investing activities involve the acquisition and sale of (1) long-term assets used in the business and (2) nonoperating investment assets. Financing activities involve cash inflows and outflows from transactions with creditors and owners.

The statement of cash flows for Dress Right for the month of July 2024 is shown in [Illustration 2-15](#). As this is the first period of operations for Dress Right, the cash balance at the beginning of the period is zero. The net increase in cash of \$68,500, therefore, equals the ending balance of cash disclosed in the balance sheet.

Illustration 2-15 Statement of Cash Flows

| DRESS RIGHT CLOTHING CORPORATION | |
|---|----------|
| Statement of Cash Flows | |
| For the Month of July 2024 | |
| Cash Flows from Operating Activities | |
| Cash inflows: | |
| From customers | \$36,500 |
| From rent | 1,000 |
| Cash outflows: | |
| For rent | (24,000) |

DRESS RIGHT CLOTHING CORPORATION

Statement of Cash Flows

For the Month of July 2024

| | | |
|---|----------------|-------------------------|
| For supplies | (2,000) | |
| To suppliers of inventory | (25,000) | |
| To employees | <u>(5,000)</u> | |
| Net cash flows from operating activities | | \$(18,500) |
| Cash Flows from Investing Activities | | |
| Purchase of office equipment | | (12,000) |
| Cash Flows from Financing Activities | | |
| Issue of common stock | \$60,000 | |
| Increase in notes payable | 40,000 | |
| Payment of cash dividend | <u>(1,000)</u> | |
| Net cash flows from financing activities | | <u>99,000</u> |
| Net increase in cash | | <u><u>\$ 68,500</u></u> |

There are two generally accepted formats that can be used to report operating activities, the direct method and the indirect method. In [Illustration 2-15](#) we use the direct method. These two methods are discussed and illustrated in subsequent chapters.

The Statement of Shareholders' Equity

The final statement, the **statement of shareholders' equity**, also is a change statement. Its purpose is to disclose the sources of the changes in the various permanent shareholders' equity accounts that occurred during the period from investments by owners, distributions to owners, net income, and other comprehensive income. [Illustration 2-16](#) shows the statement of shareholders' equity for Dress Right for the month of July 2024.⁶

The statement of shareholders' equity discloses the sources of changes in the permanent shareholders' equity accounts.

The Closing Process

LO2–8 Explain the closing process.

STEP 9

Close the temporary accounts to retained earnings (at year-end only).

At the end of any interim reporting period, the accounting processing cycle is now complete. An interim reporting period is any period when financial statements are produced other than at the end of the fiscal year. However, at the end of the fiscal year, two final steps are necessary, closing the temporary accounts—step 9—and preparing a post-closing trial balance—step 10.

The **closing process** serves a *dual purpose*: (1) the temporary accounts (revenues, expenses, gains and losses, and dividends) are reduced to *zero balances*, ready to measure activity in the upcoming accounting period, and (2) these temporary account balances are *closed (transferred) to retained earnings* to reflect the changes that have occurred in that account during the period.

To illustrate the closing process, assume that the fiscal year-end for Dress Right Clothing Corporation is July 31. Using the adjusted trial balance in  **Illustration 2-12**, we can determine the closing entries.

The first closing entry transfers the revenue account balances to retained earnings. Because revenue accounts have credit balances, we debit each one to bring their balances to zero. After this entry is posted to the accounts, both revenue accounts have a zero balance.

To close the revenue accounts to retained earnings.

| July 31 | |
|-------------------|---------------|
| Sales revenue | 38,500 |
| Rent revenue | 250 |
| Retained earnings | 38,750 |

The second closing entry transfers the expense account balances to retained earnings. Because expense accounts have debit balances, we credit them to bring their balances to zero. After this entry is posted to the accounts, the expense accounts have a zero balance.

To close the expense accounts to retained earnings.

| July 31 | |
|----------------------|--------|
| Retained earnings | 35,833 |
| Cost of goods sold | 22,000 |
| Salaries expense | 10,500 |
| Supplies expense | 800 |
| Rent expense | 2,000 |
| Depreciation expense | 200 |
| Interest expense | 333 |

In the third entry we close the dividends account to retained earnings. Like expenses, the dividends account has a debit balance, so we credit the account to bring its balance to zero.

To close the dividends account to retained earnings.

| July 31 | |
|-------------------|-------|
| Retained earnings | 1,000 |
| Dividends | 1,000 |

After the three closing entries are posted to the accounts, the temporary accounts have zero balances and retained earnings has increased by the amount of the net income and decreased by dividends distributed from that net income.

STEP 10

Prepare a *post-closing trial balance* (at year-end only).

| Retained Earnings | | | |
|-------------------|--------|--------|-----------|
| | | 0 | Beg. Bal. |
| Expenses | 35,833 | 38,750 | Revenues |

| Retained Earnings | |
|-------------------|----------------|
| Dividends | 1,000 |
| | 1,917 End Bal. |

Because this is the first month of operations for Dress Right, retained earnings had a beginning balance of \$0. After closing entries, retained earnings has a balance of \$1,917. This will be the amount reported in the July balance sheet (and this will be the beginning balance for August). Closing entries are typically prepared only at the end of the annual reporting period.

Additional Consideration

A company can choose to prepare closing entries by closing revenues and expenses to a temporary account called income summary. If so, the income summary account is then closed to retained earnings. This alternative set of closing entries provides the same effect of closing revenues and expenses directly to the retained earnings account as in our illustration.

A previous additional consideration indicated that an alternative method of recording a cash dividend is to debit retained earnings when the dividends are declared. If this approach is used, this third closing entry to close the dividends account to retained earnings isn't needed. The net result of a cash dividend is the same—a reduction in retained earnings and a reduction in cash.

Virtually all companies have computerized accounting systems that perform the closing process automatically.

After the closing entries are posted to the ledger accounts, a **post-closing trial balance** is prepared. The purpose of this trial balance is to verify that the closing entries were prepared and posted correctly and that the accounts are now ready for next year's transactions.  **Illustration 2-17** shows the post-closing trial balance for Dress Right at July 31, 2024, assuming a July 31 fiscal year-end.

The post-closing trial balance does not include any of the temporary accounts—revenues, expenses, and dividends.

Concept Review Exercise

FINANCIAL STATEMENT PREPARATION AND CLOSING

Refer to the August 31, 2024, adjusted trial balance of the Wyndham Wholesale Company presented in the previous Concept Review Exercise.

Required:

1. Prepare an income statement and a statement of shareholders' equity for the month ended August 31, 2024, and a classified balance sheet as of August 31, 2024.

2. Assume that August 31 is the company's fiscal year-end. Prepare the necessary closing entries and a post-closing trial balance.

Solution:

1. Prepare an income statement and a statement of shareholders' equity for the month ended August 31, 2024, and a classified balance sheet as of August 31, 2024.

WYNDHAM WHOLESALE COMPANY
Income Statement
For the Month of August 2024

| | | |
|--------------------------|--------------|------------------------|
| Sales revenue | | \$40,000 |
| Cost of goods sold | | <u>22,000</u> |
| Gross profit | | 18,000 |

Conversion from Cash Basis to Accrual Basis

LO2 9 Convert from cash-basis net income to accrual-basis net income.

In  **Chapter 1**, we discussed and illustrated the differences between cash and accrual accounting. Cash-basis accounting produces a measure called *net operating cash flow*. This measure is the difference between cash receipts (cash-basis revenues) and cash disbursements (cash-basis expenses) during a reporting period from transactions related to providing goods and services to customers. In other words, the *timing* of revenues and expenses under cash-basis accounting is the time of the cash flow.

On the other hand, the accrual-accounting model measures an entity's accomplishments and resource sacrifices as they occur, regardless of when cash is received or paid. In other words, under accrual-basis accounting, an attempt is made to record assets and liabilities (and their related revenues and expenses) as economic events occur. For example, suppose a company provides services on account to a customer on December 15 but cash is not collected from the customer until January 10. Under accrual-basis accounting, we recognize an account receivable and the related service revenue on December 15 (date of services provided), while under cash-basis accounting, no revenue would be recognized until January 10 (date of cash collection).

Accountants sometimes are called upon to convert cash-basis financial statements to accrual-basis financial statements, particularly for small businesses. You now have all of the tools you need to make this conversion. For example, if a company paid \$20,000 cash for insurance during the fiscal year and you determine that there was \$5,000 in prepaid insurance at the beginning of the year and \$3,000 at the end of the year, then you can determine (accrual basis) *insurance expense* for the year. Prepaid insurance decreased by \$2,000 during the year, so insurance expense must be \$22,000 (\$20,000 in cash paid *plus* the decrease in prepaid insurance). You can visualize as follows:

| Prepaid Insurance | |
|----------------------------|----------|
| Balance, beginning of year | \$ 5,000 |

| Prepaid Insurance | |
|-------------------------|------------------------|
| Plus: Cash paid | 20,000 |
| Less: Insurance expense | <u> ?</u> |
| Balance, end of year | <u><u>\$ 3,000</u></u> |

Insurance expense of \$22,000 completes the explanation of the change in the balance of prepaid insurance. Prepaid insurance of \$3,000 is reported as an asset in an accrual-basis balance sheet.

Suppose a company paid \$150,000 for salaries to employees during the year and you determine that there were \$12,000 and \$18,000 in salaries payable at the beginning and end of the year, respectively. What was salaries expense for the year?

| Salaries Payable | |
|----------------------------|-------------------------|
| Balance, beginning of year | \$ 12,000 |
| Plus: Salaries expense | <u> ?</u> |
| Less: Cash paid | <u>(150,000)</u> |
| Balance, end of year | <u><u>\$ 18,000</u></u> |

Salaries payable increased by \$6,000 during the year, so *salaries expense* must be \$156,000 (\$150,000 in cash paid *plus* the increase in salaries payable). Salaries payable of \$18,000 is reported as a liability in an accrual-basis balance sheet.

Using T-accounts is a convenient approach for converting from cash to accrual accounting.

| Salaries Payable | | Salaries Expense | |
|------------------|----------------|------------------|----------------|
| | 12,000 | Beg. balance | |
| Cash paid | 150,000 | | |
| | <u> ?</u> | Salaries expense | <u> ?</u> |
| | 18,000 | End. balance | |

The debit to salaries expense and credit to salaries payable must have been \$156,000 to balance the salaries payable account.

For another example using T-accounts, assume that the amount of cash collected from customers during the year was \$220,000, and you know that accounts receivable at the

beginning and end of the year were \$45,000 and \$33,000, respectively. You can use T-accounts to determine that *sales revenue* for the year must have been \$208,000, the necessary debit to accounts receivable and credit to sales revenue to balance the accounts receivable account.

| Accounts Receivable | | Sales Revenue | |
|---------------------|--------|---------------|------------------|
| Beg. balance | 45,000 | | |
| Credit sales | ? | | ? Credit sales |
| | | 220,000 | Cash collections |
| End. balance | 33,000 | | |

Now suppose that, on occasion, customers pay in advance of receiving a product or service. Recall from our previous discussion of adjusting entries that this event creates a liability called deferred revenue. Assume the same facts in the previous example, except you also determine that deferred revenues were \$10,000 and \$7,000 at the beginning and end of the year, respectively. A \$3,000 decrease in deferred revenues means that the company recognized an additional \$3,000 in sales revenue for which the cash had been collected in a previous year. So, *sales revenue* for the year must have been \$211,000, the \$208,000 determined in the previous example, *plus* the \$3,000 decrease in deferred revenue.

 **Illustration 2-18** provides another example of converting from cash-basis net income to accrual-basis net income.

Illustration 2-18 Cash to Accrual

The Spotless Cleaning Services Company maintains its records on the cash basis, with one exception. The company reports equipment as an asset and records depreciation expense on the equipment. During 2024, Spotless collected \$165,000 from customers, paid \$92,000 in operating expenses, and recorded \$10,000 in depreciation expense, resulting in net income of **\$63,000**. The owner has asked you to convert this \$63,000 in net income to full accrual net income. You are able to

determine the following information about accounts receivable, prepaid expenses, accrued liabilities, and deferred revenues:

| | January 1, 2024 | December 31, 2024 |
|--|-----------------|-------------------------|
| Accounts receivable | \$ 16,000 | \$ 25,000 |
| Prepaid expenses | 7,000 | 4,000 |
| Accrued liabilities (for operating expenses) | 2,100 | 1,400 |
| Deferred revenues | 3,000 | 4,200 |
| Accrual net income is \$68,500, determined as follows: | | |
| Cash-basis net income | | \$ 63,000 |
| Add: Increase in accounts receivable | | 9,000 |
| Deduct: Decrease in prepaid expenses | | (3,000) |
| Add: Decrease in accrued liabilities | | 700 |
| Deduct: Increase in deferred revenues | | <u>(1,200)</u> |
| Accrual-basis net income | | <u>\$ 68,500</u> |

Notice a pattern in the adjustments to cash-basis net income. When converting from cash-basis to accrual-basis income, we add increases and deduct decreases in assets. For example, an increase in accounts receivable means that the company recognized more revenue than cash collected, requiring the addition to cash-basis income. Conversely, we add decreases and deduct increases in accrued liabilities. For example, a decrease in interest payable means that the company incurred less interest expense than the cash interest it paid, requiring the addition to cash-basis income. These adjustments are summarized in

 **Illustration 2-19.**

Illustration 2-19 Converting Cash-Basis to Accrual-Basis Income

Converting Cash-Basis Income to Accrual-Basis Income

| | Increases | Decreases |
|-------------|-----------|-----------|
| Assets | Add | Deduct |
| Liabilities | Deduct | Add |

Most companies keep their books on an accrual basis.⁷ A more important conversion for these companies is from the accrual basis to the cash basis. This conversion, essential for the preparation of the statement of cash flows, is discussed and illustrated in

 **Chapters 4** and  **21**. The lessons learned here, though, will help you with that conversion. For example, if sales revenue for the period is \$120,000 and beginning and ending accounts receivable are \$20,000 and \$24,000, respectively, how much cash did the company collect from its customers during the period? The answer is \$116,000. An increase in accounts receivable of \$4,000 means that the company collected \$4,000 less from customers than accrual sales revenue, and cash-basis income is \$4,000 less than accrual-basis income.

Most companies must convert from an accrual basis to a cash basis when preparing the statement of cash flows.

Most companies must convert from an accrual basis to a cash basis when preparing the statement of cash flows.

Financial Reporting Case Solution

Creativa Images/Shutterstock

1. What purpose do adjusting entries serve? Adjusting entries help ensure that all revenues are recognized in the period goods or services are transferred to customers, regardless of when cash is received. In this instance, for example, \$13,000 cash has been received for services that haven't yet been performed. Also, adjusting entries enable a company to recognize all expenses incurred during a period, regardless of when cash is paid. Without depreciation, the friends' cost of using the equipment is not taken into account. Conversely, without adjustment, the cost of rent is overstated by \$3,000 paid in advance for part of next year's rent.

With adjustments, we get an accrual income statement that provides a more complete measure of a company's operating performance and a better measure for predicting future operating cash flows. Similarly, the balance sheet provides a more complete assessment of assets and liabilities as sources of future cash receipts and disbursements.

2. What year-end adjustments are needed to revise the income statement?

Did your friends do as well their first year as they thought? Three year-end adjusting entries are needed:

| | | |
|--|--------|--------|
| 1. Depreciation expense ($\$80,000 \div 5$ years) | 16,000 | |
| Accumulated depreciation | | 16,000 |
| 2. Prepaid rent [$\$500 \times 6$ months (July-Dec.)] | 3,000 | |
| Rent expense | | 3,000 |
| 3. Consulting revenue | 13,000 | |
| Deferred consulting revenue | | 13,000 |

No, your friends did not fare as well as their cash-based statement would have indicated. With appropriate adjustments, their net income is actually only \$20,000:

| | | |
|--|----------|----------|
| Consulting revenue ($\$96,000 - \$13,000$) | | \$83,000 |
| Operating expenses: | | |
| Salaries expense | \$32,000 | |
| Rent expense ($\$9,000 - \$3,000$) | 6,000 | |
| Supplies expense | 4,800 | |

| | | |
|----------------------|---------------|------------------------|
| Utilities expense | 3,000 | |
| Advertising expense | 1,200 | |
| Depreciation expense | <u>16,000</u> | <u>63,000</u> |
| Net income | | <u><u>\$20,000</u></u> |

The Bottom Line

-  **LO2-1** The accounting equation underlies the process used to capture the effect of economic events. The equation ($\text{Assets} = \text{Liabilities} + \text{Owners' Equity}$) implies an equality between the total economic resources of an entity (its assets) and the total claims against the entity (liabilities and equity). It also implies that each economic event affecting this equation will have a dual effect because resources always must equal claims. (p. 46)
-  **LO2-2** The accounting processing cycle is the process used to identify, analyze, record, and summarize transactions and prepare financial statements. (p. 49)
-  **LO2-3** After determining the dual effect of external events on the accounting equation, the transaction is recorded in a journal. A journal is a chronological list of transactions in debit/credit form. (p. 53)
-  **LO2-4** The next step in the processing cycle is to periodically transfer, or *post*, the debit and credit information from the journal to individual general ledger accounts. A general ledger is simply a collection of all of the company's various accounts. Each account provides a summary of the effects of all events and transactions on that individual account. The process of entering items from the journal to the general ledger is called *posting*. An unadjusted trial balance is then prepared. (p. 58)
-  **LO2-5** The next step in the processing cycle is to record the effect of *internal events* on the accounting equation. These transactions are commonly referred to as *adjusting entries*. Adjusting entries can be classified into three types: (1) prepayments, (2) accruals, and (3) estimates. Prepayments are transactions in which the cash flow *precedes* expense or revenue recognition. Accruals involve transactions where the cash outflow or inflow takes place in a period *subsequent* to expense or revenue recognition. Estimates for items such as future bad debts on receivables often are required to comply with the accrual accounting model. (p. 61)
-  **LO2-6** Adjusting entries are recorded in the general journal and posted to the ledger accounts at the end of any period when financial statements must be prepared for external use. After these entries are posted to the general ledger accounts, an adjusted trial balance is prepared. (p. 62)

 **LO2-7** The adjusted trial balance is used to prepare the financial statements. The basic financial statements are (1) the income statement, (2) the statement of comprehensive income, (3) the balance sheet, (4) the statement of cash flows, and (5) the statement of shareholders' equity. The purpose of the income statement is to summarize the profit-generating activities of the company that occurred during a particular period of time. A company also must report its other comprehensive income (OCI) or loss items either in a single, continuous statement or in a separate statement of comprehensive income. In the single-statement approach, net income is a subtotal within the statement followed by these OCI items, culminating in a final total of comprehensive income. In the two-statement approach, a company presents an income statement immediately followed by a statement of comprehensive income. The statement of comprehensive income begins with net income as the first component followed by OCI items to arrive at comprehensive income. The balance sheet presents the financial position of the company on a particular date. The statement of cash flows discloses the events that caused cash to change during the reporting period. The statement of shareholders' equity discloses the sources of the changes in the various permanent shareholders' equity accounts that occurred during the period. (p. 70)

 **LO2-8** At the end of the fiscal year, a final step in the accounting processing cycle, closing, is required. The closing process serves a *dual purpose*: (1) the temporary accounts (revenues, expenses, and dividends) are reduced to *zero balances*, ready to measure activity in the upcoming accounting period, and (2) these temporary account balances are *closed (transferred) to retained earnings* to reflect the changes that have occurred in that account during the period. After the entries are posted to the general ledger accounts, a post-closing trial balance is prepared. (p. 74)

 **LO2-9** Cash-basis accounting produces a measure called *net operating cash flow*. This measure is the difference between cash receipts and cash disbursements during a reporting period from transactions related to providing goods and services to customers. On the other hand, the accrual-accounting model measures an entity's accomplishments and resource sacrifices during the period, regardless of when cash is received or paid. Accountants sometimes are called upon to convert cash-basis financial statements to accrual-basis financial statements, particularly for small businesses. (p. 78)

APPENDIX 2A Using a Worksheet

A **worksheet** often is used to organize the accounting information needed to prepare adjusting and closing entries and the financial statements. It is an informal tool only and is not part of the accounting system.

A worksheet can be used as a tool to facilitate the preparation of adjusting and closing entries and the financial statements.

There are many different ways to design and use worksheets. We will illustrate a representative method using the financial information for the Dress Right Clothing Corporation presented in the chapter. Software, such as Excel, facilitates the use of worksheets.

 **Illustration 2A-1** presents the completed worksheet. The worksheet is utilized in conjunction with step 5 in the processing cycle, preparation of an unadjusted trial balance.

Illustration 2A-1 Worksheet, Dress Right Clothing Corporation, July 31, 2024

| Worksheet, Dress Right Clothing Corporation, July 31, 2024 | | | | | | | | | | |
|--|--------------------------|---------|-------------------|-------|------------------------|---------|------------------|--------|---------------|---------|
| Account Titles | Unadjusted Trial Balance | | Adjusting Entries | | Adjusted Trial Balance | | Income Statement | | Balance Sheet | |
| | Dr. | Cr. | Dr. | Cr. | Dr. | Cr. | Dr. | Cr. | Dr. | Cr. |
| Cash | 68,500 | | | | 68,500 | | | | 68,500 | |

| Totals | | | | | | | 38,750 | 38,750 | 144,700 | 144,700 |

Source: Microsoft Excel

Step 1. The account titles as they appear in the general ledger are entered in column A and the balances of these accounts are copied onto columns B and C, titled Unadjusted Trial Balance. The accounts are copied in the same order as they appear in the general ledger, which usually is assets, liabilities, shareholders' equity permanent accounts, revenues, and expenses. The debit and credit columns are totaled to make sure that they balance. This procedure is repeated for each set of columns in the worksheet to check for accuracy.

The first step is to enter account titles in column A and the unadjusted account balances in columns B and C.

Step 2. The end-of-period adjusting entries are determined and entered directly on the worksheet in columns D and E, titled Adjusting Entries. The adjusting entries for Dress Right Clothing Corporation were discussed in detail in the chapter and exhibited in general journal form in  **Illustration 2-11**. You should refer back to this illustration and trace each of the entries to the worksheet. For worksheet purposes, the entries have been numbered from (1) to (6) for easy referencing.

The second step is to determine end-of-period adjusting entries and enter them in columns D and E.

For example, entry (1) records the cost of supplies used during the month of July with a debit to supplies expense and a credit to supplies for **\$800**. A (1) is placed next to the **\$800** in the debit column in the supplies expense row as well as next to the \$800 in the credit column in the supplies row. This allows us to more easily reconstruct the entry for general journal purposes and locate errors if the debit and credit columns do not balance.

Step 3. The effects of the adjusting entries are added to or deducted from the account balances listed in the Unadjusted Trial Balance columns and copied across to columns F and G, titled Adjusted Trial Balance. For example, supplies had an unadjusted balance of **\$2,000**. Adjusting entry (1) credited this account by \$800, reducing the balance to **\$1,200**.

The third step adds or deducts the effects of the adjusting entries on the account balances.

Step 4. The balances in the temporary retained earnings accounts, revenues and expenses, are transferred to columns H and I, titled Income Statement. The difference between the total debits and credits in these columns is equal to net income or net loss. In this case, because credits (revenues) exceed debits (expenses), a net income of

The fourth step is to transfer the temporary retained earnings account balances to columns H and I.

\$2,917 results. To balance the debits and credits in this set of columns, a **\$2,917** debit entry is made in the line labeled Net income.

Step 5. The balances in the permanent accounts are transferred to columns J and K, titled Balance Sheet. To keep the debits and credits equal in the worksheet, a **\$2,917** credit must be entered to offset the \$2,917

The fifth step is to transfer the balances in the permanent accounts to columns J and K.

debit entered in step 4 and labeled as net income. This credit represents the fact that when the temporary revenue and expense accounts are closed out to retained earnings, a \$2,917 credit to retained earnings will result. The credit in column K, therefore, represents an increase in retained earnings for the period, that is, net income. The balance in the temporary account, dividends, is also transferred to column J, titled Balance Sheet. This debit represents the fact that when the dividends account is closed to retained earnings, the \$2,917 balance in that account resulting from net income will be reduced by the \$1,000 of net income distributed to shareholders as a dividend.

After the worksheet is completed, the financial statements can be prepared directly from columns H-K. The financial statements for Dress Right Clothing Corporation are shown in  **Illustrations 2-13** through  **2-16**. The accountant must remember to then record the adjusting entries and the closing entries in the general journal and post them to the general ledger accounts. An adjusted trial balance should then be prepared identical to the one in the worksheet, which is used to prepare the financial statements. At fiscal year-end, the income statement columns can then be used to prepare closing entries. After that, a post-closing trial balance is prepared to wipe the slate clean for the next reporting period.

APPENDIX 2B Reversing Entries

Accountants sometimes use **reversing entries** at the beginning of a reporting period. These optional entries remove the effects of some of the adjusting entries recorded at the end of the previous reporting period for the sole purpose of simplifying journal entries recorded during the new period. If the accountant does use reversing entries, these entries are recorded in the general journal and posted to the general ledger accounts on the first day of the new period.

Reversing entries are used most often with accruals. For example, the following adjusting entry for accrued salaries was recorded at the end of July 2024 for the Dress Right Clothing Corporation in the chapter:

To record accrued salaries at the end of July.

July 31

| | | |
|------------------|-------|-------|
| Salaries expense | 5,500 | |
| Salaries payable | | 5,500 |

If reversing entries are not used, when the salaries actually are paid in August, the accountant needs to remember to debit salaries payable and not salaries expense.

The account balances before and after salary payment can be seen below with the use of T-accounts.

| Salaries Expense | | Salaries Payable | |
|------------------|--------|------------------|--------------|
| Bal. July 31 | 10,500 | 5,500 | Bal. July 31 |
| | | Cash payment | 5,500 |
| | | | 0 |
| | | | Balance |

If the accountant for Dress Right employs reversing entries, the following entry is recorded on August 1, 2024:

To reverse accrued salaries expense recorded at the end of July.

August 1

| | |
|------------------|-------|
| Salaries payable | 5,500 |
|------------------|-------|

Salaries expense

5,500

This entry reduces the salaries payable account to zero and reduces the salary expense account by \$5,500. When salaries actually are paid in August, the debit is to salaries expense, thus increasing the account by \$5,500.

| Salaries Expense | | Salaries Payable | |
|------------------|--------|-------------------|--------------|
| Bal. July 31 | 10,500 | 5,500 | Bal. July 31 |
| | 5,500 | (Reversing entry) | 5,500 |
| Cash payment | 5,500 | | |
| Balance | 10,500 | 0 | Balance |

We see that balances in the accounts, after cash payment is made, are identical. The use of reversing entries for accruals, which is optional, simply allows cash payments or cash receipts to be entered directly into the temporary expense or revenue accounts without regard to the accruals recorded at the end of the previous period.

Reversing entries also can be used with prepayments and deferred revenues. For example, earlier in the chapter, Dress Right used the following entry to record the purchase of supplies on July 6:

To record the purchase of supplies.

July 6

| | | |
|----------|-------|-------|
| Supplies | 2,000 | |
| Cash | | 2,000 |

If reversing entries are not used, an adjusting entry is needed at the end of July to record the amount of supplies consumed during the period. In the illustration, Dress Right recorded this adjusting entry at the end of July:

To record the cost of supplies used during the month of July.

July 31

| | | |
|------------------|-----|-----|
| Supplies expense | 800 | |
| Supplies | | 800 |

T-accounts help us visualize the account balances before and after the adjusting entry.

| Supplies | | Supplies Expense | |
|----------------|-------|------------------|-------------------|
| (Cash payment) | 2,000 | | |
| | | 800 | (Adjusting entry) |
| | | | 800 |
| Bal. July 31 | 1,200 | Bal. July 31 | 800 |

If the accountant for Dress Right employs reversing entries, the purchase of supplies is recorded as follows:

To record the purchase of supplies.

| July 6 | |
|----------|-------|
| Supplies | 2,000 |
| Cash | 2,000 |

The adjusting entry then is used to establish the balance in the supplies account at \$1,200 (amount of supplies still on hand at the end of the month) and reduce the supplies expense account from the amount purchased to the amount used.

To record the cost of supplies on hand at the end of July.

| July 31 | |
|------------------------------------|-------|
| Supplies (balance on hand) | 1,200 |
| Supplies expense (\$2,000 - \$800) | 1,200 |

T-accounts make the process easier to see before and after the adjusting entry.

| Supplies | | Supplies Expense | |
|--------------|-------|-------------------|-------|
| | | Cash payment | 2,000 |
| | | | |
| | 1,200 | (Adjusting entry) | 1,200 |
| Bal. July 31 | 1,200 | Bal. July 31 | 800 |

Notice that the ending balances in both accounts are the same as when reversing entries are not used. Up to this point, this approach is the alternate approach to recording prepayments

discussed in a previous section of this chapter. The next step is an optional expediency.

On August 1, the following reversing entry can be recorded:

To reverse the July adjusting entry for supplies on hand.

| | | | |
|------------------|--|-------|-------|
| August 1 | | | |
| Supplies expense | | 1,200 | |
| Supplies | | | 1,200 |

This entry reduces the supplies account to zero and increases the supplies expense account to \$2,000. Subsequent purchases would then be entered into the supplies expense account and future adjusting entries would record the amount of supplies still on hand at the end of the period. At the end of the fiscal year, the supplies expense account, along with all other temporary accounts, is closed to retained earnings.

Using reversing entries for prepayments, which is optional, simply allows cash payments to be entered directly into the temporary expense accounts without regard to whether only the current, or both the current and future periods, are benefitted by the expenditure.

Adjustments are then recorded at the end of the period to reflect the amount of the unexpired benefit (asset).

APPENDIX 2C Subsidiary Ledgers and Special Journals

Subsidiary Ledgers

The general ledger contains what are referred to as *control accounts*. In addition to the general ledger, a **subsidiary ledger** contains a group of subsidiary accounts associated with a particular general ledger control account. For example, there will be a subsidiary ledger for accounts receivable that keeps track of the increases and decreases in the account receivable balance for each of the company's customers purchasing goods or services on credit. After all of the postings are made from the appropriate journals, the balance in the accounts receivable control account should equal the sum of the balances in the accounts receivable subsidiary ledger accounts. Subsidiary ledgers also are used for accounts payable, property and equipment, investments, and other accounts.

Accounting systems employ a *subsidiary ledger*, which contains a group of subsidiary accounts associated with particular general ledger control accounts.

Page 86

Special Journals

An actual accounting system employs many different types of journals. The purpose of each journal is to record, in chronological order, the dual effect of a transaction in debit/credit form. The chapter used the general journal format to record each transaction. However, even for small companies with relatively few transactions, the general journal is used to record only a few types of transactions.⁸

For most external transactions, *special journals* are used to capture the dual effect of the transaction in debit/ credit form.

The majority of transactions are recorded in **special journals**. These journals capture the dual effect of *repetitive* types of transactions. For example, cash receipts are recorded in a **cash receipts journal**, cash disbursements in a **cash disbursements journal**, credit sales in a **sales journal**, and the purchase of inventory on account in a **purchases journal**.

Special journals simplify the recording process in the following ways:

1. Journalizing the effects of a particular transaction is made more efficient through the use of specifically designed formats.
2. Individual transactions are not posted to the general ledger accounts but are accumulated in the special journals, and a summary posting is made on a periodic basis.
3. The responsibility for recording journal entries for the repetitive types of transactions is placed on individuals who have specialized training in handling them.

The concepts of subsidiary ledgers and special journals are illustrated using the *sales journal* and the *cash receipts journal*.

Sales Journal

The purpose of the **sales journal** is to record all credit sales. Cash sales are recorded in the cash receipts journal. Every entry in the sales journal has exactly the

All credit sales are recorded in the sales journal.

same effect on the accounts; the sales revenue account is credited and the accounts receivable control account is debited. Therefore, there is only one column needed to record the debit/credit effect of these transactions. Other columns are needed to capture information for updating the accounts receivable subsidiary ledger.  **Illustration 2C-1** presents the sales journal for Dress Right Clothing Corporation for the month of August 2024.

Illustration 2C-1 Sales Journal, Dress Right Clothing Corporation, August 2024

| Page 1 | | | | |
|-------------|--------------------------------------|--------------------------|-------------------------|----------------------------------|
| Date | Accounts Receivable Subsidiary | Customer Name | Sales Invoice No. | Cr. Sales Revenue (400) |
| | Account No. | | | Dr. Accounts Receivable (110) |
| 2024 | | | | |
| Aug. 5 | 801 | Leland High School | 10-221 | 1,500 |
| 9 | 812 | Mr. John | 10-222 | 200 |

| Date | Accounts Receivable | Customer Name | Sales Invoice No. | Cr. Sales Revenue (400) |
|------|------------------------|--------------------|-------------------|-------------------------------|
| | Subsidiary Account No. | | | Dr. Accounts Receivable (110) |
| | | Smith | | |
| 18 | 813 | Greystone School | 10-223 | 825 |
| 22 | 803 | Ms. Barbara Jones | 10-224 | 120 |
| 29 | 805 | Hart Middle School | 10-225 | <u>650</u> |
| | | | | <u><u>3,295</u></u> |

During the month of August, the company made five credit sales, totaling \$3,295. Page 87
This amount is posted as a debit to the accounts receivable control account, account number 110, and a credit to the sales revenue account, account number 400. The T-accounts for accounts receivable and sales revenue appear below. The reference SJ1 refers to page 1 of the sales journal.

| General Ledger | | | |
|---------------------|--------------|---------------|-------------|
| Accounts Receivable | 110 | Sales Revenue | 400 |
| July 31 Balance | 2,000 | | |
| Aug. 31 SJ1 | 3,295 | 3,295 | Aug. 31 SJ1 |

In a computerized accounting system, as each transaction is recorded in the sales journal, the subsidiary ledger accounts for the customer involved will automatically be updated. For example, the first credit sale of the month is to Leland High School for **\$1,500**. The sales invoice number for this sale is **10-221** and the customer's subsidiary account number is **801**.

As this transaction is entered, the subsidiary account **801** for Leland High School is debited for **\$1,500**.

| Accounts Receivable Subsidiary Ledger | |
|---------------------------------------|--------------|
| Leland High School 801 | |
| August 5 SJ1 | 1,500 |

As cash is collected from this customer, the cash receipts journal records the transaction with a credit to the accounts receivable control account and a debit to cash. At the same time, the accounts receivable subsidiary ledger account number **801** also is credited. After the postings are made from the special journals, the balance in the accounts receivable control account should equal the sum of the balances in the accounts receivable subsidiary ledger accounts.

Cash Receipts Journal

The purpose of the **cash receipts journal** is to record all cash receipts, regardless of the source. Every transaction recorded in this journal produces a debit

All cash receipts are recorded in the cash receipts journal.

entry to the cash account with the credit to various other accounts. [Illustration 2C-2](#) shows a cash receipts journal using transactions of the Dress Right Clothing Corporation for the month of August 2024.

Illustration 2C-2 Cash Receipts Journal, Dress Right Clothing Corporation, August 2024

| | | | | | | Page 1 |
|-------------|-----------------------------------|-------------------|---------------------------------|-------------------------------|---------------|-------------------|
| Date | Explanation or Account Name | Dr. Cash (100) | Cr. | | Cr. Other | Other Accounts |
| | | | Accounts Receivable (110) | Cr. Sales Revenue (400) | | |
| 2024 | | | | | | |
| Aug. 7 | Cash sale | 500 | | 500 | | |
| 11 | Borrowed cash | 10,000 | | | 10,000 | Notes payable |

| Date | Explanation or Account Name | Dr. Cash (100) | Cr. | | Cr. Sales Revenue (400) | Cr. Other | Other Accounts (220) |
|------|-----------------------------------|-------------------|---------------------------------|--|-------------------------------|---------------|----------------------------|
| | | | Accounts Receivable (110) | | | | |
| 17 | Leland High School | 750 | 750 | | | | |
| 20 | Cash sale | 300 | | | 300 | | |
| 25 | Mr. John Smith | <u>200</u> | <u>200</u> | | | | |
| | | <u>11,750</u> | <u>950</u> | | <u>800</u> | <u>10,000</u> | |

Because every transaction results in a debit to the cash account, No. 100, a column is provided for that account. At the end of August, an \$11,750 debit is posted to the general ledger cash account with the source labeled CR1, cash receipts journal, page 1.

Because cash and credit sales are common, separate columns are provided for these Page 88 accounts. At the end of August, a \$950 credit is posted to the accounts receivable general ledger account, No. 110, and an \$800 credit is posted to the sales revenue account, No. 400. Two additional credit columns are provided for uncommon cash receipt transactions, one for the credit amount and one for the account being credited. We can see that in August, Dress Right borrowed \$10,000 requiring a credit to the notes payable account, No. 220.

In addition to the postings to the general ledger control accounts, each time an entry is recorded in the accounts receivable column, a credit is posted to the accounts receivable subsidiary ledger account for the customer making the payment. For example, on August 17, Leland High School paid \$750 on account. The subsidiary ledger account for Leland High School is credited for \$750.

Questions For Review of Key Topics

- Q 2-1** Explain the difference between external events and internal events. Give an example of each type of event.
- Q 2-2** Each economic event or transaction will have a dual effect on financial position. Explain what is meant by this dual effect.
- Q 2-3** What is the purpose of a journal? What is the purpose of a general ledger?
- Q 2-4** Explain the difference between permanent accounts and temporary accounts. Why does an accounting system include both types of accounts?
- Q 2-5** Describe how debits and credits affect assets, liabilities, and permanent owners' equity accounts.
- Q 2-6** Describe how debits and credits affect temporary owners' equity accounts.
- Q 2-7** What is the first step in the accounting processing cycle? What role do source documents fulfill in this step?
- Q 2-8** Describe what is meant by transaction analysis.
- Q 2-9** Describe what is meant by posting, the fourth step in the processing cycle.
- Q 2-10** Describe the events that correspond to the following two journal entries:

| | | |
|------------------------|--------|--------|
| 1. Inventory | 20,000 | |
| Accounts payable | | 20,000 |
| 2. Accounts receivable | 30,000 | |
| Sales revenue | | 30,000 |
| Cost of goods sold | 18,000 | |
| Inventory | | 18,000 |

- Q 2-11** What is an unadjusted trial balance? An adjusted trial balance?
- Q 2-12** Define adjusting entries and discuss their purpose.
- Q 2-13** Define closing entries and their purpose.
- Q 2-14** Define prepaid expenses and provide at least two examples.
- Q 2-15** Deferred revenues represent liabilities recorded when cash is received from customers in advance of providing a good or service. What adjusting journal entry is required at the end of a period to recognize the amount of deferred revenues that were recognized during the period?

Q 2-16 Define accrued liabilities. What adjusting journal entry is required to record accrued liabilities?

Q 2-17 Describe the purpose of each of the four primary financial statements.

Page 89

Q 2-18 [Based on  **Appendix 2A**] What is the purpose of a worksheet? In a columnar worksheet similar to  **Illustration 2A-1**, what would be the result of incorrectly transferring the balance in a liability account to column I, the credit column under Income Statement?

Q 2-19 [Based on  **Appendix 2B**] Define reversing entries and discuss their purpose.

Q 2-20 [Based on  **Appendix 2C**] What is the purpose of special journals? In what ways do they simplify the recording process?

Q 2-21 [Based on  **Appendix 2C**] Explain the difference between the general ledger and a subsidiary ledger.

Brief Exercises

BE 2-1 Transaction analysis LO2-1

Analyze each of the following transactions and show the effect on the accounting equation.

1. Provide services to customers on account for \$50,000.
2. Purchase equipment by signing a note with the bank for \$35,000.
3. Repay \$10,000 of the note in 2 above.
4. Pay utilities of \$5,000 for the current month.

BE 2-2 Transaction analysis LO2-1

Analyze each of the following transactions and show the effect on the accounting equation.

1. Issue 10,000 shares of common stock in exchange for \$32,000 in cash.
2. Purchase land for \$19,000. A note payable is signed for the full amount.
3. Purchase equipment for \$8,000 cash.
4. Hire three employees for \$2,000 per month. Salaries are not paid until the end of the month.
5. Receive cash of \$12,000 in rental fees for the current month.
6. Purchase office supplies for \$2,000 on account.
7. Pay employees \$6,000 for the first month's salaries.

BE 2-3 Journal entries LO2-3

Prepare journal entries for each of the following transactions:

1. Purchase equipment in exchange for cash of \$23,400.
2. Provide services to customers and receive cash of \$6,800.
3. Pay the current month's rent of \$1,300.
4. Purchase office supplies on account for \$1,000.
5. Pay employee salaries of \$2,100 for the current month.

BE 2-4 Journal entries LO2-3

Prepare journal entries for each of the following transactions:

1. Pay \$700 for radio advertising for the current month.
2. Purchase supplies of \$1,300 on account.
3. Provide services of \$2,900 to customers and receive cash.
4. Pay employee salaries for the current month of \$900.
5. Provide services of \$1,000 to customers on account.
6. Pay utility bill for the current month of \$300.

BE 2-5 Journal entries LO2-3

Prepare journal entries for each of the following transactions:

1. Issue common stock for \$21,000.
2. Obtain \$9,000 loan from the bank by signing a note.
3. Purchase construction equipment for \$25,000 cash.
4. Purchase advertising for the current month for \$1,100 cash.
5. Provide construction services for \$18,000 on account.
6. Receive \$13,000 cash on account from previous services to customers.
7. Pay salaries for the current month of \$6,000.

BE 2-6 Posting LO2-4

Post the following transactions to the Cash T-account and calculate the ending balance. The beginning balance in the Cash T-account is \$5,000.

1. Receive cash from customers, \$15,000.
2. Pay cash for employee salaries, \$9,000.
3. Pay cash for rent, \$3,000.
4. Receive cash from sale of equipment, \$8,000.
5. Pay cash for utilities, \$1,000.
6. Receive cash from a bank loan, \$4,000.
7. Pay cash for advertising, \$7,000.

8. Purchase supplies on account, \$3,000.

BE 2-7 Transaction analysis **LO2-1**

The Marchetti Soup Company entered into the following transactions during the month of June: (1) purchased inventory on account for \$165,000 (assume Marchetti uses a perpetual inventory system); (2) paid \$40,000 in salaries to employees for work performed during the month; (3) sold inventory on account to customers for \$200,000 that had a cost of \$120,000; (4) collected \$180,000 in cash from credit customers; and (5) paid on account to suppliers of inventory \$145,000. Analyze each transaction and show the effect of each on the accounting equation for a corporation.

BE 2-8 Journal entries **LO2-3**

Prepare journal entries for each of the transactions listed in  **BE 2-7**.

BE 2-9 Posting **LO2-4**

Post the journal entries prepared in  **BE 2-8** to T-accounts. Assume that the opening balances in each of the accounts is zero except for cash, accounts receivable, and accounts payable that had opening balances of \$65,000, \$43,000, and \$22,000, respectively.

BE 2-10 Journal entries **LO2-3**

Prepare journal entries for each of the following transactions for a company that has a fiscal year-end of December 31: (1) on October 1, \$12,000 was paid for a one-year fire insurance policy; (2) on June 30 the company loaned its chief financial officer \$10,000; principal and interest at 6% on the note are due in one year; and (3) equipment costing \$60,000 was purchased at the beginning of the year for cash.

BE 2-11 Adjusting entries **LO2-6**

Prepare the necessary adjusting entries on December 31 for each of the items listed in  **BE 2-10**. Depreciation on the equipment is \$12,000 per year.

BE 2-12 Adjusting entries; income determination **LO2-5**, **LO2-6**

If the adjusting entries prepared in  **BE 2-11** were not recorded, would net income be higher or lower and by how much?

BE 2-13 Adjusting entries **LO2-6**

Prepare the necessary adjusting entries on its year-end of December 31, 2024, for the Jingle Corporation for each of the following situations. No adjusting entries were recorded during the year.

1. On December 10, 2024, Jingle received a \$4,000 payment from a customer, and credited deferred service revenue. The services to the customer were completed by December 31, 2024.
2. On December 1, 2024, the company paid a local radio station \$2,000 for 40 radio ads that were to be aired, 20 per month, throughout December and January. Prepaid advertising was debited at the time the advertising was paid.
3. Employee salaries for the month of December totaling \$16,000 will be paid on January 7, 2025.
4. On August 31, 2024, Jingle borrowed \$60,000 from a local bank. A note was signed with principal and 8% interest to be paid on August 31, 2025.

BE 2-14 Adjusting entries; accounting equation **LO2-5**, **LO2-6**

If the adjusting journal entries prepared in  **BE 2-13** were not recorded, would assets, liabilities, and shareholders' equity on the December 31, 2024, balance sheet be higher or lower and by how much?

BE 2-15 Adjusting entries **LO2-6**

Prepare the necessary adjusting entries for Digital Controls at the end of its December 31, 2024, fiscal year-end for each of the following situations. No adjusting entries were recorded during the year.

1. On March 31, 2024, the company lent \$50,000 to another company. A note was signed with principal and interest at 6% payable on March 31, 2025.

2. On September 30, 2024, the company paid its landlord \$12,000 representing rent for the period September 30, 2024, to September 30, 2025. Digital Controls debited prepaid rent at the time the rent was paid.
3. Supplies on hand at the end of 2023 (previous year) totaled \$3,000. Additional supplies costing \$5,000 were purchased during 2024 and debited to the supplies account. At the end of 2024, supplies costing \$4,200 remain on hand.
4. Vacation pay of \$6,000 for the year that had been earned by employees was not paid or recorded. The company records vacation pay as salaries expense.

BE 2-16 Income statement **LO2-7**

The following account balances were taken from the 2024 adjusted trial balance of the Bowler Corporation: sales revenue, \$325,000; cost of goods sold, \$168,000; salaries expense, \$45,000; rent expense, \$20,000; depreciation expense, \$30,000; and miscellaneous expense, \$12,000. Prepare an income statement for 2024.

BE 2-17 Balance sheet **LO2-7**

The following account balances were taken from the 2024 post-closing trial balance of the Bowler Corporation: cash, \$5,000; accounts receivable, \$10,000; inventory, \$16,000; equipment, \$100,000; accumulated depreciation, \$40,000; accounts payable, \$20,000; salaries payable, \$12,000; retained earnings, \$9,000; and common stock, \$50,000. Prepare a balance sheet for December 31, 2024.

BE 2-18 Closing entries **LO2-8**

The year-end adjusted trial balance of the Tool and Die Corporation included the following account balances: retained earnings, \$220,000; dividends, \$12,000; sales revenue, \$850,000; cost of goods sold, \$580,000; salaries expense, \$180,000; rent expense, \$40,000; and interest expense, \$15,000. Prepare the necessary closing entries.

BE 2-19 Cash versus accrual accounting **LO2-9**

For each situation, determine the date for which the company recognizes the revenue under (a) accrual-basis accounting and (b) cash-basis accounting.

1. **American Airlines** collects cash on June 12 from the sale of a ticket to a customer. The

flight occurs on August 16.

2. A customer purchases sunglasses from **Eddie Bauer** on January 27 on account. Eddie Bauer receives payment from the customer on February 2.
3. On March 30, a customer preorders 10 supreme pizzas (without onions) from **Pizza Hut** for a birthday party. The pizzas are prepared and delivered on April 2. The company receives cash at the time of delivery.
4. A customer pays in advance for a three-month subscription to **Sports Illustrated** on July 1.

Issues are scheduled for delivery each week from July 1 through September 30.

BE 2–20 Cash versus accrual accounting **LO2–9**

For each situation, determine the date for which the company recognizes the expense under (a) accrual-basis accounting and (b) cash-basis accounting.

1. **American Airlines** operates a flight from Dallas to Los Angeles on August 16. The pilots' salaries associated with the flight are paid on September 2.
2. **Eddie Bauer** pays cash on January 6 to purchase sunglasses from a wholesale distributor. The sunglasses are sold to customers on January 27.
3. On January 1, **Pizza Hut** pays for a one-year property insurance policy with coverage starting immediately.
4. **Sports Illustrated** signs an agreement with CBS on January 12 to provide television advertisements during the Super Bowl. Payment is due within 3 weeks after February 4, the day of the Super Bowl. Sports Illustrated makes the payment on February 23.

BE 2–21 Cash versus accrual accounting **LO2–9**

New Consulting Company maintains its records on a cash basis. During the year, the following cash flows were recorded: cash received for services rendered to clients, \$420,000; and cash paid for salaries, utilities, and advertising, \$240,000, \$35,000, and \$12,000, respectively. You also determine that customers owed the company \$52,000 and \$60,000 at the beginning and end of the year, respectively, and that the company owed the utility company \$6,000 and \$4,000 at the beginning and end of the year, respectively. Determine accrual net income for the year.

Exercises

E 2-1 Transaction analysis LO2-1

The following transactions occurred during March 2024 for the Right Corporation. The company operates a wholesale warehouse.

1. Issued 30,000 shares of no-par common stock in exchange for \$300,000 in cash.
2. Purchased equipment at a cost of \$40,000. Cash of \$10,000 was paid and a note payable to the seller was signed for the balance owed.
3. Purchased inventory on account at a cost of \$90,000. The company uses the perpetual inventory system.
4. Credit sales for the month totaled \$120,000. The cost of the goods sold was \$70,000.
5. Paid \$5,000 in rent on the warehouse building for the month of March.
6. Paid \$6,000 to an insurance company for fire and liability insurance for a one-year period beginning April 1, 2024.
7. Paid \$70,000 on account for the inventory purchased in 3.
8. Collected \$55,000 from customers on account.
9. Recorded depreciation expense of \$1,000 for the month on the equipment.

Required:

Analyze each transaction and show the effect of each on the expanded accounting equation for a corporation.

Example:

| | Assets | = | Liabilities | + | Paid-In Capital + Retained Earnings |
|----|-----------------|---|-------------|---|-------------------------------------|
| 1. | +300,000 (cash) | | | + | 300,000 (common stock) |

E 2-2 Journal entries LO2-3

Prepare journal entries to record each of the transactions listed in  E 2-1.

E 2-3 T-accounts and trial balance **LO2-4**

Post the journal entries prepared in  **E 2-2** to T-accounts. Assume that the opening balances in each of the accounts is zero. Prepare a trial balance from the ending account balances.

E 2-4 Journal entries **LO2-3**

The following transactions occurred during the month of June 2024 for the Stridewell Corporation. The company owns and operates a retail shoe store.

1. Issued 100,000 shares of common stock in exchange for \$500,000 cash.
2. Purchased office equipment at a cost of \$100,000. Cash of \$40,000 was paid and a note payable was signed for the balance owed.
3. Purchased inventory on account at a cost of \$200,000. The company uses the perpetual inventory system.
4. Credit sales for the month totaled \$280,000. The cost of the goods sold was \$140,000.
5. Paid \$6,000 in rent on the store building for the month of June.
6. Paid \$3,000 to an insurance company for fire and liability insurance for a one-year period beginning June 1, 2024.
7. Paid \$120,000 on account for the inventory purchased in 3.
8. Collected \$55,000 from customers on account.
9. Paid shareholders a cash dividend of \$5,000.
10. Received cash of \$2,000 from customers in advance of services to be provided.

Required:

Prepare journal entries to record each of the transactions and events listed above.

E 2-5 The accounting processing cycle **LO2-2**

Listed below are terms associated with the steps of the accounting processing cycle. Pair each item from List A (by letter) with the item from List B that is most appropriately associated with it.

| List A | | List B |
|-----------|----------------------------|--|
| _____ 1. | Source documents | a. Record of the dual effect of a transaction in debit/credit form. |
| _____ 2. | Transaction analysis | b. Updates to account balances recorded at the end of a reporting period. |
| _____ 3. | Journal | c. Primary means of disseminating information to external decision makers. |
| _____ 4. | Posting | d. To zero out the temporary accounts. |
| _____ 5. | Unadjusted trial balance | e. Determine the dual effect on the accounting equation. |
| _____ 6. | Adjusting entries | f. List of accounts and their balances before recording adjusting entries. |
| _____ 7. | Adjusted trial balance | g. List of accounts and their balances after recording closing entries. |
| _____ 8. | Financial statements | h. List of accounts and their balances after recording adjusting entries. |
| _____ 9. | Closing entries | i. Transferring balances from the journal to the ledger. |
| _____ 10. | Post-closing trial balance | j. Used to identify and process external transactions. |

E 2–6 Debits and credits LO2–1

Indicate whether a *debit* will increase (I) or decrease (D) each of the following accounts listed in items 1 through 15.

| Increase (I) or Decrease (D) | Account |
|------------------------------|----------------------|
| 1. _____ | Inventory |
| 2. _____ | Depreciation expense |
| 3. _____ | Accounts payable |

| Increase (I) or Decrease (D) | Account |
|------------------------------|---------------------|
| 4. ____ | Prepaid rent |
| 5. ____ | Sales revenue |
| 6. ____ | Common stock |
| 7. ____ | Salaries payable |
| 8. ____ | Cost of goods sold |
| 9. ____ | Utilities expense |
| 10. ____ | Equipment |
| 11. ____ | Accounts receivable |
| 12. ____ | Utilities payable |
| 13. ____ | Rent expense |
| 14. ____ | Interest expense |
| 15. ____ | Interest revenue |

E 2–7 Journal entries; debits and credits LO2–3

Some of the ledger accounts for a company are numbered and listed below. For each of the October transactions numbered 1 through 10 below, indicate by account number which accounts should be debited and which should be credited when preparing journal entries. The company uses the perpetual inventory system.

- | | | |
|-----------------------------|-----------------------|-----------------------|
| (1) Accounts payable | (2) Equipment | (3) Inventory |
| (4) Accounts receivable | (5) Cash | (6) Supplies |
| (7) Supplies expense | (8) Prepaid rent | (9) Sales revenue |
| (10) Retained earnings | (11) Notes payable | (12) Common stock |
| (13) Deferred sales revenue | (14) Rent expense | (15) Salaries payable |
| (16) Cost of goods sold | (17) Salaries expense | (18) Interest expense |
| (19) Dividends | | |

| | Account(s) Debited | Account(s) Credited |
|--|--------------------|---------------------|
| <i>Example:</i> Purchased inventory for cash | 3 | 5 |

1. Paid a cash dividend.
2. Paid rent for the next three months.
3. Sold goods to customers on account.
4. Purchased inventory on account.
5. Purchased supplies for cash.
6. Issued common stock in exchange for cash.
7. Collected cash from customers for goods sold in 3.
8. Borrowed cash from a bank and signed a note.
9. Paid salaries for the month of October.
10. Received cash for advance payment from customer.

E 2-8 Adjusting entries **LO2-6**

Prepare the necessary adjusting entries on December 31, 2024, for the Fierro Company for each of the following situations. Assume that no financial statements were prepared during the year and no adjusting entries were recorded.

1. A three-year fire insurance policy was purchased on July 1, 2024, for \$12,000. The company debited prepaid insurance for the entire amount at the time of payment.
2. Depreciation on equipment totaled \$15,000 for the year.
3. Employee salaries of \$18,000 for the month of December will be paid in early January 2025.
4. On November 1, 2024, the company borrowed \$200,000 from a bank. The note requires principal and interest at 12% to be paid on April 30, 2025.
5. On December 1, 2024, the company received \$3,000 in cash from another company that is renting office space in Fierro's building. The payment, representing rent for December, January, and February was credited to deferred rent revenue at the time cash was received.

E 2-9 Adjusting entries **LO2-6**

Prepare the necessary adjusting entries on December 31, 2024, for the Microchip Company for each of the following situations. Assume that no financial statements were prepared during the year and no adjusting entries were recorded.

1. On October 1, 2024, Microchip lent \$90,000 to another company. A note was signed with principal and 8% interest to be paid on September 30, 2025.
2. On November 1, 2024, the company paid its landlord \$6,000 representing rent for the months of November through January. Prepaid rent was debited at the time of payment.
3. On August 1, 2024, collected \$12,000 in advance rent from another company that is renting a portion of Microchip's factory. The \$12,000 represents one year's rent and the entire amount was credited to deferred rent revenue at the time cash was received.
4. Depreciation on office equipment is \$4,500 for the year.
5. Vacation pay for the year that had been earned by employees but not paid to them or recorded is \$8,000. The company records vacation pay as salaries expense.
6. Microchip began the year with \$2,000 in its asset account, supplies. During the year, \$6,500 in supplies were purchased and debited to supplies. At year-end, supplies costing \$3,250 remain on hand.

E 2-10 Adjusting entries; solving for unknowns  **LO2-5,**
 **LO2-6**

The Eldorado Corporation's controller prepares adjusting entries only at the end of the reporting year. The following adjusting entries were prepared on December 31, 2024:

| | Debit | Credit |
|---------------------|--------|--------|
| Interest expense | 7,200 | |
| Interest payable | | 7,200 |
| Rent expense | 35,000 | |
| Prepaid rent | | 35,000 |
| Interest receivable | 500 | |
| Interest revenue | | 500 |

Additional information:

1. The company borrowed \$120,000 on March 31, 2024. Principal and interest are due on March 31, 2025. This note is the company's only interest-bearing debt.

2. Rent for the year on the company's office space is \$60,000. The rent is paid in advance.
3. On October 31, 2024, Eldorado lent money to a customer. The customer signed a note with principal and interest at 6% due in one year.

Required:

Determine the following:

1. What is the interest rate on the company's note payable?
2. The 2024 rent payment was made at the beginning of which month?
3. How much did Eldorado lend its customer on October 31?

E 2-11 Adjusting entries; alternative approach  **LO2-6**

The Mazzanti Wholesale Food Company's fiscal year-end is June 30. Prepare the necessary year-end adjusting entries at the end of June 30, 2024, for the following situations.

1. On December 1, 2023, the company paid its annual fire insurance premium of \$6,000 for the year beginning December 1 and debited insurance expense at the time of payment.
2. On November 1, 2023, Mazzanti purchased an advertising campaign to occur evenly over the next year. The company paid \$9,600 and debited advertising expense at the time of payment.
3. Mazzanti owns a warehouse that it rents to another company. On January 1, 2024, Mazzanti collected \$24,000 representing rent for the 2024 calendar year and credited rent revenue at the time cash was received.
4. On February 17, 2024, Mazzanti purchased \$7,200 of office supplies and debited supplies expense. By June 30, 2024, only \$4,100 of the supplies have been used.
5. Mazzanti provides delivery services to its customers and offers special pricing to those customers who pay for these services in advance. Suppose Mazzanti receives \$3,000 from a customer on April 22, 2024, for future delivery services and credits delivery revenue at that time. By June 30, 2024, Mazzanti has provided delivery services of \$1,800 to this customer.

E 2-12 Financial statements and closing entries  **LO2-7,**
 **LO2-8**

The December 31, 2024, adjusted trial balance for the Blueboy Cheese Corporation is presented below.

| Account Title | Debits | Credits |
|-----------------------------------|--------------------|--------------------|
| Cash | \$ 21,000 | |
| Accounts receivable | 300,000 | |
| Prepaid rent | 10,000 | |
| Inventory | 50,000 | |
| Office equipment | 600,000 | |
| Accumulated depreciation | | \$ 250,000 |
| Accounts payable | | 60,000 |
| Notes payable (due in six months) | | 60,000 |
| Salaries payable | | 8,000 |
| Interest payable | | 2,000 |
| Common stock | | 400,000 |
| Retained earnings | | 100,000 |
| Sales revenue | | 800,000 |
| Cost of goods sold | 480,000 | |
| Salaries expense | 120,000 | |
| Rent expense | 30,000 | |
| Depreciation expense | 60,000 | |
| Interest expense | 4,000 | |
| Advertising expense | 5,000 | |
| Totals | <u>\$1,680,000</u> | <u>\$1,680,000</u> |

Required:

1. Prepare an income statement for the year ended December 31, 2024, and a classified balance sheet as of December 31, 2024.
2. Prepare the necessary closing entries on December 31, 2024.

E 2-13 Closing entries  **LO2-8**

American Chip Corporation's reporting year-end is December 31. The following is a partial adjusted trial balance as of December 31, 2024.

| Account Title | Debits | Credits |
|----------------------|-----------|-----------|
| Retained earnings | | \$ 80,000 |
| Sales revenue | | 750,000 |
| Interest revenue | | 3,000 |
| Cost of goods sold | \$420,000 | |
| Salaries expense | 100,000 | |
| Rent expense | 15,000 | |
| Depreciation expense | 30,000 | |
| Interest expense | 5,000 | |
| Insurance expense | 6,000 | |

Required:

Prepare the necessary closing entries on December 31, 2024.

E 2-14 Closing entries  **LO2-8**

Presented below is income statement information of the Schefter Corporation for the year ended December 31, 2024.

| | | | |
|-----------------------------|-----------|----------------------|-----------|
| Sales revenue | \$492,000 | Cost of goods sold | \$284,000 |
| Salaries expense | 80,000 | Insurance expense | 12,000 |
| Interest revenue | 6,000 | Interest expense | 4,000 |
| Advertising expense | 10,000 | Income tax expense | 30,000 |
| Gain on sale of investments | 8,000 | Depreciation expense | 20,000 |

Required:

Prepare the necessary closing entries on December 31, 2024.

E 2-15 Cash versus accrual accounting; adjusting entries
 **LO2-5**,  **LO2-6**,  **LO2-9**

The Righter Shoe Store Company prepares monthly financial statements for its bank. The November 30 and December 31, 2024, trial balances contained the following account information:

| | Nov. 30 | | Dec. 31 | |
|-----------------------|---------|--------|---------|--------|
| | Dr. | Cr. | Dr. | Cr. |
| Supplies | 1,500 | | 3,000 | |
| Prepaid insurance | 6,000 | | 4,500 | |
| Salaries payable | | 10,000 | | 15,000 |
| Deferred rent revenue | | 2,000 | | 1,000 |

The following information also is known:

- The December income statement reported \$2,000 in supplies expense.
- No insurance payments were made in December.
- \$10,000 was paid to employees during December for salaries.
- On November 1, 2024, a tenant paid Righter \$3,000 in advance rent for the period November through January. Deferred rent revenue was credited at the time cash was received.

Required:

- What was the cost of supplies purchased during December?
- What was the adjusting entry recorded at the end of December for prepaid insurance?
- What was the adjusting entry recorded at the end of December for accrued salaries?
- What was the amount of rent revenue recognized in December? What adjusting entry was recorded at the end of December for deferred rent revenue?

E 2-16 External transactions and adjusting entries  **LO2-3,**
 **LO2-6**

The following transactions occurred during 2024 for the Beehive Honey Corporation:

- Feb. 1 Borrowed \$12,000 from a bank and signed a note. Principal and interest at 10% will be paid on January 31, 2025.
- Apr. 1 Paid \$3,600 to an insurance company for a two-year fire insurance policy.

- July 17 Purchased supplies costing \$2,800 on account. At the year-end on December 31, 2024, supplies costing \$1,250 remained on hand.
- Nov. 1 A customer borrowed \$6,000 and signed a note requiring the customer to pay principal and 8% interest on April 30, 2025.

Required:

1. Record each transaction in general journal form. Omit explanations.
2. Prepare any necessary adjusting entries at the year-end on December 31, 2024. No adjusting entries were recorded during the year for any item.

E 2-17 Accrual accounting income determination  **LO2-5,**
 **LO2-9**

During the course of your examination of the financial statements of the Hales Corporation for the year ended December 31, 2024, you discover net income in 2024 is \$30,000 but no adjusting entries have been prepared. To prepare adjusting entries, you discover the following items:

- a. An insurance policy covering three years was purchased on January 1, 2024, for \$6,000. The entire amount was debited to insurance expense.
- b. During 2024, the company received a \$1,000 cash advance from a customer for services to be provided 2025. The \$1,000 was credited to sales revenue.
- c. All purchases of supplies were debited immediately to supplies expense. However, you discover that supplies costing \$750 were on hand on December 31.
- d. Hales borrowed \$20,000 from a local bank on October 1, 2024. Principal and interest at 12% will be paid on September 30, 2025. No accrual was recorded for interest.

Required:

Determine the proper amount of net income for 2024.

E 2-18 Cash versus accrual accounting  **LO2-9**

S&J Lawn Service Company maintains its books on a cash basis. However, the company recently borrowed \$100,000 from a local bank, and the bank requires S&J to provide annual

financial statements prepared on an accrual basis. During 2024, the following cash flows were recorded:

| | | |
|---|---------------|----------------|
| Cash collected for: Services to customers | | \$320,000 |
| Cash paid for: | | |
| Salaries | \$180,000 | |
| Supplies | 25,000 | |
| Rent | 12,000 | |
| Insurance | 6,000 | |
| Miscellaneous | <u>20,000</u> | <u>243,000</u> |
| Net operating cash flow | | \$ 77,000 |

You are able to determine the following information about accounts receivable, prepaid expenses, and accrued liabilities:

| | January 1, 2024 | December 31, 2024 |
|--|--------------------|----------------------|
| Accounts receivable | \$32,000 | \$27,000 |
| Prepaid insurance | 0 | 2,000 |
| Supplies | 1,000 | 1,500 |
| Accrued liabilities (for miscellaneous expenses) | 2,400 | 3,400 |

In addition, you learn that the bank loan was dated September 30, 2024, with principal and interest at 6% due in one year. Depreciation on the company's equipment is \$10,000 for the year.

Required:

Prepare an accrual basis income statement for 2024. (Ignore income taxes.)

E 2-19 Cash versus accrual accounting  **LO2-9**

Haskins and Jones, Attorneys-at-Law, maintains its books on a cash basis. During 2024, the law firm collected \$545,000 for services rendered to its clients and paid out \$412,000 in expenses. You are able to determine the following information about accounts receivable, prepaid expenses, deferred service revenue, and accrued liabilities:

| | January 1, 2024 | December 31, 2024 |
|--|-----------------|-------------------|
| Accounts receivable | \$62,000 | \$55,000 |
| Prepaid insurance | 4,500 | 6,000 |
| Prepaid rent | 9,200 | 8,200 |
| Deferred service revenue | 9,200 | 11,000 |
| Accrued liabilities (for various expenses) | 12,200 | 15,600 |

In addition, 2024 depreciation expense on office equipment is \$22,000.

Required:

Determine accrual basis net income for 2024.

E 2–20 Worksheet  **Appendix 2A**

The December 31, 2024, unadjusted trial balance for the Wolkstein Drug Company is presented below. December 31 is the company's year-end reporting date.

| Account Title | Debits | Credits |
|--------------------------|-----------|-----------|
| Cash | \$ 20,000 | |
| Accounts receivable | 35,000 | |
| Prepaid rent | 5,000 | |
| Inventory | 50,000 | |
| Equipment | 100,000 | |
| Accumulated depreciation | | \$ 30,000 |
| Accounts payable | | 25,000 |
| Salaries payable | | 0 |
| Common stock | | 100,000 |
| Retained earnings | | 29,000 |
| Sales revenue | | 323,000 |
| Cost of goods sold | 180,000 | |
| Salaries expense | 71,000 | |
| Rent expense | 30,000 | |
| Depreciation expense | 0 | |

| Account Title | Debits | Credits |
|---------------------|------------------|------------------|
| Utilities expense | 12,000 | |
| Advertising expense | 4,000 | |
| Totals | <u>\$507,000</u> | <u>\$507,000</u> |

The following year-end adjusting entries are required:

- Depreciation expense for the year on the equipment is \$10,000.
- Salaries at year-end should be accrued in the amount of \$4,000.

Required:

- Prepare and complete a worksheet similar to  **Illustration 2A-1**.
- Prepare an income statement for 2024 and a balance sheet as of December 31, 2024.

E 2-21 Reversing entries  **Appendix 2B**

The employees of Xitrex, Inc., are paid each Friday. The company's fiscal year-end is June 30, which falls on a Wednesday for the current year. Salaries are earned evenly throughout the five-day work week, and \$10,000 will be paid on Friday, July 2.

Required:

- Prepare an adjusting entry to record the accrued salaries as of June 30, a reversing entry on July 1, and an entry to record the payment of salaries on July 2.
- Prepare journal entries to record the accrued salaries as of June 30 and the payment of salaries on July 2 assuming a reversing entry is not recorded.

E 2-22 Reversing entries  **Appendix 2B**

Refer to  **E 2-9** and respond to the following requirements.

Required:

- If Microchip's accountant employed reversing entries for accruals, which adjusting entries would she likely reverse at the beginning of the following year?
- Prepare the adjusting entries at the end of 2024 for the adjustments you identified in requirement 1.
- Prepare the appropriate reversing entries at the beginning of 2025.

E 2–23 Special journals Appendix 2C

A company's accounting system consists of a general journal (GJ), a cash receipts journal (CR), a cash disbursements journal (CD), a sales journal (SJ), and a purchases journal (PJ). For each of the following, indicate which journal should be used to record the transaction.

| Transaction | Journal |
|---|---------|
| 1. Purchased inventory on account. | _____ |
| 2. Collected an account receivable. | _____ |
| 3. Borrowed \$20,000 and signed a note. | _____ |
| 4. Recorded depreciation expense. | _____ |
| 5. Purchased equipment for cash. | _____ |
| 6. Sold inventory for cash (the sale only, not the cost of the inventory). | _____ |
| 7. Sold inventory on credit (the sale only, not the cost of the inventory). | _____ |
| 8. Recorded accrued salaries payable. | _____ |
| 9. Paid employee salaries. | _____ |
| 10. Sold equipment for cash. | _____ |
| 11. Sold equipment on credit. | _____ |
| 12. Paid a cash dividend to shareholders. | _____ |
| 13. Issued common stock in exchange for cash. | _____ |
| 14. Paid accounts payable. | _____ |

E 2–24 Special journals Appendix 2C

The accounting system of a company consists of a general journal (GJ), a cash receipts journal (CR), a cash disbursements journal (CD), a sales journal (SJ), and a purchases journal (PJ). For each of the following, indicate which journal should be used to record the transaction.

| Transaction | Journal |
|-----------------------------|---------|
| 1. Paid interest on a loan. | _____ |

| Transaction | Journal |
|---|---------|
| 2. Recorded depreciation expense. | _____ |
| 3. Purchased office equipment for cash. | _____ |
| 4. Purchased inventory on account. | _____ |
| 5. Sold inventory on credit (the sale only, not the cost of the inventory). | _____ |
| 6. Sold inventory for cash (the sale only, not the cost of the inventory). | _____ |
| 7. Paid rent. | _____ |
| 8. Recorded accrued interest payable. | _____ |
| 9. Paid advertising bill. | _____ |
| 10. Sold a factory building in exchange for a note receivable. | _____ |
| 11. Collected cash from customers on account. | _____ |
| 12. Paid employee salaries. | _____ |
| 13. Collected interest on the note receivable. | _____ |

Problems

P 2–1 Accounting cycle through unadjusted trial balance

LO2–3, LO2–4

Halogen Laminated Products Company began business on January 1, 2024. During January, the following transactions occurred:

- Jan. 1 Issued common stock in exchange for \$100,000 cash.
- 2 Purchased inventory on account for \$35,000 (the perpetual inventory system is used).
- 4 Paid an insurance company \$2,400 for a one-year insurance policy. Prepaid insurance was debited for the entire amount.
- 10 Sold inventory on account for \$12,000. The cost of the inventory was \$7,000.
- 15 Borrowed \$30,000 from a local bank and signed a note. Principal and interest at 10% is to be repaid in six months.
- 20 Paid employees \$6,000 salaries for the first half of the month.
- 22 Sold inventory for \$10,000 cash. The cost of the inventory was \$6,000.
- 24 Paid \$15,000 to suppliers for the inventory purchased on January 2.
- 26 Collected \$6,000 on account from customers.
- 28 Paid \$1,000 to the local utility company for January gas and electricity.
- 30 Paid \$4,000 rent for the building. \$2,000 was for January rent, and \$2,000 for February rent. Prepaid rent and rent expense were debited for their appropriate amounts.

Required:

1. Prepare general journal entries to record each transaction. Omit explanations.
2. Post the entries to T-accounts.
3. Prepare an unadjusted trial balance as of January 30, 2024.

P 2–2 Accounting cycle through unadjusted trial balance

LO2–3, LO2–4

The following is the post-closing trial balance for the Whitlow Manufacturing Corporation as of December 31, 2023.

| Account Title | Debits | Credits |
|--------------------------|-----------------|------------------|
| Cash | \$ 5,000 | |
| Accounts receivable | 2,000 | |
| Inventory | 5,000 | |
| Equipment | 11,000 | |
| Accumulated depreciation | | \$ 3,500 |
| Accounts payable | | 3,000 |
| Accrued liabilities | | 0 |
| Common stock | | 10,000 |
| Retained earnings | | 6,500 |
| Sales revenue | | 0 |
| Cost of goods sold | 0 | |
| Salaries expense | 0 | |
| Rent expense | 0 | |
| Advertising expense | 0 | |
| Dividends | 0 | 0 |
| Totals | <u>\$23,000</u> | <u>\$ 23,000</u> |

The following transactions occurred during January 2024:

- Jan. 1 Sold inventory for cash, \$3,500. The cost of the inventory was \$2,000. The company uses the perpetual inventory system.
- 2 Purchased equipment on account for \$5,500 from the Strong Company. The full amount is due in 15 days.
- 4 Received a \$150 invoice from the local newspaper requesting payment for an advertisement that Whitlow placed in the paper on January 2.
- 8 Sold inventory on account for \$5,000. The cost of the inventory was \$2,800.
- 10 Purchased inventory on account for \$9,500.

- 13 Purchased equipment for cash, \$800.
- 16 Paid the entire amount due to the Strong Company.
- 18 Received \$4,000 from customers on account.
- 20 Paid \$800 to the owner of the building for January's rent.
- 30 Paid employees \$3,000 for salaries for the month of January.
- 31 Paid a cash dividend of \$1,000 to shareholders.

Required:

1. Set up T-accounts and enter the beginning balances as of January 1, 2024.
2. Prepare general journal entries to record each transaction. Omit explanations.
3. Post the entries to T-accounts.
4. Prepare an unadjusted trial balance as of January 31, 2024.

P 2–3 Adjusting entries  **LO2–6**

Pastina Company sells various types of pasta to grocery chains as private label brands. The company's reporting year-end is December 31. The unadjusted trial balance as of December 31, 2024, appears below.

| Account Title | Debits | Credits |
|--------------------------|-----------|-----------|
| Cash | \$ 30,000 | |
| Accounts receivable | 40,000 | |
| Supplies | 1,500 | |
| Inventory | 60,000 | |
| Notes receivable | 20,000 | |
| Interest receivable | 0 | |
| Prepaid rent | 2,000 | |
| Prepaid insurance | 6,000 | |
| Office equipment | 80,000 | |
| Accumulated depreciation | | \$ 30,000 |
| Accounts payable | | 31,000 |
| Salaries payable | | 0 |

| Account Title | Debits | Credits |
|------------------------|------------------|------------------|
| Notes payable | | 50,000 |
| Interest payable | | 0 |
| Deferred sales revenue | | 2,000 |
| Common stock | | 60,000 |
| Retained earnings | | 28,500 |
| Dividends | 4,000 | |
| Sales revenue | | 146,000 |
| Interest revenue | | 0 |
| Cost of goods sold | 70,000 | |
| Salaries expense | 18,900 | |
| Rent expense | 11,000 | |
| Depreciation expense | 0 | |
| Interest expense | 0 | |
| Supplies expense | 1,100 | |
| Insurance expense | 0 | |
| Advertising expense | 3,000 | |
| Totals | <u>\$347,500</u> | <u>\$347,500</u> |

Information necessary to prepare the year-end adjusting entries appears below.

1. Depreciation on the office equipment for the year is \$10,000.
2. Employee salaries are paid twice a month, on the 22nd for salaries earned from the 1st through the 15th, and on the 7th of the following month for salaries earned from the 16th through the end of the month. Salaries earned from December 16 through December 31, 2024, were \$1,500.
3. On October 1, 2024, Pastina borrowed \$50,000 from a local bank and signed a note. The note requires interest to be paid annually on September 30 at 12%. The principal is due in 10 years.
4. On March 1, 2024, the company lent a supplier \$20,000, and a note was signed requiring principal and interest at 8% to be paid on February 28, 2025.
5. On April 1, 2024, the company paid an insurance company \$6,000 for a one-year fire insurance policy. The entire \$6,000 was debited to prepaid insurance at the time of the

payment.

6. \$800 of supplies remained on hand on December 31, 2024.
7. The company received \$2,000 from a customer in December for 1,500 pounds of spaghetti to be delivered in January 2025. Pastina credited deferred sales revenue at the time cash was received.
8. On December 1, 2024, \$2,000 rent was paid to the owner of the building. The payment represented rent for December 2024 and January 2025 at \$1,000 per month. The entire amount was debited to prepaid rent at the time of the payment.

Required:

Prepare the necessary December 31, 2024, adjusting journal entries.

P 2-4 Accounting cycle; adjusting entries through post-closing trial balance  **LO2-4**,  **LO2-6** through  **LO2-8**

Refer to  **P 2-3** and complete the following steps:

1. Enter the unadjusted balances from the trial balance into T-accounts.
2. Post the adjusting entries prepared in  **P 2-3** to the accounts.
3. Prepare an adjusted trial balance.
4. Prepare an income statement and a statement of shareholders' equity for the year ended December 31, 2024, and a classified balance sheet as of December 31, 2024. Assume that no common stock was issued during the year and that \$4,000 in cash dividends were paid to shareholders during the year.
5. Prepare closing entries and post to the accounts.
6. Prepare a post-closing trial balance.

P 2-5 Adjusting entries  **LO2-6**

Huang Company's reporting year-end is December 31. Below are the unadjusted and adjusted trial balances for December 31, 2024.

| Account Title | Unadjusted | | Adjusted | |
|----------------------------|------------------|------------------|------------------|------------------|
| | Debits | Credits | Debits | Credits |
| Cash | \$ 50,000 | | \$ 50,000 | |
| Accounts receivable | 35,000 | | 35,000 | |
| Prepaid rent | 2,000 | | 1,200 | |
| Supplies | 1,500 | | 800 | |
| Inventory | 60,000 | | 60,000 | |
| Notes receivable | 30,000 | | 30,000 | |
| Interest receivable | 0 | | 1,500 | |
| Office equipment | 45,000 | | 45,000 | |
| Accumulated depreciation | | \$ 15,000 | | \$ 21,500 |
| Accounts payable | | 34,000 | | 34,000 |
| Salaries payable | | 0 | | 6,200 |
| Notes payable | | 50,000 | | 50,000 |
| Interest payable | | 0 | | 2,500 |
| Deferred rent revenue | | 2,000 | | 0 |
| Common stock | | 46,000 | | 46,000 |
| Retained earnings | | 20,000 | | 20,000 |
| Sales revenue | | 244,000 | | 244,000 |
| Rent revenue | | 4,000 | | 6,000 |
| Interest revenue | | 0 | | 1,500 |
| Cost of goods sold | 126,000 | | 126,000 | |
| Salaries and wages expense | 45,000 | | 51,200 | |
| Rent expense | 11,000 | | 11,800 | |
| Depreciation expense | 0 | | 6,500 | |
| Supplies expense | 1,100 | | 1,800 | |
| Interest expense | 5,400 | | 7,900 | |
| Advertising expense | 3,000 | | 3,000 | |
| Totals | <u>\$415,000</u> | <u>\$415,000</u> | <u>\$431,700</u> | <u>\$431,700</u> |

Required:

Prepare the adjusting journal entries that were recorded on December 31, 2024.

P 2–6 Accounting cycle  **LO2–3** through  **LO2–8**

The general ledger of the Karlin Company, a consulting company, at January 1, 2024, contained the following account balances:

| Account Title | Debits | Credits |
|--------------------------|-----------------|-----------------|
| Cash | \$30,000 | |
| Accounts receivable | 15,000 | |
| Equipment | 20,000 | |
| Accumulated depreciation | | \$ 6,000 |
| Salaries payable | | 9,000 |
| Common stock | | 40,500 |
| Retained earnings | | 9,500 |
| Total | <u>\$65,000</u> | <u>\$65,000</u> |

The following is a summary of the transactions for the year:

- Provided services, \$100,000, of which \$30,000 was on account and the balance was received in cash.
- Collected on accounts receivable, \$27,300.
- Issued shares of common stock in exchange for \$10,000 in cash.
- Paid salaries, \$50,000 (of which \$9,000 was for salaries payable at the end of the prior year).
- Paid miscellaneous expense for various items, \$24,000.
- Purchased equipment for \$15,000 in cash.
- Paid \$2,500 in cash dividends to shareholders.

Required:

- Set up the necessary T-accounts and enter the beginning balances from the trial balance.
- Prepare a general journal entry for each of the summary transactions listed above.

3. Post the journal entries to the accounts.
4. Prepare an unadjusted trial balance.
5. Prepare and post adjusting journal entries. Accrued salaries at year-end amounted to \$1,000. Depreciation for the year on the equipment is \$2,000.
6. Prepare an adjusted trial balance.
7. Prepare an income statement for 2024 and a balance sheet as of December 31, 2024.
8. Prepare and post-closing entries.
9. Prepare a post-closing trial balance.

P 2–7 Adjusting entries and income effects **LO2–5,** **LO2–6**

The information necessary for preparing the December 31, 2024, year-end adjusting entries for Vito's Pizza Parlor appears below.

- a. On July 1, 2024, purchased \$10,000 of **IBM Corporation** bonds at face value. The bonds pay interest twice a year on January 1 and July 1. The annual interest rate is 12%.
- b. Vito's depreciable equipment has a cost of \$30,000, a five-year life, and no salvage value. The equipment was purchased in 2022. The straight-line depreciation method is used.
- c. On November 1, 2024, the bar area was leased to Jack Donaldson for one year. Vito's received \$6,000 representing the first six months' rent and credited deferred rent revenue at the time cash was received.
- d. On April 1, 2024, the company paid \$2,400 for a two-year fire insurance policy and debited prepaid insurance at the time of the payment.
- e. On October 1, 2024, the company borrowed \$20,000 from a local bank and signed a note. Principal and interest at 12% will be paid on September 30, 2025.
- f. At year-end, there is a \$1,800 debit balance in the supplies (asset) account. Only \$700 of supplies remain on hand.

Required:

1. Prepare the necessary adjusting journal entries on December 31, 2024.
2. Determine the amount by which net income would be misstated if Vito's failed to record these adjusting entries. (Ignore income tax expense.)

P 2–8 Adjusting entries LO2–6

Excalibur Corporation sells video games for personal computers. The unadjusted trial balance as of December 31, 2024, appears below. December 31 is the company's reporting year-end. The company uses the perpetual inventory system.

| Account Title | Debits | Credits |
|--------------------------|------------------|------------------|
| Cash | \$ 23,300 | |
| Accounts receivable | 32,500 | |
| Supplies | 2,000 | |
| Prepaid rent | 14,000 | |
| Inventory | 65,000 | |
| Office equipment | 75,000 | |
| Accumulated depreciation | | \$ 10,000 |
| Accounts payable | | 26,100 |
| Salaries payable | | 3,000 |
| Notes payable | | 30,000 |
| Common stock | | 80,000 |
| Retained earnings | | 22,050 |
| Dividends | 6,000 | |
| Sales revenue | | 180,000 |
| Cost of goods sold | 95,000 | |
| Interest expense | 0 | |
| Salaries expense | 32,350 | |
| Rent expense | 0 | |
| Supplies expense | 0 | |
| Utilities expense | 6,000 | |
| Totals | <u>\$351,150</u> | <u>\$351,150</u> |

Information necessary to prepare the year-end adjusting entries appears below.

1. The office equipment was purchased in 2022 and is being depreciated using the straight-line method over a ten-year useful life with no residual value.
2. Accrued salaries at year-end should be \$4,500.

3. The company borrowed \$30,000 on September 1, 2024. The principal is due to be repaid in 10 years. Interest is payable twice a year on each August 31 and February 28 at an annual rate of 10%.
4. The company debits supplies when supplies are purchased. Supplies on hand at year-end cost \$500.
5. Prepaid rent expired during the period is \$13,000.

Required:

Prepare the necessary December 31, 2024, adjusting entries.

P 2–9 Accounting cycle; unadjusted trial balance through closing  **LO2–4**,  **LO2–6**,  **LO2–8**

The unadjusted trial balance as of December 31, 2024, for the Bags Consulting Company appears below. December 31 is the company’s reporting year-end.

| Account Title | Debits | Credits |
|---|----------|-----------|
| Cash | \$ 8,000 | |
| Accounts receivable | 9,000 | |
| Prepaid insurance | 3,000 | |
| Land | 200,000 | |
| Buildings | 50,000 | |
| Accumulated depreciation—buildings | | \$ 20,000 |
| Office equipment | 100,000 | |
| Accumulated depreciation—office equipment | | 40,000 |
| Accounts payable | | 35,050 |
| Salaries payable | | 0 |
| Deferred rent revenue | | 7,500 |
| Common stock | | 200,000 |
| Retained earnings | | 56,450 |
| Service revenue | | 90,000 |
| Interest revenue | | 3,000 |
| Rent revenue | | 0 |

| Account Title | Debits | Credits |
|----------------------|------------------|------------------|
| Salaries expense | 37,000 | |
| Depreciation expense | 0 | |
| Insurance expense | 0 | |
| Utilities expense | 30,000 | |
| Maintenance expense | 15,000 | |
| Totals | <u>\$452,000</u> | <u>\$452,000</u> |

Required:

- From the trial balance and information given, prepare adjusting entries.
 - The buildings have an estimated useful life of 50 years with no salvage value. The company uses the straight-line depreciation method.
 - The office equipment is depreciated at 10 percent of original cost per year.
 - Prepaid insurance expired during the year, \$1,000.
 - Accrued salaries at year-end, \$1,500.
 - Rent to customers who paid in advance has been provided for \$6,300.
- Post the beginning balances and adjusting entries into the appropriate T-accounts.
- Prepare an adjusted trial balance.
- Prepare closing entries.
- Prepare a post-closing trial balance.

P 2–10 Accrual accounting; financial statements  **LO2–5,**
 **LO2–7,**  **LO2–9**

McGuire Corporation began operations in 2024. The company purchases computer equipment from manufacturers and then sells to retail stores. During 2024, the bookkeeper used a check register to record all cash receipts and cash disbursements. No other journals were used. The following is a recap of the cash receipts and disbursements made during the year.

Cash receipts:

| | |
|---|-------------------------|
| Issue of common stock | \$ 50,000 |
| Collections from customers | 320,000 |
| Borrowed from local bank on April 1, note signed requiring principal and interest at 12% to be paid on March 31, 2025 | <u>40,000</u> |
| Total cash receipts | <u><u>\$410,000</u></u> |

Cash disbursements:

| | |
|------------------------------|-------------------------|
| Purchase of inventory | \$220,000 |
| Payment of salaries | 80,000 |
| Purchase of office equipment | 30,000 |
| Payment of rent on building | 14,000 |
| Miscellaneous expense | <u>10,000</u> |
| Total cash disbursements | <u><u>\$354,000</u></u> |

You are called in to prepare financial statements on December 31, 2024. The following additional information was provided to you:

1. Customers owed the company \$22,000 at year-end.
2. At year-end, \$30,000 was still due to suppliers of inventory purchased on credit.
3. At year-end, inventory costing \$50,000 still remained on hand.
4. Salaries owed to employees at year-end amounted to \$5,000.
5. On December 1, \$3,000 in rent was paid to the owner of the building used by McGuire. This represented rent for the months of December through February.
6. The office equipment, which has a ten-year life and no salvage value, was purchased on January 1, 2024. Straight-line depreciation is used.

Required:

Prepare an income statement for 2024 and a balance sheet as of December 31, 2024.

P 2–11 Cash versus accrual accounting  **LO2–9**

Selected balance sheet information for the Wolf Company at November 30, and December 31, 2024, is presented below. The company uses the perpetual inventory system and all sales to customers are made on credit.

| | Nov. 30 | | Dec. 31 | |
|---------------------|---------|---------|---------|---------|
| | Debits | Credits | Debits | Credits |
| Accounts receivable | 10,000 | | 3,000 | |
| Prepaid insurance | 5,000 | | 7,500 | |
| Inventory | 7,000 | | 6,000 | |
| Accounts payable | | 12,000 | | 15,000 |
| Salaries payable | | 5,000 | | 3,000 |

The following cash flow information also is available:

- a. Cash collected from credit customers, \$80,000
- b. Cash paid for insurance, \$5,000
- c. Cash paid to suppliers of inventory, \$60,000 (the entire accounts payable amounts relate to inventory purchases)
- d. Cash paid to employees for salaries, \$10,000

Required:

1. Determine the following for the month of December:
 - a. Sales revenue
 - b. Cost of goods sold
 - c. Insurance expense
 - d. Salaries expense
2. Prepare summary journal entries to record the month's sales and cost of those sales.

P 2-12 Cash versus accrual accounting  **LO2-9**

Zambrano Wholesale Corporation maintains its records on a cash basis. At the end of each year the company's accountant obtains the necessary information to prepare accrual basis financial statements. The following cash flows occurred during the year ended December 31, 2024:

Cash receipts:

| | |
|------------------------|------------------|
| From customers | \$675,000 |
| Interest on note | 4,000 |
| Loan from a local bank | <u>100,000</u> |
| Total cash receipts | <u>\$779,000</u> |

Cash disbursements:

| | |
|--------------------------------|------------------|
| Purchase of inventory | \$390,000 |
| Annual insurance payment | 6,000 |
| Payment of salaries | 210,000 |
| Dividends paid to shareholders | 10,000 |
| Annual rent payment | <u>24,000</u> |
| Total cash disbursements | <u>\$640,000</u> |

Selected balance sheet information:

| | 12/31/2023 | 12/31/2024 |
|----------------------------------|------------|------------|
| Cash | \$ 25,000 | \$ 164,000 |
| Accounts receivable | 62,000 | 92,000 |
| Inventory | 80,000 | 62,000 |
| Prepaid insurance | 2,500 | ? |
| Prepaid rent | 11,000 | ? |
| Interest receivable | 3,000 | ? |
| Notes receivable | 50,000 | 50,000 |
| Equipment | 100,000 | 100,000 |
| Accumulated depreciation | (40,000) | (50,000) |
| Accounts payable (for inventory) | 110,000 | 122,000 |
| Salaries payable | 20,000 | 24,000 |
| Notes payable | 0 | 100,000 |
| Interest payable | 0 | ? |

Additional information:

1. On March 31, 2023, Zambrano lent a customer \$50,000. Interest at 8% is payable annually on each March 31. Principal is due in 2027.

2. The annual insurance payment is paid in advance on April 30. The policy period begins on May 1.
3. On October 31, 2024, Zambrano borrowed \$100,000 from a local bank and signed a note promising repayment. Principal and interest at 6% are due on October 31, 2025.
4. Annual rent on the company's facilities is paid in advance on June 30. The rental period begins on July 1.

Required:

1. Prepare an accrual basis income statement for 2024 (ignore income taxes).
2. Determine the following balance sheet amounts on December 31, 2024:
 - a. Prepaid insurance
 - b. Prepaid rent
 - c. Interest receivable
 - d. Interest payable

P 2-13 Worksheet  **Appendix 2A**

Using the information from  **P 2-8**, prepare and complete a worksheet similar to  **Illustration 2A-1**. Use the information in the worksheet to prepare an income statement and a statement of shareholders' equity for 2024 and a balance sheet as of December 31, 2024. Cash dividends paid to shareholders during the year amounted to \$6,000. Also prepare the necessary closing entries assuming that adjusting entries have been correctly posted to the accounts.

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Analysis Case 2-1 Adjusting entries LO2-5

“I don't understand,” complained Chris, who responded to your bulletin board posting for tutoring in introductory accounting. The complaint was in response to your statements that recording adjusting entries is a critical step in the accounting processing cycle, and the two major classifications of adjusting entries are prepayments and accruals.

Required:

Respond to Chris.

1. When do prepayments occur? Accruals?
2. Describe the appropriate adjusting entry for prepaid expenses and for deferred revenues. What is the effect on net income, assets, liabilities, and shareholders' equity of not recording a required adjusting entry for prepayments?
3. Describe the required adjusting entry for accrued liabilities and for accrued receivables. What is the effect on net income, assets, liabilities, and shareholders' equity of not recording a required adjusting entry for accruals?

Judgment Case 2-2 Cash versus accrual accounting LO2-9

A company has always kept its records on a cash basis. You are provided with the following transaction information for the fiscal year ending December 31, 2024:

1. A new comprehensive insurance policy requires an annual payment of \$12,000 for the upcoming year. Coverage began on September 1, 2024, at which time the first payment was made.
2. Customers may pay using a credit card. At the end of the current year, various credit card companies owed the company \$6,500. At the end of last year, customer credit card charges outstanding were \$5,000.
3. Employees are paid once a month, on the 10th of the month following the work period. Cash disbursements to employees were \$8,200 and \$7,200 for January 10, 2025, and January 10, 2024, respectively.
4. Utility bills outstanding totaled \$1,200 at the end of 2024 and \$900 at the end of 2023.
5. A physical count of inventory is always taken at the end of the fiscal year. The inventory on hand at the end of 2024 cost \$35,000. At the end of 2023, inventory on hand cost \$32,000.
6. At the end of 2023, the company did not have any bills outstanding to suppliers of inventory. However, at the end of 2024, suppliers are owed \$4,000.

Required:

1. The 2024 cash basis net income (after one adjustment for depreciation expense) is \$26,000. Determine net income applying the accrual accounting model.
2. Explain the effect on the balance sheet of converting from cash to accrual. That is, would assets, liabilities, and owner's equity be higher or lower and by what amounts?

Communication Case 2–3 Cash versus accrual accounting; adjusting entries; Chapters 1 and 2  **LO2–5**,  **LO2–9**

You have recently been hired by Davis & Company, a small public accounting firm. One of the firm's partners, Alice Davis has asked you to deal with a disgruntled client, Mr. Sean Pitt, owner of the city's largest hardware store. Mr. Pitt is applying to a local bank for a substantial loan to remodel his store. The bank requires accrual-based financial statements, but Mr. Pitt has always kept the company's records on a cash basis. He doesn't see the purpose of accrual-based statements. His most recent outburst went something like this: "After all, I collect cash from customers, pay my bills in cash, and I am going to pay the

bank loan with cash. And, I already show my building and equipment as assets and depreciate them. I just don't understand the problem."

Required:

Draft a memo to Mr. Pitt providing an explanation of why the bank requests accrual-based financial statements for loan requests such as his. Include in the memo:

- An explanation of the difference between a cash basis and an accrual basis measure of performance.
- Why, in most cases, that accrual-basis net income provides a better measure of performance than net operating cash flow.
- The purpose of adjusting entries as they relate to the difference between cash and accrual accounting.

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO2-4, LO2-8

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company's website (www.target.com).

Required:

1. What amount did Target report for total assets, total liabilities, and total shareholders' equity (labeled "Shareholders' investment) in the most recent year? Show that the basic accounting equation remains in balance.
2. (a) Find sales revenue (labeled "Sales") in the income statement (labeled "Consolidated Statement of Operations") and record sales for the year, assuming all sales were for cash.
(b) Find total cost of goods sold (labeled "Cost of sales") in the income statement and record the journal entry for cost of goods sold for the year.
(c) Record inventory purchases for the year, assuming all were on account. Page 107
(Hint: To calculate the amount of purchases, use a T-account for inventory and input the beginning and ending balances of inventory from the balance sheet. Input the credit to inventory from requirement 2(b) and solve for the missing amount to calculate inventory purchases).
3. Note 9 provides information on Target's current assets. Assume all prepaid expenses are for prepaid insurance and that insurance expense comprises \$50 million of the \$16,233 million of selling, general, and administrative expenses reported in the income statement for the year ended February 1, 2020. How much cash did Target pay for insurance coverage during the year? Prepare the adjusting entry Target would make to record all insurance expense for the year. What would be the effect on the income statement and balance sheet if Target didn't record an adjusting entry for prepaid expenses?
4. (a) By how much did retained earnings increase/decrease in the most recent year compared to the previous year?

- (b) Target reduces retained earnings for “Dividends declared” and “Repurchase of stock.” These two amounts totaled \$2,865 million in the most recent year. Using this amount and your answer in (a), compute Target's net income. Verify your answer by finding net income (labeled “Net earnings”) in the income statement.

Air France–KLM Case LO2–4

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are provided in Connect. This material also is available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. What amount did AF report for total assets, total liabilities, and total equity in the balance sheet? Show that the basic accounting equation remains in balance.
2. Find sales revenue (labeled “Sales”) in the income statement. Using this amount, (a) prepare the journal entry for the sale of tickets, assuming all tickets are sold for cash and before the day of the flight. (b) Prepare the journal entry on the day of the flight.
3. Among the items listed under "External expenses" in the income statement is aircraft fuel (see Note 7). Using this amount, (a) prepare the journal entry for the prepayment of aircraft fuel in advance of flights. (b) Prepare the journal entry on the day of the flight.
4. The statement of cash flows lists the purchase of property, plant and equipment. Assuming this full amount was for the purchase of flight equipment, prepare the journal entry.

CHAPTER 3

The Balance Sheet and Financial Disclosures

OVERVIEW

Chapter 1 stressed the importance of the financial statements to investors and creditors, and  **Chapter 2** reviewed the preparation of those financial statements. In this chapter, we'll take a closer look at the balance sheet, along with accompanying disclosures. The balance sheet provides relevant information useful in helping investors and creditors not only to predict future cash flows, but also to make the related assessments of liquidity and long-term solvency. In  **Chapter 4** we'll continue our conversation about the financial statements with discussion of the income statement, statement of comprehensive income, and statement of cash flows.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO3-1** Describe the purpose of the balance sheet and understand its usefulness and limitations. (p. 110)
-  **LO3-2** Identify and describe the various asset classifications. (p. 112)
-  **LO3-3** Identify and describe the various liability and shareholders' equity classifications. (p. 116)
-  **LO3-4** Explain the purpose of financial statement disclosures. (p. 120)
-  **LO3-5** Describe disclosures related to management's discussion and analysis, responsibilities, and compensation. (p. 123)
-  **LO3-6** Explain the purpose of an audit and describe the content of the audit report. (p. 128)

-  **LO3-7** Describe the techniques used by financial analysts to transform financial information into forms more useful for analysis. (p. 130)
-  **LO3-8** Identify and calculate the common liquidity and solvency ratios used to assess risk. (p. 131)
-  **LO3-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to the balance sheet, financial disclosures, and segment reporting. (pp. 118 and 139)

FINANCIAL REPORTING CASE

igorPHOTOserg/Shutterstock

What's It Worth?

"I can't believe it. Why don't you accountants prepare financial statements that are relevant?" Your friend Jerry is a finance major and is constantly badgering you about what he perceives to be a lack of relevance of financial statements prepared according to generally accepted accounting principles. "For example, take a look at this balance sheet for **Nike** that I just downloaded off the Internet. The equity (or book value) of the company according to the 2020 balance sheet was about \$8 billion. But if you multiply the number of outstanding shares by the stock price per share at the same point in time, the company's market value was nearly \$153 billion. I thought equity was supposed to represent the value of the company, but those two numbers aren't close." You decide to look at the company's balance sheet and try to set Jerry straight.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Respond to Jerry's criticism that shareholders' equity does not represent the market value of the company. What information does the balance sheet provide?
2. The usefulness of the balance sheet is enhanced by classifying assets and liabilities according to common characteristics. What are the classifications used in the balance sheet and what elements do those categories include?

Most companies provide their financial statements and accompanying disclosures on their website in an "Investor Relations" link, but this information also can be found at the SEC's website (www.sec.gov) through its electronic filing system known as EDGAR (Electronic Data

Gathering, Analysis, and Retrieval system). Companies are required to file their financial information in a timely manner using the EDGAR system. As stated by the SEC, "Its (EDGAR system's) primary purpose is to increase the efficiency and fairness of the securities market for the benefit of investors, corporations, and the economy by accelerating the receipt, acceptance, dissemination, and analysis of time-sensitive corporate information filed with the agency."

The first part of this chapter begins our discussion of the financial statements by providing an overview of the balance sheet. The balance sheet reports a company's assets, liabilities, and shareholders' equity. You can see an example of Nike's balance sheet on the next page.

In the second part of this chapter, we discuss additional disclosures that companies are required to provide beyond the basic financial statements. These disclosures are critical to understanding the financial statements and to evaluating a firm's performance and financial health.

In the third part of this chapter, we discuss how information in the financial statements can be used by decision makers to assess business risk (liquidity and long-term solvency).

The SEC's EDGAR system improves the efficiency with which company information is collected and disseminated.

| Total liabilities and shareholders' equity | | <u>\$31,342</u> |

PART A

The Balance Sheet

LO3–1 Describe the purpose of the balance sheet and understand its usefulness and limitations.

The **balance sheet**, sometimes referred to as the **statement of financial position**, presents an organized list of assets, liabilities, and equity *at a point in time*. It is a freeze frame or snapshot of a company's financial position at the end of a particular day marking the end of an accounting period.

Usefulness

The balance sheet provides a list of assets and liabilities that are classified (grouped) according to common characteristics. These classifications, which we explore in the next section, along with related disclosure notes, help the balance sheet to provide

useful information about liquidity and long-term solvency. **Liquidity** most often refers to the ability of a company to convert its assets to cash to pay its *current* liabilities. **Long-term solvency** refers to an assessment of whether a company will be able to pay all its liabilities, which includes *long-term* liabilities as well. Other things being equal, the risk that a company will not be able to pay its debt increases as its liabilities, relative to equity, increases.

The *balance sheet* provides information useful for assessing future cash flows, *liquidity*, and *long-term solvency*.

Solvency also provides information about *financial flexibility*—the ability of a company to alter cash flows in order to take advantage of unexpected investment opportunities and needs. For example, the higher the percentage of a company’s liabilities to its equity, the more difficult it typically will be to borrow additional funds either to take advantage of a promising investment opportunity or to meet obligations. In general, the less financial flexibility, the more risk there is that an enterprise will fail. In Part C of this chapter, we introduce some common ratios used to assess liquidity and long-term solvency.¹

Limitations

Despite its usefulness, the balance sheet has limitations. One important limitation is that a company's **book value**, its reported assets minus liabilities as shown in the balance sheet, usually *will not directly measure the company's market value*. Market

Assets minus liabilities, measured according to GAAP, is not likely to be representative of the market value of the entity.

value represents the price at which something could be sold in a given market. In the case of a public corporation, market value is represented by the trading price of a share of the corporation's stock. We can get an idea of the corporation's overall market value by multiplying the share price times the number of shares outstanding.

The two primary reasons that a company's book value in the balance sheet does not equal its market value are:

1. Many assets, like land and buildings, are measured at their historical costs rather than amounts for which the assets could be sold (often referred to as the assets' fair values). For example, suppose a company owns land and the amount for which the land could be sold increases. The increase in the land's fair value is not reported in the balance sheet, so it has no effect on the company's book value. However, to the extent the increase in the land's fair value is known by investors, that increase will be reflected in the company's overall market value.
2. Many aspects of a company may represent valuable resources (such as trained employees, experienced management team, loyal customer relationships, and product knowledge). These items, however, are not recorded as assets in the balance sheet and therefore have zero book value. Investors understand the ability of these resources to generate future profits and therefore these resources will be reflected in a company's overall market value.

As an example of the second item, **Facebook** spends more than \$10 billion each year on research and development to design new products and improve existing services. While these costs likely improve the company's ability to generate future profits (and therefore increase the market value of the company to shareholders), these items are not reported in the balance sheet as an asset. They typically are expensed in the year incurred. As a result of this and other items, Facebook's ratio of market value to book value is well above 1 (typically ranging from 5 to 7). In comparison, the average ratio of market value to book value for companies in the S&P 500 index typically ranges from about 2 to 4.

Another limitation of the balance sheet is that many items in the balance sheet are heavily reliant on *estimates and judgments rather than determinable amounts*. For example, companies estimate (a) the amount of receivables they will be able to actually collect, (b) the amount of warranty costs they will eventually incur for products already sold, (c) the residual values and useful lives of their long-term assets, and (d) amounts used to calculate employee pension obligations. Each of these estimates affects amounts reported in the balance sheet.

In summary, even though the balance sheet *does not directly measure* the market value of the entity, it provides valuable information that can be used to *help judge* market value.

Classification of Elements

The usefulness of the balance sheet is enhanced when assets and liabilities are grouped according to common characteristics. *The broad distinction made in the balance sheet is the current versus long-term (noncurrent) classification of both assets and liabilities.* The

The key classification of assets and liabilities in the balance sheet is the current versus long-term distinction.

remainder of Part A provides an overview of the balance sheet. We discuss each of the three primary elements of the balance sheet (assets, liabilities, and shareholders' equity) in the order they are reported in the statement as well, as the classifications typically made within the elements. The balance sheet elements were formally defined in [Chapter 1](#). In simple terms:

Page 112

Assets are the economic resources of a company.

Liabilities are the obligations of a company.

Equity (or net assets), called **shareholders' equity** or **stockholders' equity** for a corporation, equals total assets minus total liabilities.

Illustration 3-1 shows the relationship among assets, liabilities, and shareholders' equity, often referred to as the **accounting equation**. Included in the illustration are the subclassifications of each element. We will discuss each of these subclassifications next.

ILLUSTRATION 3-1 Classification of Elements within a Balance Sheet

| Assets | = | Liabilities | + | Shareholders' Equity |
|---------------------|----------|--------------------------|----------|-----------------------------|
| 1. Current assets | | 1. Current liabilities | | 1. Paid-in capital |
| 2. Long-term assets | | 2. Long-term liabilities | | 2. Retained earnings |

Assets

CURRENT ASSETS

LO3-2 Identify and describe the various asset classifications.

Current assets include cash and other assets that are reasonably expected to be converted to cash or consumed within one year from the balance sheet date, or within the normal operating cycle of the business if that's longer than one year. The **operating cycle** for a typical merchandising or manufacturing company

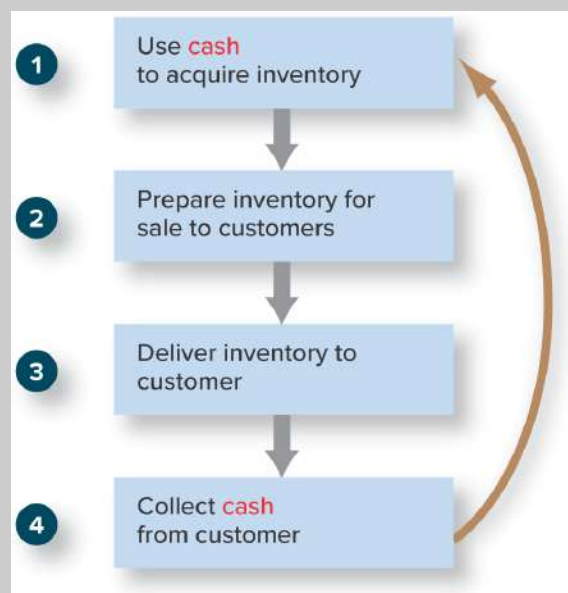

Current assets include cash and all other assets expected to become cash or be consumed within one year from the balance sheet date (or operating cycle, if longer).

refers to the period of time from the initial outlay of cash for the purchase of inventory until the time the company collects cash from a customer from the sale of inventory.

For a merchandising company, the initial purchase of inventory often is for a finished good, although some preparation may be necessary to get the inventory ready for sale (such as packaging or distribution). *For a manufacturing company*, the initial outlay of cash often involves the purchase of raw materials, which are then converted into a finished product through the manufacturing process. The concept of an operating cycle is shown in

 **Illustration 3-2.**

ILLUSTRATION 3-2 Operating Cycle of a Typical Merchandising or Manufacturing Company

In some businesses, such as shipbuilding or distilleries, the operating cycle extends far beyond one year. For example, if it takes two years to build an oil-carrying supertanker, then the shipbuilder will classify as current those assets that will be converted to cash or consumed within two years from the balance sheet date. But for most businesses, the operating cycle will be shorter than one year. In these situations, the one-year convention is used to classify both assets and liabilities. Where a company has no clearly defined operating cycle, the one-year convention is used.

 **Illustration 3-3** presents the current assets section of Nike's balance sheet. In keeping with common practice, the individual current assets are listed in the order of their liquidity (the ability to convert the asset to cash).

ILLUSTRATION 3-3 Current Assets—Nike, Inc.

Real World Financials

| (\$ in millions) | May 31, 2020 | May 31, 2019 |
|---|-----------------|-----------------|
| Current assets: | | |
| Cash and equivalents | \$ 8,348 | \$ 4,466 |
| Short-term investments | 439 | 197 |
| Accounts receivable (net) | 2,749 | 4,272 |
| Inventory | 7,367 | 5,622 |
| Prepaid expenses and other current assets | 1,653 | 1,968 |
| Total current assets | <u>\$20,556</u> | <u>\$16,525</u> |

Source: Nike, Inc.

Cash and Cash Equivalents. The most liquid asset, cash, is listed first. Cash includes cash on hand and in banks that is available for use in the operations of the business and such items as bank drafts, cashier's checks, and money orders. **Cash equivalents** are defined as short-term investments that have a maturity date no longer than three months *from the date of*

purchase. Examples include certain negotiable items such as commercial paper, money market funds, and U.S. treasury bills.

These items are listed as cash equivalents because they are highly liquid investments that can be quickly converted into cash with little risk of loss. Nike's policy for classifying items as cash equivalents is stated in its disclosure note on summary of significant accounting policies, as shown in  **Illustration 3-4**.

ILLUSTRATION 3-4 Disclosure of Cash Equivalents—Nike, Inc.

Real World Financials

Cash and equivalents represent cash and short-term, highly liquid investments, including commercial paper, U.S. Treasury, U.S. Agency, money market funds, time deposits, and corporate debt securities with maturities of 90 days or less at the date of purchase.

Source: Nike, Inc.

Cash that is restricted for a special purpose and not available for current operations should not be included in the primary balance of cash and cash equivalents. These restrictions could include future plans to repay debt, purchase equipment, or make investments. Restricted cash is classified as a current asset if it is expected to be used within one year from the balance sheet date. Otherwise, restricted cash is classified as a long-term asset.

Short-Term Investments. Investments not classified as cash equivalents that the company has the ability and intent to sell within one year (or operating cycle, if longer) are reported as **short-term investments**. These investments include items such as equity investments in the common stock of other corporations, as well as debt investments in commercial paper and U.S. Treasury securities. We discuss accounting for equity and debt investments in Chapter 12.

Accounts Receivable. **Accounts receivable** result from the sale of goods or services on account (discussed in  **Chapter 7**). Accounts receivable often are referred to as *trade receivables* because they arise in the course of a company's normal trade. *Nontrade receivables* result from loans or advances by the company to individuals and other entities.

When receivables are supported by a formal agreement or note that specifies payment terms, they are called notes receivable.

Accounts receivable usually are due in 30 to 60 days, depending on the terms offered to customers, and are, therefore, classified as current assets. Any receivable, regardless of the source, not expected to be collected within one year (or operating cycle, if longer) is classified as a long-term investment. In addition, receivables are typically reported at the net amount expected to be collected. The net amount is calculated as total receivables less an allowance for the estimate of uncollectible accounts. **Nike** reported net accounts receivable of \$2,749 million. In a disclosure note, the company indicated that total accounts receivable were \$2,963 million, indicating an allowance for uncollectible accounts of \$214 million.

Inventory. **Inventory** for a wholesale or retail company consists of finished goods for sale to customers. For example, you buy finished goods such as shoes and athletic wear from **Nike**, potato chips at **Costco**, school supplies at **Office Depot**, and a new shirt at **Gap**.

Inventory consists of assets that a retail or wholesale company acquires for resale or goods that manufacturers produce for sale.

However, the inventory of a manufacturer will include not only finished goods but also goods in the course of production (work in process) and goods to be consumed directly or indirectly in production (raw materials). Manufacturers typically report all three types of inventory either directly in the balance sheet or in a disclosure note.  **Illustration 3-5** demonstrates how **Intel Corp.**, a semiconductor chip manufacturer, discloses its components of inventory.

| Total inventory | <u>\$8,744</u> | <u>\$7,253</u> |

Source: Intel Corp.

Inventory is reported as a current asset because it normally is sold within the operating cycle.

Prepaid Expenses. Recall from  **Chapter 2** that a **prepaid expense** arises when a company incurs a cost of acquiring an asset in one period that won't be expensed until a future period. Examples are supplies, prepaid rent, and prepaid insurance. These assets are not converted to cash, like receivables, collected and inventory sold, but they instead are consumed in the future. Supplies are used, prepaid rent expires over the rental period, and prepaid insurance expires over the period of insurance coverage.

Whether a prepaid expense is current or noncurrent depends on the period in which the item is consumed. For example, if rent on an office building were prepaid for one year, then the prepayment is classified as a current asset. However, if rent were prepaid for a period extending beyond the coming year, that portion of the prepayment is classified as a long-term asset.² Nike includes prepaid expenses with other current assets. Other current assets could include assets such as nontrade receivables that, because their amounts are not material, do not warrant separate disclosure.

LONG-TERM ASSETS

When assets are expected to be converted to cash or consumed in more than one year (or operating cycle, if longer), they are reported as *long-term* (or *noncurrent*) assets. Typical classifications of long-term assets are as follows:

1. Investments
2. Property, plant, and equipment
3. Intangible assets
4. Other long-term assets

Next, we'll discuss each of these categories of long-term assets.

Investments. Most companies occasionally acquire assets that are not used directly in the operations of the business. These assets include investments in debt and equity securities of other corporations, land held for speculation, and long-term receivables. These assets are classified as long-term because management does not intend to convert the assets into cash in the next year (or operating cycle, if longer).

Investments are assets not used directly in operations.

Property, Plant, and Equipment. Virtually all companies own assets classified as **property, plant, and equipment**. The common characteristics these assets share are that they are *tangible, long-lived, and used in the operations of the business*. Property, plant, and equipment often are the primary revenue-generating assets of the business.

Tangible, long-lived assets used in the operations of the business are classified as *property, plant, and equipment*.

Property, plant, and equipment include land, buildings, equipment, machinery, furniture, and vehicles, as well as natural resources, such as mineral mines, timber tracts, and oil wells. These various assets often are reported in the balance sheet by showing their original cost on one line and their accumulated depreciation (or depletion for natural resources) to date on the next line. The difference between original cost and accumulated depreciation is the net amount of property, plant, and equipment. Sometimes, companies combine the original cost and accumulated depreciation for all property, plant, and equipment and report a single net amount in the balance sheet. In this case, a separate disclosure note provides details of the original cost and accumulated depreciation for each major asset category included in property, plant, and equipment. Land is included as part of property, plant, and equipment, but it has an unlimited useful life and therefore is not depreciated.

Illustration 3-6 shows the long-term asset section of Nike's balance sheets, including its property, plant, and equipment, net of accumulated depreciation.

ILLUSTRATION 3-6 Long-Term Assets—Nike, Inc.

Real World Financials

| (\$ in millions) | May 31, 2020 | May 31, 2019 |
|---|-----------------|----------------|
| Long-term assets: | | |
| Property, plant and equipment (net) | \$ 4,866 | \$4,744 |
| Operating lease right-of-use assets (net) | 3,097 | — |
| Identifiable intangible assets (net) | 274 | 283 |
| Goodwill | 223 | 154 |
| Deferred income taxes and other assets | 2,326 | 2,011 |
| Total long-term assets | <u>\$10,786</u> | <u>\$7,192</u> |

Intangible Assets. Some assets used in the operations of a business have no physical substance. These assets are appropriately called **intangible assets**. Many intangible assets grant an exclusive right to a company to provide a product or service. This right can be a valuable resource in generating future revenues. Patents, copyrights, franchises, and trademarks are examples.

Intangible assets generally represent exclusive rights that a company can use to generate future revenues.

Many intangible assets are reported in the balance sheet at their purchase price less accumulated *amortization*. The calculation is similar to how we report property, plant, and equipment at their purchase price less accumulated *depreciation*. Companies most often combine the purchase price and accumulated amortization to report a single net amount for intangible assets. A disclosure note is used to detail amounts for individual types of intangible assets. In 2020, Nike reported identifiable intangible assets, net of their amortization, of \$274 million. These consist primarily of acquired trade names and trademarks.

Another common type of intangible asset, also reported by Nike, is *goodwill*. Goodwill isn't associated with any specific identifiable right, but instead arises when one company acquires another company. The amount reported for goodwill equals the acquisition price above the fair value of the identifiable net assets acquired. We'll discuss goodwill and other intangible assets in more detail in Chapter 10.

Not all intangible assets are purchased; some are developed internally. For example, instead of purchasing a patent granting the exclusive right to manufacture a certain drug, a pharmaceutical company may spend significant amounts in research and development to discover the drug and obtain a patent on its own. For internally developed intangibles, none of the research and development costs incurred in developing the intangible asset are included in the reported cost. Instead, research and development costs are expensed as incurred. **Pfizer**, one of the world's largest pharmaceutical companies, typically spends \$7 to \$8 billion each year on researching and developing new medicines, vaccines, medical devices, and other health care products. These costs may help to generate future profits, but none of them were reported as an asset. Similarly, Nike spends over \$3 billion each year on advertising and marketing to create brand recognition and help maintain its long-term

competitiveness, but these costs are expensed in the period incurred (rather than reported as an intangible asset).

Other Long-Term Assets. Some long-term assets do not fit clearly in one of the previous categories. These long-term assets can be reported in their own descriptive category or simply in a catchall “Other” category. Two common types of other long-term assets are long-term operating leases and long-term prepaid expenses (sometimes called deferred charges).

Nike reports over \$3 billion in operating lease assets in 2020 (net of amortization). Prior to 2020, companies were not required to report operating leases as assets (or the obligation of the lease payments as liabilities) on the face of the balance sheet (disclosure note only). As you can see, recognition of operating leases caused a significant increase in Nike’s total reported assets. Because of the dollar magnitude of these long-term assets, Nike reports them under their own category heading. Leases are discussed in [Chapter 15](#).

Nike also reports long-term deferred charges related to income taxes, endorsement contracts, and advertising arrangements. The details for these amounts can be found in the disclosure notes. Page 116

This category might also include any long-term restricted cash or long-term investments that were not reported separately in the long-term investments category discussed earlier. In the disclosure notes to its financial statements, Nike revealed that it did have a small amount of long-term investments as well as long-term receivables that were combined with deferred charges and reported in this category (instead of being reported separately in a long-term investments category).

A key to understanding which category an asset is reported is *management intent*. For example, in which category will land be reported? It depends on

management intent. Management may intend to use land for long-term operating purposes (property, plant, and equipment), hold it for future resale (investment), or sell it in its ordinary course of business (inventory for a real estate company).

Asset classification is affected by management intent.

Liabilities

LO3–3 Identify and describe the various liability and shareholders equity classifications.

Liabilities represent obligations to other entities. The information value of reporting these amounts is enhanced by classifying them as current liabilities and long-term liabilities.

 **Illustration 3-7** shows the liability section of Nike's balance sheets.

ILLUSTRATION 3-7 Liabilities—Nike, Inc.

| Total liabilities | <u>\$23,287</u> | <u>\$14,677</u> |

Source: Nike, Inc.

CURRENT LIABILITIES

Current liabilities are those obligations that are expected to be satisfied through the use of current assets or the creation of other current liabilities. So, this classification includes all liabilities that are expected to be satisfied within one year from the balance sheet date (or within the operating cycle if that's longer than one year). As of May 31, 2020, Nike had current liabilities of \$8,284 million that it planned to pay in the next 12 months.

Current liabilities are expected to be satisfied within one year from the balance sheet date (or operating cycle, if longer).

The most common current liabilities are accounts payable, notes payable (short-term borrowings), deferred revenues, accrued liabilities, and the currently maturing portion of long-term debt.

Accounts payable are obligations to suppliers of merchandise or of services purchased on account, with payment usually due in 30 to 60 days.

Notes payable are written promises to pay cash at some future date (I.O.U.s). Unlike accounts payable, notes usually require the payment of explicit interest in addition to the original obligation amount.

Deferred revenues, sometimes called *unearned revenues*, represent cash received from a customer for goods or services to be provided in a future period. For example, a company records deferred revenue when it sells gift cards. Revenue is not recorded until those gift cards are redeemed by the customer for merchandise or expire without being used.

Accrued liabilities represent obligations created when expenses have been incurred, but amounts owed will not be paid until a subsequent reporting period. For example, a company might owe salaries at the end of the fiscal year to be paid some time in the following year. In this case, the company would report *salaries payable* as an accrued liability in the current year's balance sheet (as well as the related salaries expense in the income statement). Other common examples of accrued liabilities include interest payable, taxes payable, utilities payable, and legal fees payable. In most financial statements, these items are reported in the balance sheet for a single amount as total accrued liabilities, and the individual account balances may be found listed in the disclosure notes.

Current maturities of long-term debt refer to the portion of long-term notes, loans, mortgages, and bonds payable that is payable within the next year (or operating cycle, if longer).³ For example, a \$1,000,000 note payable requiring \$100,000 in principal payments to be made in each of the next 10 years is classified as a \$100,000 current liability and a \$900,000 long-term liability. Nike classifies the current portion of its long-term debt as a current liability.

An exception for the current liability classification is a liability that management intends to refinance on a long-term basis. For example, if management intends to refinance a six-month note payable by substituting a two-year note payable and has the ability to do so, then the six-month note payable would not be classified as current even though it's due within the coming year. This exception and issues related to current liabilities are discussed in more detail in [Chapter 13](#).

Nike also is involved in several leases related to its distribution centers, manufacturing facilities, administrative offices, and retail stores. Most of these leases are multi-year commitments with payments due each month. The portion of these long-term leases that is due within the next year (or operating cycle, if longer) is classified as a current liability. A full discussion of leases is provided in [Chapter 15](#).

LONG-TERM LIABILITIES

Long-term liabilities are obligations that are (a) due to be settled or (b) have a contractual right by the borrowing company to be settled in more than one year (or operating cycle, if longer) after the balance sheet date. Examples are long-term notes, bonds,

Noncurrent, or long-term liabilities, usually are those payable beyond one year from the balance sheet date (or operating cycle, if longer).

pension obligations, and lease obligations. Nike had a significant increase in reported long-term liabilities associated with initial recognition of operating lease liabilities in 2020.

But simply classifying a liability as long-term doesn't provide complete information to external users. For instance, long-term could mean anything from 2 to 20, 30, or 40 years. Payment terms, interest rates, and other details needed to assess the impact of these obligations on future cash flows and long-term solvency are reported in a disclosure note. For example, Nike issued \$6 billion in long-term notes in March 2020. These notes are due March 2025 (\$1 billion), March 2027 (\$1 billion), March 2030 (\$1.5 billion), March 2040 (\$1 billion), and March 2050 (\$1.5 billion).

Shareholders' Equity

Owners' equity is simply total assets minus total liabilities. For that reason, it's sometimes referred to as the *net assets* or *book value* of a company. Because owners of a corporation are its shareholders, owners' equity for a corporation typically is referred to as *shareholders' equity* or *stockholders' equity*. Here's a simple way to think of equity. If someone buys a house for \$200,000 by making an initial \$50,000 payment and borrowing the remaining \$150,000, then the house's owner has an asset of \$200,000, a liability of \$150,000, and equity of \$50,000.

Shareholders' equity for a corporation arises primarily from

1. Paid-in capital
2. Retained earnings

Paid-in capital is the amount that shareholders have invested in the company. It most often arises when the company issues stock. As shown in  **Illustration 3-8**, the shareholders' equity section of Nike's balance sheets reports the full amount of paid-in capital in two accounts—common stock and additional paid-in capital. Information about the number of shares the company has authorized and how many shares have been issued and are outstanding also must be disclosed either directly in the balance sheet or in a note. Page 118

ILLUSTRATION 3-8 Shareholders' Equity—Nike, Inc.

Real World Financials

| (\$ in millions) | May 31, 2020 | May 31, 2019 |
|---|-----------------|-----------------|
| Shareholders' equity: | | |
| Common stock (1,243 and 1,253 shares outstanding) | \$ 3 | \$ 3 |
| Additional paid-in capital | 8,299 | 7,163 |
| Retained earnings (deficit) | (191) | 1,643 |
| Accumulated other comprehensive (loss) income | (56) | 231 |
| Total shareholders' equity | <u>\$8,055</u> | <u>\$9,040</u> |

Source: Nike, Inc.

Retained earnings represents the accumulated net income reported by a company since its inception minus all dividends distributed to shareholders. In other words, it's the accumulated lifetime profits a company has earned for its shareholders but has not yet distributed to those shareholders. The fact that a company does not distribute all of its profits each year as dividends is not necessarily a bad thing from the shareholders' perspective. Instead of paying additional cash dividends, Nike's management can put those undistributed profits to productive use, such as buying additional inventory or equipment or paying liabilities as they come due. Nike has been quite profitable over its lifetime (since 1964) and has distributed some of those profits as dividends to investors and retained the remaining portion.

Some other companies have not been as profitable. Companies that report net losses could end up with a negative balance in the retained earnings account. When this occurs, the retained earnings account often is referred to as the *accumulated deficit* account. Nike's retained earnings went from positive in 2019 to a deficit in 2020, even though the company reported profits of \$2.5 billion in 2020. The reason for the decrease in retained earnings is because Nike (1) declared dividends of \$1.5 billion and (2) retired some of its own stock for \$2.9. Both of these transactions decreased retained earnings. We discuss dividends and share retirements in detail in [📖 Chapter 18](#).

Nike also reports a *third component of stockholders' equity*—**accumulated other comprehensive income (AOCI)**. Other comprehensive income refers to changes in stockholders' equity other than transactions with owners and other than transactions that affect net income. We accumulate items of other comprehensive income in the *accumulated other comprehensive (loss) income* account, just like we accumulate each year's net income (that hasn't been distributed as dividends) in the *retained earnings* account. The AOCI account is discussed in detail in [📖 Chapter 4](#).

While accumulated other comprehensive income typically is not a large portion of total shareholders' equity, companies are required to report this amount separately. We will discuss specific examples of items included in other comprehensive income in [📖 Chapters 4](#), [📖 12](#), [📖 17](#), [📖 18](#), and Appendix A.

We also will discuss other transactions affecting equity, such as a company's purchase of its own stock that is not retired (*treasury stock*) in [📖 Chapter 18](#). Purchased shares are essentially the same as shares that never were issued at all. A company may decide to resell those shares in the future, but until then, they are reported as negative (or contra) shareholders' equity. Nike does not report any treasury stock, but many companies do.

The usefulness of the balance sheet, as well as the other financial statements, is significantly enhanced by financial statement disclosures. We now turn our attention to these disclosures.

LO3–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the balance sheet, financial disclosures, and segment reporting.

International Financial Reporting Standards

Balance Sheet Presentation. There are more similarities than differences in balance sheets prepared according to U.S. GAAP and those prepared applying IFRS. Some of the differences are

- International standards specify a minimum list of items to be presented in the balance sheet. U.S. GAAP has no minimum requirements.
- *IAS No. 1, revised*,⁴ changed the title of the balance sheet to *statement of financial position*, although companies are not required to use that title. Some U.S. companies use the statement of financial position title as well.
- Under U.S. GAAP, we present current assets and liabilities before noncurrent assets and liabilities. Balance sheets prepared using IFRS most often report noncurrent items first.⁵ For example, **H&M**, a Swedish-based clothing company, reported assets, liabilities, and shareholders' equity in its balance sheet in the following order:

| | (SEK in millions) |
|--|-------------------|
| Noncurrent assets (including property, plant, and equipment) | 58,213 |
| Current assets | 62,272 |
| Total assets | <u>120,485</u> |
| Shareholders' equity | <u>57,069</u> |
| Long-term liabilities | 15,580 |
| Current liabilities | 47,836 |
| Total liabilities and equity | <u>120,485</u> |

Concept Review Exercise

BALANCE SHEET CLASSIFICATION

The following is a post-closing trial balance for the Sepia Paint Corporation at December 31, 2024, the end of the company's fiscal year:

| Account Title | Debits | Credits |
|--------------------------------------|---------------------|---------------------|
| Cash | \$ 80,000 | |
| Accounts receivable | 200,000 | |
| Allowance for uncollectible accounts | | \$ 20,000 |
| Inventory | 300,000 | |
| Prepaid expenses | 30,000 | |
| Notes receivable (due in one month) | 60,000 | |
| Investment in equity securities | 50,000 | |
| Land | 120,000 | |
| Buildings | 550,000 | |
| Machinery | 500,000 | |
| Accumulated depreciation—buildings | | 200,000 |
| Accumulated depreciation—machinery | | 250,000 |
| Patent (net of amortization) | 50,000 | |
| Accounts payable | | 170,000 |
| Salaries payable | | 40,000 |
| Interest payable | | 10,000 |
| Notes payable | | 100,000 |
| Bonds payable (due in 10 years) | | 500,000 |
| Common stock (no par) | | 400,000 |
| Retained earnings | | 250,000 |
| Totals | <u>\$ 1,940,000</u> | <u>\$ 1,940,000</u> |

The company intends to hold the \$50,000 investment in equity securities of other corporations for at least three years. The \$100,000 note payable is an installment loan. Principal of \$10,000, plus interest, is due on each July 1 for the next 10 years. At the end of the year, 100,000 shares of common stock were issued and outstanding. The company has 500,000 shares of common stock authorized.

Required:

Prepare a classified balance sheet for the Sepia Paint Corporation at December 31, 2024.

Solution:

| Total shareholders' equity | | 650,000 |
| Total liabilities and shareholders' equity | | <u>\$1,470,000</u> |

PART B

Annual Report Disclosures

At the end of each fiscal year, companies with public securities are required to provide shareholders with an *annual report*. The annual report includes financial statements such as the balance sheet. Financial statements, though, are only part of the information provided in the annual report. Critical to understanding the financial statements and to evaluating a company's performance and financial health are additional disclosures included as part of the financial statements and also as part of the annual reporting requirements to the SEC.

The amount of information provided by annual report disclosures can be significant. For example, **Nike**'s 2020 annual report filed with the SEC (known as the Form 10-K) was a total of 110 pages, with 5 pages for financial statements, 33 for related-disclosure notes, and the rest related to business conditions, risk factors, legal proceedings, the company's stock performance, management's discussion and analysis, and internal control procedures. We will discuss some of the annual report disclosures in the next section.

Disclosure Notes

LO3–4 Explain the purpose of financial statement disclosures.

Some financial statement disclosures are provided by including additional information, often parenthetically, on the face of the statement. Common examples of disclosures included on the face of the balance sheet are the allowance for uncollectible accounts and information about common stock. Other disclosures include supporting discussion, calculations, and schedules in notes following the financial statements. These notes are the most common means of providing additional disclosure. For instance, the fair values of financial instruments and “off-balance-sheet” risk associated with financial instruments are disclosed in notes. Information providing details of many financial statement items is provided using disclosure notes. Some examples include

The full-disclosure principle requires that financial statements provide all material relevant information concerning the reporting entity.

- Pension plans
- Leases
- Long-term debt
- Investments
- Income taxes
- Property, plant, and equipment
- Employee benefit plans

Disclosure notes must include certain specific notes such as a summary of significant accounting policies, descriptions of subsequent events, and related third-party transactions, but many notes are fashioned to suit the disclosure needs of the particular reporting enterprise. Actually, any explanation that contributes to investors’ and creditors’ understanding of the results of operations, financial position, and cash flows of the company should be included. Let’s take a look at just a few disclosure notes.

Summary of Significant Accounting Policies

There are many areas where management chooses from among equally acceptable alternative accounting methods. For example, management chooses whether to use accelerated or straight-line depreciation, whether to use FIFO, LIFO, or average cost to measure inventories, and whether to measure certain financial investments at fair value or cost. The company also defines which securities it considers to be cash equivalents and its policies regarding the timing of recognizing revenues and the estimated useful lives of its depreciable assets. Typically, the first disclosure note consists of a summary of significant accounting policies that discloses the choices the company makes.⁶  **Illustration 3-9** shows a portion of a typical summary note from a recent annual report of the **Starbucks Corporation**.

The summary of significant accounting policies conveys valuable information about the company's choices from among various alternative accounting methods.

ILLUSTRATION 3-9 Summary of Significant Accounting Policies—Starbucks Corporation

Real World Financials

Note 1: Summary of Accounting Policies (in part)

Principles of Consolidation

Our consolidated financial statements reflect the financial position and operating results of Starbucks, including wholly owned subsidiaries and investees that we control.

Cash and Cash Equivalents

We consider all highly liquid instruments with maturities of three months or less at the time of purchase, as well as credit card receivables for sales to customers in our company-operated stores that generally settle within two to five business days, to be cash equivalents.

Inventories

Inventories are stated at the lower of cost (primarily moving average cost) or net realizable value. We record inventory reserves for obsolete and slow-moving inventory and for estimated shrinkage between physical inventory counts.

Property, Plant, and Equipment

Property, plant, and equipment, which includes assets under capital leases, are carried at cost less accumulated depreciation. Cost includes all direct

costs necessary to acquire and prepare assets for use, including internal labor and overhead in some cases. Depreciation computed using the straight-line method over estimated useful lives, of the assets generally ranging from 2 to 15 years for equipment and 30 to 40 years for buildings. Leasehold improvements are amortized over the shorter of their estimated useful lives or the related lease life, generally 10 years.

Revenue Recognition

Consolidated revenues are presented net of intercompany eliminations for wholly-owned subsidiaries and investees controlled by us and for product sales to and royalty and other fees from licensees accounted for under the equity method. Additionally, consolidated revenues are recognized net of any discounts, returns, allowances, and sales incentives, including coupon redemptions and rebates.

Source: Starbucks

Studying this note is an essential step in analyzing financial statements. Obviously, knowing which methods were used to derive certain accounting numbers is critical to assessing the adequacy of those amounts.

Subsequent Events

When an event that has a material effect on the company's financial position occurs after the fiscal year-end but before the financial statements are issued or "available to be issued," the event is described in a **subsequent event** disclosure note.⁷ Examples include the issuance of debt or equity securities, a business

combination or the sale of a business, the sale of assets, an event that sheds light on the outcome of a loss contingency, or any other event having a material effect on operations.

 **Illustration 3-10** illustrates an event that **Nike** disclosed in its annual report for the year ending May 31, 2020, but before the release of those financial statements. We cover subsequent events in more depth in  **Chapter 13**.

A subsequent event is a significant development that occurs after a company's fiscal year-end but before the financial statements are issued or available to be issued.

ILLUSTRATION 3–10 Subsequent Event—Nike, Inc.

Real World Financials

In June 2020, the Company announced a new digitally empowered phase of its Consumer Direct Offense, the Consumer Direct Acceleration. As a result, on July 22, 2020, management announced a series of leadership and operating model changes to streamline and speed up strategic execution for the Company. The changes are expected to lead to a net loss of jobs, resulting in pre-tax, one-time employee termination costs of approximately \$200 million to \$250 million, which is expected to be incurred primarily during the first half of fiscal 2021, in the form of cash expenditures.

Noteworthy Events and Transactions

Some transactions and events occur only occasionally but, when they do occur, they are potentially important to evaluating a company's financial statements. In this category are related-party transactions, errors and fraud, and illegal acts. The most frequent of these is related-party transactions.

Sometimes a company will engage in transactions with owners, management, families of owners or management, affiliated companies, and other parties that can significantly influence or be influenced by the

company. The potential problem with **related-party tran**

sactions is that their economic substance may differ from their legal form. For instance, borrowing or lending money at an interest rate that differs significantly from the market interest rate is an example of a transaction that could result from a related-party involvement. As a result of the potential for misrepresentation, financial statement users are particularly interested in more details about these transactions.

The economic substance of *related-party transactions* should be disclosed, including dollar amounts involved.

When related-party transactions occur, companies must disclose the nature of the relationship, provide a description of the transactions, and report the dollar amounts of transactions and any amounts due from or to related parties.⁸  **Illustration 3–11** shows a

disclosure note from a recent annual report of **Hyatt Hotels**. The note describes payments for legal and other services related to family members of the Executive Chairman.

ILLUSTRATION 3–11 Related-Party Transactions Disclosure—Hyatt Hotels Corp.

Real World Financials

Related-Party Transactions

In addition to those included elsewhere in the Notes to our consolidated financial statements, related-party transactions entered into by us are summarized as follows:

Legal Services—A partner in a law firm that provided services to us throughout 2019, 2018, and 2017 is the brother-in-law of our Executive Chairman. We incurred \$6 million, \$6 million, and \$3 million of legal fees with this firm for the years ended December 31, 2019, December 31, 2018, and December 31, 2017, respectively. At both December 31, 2019 and December 31, 2018, we had insignificant amounts due to the law firm.

Other Services—The brother of our Executive Chairman is affiliated with a limited partnership which has ownership interests in hotels from which we recognized \$7 million of management and franchise fees during the year ended December 31, 2019. At both December 31, 2019 and December 31, 2018, we had insignificant receivables due from these properties.

Less frequent events are errors and **fraud**. The distinction between these two terms is that *errors are unintentional*, while *fraud is intentional* misappropriation of assets or incorrect financial reporting.⁹ Errors and fraud may require disclosure (e.g., of assets lost through either errors or fraud). Obviously, the existence of fraud involving management might cause a user to approach financial analysis from an entirely different and more cautious viewpoint.

Closely related to fraud are **illegal acts** such as bribes, kickbacks, illegal contributions to political candidates, and other violations of the law. Accounting for illegal practices has been influenced by the Foreign Corrupt Practices Act passed by Congress in 1977. The Act is intended to discourage illegal business practices through tighter controls and also encourage better disclosure of those practices when encountered. The nature of such

disclosures should be influenced by the materiality of the impact of illegal acts on amounts disclosed in the financial statements.¹⁰ However, the SEC issued guidance expressing its view that exclusive reliance on quantitative benchmarks to assess materiality in preparing financial statements is inappropriate.¹¹ A number of other factors, including whether the item in question involves an unlawful transaction, should also be considered when - determining materiality.

As you might expect, any disclosures of related-party transactions, fraud, and illegal acts can be quite sensitive. Although auditors must be considerate of the privacy of the parties involved, that consideration cannot be subordinate to users' needs for full disclosure.

We've discussed only a few of the disclosure notes most frequently included as an integral part of the financial statements. Other common disclosures include details concerning earnings per share calculations, income taxes, property and equipment, contingencies, long-term debt, leases, pensions, stock compensation, changes in accounting methods, fair values of financial instruments, and exposure to market risk and credit risk. We discuss and illustrate these in later chapters in the context of related financial statement elements.

Disclosure notes for some financial statement elements are required. Others are provided when required by specific situations in the interest of full disclosure.

Management's Discussion and Analysis

LO3–5 Describe disclosures related to managements discussion and analysis, responsibilities, and compensation.

In addition to the financial statements and accompanying disclosure notes, each annual report of a public company requires a fairly lengthy discussion and analysis provided by the company's management.

Management's discussion and analysis provides a biased but informed perspective of a company's operations.

In this section, which precedes the financial statements and the auditor's report, management provides its views on significant events, trends, and uncertainties pertaining to the company's (1) results of operations, (2) liquidity, (3) capital resources, (4) off-balance sheet arrangements, and (5) critical accounting estimates. Although the **management's discussion and analysis (MD&A)** section may embody management's biased perspective, it can offer an informed insight that might not be available elsewhere. Most companies' MD&A is several pages long, often more than 20 pages.  **Illustration 3-12** provides a glimpse of the MD&A for **Darden Restaurants**. As you might imagine, most MD&A disclosures in 2020 provided significant discussion of the impact of COVID-19 on company operations.

ILLUSTRATION 3–12 Management's Discussion and Analysis—Darden Restaurants

Real World Financials

Management's Discussion and Analysis of Financial Condition and Results of Operations Liquidity and Capital Resources (in part)

Typically, cash flows generated from operating activities are our principal source of liquidity, which we use to finance capital expenditures for new restaurants and to remodel and maintain existing restaurants, to pay dividends to our shareholders and to repurchase shares of our common stock. Since substantially all of our sales are for cash and cash equivalents, and accounts payable are generally paid in 5 to 90 days, we are typically able to carry current liabilities in excess of current assets. As previously noted, during the fourth quarter of fiscal 2020, all of our restaurants

began operating at reduced capacities due to the COVID-19 outbreak and may not be able to generate sufficient cash from operations to cover all of our projected expenditures while operating at these reduced capacities. Accordingly, in response to the current conditions, we have suspended our dividend until further notice and suspended our share repurchase activity. To secure our liquidity position and provide financial flexibility, during the fourth quarter of fiscal 2020 we secured \$270 million through a Term Loan Agreement and received \$505.1 million in net proceeds in a follow-on equity offering.

Critical Accounting Estimates (in part)

Due to the economic impact of COVID-19 on Darden's overall market capitalization and the impact on Cheddar's Scratch Kitchen's projected sales and cash flows, we determined that both the estimated fair values of the trademark and the reporting unit for Cheddar's Scratch Kitchen were less than their respective carrying values. As a result, we recorded in our fiscal 2020 fourth quarter pre-tax non-cash impairment charges of \$145.0 million and \$169.2 million related to the Cheddar's Scratch Kitchen trademark and goodwill balances, respectively. Significant judgment was used when performing our impairment testing of goodwill and trademarks including the following estimates:

- Future sales, operating results and cash flows: The projected performance for each reporting unit was based on a combination of historical and current trends, organic growth expectations, residual growth rate assumptions and considerations from the impact of COVID-19.
- Royalty rate: The royalty rates were determined based on internal assumptions combined with observed market participant data. The royalty rates used ranged from 2.75 percent to 4.0 percent.
- Discount rate: The discount rate was on an adjusted estimated weighted average cost of capital (WACC) for each business unit. The cost of equity estimate utilized both external and internal assumptions including perceived risk attributable to each reporting unit specifically.
- Market multiples and control premiums: Both market multiples and control premiums were estimated using observable market data.

Management's Responsibilities

Management prepares and is responsible for the financial statements and other information in the annual report. To enhance the awareness of the users of financial statements concerning the relative roles of

management and the auditor, annual reports of public companies include a management's responsibilities section that asserts the responsibility of management for the information contained in the annual report as well as an assessment of the company's internal control procedures.

Management acknowledges responsibility and certifies accuracy of financial statements.

 **Illustration 3-13** contains Management's Report on Internal Control over

Page 124

Financial Reporting for **Nike**, included with the company's financial statements. Recall from our discussion of financial reporting reform in Chapter 1, that the *Sarbanes-Oxley Act of 2002* requires corporate executives to personally certify the financial statements. Submission of false statements carries a penalty of up to 20 years in jail. John J. Donahoe II, Nike's president and chief executive officer, and Matthew Friend, executive vice president and chief financial officer, signed the required certifications.

ILLUSTRATION 3-13 Management's Responsibilities and Certification—Nike, Inc.

Real World Financials

Management's Responsibility for Financial Statements (in part)

Management of NIKE, Inc. is responsible for the information and representations contained in this report. The financial statements have been prepared in conformity with accounting principles generally accepted in the United States of America ("U.S. GAAP") and include certain amounts based on our best estimates and judgments. Other financial information in this report is consistent with these financial statements.

The Audit & Finance Committee is responsible for the appointment of the independent registered public accounting firm and reviews, with the independent registered public accounting firm, management and the internal corporate audit staff, the scope and the results of the annual audit, the effectiveness of the accounting control system and other matters relating to the financial affairs of

NIKE as the Audit & Finance Committee deems appropriate. The independent registered public accounting firm and the internal corporate auditors have full access to the Audit & Finance Committee, with and without the presence of management, to discuss any appropriate matters.

Management’s Report on Internal Control over Financial Reporting (in part)

Management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rule 13(a)-15(f) and Rule 15(d)-15(f) of the Securities Exchange Act of 1934, as amended. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with generally accepted accounting principles in the United States of America.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Under the supervision and with the participation of our Chief Executive Officer and Chief Financial Officer, our management conducted an evaluation of the effectiveness of our internal control over financial reporting based upon the framework in Internal Control–Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

Based on the results of our evaluation, our management concluded that our internal control over financial reporting was effective as of May 31, 2020.

Compensation of Directors and Top Executives

The compensation large U.S. corporations pay their top executives is an issue of considerable public debate and controversy. Shareholders, employees, politicians, and the public in general sometimes question the huge pay packages received by company officials at the same time that more and more rank-and-file employees are being laid off as a result of company cutbacks. Contributing to the debate is the realization that the compensation gap between executives and lower-level employees is much wider in the United States than in most other industrialized countries.

A substantial portion of executive pay often is in the form of stock options or restricted stock awards. Executive stock options give their holders the right to buy the company's stock at a set price, regardless of how high the stock price rises. Restricted stock is a unit of stock given to an employee, but that unit of stock is not fully transferable until certain conditions are met (such as length of employment or attainment of performance goals). In recent years, restricted stock as a form of compensation has become more popular than stock options. Both forms of stock compensation are discussed in depth in Chapter 19.

To help shareholders and others sort out the content of executive pay packages and better understand the commitments of the company in this regard, SEC requirements provide for disclosures on compensation to directors and executives. A **proxy statement** is provided each year and includes compensation information for directors and top executives. The statement also invites shareholders to the annual meeting to elect board members and to vote on issues before the shareholders or to vote by proxy.  **Illustration 3-14** shows a portion of **Best Buy's** summary compensation table included in a recent proxy statement.

The *proxy statement* contains disclosures on compensation to directors and executives.

Sustainability Disclosures

Nearly all major public companies provide disclosures that detail their practices and policies related to the sustainability of business operations. These disclosures most often relate to environmental, social, and governance (ESG) factors that *shareholders* can use to assess factors affecting the company's financial performance, resource efficiency, and operating risks. Sustainability disclosures also provide information more broadly to other *stakeholders* (creditors, employees, suppliers, governments, and the community from which the business draws its resources) to better understand their unique relationship with the company and the impact of the company on society in general.

Environmental disclosures focus on the company's environmental impact. The most common environmental disclosure by most major companies is their greenhouse gas emissions. Many companies disclose their actual emissions and then often compare these actual emissions to planned reductions. For example, **Coca-Cola** reports each year its greenhouse gas emission in total and per liter of product, as well as its progress toward its goal of a 25% reduction in emissions by 2030 from a 2015 base year. **Disney** provides a similar report, disclosing its progress in moving toward more renewable energy and away from fuel consumption, water usage, and waste production.

Social disclosures focus on issues of interest to broader stakeholders and society at large. For example, the SEC requires companies to disclose the ratio of the compensation of its chief executive officer (CEO) to the median compensation of all full-time employees. Many stakeholders are concerned that a significant pay gap between CEOs and their employees could reduce employee morale, lower productivity, and increase employee turnover. Each of these outcomes has potential negative consequences on the company and on society in general. While a variety of metrics are used to calculate this ratio, and the ratio can fluctuate greatly each year depending on the form of CEO pay, the average ratio for S&P 500 companies in 2019 was 264-to-1. Some of the most astounding CEO ratios included **Dick's**

Sporting Goods (1,487-to-1), **Starbucks** (1,675-to-1), **McDonald's** (1,939-to-1), and **Abercrombie & Fitch** (4,293-to-1).¹²

Related to the CEO pay ratio are the gender pay ratio and gender diversity ratio. The gender pay ratio measures male pay relative to female pay. To the extent the ratio is out of balance, the company might not be able to retain qualified employees and may potentially suffer from reputational and legal costs. Similarly, most agree that increasing diversity of thought by having a sufficient number of both men and women will lead to greater creativity and better financial outcomes. Many other types of disclosures can be reported to provide clarity concerning the treatment of its employees—employee turnover rate, employee injury rate, temporary worker ratio, employee safety policy, and employee non-discrimination policy.

Governance disclosures include the company's actions and policies related to the division of power within the company. Most companies disclose the gender diversity and independence of their Board of Directors. Gender diversity includes the number of male versus female directors. Independent directors (sometimes referred to as outside members) are those individuals with no material interest in the company other than being on the board. Inside board members often include company executives and major stockholders. While inside board members often have detailed information on the company's operations, independent board members are believed to act in better interest of shareholders and broader stakeholders. In 2020, **HP's** 12-member board included 11 independent directors, 7 minorities, and 5 women.

Companies also may provide governance disclosures related to their ethical policies and procedures. Companies have incentives to signal their ethical conduct and willingness to reduce the risks of government fines and sanctions that would potentially hinder the company's operations. Another important governance disclosure in recent years is data privacy. With easy access to customer data, many ethical issues have surfaced on how and whether companies should use their customers' data. For example, in

 **Illustration 3-15**, **Target** discloses its policy on how customer data are collected, used, protected, and shared. Nevertheless, Target also discloses that simply having a data privacy policy does not guarantee these data remain private.

ILLUSTRATION 3-15 Risk Factors—Target Corp.

Real World Financials

Information Security, Cybersecurity and Data Privacy Risks (in part)

We regularly receive and store information about our guests, team members, vendors, and other third parties. We have programs in place to detect, contain, and respond to data security incidents. However, because the techniques used to obtain unauthorized access, disable or degrade service, or sabotage systems change frequently and may be difficult to detect for long periods of time, we may be unable to anticipate these techniques or implement adequate preventive measures. In addition, hardware, software, or applications we develop or procure from third parties may contain defects in design or manufacture or other problems that could unexpectedly compromise information security, cybersecurity, and data privacy. Unauthorized parties may also attempt to gain access to our systems or facilities, or those of third parties with whom we do business, through fraud, trickery, or other forms of deceiving our team members, contractors, and vendors.

Sustainability disclosures are in their infancy. There is little uniformity across companies and little professional guidance, unlike most mandatory GAAP disclosures. In 2020, the International Integrated Reporting Council (IIRC) and the Sustainability Accounting Standards Board (SASB) announced their intention to create the Value Reporting Foundation. The purpose of the Foundation is to create a comprehensive reporting framework to allow more informative sustainability disclosures.

Auditor's Report

LO3–6 Explain the purpose of an audit and describe the content of the audit report.

Auditors examine financial statements and the internal control procedures designed to support the content of those statements. Their role is to attest to the fairness of the financial statements based on that examination. The auditor's attest function for public business entities results in an opinion stated in the **auditor's report**.

There are four basic types of auditor's reports, as follows:

1. Unqualified
2. Unqualified with an explanatory or emphasis paragraph
3. Qualified
4. Adverse or disclaimer

An auditor issues an *unqualified* (or “clean”) opinion when the auditor has undertaken professional care to ensure that the financial statements are presented in conformity with generally accepted accounting principles (GAAP). Professional care would include sufficient planning of the audit, understanding the company's internal control procedures, and gathering evidence to attest to the accuracy of the amounts reported in the financial statements.

The unqualified auditor's report prepared by **Ernst & Young (EY)** for the financial statements of **Facebook** is shown in  **Illustration 3–16**.

ILLUSTRATION 3–16 Auditor's Report—Facebook, Inc.

Real World Financials

Report of Independent Registered Public Accounting Firm (in part) To the Stockholders and Board of Directors of Facebook, Inc. Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheets of Facebook, Inc.

(the Company) as of December 31, 2019 and 2018, and the related consolidated statements of income, comprehensive income, stockholders' equity and cash flows for each of the three years in the period ended December 31, 2019, and the related notes (collectively referred to as the consolidated "financial statements"). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company at December 31, 2019 and 2018, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2019, in conformity with U.S. generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the Company's internal control over financial reporting as of December 31, 2019, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) and our report dated January 29, 2020, expressed an unqualified opinion thereon.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

/s/ Ernst & Young LLP

We have served as the Company's auditor since 2007.

San Francisco, California

January 29, 2020

Source: Facebook

In most cases, including the report for Facebook, the auditors will be satisfied that the financial statements “present fairly” the financial position, results of operations, and cash flows and are “in conformity with U.S. generally accepted accounting principles.” These situations prompt an unqualified opinion. Notice that the report also references the auditor’s opinion on the effectiveness of the company’s internal control over financial reporting.¹³

Sometimes circumstances cause the auditor to issue an opinion that is *unqualified with an explanatory paragraph*. In these circumstances, the auditor believes the financial statements are in conformity with GAAP (unqualified), but the auditor feels that other important information needs to be emphasized to financial statement users. Most notably, these situations include the following:

- *Lack of consistency* due to a change in accounting principle such that comparability is affected even though the auditor concurs with the desirability of the change.
- *Going concern* when the auditor determines there is significant doubt as to whether the company will be able to pay its debts as they come due. Indicators of a going concern include significant operating losses, loss of a major customer, or legal proceedings that might jeopardize the company’s ability to continue operations.¹⁴
- *Material misstatement* in previously issued financial statements has been corrected.

An audit opinion may also include a paragraph on *emphasis of a matter*. This discussion would include items such as significant transactions with related parties, important events subsequent to the balance sheet date, or uncertainty relating to the future outcome of significant litigation or regulatory actions.

Page 129

An example of a going concern paragraph in the 2020 auditor’s report of **RTW Retailwinds** is shown in  **Illustration 3-17**.

Page 130

ILLUSTRATION 3-17 Going Concern Paragraph—RTW Retailwinds

Real World Financials

(in part)

The COVID-19 pandemic has had a material adverse effect on the Company's results of operations, cash flows and liquidity. The Company has disclosed that it cannot reasonably estimate the length or severity of COVID-19 but it currently anticipates a material adverse impact on its financial position, revenues, results of operations, and cash flows during fiscal year 2020, which have been adversely impacted in the period subsequent to February 1, 2020.

The Company has experienced substantial and recurring losses from operations and has deferred payment of amounts due to landlords and vendors. The Company has not paid rent to its landlords for its store locations for the months of April 2020 and May 2020. In addition, the Company has not made recent payments to many of its vendors. As of the date of this filing, the Company has received default notices from many landlords and vendors for non-payment.

These conditions result in substantial doubt about the Company's ability to continue as a going concern.

Source: RTW Retailwinds.

Some audits result in the need to issue other than an unqualified opinion due to exceptions such as (a) nonconformity with generally accepted accounting principles, (b) inadequate disclosures, and (c) a limitation or restriction of the scope of the examination. In these situations the auditor will issue one of the following:

The auditor's report calls attention to problems that might exist in the financial statements.

- *Qualified opinion* when either the audit process has been limited (scope limitation) or there has been a departure from GAAP, but neither is of sufficient seriousness to invalidate the financial statements as a whole.
- *Adverse opinion* when the auditor has specific knowledge that financial statements or disclosures are seriously misstated or misleading. Adverse opinions are rare because auditors usually are able to persuade management to rectify problems to avoid this undesirable report.
- *Disclaimer* when the auditor is not able to gather sufficient information that financial statements are in conformity with GAAP.

Obviously, the auditor's report is most informative when any deviations from the standard unqualified opinion are present. These departures from the norm should raise a red flag to a financial analyst and prompt additional search for information.

PART C

Risk Analysis

Using Financial Statement Information

LO3–7 Describe the techniques used by financial analysts to transform financial information into forms more useful for analysis.

Investors and others use information that companies provide in corporate financial reports to make decisions. Although the financial reports focus primarily on the past performance and the present financial condition of the reporting company, users are most interested in information about the future. Investors want to know a company's **default risk**. This is the risk that a company won't be able to pay its obligations when they come due. Another aspect of risk is **operational risk**, which relates more to how adept a company is at withstanding various events and circumstances that might impair its ability to earn profits.

Trying to gain a glimpse of the future from past and present data entails using various tools and techniques to formulate predictions. This is the goal of financial statement analysis.

Common methods for analyzing financial statements include the following:

1. **Comparative financial statements.** Financial statements that are accompanied by the corresponding financial statement of the preceding year, and often the previous two years.
2. **Horizontal analysis.** Each item in a financial statement is expressed as a percentage of that same item in the financial statements of another year (base amount). For example, comparing inventory this year to inventory last year would provide the percentage change in inventory.
3. **Vertical analysis.** Each item in the financial statements is expressed as a percentage of an appropriate corresponding total, or base amount, but within the same year. For example, cash, receivables, and inventory in the current year can be restated as a percentage of total assets in the current year.
4. **Ratio analysis.** Financial statement items are converted to ratios for evaluating the performance and risk of a company.

As an example, we presented the current asset section of **Nike's** comparative balance sheets in  **Illustration 3-3**. From this, we could easily calculate the current year's percentage change in cash (horizontal analysis) or cash as a percentage of total current assets (vertical analysis). Understanding Nike's cash position relative to the previous year or

relative to other current assets provides some information for assessing the cash available to pay debt or to respond to other operating concerns.

However, the most common way to analyze financial statements is ratio analysis. Next, we'll analyze Nike's risk by using ratio analysis to investigate **liquidity** and **long-term solvency**. In **Chapter 4**, we introduce ratios related to profitability analysis. You will also employ ratios in the Decision Makers' Perspective sections in many of the chapters in this text. Analysis cases that benefit from ratio analysis are included in many of these chapters as well.

We use ratios every day. Batting averages indicate how well our favorite baseball players are performing. We evaluate basketball players by field goal percentage and rebounds per game. Speedometers measure the speed of our cars in terms of miles per hour. We compare grocery costs based on price per pound or ounce. In each of these cases, the ratio is more meaningful than a single number by itself. Do 45 hits indicate satisfactory performance? It depends on the number of at-bats. Is \$2 a good price for cheese? It depends on how many ounces the \$2 buys. Ratios make these measurements meaningful.

Likewise, we can use ratios to help evaluate a firm's performance and financial position. Is net income of \$4 million a cause for shareholders to celebrate? Probably not if shareholders' equity is \$10 billion. But if shareholders equity is \$10 million, that's a return on equity of 40% (net income divided by shareholders' equity)! Although ratios provide more meaningful information than absolute numbers alone, the ratios are most useful when analyzed relative to some standard of comparison. That standard of comparison may be the company's previous performance, the performance of a competitor company, or an industry average for the particular ratio. Such comparisons are useful to investors and analysts in evaluating the company's performance, to management for planning and control purposes, and to auditors in assessing the reasonableness of amounts in financial statements.

Evaluating information in ratio form allows analysts to control for size differences over time and among firms.

Liquidity Ratios

LO3–8 Identify and calculate the common liquidity and solvency ratios used to assess risk.

Liquidity most often refers to the ability of a company to convert its assets to cash to pay its *current* obligations. By examining a company's liquidity, we can obtain a general idea of the firm's ability to pay its short-term debts as they come due.

Current assets usually are thought of as the most liquid of a company's assets because these assets are easier to convert to cash than long-term assets. Some current assets are more liquid than others, so it's also important to evaluate the specific makeup of current assets.

Two common measures of liquidity are (1) the current ratio and (2) the acid-test ratio (or quick ratio) calculated as follows:

$$\begin{aligned}\text{Current ratio} &= \frac{\text{Current assets}}{\text{Current liabilities}} \\ \text{Acid-test (or quick ratio)} &= \frac{\text{Quick assets}}{\text{Current liabilities}}\end{aligned}$$

CURRENT RATIO

Implicit in the definition of a current liability is the relationship between current assets and current liabilities. The difference between current assets and current liabilities is called **working capital**. By comparing a company's obligations that will shortly

become due with the company's cash and other assets that, by definition, will shortly be converted to cash or used to generate cash, the analysis offers some indication of an ability to pay current debts. This ratio is particularly useful to lenders considering whether to offer short-term credit. Nike's working capital (in millions) at the end of its May 31, 2020, fiscal year is \$12,272. This amount is computed as Nike's current assets of \$20,556 (

 **Illustration 3-3**) minus its current liabilities of \$8,284 ( **Illustration 3-7**).

Working capital, the difference between current assets and current liabilities, is a popular measure of a company's ability to satisfy its short-term obligations.

$$\text{Working capital} = \$20,556 - \$8,284 = \$12,272$$

The **current ratio** equals current assets divided by current liabilities. Nike's current ratio indicates the company has \$2.48 of current assets for each \$1 of current liabilities.

$$\text{Current ratio} = \frac{\$20,556}{\$8,284} = 2.48$$

Care should be taken, however, in assessing liquidity based solely on the current ratio. Liabilities usually are paid with cash, not other types of current assets. A company could have difficulty paying its liabilities even with a current ratio significantly greater than 1.0. For example, if a significant portion of current assets consisted of inventories, and inventories usually are not converted to cash for several months, there could be a problem in paying accounts payable due in 30 days. On the other hand, a current ratio of less than 1.0 doesn't necessarily mean the company will have difficulty meeting its current obligations. A line of credit, for instance, which the company can use to borrow funds, provides financial flexibility. That also must be considered in assessing liquidity.

ACID-TEST RATIO (OR QUICK RATIO).

Some analysts like to modify the current ratio to consider only current assets that are readily available to pay current liabilities. One such variation in common use is the **acid-test ratio**. This ratio excludes inventories, prepaid items, and restricted cash from current assets before dividing by current liabilities. The numerator, then, consists of (unrestricted) cash, short-term investments, and accounts receivable, which are referred to as the "quick assets." By eliminating current assets that are less readily convertible into cash, the acid-test ratio provides a more rigorous indication of liquidity than does the current ratio.

The *acid-test ratio* provides a more stringent indication of a company's ability to pay its current obligations.

 **Illustration 3-3** shows that **Nike's** quick assets (in millions) total \$11,536 (= \$8,348 + \$439 + \$2,749). The acid-test ratio can be computed as follows:

$$\text{Acid-test ratio} = \frac{\$11,536}{\$8,284} = 1.39$$

Are these liquidity ratios adequate? It's generally difficult to say without some point of comparison. As indicated previously, common standards for such comparisons are industry averages for similar ratios or ratios of the same company in prior years. Industry averages for the above two ratios are as follows:

Industry Average
Current ratio = 1.92
Acid-test ratio = 1.10

Nike's ratios are higher than the industry average, so Nike's liquidity appears to be in good shape. What if the ratios were lower? Would that indicate a liquidity problem? Not necessarily, but it would raise a red flag that calls for caution in analyzing other areas. Remember that each ratio is but one piece of the entire puzzle. For instance, profitability is perhaps the best indication of liquidity in the long run. We discuss ratios that measure profitability in [Chapter 4](#).

Also, management may be very efficient in managing current assets so that, let's say, receivables are collected faster than normal, or inventory is sold faster than normal, making those assets more liquid than they otherwise would be. Higher turnover ratios, relative to those of a competitor or the industry, generally indicate a more liquid position for a given level of the current ratio. We discuss these turnover ratios in [Chapter 4](#).

Liquidity ratios should be assessed in the context of both profitability and efficiency of managing assets.

Ethical Dilemma

The Raintree Cosmetic Company has several loans outstanding with a local bank. The debt agreements all contain a covenant stipulating that Raintree must maintain a current ratio of at least 0.9. Jackson Phillips, company controller, estimates that the 2024 year-end current assets and current liabilities will be \$2,100,000 and \$2,400,000, respectively. These estimates provide a current ratio of only 0.875. Violation of the debt agreement will increase Raintree's borrowing costs as the loans are renegotiated at higher rates.

Jackson proposes to the company president that Raintree purchase inventory of \$600,000 on credit before year-end. This will cause both current assets and current liabilities to increase by the same amount, but the current ratio will increase to 0.9.

The extra \$600,000 in inventory will be used over the later part of 2025. However, the purchase will cause warehousing costs and financing costs to increase.

Jackson is concerned about the ethics of his proposal. What do you think?

Solvency Ratios

Investors and creditors, particularly long-term creditors, are vitally interested in long-term solvency, a company's ability to pay its long-term debts. Two common solvency ratios are (1) the debt to equity ratio and (2) the times interest earned ratio:

$$\begin{aligned}\text{Debt to equity ratio} &= \frac{\text{Total liabilities}}{\text{Shareholders' equity}} \\ \text{Times interest earned ratio} &= \frac{\text{Net income} + \text{Interest expense} + \text{Income taxes}}{\text{Interest expense}}\end{aligned}$$

DEBT TO EQUITY RATIO

The **debt to equity ratio** compares resources provided by creditors with resources provided by owners. It is calculated by dividing total liabilities (current and long-term) by total shareholders' equity (including retained earnings). The mixture of liabilities and shareholders' equity in a company refers to its **capital structure**.¹⁵

The *debt to equity ratio* indicates the extent of reliance on creditors, rather than owners, in providing resources.

Other things being equal, the higher the ratio, the higher the company's risk. The higher the ratio, the greater the creditor claims on assets, so the higher the likelihood an individual creditor would not be paid in full if the company is unable to meet its obligations.

Nike's liabilities (in millions) are \$23,287 ([Illustration 3-7](#)), and stockholders' equity is \$8,055 ([Illustration 3-8](#)). The debt to equity ratio can be computed as follows:

$$\text{Debt to equity ratio} = \frac{\$23,287}{\$8,055} = 2.89$$

As with all ratios, the debt to equity ratio is more meaningful if compared to some standard such as an industry average or a competitor. For example, an industry average debt to equity ratio of 1.05 would indicate that Nike has more liabilities per dollar of equity than does the average firm in its industry. Does this mean that Nike's default risk is higher? Not necessarily. Nike significantly increased its debt at the onset of the COVID-19 pandemic in 2020, causing its debt to equity ratio to nearly double. The fact that lenders would be willing to lend Nike this additional debt is somewhat a signal of its creditworthiness.

TIMES INTEREST EARNED RATIO

A ratio that is commonly used in conjunction with the debt to equity ratio is the **times interest earned ratio**.

This ratio is calculated as income before subtracting interest expense and income taxes, divided by interest

expense. To remain solvent or to take on more debt if needed, a company needs to have funds available in the current year to pay interest charges. The ability of a company to “cover” its interest charges commonly is measured by the extent to which income exceeds interest charges in the current period.

The *times interest earned ratio* indicates the margin of safety provided to creditors.

If income is many times greater than interest expense, creditors’ interests are more protected than if income just barely covers this expense. For this purpose, income should be the amount available to pay interest, which is income before subtracting interest and income taxes, calculated by adding back to net income the interest and income taxes that were deducted.

As an example, **Nike** reports the following:

| | (\$ in millions) |
|----------------------------------|------------------|
| Net income | \$2,539 |
| Interest expense | + 151 |
| Income taxes | + 348 |
| Income before interest and taxes | \$3,038 |

The times interest earned ratio can be computed as follows:

$$\text{Times interest earned ratio} = \frac{\$3,038}{\$151} = 20.12$$

The ratio of 20.12 indicates a considerable margin of safety for creditors. Income could decrease many times and the company would still be able to meet its interest payment obligations.¹⁶ Nike is a highly profitable company with little interest-bearing debt. In comparison, the average times interest earned ratio for its industry is approximately 19.38 times.

Relationship between Risk and Profitability. Now that we’ve assessed a company’s liquidity and solvency, let’s look at why a company might want to borrow money. While there are default risks associated with borrowing, a company can use those borrowed funds to provide

greater returns to its shareholders. This is referred to as favorable **financial leverage** and is a very common (but risky) business activity.

To see how financial leverage works, consider a newly formed corporation attempting to determine the appropriate mix of debt and equity. The initial capitalization goal is \$50 million. The capitalization mix alternatives have been narrowed to two: (1) \$10 million in debt and \$40 million in equity and (2) \$30 million in debt and \$20 million in equity.

Also assume that regardless of the capitalization mix chosen, the corporation will be able to generate a 16% annual return, *before payment of interest and income taxes*, on the \$50 million in assets acquired. In other words, income before interest and taxes will be \$8 million (16% × \$50 million). If the interest rate on debt is 8% and the income tax rate is 25%, comparative net income for the first year of operations for the two capitalization alternatives can be calculated as follows:

| | Alternative 1 Debt = \$10 million Equity = \$40 million | Alternative 2 Debt = \$30 million Equity = \$20 million |
|---|--|--|
| Income before interest and income taxes | \$8,000,000 | \$8,000,000 |
| Less: Interest expense | <u>(800,000)*</u> | <u>(2,400,000)†</u> |
| Income before income taxes | 7,200,000 | 5,600,000 |
| Less: Income tax expense (25%) | <u>(1,800,000)</u> | <u>(1,400,000)</u> |
| Net income | <u>\$5,400,000</u> | <u>\$4,200,000</u> |

*8% × \$10,000,000

†8% × \$30,000,000

Would shareholders be in favor of alternative 1? Probably not. Although alternative 1 provides a higher net income, the return on the shareholders' equity (net income divided by shareholders' equity) is higher for alternative 2. Under alternative 1, shareholders had to invest \$40 million to earn \$5.4 million. Under alternative 2, shareholders had to invest only \$20 million to earn \$4.2 million.

Favorable financial leverage means earning a return on borrowed funds that exceeds the cost of borrowing the funds.

| | | |
|----------------------------------|------------------------------------|------------------------------------|
| | Alternative 1 | Alternative 2 |
| Return on equity ¹⁷ = | $\frac{\$5,400,000}{\$40,000,000}$ | $\frac{\$4,200,000}{\$20,000,000}$ |

$$= \quad 13.5\% \quad 21.0\%$$

Alternative 2 generated a higher return for each dollar invested by shareholders. This is because the company leveraged its \$20 million equity investment with additional debt. *Any time the cost of the additional debt (8%) is less than the return on assets invested (16%), the return to shareholders is higher with borrowing.* This is the essence of favorable financial leverage.

Be aware, though, leverage is risky and not always favorable; the cost of borrowing the funds might exceed the returns they provide. If the return on assets invested turned out to be less than expected, the additional debt could result in a lower return on equity for alternative 2. If, for example, the return on assets invested (before interest and income taxes) had been 6% of \$50,000,000 (or \$3,000,000), rather than 16%, alternative 1 would have provided the better return on equity:

| | Alternative 1 Debt = \$10 million Equity = \$40 million | Alternative 2 Debt = \$30 million Equity = \$20 million |
|---|--|--|
| Income before interest and income taxes | \$ 3,000,000 | \$ 3,000,000 |
| Less: Interest expense | <u>(800,000)*</u> | <u>(2,400,000)†</u> |
| Income before income taxes | 2,200,000 | 600,000 |
| Less: Income tax expense (25%) | <u>(550,000)</u> | <u>(150,000)</u> |
| Net income | <u><u>\$1,650,000</u></u> | <u><u>\$ 450,000</u></u> |

*8% × \$10,000,000

†8% × \$30,000,000

$$\begin{aligned} \text{Return on equity}^{18} &= \frac{\text{Alternative 1}}{\text{Alternative 2}} \\ &= \frac{\frac{\$1,650,000}{\$40,000,000}}{\frac{\$450,000}{\$20,000,000}} \\ &= \frac{4.125\%}{2.250\%} \end{aligned}$$

If the return on assets are too low and the company has become too leveraged, it Page 136 faces the risk of not being able to make its interest and debt payments. So, shareholders typically are faced with a trade-off between the risk that high debt denotes and the potential for a higher return from having the higher debt. Liquidity and solvency ratios can help with that decision.

Financial Reporting Case Solution

igorPHOTOserg/Shutterstock

1. Respond to Jerry's criticism that shareholders' equity does not represent the market value of the company. What information does the balance sheet provide?

Jerry is correct. The financial statements are supposed to help investors and creditors value a company. However, the balance sheet is not intended to portray the market value of the company. The assets of a company minus its liabilities, as shown in the balance sheet (shareholders' equity), usually will not equal the company's market value for several reasons. For example, many assets are measured at their historical costs rather than their fair values. Also, many company resources, including its trained employees, its experienced management team, and its reputation, are not recorded as assets. The balance sheet must be used in conjunction with other financial statements, disclosure notes, and other publicly available information.

The balance sheet does, however, provide valuable information that can be used by investors and creditors to help determine market value. After all, it is the balance sheet that describes many of the resources a company has available for generating future cash flows. The balance sheet also provides important information about liquidity and long-term solvency.

2. The usefulness of the balance sheet is enhanced by classifying assets and liabilities according to common characteristics. What are the classifications used in the balance sheet and what elements do those

categories include? Nike's balance sheet contains the following classifications:

Assets:

- *Current assets* include cash and several other assets that are reasonably expected to be converted to cash or consumed within the coming year or within the normal operating cycle of the business if that's longer than one year.
- *Property, plant, and equipment* are the tangible long-lived assets used in the operations of the business. This category includes land, buildings, equipment, machinery, and furniture, as well as long-term leases and natural resources.
- *Intangible assets* are assets that represent exclusive rights to something such as a product, a process, or a name. Patents, copyrights, and franchises are examples.
- *Goodwill* is a unique intangible asset in that its cost can't be directly associated with any specifically identifiable right and is not separable from the company as a whole. It represents the unique value of the company as a whole over and above all identifiable tangible and intangible assets.
- *Deferred income taxes* result from temporary differences between taxable income and accounting income.
- *Other long-term assets* is a "catchall" classification of long-term (noncurrent) assets and could include long-term prepaid expenses and any long-term asset not included in one of the other categories.

Liabilities:

- *Current liabilities* are those obligations that are expected to be satisfied through the use of current assets or the creation of other current liabilities. Usually, this means liabilities that are expected to be paid within one year from the balance sheet date (or within the operating cycle if that's longer than one year).

- *Long-term liabilities* are obligations that will *not* be satisfied in the next year or operating cycle, whichever is longer. Examples are long-term notes, bonds, pension obligations, and lease obligations.

Shareholders' equity:

- *Common stock* and *additional paid-in capital* collectively equal the amounts invested by shareholders in the corporation.
- *Retained earnings* represents the accumulated net income or net loss reported since inception of the corporation less dividends distributed to shareholders. If this amount is negative, it is called *accumulated deficit*.
- *Accumulated other comprehensive income/loss* is the cumulative amount of other comprehensive income/loss items. This topic is addressed in subsequent chapters. ●

The Bottom Line

-  **LO3-1** The balance sheet is a position statement that presents an organized list of assets, liabilities, and equity at a point in time. The statement does not portray the market value of the entity. However, the information in the statement can be useful in assessing market value, as well as in providing important information about liquidity and long-term solvency. (*p. 110*)
-  **LO3-2** Current assets include cash and other assets that are reasonably expected to be converted to cash or consumed within one year from the balance sheet date, or within the normal operating cycle of the business if that's longer than one year. All other assets are classified as various types of noncurrent assets. In addition to cash and cash equivalents, current assets include short-term investments, accounts receivable, inventory, and prepaid expenses. Long-term asset classifications include investments; property, plant, and equipment; intangible assets; and other assets. (*p. 112*)
-  **LO3-3** Current liabilities are those obligations that are expected to be satisfied through the use of current assets or the creation of other current liabilities. All other liabilities are classified as long term. Current liabilities include notes and accounts payable, deferred revenues, accrued liabilities, and the current maturities of long-term debt. Long-term liabilities include long-term notes, loans, mortgages, bonds, pension and lease obligations, as well as deferred income taxes. Shareholders' equity for a corporation arises primarily from two sources: (1) paid-in capital—amounts invested by shareholders in the corporation, and (2) retained earnings—accumulated net income reported by a company since its inception minus all dividends distributed to shareholders. (*p. 116*)
-  **LO3-4** Financial statement disclosures are used to convey additional information about the account balances in the basic financial statements as well as to provide supplemental information. This information is disclosed, often parenthetically in the basic financial statements, or in disclosure notes that often include supporting schedules. (*p. 120*)
-  **LO3-5** Annual reports of public companies will include management's discussion and analysis of key aspects of the company's business. The purpose of this disclosure is to provide external parties with management's insight into

certain transactions, events, and circumstances that affect the enterprise, including their financial impact. (*p. 123*)

 **LO3-6** The purpose of an audit is to provide a professional, independent opinion as to whether or not the financial statements are prepared in conformity with generally accepted accounting principles. The standard audit report of a public company identifies the financial statements and their dates, issues an opinion on whether those financial statements are presented fairly, explains the basis for that opinion, and states that the financial statements are the responsibility of management. Explanatory language and emphasis of matters might be included. (*p. 128*)

 **LO3-7** Financial analysts use various techniques to transform financial information into forms more useful for analysis. Horizontal analysis provides a useful way of analyzing year-to-year changes, while vertical analysis allows individual items to be expressed as a percentage of some base amount within the same year. Ratio analysis allows analysts to control for size differences over time and among firms while investigating important relationships among financial variables. (*p. 130*)

 **LO3-8** The balance sheet provides information that can be useful in assessing risk. A key element of risk analysis is investigating a company's ability to pay its obligations when they come due. Liquidity ratios and solvency ratios provide information about a company's ability to pay its obligations. (*p. 131*)

 **LO3-9** There are more similarities than differences in balance sheets and financial disclosures prepared according to U.S. GAAP and those prepared applying IFRS. Balance sheet presentation is one important difference. Under U.S. GAAP, we present current assets and liabilities before long-term assets and liabilities. IFRS doesn't prescribe the format of the balance sheet, but balance sheets prepared using IFRS often report long-term items first. Reportable segment disclosures also are similar. However, IFRS requires an additional disclosure, the amount of segment liabilities (Appendix 3). (*pp. 118 and 139*)

APPENDIX 3 Reporting Segment Information

Financial analysis of diversified companies is especially difficult. Consider, for example, a company that operates in several distinct business segments, including computer peripherals, home health care systems, textiles, and consumer food products. The results of these distinctly different activities will be aggregated into a single set of financial statements, making an informed projection of future performance difficult. It may well be that the five-year outlook differs greatly among the areas of the economy represented by the different segments. To make matters worse for an analyst, the integrated financial statements do not reveal the relative investments in each of the business segments nor the success the company has had within each area. Given that so many companies these days have chosen to balance their operating risks through diversification, aggregated financial statements pose a widespread problem for analysts, lending and credit officers, and other financial forecasters.

Many companies operate in several business segments as a strategy to achieve growth and to reduce operating risk through diversification.

Reporting by Operating Segment

To address the problem, the accounting profession requires public business entities to provide supplemental information concerning individual operating segments. The supplemental disaggregated data do not include complete financial statements for each reportable segment, only certain specified items.

Segment reporting facilitates the financial statement analysis of diversified companies.

WHAT IS A REPORTABLE OPERATING SEGMENT?

According to U.S. GAAP guidelines, a *management approach* is used in determining which segments of a company are reportable. This approach is based on the way that management organizes the segments within the company for making operating decisions and assessing performance. The segments are, therefore, evident from the structure of the company's internal organization.

More formally, the following characteristics define an **operating segment**¹⁹ as a component of a public business entity:

- That engages in business activities from which it may recognize revenues and incur expenses (including revenues and expenses relating to transactions with other components of the same entity).
- Whose operating results are regularly reviewed by the entity's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance.
- For which discrete financial information is available.

The FASB hopes that this approach provides insights into the risk and opportunities management sees in the various areas of company operations. Also, reporting information based on a company's internal organization should reduce the incremental cost to companies of providing the data. In addition, there are quantitative thresholds for the definition of an operating segment to limit the number of reportable segments. Only segments of material size (10% or more of total company revenues, assets, or net income) must be disclosed. However, a company must account for at least 75% of consolidated revenue through segment disclosures.

WHAT AMOUNTS ARE REPORTED BY AN OPERATING SEGMENT?

For areas determined to be reportable operating segments, the following disclosures are required:

- a. General information about the operating segment.
- b. Information about reported segment profit or loss, including certain revenues and expenses included in reported segment profit or loss, segment assets, and the basis of measurement.
- c. Reconciliations of the totals of segment revenues, reported profit or loss, assets, and other significant items to corresponding entity amounts.
- d. Interim period information.²⁰

 **Illustration 3A-1** shows the business segment information reported by **Abbott - Laboratories**.

LO3-9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the balance sheet, financial disclosures, and segment reporting.

International Financial Reporting Standards

Segment Reporting. U.S. GAAP requires companies to report information about reported segment profit or loss, including certain revenues and expenses included in reported segment profit or loss, segment assets, and the basis of measurement. The international standard on segment reporting, *IFRS No. 8*,²¹ requires that companies also disclose total *liabilities* of its reportable segments.

REPORTING BY GEOGRAPHIC AREA

In today's global economy, it is sometimes difficult to distinguish between domestic and foreign companies. Most large U.S. firms conduct significant operations in other countries in addition to having substantial export sales from this country. Differing political and economic environments from country to country means risks and associated rewards sometimes vary greatly among the various operations of a single company. For instance, manufacturing facilities in a South American country embroiled in political unrest pose different risks from having a plant in Vermont or even Canada. Without disaggregated financial information, these differences cause problems for analysts.

U.S. GAAP requires a public business entity to report certain geographic information unless it is impracticable to do so. This information includes the following:

- a. Revenues from external customers (1) attributed to the entity's country of domicile and (2) attributed to all foreign countries in total from which the entity derives revenues, and
- b. Long-lived assets other than financial instruments, long-term customer relationships of a financial institution, mortgage and other servicing rights, deferred policy acquisition costs, and deferred tax assets (1) located in the entity's country of domicile and (2) located in all foreign countries in total in which the entity holds material assets.²²

Abbott Laboratories reports its geographic sales by separate countries, as shown in  **Illustration 3A-2**. Notice that both the business segment ( **Illustration 3A-1**) and geographic information disclosures include reconciling company totals. In both illustrations, net sales of both the business segments and the geographic areas are reconciled to the company's total net sales of **\$31,904 million**.

ILLUSTRATION 3A-2 Geographic Area Sales Disclosure—Abbott Laboratories, Inc.

Real World Financials

| Geographic Areas (\$ in millions) | |
|--------------------------------------|-----------|
| | Net Sales |
| U.S. | \$11,398 |
| China | 2,346 |
| Germany | 1,751 |

| | |
|---------------------|----------------------|
| Japan | 1,435 |
| India | 1,397 |
| Switzerland | 1,068 |
| Netherlands | 975 |
| All other countries | 11,534 |
| Total | <u>31,904</u> |

Source: Abbott Laboratories, Inc.

INFORMATION ABOUT MAJOR CUSTOMERS

Financial analysts are extremely interested in information concerning the extent to which a company's prosperity depends on one or more major customers. For this reason, if 10% or more of the revenue of an entity is derived from transactions with a single customer, the entity must disclose that fact, the total amount of revenue from each such customer, and the identity of the operating segment or segments reporting the revenue. The identity of the major customer or customers need not be disclosed, although companies routinely provide that information. In its annual report, Abbott Laboratories did not report any major customer information.

Revenues from major customers must be disclosed.

Lockheed Martin Corporation reported a major customer in its segment disclosures. The company reported that the U.S. government accounts for 71% of its revenues. Many companies in the defense industry derive substantial portions of their revenues from contracts with the Defense Department. When cutbacks occur in national defense or in specific defense systems, the impact on a company's operations can be considerable. ●

Questions For Review of Key Topics

- Q 3-1** Describe the purpose of the balance sheet.
- Q 3-2** Explain why the balance sheet does not portray the market value of the entity.
- Q 3-3** Define current assets and list the typical asset categories included in this classification.
- Q 3-4** Define current liabilities and list the typical liability categories included in this classification.
- Q 3-5** Describe what is meant by an operating cycle for a typical manufacturing company.
- Q 3-6** Explain the difference(s) between investments in equity securities classified as current assets versus those classified as long-term (noncurrent) assets.
- Q 3-7** Describe the common characteristics of assets classified as property, plant, and equipment and identify some assets included in this classification.
- Q 3-8** Distinguish between property, plant, and equipment and intangible assets.
- Q 3-9** Explain how each of the following liabilities would be classified in the balance sheet:
- A note payable of \$100,000 due in five years.
 - A note payable of \$100,000 payable in annual installments of \$20,000 each, with the first installment due next year.
- Q 3-10** Define the terms *paid-in capital* and *retained earnings*.
- Q 3-11** Disclosure notes are an integral part of the information provided in financial statements. In what ways are the notes critical to understanding the financial statements and evaluating the firm's performance and financial health?
- Q 3-12** A summary of the company's significant accounting policies is a required disclosure. Why is this disclosure important to external financial statement users?
- Q 3-13** Define a subsequent event.
- Q 3-14** Every annual report of a public company includes an extensive discussion and analysis provided by the company's management. Specifically, which aspects of the company must this discussion address? Isn't management's perspective too biased to be of use to investors and creditors?
- Q 3-15** What is a proxy statement? What information does it provide?

- Q 3-16** What are the three main types of sustainability disclosures? How can those disclosures provide information to shareholders and stakeholders?
- Q 3-17** The auditor's report provides the analyst with an independent and professional opinion about the fairness of the representations in the financial statements. What are the four main types of opinion an auditor of a public company might issue? Describe each.
- Q 3-18** Define the terms *working capital*, *current ratio*, and *acid-test ratio* (or *quick ratio*).
- Q 3-19** Show the calculation of the following solvency ratios: (1) the debt to equity ratio, and (2) the times interest earned ratio.
-  **IFRS**
- Q 3-20** Where can we find authoritative guidance for balance sheet presentation under IFRS?
-  **IFRS**
- Q 3-21** Describe at least two differences between U.S. GAAP and IFRS in balance sheet presentation.
- Q 3-22** (Based on  **Appendix 3**) Segment reporting facilitates the financial statement analysis of diversified companies. What determines whether an operating segment is a reportable segment for this purpose?
- Q 3-23** (Based on  **Appendix 3**) For segment reporting purposes, what amounts are reported by each operating segment?
-  **IFRS**
- Q 3-24** (Based on  **Appendix 3**) Describe any differences in segment disclosure requirements between U.S. GAAP and IFRS.

Brief Exercises

BE 3-1 Current versus long-term classification **LO3-2**, **LO3-3**

Indicate whether each of the following assets and liabilities typically should be classified as current or long-term: (a) accounts receivable within the next 60 days; (b) prepaid rent for the next six months; (c) notes receivable due in two years; (d) notes payable due in 90 days; (e) notes payable due in five years; and (f) patent with 12-year remaining legal life.

BE 3-2 Balance sheet classification **LO3-2**, **LO3-3**

The trial balance for K and J Nursery, Inc., listed the following account balances at December 31, 2024, the end of its fiscal year: cash, \$16,000; accounts receivable, \$11,000; inventory, \$25,000; equipment (net), \$80,000; accounts payable, \$14,000; salaries payable, \$9,000; interest payable, \$1,000; notes payable (due in 18 months), \$30,000; common stock, \$50,000. Calculate total current assets and total current liabilities that would appear in the company's year-end balance sheet.

BE 3-3 Balance sheet classification **LO3-2**, **LO3-3**

Refer to the situation described in  **BE 3-2**. Determine the year-end balance in retained earnings for K and J Nursery, Inc.

BE 3-4 Balance sheet classification **LO3-2**, **LO3-3**

Refer to the situation described in  **BE 3-2**. Prepare a classified balance sheet for K and J Nursery, Inc. The equipment originally cost \$140,000.

BE 3-5 Balance sheet classification **LO3-2**, **LO3-3**

The following is a December 31, 2024, post-closing trial balance for Culver City Lighting, Inc. Prepare a classified balance sheet for the company.

| Account Title | Debits | Credits |
|---------------------------------|------------------|-------------------|
| Cash | \$ 55,000 | |
| Accounts receivable | 39,000 | |
| Inventory | 45,000 | |
| Prepaid insurance | 15,000 | |
| Equipment | 100,000 | |
| Accumulated depreciation | | \$ 34,000 |
| Patent (net) | 40,000 | |
| Accounts payable | | 12,000 |
| Interest payable | | 2,000 |
| Notes payable (due in 10 years) | | 100,000 |
| Common stock | | 70,000 |
| Retained earnings | | 76,000 |
| Totals | <u>\$294,000</u> | <u>\$ 294,000</u> |

BE 3–6 Balance sheet classification LO3–2, LO3–3

You have been asked to review the December 31, 2024, balance sheet for Champion Cleaning. After completing your review, you list the following three items for discussion with your superior:

1. An investment of \$30,000 is included in current assets. Management has indicated it has no intention of liquidating the investment in 2025.
2. A \$100,000 note payable is listed as a long-term liability, but you have determined that the note is due in 10 equal annual installments with the first installment due on March 31, 2025.
3. Deferred revenue of \$60,000 is included as a current liability even though only two-thirds will be recognized as revenue in 2025, and the other one-third in 2026.

Determine the appropriate classification of each of these items.

BE 3–7 Balance sheet preparation; missing elements

 LO3–2,  LO3–3

Use the following information from the balance sheet of Raineer Plumbing to determine the missing amounts.

| | | | |
|---------------------------|-----------|-------------------------------------|-----------|
| Cash and cash equivalents | \$ 40,000 | Accounts payable | \$ 32,000 |
| Retained earnings | ? | Accounts receivable | 120,000 |
| Inventory | ? | Notes payable (due in 2 years) | 50,000 |
| Common stock | 100,000 | Property, plant and equipment (net) | ? |
| Total current assets | 235,000 | Total assets | 400,000 |

BE 3–8 Financial statement disclosures LO3–4

For each of the following note disclosures, indicate whether the disclosure would likely appear in (A) the summary of significant accounts policies or (B) a separate note: (1) depreciation method; (2) contingency information; (3) significant issuance of common stock after the fiscal year-end; (4) cash equivalent designation; (5) long-term debt information; and (6) inventory costing method.

BE 3–9 Sustainability disclosures LO3–4

For each of the following note disclosures, indicate whether the disclosure would likely appear in (A) environmental, (B) social, or (C) governance disclosures: (1) ratio of pay of chief executive officer to median full-time employee; (2) ratio of independent board members; (3) reduction in greenhouse gas emissions relative to planned reductions; (4) management's data privacy policies; and (5) employee turnover rate.

BE 3–10 Calculating ratios LO3–8

Refer to the trial balance information in  BE 3–5. Calculate the (a) current ratio, (b) acid-test ratio, and (c) debt to equity ratio.

BE 3–11 Effect of decisions on ratios LO3–8

At the end of 2024, Barker Corporation's preliminary trial balance indicated a current ratio of 1.2. Management is contemplating paying some of its accounts payable balance before the end of the fiscal year. Determine whether the effect of this transaction would increase or

decrease the current ratio. Would your answer be the same if the preliminary trial balance indicated a current ratio of 0.8?

BE 3-12 Calculating ratios; solving for unknowns  **LO3-8**

The current asset section of Stibbe Pharmaceutical Company's balance sheet included cash of \$20,000 and accounts receivable of \$40,000. The only other current asset is inventory. The company's current ratio is 2.0 and its acid-test ratio is 1.5. Determine the ending balance in inventory and total current liabilities.

Exercises

E 3–1 Balance sheet; missing elements LO3–2, LO3–3

The following December 31, 2024, fiscal year-end account balance information is available for the Stonebridge Corporation:

| | |
|--------------------------------------|----------|
| Cash and cash equivalents | \$ 5,000 |
| Accounts receivable (net) | 20,000 |
| Inventory | 60,000 |
| Property, plant, and equipment (net) | 120,000 |
| Accounts payable | 44,000 |
| Salaries payable | 15,000 |
| Paid-in capital | 100,000 |

The only asset not listed is short-term investments. The only liabilities not listed are \$30,000 notes payable due in two years and related accrued interest payable of \$1,000 due in four months. The current ratio at year-end is 1.5:1.

Required:

Determine the following at December 31, 2024:

1. Total current assets
2. Short-term investments
3. Retained earnings

E 3–2 Balance sheet classification LO3–2, LO3–3

The following are the typical classifications used in a balance sheet:

- a. Current assets
- b. Investments

- c. Property, plant, and equipment
- d. Intangible assets
- e. Current liabilities
- f. Long-term liabilities
- g. Paid-in capital
- h. Retained earnings

Required:

For each of the following balance sheet items, use the letters above to indicate the appropriate classification category. If the item is a contra account, place a minus sign before the chosen letter.

1. _____ Equipment
2. _____ Accounts payable
3. _____ Allowance for uncollectible accounts
4. _____ Land (held for investment)
5. _____ Notes payable (due in 5 years)
6. _____ Deferred revenue (for the next 12 months)
7. _____ Notes payable (due in 6 months)
8. _____ Accumulated amount of net income less dividends
9. _____ Investment in XYZ Corp. (long-term)
10. _____ Inventory
11. _____ Patent
12. _____ Land (used in operations)
13. _____ Accrued liabilities (due in 6 months)
14. _____ Prepaid rent (for the next 9 months)
15. _____ Common stock
16. _____ Building (used in operations)
17. _____ Cash
18. _____ Income taxes payable

E 3-3 Balance sheet classification  **LO3-2**,  **LO3-3**

The following are the typical classifications used in a balance sheet:

- a. Current assets

- b. Investments
- c. Property, plant, and equipment
- d. Intangible assets
- e. Current liabilities
- f. Long-term liabilities
- g. Paid-in capital
- h. Retained earnings

Required:

For each of the following balance sheet items, use the letters above to indicate the appropriate classification category. If the item is a contra account, place a minus sign before the chosen letter.

- 1. _____ Interest payable (due in 3 months)
- 2. _____ Franchise
- 3. _____ Accumulated depreciation
- 4. _____ Prepaid insurance (for next 6 months)
- 5. _____ Bonds payable (due in 10 years)
- 6. _____ Current maturities of long-term debt
- 7. _____ Notes payable (due in 3 months)
- 8. _____ Long-term receivables
- 9. _____ Unrestricted cash
- 10. _____ Supplies
- 11. _____ Machinery
- 12. _____ Land (used in operations)
- 13. _____ Deferred revenue (for next 4 months)
- 14. _____ Copyrights
- 15. _____ Common stock
- 16. _____ Land (held for speculation)
- 17. _____ Cash equivalents
- 18. _____ Salaries payable

E 3-4 Balance sheet preparation  **LO3-2**,  **LO3-3**

The following is a December 31, 2024, post-closing trial balance for the Jackson Corporation.

| Account Title | Debits | Credits |
|--|------------------|------------------|
| Cash | \$ 40,000 | |
| Accounts receivable | 34,000 | |
| Inventory | 75,000 | |
| Prepaid rent (for the next 8 months) | 16,000 | |
| Investment in equity securities (short term) | 10,000 | |
| Machinery | 145,000 | |
| Accumulated depreciation | | \$ 11,000 |
| Patent (net) | 83,000 | |
| Accounts payable | | 8,000 |
| Salaries payable | | 4,000 |
| Income taxes payable | | 32,000 |
| Bonds payable (due in 10 years) | | 200,000 |
| Common stock | | 100,000 |
| Retained earnings | | 48,000 |
| Totals | <u>\$403,000</u> | <u>\$403,000</u> |

Required:

Prepare a classified balance sheet for Jackson Corporation at December 31, 2024, by properly classifying each of the accounts.

E 3–5 Balance sheet preparation  **LO3–2**,  **LO3–3**

The following are the ending balances of accounts at December 31, 2024, for the Valley Pump Corporation.

| Account Title | Debits | Credits |
|---------------------------------|-----------|-----------|
| Cash | \$ 25,000 | |
| Accounts receivable | 56,000 | |
| Inventory | 81,000 | |
| Interest payable | | \$ 10,000 |
| Investment in equity securities | 44,000 | |
| Land | 120,000 | |

| Account Title | Debits | Credits |
|--------------------------------------|------------------|------------------|
| Buildings | 300,000 | |
| Accumulated depreciation—buildings | | 100,000 |
| Equipment | 75,000 | |
| Accumulated depreciation—equipment | | 25,000 |
| Copyright (net) | 12,000 | |
| Prepaid expenses (next 12 months) | 32,000 | |
| Accounts payable | | 65,000 |
| Deferred revenue (next 12 months) | | 20,000 |
| Notes payable | | 250,000 |
| Allowance for uncollectible accounts | | 5,000 |
| Common stock | | 200,000 |
| Retained earnings | | 70,000 |
| Totals | <u>\$745,000</u> | <u>\$745,000</u> |

Additional Information:

1. The \$120,000 balance in the land account consists of \$100,000 for the cost of land where the plant and office buildings are located. The remaining \$20,000 represents the cost of land being held for speculation.
2. The \$44,000 balance in the investment in equity securities account represents an investment in the common stock of another corporation. Valley intends to sell one-half of the stock within the next year.
3. The notes payable account consists of a \$100,000 note due in six months and a \$150,000 note due in three annual installments of \$50,000 each, with the first payment due in August of 2025.

Required:

Prepare a classified balance sheet for the Valley Pump Corporation at December 31, 2024. Use the additional information to help determine appropriate classifications and account balances.

Presented next are the ending balances of accounts for the Kansas Instruments Corporation at December 31, 2024.

E 3-6 Balance sheet; Current versus long-term classification

LO3-2, LO3-3

| Account Title | Debits | Credits |
|--|-----------|----------|
| Cash | \$ 20,000 | |
| Accounts receivable | 130,000 | |
| Raw materials | 24,000 | |
| Notes receivable | 100,000 | |
| Interest receivable | 3,000 | |
| Interest payable | | \$ 5,000 |
| Investment in debt securities | 32,000 | |
| Land | 50,000 | |
| Buildings | 1,300,000 | |
| Accumulated depreciation-buildings | | 620,000 |
| Work in process | 42,000 | |
| Finished goods | 89,000 | |
| Equipment | 300,000 | |
| Accumulated depreciation-equipment | | 130,000 |
| Patent (net) | 120,000 | |
| Prepaid rent(for the next two years) | 60,000 | |
| Deferred revenue | | 36,000 |
| Accounts payable | | 180,000 |
| Notes payable | | 400,000 |
| Restricted cash (for payment of notes payable) | 80,000 | |
| Allowance for uncollectible accounts | | 13,000 |
| Sales revenue | | 800,000 |
| Cost of goods sold | 450,000 | |
| Rent expense | 28,000 | |

Additional Information:

1. The notes receivable, along with any interest receivable, are due on November 22, 2025.
2. The notes payable are due in 2028. Interest is payable annually.
3. The investment in debt securities consist of treasury bills, all of which mature next year.
4. Deferred revenue will be recognized as revenue equally over the next two years.

Required:

Determine the company's working capital (current assets minus current liabilities) at December 31, 2024.

E 3–7 Balance sheet preparation; errors  **LO3–2**,  **LO3–3**

The following balance sheet for the Los Gatos Corporation was prepared by a recently hired accountant. In reviewing the statement you notice several errors.

LOS GATOS CORPORATION

Balance Sheet

At December 31, 2024

Assets

| | |
|---------------------|-----------|
| Cash | \$ 40,000 |
| Accounts receivable | 80,000 |
| Inventory | 55,000 |
| Machinery (net) | 120,000 |
| Franchise (net) | 30,000 |
| Total assets | \$325,000 |

Liabilities and Shareholders' Equity

| | |
|--|-----------|
| Accounts payable | \$ 50,000 |
| Allowance for uncollectible accounts | 5,000 |
| Notes payable | 55,000 |
| Bonds payable | 110,000 |
| Shareholders' equity | 105,000 |
| Total liabilities and Shareholders' equity | \$325,000 |

Additional Information:

1. Cash includes a \$20,000 restricted amount to be used for repayment of the bonds payable in 2028.
2. The cost of the machinery is \$190,000.
3. Accounts receivable includes a \$20,000 note receivable from a customer due in 2027.
4. The notes payable balance includes accrued interest of \$5,000. Principal and interest are both due on February 1, 2025.
5. The company began operations in 2019. Net income less dividends since inception of the company totals \$35,000.
6. 50,000 shares of no par common stock were issued in 2019. 100,000 shares are authorized.

Required:

Prepare a corrected, classified balance sheet. Use the additional information to help determine appropriate classifications and account balances. The cost of machinery and its accumulated depreciation are shown separately.

E 3–8 Balance sheet; current versus long-term classification

 **LO3–2**,  **LO3–3**

Cone Corporation is in the process of preparing its December 31, 2024, balance sheet. There are some questions as to the proper classification of the following items:

- a. \$50,000 in cash restricted to pay debt. The debt matures in 2028.
- b. Prepaid rent of \$24,000, covering the period January 1, 2025, through December 31, 2026.
- c. Notes payable of \$200,000. The notes are payable in annual installments of \$20,000 each, with the first installment payable on March 1, 2025.
- d. Accrued interest payable of \$12,000 related to the notes payable is due June 30, 2025.
- e. Investment in equity securities of other corporations, \$80,000. Cone intends to sell one-half of the securities in 2025.

Required:

Prepare the asset and liability sections of a classified balance sheet to show how each of the above items should be reported.

E 3-9 Balance sheet preparation LO3-2, LO3-3

The following is the balance sheet of Korver Supply Company at December 31, 2023 (prior year).

KORVER SUPPLY COMPANY

Balance Sheet

At December 31, 2023

Assets

| | |
|------------------------------|-------------------|
| Cash | \$ 120,000 |
| Accounts receivable | 300,000 |
| Inventory | 200,000 |
| Furniture and fixtures (net) | 150,000 |
| Total assets | <u>\$ 770,000</u> |

Liabilities and Shareholders' Equity

| | |
|--|-------------------|
| Accounts payable (for inventory) | \$1,90,000 |
| Notes payable | 200,000 |
| Interest payable | 6,000 |
| Common stock | 100,000 |
| Retained earnings | 274,000 |
| Total liabilities and Shareholders' equity | <u>\$ 770,000</u> |

Transactions during 2024 (current year) were as follows:

| | |
|-------------------------------------|-----------|
| 1. Sales to customers on account | \$800,000 |
| 2. Cash collected from customers | 780,000 |
| 3. Purchase of inventory on account | 550,000 |
| 4. Cash payment to suppliers | 560,000 |
| 5. Cost of inventory sold | 500,000 |
| 6. Cash paid for operating expenses | 160,000 |
| 7. Cash paid for interest on notes | 12,000 |

Additional Information:

The notes payable are dated June 30, 2023, and are due on June 30, 2025. Interest at 6% is payable annually on June 30. Depreciation on the furniture and fixtures for 2024 is \$20,000. The furniture and fixtures originally cost \$300,000.

Required:

Prepare a classified balance sheet at December 31, 2024, by updating ending balances from 2023 for transactions during 2024 and the additional information. The cost of furniture and fixtures and their accumulated depreciation are shown separately.

E 3–10 Financial statement disclosures  **LO3–4**

The following are typical disclosures that would appear in the notes accompanying financial statements. For each of the items listed, indicate where the disclosure would likely appear—either in (A) the significant accounting policies note or (B) a separate note.

- | | |
|--|-------------------|
| 1. Inventory costing method | <u> A </u> |
| 2. Information on related party transactions | <u> </u> |
| 3. Composition of property, plant, and equipment | <u> </u> |
| 4. Depreciation method | <u> </u> |
| 5. Subsequent event information | <u> </u> |
| 6. Measurement basis for certain financial instruments | <u> </u> |
| 7. Important merger occurring after year-end | <u> </u> |
| 8. Composition of receivables | <u> </u> |

E 3–11 Disclosure notes  **LO3–4**

Hallergan Company produces car and truck batteries that it sells primarily to auto manufacturers. Dorothy Hawkins, the company’s controller, is preparing the financial statements for the year ended December 31, 2024. Hawkins asks for your advice concerning the following information that has not yet been included in the statements. The statements will be issued on February 28, 2025.

1. Hallergan leases its facilities from the brother of the chief executive officer.
2. On January 8, 2025, Hallergan entered into an agreement to sell a tract of land that it had been holding as an investment. The sale, which resulted in a material gain, was completed on February 2, 2025.

3. Hallergan uses the straight-line method to determine depreciation on all of the company's depreciable assets.
4. On February 8, 2025, Hallergan completed negotiations with its bank for a \$10,000,000 line of credit.
5. Hallergan uses the first-in, first-out (FIFO) method to value inventory.

Required:

For each of the above items, discuss any additional disclosures that Hawkins should include in Hallergan's financial statements.

E 3-12 Financial statement disclosures  **LO3-4**

Parkman Sporting Goods is preparing its annual report for its fiscal year. The company's controller has asked for your help in determining how best to disclose information about the following items:

1. A related-party transaction.
2. Depreciation method.
3. Allowance for uncollectible accounts.
4. Composition of investments.
5. Composition of long-term debt.
6. Inventory costing method.
7. Number of shares of common stock authorized, issued, and outstanding.
8. Employee benefit plans.

Required:

Indicate whether the above items should be disclosed (A) in the summary of significant accounting policies note, (B) in a separate disclosure note, or (C) on the face of the balance sheet.

E 3-13 FASB codification research  **LO3-4**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org). Determine each of the following:

1. The topic number (Topic XXX) that provides guidance on information contained in the notes to the financial statements.
2. The specific seven-digit Codification citation (XXX-XX-XX) that requires a company to identify and describe in the notes to the financial statements the accounting principles and methods used to prepare the financial statements.
3. Describe the disclosure requirements.

E 3-14 FASB codification research **LO3-2**, **LO3-4**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) for each of the following:

1. The balance sheet classification for a note payable due in six months that was used to purchase a building.
2. The assets that may be excluded from current assets.
3. Whether a note receivable from a related party would be included in the balance sheet with notes receivable or accounts receivable from customers.
4. The items that are nonrecognized subsequent events that require a disclosure in the notes to the financial statements.

E 3-15 Concepts; terminology **LO3-2** through **LO3-4**, **LO3-6**

Listed below are several terms and phrases associated with the balance sheet and financial disclosures. Pair each item from List A (by letter) with the item from List B that is most appropriately associated with it.

| List A | | List B |
|-----------|--|--|
| _____ 1. | Balance sheet | a. Will be satisfied through the use of current assets. |
| _____ 2. | Liquidity | b. Items expected to be converted to cash or consumed within one year or the operating cycle, whichever is longer. |
| _____ 3. | Current assets | c. The statements are presented fairly in conformity with GAAP. |
| _____ 4. | Operating cycle | d. An organized array of assets, liabilities, and equity. |
| _____ 5. | Current liabilities | e. Important to a user in comparing financial information across companies. |
| _____ 6. | Cash equivalent | f. Scope limitation or a departure from GAAP. |
| _____ 7. | Intangible asset | g. Recorded when an expense is incurred but not yet paid. |
| _____ 8. | Working capital | h. Refers to the ability of a company to convert its assets to cash to pay its current obligations. |
| _____ 9. | Accrued liabilities | i. Occurs after the fiscal year-end but before the statements are issued. |
| _____ 10. | Summary of significant accounting policies | j. Period of time from payment of cash to collection of cash. |
| _____ 11. | Subsequent events | k. One-month U.S. Treasury bill. |
| _____ 12. | Sustainability disclosures | l. Current assets minus current liabilities. |
| _____ 13. | Unqualified opinion | m. Lacks physical substance. |
| _____ 14. | Qualified opinion | n. Information about environmental, social, and governance factors related to company operations. |

The 2024 balance sheet for Hallbrook Industries, Inc., is shown below.

HALLBROOK INDUSTRIES, INC.

Balance Sheet

December 31, 2024

(\$ in thousands)

Assets

| | |
|--------------------------------------|----------------|
| Cash | \$ 200 |
| Short-term investments | 150 |
| Accounts receivable | 200 |
| Inventory | 350 |
| Property, plant, and equipment (net) | 1,000 |
| Total assets | <u>\$1,900</u> |

Liabilities and Shareholders' Equity

| | |
|--|----------------|
| Current liabilities | \$ 400 |
| Long-term liabilities | 350 |
| Paid-in capital | 750 |
| Retained earnings | 400 |
| Total liabilities and shareholders' equity | <u>\$1,900</u> |

The company's 2024 income statement reported the following amounts (\$ in thousands):

| | |
|--------------------|---------|
| Net sales | \$4,600 |
| Interest expense | 40 |
| Income tax expense | 100 |
| Net income | 160 |

Required:

Determine the following ratios for 2024:

1. Current ratio
2. Acid-test ratio
3. Debt to equity ratio
4. Times interest earned ratio

E 3–17 Calculating ratios; Best Buy LO3–8

Real World Financials

Best Buy Co, Inc., is a leading retailer specializing in consumer electronics. A condensed income statement and balance sheet for the fiscal year ended February 1, 2020, are shown next.

| Best Buy Co., Inc. | |
|---|------------------------|
| Balance Sheet | |
| At February 1, 2020 | |
| (\$ in millions) | |
| Assets | |

| Accounts payable | \$ 5,288 |
| Other current liabilities | <u>2,772</u> |
| Total current liabilities | 8,060 |
| Long-term liabilities | 4,052 |
| Shareholders' equity | <u>3,479</u> |
| Total liabilities and Shareholders' equity | <u><u>\$15,591</u></u> |

For the Year Ended February 1, 2020
(\$ in millions)

| | |
|----------------------------|------------------------|
| Revenues | \$43,638 |
| Costs and expenses | <u>41,629</u> |
| Operating income | 2,009 |
| Other income (expense)* | <u>(16)</u> |
| Income before income taxes | 1,993 |
| Income tax expense | 452 |
| Net income | <u><u>\$ 1,541</u></u> |

*Includes \$64 of interest expense.

Liquidity and solvency ratios for the industry are as follows:

| | Industry Average |
|-----------------------|-------------------------|
| Current ratio | 1.41 |
| Acid-test ratio | 0.39 |
| Debt to equity | 1.75 |
| Times interest earned | 2.69 times |

Required:

1. Determine the following ratios for Best Buy for its fiscal year ended February 1, 2020.
 - a. Current ratio
 - b. Acid-test ratio
 - c. Debt to equity ratio
 - d. Times interest earned ratio
2. Using the ratios from requirement 1, assess Best Buy's liquidity and solvency relative to its industry.

E 3-18 Calculating ratios; solve for unknowns  **LO3-8**

The current asset section of the Excalibur Tire Company's balance sheet consists of cash, marketable securities, accounts receivable, and inventory. The balance sheet revealed the following:

| | |
|----------------------|-------------|
| Inventory | \$ 840,000 |
| Total assets | \$2,800,000 |
| Current ratio | 2.25 |
| Acid-test ratio | 1.2 |
| Debt to equity ratio | 1.8 |

Required:

Determine the following balance sheet items:

1. Current assets
2. Shareholders' equity
3. Long-term assets
4. Long-term liabilities

E 3–19 Calculating ratios; solve for unknowns  **LO3–8**

The current asset section of Guardian Consultant's balance sheet consists of cash, accounts receivable, and prepaid expenses. The balance sheet reported the following: cash, \$1,300,000; prepaid expenses, \$360,000; long-term assets, \$2,400,000; and shareholders' equity, \$2,500,000. The current ratio at the end of the year was 2.0 and the debt to equity ratio was 1.4.

Required:

Determine the following amounts and ratios:

1. Current liabilities
2. Long-term liabilities
3. Accounts receivable
4. The acid-test ratio

E 3–20 Effect of management decisions on ratios  **LO3–8**

Most decisions made by management impact the ratios analysts use to evaluate performance. Indicate (by letter) whether each of the actions listed below will immediately increase (I), decrease (D), or have no effect (N) on the ratios shown. Assume each ratio is less than 1.0 before the action is taken.

| Action | Current Ratio | Acid-Test Ratio | Debt to Equity Ratio |
|---|---------------|-----------------|----------------------|
| 1. Issuance of long-term bonds | _____ | _____ | _____ |
| 2. Issuance of short-term notes | _____ | _____ | _____ |
| 3. Payment of accounts payable | _____ | _____ | _____ |
| 4. Purchase of inventory on account | _____ | _____ | _____ |
| 5. Purchase of inventory for cash | _____ | _____ | _____ |
| 6. Purchase of equipment with a 4-year note | _____ | _____ | _____ |
| 7. Repayment of long-term notes payable | _____ | _____ | _____ |
| 8. Issuance of common stock | _____ | _____ | _____ |
| 9. Payment for advertising expense | _____ | _____ | _____ |
| 0. Purchase of short-term investment for cash | _____ | _____ | _____ |
| 1. Reclassification of long-term notes payable to current notes payable | _____ | _____ | _____ |

E 3–21 Segment reporting Appendix 3

The Canton Corporation operates in four distinct business segments. The segments, along with information on revenues, assets, and net income, are listed below (\$ in thousands):

| Segment | Revenues | Assets | Net Income |
|-----------------|----------------|----------------|--------------|
| Pharmaceuticals | \$2,000 | \$1,000 | \$200 |
| Plastics | 3,000 | 1,500 | 270 |
| Farm equipment | 2,500 | 1,250 | 320 |
| Electronics | 500 | 250 | 40 |
| Total company | <u>\$8,000</u> | <u>\$4,000</u> | <u>\$830</u> |

Required:

1. For which segments must Canton report supplementary information according to U.S. GAAP?
2. What information must be reported for the segments you identified in requirement 1?

E 3–22 Segment reporting  **Appendix 3 LO3–9**

IFRS

Refer to  **E 3–21**.

Required:

How might your answers differ if Canton Corporation prepares its segment disclosure according to International Financial Reporting Standards?

Problems

P 3–1 Balance sheet preparation LO3–2, LO3–3

Presented below is a list of balance sheet accounts.

| | |
|--------------------------------------|---|
| Accounts payable | Cash |
| Accounts receivable | Common stock |
| Accumulated depreciation—buildings | Copyright (net) |
| Accumulated depreciation—equipment | Equipment |
| Allowance for uncollectible accounts | Interest receivable (due in three months) |
| Land (held for speculation) | Inventory |
| Bonds payable (due in 10 years) | Land (in use) |
| Buildings | Long-term equity investments |
| Notes payable (due in 6 months) | Interest payable (current) |
| Notes receivable (due in 2 years) | Retained earnings |
| Patent (net) | Short-term investments |
| Additional paid-in capital | Income taxes payable |
| Prepaid expenses | Salaries payable |

Required:

Prepare a classified balance sheet ignoring monetary amounts. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

P 3–2 Balance sheet preparation; missing elements LO3–2, LO3–3

The data listed below are taken from a balance sheet of Trident Corporation at December 31, 2024. Some amounts, indicated by question marks, have been intentionally omitted.

| | <u>(\$ in thousands)</u> |
|----------------------------|--------------------------|
| Cash and cash equivalents | \$ 239,186 |
| Short-term investments | 353,700 |
| Accounts receivable | 504,944 |
| Inventory | ? |
| Prepaid expenses (current) | 83,259 |
| Total current assets | 1,594,927 |
| Long-term receivables | 110,800 |
| Equipment (net) | ? |
| Total assets | ? |
| Notes payable (current) | 31,116 |
| Accounts payable | ? |
| Accrued liabilities | 421,772 |
| Other current liabilities | 181,604 |
| Total current liabilities | 693,564 |
| Long-term debt | ? |
| Total liabilities | 956,140 |
| Common stock | 370,627 |
| Retained earnings | 1,000,000 |

Required:

1. Determine the missing amounts.
2. Prepare Trident's classified balance sheet. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

P 3–3 Balance sheet preparation  **LO3–2,**  **LO3–3**

The following is a December 31, 2024, post-closing trial balance for Almway Corporation.

| Account Title | Debits | Credits |
|---|--------------------|--------------------|
| Cash | \$ 45,000 | |
| Investment in equity securities | 110,000 | |
| Accounts receivable | 60,000 | |
| Inventory | 200,000 | |
| Prepaid insurance (for the next 9 months) | 9,000 | |
| Land | 90,000 | |
| Buildings | 420,000 | |
| Accumulated depreciation—buildings | | \$ 100,000 |
| Equipment | 110,000 | |
| Accumulated depreciation—equipment | | 60,000 |
| Patent (net) | 10,000 | |
| Accounts payable | | 75,000 |
| Notes payable | | 130,000 |
| Interest payable | | 20,000 |
| Bonds payable | | 240,000 |
| Common stock | | 300,000 |
| Retained earnings | | 129,000 |
| Totals | <u>\$1,054,000</u> | <u>\$1,054,000</u> |

Additional Information:

1. The investment in equity securities account includes an investment in common stock of another corporation of \$30,000 which management intends to hold for at least three years. The balance of these investments is intended to be sold in the coming year.
2. The land account includes land which cost \$25,000 that the company has not used and is currently listed for sale.
3. The cash account includes \$15,000 restricted in a fund to pay bonds payable that mature in 2027 and \$23,000 restricted in a three-month Treasury bill.
4. The notes payable account consists of the following:
 - a. a \$30,000 note due in six months.
 - b. a \$50,000 note due in six years.

c. a \$50,000 note due in five annual installments of \$10,000 each, with the next installment due February 15, 2025.

5. The \$60,000 balance in accounts receivable is net of an allowance for uncollectible accounts of \$8,000.

6. The common stock account represents 100,000 shares of no par value common stock issued and outstanding. The corporation has 500,000 shares authorized.

Required:

Prepare a classified balance sheet for the Almway Corporation at December 31, 2024. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

P 3–4 Balance sheet preparation  **LO3–2,**  **LO3–3**

The following is the ending balances of accounts at December 31, 2024, for the Weismuller Publishing Company.

| Account Title | Debits | Credits |
|--------------------------------------|-----------|------------|
| Cash | \$ 65,000 | |
| Accounts receivable | 160,000 | |
| Inventory | 285,000 | |
| Prepaid expenses | 148,000 | |
| Equipment | 320,000 | |
| Accumulated depreciation | | \$ 110,000 |
| Investments | 140,000 | |
| Accounts payable | | 60,000 |
| Interest payable | | 20,000 |
| Deferred revenue | | 80,000 |
| Income taxes payable | | 30,000 |
| Notes payable | | 200,000 |
| Allowance for uncollectible accounts | | 16,000 |
| Common stock | | 400,000 |

| Account Title | Debits | Credits |
|-------------------|-------------|-------------|
| Retained earnings | | 202,000 |
| Totals | \$1,118,000 | \$1,118,000 |

Additional Information:

1. Prepaid expenses include \$120,000 paid on December 31, 2024, for two years of rent on the building that houses both the administrative offices and the manufacturing facility.
2. Investments include \$30,000 in Treasury bills purchased on November 30, 2024. The bills mature on January 30, 2025. The remaining \$110,000 is an investment in equity securities that the company intends to sell in the next year.
3. Deferred revenue represents customer prepayments for subscriptions. Subscriptions are for periods of one year or less.
4. The notes payable account consists of the following:
 - a. a \$40,000 note due in six months.
 - b. a \$100,000 note due in six years.
 - c. a \$60,000 note due in three annual installments of \$20,000 each, with the next installment due August 31, 2025.
5. The common stock account represents 400,000 shares of no par value common stock issued and outstanding. The corporation has 800,000 shares authorized.

Required:

Prepare a classified balanced sheet for the Weismuller Publishing Company at December 31, 2024. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

P 3–5 Balance sheet preparation  **LO3–2,**  **LO3–3**

The following is the ending balances of accounts at June 30, 2024, for Excell Company.

| Account Title | Debits | Credits |
|------------------------|-----------|---------|
| Cash | \$ 83,000 | |
| Short-term investments | 65,000 | |

| Account Title | Debits | Credits |
|---|--------------------|--------------------|
| Accounts receivable (net) | 280,000 | |
| Prepaid expenses (for the next 12 months) | 32,000 | |
| Land | 75,000 | |
| Buildings | 320,000 | |
| Accumulated depreciation—buildings | | \$ 160,000 |
| Equipment | 265,000 | |
| Accumulated depreciation—equipment | | 120,000 |
| Accounts payable | | 173,000 |
| Accrued liabilities | | 45,000 |
| Notes payable | | 100,000 |
| Mortgage payable | | 250,000 |
| Common stock | | 100,000 |
| Retained earnings | | 172,000 |
| Totals | <u>\$1,120,000</u> | <u>\$1,120,000</u> |

Additional Information:

- The short-term investments account includes \$18,000 in U.S. treasury bills purchased in May. The bills mature in July, 2024.
- The accounts receivable account consists of the following:

| | |
|---|------------------|
| a. Amounts owed by customers | \$225,000 |
| b. Allowance for uncollectible accounts—trade customers | (15,000) |
| c. Nontrade notes receivable (due in three years) | 65,000 |
| d. Interest receivable on notes (due in four months) | <u>5,000</u> |
| Total | <u>\$280,000</u> |
- The notes payable account consists of two notes of \$50,000 each. One note is due on September 30, 2024, and the other is due on November 30, 2025.
- The mortgage payable is a loan payable to the bank in *semiannual* installments of \$5,000 each plus interest. The next payment is due on October 31, 2024. Interest has been properly accrued and is included in accrued expenses.

5. Five hundred thousand shares of no par common stock are authorized, of which 200,000 shares have been issued and are outstanding.
6. The land account includes \$50,000 representing the cost of the land on which the company's office building resides. The remaining \$25,000 is the cost of land that the company is holding for investment purposes.

Required:

Prepare a classified balance sheet for the Excell Company at June 30, 2024. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

P 3–6 Balance sheet preparation; disclosures  **LO3–2**
through  **LO3–4**

The following is the ending balances of accounts at December 31, 2024, for the Vosburgh Electronics Corporation.

| Account Title | Debits | Credits |
|-----------------------------|-----------|---------|
| Cash | \$ 67,000 | |
| Short-term investments | 182,000 | |
| Accounts receivable | 123,000 | |
| Long-term investments | 35,000 | |
| Inventory | 215,000 | |
| Receivables from employees | 40,000 | |
| Prepaid expenses (for 2025) | 16,000 | |
| Land | 280,000 | |
| Building | 1,550,000 | |
| Equipment | 637,000 | |
| Patent (net) | 152,000 | |
| Franchise (net) | 40,000 | |

| Account Title | Debits | Credits |
|--|--------------------|--------------------|
| Notes receivable | 250,000 | |
| Interest receivable | 12,000 | |
| Accumulated depreciation—building | | \$ 620,000 |
| Accumulated depreciation—equipment | | 210,000 |
| Accounts payable | | 189,000 |
| Dividends payable (payable on 1/16/2025) | | 10,000 |
| Interest payable | | 16,000 |
| Income taxes payable | | 40,000 |
| Deferred revenue | | 60,000 |
| Notes payable | | 300,000 |
| Allowance for uncollectible accounts | | 8,000 |
| Common stock | | 2,000,000 |
| Retained earnings | | 146,000 |
| Totals | <u>\$3,599,000</u> | <u>\$3,599,000</u> |

Additional Information:

1. The receivables from employees are due on June 30, 2025.
2. The notes receivable are due in installments of \$50,000, payable on each September 30. Interest is payable annually.
3. Short-term investments consist of securities that the company plans to sell in 2025 and \$50,000 in treasury bills purchased on December 15 of the current year that mature on February 15, 2025. Long-term investments consist of securities that the company does not plan to sell in the next year.
4. Deferred revenue represents payments from customers for extended service contracts. Eighty percent of these contracts expire in 2025, the remainder in 2026.
5. Notes payable consists of two notes, one for \$100,000 due on January 15, 2026, and another for \$200,000 due on June 30, 2027.

Required:

1. Prepare a classified balance sheet for Vosburgh at December 31, 2024. Include headings for each classification, as well as titles for each classification's subtotal. An example of a

classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

2. Identify the items that would require additional disclosure, either on the face of the balance sheet or in a disclosure note.

P 3–7 Balance sheet preparation; errors  **LO3–2**,  **LO3–3**

The following balance sheet for the Hubbard Corporation was prepared by the company:

HUBBARD CORPORATION

Balance Sheet

At December 31, 2024

Assets

| | |
|---------------------------------|--------------------|
| Buildings | \$ 750,000 |
| Land | 250,000 |
| Cash | 60,000 |
| Accounts receivable (net) | 120,000 |
| Inventory | 240,000 |
| Machinery | 280,000 |
| Patent (net) | 100,000 |
| Investment in equity securities | 60,000 |
| Total assets | <u>\$1,860,000</u> |

Liabilities and Shareholders' Equity

| | |
|---|--------------------|
| Accounts payable | \$ 215,000 |
| Accumulated depreciation | 255,000 |
| Notes payable | 500,000 |
| Appreciation of inventory | 80,000 |
| Common stock (authorized and issued 100,000 shares of no par stock) | 430,000 |
| Retained earnings | <u>380,000</u> |
| Total liabilities and shareholders' equity | <u>\$1,860,000</u> |

Additional Information:

1. The buildings, land, and machinery are all stated at cost except for a parcel of land that the company is holding for future sale. The land originally cost \$50,000 but, due to a significant increase in market value, is listed at \$120,000. The increase in the land account was credited to retained earnings.
2. The investment in equity securities account consists of stocks of other corporations and are recorded at cost, \$20,000 of which will be sold in the coming year. The remainder will be held indefinitely.
3. Notes payable are all long term. However, a \$100,000 note requires an installment payment of \$25,000 due in the coming year.
4. Inventory is recorded at current resale value. The original cost of the inventory is \$160,000.

Required:

Prepare a corrected classified balance sheet for the Hubbard Corporation at December 31, 2024. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

P 3–8 Balance sheet; errors; missing amounts  **LO3–2,**
 **LO3–3**

The following incomplete balance sheet for the Sanderson Manufacturing Company was prepared by the company's controller. As accounting manager for Sanderson, you are attempting to reconstruct and revise the balance sheet.

Sanderson Manufacturing Company

Balance Sheet

Balance Sheet

At December 31, 2024

(\$ in thousands)

Assets

| | |
|--|--------------------|
| Total liabilities and shareholders' equity | <u>\$</u> <u>?</u> |
|--|--------------------|

Additional Information (\$ in thousands):

1. Certain records that included the account balances for the patent and shareholders' equity items were lost. However, the controller told you that a complete, preliminary balance sheet prepared before the records were lost showed a debt to equity ratio of 1.2. That is, total liabilities are 120% of total shareholders' equity. Retained earnings at the beginning of the year was \$4,000. Net income for 2024 was \$1,560, and \$560 in cash dividends were declared and paid to shareholders.
2. Management intends to sell the investments in the next six months.
3. Interest on both the notes and the bonds is payable annually.
4. The notes payable are due in annual installments of \$1,000 each.
5. Deferred revenue will be recognized as revenue equally over the next two fiscal years.
6. The common stock represents 400,000 shares of no par stock authorized, 250,000 shares issued and outstanding.

Required:

Prepare a complete, corrected, classified balance sheet. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

P 3–9 Balance sheet preparation  **LO3–2,**  **LO3–3**

Presented below is the balance sheet for HHD, Inc., at December 31, 2024.

| | | | |
|----------------|------------|-----------------------|------------|
| Current assets | \$ 600,000 | Current liabilities | \$ 400,000 |
| Investments | 500,000 | Long-term liabilities | 1,100,000 |

| | | | |
|-----------------------------------|---------------------------|---|---------------------------|
| Property, plant, and equipment | 2,000,000 | Shareholders' equity | <u>1,800,000</u> |
| Intangible assets | 200,000 | | |
| Total assets | <u><u>\$3,300,000</u></u> | Total liabilities and shareholders' equity | <u><u>\$3,300,000</u></u> |

The captions shown in the summarized statement above include the following:

Page 156

- Current assets: cash, \$150,000; accounts receivable (net), \$200,000; inventory, \$225,000; and prepaid insurance, \$25,000.
- Investments: investment in equity securities, short term, \$90,000, and long term, \$410,000.
- Property, plant, and equipment: buildings, \$1,500,000 less accumulated depreciation, \$600,000; equipment, \$500,000 less accumulated depreciation, \$200,000; and land, \$800,000.
- Intangible assets net of amortization: patent, \$110,000; and copyright, \$90,000.
- Current liabilities: accounts payable, \$100,000; notes payable, short term, \$150,000, and long term, \$90,000; and income taxes payable, \$60,000.
- Long-term liabilities: bonds payable due 2026.
- Shareholders' equity: common stock, \$1,000,000; retained earnings, \$800,000. Five hundred thousand shares of no par common stock are authorized, of which 200,000 shares were issued and are outstanding.

Required:

Prepare a corrected classified balance sheet for HHD, Inc., at December 31, 2024. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

P 3-10 Balance sheet preparation  **LO3-2,**  **LO3-3**

Melody Lane Music Company was started by John Ross early in 2024. Initial capital was acquired by issuing shares of common stock to various investors and obtaining a bank loan. The company operates a retail store that sells records, tapes, and compact discs. Business was so good during the first year of operations that John is considering opening a second store on the other side of town. The funds necessary for expansion will come from a new bank loan. In order to approve the loan, the bank requires financial statements.

John asks for your help in preparing the balance sheet and presents you with the following information for the year ending December 31, 2024:

a. Cash receipts consisted of the following:

| | |
|----------------------------|-----------|
| From customers | \$360,000 |
| From issue of common stock | 100,000 |
| From bank loan | 100,000 |

b. Cash disbursements were as follows:

| | |
|-----------------------|-----------|
| Purchase of inventory | \$300,000 |
| Rent | 15,000 |
| Salaries | 30,000 |
| Utilities | 5,000 |
| Insurance | 3,000 |
| Purchase of equipment | 40,000 |

c. The bank loan was made on March 31, 2024. A note was signed requiring payment of interest and principal on March 31, 2025. The interest rate is 12%.

d. The equipment was purchased on January 3, 2024, and has an estimated useful life of 10 years with no anticipated salvage value. Depreciation per year is \$4,000.

e. Inventory on hand at the end of the year cost \$100,000.

f. Amounts owed at December 31, 2024, were as follows:

| | |
|---------------------------|----------|
| To suppliers of inventory | \$20,000 |
| To the utility company | 1,000 |

- g. Rent on the store building is \$1,000 per month. On December 1, 2024, four months' rent was paid in advance.
- h. Net income for the year was \$76,000. Assume that the company is not subject to federal, state, or local income tax.
- i. One hundred thousand shares of no par common stock are authorized, of which 20,000 shares were issued and are outstanding.

Required:

Prepare a balance sheet at December 31, 2024. Include headings for each classification, as well as titles for each classification's subtotal. An example of a classified balance sheet can be found in the Concept Review Exercise at the end of Part A of this chapter.

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Analysis Case 3–1 Current versus long-term classification

 LO3–2,  LO3–3

The usefulness of the balance sheet is enhanced when assets and liabilities are grouped according to common characteristics. The broad distinction made in the balance sheet is the current versus long-term classification of both assets and liabilities.

Required:

1. Identify the factors that determine whether an asset or liability should be classified as current or long term in a balance sheet.
2. Determine whether certain assets and liabilities should be classified as current or long term.

IFRS Case 3–2 Balance sheet presentation; Vodafone Group, Plc. LO3–2, LO3–3, LO3–9

IFRS

Real World Financials

Vodafone Group, Plc., a U.K. company, is the largest mobile telecommunications network company in the world. The company prepares its financial statements in accordance with International Financial Reporting Standards. Below are partial company balance sheets (statements of financial position) included in a recent annual report:

| Vodafone Group, Plc. | | |
|--|-----------------------|-----------------------|
| Consolidated Statements of Financial Position | | |
| At March 31 | | |
| | 31 March 2019 | 31 March 2018 |

Required:

1. Determine the differences between Vodafone's balance sheets and a typical U.S. company balance sheet.

Judgment Case 3–3 Balance sheet; errors  **LO3–2,**
 **LO3–3**

You recently joined the internal auditing department of Marcus Clothing Corporation. As one of your first assignments, you are examining a balance sheet prepared by a staff accountant.

| MARCUS CLOTHING CORPORATION | | |
|---|---------------|---------------------------|
| Balance Sheet | | |
| At December 31, 2024 | | |
| Assets | | |
| Current assets: | | |
| Cash | | \$ 137,000 |
| Accounts receivable (net) | | 80,000 |
| Notes receivable | | 53,000 |
| Inventory | | 240,000 |
| Investments | | <u>66,000</u> |
| Total current assets | | 576,000 |
| Other assets: | | |
| Land | \$ 200,000 | |
| Equipment (net) | 320,000 | |
| Prepaid expenses (for the next 12 months) | 27,000 | |
| Patent (net) | <u>22,000</u> | |
| Total other assets | | 569,000 |
| Total assets | | <u><u>\$1,145,000</u></u> |
| Liabilities and Shareholders' Equity | | |
| Current liabilities: | | |
| Accounts payable | | \$125,000 |
| Salaries payable | | <u>32,000</u> |
| Total current liabilities | | 157,000 |
| Long-term liabilities: | | |
| Notes payable | \$ 100,000 | |
| Bonds payable (due in 5 years) | 300,000 | |

MARCUS CLOTHING CORPORATION

Balance Sheet

At December 31, 2024

Assets

| | | |
|--|---------------|--------------------|
| Interest payable | <u>20,000</u> | |
| Total long-term liabilities | | 420,000 |
| Shareholders' equity: | | |
| Common stock | 500,000 | |
| Retained earnings | <u>68,000</u> | |
| Total shareholders' equity | | 568,000 |
| Total liabilities and shareholders' equity | | <u>\$1,145,000</u> |

In the course of your examination you uncover the following information pertaining to the balance sheet:

1. The company rents its facilities. The land that appears in the statement is being held for future sale.
2. The notes receivable account contains one note that is due in 2026. The balance of \$53,000 includes \$3,000 of accrued interest expected to be received in July 2025.
3. The notes payable account contains one note that is due in installments of \$20,000 per year. All interest is payable annually.
4. The company's investments consist of marketable equity securities of other corporations. Management does not intend to liquidate any investments in the coming year.

Required:

For each asset and liability, determine whether it is correctly classified. If it is not, select the correct classification.

Judgment Case 3–4 Financial disclosures  **LO3–4**

You recently joined the auditing staff of Best, Best, and Krug, CPAs. You have been assigned to the audit of Clearview, Inc., and have been asked by the audit senior to examine the balance sheet prepared by Clearview's accountant.

CLEARVIEW, INC.
Balance Sheet
At December 31, 2024

| Total shareholders' equity | 308.6 |

| | |
|--|-----------------------|
| Total liabilities and shareholders' equity | <u><u>\$857.6</u></u> |
|--|-----------------------|

Required:

Match each balance sheet item with the disclosure note most closely associated.

Real World Case 3–5 Balance sheet and significant accounting policies disclosure; Walmart  **LO3–2** through  **LO3–4**,  **LO3–8**

Real World Financials

The balance sheet and disclosure of significant accounting policies taken from the January 31, 2020, annual report **Walmart Inc.** appear below. Use this information to answer the following questions:

1. Does Walmart separately report current assets versus long-term assets, and current liabilities versus long-term liabilities (yes/no)?
2. What amounts did Walmart report for the following items for 2020:
 - a. Total assets
 - b. Current assets
 - c. Current liabilities
 - d. Total equity
 - e. Retained earnings
 - f. Inventory
3. What is Walmart’s largest current asset? What is its largest current liability?
4. Compute Walmart’s current ratio for 2020.
5. Identify the following items from the summary of significant accounting policies:
 - a. Does the company have any securities classified as cash equivalents (yes/no)?
 - b. What cost method does the company use for its U.S. inventory?
 - c. When does the company recognize revenue from service transactions?

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

WALMART INC.

1 Summary of Significant Accounting Policies (in part)

Cash and Cash Equivalents

The Company considers investments with a maturity when purchased of three months or less to be cash equivalents.

Inventories

The Company values inventories at the lower of cost or market as determined primarily by the retail inventory method of accounting, using the last-in, first-out (“LIFO”) method for the Walmart U.S. segment’s inventories. The inventory at the Walmart International segment is valued primarily by the retail inventory method of accounting, using the first-in, first-out (“FIFO”) method. At January 31, 2020 and January 31, 2019, the Company’s inventories valued at LIFO approximated those inventories as if they were valued at FIFO.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
WALMART INC.

Revenue Recognition

The Company recognizes sales revenue, net of sales taxes and estimated sales returns, at the time it sells merchandise to the customer. eCommerce sales include shipping revenue and are recorded upon delivery to the customer. Customer purchases of shopping cards are not recognized as revenue until the card is redeemed and the customer purchases merchandise using the shopping card. The Company recognizes revenue from service transactions at the time the service is performed. Generally, revenue from services is classified as a component of net sales in the Company's Consolidated Statements of Income.

Page 161

Judgment Case 3–6 Post fiscal year-end events  **LO3–4**

The fiscal year-end for the Northwest Distribution Corporation is December 31. The company's 2024 financial statements were issued on March 15, 2025. The following events occurred between December 31, 2024, and March 15, 2025.

1. On January 22, 2025, the company negotiated a major merger with Blandon Industries. The merger will be completed by the middle of 2025.
2. On February 3, 2025, Northwest negotiated a \$10 million long-term note with the Credit Bank of Ohio. The amount of the note is material.
3. On February 25, 2025, a flood destroyed one of the company's manufacturing plants causing \$600,000 of uninsured damage.

Required:

Determine whether each of these events should be disclosed with the 2024 financial statements of Northwest Distribution Corporation.

Real World Case 3–7 MD&A disclosure; Delta Airlines; COVID-19  **LO3–5**

Real World Financials

Obtain the quarterly financial report (10-Q) of **Delta Airlines** for the period ended June 30, 2020. You can access this report through the SEC's EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system. You can also access this report at the company's website (<https://ir.delta.com/financials>).

Required:

Find the section "Balance Sheet, Cash Flow and Liquidity" in Management's Discussion and Analysis of Financial Condition and Results of Operations (page 29). The company initiated a series of actions to improve its liquidity and strengthen its financial position because of the impact of COVID-19. Answer the following questions:

1. How much does the company plan to reduce capital expenditures for the year?
2. How much did the company receive from the CARES Act?
3. How much did the company draw from previously undrawn revolving credit facilities?
4. Did the company suspend share repurchases and dividends?
5. How much did the company postpone planned voluntary pension funding?

Judgment Case 3–8 Debt versus equity LO3–7, LO3–8

A common problem facing any business entity is the debt versus equity decision. When funds are required to obtain assets, should debt or equity financing be used? This decision also is faced when a company is initially formed. What will be the mix of debt versus equity in the initial capital structure? The characteristics of debt are very different from those of equity, as are the financial implications of using one method of financing as opposed to the other.

Cherokee Plastics Corporation is formed by a group of investors to manufacture household plastic products. Their initial capitalization goal is \$50,000,000. That is, the incorporators have decided to raise \$50,000,000 to acquire the initial assets of the company. They have narrowed down the financing mix alternatives to two:

1. All equity financing
2. \$20,000,000 in debt financing and \$30,000,000 in equity financing

No matter which financing alternative is chosen, the corporation expects to generate a 10% annual return, before payment of interest and income taxes, on the \$50,000,000 in assets acquired. The interest rate on debt would be 8%. The effective income tax rate will be approximately 25%.

Alternative 2 will require specified interest and principal payments to be made to the creditors at specific dates. The interest portion of these payments (interest expense) will reduce the taxable income of the corporation and hence the amount of income tax the corporation will pay. The all-equity alternative requires no specified payments to be made to suppliers of capital. The corporation is not legally liable to make distributions to its owners. If the board of directors does decide to make a distribution, it is not an expense of the corporation and does not reduce taxable income and hence the taxes the corporation pays.

Required:

1. Prepare abbreviated income statements that compare first-year profitability for each of the two alternatives.
2. Which alternative would be expected to achieve the highest first-year profits? Why?
3. Which alternative would provide the highest rate of return on equity? Why?
4. Which alternative is considered to be riskier, all else equal?

Analysis Case 3–9 Balance sheet information  **LO3–2**
through  **LO3–4**

Real World Financials

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in the Connect library. This material also is available under the Investor Relations link at the company's website (www.target.com).

Required:

1. Does the company separately report current assets and long-term assets, as well as current liabilities and long-term liabilities?
2. Are any investments shown as a current asset? Why?
3. In which liability account would the company report the balance of its gift card liability?
4. What method does the company use to depreciate its property and equipment?

Analysis Case 3–10 Segment reporting concepts
 **Appendix 3**

Real World Financials

Examine the segment disclosures of **Abbott Laboratories** reported in  **Appendix 3** and answer the following questions.

1. Does Abbott Laboratories define its operating segments by business or geography?
2. Determine which business segment has the greatest amount of (a) sales, (b) operating earnings, and (c) capital expenditures.
3. Which business segment has the least profitable return on assets (defined as operating earnings divided by total assets)?
4. What percentage of sales occur outside of the United States?
5. In which country other than the United States is sales the greatest?

Communication Case 3–11 Current versus long-term classification **LO3–2**

A first-year accounting student is confused by a statement made in a recent class. Her instructor stated that the assets listed in the balance sheet of the **IBM Corporation** include computers that are classified as current assets as well as computers that are classified as long-term (noncurrent) assets. In addition, the instructor stated that investments in equity securities of other corporations could be classified in the balance sheet as either current or long-term assets.

Required:

Explain to the student the distinction between current and long-term assets pertaining to the IBM computers and the investments in equity securities.

Communication Case 3–12 FASB codification research; inventory or property, plant, and equipment **LO3–2**

The Red Hen Company produces, processes, and sells fresh eggs. The company is in the process of preparing financial statements at the end of its first year of operations and has asked for your help in determining the appropriate treatment of the cost of its egg-laying flock. The estimated life of a laying hen is approximately two years, after which they are sold to soup companies.

The controller considers the company's operating cycle to be two years and wants to present the cost of the egg-producing flock as inventory in the current asset section of the balance sheet. He feels that the hens are "goods awaiting sale." The chief financial officer does not agree with this treatment. He thinks that the cost of the flock should be classified as property, plant, and equipment because the hens are used in the production of product—the eggs.

The focus of this case is the balance sheet presentation of the cost of the egg-producing flock. Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to reach a consensus on the appropriate presentation.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Communication Case 3–13 Obtain and compare annual reports from companies in the same industry  **LO3–4**,  **LO3–7**,  **LO3–8**

Real World Financials

Insight concerning the performance and financial condition of a company often comes from evaluating its financial data in comparison with other firms in the same industry.

Required:

Obtain annual reports from three corporations in the same primary industry. Using techniques you learned in this chapter and any analysis you consider useful, respond to the following questions:

1. Are there differences in accounting methods that should be taken into account when

making comparisons?

2. How do earnings trends compare in terms of both the direction and stability of income?
3. Which of the three firms had the greatest earnings relative to resources available?
4. Which corporation has made most effective use of financial leverage?
5. Of the three firms, which seems riskiest in terms of its ability to pay short-term obligations? Long-term obligations?

Note: You can obtain copies of annual reports from friends who are shareholders, from the investor relations department of the corporations, from a friendly stockbroker, or from EDGAR (Electronic Data Gathering, Analysis, and Retrieval) on the Internet (www.sec.gov).

Ethics Case 3–14 Segment reporting Appendix 3

You are in your third year as an accountant with McCarver-Lynn Industries, a multidivisional company involved in the manufacturing, marketing, and sales of surgical prosthetic devices. After the fiscal year-end, you are working with the controller of the firm to prepare geographic area disclosures. Yesterday you presented her with the following summary information:

| | (\$ in millions) | | | | | |
|------------------|------------------|-------|-------|--------|----------------|---------|
| | Domestic | Libya | Egypt | France | Cayman Islands | Total |
| Revenues | \$ 845 | \$222 | \$265 | \$343 | \$2,311 | \$3,986 |
| Operating income | 145 | 76 | 88 | 21 | 642 | 972 |
| Assets | 1,005 | 301 | 290 | 38 | 285 | 1,919 |

Upon returning to your office after lunch, you find the following memo:

Page 163

Nice work. Let's combine the data this way:

| | (\$ in millions) | | | |
|----------------------|------------------|--------|--------------------------|---------|
| | Domestic | Africa | Europe and Other Foreign | Total |
| Revenues | \$ 845 | \$487 | \$2,654 | \$3,986 |
| Capital expenditures | 145 | 164 | 663 | 972 |
| Assets | 1,005 | 591 | 323 | 1,919 |

Continuing Cases

Target Case LO3-2, LO3-3, LO3-8

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Required:

1. By what name does Target label its balance sheet?
2. What amounts did Target report for the following items on February 1, 2020? (a) Current assets, (b) Long-term assets, (c) Total assets, (d) Current liabilities, (e) Long-term liabilities, (f) Total liabilities, and (g) Total shareholders' equity
3. What was Target's largest current asset? What was its largest current liability?
4. Compute Target's current ratio and debt to equity ratio in 2020?
5. Assuming Target's industry had an average current ratio of 1.0 and an average debt to equity ratio of 2.5, comment on Target's liquidity and long-term solvency.

Air France–KLM Case LO3-9

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are provided in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

IFRS

Required:

1. Describe the similarities and differences in the order of presentation of the components of the balance sheet AF and a typical balance sheet prepared in accordance with U.S. GAAP.
2. What amounts did AF report for the following items on December 31, 2019? (a) Current assets, (b) Longterm assets, (c) Total assets, (d) Current liabilities, (e) Long-term

liabilities, (f) Total liabilities, and (g) Total shareholders' equity

3. What was AF's largest current asset? What is the largest current liability other than "Other current liabilities?"
4. Compute AF's current ratio and debt to equity ratio in 2019?
5. Assuming AF's industry had an average current ratio of 1.0 and an average debt to equity ratio of 2.5, comment on AF's liquidity and long-term solvency.

CHAPTER 4

The Income Statement, Comprehensive Income, and the Statement of Cash Flows

OVERVIEW

This chapter has three purposes: (1) to consider important issues dealing with the content, presentation, and disclosure of net income and other components of comprehensive income; (2) to provide an *overview* of the statement of cash flows, which is covered in depth in [Chapter 21](#); and (3) to examine common ratios used in profitability analysis.

The income statement summarizes the profit-generating activities that occurred during a particular reporting period. Comprehensive income includes net income as well as other gains and losses that are not part of net income.

The statement of cash flows provides information about the cash receipts and cash disbursements of an enterprise's operating, investing, and financing activities that occurred during the period.

Profitability ratios measure how well a company manages its operations and utilizes resources to generate a profit. Profitability is a key metric in understanding the company's ability to generate cash in the future.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO4-1** Discuss the importance of income from continuing operations and describe its components. (p. 166)
-  **LO4-2** Describe earnings quality and how it is impacted by management practices to alter reported earnings. (p. 171)
-  **LO4-3** Discuss the components of operating and nonoperating income and their relationship to earnings quality. (p. 171)

-  **LO4-4** Define what constitutes discontinued operations and describe the appropriate income statement presentation for these transactions. (p. 174)
-  **LO4-5** Discuss additional reporting issues related to accounting changes, error corrections, and earnings per share (EPS). (p. 179)
-  **LO4-6** Explain the difference between net income and comprehensive income and how we report components of the difference. (p. 183)
-  **LO4-7** Describe the purpose of the statement of cash flows. (p. 188)
-  **LO4-8** Identify and describe the various classifications of cash flows presented in a statement of cash flows. (p. 188)
-  **LO4-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to the income statement, statement of comprehensive income, and statement of cash flows. (pp. 170, 186, 193, and 205)
-  **LO4-10** Identify and calculate the common ratios used to assess profitability. (p. 196)

FINANCIAL REPORTING CASE

Eric Audras/Onoky/SuperStock

Campbell Soup Company

Your friend, Bianca Mendes, just received a generous gift from a grandparent. Accompanying a warm letter were 200 shares of stock of **Campbell Soup Company**, along

with the most recent annual financial statements of the company. Bianca knows that you are an accounting major and pleads with you to explain some items in the company's income statement. "I remember studying the income statement in my introductory accounting course," Bianca says "but I am still confused. What is this item *discontinued operations*? I also read in the annual report the company has *restructuring costs*? These don't sound good. Are they something I should worry about? We studied earnings per share briefly, but what does *earnings per share—assuming dilution* mean?" You agree to try to help.

CAMPBELL SOUP COMPANY
Consolidated Statements of Earnings

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How would you explain restructuring costs to Bianca? Are restructuring costs something Bianca should worry about?
2. Explain to Bianca what is meant by discontinued operations and describe how that item is reported in an income statement.
3. Describe to Bianca the difference between basic and diluted earnings per share.

 **Chapter 1** discussed the critical role of financial accounting information in allocating resources within our economy. Ideally, resources should be allocated to private enterprises that will (1) provide the goods and services our society desires and (2) at the same time provide a fair rate of return to those who supply the resources. A company will be able to achieve these goals only if it can generate enough cash to stay in business. A company's ability to generate cash relates to its ability to sell products and services for amounts greater than the costs of providing those products and services (that is, generate a profit).

Two financial statements that are critical for understanding the company's ability to earn profits and generate cash in the future are as follows:

1. **Income statement** (also called *statement of operations* or *statement of earnings*).
2. **Statement of cash flows**.

The **income statement** reports a company's profit during a particular reporting period. Profit equals revenues and gains minus expenses and losses. A few types of gains and losses are excluded from the income statement but are included in the broader concept of **comprehensive income**. We refer to these other gains and losses as **other comprehensive income (OCI)**.

The **statement of cash flows** provides information about the cash receipts and cash payments of a company during a particular reporting period. The difference between cash receipts and cash payments represents the change in cash for the period. To help investors and creditors better understand the sources and uses of cash during the period, the statement of cash flows distinguishes among operating, investing, and financing activities.

PART A

The Income Statement and Comprehensive Income

Before we discuss the specific components of an income statement in much depth, let's take a quick look at the general makeup of the statement.  **Illustration 4-1** offers an income statement for Mid-Atlantic Manufacturing that you can refer to as we proceed through the chapter. At this point, our objective is only to gain a general perspective on the items reported and classifications contained in corporate income statements. In addition, each income statement should include in the heading the name of the company, the title of the statement, and the date or time period. Mid-Atlantic's income statement is for the year ended December 31. This means that amounts in the income statement are the result of transactions from January 1 to December 31 of that year. In reality, many companies have reporting periods (often referred to as *fiscal years*) that end in months other than December.  **Illustration 4-1** shows comparative income statements for two consecutive years.

ILLUSTRATION 4-1 Income Statement

| | | Mid-Atlantic Manufacturing Income Statement | |
|---|---|--|-----------|
| | | (\$ in millions, except per share data) | |
| | | Year Ended December 31 | |
| | | 2024 | 2023 |
| Income from Continuing Operations | Sales revenue | \$1,450.6 | \$1,380.0 |
| | Cost of goods sold | 832.6 | 800.4 |
| | Gross profit | 618.0 | 579.6 |
| | Operating expenses: | | |
| | Selling expense | 123.5 | 110.5 |
| | General and administrative expense | 147.8 | 139.1 |
| | Research and development expense | 55.0 | 65.0 |
| | Restructuring costs | 125.0 | — |
| | Total operating expenses | 451.3 | 314.6 |
| | Operating income | 166.7 | 265.0 |
| | Other income (expense): | | |
| | Interest revenue | 12.4 | 11.1 |
| | Interest expense | (25.9) | (24.8) |
| Gain on sale of investments | 18.0 | 19.0 | |
| Income from continuing operations before income taxes | 171.2 | 270.3 | |
| Income tax expense | 59.9 | 94.6 | |
| Income from continuing operations | 111.3 | 175.7 | |
| Discontinued Operations | Discontinued operations: | | |
| | Loss from operations of discontinued component (including gain on disposal in 2024 of \$47) | (7.6) | (45.7) |
| | Income tax benefit | 2.0 | 13.0 |
| | Loss on discontinued operations | (5.6) | (32.7) |
| Net income | \$ 105.7 | \$ 143.0 | |
| Earnings per Share | Earnings per common share—basic: | | |
| | Income from continuing operations | \$ 2.14 | \$ 3.38 |
| | Discontinued operations | (0.11) | (0.63) |
| | Net income | \$ 2.03 | \$ 2.75 |
| | Earnings per common share—diluted: | | |
| | Income from continuing operations | \$ 2.06 | \$ 3.25 |
| Discontinued operations | (0.10) | (0.61) | |
| Net income | \$ 1.96 | \$ 2.64 | |

Let's first look closer at the components of net income. At the end of Part A, we'll see how net income fits within the concept of comprehensive income and how comprehensive income is reported.

Income from Continuing Operations

Revenues, Expenses, Gains, and Losses

LO4–1 Discuss the importance of income from continuing operations and describe its components.

Unlike the balance sheet, which is a position statement *at a point in time*, the income statement measures activity *over a period of time*. The income statement reports the revenues, expenses, gains, and losses that have occurred during the reporting period. For example, if a company reports revenues of \$100 million in its income statement for the year ended December 31, 2024, this means that the company had revenue transactions from January 1, 2024, to December 31, 2024, equal to \$100 million.

Revenues are inflows of resources resulting from providing goods or services to customers. For merchandising companies like **Walmart**, the main source of revenue is sales revenue derived from selling merchandise. Service companies such as **FedEx** and **State Farm Insurance** generate revenue by providing services.

Expenses are outflows of resources incurred while generating revenue. They represent the costs of providing goods and services. When recognizing expenses, we attempt to establish a causal relationship between revenues and expenses. If causality can be determined, expenses are reported in the same period that the related revenue is recognized. If a causal relationship cannot be established, we relate the expense to a particular period, allocate it over several periods, or expense it as incurred.

Gains and **losses** are increases or decreases in equity from transactions not classified as revenues or expenses and not involving owners. In general, these gains and losses do not reflect normal operating activities of the company, but they nevertheless represent transactions that affect a company's financial position. For example, gains and losses can arise when a company sells investments or property, plant, and equipment for an amount that differs from their recorded amount. Losses can occur on inventory due to obsolescence, on assets for impaired values, and on litigation claims. We will discuss many types of gains and losses throughout this book.

Income from continuing operations includes revenues, expenses (including income taxes), gains, and losses arising from operations that are more likely to continue. In contrast, income from *discontinued operations* will not continue into the future.¹ The distinction between the two sources of income helps investors and creditors assess which components of net income are likely to continue into the future.

Income from continuing operations includes the revenues, expenses, gains and losses from operations that are more likely to continue into the future.

The three major components of income from continuing operations include the following:

Page 168

1. Operating income
2. Nonoperating income
3. Income tax expense

Operating Income versus Nonoperating Income

Operating income includes revenues, expenses, gains, and losses directly related to the *primary revenue-generating activities* of the company. For a manufacturing company, operating income includes sales revenue from selling the products it manufactures minus cost of goods sold and operating expenses related to its primary activities.² Operating income is often presented as gross profit (sales revenue minus cost of goods sold) minus operating expenses. For a service company, operating income would include service revenue minus operating expenses (and no cost of goods sold).

Nonoperating income includes revenues, expenses, gains, and losses not related to primary activities of the company. For example, a manufacturer would include interest revenue, gains and losses from selling investments, and interest expense in nonoperating income. These items are not directly related to the primary revenue-generating activities of a manufacturing company. On the other hand, a financial institution like a bank would consider those items to be a part of operating income because they relate to the primary revenue-generating activities for that type of business.

Income Tax Expense

Like individuals, corporations are income-tax-paying entities.³ Because of the importance and size of income tax expense (sometimes called *provision for income taxes*), it always is reported in a separate line in corporate income statements. In addition, as we'll discuss in more detail later in this chapter, companies are required to report income tax expense associated with operations that are *continuing* separately from income tax expense associated with operations that are being *discontinued*. Separately reporting income tax expense in this way is known as *intraproduct tax allocation*.

Income tax expense is reported in a separate line in the income statement.

 **Illustration 4-2** presents the income statement for **The Home Depot, Inc.**, a retail company specializing in home improvement products. Notice that Home Depot distinguishes between operating income, nonoperating income, and income tax expense. Operating income includes revenues and expenses from primary business activities related to merchandise sales. After operating income is determined, nonoperating items are added or subtracted. For a retail company like Home Depot, activities related to interest and investments are not primary operations and, therefore, are listed as nonoperating items. Finally, income tax expense is subtracted to arrive at net income.

Income Statement Formats

No specific standards dictate how income from continuing operations must be displayed, so companies have considerable latitude in how they present the components of income from continuing operations. This flexibility has resulted in a variety of income statement presentations. However, we can identify two general approaches, the single-step and the multiple-step formats, that might be considered the two extremes, with the income statements of most companies falling somewhere in between.

The **single-step** format first lists all the revenues and gains included in income from continuing operations. Then, expenses and losses are grouped, subtotaled, and subtracted—in a single step—from revenues and gains to derive income from continuing operations. In a departure from that, though, companies usually report income tax expense in a separate line in the statement. In a single-step income statement, operating and nonoperating items are not separately classified.  **Illustration 4-3** shows an example of a single-step income statement for a hypothetical manufacturing company, Motor Gear Corporation.

Page 169

A single-step income statement format groups all revenues and gains together and all expenses and losses together.

ILLUSTRATION 4-3 Single-Step Income Statement

| MOTOR GEAR CORPORATION | |
|---|---------------|
| Income Statement | |
| For the Year Ended December 31, 2024 | |
| Revenues and gains: | |
| Sales revenue | \$573,522 |
| Interest revenue | 5,500 |
| Gain on sale of investments | <u>26,400</u> |

MOTOR GEAR CORPORATION
Income Statement
For the Year Ended December 31, 2024

| | | |
|------------------------------------|---------|-----------|
| Total revenues and gains | | \$605,422 |
| Expenses and losses: | | |
| Cost of goods sold | 302,371 | |
| Selling expense | 47,341 | |
| General and administrative expense | 24,888 | |
| Research and development expense | 16,300 | |
| Interest expense | 14,522 | |
| Total expenses and losses | | 405,422 |
| Income before income taxes | | 200,000 |
| Income tax expense | | 50,000 |
| Net income | | \$150,000 |

The **multiple-step** format reports a series of intermediate subtotals such as gross profit, operating income, and income before taxes. Most real-world income statements are in this format.

 **Illustration 4-4** presents a multiple-step income statement for the Motor Gear Corporation.

A multiple-step income statement format includes a number of intermediate subtotals before arriving at income from continuing operations.

ILLUSTRATION 4-4 Multiple-Step Income Statement

MOTOR GEAR CORPORATION
Income Statement
For the Year Ended December 31, 2024

| | | |
|---------------------|---------|-----------|
| Sales revenue | | \$573,522 |
| Cost of goods sold | 302,371 | 302,371 |
| Gross profit | | 271,151 |
| Operating expenses: | | |

MOTOR GEAR CORPORATION
Income Statement
For the Year Ended December 31, 2024

| | | |
|------------------------------------|-----------------|-------------------------|
| Selling expense | \$47,341 | |
| General and administrative expense | 24,888 | |
| Research and development expense | <u>16,300</u> | |
| Total operating expenses | | <u>88,529</u> |
| Operating income | | 182,622 |
| Other income (expense): | | |
| Interest revenue | 5,500 | |
| Gain on sale of investments | 26,400 | |
| Interest expense | <u>(14,522)</u> | |
| Total other income, net | | <u>17,378</u> |
| Income before income taxes | | 200,000 |
| Income tax expense | | <u>50,000</u> |
| Net income | | <u>\$150,000</u> |

A primary advantage of the multiple-step format is that, by separately classifying operating and nonoperating items, it provides information that might be useful in analyzing trends. Similarly, the classification of expenses by function also provides useful information. For example, reporting *gross profit* for merchandising companies highlights the important relationship between sales revenue and cost of goods sold. *Operating income* provides a measure of profitability for core (or normal) operations, a key performance measure for predicting the future profit-generating ability of the company. *Income before taxes* could be useful for comparing the performance of companies in different tax jurisdictions or comparing corporations (tax-paying entities) with sole proprietorships or partnerships (typically non-tax-paying entities).

It is important to note that the difference between the single-step and multiple-step income statement is one of presentation. The bottom line, *net income*, is the same regardless of the format used. Most companies use the multiple-step format. We use the multiple-step format for illustration purposes throughout the remainder of this chapter.

LO4–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the income statement, statement of comprehensive income, and statement of cash flows.

International Financial Reporting Standards

Income Statement Presentation. There are more similarities than differences between income statements prepared according to U.S. GAAP and those prepared applying international standards. Some of the differences are as follows:

- International standards require certain minimum information to be reported on the face of the income statement. U.S. GAAP has no minimum requirements.
- International standards allow expenses to be classified either by function (e.g., cost of goods sold, general and administrative, etc.), or by natural description (e.g., salaries, rent, etc.). SEC regulations require that expenses be classified by function.
- In the United States, the “bottom line” of the income statement usually is called either *net income* or *net loss*. The descriptive term for the bottom line of the income statement prepared according to international standards is either *profit* or *loss*.

Earnings Quality

LO4–2 Describe earnings quality and how it is impacted by management practices to alter reported earnings.

Investors, creditors, and financial analysts are concerned with more than just the bottom line of the income statement—net income. The presentation of the components of net income and the related supplemental disclosures provide clues to the user of the statement in an assessment of *earnings quality*. Earnings quality is used as a framework for more in-depth discussions of operating and nonoperating income.

One meaning of **earnings quality** is the ability of reported earnings (income) to predict a company's future earnings. The relevance of any historical-based financial statement hinges on its predictive value. To enhance predictive value, analysts try to separate a company's *temporary earnings* from its *permanent earnings*. Temporary earnings arise from transactions or events that are not likely to occur again in the foreseeable future or that are likely to have a different impact on earnings in the future. In contrast, permanent earnings arise from operations that are expected to generate similar profits in the future. Analysts begin their assessment of permanent earnings with income before discontinued operations, that is, income from continuing operations. Later in the chapter, we address discontinued operations that, because of their nature, are required to be reported separately at the bottom of the income statement.

Earnings quality refers to the ability of reported earnings (income) to predict a company's future earnings.

It would be a mistake, though, to assume that all items included in income from continuing operations reflect permanent earnings. Some income items that fall under this category may be temporary. In a sense, the label *continuing* may be misleading.

Income Smoothing and Classification Shifting

An often-debated contention is that, within the rules allowed by GAAP, managers have the power to change reported income by altering assumptions and estimates. And these alternatives are not always in the direction of higher income. Survey evidence suggests that

managers often alter income upwards in one year but downward in other years.⁴ For example, in a year when income is high, managers may create reserves by overestimating certain expenses (such as future bad debts or warranties). These reserves reduce reported income in the current year. Then, in later years, they can use those reserves by underestimating expenses, which will increase reported income. By shifting income in this manner, managers effectively smooth the pattern in reported income over time, portraying a steadier income stream to investors, creditors, and other financial statement users.⁵

Management's *income smoothing* behavior is controversial. While some believe that a smoother income pattern helps investors and creditors to better predict future performance, others believe that managers are doing this to hide the true risk (volatility) of operations. By hiding this underlying volatility through manipulation of the income pattern over time, managers may be "fooling" investors and creditors into believing that the company's operations are lower-risk than they really are.

Income smoothing may help investors to predict future performance but it could also hide underlying risk.

Another way that managers affect reported income is through *classification shifting* in the income statement.⁶ The most common example of this

involves misclassifying operating expenses as nonoperating expenses. By shifting operating expenses to a nonoperating expense classification (often referred to as "special charges" or "special items"), managers report fewer operating expenses and, therefore higher, operating income. This type of manipulation creates the appearance of stronger performance for core operations. While bottom-line net income remains unaffected, investors and creditors may believe the core business is stronger than it really is.

Classification shifting inflates core performance.

Operating Income and Earnings Quality

LO4–3 Discuss the components of operating and nonoperating income and their relationship to earnings quality.

Should all items of revenue and expense included in operating income be considered indicative of a company's permanent earnings? No, not necessarily. Sometimes a company will have an unusual or infrequent event. Even though these events may be unlikely to occur

again in the near future, we report them as part of operating income because they are so closely related to the company's core business.

What kind of items might be included in this category? Look closely at the partial income statements in  **Illustration 4-5** of **Estée Lauder Companies**, one of the world's leading manufacturers and marketers of quality skin care, makeup, fragrance, and hair care products. Which items appear unusual? Certainly not net sales, cost of sales, or selling, general and administrative expenses. But what about? *Restructuring and other charges, Goodwill impairment, and Impairments of other intangible and long-lived assets?*

ILLUSTRATION 4-5 Partial Income Statement—Estée Lauder Companies

Real World Financials

| (In millions, except per share data) | Year Ended June 30 | |
|---|--------------------|---------------|
| | 2020 | 2019 |
| Net sales | \$14,294 | \$14,863 |
| Cost of sales | 3,552 | 3,387 |
| Gross profit | <u>10,742</u> | <u>11,476</u> |
| Operating expenses | | |
| Selling, general, and administrative | 8,637 | 8,857 |
| Restructuring and other charges | 73 | 216 |
| Goodwill impairment | 812 | 68 |
| Impairments of other intangible and long-lived assets | 614 | 22 |
| Total operating expenses | <u>10,136</u> | <u>9,163</u> |
| Operating income | <u>606</u> | <u>2,313</u> |

RESTRUCTURING COSTS

It's not unusual for a company to reorganize its operations to attain greater efficiency. When this happens, the company often incurs significant **restructuring costs** (sometimes referred to as *reorganization costs* or *realignment costs*). Restructuring costs are

Restructuring costs include costs associated with shutdown or relocation of facilities or downsizing of operations.

associated with management's plans to materially change the scope of business operations or the manner in which they are conducted.⁷ For example, facility closings and related employee layoffs translate into costs incurred for severance pay and relocation costs. **Estée Lauder** had restructuring costs related to its shift to more online operations and realignment of its distribution network reflecting freestanding store and certain department store closures.

Restructuring costs are recognized in the period the exit or disposal cost obligation actually is incurred. Suppose, as part of a restructuring plan, employees to be terminated are offered various benefits but only if they complete a certain period of work for the company. In that case, a liability for termination benefits, and corresponding expense, should be accrued in the required period(s) of work. On the other hand, if future work by the employee is not required to receive the termination benefits, the liability and corresponding expense for benefits are recognized at the time the company communicates the arrangement to employees. Similarly, costs associated with closing facilities and relocating employees are recognized when goods or services associated with those activities are received.

GAAP requires that restructuring costs be recognized only in the period incurred.

Because it usually takes considerable time to sell or terminate a line of business or to close a location or facility, many restructuring costs represent long-term liabilities. GAAP requires initial measurement of these liabilities to be at fair value, which often is determined as the present value of future estimated cash outflows. Companies also are required to provide many disclosures in the notes, including the years over which the restructuring is expected to take place.

Now that we understand the nature of restructuring costs, we can address the important question: Should financial statement users attempting to forecast future earnings consider these costs to be part of a company's

Should restructuring costs be considered part of a company's permanent earnings stream?

permanent earnings stream, or are they unlikely to occur again? There is no easy answer. For example, Estée Lauder has some amount of restructuring costs nearly every year. A recent survey reports that of the 500 companies surveyed, 40% included restructuring costs in their income statements.⁸ The inference: A financial statement user must interpret restructuring charges in light of a company's past history and financial statement note disclosures that outline the plan and the period over which it will take place. In general, the more frequently

these sorts of unusual charges occur, the more appropriate it is that financial statement users include them in their estimation of the company's permanent earnings stream.

OTHER UNUSUAL ITEMS

Estée Lauder's financial statements also include impairments for goodwill and other assets. Any long-lived asset, whether tangible or intangible, should have its balance reduced if there has been a significant impairment of value. We explore property, plant, and equipment and intangible assets in [Chapters 10](#) and [11](#). After discussing this topic in more depth in those chapters, we revisit the concept of earnings quality as it relates to asset impairment.

These aren't the only components of operating expenses that call into question this issue of earnings quality. For example, in [Chapter 9](#) we discuss the write-down of inventory that can occur with obsolete or damaged inventory. Other possibilities include losses from natural disasters such as earthquakes and floods and gains and losses from litigation settlements. Earnings quality also is influenced by the way a company records income from investments ([Chapter 12](#)) and accounts for its pension plans ([Chapter 17](#)).

Unusual items included in operating income require investigation to determine their permanent or temporary nature.

Earnings quality is affected by revenue issues as well. As an example, suppose that toward the end of its fiscal year, a company loses a major customer that can't be replaced. That would mean the current year's revenue number includes a component that will not occur again next year. Of course, in addition to its effect on revenues, losing the customer would have implications for certain related expenses and net income.

Nonoperating Income and Earnings Quality

Most of the components of earnings in an income statement relate directly to the ordinary, continuing operations of the company. Some, though, such as interest or the gains and losses on the sale of investments, relate only tangentially to normal operations. We refer to these as nonoperating items. How should these items be interpreted in terms of their relationship to future earnings? Are these expenses likely to occur again next year? Investors need to understand that some of these items may recur, such as interest expense, while others are less likely to recur, such as gains and losses on investments.

Gains and losses from the sale of investments typically relate only tangentially to normal operations.

Home Depot's partial income statement is shown in [Illustration 4-6](#). There are two nonoperating amounts reported after operating income. The first one is “Interest and investment income” that primarily includes gains on the sale of investments in another company’s stock. Because Home Depot’s primary business includes selling home improvement products, sales of investments are not considered normal operations. Therefore, Home Depot reports these amounts as nonoperating items.

ILLUSTRATION 4-6 Income Statements (in part)—The Home Depot, Inc.

Real World Financials

| Income Statements (in part) (\$ in millions) | Year Ended | |
|---|------------------|------------------|
| | February 2, 2020 | February 3, 2019 |
| Operating income | \$15,843 | \$15,530 |
| Interest and investment income | 73 | 93 |
| Interest expense | (1,201) | (1,051) |
| Other | — | (16) |
| Income before taxes | <u>\$14,715</u> | <u>\$14,556</u> |

Source: Home Depot, Inc.

Another large nonoperating item reported by most companies is interest expense. In its 2020 report, Home Depot reported \$1,201 million in interest expense. The company also reported long-term debt of approximately \$35 billion in the balance sheet. Because this long-term debt will not be repaid for several years, the company will have to pay interest for several years. Therefore, interest expense represents a type of nonoperating item that is expected by investors to be a more permanent component of future profitability.

Non-GAAP Earnings

Companies are required to report earnings based on generally accepted accounting principles (GAAP). This number includes *all revenues and expenses*. Most

Many companies voluntarily provide *non-GAAP earnings*—

companies, however, also voluntarily provide **non-GAAP earnings** when they announce annual or quarterly

earnings. Non-GAAP earnings *exclude certain expenses*

and sometimes certain revenues. Common expenses excluded are restructuring costs, acquisition costs, write-downs of impaired assets, and stock-based compensation.

Supposedly, non-GAAP earnings are management's view of "permanent earnings," in the sense of being a better long-run measure of its company's performance.

management's assessment of permanent earnings.

Nearly all major companies report non-GAAP earnings. For example, in 2020 **Nvidia** reported GAAP net income of \$2.8 billion and non-GAAP net income of \$3.6 billion. The difference is related to the exclusion of certain stock-based compensation costs, litigation settlement costs, and acquisition costs in calculating non-GAAP net income.

Non-GAAP earnings are controversial because determining which expenses to exclude is at the discretion of management. By removing certain

expenses from reported GAAP earnings, management has the potential to report misleadingly higher profits. The issue is: Do non-GAAP earnings represent management's true belief of core, long-term performance (so excluding certain temporary expenses is helpful to investors), or do non-GAAP earnings represent management's attempt to mislead investors into believing the company is more profitable than it actually is (and therefore harming investors)? Many are concerned that the latter is more likely.

Non-GAAP earnings are controversial.

The Sarbanes-Oxley Act addressed non-GAAP earnings in its Section 401. One of the act's important provisions requires that if non-GAAP earnings are included in any periodic or other report filed with the SEC or in any public disclosure or press release, the

company also must provide a reconciliation with earnings determined according to GAAP.⁹

The SEC continuously updates Compliance & Disclosure Interpretations of non-GAAP measures to provide guidance to preparers and prevent investors from being misled.¹⁰

The Sarbanes-Oxley Act requires reconciliation between non-GAAP earnings and earnings determined according to GAAP.

Discontinued Operations

LO4–4 Define what constitutes discontinued operations and describe the appropriate income statement presentation for these transactions.

Companies sometimes decide to sell or dispose of a component of their business. The operations of that business component are known as **discontinued operations**. For example, **Campbell Soup Company** decided to sell a significant portion of its international operations. Obviously, profits from these discontinued operations *will not continue*. Because discontinued operations represent a material¹¹ component of the company, the results from discontinued operations are reported separately in the income statement to allow financial statement users to more clearly understand results from continuing operations.

For example, suppose a company has total pretax profits for the year of \$1,200. The company plans to continue these operations next year. Assuming a 25% tax rate, the company would have tax expense of \$300 and report net income of \$900.

| | |
|----------------------------|---------------|
| Income before income taxes | \$1,200 |
| Income tax expense (25%) | 300 |
| Net income | <u>\$ 900</u> |

Now assume \$200 of the profits come from operations that are discontinued by the end of the year, and the other \$1,000 come from operations that will continue. The presentation of discontinued operations is mandated as follows:¹²

Page 175

| | |
|--|---------------|
| Income from continuing operations before income taxes | \$1,000 |
| Income tax expense (25%) | <u>250</u> |
| Income from continuing operations | 750 |
| Income from discontinued operations (\$200 net of \$50 tax expense) | 150 |
| Net income | <u>\$ 900</u> |

The objective of this format is to inform financial statements users of which components of net income are continuing. We do this by separately reporting income from continuing

operations (\$750) and income from discontinued operations (\$150). All else the same, investors should not expect next year's net income to be \$900, because only \$750 of profits from this year are part of continuing operations.

Separate reporting includes taxes as well. The income tax expense associated with continuing operations is reported separately from the income tax of

Income from discontinued operations (and its tax effect) are reported separately.

discontinued operations. Also, in the case that there is a loss from discontinued operations, there would be an *income tax benefit* (instead of income tax expense); losses from discontinued operations are tax deductible and would reduce overall taxes owed, thereby providing a benefit. The process of associating income tax effects with the income statement components that create those effects is referred to as *intra-period tax allocation*, something we discuss in depth in [Chapter 16](#).

What Constitutes a Discontinued Operation?

Discontinued operations are reported when

1. A *component of an entity* or group of components has been sold or disposed of, or is considered held for sale,
2. If the disposal represents a *strategic shift* that has, or will have, a major effect on a company's operations and financial results.¹³

For the first item, a *component of an entity* includes activities and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the company. A component could include an operating segment, a reporting unit, a subsidiary, or an asset group.¹⁴

For the second item, whether the disposal represents a *strategic shift* requires the judgment of company management. Examples of possible strategic shifts include the disposal of operations in a major geographical area, a major line of business, a major equity method investment,¹⁵ or other major parts of the company.

As part of the continuing process to converge U.S. GAAP and international standards, the FASB and IASB have developed a common definition and a common set of disclosures for discontinued operations.¹⁶

Reporting Discontinued Operations

By definition, the income or loss stream from a discontinued operation will no longer continue. A financial statement user is more interested in the results of a company's operations that will continue. It is informative, then, for companies to separate the effects of the discontinued operations from the results of operations that will continue. For this reason, the revenues, expenses, gains, losses, and income tax related to a *discontinued* operation must be removed from *continuing* operations and reported separately *for all years presented*.

For example, even though Campbell Soup did not discontinue certain international operations until fiscal year 2020, it's important for comparative purposes to separate the effects for any prior years presented. This allows an apples-to-apples comparison of income from *continuing* operations. So, in its 2020 three-year comparative income statements, the 2019 and 2018 income statements reclassified income from the discontinued component to discontinued operations. In addition, there was a disclosure note to inform readers that prior years were reclassified.¹⁷

Page 176

Sometimes a discontinued component actually has been sold by the end of a reporting period. Often, though, the disposal transaction has not yet been completed as of the end of the reporting period. We consider these two possibilities next.

WHEN THE COMPONENT HAS BEEN SOLD

When the discontinued component is sold before the end of the reporting period, the reported income effects of a discontinued operation will include two elements.

1. Income or loss from operations (revenues, expenses, gains, and losses) of the component from the beginning of the reporting period *to the disposal date*.
2. Gain or loss on disposal of the component's assets.

If a component to be discontinued has not yet been sold, its income effects, including any impairment loss, usually still are reported separately as discontinued operations.

The first element would consist primarily of income from daily operations of this discontinued component of the company. This would include typical revenues from sales to customers and ordinary expenses such as cost of goods sold, salaries, rent, and insurance. The second element includes gains and losses on the sale of assets, such as selling a building or office equipment of this discontinued component.

These two elements can be combined or reported separately, net of their tax effects. If combined, the gain or loss component must be indicated. In our illustrations to follow, we combine the income effects. [Illustration 4-7](#) describes a situation in which the discontinued component is sold before the end of the reporting period.

ILLUSTRATION 4-7 Discontinued Operations Sold—Loss

In October 2024, management of Duluth Holding Company decided to sell one of its divisions that qualifies as a separate component according to generally accepted accounting principles. On December 18, 2024, **the division was sold**. Consider the following facts related to the division:

1. From January 1 through disposal, the division had a pretax loss from operations of \$5,000,000.
2. The assets of the division had a net selling price of \$15,000,000 and book value of \$12,000,000.

Duluth’s income statement for 2024, beginning with after-tax income from continuing operations of \$20,000,000, would be reported as follows (assuming a 25% tax rate):

| | | |
|---|----------------------------|---------------------|
| Income from continuing operations | | \$20,000,000 |
| Discontinued operations: | | |
| Loss from operations of discontinued component (including gain on disposal of \$3,000,000*) | \$(2,000,000) [†] | |
| Income tax benefit | 500,000 [‡] | |
| Loss on discontinued operations | | (1,500,000) |
| Net income | | \$18,500,000 |

*Net selling price of \$15 million less book value of \$12 million

[†]Loss from operations of \$5 million less gain on disposal of \$3 million

[‡]\$2,000,000 × 25%

Notice that an *income tax benefit* occurs because a *loss* reduces taxable income, saving the company \$500,000 in taxes.

On the other hand, suppose Duluth’s discontinued division had a pretax loss from operations of only \$1,000,000 (and still had a gain on disposal of \$3,000,000). In this case, the combined amount of \$2,000,000 represents *income* from operations of the discontinued component, and the company would have an additional *income tax expense* of \$500,000, as demonstrated below.

| | | |
|---|------------------------------|----------------------------|
| Income from continuing operations | | \$20,000,000 |
| Discontinued operations: | | |
| Income from operations of discontinued component (including gain on disposal of \$3,000,000*) | \$2,000,000 [†] | |
| Income tax expense | <u>(500,000)[‡]</u> | |
| Income on discontinued operations | | 1,500,000 |
| Net income | | <u><u>\$21,500,000</u></u> |

*Net selling price of \$15 million less book value of \$12 million

[†]Loss from operations of \$1 million plus gain on disposal of \$3 million

[‡]\$2,000,000 × 25%

Additional Consideration

For reporting discontinued operations in the income statement, some companies separate the income/loss from operations and the gain/loss on disposal. For example, in [Illustration 4–7](#), Duluth Holding Company could have reported the \$5,000,000 loss from operations separately from the \$3,000,000 gain on disposal, with each shown net of their tax effects (25%).

| | | |
|-----------------------------------|----------------------------------|--------------|
| Income from continuing operations | | \$20,000,000 |
| Discontinued operations: | | |
| Loss from operations (net | \$(3,750,000)[†] | |

| | | |
|---------------------------------|-----------------|------------------------------|
| | of tax benefit) | |
| Gain on disposal | | <u>2,250,000[‡]</u> |
| (net of tax expense) | | |
| Loss on discontinued operations | | (1,500,000) |
| Net income | | <u><u>\$18,500,000</u></u> |

[†]\$5,000,000 - (\$5,000,000 × 25%)

[‡]\$15,000,000 - \$12,000,000 = \$3,000,000; \$3,000,000 - (\$3,000,000 × 25%) = \$2,250,000

The amount of the loss on discontinued operations of **\$1,500,000** is the same with either presentation. In practice, most companies report on the face of the income statement a single net amount for discontinued operations, with a note disclosure providing details of the calculation.

| | |
|--|----------------------------|
| Income from continuing operations | \$20,000,000 |
| Loss on discontinued operations (net of tax) | (1,500,000) |
| Net income | <u><u>\$18,500,000</u></u> |

WHEN THE COMPONENT IS CONSIDERED HELD FOR SALE

What if a company has decided to discontinue a component but, when the reporting period ends, the component has not yet been sold? If the situation indicates that the component is likely to be sold within a year, the component is considered “held for sale.”¹⁸

In that case, the income effects of the discontinued operation still are reported, but the two components of the reported amount are modified as follows:

If a component to be discontinued has not yet been sold, its income effects, including any impairment loss, usually still are reported separately as discontinued operations.

1. Income or loss from operations (revenues, expenses, gains and losses) of the component from the beginning of the reporting period *to the end of the reporting period*.

- An impairment loss if the fair value of the assets of the component (minus cost to sell the assets) is less than the book value (sometimes called carrying value or carrying amount).

The two income elements can be combined or reported separately, net of their tax effects. In addition, if the amounts are combined and there is an impairment loss, the loss must be disclosed, either parenthetically on the face of the statement or in a disclosure note.

Consider the example in [Illustration 4-8](#).

ILLUSTRATION 4-8 Discontinued Operations Held for Sale—Impairment Loss

In October 2024, management of Duluth Holding Company decided to sell one of its divisions that qualifies as a separate component according to generally accepted accounting principles. On December 31, 2024, the end of the company's fiscal year, **the division had not yet been sold**. Consider the following facts related to the division:

- For the year, the division reported a pretax loss from operations of \$5,000,000.
- On December 31, assets of the division had a fair value, minus anticipated cost to sell, of \$9,000,000. The book value of the assets was \$12,000,000.

Duluth's income statement for 2024, beginning with after-tax income from continuing operations of \$20,000,000, would be reported as follows (assuming a 25% tax rate):

| | | |
|--|------------------------------|----------------------------|
| Income from continuing operations | | \$20,000,000 |
| Discontinued operations: | | |
| Loss from operations of discontinued component (including impairment loss of \$3,000,000*) | \$(8,000,000) [†] | |
| Income tax benefit | <u>2,000,000[‡]</u> | |
| Loss on discontinued operations | | (6,000,000) |
| Net income | | <u><u>\$14,000,000</u></u> |

*Fair value net of cost to sell of \$9 million less book value of \$12 million

†Loss from operations of \$5 million plus impairment loss of \$3 million

‡\$8,000,000 × 25%

Also, the net-of-tax income or loss from operations of the component being discontinued is reported separately from continuing operations for any prior year that is presented for comparison purposes along with the 2024 income statement. Then, in the year of actual disposal, the discontinued operations section of the income statement will include the final gain or loss on the sale of the discontinued segment's assets. The gain or loss is determined relative to the revised book values of the assets after the impairment write-down.

Important information about discontinued operations, whether sold or held for sale, is reported in a disclosure note. The note provides additional details about the discontinued component, including its identity, its major classes of assets and liabilities, the major revenues and expenses constituting pretax income or loss from operations, the reason for the discontinuance, and the expected manner of disposition if held for sale.¹⁹

In  **Illustration 4-8**, if the fair value of the division's assets minus cost to sell exceeded the book value of \$12,000,000, there is no impairment loss and the income effects of the discontinued operation would include only the loss from operations of \$5,000,000, less the income tax benefit.

The balance sheet is affected, too. The assets and liabilities of the component considered held for sale are reported at the lower of their book value or fair value minus cost to sell. And, because it's not in use, an asset classified as held for sale is no longer reported as part of property, plant, and equipment or intangible assets and is not depreciated or amortized.²⁰

For example, in 2019 Campbell Soup began the process of discontinuing operations, but these businesses were not sold by the end of the year. The related assets and liabilities were reported separately and included in a disclosure note, as shown in  **Illustration 4-9**. Information about the discontinued operations was included in the disclosure note shown in  **Illustration 4-9**.

INTERIM REPORTING

Remember that companies whose ownership shares are publicly traded in the United States must file quarterly reports with the Securities and Exchange Commission. If a component of an entity is considered held for sale at the end of a quarter, the income effects of the discontinued component must be separately reported in the quarterly income statement. These effects would include the income or loss from operations for the quarter as well as an impairment loss if the component's assets have a book value more than fair value minus cost to sell. If the assets are impaired and written down, any gain or loss on disposal in a subsequent quarter is determined relative to the new, written-down book value.

Accounting Changes

LO4–5 Discuss additional reporting issues related to accounting changes, error corrections, and earnings per share (EPS).

Accounting changes fall into one of three categories: (1) a change in an accounting principle, (2) a change in estimate, or (3) a change in reporting entity. The correction of an error is another adjustment that is accounted for in the same way as certain accounting changes. A brief overview of a change in accounting principle, a change in estimate, and correction of errors is provided here. We cover accounting changes, including changes in reporting entities, and accounting errors in detail in subsequent chapters, principally in  **Chapter 20**.

Change in Accounting Principle

A change in accounting principle refers to a change from one acceptable accounting method to another. There are many situations that allow alternative treatments for similar transactions. Common examples of these situations include the choice among FIFO, LIFO, and average cost for the measurement of inventory and among alternative revenue recognition methods. New accounting standard updates issued by the FASB also may require companies to change their accounting methods.

MANDATED CHANGES IN ACCOUNTING PRINCIPLES

Sometimes the FASB requires a change in accounting principle. These changes in accounting principles potentially hamper the ability of external users to compare financial information among reporting periods because information lacks consistency. The board considers factors such as this, as well as the cost and complexity of adopting new standards, and chooses among various approaches to require implementation by companies.

1. **Retrospective approach.** The new standard is applied to all periods presented in the financial statements. That is, we restate prior period financial statements as if the new accounting method had been used in those prior periods. We revise the balance of each

account affected to make those statements appear as if the newly adopted accounting method had been applied all along.

2. **Modified retrospective approach.** The new standard is applied to the adoption period only. Prior period financial statements are not restated. The cumulative effect of the change on prior periods' net income is shown as an adjustment to the beginning balance of retained earnings in the adoption period.
3. **Prospective approach.** This approach requires neither a modification of prior period financial statements nor an adjustment to account balances. Instead, the change is simply implemented in the current period and all future periods.

VOLUNTARY CHANGES IN ACCOUNTING PRINCIPLES

Occasionally, without being required by the FASB, a company will change from one generally accepted accounting principle to another. For example, a company may decide to change its inventory method from LIFO to FIFO. When this occurs, inventory and cost of goods sold are measured in one reporting period using LIFO, but then are measured using FIFO in a subsequent period. Inventory and cost of goods sold, and hence net income, for the two periods are not comparable. To improve comparability and consistency, GAAP typically requires that voluntary accounting changes be accounted for retrospectively.^{21,22}

We will see these aspects of accounting for the change in accounting principle demonstrated in  **Chapter 9** in the context of our discussion of inventory methods. We'll also discuss changes in accounting principles in depth in  **Chapter 20**.

Change in Accounting Estimate

Estimates are a necessary aspect of accounting. A few of the more common accounting estimates are the amount of future bad debts on existing accounts receivable, the useful life and residual value of a depreciable asset, and future warranty expenses.

A change in accounting estimate is reflected in the financial statements of the current period and future periods.

Because estimates require the prediction of future events, it's not unusual for them to turn out to be wrong. When an estimate is modified as new information comes to light, accounting for the change in estimate is quite straightforward. We do not revise prior years' financial statements to reflect the new estimate. Instead, we merely incorporate the new estimate in any related accounting determinations from that point on; that is, we account for

a change in accounting estimate prospectively.⁴⁵ If the effect of the change is material, a disclosure note is needed to describe the change and its effect on both net income and earnings per share.  **Chapters 11** and  **20** provide illustrations of changes in accounting estimates.

Change in Depreciation, Amortization, or Depletion Method

A change in depreciation, amortization, or depletion method is considered to be a change in accounting estimate that is achieved by a change in accounting principle. We account for this change prospectively, almost exactly as we would any other change in

estimate. One difference is that most changes in estimate don't require a company to justify the change. However, this change in estimate is a result of changing an accounting principle and therefore requires a clear justification as to why the new method is preferable.

 **Chapter 11** provides an illustration of a change in depreciation method.

Changes in depreciation, amortization, or depletion methods are accounted for the same way as a change in an accounting estimate.

Correction of Accounting Errors

Errors occur when transactions are either recorded incorrectly or not recorded at all. We briefly discuss the correction of errors here as an overview and in later chapters in the context of the effect of errors on specific chapter topics. In addition, [Chapter 20](#) provides comprehensive coverage of the correction of errors.

Accountants employ various control mechanisms to ensure that transactions are accounted for correctly. In spite of this, errors occur. When errors do occur, they can affect any one or several of the financial statement elements on any of the financial statements a company prepares. In fact, many kinds of errors simultaneously affect more than one financial statement. When errors are discovered, they should be corrected.

Most errors are discovered in the same year that they are made. These errors are simple to correct. The original erroneous journal entry is reversed, and the appropriate entry is recorded. If an error is discovered in a year subsequent to the year the error is made, the accounting treatment depends on whether or not the error is material with respect to its effect on the financial statements. In practice, the vast majority of errors are not material and are, therefore, simply corrected in the year discovered. However, material errors that are discovered in subsequent periods require a prior period adjustment.

Prior Period Adjustments

Assume that after its financial statements are published and distributed to shareholders, Roush Distribution Company discovers a material error in the statements. What does it do? Roush must make a **prior period adjustment**.²⁴ Roush would record a journal entry that adjusts any balance sheet accounts to their appropriate levels and would account for the income effects of the error by increasing or decreasing the beginning retained earnings balance in a statement of shareholders' equity. Remember, net income in prior periods was closed to retained earnings so, by adjusting retained earnings, the prior period adjustment accounts for the error's effect on prior periods' net income.

Simply reporting a corrected retained earnings amount might cause a misunderstanding for someone familiar with the previously reported amount. Explicitly reporting a prior period adjustment in the statement of shareholders' equity (or statement of retained earnings if that's presented instead) highlights the adjustment and avoids this confusion.

In addition to reporting the prior period adjustment to retained earnings, previous years' financial statements that are incorrect as a result of the error are retrospectively restated to reflect the correction. Also, a disclosure note communicates the impact of the error on prior periods' net income.

Earnings per Share

We've discussed that the income statement reports a company's net income for the period. Net income is reported in total dollars (total dollars of revenues minus total dollars of expenses) and represents the total profits that the company has generated for *all shareholders* during the period. However, for individual decision making, investors want to know how much profit has been generated for *each shareholder*. To know this, we calculate **earnings per share (EPS)** to relate the amount of net income a company generates to the number of common shares outstanding.

EPS provides a convenient way for investors to link the company's profitability to the value of an individual share of ownership. The ratio of stock price per share to earnings per share (the PE ratio) is one of the most widely used financial metrics in the investment world. EPS also makes it easier to compare the performance of the company over time or with other companies. Larger companies may naturally have larger dollar amounts of net income, but they do not always generate more profit for each shareholder.

U.S. GAAP requires that public companies report two specific calculations of EPS: (1) basic EPS and (2) diluted EPS. **Basic EPS** equals total net income (less any dividends to preferred shareholders) divided by the weighted-average number of common shares outstanding. Dividends to preferred shareholders are subtracted from net income in the numerator because those dividends are distributions of the company not available to common shareholders. The denominator is the weighted-average number of common shares outstanding, rather than the number of shares outstanding at the beginning or end of the period, because the goal is to relate performance for the period to the shares that were in place throughout that period. The number of common shares may change over the year from additional issuances or company buybacks, so a weighted average better reflects the number of shares outstanding for the period. The resulting EPS provides a measure of net income generated for each share of common stock during the period.

All corporations whose common stock is publicly traded must disclose EPS.

For example, suppose the Fetzer Corporation reported net income of \$600,000 for its fiscal year ended December 31, 2024. Preferred stock dividends of \$75,000 were declared during the year. Fetzer had 1,000,000 shares of common stock outstanding at the beginning of the

year and issued an additional 1,000,000 shares on March 31, 2024. Basic EPS of \$0.30 per share for 2024 is computed as follows:

$$\frac{\$600,000 - \$75,000}{1,000,000 + 1,000,000 \left(\frac{9}{12}\right)} = \frac{\$525,000}{1,750,000} = \$0.30$$

Shares New
at Jan. 1 shares

Diluted EPS incorporates the dilutive effect of all *potential* common shares in the calculation of EPS. Dilution refers to the reduction in EPS that occurs as the number of common shares outstanding increases. Companies may have certain securities outstanding that could be converted into common shares, or they could have stock options outstanding that create additional common shares if the options were exercised. Because these items could cause the number of shares in the denominator to increase, they potentially decrease EPS. We devote a substantial portion of [Chapter 19](#) to understanding these two measures of EPS. Here, we provide only an overview.

When the income statement includes discontinued operations, we report per-share amounts for both income (loss) from continuing operations and for net income (loss), as well as for the discontinued operations. We see this demonstrated for **Campbell Soup Company** in [Illustration 4-10](#).

Comprehensive Income

LO4–6 Explain the difference between net income and comprehensive income and how we report components of the difference.

Shareholders' equity represents the residual interest of owners (shareholders) in the assets of the company. This residual interest is affected by transactions between the company and its *owners* and by transactions between the company and *nonowners*.

1. **Transactions with owners** include events such as increasing equity by issuing stock to shareholders or decreasing equity by buying back stock from shareholders or paying dividends to shareholders.
2. **Transactions with nonowners** include events reported as revenues, expenses, gains, and losses. Revenues and gains increase equity, while expenses and losses decrease equity.

It is the second type, transactions with nonowners, that represents comprehensive income. We use the term **comprehensive income** to describe the total change in shareholders' equity due to nonowner transactions.

Comprehensive income is the total change in equity for a reporting period other than from transactions with owners.

Comprehensive income consists of two components. You already have been introduced to the first component—**net income**. Net income consists of *all* revenues and expenses and *most* gains and losses. These items are reported in the income statement. However, there are a *few* gains and losses from nonowner transactions that we don't report in the income statement; instead, we report these gains and losses separately as the second component of comprehensive income known as **other comprehensive income**. Together, net income and other comprehensive income embody comprehensive income.

$$\text{Net income} + \text{Other comprehensive income} = \text{Comprehensive income}$$

Statement of Comprehensive Income

Currently, the FASB has established no conceptual basis for determining which gains and losses are reported as part of other comprehensive income rather than net income. To help avoid confusion, companies are required to provide a reconciliation from net income to comprehensive income.²⁵ The reconciliation simply extends net income (reported in the income statement) to include other comprehensive income items as well, reported net of tax, with the total representing comprehensive income. A simple example is demonstrated in  **Illustration 4-11A**.

Illustration 4-11A Comprehensive Income

For the year ended December 31, 2024, Trosper Company reports net income of \$500,000, consisting of typical revenues and gains of \$2,000,000 minus expenses and losses of \$1,500,000. In addition, Trosper has three other transactions from nonowner sources (listed below) that result in gains and losses reported as part of other comprehensive income. Together, these gains and losses (net of tax) equal \$30,000. The company will report comprehensive income for 2024 of \$530,000.

Statement of Comprehensive Income
For the year ended December 31, 2024

| | | |
|---|--------------------|-------------------------|
| Revenues and gains | \$ 2,000,000 | |
| Expenses and losses | <u>(1,500,000)</u> | |
| Net income | | \$500,000 |
| <i>Other comprehensive income, net of tax:</i> | | |
| Gain on debt securities* | 100,000 | |
| Loss on projected benefit obligation [†] | (50,000) | |
| Loss on derivatives [‡] | <u>(20,000)</u> | |
| Other comprehensive income (OCI) | | 30,000 |
| Comprehensive income | | <u><u>\$530,000</u></u> |

*Changes in the fair value of investments in debt securities (described in  **Chapter 12**)

[†]Gain or loss due to revising assumptions of the employee pension plan (described in  **Chapter 17**).

[‡]When a derivative designated as a cash flow hedge is adjusted to fair value, the gain or loss is deferred as a component of comprehensive income and included in earnings later, at the same time

as earnings are affected by the hedged transaction (described in the Derivatives Appendix to the text).

FLEXIBILITY IN REPORTING.

The information in the income statement, as well as other comprehensive income, can be presented either (1) in a single, continuous statement of comprehensive income as shown in  **Illustration 4-11A** or (2) in two separate, but consecutive statements—an income

statement followed by a statement of comprehensive income. These two alternatives are compared in the Concept Review Exercise at the end of this section. Each component of other comprehensive income can be displayed net of tax, or alternatively, before tax with one amount shown for the aggregate income tax expense (or benefit).²⁶

Reporting comprehensive income can be accomplished with a single, continuous statement or in two separate, but consecutive statements.

Balance Sheet—Accumulated Other Comprehensive Income

All items in comprehensive income accumulate into the balance of total shareholders' equity, but the specific equity account in which this accumulation occurs depends on whether the item was reported as part of net income or as part of other comprehensive income.

- Items included in *net income* accumulate in the equity account **retained earnings**.
- Items of *other comprehensive income* accumulate in the equity account **accumulated other comprehensive income (AOCI)**.

Think of these as two parallel approaches—the way net income for the period adds to retained earnings is the same way OCI for the period adds to AOCI.

| | | Equity Account | |
|--|------------|-----------------------|-------------------|
| Comprehensive income for the period | Net Income | → | Retained Earnings |
| | + | | |
| | OCI | → | AOCI |

Let's continue the example we started in [Illustration 4-11A](#). [Illustration 4-11B](#) demonstrates how net income and other comprehensive income accumulate to their respective shareholders' equity accounts.

OCI adds to AOCI the same way net income adds to retained earnings

Illustration 4-11B Accumulation of Net Income and Other Comprehensive Income into Equity

Continuing the example in [Illustration 4-11A](#), Trosper Company prepares closing entries at the end of 2024. Items included in Trosper's net income are closed to retained earnings, while items included in other comprehensive income are closed to accumulated other comprehensive income.

| | | |
|--|-----------|----------------|
| Revenues and gains | 2,000,000 | |
| Expenses and losses | | 1,500,000 |
| Retained Earnings (equity account) | | 500,000 |
| (To close net income items to retained earnings) | | |
| Gain on debt securities | 100,000 | |
| Loss on projected benefit obligation | | 50,000 |
| Loss on derivatives | | 20,000 |
| Accumulated OCI (equity account) | | 30,000 |
| (To close OCI items to Accumulated OCI) | | |

Assume the balances of retained earnings and accumulated other comprehensive income at the end of 2023 (prior year) were \$2,000,000 and \$200,000, respectively. In 2024, these balances increase by the amount of net income (**\$500,000**) and other comprehensive income (**\$30,000**).

Balance Sheet
December 31, 2024

Retained Earnings

| | |
|-----------|------------|
| 2,000,000 | 12/31/2023 |
|-----------|------------|

| | 2024 | 2023 (prior year) | 500,000 | NI for 2024 |
|--|------------|----------------------|------------------------|-------------|
| | | | 2,500,000 | 12/31/2024 |
| Assets | 10,530,000 | 10,000,000 | Accumulated OCI | |
| Liabilities | 4,000,000 | 4,000,000 | 200,000 | 12/31/2023 |
| Shareholders' equity: | | | 30,000 | OCI for |
| Common stock | 3,800,000 | 3,800,000 | | 2024 |
| Retained Earnings | 2,500,000 | 2,000,000 | 230,000 | 12/31/2024 |
| Accumulated OCI | 230,000 | 200,000 | | |
| Total liabilities and shareholders' equity | 10,530,000 | 10,000,000 | | |

Let's see how comprehensive income is reported by **Campbell Soup Company**.

 **Illustration 4-12** includes Campbell's statement of comprehensive income. Notice the amount of net income of **\$1,628** and other comprehensive income of **\$188** in 2020. These amounts make up total comprehensive income of \$1,816.

ILLUSTRATION 4-12 Comprehensive Income Presented as a Separate Statement—
Campbell Soup Company

Real World Financials

| CAMPBELL SOUP COMPANY | | |
|--|----------------|---------------|
| Consolidated Statements of Comprehensive Income | | |
| (millions) | | |
| | 2020 | 2019 |
| Net income | \$1,628 | \$ 211 |
| Foreign currency translation adjustments | 208 | (66) |
| Cash flow hedgers | 2 | (2) |

CAMPBELL SOUP COMPANY
Consolidated Statements of Comprehensive Income
(millions)

| | 2020 | 2019 |
|---|----------------|---------------|
| Pension and other postretirement benefits | (22) | (21) |
| Other comprehensive income | 188 | (89) |
| Comprehensive income | <u>\$1,816</u> | <u>\$ 122</u> |

Source: Campbell Soup Company

Campbell Soup then accumulates net income and other comprehensive income into their respective shareholders' equity accounts in the balance sheet, as shown in

 **Illustration 4-13.** The increase in retained earnings of \$1,197 (= \$3,190 – \$1,993) represents net income of **\$1,628** less dividends of \$431 (not shown in illustration). The increase in accumulated other comprehensive income of **\$188** (from negative \$198 to negative \$10) equals the amount of other comprehensive income for the period.

ILLUSTRATION 4-13 Shareholders' Equity—Campbell Soup Company

CAMPBELL SOUP COMPANY
Consolidated Balance Sheets (in part)
As of January 31

| (\$ in thousands) | 2020 | 2019 |
|---|----------------|----------------|
| Shareholders' equity: | | |
| Common stock | \$ 12 | \$ 12 |
| Additional paid-in capital | 394 | 372 |
| Retained earnings | 3,190 | 1,993 |
| Treasury stock, at cost | (1,023) | (1,076) |
| Accumulated other comprehensive income | (10) | (198) |
| Total shareholders' equity | <u>\$2,563</u> | <u>\$1,103</u> |

So, we can reconcile the changes in both retained earnings and AOCI:

| (\$ in millions) | Retained Earnings | Accumulated Other Comprehensive Income |
|--|-----------------------|---|
| Balance, Beginning | \$1,993 | \$(198) |
| Add: Net income | 1,628 | |
| Deduct: Dividends | (431) | |
| Other comprehensive inc ome | | 188 |
| Balance, Ending | <u><u>\$3,190</u></u> | <u><u>\$ (10)</u></u> |

TOTAL SHAREHOLDERS' EQUITY UNAFFECTED BY CLASSIFICATION.

As mentioned previously, the FASB has outlined no conceptual basis for classifying gains and losses in net income versus other comprehensive income. How would total shareholders' equity be affected if we classified some gains or losses the other way? *Not at all.* If a company reports a \$10 million gain (net of tax) in net income, then retained earnings will be higher by \$10 million. If, instead, the company reports the \$10 million gain in other comprehensive income, then accumulated other comprehensive income will be higher. Either way, total shareholders' equity is higher by \$10 million.

Eventually, items in accumulated other comprehensive income are reclassified to retained earnings. We'll look at the specifics of this accounting in future chapters dealing with investments, pensions, and derivatives.

Classification of gains and losses in net income versus OCI has no effect on total shareholders' equity.

LO4–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the income statement, statement of comprehensive income, and statement of cash flows.

International Financial Reporting Standards

Comprehensive Income. Both U.S. GAAP and IFRS allow companies to report comprehensive income in either a single statement of comprehensive income or in two separate statements.

Other comprehensive income items are similar under the two sets of standards. However, an additional OCI item, *changes in revaluation surplus*, is possible under IFRS. In Chapter 11 you will learn that *IAS No. 16*²⁷ permits companies to value property, plant, and equipment at (1) cost less accumulated depreciation or (2) fair value (revaluation). *IAS No. 38*²⁸ provides a similar option for the valuation of intangible assets. U.S. GAAP prohibits revaluation.

If the revaluation option is chosen and fair value is higher than book value, the difference, changes in revaluation surplus, is reported as *other comprehensive income* and then accumulates in a revaluation surplus account in equity.

Concept Review Exercise

INCOME STATEMENT PRESENTATION; COMPREHENSIVE INCOME

The Barrington Company sells clothing and furniture. On September 30, 2024, the company decided to sell the entire furniture business for \$40 million. The sale was completed on December 15, 2024. Income statement information for 2024 is provided below for the two components of the company.

| (\$ in millions) | |
|--------------------|---------------------|
| Clothing Component | Furniture Component |

| | | |
|---|--------------|---------------|
| Sales revenue | \$650 | \$425 |
| Cost of goods sold | <u>200</u> | <u>225</u> |
| Gross profit | 450 | 200 |
| Operating expenses | <u>226</u> | <u>210</u> |
| Operating income | 224 | (10) |
| Other income (loss)* | <u>16</u> | <u>(30)</u> |
| Income (loss) before income taxes | 240 | (40) |
| Income tax expense (benefit) [†] | 60 | (10) |
| Net income (loss) | <u>\$180</u> | <u>\$(30)</u> |

*For the furniture component, the entire Other income (loss) amount represents the loss on sale of assets of the component for \$40 million when their book value was \$70 million.

[†] A 25% tax rate applies to all items of income or loss.

In addition, in 2024 the company had a pretax net unrealized gain on debt securities of \$6 million and a positive foreign currency translation adjustment of \$2 million.

Required:

1. Prepare a single, continuous 2024 statement of comprehensive income for the Barrington Company including EPS disclosures. There were 100 million shares of common stock outstanding throughout 2024. The company had no potentially dilutive securities outstanding or stock options that could cause additional common shares. Use the multiple-step approach for the income statement portion of the statement.
2. Prepare a separate 2024 statement of comprehensive income.

Solution:

1. Prepare a single, continuous 2024 statement of comprehensive income.

PART B

The Statement of Cash Flows

LO4–7 Describe the purpose of the statement of cash flows.

When a balance sheet and an income statement are presented, a **statement of cash flows (SCF)** is required for each income statement period.³⁰ The purpose of the SCF is to provide information about the cash receipts and cash disbursements of an enterprise.

A statement of cash flows is presented for each period for which an income statement is provided.

Similar to the income statement, it is a *change* statement, summarizing the transactions that affected cash during the period. The term *cash* in the statement of cash flows refers to the total of cash, cash equivalents, and restricted cash. Cash equivalents, discussed in **Chapter 3**, include highly liquid (easily converted to cash) investments such as Treasury bills. **Chapter 21** is devoted exclusively to the SCF. A brief overview is provided here.

Usefulness of the Statement of Cash Flows

We discussed the difference between cash and accrual accounting in  **Chapter 1**. It was pointed out and illustrated that over short periods of time, operating cash flows may not be indicative of the company's long-run cash-generating ability and that accrual-based net income provides a more accurate prediction of future operating cash flows. Nevertheless, information about cash flows from operating activities, when combined with information about cash flows from other activities, can provide information helpful in assessing future profitability, liquidity, and long-term solvency. After all, a company must pay its debts with cash, not with income.

Of particular importance is the amount of cash generated from operating activities. In the long run, a company must be able to generate positive cash flow from activities related to selling its product or service. These activities must provide the necessary cash to pay debts, provide dividends to shareholders, and provide for future growth.

Classifying Cash Flows

LO4–8 Identify and describe the various classifications of cash flows presented in a statement of cash flows.

A list of cash flows is more meaningful to investors and creditors if they can determine the type of transaction that gave rise to each cash flow. Toward this end, the statement of cash flows classifies all transactions affecting cash into one of three categories: (1) operating activities, (2) investing activities, and (3) financing activities.

Page 189

Operating Activities

The inflows and outflows of cash that result from activities reported in the income statement are classified as cash flows from **operating activities**. In other words, this classification of cash flows includes the elements of net income reported on a cash basis rather than an accrual basis.³¹

Operating activities are inflows and outflows of cash related to the transactions entering into the determination of net operating income.

Cash inflows include cash received from the following:

1. Customers from the sale of goods or services
2. Interest and dividends from investments

These amounts may differ from sales revenue and investment income reported in the income statement. For example, sales revenue measured on the accrual basis reflects revenue recognized during the period, not necessarily the cash actually collected. Revenue will not equal cash collected from customers if receivables from customers or deferred revenue changed during the period.

Cash outflows include cash paid for the following:

1. The purchase of inventory
2. Salaries, wages, and other operating expenses
3. Interest on debt

4. Income taxes

Likewise, these amounts may differ from the corresponding accrual expenses reported in the income statement. Expenses are reported when incurred, not necessarily when cash is actually paid for those expenses. Also, some revenues and expenses, like depreciation expense, don't affect cash at all and aren't included as cash outflows from operating activities.

The difference between the inflows and outflows is called *net cash flows from operating activities*. This is equivalent to net income if the income statement had been prepared on a cash basis rather than an accrual basis.

DIRECT AND INDIRECT METHODS OF REPORTING

Two generally accepted formats can be used to report operating activities, the direct method and the indirect method. Under the **direct method**, the cash effect of each operating activity is reported directly in the statement. For example, *cash received from customers* is reported as the cash effect of sales activities. Income statement transactions that have no cash flow effect, such as depreciation, are simply not reported.

By the *direct method*, the cash effect of each operating activity is reported directly in the SCF.

By the **indirect method**, on the other hand, we arrive at net cash flow from operating activities indirectly by starting with reported net income and working backwards to convert that amount to a cash basis. Two types of adjustments to net income are needed.

By the *indirect method*, cash flow from operating activities is derived indirectly by starting with reported net income and adding or subtracting items to convert that amount to a cash basis.

- 1. Income statement items.** (a) Remove noncash revenues and noncash expenses, such as depreciation expense and amortization expense, and (b) remove nonoperating gains and nonoperating losses, such as gains and losses on the sale of land, buildings, and equipment.
- 2. Balance sheet items.** Adjust for changes in current operating assets and current operating liabilities. These changes represent differences between accrual-basis revenues/expenses and their corresponding operating cash flows. For example, an *increase* in accounts receivable represents sales to customers (accrual-basis revenue) that have not yet been collected (no operating cash inflow). We need to remove this amount of revenue from net income so that only the cash portion remains.

To contrast the direct and indirect methods further, consider the income statement and balance sheet for Arlington Lawn Care (ALC) in [Illustration 4-14](#). We'll use these to construct the operating activities section of the statement of cash flows.

ILLUSTRATION 4-14 Contrasting the Direct and Indirect Methods of Presenting Cash Flows from Operating Activities

Net income is \$45,000, but cash flow from these same activities is not necessarily the same

Changes in assets and liabilities can indicate that cash inflows are different from revenues and cash outflows are different from expenses.

Arlington Lawn Care (ALC) began operations at the beginning of 2024. ALC's 2024 (\$ in thousands).

**ARLINGTON LAWN CARE
Income Statement
For the Year Ended December 31, 2024**

| | |
|------------------------------------|-------|
| Service revenue | \$100 |
| Operating expenses: | |
| General and administrative expense | \$30 |
| Depreciation expense | \$15 |
| Total operating expenses | \$45 |
| Income before income taxes | \$55 |
| Income tax expense | \$10 |
| Net income | \$45 |

*Includes \$6 in insurance expense

Balance Sheet
December 31, 2024 and 2023**

| Assets | | | Liabilities |
|-----------------|-------------|-------------|----------------------|
| Current assets: | <u>2024</u> | <u>2023</u> | Current liabilities: |
| Cash | \$122 | \$102 | |

| | | | |
|--------------------------------|---------------------|---------------------|--------|
| Accounts receivable | 43 | 33 | |
| Prepaid insurance | <u>3</u> | <u>5</u> | |
| Total current assets | 168 | 140 | Shareh |
| Equipment | 160 | 120 | |
| Less: Accumulated depreciation | (28) | (20) | |
| Total assets | <u><u>\$300</u></u> | <u><u>\$240</u></u> | |

**For various items of general and administrative expense

†Increase from \$35 to \$75 equals net income of \$45 less \$5 in cash dividends paid

DIRECT METHOD

Let's begin with the direct method of presentation. We illustrated this method previously in [Chapter 2](#). In that chapter, specific cash transactions were provided, and we simply included them in the appropriate cash flow category in the SCF. Here, we start with account balances, so the direct method requires a bit more reasoning.

From the income statement, we see that ALC's net income has four components. Three of those—service revenue, general and administrative expense, and income tax expense—affect cash flows, but not by the accrual amounts reported in the income statement. One component—depreciation—reduces net income but not cash; it's simply an allocation over time of a prior year's expenditure for a depreciable asset. To report these operating activities on a cash basis, rather than an accrual basis, we take the three items that affect cash and adjust the amounts to reflect cash inflow rather than revenue recognized, and cash outflows rather than expenses incurred.

- Service revenue is \$100,000, but ALC did not collect that much cash from its customers. We know that because accounts receivable increased from \$33,000 to \$43,000. ALC must have collected to date only **\$90,000**.

| Accounts receivable | |
|---------------------|----|
| Beg. bal. | 33 |

| | | | | | |
|--|-----------|-----|----|------|--|
| | Revenue | 100 | | | |
| | | | 90 | Cash | |
| | End. bal. | 43 | | | |

- General and administrative expense of \$32,000 was incurred, but \$13,000 of that hasn't yet been paid. We know that because accrued liabilities increased by \$13,000. Also, prepaid insurance decreased by \$2,000, so the amount paid for insurance coverage must have been \$2,000 less than the amount that expired and was reported as insurance expense. That means cash paid for general and administrative expense was only \$17,000 (\$32,000 less the \$13,000 increase in accrued liabilities and the \$2,000 decrease in prepaid insurance).
- Income tax expense was \$15,000. Income taxes payable decreased by \$3,000. This means the amount paid for taxes was greater than the expense by \$3,000, so the amount paid must have been \$18,000.

We can report ALC's cash flows from operating activities using the direct method as shown in  **Illustration 4-14A**.

ILLUSTRATION 4-14A Direct Method of Presenting Cash Flows from Operating Activities

By the direct method, we report the components of net income on a cash basis.

| ARLINGTON LAWN CARE | |
|--|-------------|
| Statement of Cash Flows | |
| For the Year Ended December 31, 2024 | |
| (\$ in thousands) | |
| Cash Flows from Operating Activities | |
| Cash received from customers* | \$ 90 |
| Cash paid for general and administrative expense** | (17) |
| Cash paid for income taxes*** | <u>(18)</u> |
| Net cash flows from operating activities | \$ 55 |

ARLINGTON LAWN CARE
Statement of Cash Flows
For the Year Ended December 31, 2024

*Service revenue of \$100 thousand, less increase of \$10 thousand in accounts receivable.

**General and administrative expense of \$32 thousand, less increase of \$13 thousand in accrued liabilities, less decrease of \$2 thousand in prepaid insurance.

***Income tax expense of \$15 thousand, plus decrease of \$3 thousand in income taxes payable.

INDIRECT METHOD

To report operating cash flows using the indirect method, we take a different approach. We start with ALC's net income but realize that the \$45,000 includes both cash and noncash components. We need to adjust net income, then, to eliminate the noncash effects so that we're left with only the cash flows. We start by eliminating the only noncash component of net income in our illustration—depreciation expense. As shown in [Illustration 4-14B](#), depreciation of \$8,000 was subtracted in the income statement, so to eliminate its negative effect on net income, we simply add it back.

ILLUSTRATION 4-14B Indirect Method of Presenting Cash Flows from Operating

Activities

By the indirect method, we start with net income and work backwards to convert that amount to a cash basis.

ARLINGTON LAWN CARE
Statement of Cash Flows
For the Year Ended December 31, 2024

(\$ in thousands)

Cash Flows from Operating Activities

Net income \$45

Adjustments for noncash effects:

Depreciation expense \$ 8

Changes in operating assets and liabilities:

Increase in accounts receivable (10)

ARLINGTON LAWN CARE
Statement of Cash Flows
For the Year Ended December 31, 2024

| | | |
|--|------------|-----------|
| Decrease in prepaid insurance | 2 | |
| Increase in accrued liabilities | 13 | |
| Decrease in income taxes payable | <u>(3)</u> | <u>10</u> |
| Net cash flows from operating activities | | \$55 |

That leaves us with three components of net income that do affect cash but not necessarily by the amounts reported—service revenue, general and administrative expense, and income tax expense. For those, we need to make adjustments to net income to cause it to reflect cash flows rather than accrual amounts. For instance, we saw earlier that even though \$100,000 in service revenue is reflected in net income, only \$90,000 cash was received from customers. That means we need to include an adjustment to reduce net income by \$10,000, the increase in accounts receivable.

Depreciation expense does not reduce cash, but is subtracted in the income statement. So, we add back depreciation expense to net income to eliminate it.

In a similar manner, we include adjustments for the changes in prepaid insurance, accrued liabilities, and income taxes payable to adjust net income to reflect cash payments rather than expenses incurred. Positive adjustments to net income are made for decreases in related assets and increases in related liabilities, while negative adjustments are made for increases in those assets and decreases in those liabilities. The decrease in paid prepaid insurance and increase in accrued liabilities indicate that less cash was paid for these items compared to their related expense amounts, so we add these changes. The decrease in income taxes payable indicates that more cash was paid for taxes than the amount of income taxes expense, so we subtract the decrease.

We make adjustments for changes in assets and liabilities that indicate that components of net income are not the same as cash flows.

Cash flows from operating activities using the indirect method are shown in **Illustration 4-14B**.

Both the direct and the indirect methods produce the same net cash flows from operating activities (\$55,000 in our illustration); they are merely alternative approaches to

reporting the cash flows. The FASB, in promulgating GAAP for the statement of cash flows, stated its preference for the direct method. However, nearly all U.S. companies use the indirect method.

The choice of presentation method for cash flow from operating activities has no effect on how investing activities and financing activities are reported. We now look at how cash flows are classified into those two categories.

Investing Activities

Cash flows from **investing activities** include inflows and outflows of cash related to the acquisition and disposition of long-lived assets used in the operations of the business (such as property, plant, and equipment) and investment assets (except those classified as cash equivalents and trading securities). The purchase and sale of inventory are not considered investing activities. Inventory is purchased for the purpose of being sold as part of the company's operations, so the purchase and sale are included with operating activities rather than investing activities.

Investing activities involve the acquisition and sale of (1) long-term assets used in the business and (2) nonoperating investment assets.

Cash outflows from investing activities include cash paid for the following:

1. The purchase of long-lived assets used in the business
2. The purchase of investment securities like stocks and bonds of other entities (other than those classified as cash equivalents and trading securities)
3. Loans to other entities

Later, when the assets are disposed of, cash inflow from the sale of the assets (or collection of loans and notes) also is reported as cash flows from investing activities. As a result, cash inflows from these transactions are considered investing activities as follows:

1. The sale of long-lived assets used in the business
2. The sale of investment securities (other than cash equivalents and trading securities)
3. The collection of a nontrade receivable (excluding the collection of interest, which is an operating activity)

Net cash flows from investing activities equal the difference between the inflows and outflows. The only investing activity indicated in  **Illustration 4-14** is ALC's investment of \$40,000

cash for equipment. We know \$40,000 was paid to buy equipment because that balance sheet account increased from \$120,000 to \$160,000.

Financing Activities

Financing activities relate to the external financing of the company. Cash inflows occur when cash is borrowed from creditors or invested by owners. Cash outflows occur when cash is paid back to creditors or distributed to owners. The payment of interest to a creditor, however, is classified as an operating activity.

Financing activities involve cash inflows and outflows from transactions with creditors (excluding trade payables) and owners.

Financing cash inflows include cash received from the following:

1. Owners when shares are sold to them
2. Creditors when cash is borrowed through notes, loans, mortgages, and bonds

Financing cash outflows include cash paid to the following:

1. Owners in the form of dividends or other distributions
2. Owners for the reacquisition of shares previously sold
3. Creditors as repayment of the principal amounts of debt (excluding trade payables that relate to operating activities)

Net cash flows from financing activities equal the difference between the inflows and outflows. The only financing activities indicated in [Illustration 4-14](#) are ALC's receipt of \$10,000 cash from issuing common stock and the payment of \$5,000 in cash dividends. Because common stock increased from \$185,000 to \$195,000, we know that common stock was issued for \$10,000. For dividends, we know the balance of retained earnings increases by the amount of net income minus dividends. This means that the increase in retained earnings of \$40,000 represents net income of \$45,000 minus dividends of \$5,000.

The 2024 statement of cash flows for ALC, beginning with net cash flows from operating activities, is shown in [Illustration 4-15](#).

| Cash balance, January 1 | <u>102</u> |
| Cash balance, December 31 | <u><u>\$122</u></u> |

LO4–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the income statement, statement of comprehensive income, and statement of cash flows.

International Financial Reporting Standards

Classification of Cash Flows. Like U.S. GAAP, international standards also require a statement of cash flows. Consistent with U.S. GAAP, cash flows are classified as operating, investing, or financing. However, the U.S. standard designates cash outflows for interest payments and cash inflows from interest and dividends received as operating cash flows. Dividends paid to shareholders are classified as financing cash flows.

IAS No. 7,⁵² on the other hand, allows more flexibility. Companies can report interest and dividends paid as either operating or financing cash flows and interest and dividends received as either operating or investing cash flows. Interest and dividend payments usually are reported as financing activities. Interest and dividends received normally are classified as investing activities.

Siemens AG, a German company, prepares its financial statements according to IFRS. In its statement of cash flows for 2020, the company reported interest and dividends received as operating cash flows, as would a U.S. company. However, Siemens classified **interest paid** as a financing cash flow.

SIEMENS AG

Statement of Cash Flows (partial)

For the Year Ended September 30, 2020

| | |
|--|-----------------|
| Cash flows from financing activities: | (€ in millions) |
| Transactions with owners | 1,107 |
| Issuance of long-term debt | 10,255 |
| Repayment of long-term debt | (4,472) |
| Change in short-term debt and other financing activities | 1,588 |

| | |
|--------------------------------------|----------------|
| Interest paid | (833) |
| Dividends paid | <u>(3,382)</u> |
| Cash flows from financing activities | 4,263 |

Noncash Investing and Financing Activities

As we just discussed, the statement of cash flows provides useful information about the investing and financing activities in which a company is engaged. Even though these primarily result in cash inflows and cash outflows, there may be significant investing and financing activities occurring during the period that do not involve cash flows at all. In order to provide complete information about these activities, any significant noncash investing and financing activities (that is, noncash exchanges) are reported either on the face of the SCF or in a disclosure note. An example of a significant noncash investing and financing activity is the acquisition of equipment (an investing activity) by simultaneously issuing either a long-term note payable or equity securities (a financing activity) to the seller of the equipment.

PART C

Profitability Analysis

LO4–10 Identify and calculate the common ratios used to assess profitability.

 **Chapter 3** provided an overview of financial statement analysis and introduced some of the common ratios used in risk analysis to investigate a company's liquidity and long-term solvency. We now look at ratios related to profitability analysis.

Activity Ratios

One key to profitability is how well a company manages and utilizes its assets. Some ratios are designed to evaluate a company's effectiveness in managing assets. Of particular interest are the activity, or turnover ratios, of certain assets. The greater the number of times an asset turns over, the fewer assets that are required to maintain a given level of activity (revenue). Therefore, high turnover ratios usually are preferred.

Activity ratios measure a company's efficiency in managing its assets.

Although, in concept, the activity or turnover can be measured for any asset, activity ratios are most frequently calculated for total assets, accounts receivable, and inventory. These ratios are calculated as follows:

$$\begin{aligned}\text{Asset turnover ratio} &= \frac{\text{Net sales}}{\text{Average total assets}} \\ \text{Receivables turnover ratio} &= \frac{\text{Net sales}}{\text{Average accounts receivable (net)}} \\ \text{Inventory turnover ratio} &= \frac{\text{Cost of goods sold}}{\text{Average inventory}}\end{aligned}$$

ASSET TURNOVER

A broad measure of asset efficiency is the **asset turnover ratio**. The ratio is computed by dividing a company's net sales by the average total assets available for use during a period. The denominator, average assets, is determined by adding beginning and ending total assets and dividing by two. The asset turnover ratio provides an indication of how efficiently a company utilizes all of its assets to generate revenue.

The *asset turnover ratio* measures a company's efficiency in using assets to generate revenue.

RECEIVABLES TURNOVER

The **receivables turnover ratio** is calculated by dividing a period's net credit sales by the average net accounts receivable. Because income statements seldom distinguish between cash sales and credit sales, this ratio usually is computed using total net sales as the numerator. The denominator, average accounts receivable, is determined by adding beginning and ending net accounts receivable (gross accounts receivable less allowance for uncollectible accounts) and dividing by two.³³

The *receivables turnover ratio* offers an indication of how quickly a company is able to collect its accounts receivable.

The receivables turnover ratio provides an indication of a company's efficiency in collecting cash from customers. The ratio shows the number of times during a period that the average accounts receivable balance is collected. The higher the ratio, the shorter the average time between sales and cash collection.

Page 197

A convenient extension is the **average collection period**. This measure is computed by dividing 365 days by the receivables turnover ratio. The result is an approximation of the number of days the average accounts receivable balance is outstanding.

$$\text{Average collection period} = \frac{365}{\text{Receivables turnover ratio}}$$

Monitoring the receivables turnover ratio (and average collection period) over time can provide useful information about a company's future prospects. For example, a decline in the receivables turnover ratio (an increase in the average collection period) could be an indication that sales are declining because of customer dissatisfaction with the company's products. Another possible explanation is that the company has changed its credit policy and is granting extended credit

The *average collection period* indicates the average age of accounts receivable.

terms in order to maintain customers. Either explanation could signal a future increase in bad debts. Ratio analysis does not explain what is wrong. It does provide information that highlights areas for further investigation. We cover additional details of the receivables turnover ratio and average collection period in  **Chapter 7**.

INVENTORY TURNOVER

An important activity measure for a merchandising company (a retail, wholesale, or manufacturing company) is the **inventory turnover ratio**. The ratio shows the number of times the average inventory balance is sold during a reporting period. The more frequently a business is able to sell, or turn over, its inventory, the lower its investment in inventory must be for a given level of sales. The ratio is computed by dividing the period's cost of goods sold by the average inventory balance. The denominator, average inventory, is determined by adding beginning and ending inventory and dividing by two.³⁴

*The **inventory turnover ratio** measures a company's efficiency in managing its investment in inventory.*

A relatively high ratio, compared to a competitor, usually is desirable. A high ratio indicates comparative strength, perhaps caused by a company's superior sales force or maybe a successful advertising campaign. However, it might also be caused by a relatively low inventory level, which could mean either very efficient inventory management or stockouts and lost sales in the future.

On the other hand, a relatively low ratio, or a decrease in the ratio over time, usually is perceived to be unfavorable. Too much capital may be tied up in inventory. A relatively low ratio may result from overstocking, the presence of obsolete items, or poor marketing and sales efforts.

Similar to the receivables turnover, we can divide the inventory turnover ratio into 365 days to compute the **average days in inventory**. This measure indicates the number of days it normally takes to sell inventory.

$$\text{Average days in inventory} = \frac{365}{\text{Inventory turnover ratio}}$$

Profitability Ratios

A fundamental element of an analyst's task is to develop an understanding of a firm's profitability. Profitability ratios attempt to measure a company's ability to earn an adequate return relative to sales or resources devoted to operations. Resources devoted to operations can be defined as total assets or only those assets provided by owners, depending on the evaluation objective.

Profitability ratios assist in evaluating various aspects of a company's profit-making activities.

Three common profitability measures are (1) the profit margin on sales, (2) the return on assets, and (3) the return on equity. These ratios are calculated as follows:

$$\begin{aligned}\text{Profit margin on sales} &= \frac{\text{Net income}}{\text{Net sales}} \\ \text{Return on assets} &= \frac{\text{Net income}}{\text{Average total assets}} \\ \text{Return on equity} &= \frac{\text{Net income}}{\text{Average shareholders' equity}}\end{aligned}$$

Notice that for all of the profitability ratios, our numerator is net income. Recall our discussion earlier in this chapter on earnings quality. The relevance of any historical-based financial statement hinges on its predictive value. To enhance predictive value, analysts often adjust net income in these ratios to separate a company's *temporary earnings* from its *permanent earnings*. Analysts begin their assessment of permanent earnings with income from continuing operations. Then, adjustments are made for any unusual, one-time gains or losses included in income from continuing operations. It is this adjusted number that they use as the numerator in these ratios.

When calculating profitability ratios, analysts often adjust net income for any temporary income effects.

PROFIT MARGIN ON SALES

The **profit margin on sales** is simply net income divided by net sales. The ratio measures an important dimension of a company's profitability. It indicates the portion of each dollar of revenue that is available after all expenses have been covered. It offers a measure of the company's ability to withstand either higher expenses or lower revenues.

The *profit margin on sales* measures the amount of net income achieved per sales dollar.

What is considered to be a desirable profit margin is highly sensitive to the nature of the business activity. For instance, you would expect a specialty shop to have a higher profit

margin than, say, **Walmart**. A low profit margin can be compensated for by a high asset turnover rate, and vice versa, which brings us to considering the trade-offs inherent in generating return on assets.

RETURN ON ASSETS

The **return on assets (ROA)** ratio expresses income as a percentage of the average total assets available to generate that income. Because total assets are partially financed with debt and partially by equity funds, this is an inclusive way of measuring earning power that ignores specific sources of financing.

A company's return on assets is related to both profit margin and asset turnover. Specifically, profitability can be achieved by either a high profit margin, high asset turnover, or a combination of the two. In fact, the return on assets can be calculated by multiplying the profit margin and asset turnover.

Profit margin and asset turnover combine to yield *return on assets*, which measures the return generated by a company's assets.

$$\text{Return on assets} = \text{Profit margin} \times \text{Asset turnover}$$
$$\frac{\text{Net income}}{\text{Average total assets}} = \frac{\text{Net income}}{\text{Net sales}} \times \frac{\text{Net sales}}{\text{Average total assets}}$$

Industry standards are particularly important when evaluating asset turnover and profit margin. Some industries are characterized by low turnover but typically make up for it with higher profit margins. Others have low profit margins but compensate with high turnover. Grocery stores typically have relatively low profit margins but relatively high asset turnover. In comparison, a manufacturer of specialized equipment will have a higher profit margin but a lower asset turnover ratio.

Additional Consideration

The return on assets ratio often is computed as follows:

$$\text{Return on assets} = \frac{\text{Net income} + \text{Interest expense} (1 - \text{Tax rate})}{\text{Average total assets}}$$

The reason for adding back interest expense (net of tax) is that interest represents a return to suppliers of debt capital and should not be deducted in the computation of net income when computing the return on assets. In other words, the numerator is the total amount of income available to both debt and equity capital.

RETURN ON SHAREHOLDERS' EQUITY

Shareholders are concerned with how well management uses their equity to generate a profit. A closely watched measure that captures this concern is **return on equity (ROE)**, calculated as net income divided by average shareholders' equity.

Return on equity measures the return to suppliers of equity capital.

In addition to monitoring return on equity, investors want to understand how that return can be improved. The **DuPont framework** provides a convenient basis for analysis that breaks return on equity into three key components:³⁵

The DuPont framework shows that return on equity depends on profitability, activity, and financial leverage.

- **Profitability**, measured by the profit margin (Net income ÷ Sales). As discussed already, a higher profit margin indicates that a company generates more profit from each dollar of sales.
- **Activity**, measured by asset turnover (Sales ÷ Average total assets). As discussed already, higher asset turnover indicates that a company uses its assets efficiently to generate more sales from each dollar of assets.
- **Financial leverage**, measured by the equity multiplier (Average total assets ÷ Average total equity). A high equity multiplier indicates that relatively more of the company's assets have been financed with debt; that is, the company is more leveraged. As discussed in [Chapter 3](#), leverage can provide additional return to the company's equity holders.

In equation form, the DuPont framework looks like this:

$$\begin{aligned} \text{Return on equity} &= \text{Profit margin} \times \text{Asset turnover} \times \text{Equity multiplier} \\ \frac{\text{Net income}}{\text{Avg. total equity}} &= \frac{\text{Net income}}{\text{Net sales}} \times \frac{\text{Net sales}}{\text{Avg. total assets}} \times \frac{\text{Avg. total assets}}{\text{Avg. total equity}} \end{aligned}$$

Notice that net sales and average total assets appear in the numerator of one ratio and the denominator of another, so they cancel to yield net income ÷ average total equity, or ROE.

We have already seen that ROA is determined by profit margin and asset turnover, so another way to compute ROE is by multiplying ROA by the equity multiplier:

$$\begin{aligned} \text{Return on equity} &= \text{Return on assets} \times \text{Equity multiplier} \\ \frac{\text{Net income}}{\text{Avg. total equity}} &= \frac{\text{Net income}}{\text{Avg. total assets}} \times \frac{\text{Avg. total assets}}{\text{Avg. total equity}} \end{aligned}$$

We can see from this equation that an equity multiplier of greater than 1 will produce a return on equity that is higher than the return on assets. However, as with all ratio analysis, there are trade-offs. If leverage is too high, creditors become concerned about the potential for default on the company's debt and require higher interest rates. Because interest is recognized as an expense, net income is reduced, so at some point, the benefits of a higher equity multiplier are offset by a lower profit margin. Part of the challenge of managing a company is to identify the combination of profitability, activity, and leverage that produces the highest return for equity holders.

Additional Consideration

Sometimes when return on equity is calculated, shareholders' equity is viewed more narrowly to include only common shareholders. In that case, preferred stock is excluded from the denominator, and preferred dividends are deducted from net income in the numerator. The resulting rate of return on equity focuses on profits generated on resources provided by common shareholders.

 **Illustration 4-16** provides a recap of the ratios we have discussed.

ILLUSTRATION 4-16 Summary of Profitability Analysis Ratios

Activity ratios

$$\text{Asset turnover} = \frac{\text{Net sales}}{\text{Average total assets}}$$

$$\text{Receivables turnover} = \frac{\text{Net sales}}{\text{Average accounts receivable (net)}}$$

$$\text{Average collection period} = \frac{365}{\text{Receivables turnover ratio}}$$

$$\text{Inventory turnover} = \frac{\text{Cost of goods sold}}{\text{Average inventory}}$$

$$\text{Average days in inventory} = \frac{365}{\text{Inventory turnover ratio}}$$

Profitability ratios

$$\text{Profit margin on sales} = \frac{\text{Net income}}{\text{Net sales}}$$

$$\text{Return on assets} = \frac{\text{Net income}}{\text{Average total assets}}$$

$$\text{Return on equity} = \frac{\text{Net income}}{\text{Average shareholders' equity}}$$

Leverage ratio

$$\text{Equity multiplier} = \frac{\text{Average total assets}}{\text{Average total equity}}$$

Profitability Analysis—An Illustration

To illustrate the application of the DuPont framework and the computation of the activity and profitability ratios, we analyze the financial statements of two well-known retailers, **Costco Wholesale Corporation** and **Walmart Inc.**,³⁶ The operations of these two companies are similar in their focus on operating large general merchandising and food discount stores.  **Illustration 4-17** presents selected financial statement information for the two companies (all numbers are in millions of dollars).

Illustration 4-17 Selected Financial Information for Costco Wholesale Corporation and Walmart Inc.

| Net sales | 163,220 | 519,926 |
| Cost of goods sold | 144,939 | 394,605 |
| Net Income | 4,002 | 14,881 |

Source: Costco; Walmart

In absolute dollars, it appears that Walmart is far more profitable than Costco. As shown at the bottom of [Illustration 4-17](#), Walmart's net income was \$14,881 million, compared to Costco's \$4,002 million. But that's not the whole story. Even though both are very large companies, Walmart is four times the size of Costco in terms of total assets, so how can they be compared? Focusing on financial ratios helps adjust for size differences, and the DuPont framework helps identify the determinants of profitability from the perspective of shareholders.

[Illustration 4-18](#) includes the DuPont analysis for Walmart and Costco, as well as some additional activity ratios we've discussed. The first item to notice is that Walmart's profit margin is higher than Costco's (2.86% for Walmart compared to 2.45% for Costco). This means that Walmart generates more profit for each \$1 of sales. However, by looking at the asset turnover ratio, we see that Costco is better able to use its assets to generate sales. Costco's asset turnover ratio of 3.23 is noticeably higher than Walmart's ratio of only 2.28. Then, we see from the equity multiplier of each company that Costco's strategy is to use more debt (or, conversely, less equity) to finance the purchase of its assets. This strategy has paid off for its shareholders. By using financial leverage to purchase more productive assets, Costco is able to generate a higher return on equity (ROE) for its shareholders (23.34% for

Costco versus only 18.46% for Walmart). The DuPont analysis helps us understand how this occurs.

Illustration 4–18 DuPont Framework and Activity Ratios—Costco Wholesale Corporation and Walmart Inc.

Real World Financials

| DuPont Analysis | Costco | | Walmart |
|------------------------------|--------|--|----------------------------------|
| Profit margin on sales | = | $\frac{\$4,002}{\$163,220} = 2.45\%$ | $\frac{\$14,881}{\$519,926}$ |
| × | | × | |
| <u>Asset turnover</u> | = | $\frac{\$163,220}{\$50,478.0} = 3.23$ | $\frac{\$519,926}{\$227,895.0}$ |
| = | | = | |
| Return on assets | = | $\frac{\$4,002}{\$50,478.0} = 7.93$ | $\frac{\$14,881}{\$227,895.0}$ |
| × | | × | |
| <u>Equity multiplier</u> | = | $\frac{\$50,478.0}{\$17,144.5} = 2.94$ | $\frac{\$227,895.0}{\$80,593.0}$ |
| = | | = | |
| Return on equity | = | $\frac{\$4,002}{\$17,144.5} = 23.34\%$ | $\frac{\$14,881}{\$80,593.0}$ |
| Other activity ratios | | | |
| Receivables turnover | = | $\frac{\$163,220}{\$1,542.5} = 105.82$ | $\frac{\$519,926}{\$6,283.5}$ |
| Average collection period | = | $\frac{365}{105.82} = 3.45$ days | $\frac{365}{82.74}$ |
| Inventory turnover | = | $\frac{\$144,939}{\$11,818.5} = 12.26$ | $\frac{\$394,605}{\$44,352.0}$ |
| Average days in inventory | = | $\frac{365}{12.26} = 29.77$ days | $\frac{365}{8.90}$ |

Source: www.reuters.com

Other activity ratios further reveal Costco’s greater operating efficiency. Two components of asset turnover are inventory turnover and receivables turnover. Based on the inventory turnover ratio, we see that inventory sells much more quickly at Costco. Inventory takes only 29.77 days on average before being sold at Costco, compared

with 41.01 days at Walmart. Costco also turns over its accounts receivable slightly faster than Walmart does. While accounts receivable are relatively small for both companies, the difference in the receivables turnover could provide investors with another signal of Costco management's greater overall operating efficiency.

The essential point of our discussion here, and in Part C of Chapter 3, is that raw accounting numbers alone mean little to decision makers. The numbers gain value when viewed in relation to other numbers. Similarly, the financial ratios formed by those relationships provide even greater perspective when compared with similar ratios of other companies or with averages for several companies in the same industry. Accounting information is useful in making decisions. Financial analysis that includes comparisons of financial ratios enhances the value of that information.

Financial Reporting Case Solution

Eric Audras/Onoky/SuperStock

- 1. How would you explain restructuring costs to Bianca? Are restructuring costs something Bianca should worry about?** Restructuring costs include employee severance and termination benefits plus other costs associated with the shutdown or relocation of facilities or downsizing of operations. Restructuring costs are not necessarily bad. In fact, the objective is to make operations more efficient. The costs are incurred now in hopes of better earnings later.
- 2. Explain to Bianca what is meant by discontinued operations and describe to her how that item is reported in an income statement.** Separate reporting as a discontinued operation is required when the disposal of a

component represents a strategic shift that has, or will have, a major effect on a company's operations and financial results. The net-of-tax effect of discontinued operations is separately reported below income from continuing operations. If the component has been disposed of by the end of the reporting period, the income effects include (1) income or loss from operations of the discontinued component from the beginning of the reporting period through the disposal date and (2) gain or loss on disposal of the component's assets. If the component has not been disposed of by the end of the reporting period, the income effects include (1) income or loss from operations of the discontinued component from the beginning of the reporting period through the end of the reporting period, and (2) an impairment loss if the fair value minus cost to sell of the component's assets is less than their book value.

3. Describe to Bianca the difference between basic and diluted earnings per share. Basic earnings per share is computed by dividing net income available to common shareholders (net income less any preferred stock dividends) by the weighted-average number of common shares outstanding for the period. Diluted earnings per share reflects the potential dilution that could occur for companies that have certain securities outstanding that are convertible into common shares or stock options that could create additional common shares if the options were exercised. These items could cause earnings per share to decrease (become diluted). Because of the complexity of the calculation and the importance of earnings per share to investors, the text devotes a substantial portion of  **Chapter 19** to this topic.

The Bottom Line

-  **LO4-1** The components of income from continuing operations are revenues, expenses (including income taxes), gains, and losses, excluding those related to discontinued operations. Companies often distinguish between operating and nonoperating income within continuing operations. (*p. 166*)
-  **LO4-2** The term *earnings quality* refers to the ability of reported earnings (income) to predict a company's future earnings. The relevance of any historical-based financial statement hinges on its predictive value. To enhance predictive value, analysts try to separate a company's *temporary earnings* from its *permanent earnings*. Many believe that manipulating income reduces earnings quality because it can mask permanent earnings. Two major methods used by managers to manipulate earnings are (1) income shifting and (2) income statement classification. (*p. 171*)
-  **LO4-3** Analysts begin their assessment of permanent earnings with income from continuing operations. It would be a mistake to assume income from continuing operations reflects permanent earnings entirely. In other words, there may be temporary earnings effects included in both operating and nonoperating income. (*p. 171*)
-  **LO4-4** A discontinued operation refers to the disposal or planned disposal of a component of the entity. The net-of-tax effect of discontinued operations is separately reported below income from continuing operations. (*p. 174*)
-  **LO4-5** Accounting changes include changes in principle, changes in estimate, or changes in reporting entity. Their effects on the current period and prior period financial statements are reported using various approaches—retrospective, modified retrospective, and prospective. Error corrections are made by restating prior period financial statements. Any correction to retained earnings is made with an adjustment to the beginning balance in the current period. Earnings per share (EPS) is the amount of income achieved during a period expressed per share of common stock outstanding. EPS must be disclosed for income from continuing operations and for discontinued operations. (*p. 179*)
-  **LO4-6** The FASB's Concept Statement 6 defines the term *comprehensive income* as the change in equity from nonowner transactions. The calculation of net

income, however, excludes certain transactions that are included in comprehensive income. To convey the relationship between the two measures, companies must report both net income and comprehensive income and reconcile the difference between the two. The presentation can be (1) in a single, continuous statement of comprehensive income or (2) in two separate, but consecutive statements—an income statement and a statement of comprehensive income. (*p. 183*)

- LO4-7** When a company provides a balance sheet and income statement, a statement of cash flows also is provided. The purpose of the statement of cash flows is to provide information about the cash receipts and cash disbursements that occurred during the period. (*p. 188*)
- LO4-8** To enhance the usefulness of the information, the statement of cash flows classifies all transactions affecting cash into one of three categories: (1) operating activities, (2) investing activities, or (3) financing activities. (*p. 188*)
- LO4-9** There are more similarities than differences between income statements and statements of cash flows prepared according to U.S. GAAP and those prepared applying international standards. In a statement of cash flows, some differences are possible in the classifications of interest and dividend revenue, interest expense, and dividends paid. (*pp. 170, 186, 193, and 205*)
- LO4-10** Activity and profitability ratios provide information about a company's profitability. Activity ratios include the receivables turnover ratio, the inventory turnover ratio, and the asset turnover ratio. Profitability ratios include the profit margin on sales, the return on assets, and the return on equity. DuPont analysis explains return on equity as determined by profit margin, asset turnover, and the extent to which assets are financed with equity versus debt. (*p. 196*)

APPENDIX 4 Interim Reporting

Financial statements covering periods of less than a year are called *interim reports*. Companies registered with the SEC, which includes most public companies, must submit quarterly reports, and you will see excerpts from these reports throughout this book.³⁷

Interim reports are issued for periods of less than a year, typically as quarterly financial statements.

Though there is no requirement to do so, most also provide quarterly reports to their shareholders and typically include abbreviated, unaudited interim reports as supplemental information within their annual reports. For instance, [Illustration 4A-1](#) shows the quarterly information disclosed in the annual report of **The Home Depot, Inc.** Amounts for each of the four quarters sum to the reported amount for the full year. Compare these numbers to the annual income statement in [Illustration 4-2](#).

ILLUSTRATION 4A-1 Interim Data in Annual Report—The Home Depot, Inc.

Real World Financials

| SUMMARY OF QUARTERLY RESULTS OF OPERATIONS (UNAUDITED) | | | | | |
|--|----------|----------|----------|----------|-----------|
| Year Ended | 1st | 2nd | 3rd | 4th | |
| February 2, 2020 | Quarter | Quarter | Quarter | Quarter | Full Year |
| (\$ in millions, except per share data) | | | | | |
| Net sales | \$26,381 | \$30,839 | \$27,223 | \$25,782 | \$110,225 |
| Gross profit | 9,017 | 10,432 | 9,387 | 8,736 | 37,572 |
| Net income | 2,513 | 3,479 | 2,769 | 2,481 | 11,242 |
| Basic | \$ 2.28 | \$ 3.18 | \$ 2.54 | \$ 2.29 | \$ 10.29 |
| Diluted | \$ 2.27 | \$ 3.17 | \$ 2.53 | \$ 2.28 | \$ 10.25 |

Source: Home Depot, Inc.

For accounting information to be useful to decision makers, it must be available on a timely basis. One of the objectives of interim reporting is to enhance the timeliness of financial

information. In addition, quarterly reports provide investors and creditors with additional insight on the seasonality of business operations that might otherwise get lost in annual reports. Why are sales and net income higher in the 2nd and 3rd quarters (compared to the 1st and 4th quarters) for Home Depot? Most home improvement projects occur in the warmer months. These months occur in the 2nd and 3rd quarters, so it is expected that sales would be higher in these quarters. Because the company sells home products for a profit, profitability is also higher in quarters with greater sales.

However, the downside to interim reporting is that the amounts often are less reliable. With a shorter reporting period, questions associated with estimation and allocation are magnified. For example, certain expenses often benefit an entire year's operations and yet are incurred primarily within a single interim period. Similarly, should smaller companies use lower tax rates in the earlier quarters and higher rates in later quarters as higher tax brackets are reached? Another result of shorter reporting periods is the intensified effect of unusual events such as material gains and losses. A second quarter casualty loss, for instance, that would reduce annual profits by 10% might reduce second quarter profits by 40% or more. Is it more realistic to allocate such a loss over the entire year? These and similar questions tend to hinge on the way we view an interim period in relation to the fiscal year. More specifically, should each interim period be viewed as a *discrete* reporting period or as an *integral part* of the annual period?

The fundamental debate regarding interim reporting centers on the choice between the *discrete* and *integral part* approaches.

Reporting Revenues and Expenses

Existing practice and current reporting requirements for interim reporting generally follow the viewpoint that interim reports are an integral part of annual statements, although the discrete approach is applied to some items. Most revenues and expenses are recognized using the same accounting principles applicable to annual reporting. Some modifications are necessary to help cause interim statements to relate better to annual statements. This is most evident in the way costs and expenses are recognized. Most are recognized in interim periods as incurred. But when an expenditure clearly benefits more than just the period in which it is incurred, the expense should be allocated among the periods benefited on an allocation basis consistent with the company's annual allocation

With only a few exceptions, the same accounting principles applicable to annual reporting are used for interim reporting.

procedures. For example, annual repair expenses, property tax expense, and advertising expenses incurred in the first quarter that clearly benefit later quarters are assigned to each quarter through the use of accruals and deferrals. Costs and expenses subject to year-end adjustments, such as depreciation expense, are estimated and allocated to interim periods in a systematic way. Similarly, income tax expense at each interim date should be based on estimates of the effective tax rate for the whole year. This would mean, for example, that if the estimated effective rate has changed since the previous interim period(s), the tax expense in the current period would be determined as the new rate times the cumulative pretax income to date, less the total tax expense reported in previous interim periods.

Reporting Unusual Items

On the other hand, major events such as discontinued operations should be reported separately in the interim period in which they occur. That is, these amounts should not be allocated among individual quarters within the fiscal year. The same is true for items that are unusual. Treatment of these items is more consistent with the discrete view than the integral part view.

Discontinued operations and unusual items are reported entirely within the interim period in which they occur.

LO4–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the income statement, statement of comprehensive income, and statement of cash flows.

International Financial Reporting Standards

Interim Reporting. *IAS No. 34* requires that a company apply the same accounting policies in its interim financial statements as it applies in its annual financial statements. Therefore, IFRS takes much more of a discrete-period approach than does U.S. GAAP. For example, costs for repairs, property taxes, and advertising that do not meet the definition of an asset at the end of an interim period are expensed entirely in the period in which they occur under IFRS, but are accrued or deferred

and then charged to each of the periods they benefit under U.S. GAAP. This difference would tend to make interim period income more volatile under IFRS than under U.S. GAAP. However, as in U.S. GAAP, income taxes are accounted for based on an estimate of the tax rate expected to apply for the entire year.³⁸

Earnings per Share

A second item that is treated in a manner consistent with the discrete view is earnings per share. EPS calculations for interim reports follow the same procedures as annual calculations that you will study in Chapter 19. The calculations are based on conditions actually existing during the particular interim period rather than on conditions estimated to exist at the end of the fiscal year.

Quarterly EPS calculations follow the same procedures as annual calculations.

Reporting Accounting Changes

Recall that we account for a change in accounting principle retrospectively, meaning we recast prior years' financial statements when we report those statements again in comparative form. In other words, we make those statements appear as if the newly adopted accounting method had been used in those prior years. It's the same with interim reporting. We retrospectively report a change made during an interim period in similar fashion. Then in financial reports of subsequent interim periods of the same fiscal year, we disclose how that change affected (a) income from continuing operations, (b) net income, and (c) related per share amounts for the postchange interim period.

Accounting changes made in an interim period are reported by retrospectively applying the changes to prior financial statements.

Minimum Disclosures

Complete financial statements are not required for interim period reporting, but certain minimum disclosures are required as follows:³⁹

- Sales, income taxes, and net income.
- Earnings per share.

- Seasonal revenues, costs, and expenses.
- Significant changes in estimates for income taxes.
- Discontinued operations and unusual items.
- Contingencies.
- Changes in accounting principles or estimates.
- Information about fair value of financial instruments and the methods and assumptions used to estimate fair values.
- Significant changes in financial position.

When fourth quarter results are not separately reported, material fourth quarter events, including year-end adjustments, should be reported in disclosure notes to annual statements.

Questions For Review of Key Topics

- Q 4-1** The income statement is a change statement. Explain what is meant by this.
- Q 4-2** What transactions are included in income from continuing operations? Briefly explain why it is important to segregate income from continuing operations from other transactions affecting net income.
- Q 4-3** Distinguish between operating and nonoperating income in relation to the income statement.
- Q 4-4** Briefly explain the difference between the single-step and multiple-step income statement formats.
- Q 4-5** Explain what is meant by the term *earnings quality*.
- Q 4-6** What are restructuring costs and where are they reported in the income statement?
- Q 4-7** Define intraperiod tax allocation. Why is the process necessary?
- Q 4-8** How are discontinued operations reported in the income statement?
- Q 4-9** What is meant by a change in accounting principle? Describe the possible accounting treatments for a mandated change in accounting principle.
- Q 4-10** Accountants very often are required to make estimates, and very often, those estimates prove incorrect. In what period(s) is the effect of a change in an accounting estimate reported?
- Q 4-11** The correction of a material error discovered in a year subsequent to the year the error was made is considered a prior period adjustment. Briefly describe the accounting treatment for prior period adjustments.
- Q 4-12** Define earnings per share (EPS). For which income statement items must EPS be disclosed?
- Q 4-13** Define comprehensive income. What are the two ways companies can present comprehensive income?
- Q 4-14** Describe the purpose of the statement of cash flows.
- Q 4-15** Identify and briefly describe the three categories of cash flows reported in the statement of cash flows.
- Q 4-16** Explain what is meant by noncash investing and financing activities pertaining to the statement of cash flows. Give an example of one of these activities.
- Q 4-17** Distinguish between the direct method and the indirect method for reporting the results of operating activities in the statement of cash flows.

IFRS

- Q 4-18** Describe the potential statement of cash flows classification differences between U.S. GAAP and IFRS.
- Q 4-19** Show the calculation of the following activity ratios: (1) the receivables turnover ratio, (2) the inventory turnover ratio, and (3) the asset turnover ratio. What information about a company do these ratios offer?
- Q 4-20** Show the calculation of the following profitability ratios: (1) the profit margin on sales, (2) the return on assets, and (3) the return on equity. What information about a company do these ratios offer?
- Q 4-21** Show the DuPont framework's calculation of the three components of return on equity. What information about a company do these ratios offer?
- Q 4-22** Interim reports are issued for periods of less than a year, typically as quarterly financial statements. Should these interim periods be viewed as separate periods or integral parts of the annual period?

IFRS

- Q 4-23** [Based on Appendix 4] What is the primary difference between interim reports under IFRS and U.S. GAAP?

Brief Exercises

BE 4-1 Single-step income statement LO4-1

The adjusted trial balance of Pacific Scientific Corporation on December 31, 2024, the end of the company's fiscal year, contained the following income statement items (\$ in millions): sales revenue, \$2,106; cost of goods sold, \$1,240; selling expense, \$126; general and administrative expense, \$105; interest expense, \$40; and gain on sale of investments, \$45. Income tax expense has not yet been recorded. The income tax rate is 25%.

Using the account balances, prepare a single-step income statement. An example of a single-step income statement can be found in  **Illustration 4-3** of this chapter.

Page 207

BE 4-2 Multiple-step income statement LO4-1, LO4-3

Refer to the situation described in  **BE 4-1**. If the company's accountant prepared a multiple-step income statement, what amount would appear in that statement for (a) operating income and (b) nonoperating income?

BE 4-3 Multiple-step income statement LO4-1, LO4-3

Refer to the situation described in  **BE 4-1**. Using the account balances, prepare a multiple-step income statement. An example of a multiple-step income statement can be found in  **Illustration 4-4** of this chapter.

BE 4-4 Multiple-step income statement LO4-1, LO4-3

The following is a partial year-end adjusted trial balance.

| Account Title | Debits | Credits |
|-----------------------------|-----------|-----------|
| Sales revenue | | \$300,000 |
| Loss on sale of investments | \$ 22,000 | |
| Interest revenue | | 4,000 |

| Account Title | Debits | Credits |
|------------------------------------|---------|---------|
| Cost of goods sold | 160,000 | |
| General and administrative expense | 40,000 | |
| Restructuring costs | 50,000 | |
| Selling expense | 25,000 | |
| Income tax expense | ? | |

Income tax expense has not yet been recorded. The income tax rate is 25%. Determine the following: (a) operating income (loss), (b) income (loss) before income taxes, and (c) net income (loss).

BE 4-5 Income from continuing operations LO4-3, LO4-5

The following are partial income statement account balances taken from the December 31, 2024, year-end trial balance of White and Sons, Inc.: restructuring costs, \$300,000; interest revenue, \$40,000; before-tax loss on discontinued operations, \$400,000; and loss on sale of investments, \$50,000. Income tax expense has not yet been recorded. The income tax rate is 25%.

Prepare the lower portion of the 2024 income statement beginning with \$800,000 income from continuing operations before income taxes. Include appropriate EPS disclosures. The company had 100,000 shares of common stock outstanding throughout the year.

BE 4-6 Discontinued operations LO4-4

On December 31, 2024, the end of the fiscal year, Revolutionary Industries completed the sale of its robotics business for \$9 million. The robotics business segment qualifies as a component of the entity, according to GAAP. Consider the following additional information:

- The book value of the assets of the segment was \$7 million at the time of the sale.
- The income from operations of the segment during 2024 was \$4 million.
- Pretax income from other continuing operations for the year totaled \$12 million.
- The income tax rate is 25%.

Prepare the lower portion of the 2024 income statement beginning with income from continuing operations before income taxes.

BE 4–7 Discontinued operations **LO4–4**

On December 31, 2024, the end of the fiscal year, California Microtech Corporation completed the sale of its semiconductor business for \$10 million. The semiconductor business segment qualifies as a component of the entity according to GAAP. Consider the following additional information:

- The book value of the assets of the segment at the time of the sale was \$8 million.
- The loss from operations of the segment during 2024 was \$3.6 million.
- Pretax income from other continuing operations for the year totaled \$5.8 million.
- The income tax rate is 25%.

Prepare the lower portion of the 2024 income statement beginning with income from continuing operations before income taxes.

BE 4–8 Discontinued operations **LO4–4**

Refer to the situation described in  **BE 4-7**. Assume that the semiconductor segment was not sold during 2024 but was held for sale at year-end. The estimated fair value of the segment's assets, less costs to sell, on December 31 was \$10 million. Prepare the lower portion of the 2024 income statement beginning with income from continuing operations before income taxes.

BE 4–9 Discontinued operations **LO4–4**

Refer to the situation described in  **BE 4-8**. Assume instead that the estimated fair value of the segment's assets, less costs to sell, on December 31 was \$7 million rather than \$10 million. Prepare the lower portion of the 2024 income statement beginning with income from continuing operations before income taxes.

BE 4–10 Comprehensive income **LO4–6**

Atlantic Beverage Company reported net income of \$650,000 for 2024. In addition, the company deferred a \$60,000 pretax loss on derivatives and had pretax net unrealized gains

on debt securities of \$40,000. Prepare a separate statement of comprehensive income for 2024. The company's income tax rate is 25%.

BE 4-11 Statement of cash flows; direct method  **LO4-8**

The following are summary cash transactions that occurred during the year for Hope Healthcare Co. (HHC):

Cash received from:

| | |
|--------------------------------|-----------|
| Customers | \$660,000 |
| Interest on notes receivable | 12,000 |
| Collection of notes receivable | 100,000 |
| Sale of land | 40,000 |
| Issuance of common stock | 200,000 |

Cash paid for:

| | |
|---------------------------|---------|
| Interest on notes payable | 18,000 |
| Purchase of equipment | 120,000 |
| Operating expenses | 440,000 |
| Dividends to shareholders | 30,000 |

Prepare the cash flows from operating activities section of HHC's statement of cash flows using the direct method.

BE 4-12 Statement of cash flows; investing and financing activities  **LO4-8**

Refer to the situation described in  **BE 4-11**. Prepare the cash flows from investing and financing activities sections of HHC's statement of cash flows.

BE 4-13 Statement of cash flows; indirect method  **LO4-8**

Net income of Trout Company was \$45,000. The accounting records reveal depreciation expense of \$80,000 as well as increases in prepaid rent, salaries payable, and income taxes payable of \$60,000, \$15,000, and \$12,000, respectively. Prepare the cash flows from operating activities section of Trout's statement of cash flows using the indirect method.

BE 4-14 IFRS; Statement of cash flows **LO4-8**, **LO4-9**

IFRS

Refer to the situation described in  **BE 4-11** and  **BE 4-12**. How might your solution to those brief exercises differ if Hope Healthcare Co. prepares its statement of cash flows according to International Financial Reporting Standards?

BE 4-15 Receivables and inventory turnover ratios **LO4-10**

Universal Calendar Company began the year with accounts receivable (net) and inventory balances of \$100,000 and \$80,000, respectively. Year-end balances for these accounts were \$120,000 and \$60,000, respectively. Sales for the year of \$600,000 generated a gross profit of \$200,000. Calculate the receivables and inventory turnover ratios for the year.

BE 4-16 Profitability ratios **LO4-10**

The 2024 income statement for Circuit TV and Appliance reported net sales of \$420,000 and net income of \$65,000. Average total assets for 2024 was \$800,000. Shareholders' equity at the beginning of the year was \$500,000, and \$20,000 was paid to shareholders as dividends. There were no other shareholders' equity transactions that occurred during the year. Calculate the profit margin on sales, return on assets, and return on equity for 2024.

BE 4-17 Profitability ratios **LO4-10**

Refer to the facts described in  **BE 4-16**. Show the DuPont framework's calculation of the three components of the 2024 return on equity for Circuit TV and Appliance.

BE 4-18 Inventory turnover ratio **LO4-10**

During 2024, Rogue Corporation reported net sales of \$600,000. Inventory at both the beginning and end of the year totaled \$75,000. The inventory turnover ratio for the year was 6.0. What amount of gross profit did the company report in its 2024 income statement?

Exercises

E 4-1 Operating versus nonoperating Income LO4-1

Pandora Corporation operates several factories in the Midwest that manufacture consumer electronics. The December 31, 2024, year-end trial balance contained the following income statement items:

| Account Title | Debits | Credits |
|------------------------------------|------------|--------------|
| Sales revenue | | \$12,500,000 |
| Interest revenue | | 50,000 |
| Loss on sale of investments | \$ 100,000 | |
| Cost of goods sold | 6,200,000 | |
| Selling expense | 620,000 | |
| General and administrative expense | 1,520,000 | |
| Interest expense | 40,000 | |
| Research and development expense | 1,200,000 | |
| Income tax expense | 900,000 | |

Required:

Calculate the company's operating income for the year.

E 4-2 Income statement format; single step and multiple step LO4-1

The following is a partial trial balance for the Green Star Corporation as of December 31, 2024:

| Account Title | Debits | Credits |
|------------------|--------|-------------|
| Sales revenue | | \$1,300,000 |
| Interest revenue | | 30,000 |

| Account Title | Debits | Credits |
|------------------------------------|-----------|---------|
| Gain on sale of investments | | 50,000 |
| Cost of goods sold | \$720,000 | |
| Selling expense | 160,000 | |
| General and administrative expense | 75,000 | |
| Interest expense | 40,000 | |
| Income tax expense | 130,000 | |

Required:

1. Prepare a single-step income statement by inserting the amounts above into the appropriate section.
2. Prepare a multiple-step income statement by inserting the amounts above into the appropriate section.

E 4-3 Income statement format; single step and multiple step

 **LO4-1**

The following is a partial trial balance for General Lighting Corporation as of December 31, 2024:

| Account Title | Debits | Credits |
|---|-----------|-------------|
| Sales revenue | | \$2,350,000 |
| Interest revenue | | 80,000 |
| Loss on sale of investments | \$ 22,500 | |
| Cost of goods sold | 1,200,300 | |
| Loss on inventory write-down (obsolescence) | 200,000 | |
| Selling expense | 300,000 | |
| General and administrative expense | 150,000 | |
| Interest expense | 90,000 | |

Income tax expense has not yet been recorded. The income tax rate is 25% of income before income taxes.

Required:

1. Prepare a single-step income statement. An example of a single-step income statement can be found in  **Illustration 4-3** of this chapter.
2. Prepare a multiple-step income statement. An example of a multiple-step income statement can be found in  **Illustration 4-4** of this chapter.

E 4-4 Multiple-step continuous statement of comprehensive income **LO4-1**, **LO4-6**

The trial balance for Lindor Corporation, a manufacturing company, for the year ended December 31, 2024, included the following accounts:

| Account Title | Debits | Credits |
|------------------------------------|-------------|-------------|
| Sales revenue | | \$2,300,000 |
| Cost of goods sold | \$1,400,000 | |
| Selling and administrative expense | 420,000 | |
| Interest expense | 40,000 | |
| Gain on debt securities | | 80,000 |

The gain on debt securities is unrealized and classified as other comprehensive income. The trial balance does not include the accrual for income taxes. Lindor's income tax rate is 25%.

Required:

Prepare a single, continuous multiple-step statement of comprehensive income.

E 4-5 Income statement presentation **LO4-1**

The following *single-step* income statement was prepared by the accountant of the Axel Corporation:

AXEL CORPORATION
Income Statement
For the Year Ended December 31, 2024

| | |
|---------------------|-----------|
| Revenues and gains: | |
| Sales revenue | \$592,000 |
| Interest revenue | 32,000 |

| | | |
|-----------------------------|---------------|-------------------------|
| Gain on sale of investments | | <u>86,000</u> |
| Total revenues and gains | | 710,000 |
| Expenses and losses: | | |
| Cost of goods sold | \$325,000 | |
| Selling expense | 67,000 | |
| Administrative expense | 87,000 | |
| Interest expense | 16,000 | |
| Restructuring costs | 55,000 | |
| Income tax expense | <u>40,000</u> | |
| Total expenses and losses | | 590,000 |
| Net Income | | <u><u>\$120,000</u></u> |

Required:

Prepare a multiple-step income statement applying generally accepted accounting principles. The income tax rate is 25%. Be sure to include appropriate headings and subtotal titles. An example of a multiple-step income statement can be found in  **Illustration 4-4** of this chapters.

E 4-6 Discontinued operations **LO4-4**, **LO4-5**

Chance Company had two operating divisions, one manufacturing farm equipment and the other office supplies. Both divisions are considered separate components as defined by generally accepted accounting principles. The farm equipment component had been unprofitable, and on September 1, 2024, the company adopted a plan to sell the assets of the division. Consider the following:

- The actual sale was completed on December 15, 2024, at a price of \$600,000. The book value of the division's assets was \$1,000,000, resulting in a before-tax loss of \$400,000 on the sale.
- The division incurred a before-tax operating loss from operations of \$120,000 from the beginning of the year through December 15.
- Chance's after-tax income from its continuing operations is \$550,000.
- The income tax rate is 25%.

Required:

Prepare an income statement beginning with income from continuing operations. Include appropriate EPS disclosures assuming that 100,000 shares of common stock were outstanding throughout the year.

E 4–7 Income statement presentation; discontinued operations; restructuring costs **LO4–1**, **LO4–3**, **LO4–4**

Esquire Comic Book Company had income before tax of \$1,000,000 in 2024 *before* considering the following material items:

1. Esquire sold one of its operating divisions, which qualified as a separate component according to generally accepted accounting principles. The before-tax loss on disposal was \$340,000. The division generated before-tax income from operations from the beginning of the year through disposal of \$500,000.
2. The company incurred restructuring costs of \$80,000 during the year.

Required:

Prepare the income statement for Esquire beginning with income from continuing operations. Assume an income tax rate of 25%. Ignore EPS disclosures.

E 4–8 Discontinued operations; disposal in subsequent year **LO4–4**

Kandon Enterprises, Inc., has two operating divisions; one manufactures machinery and the other breeds and sells horses. Both divisions are considered separate components as defined by generally accepted accounting principles. The horse division has been unprofitable, and, on November 15, 2024, Kandon adopted a formal plan to sell the division. The sale was completed on April 30, 2025. At December 31, 2024, the component was considered held for sale. Consider the following:

- On December 31, 2024, the company's fiscal year-end, the book value of the assets of the horse division was \$240,000. On that date, the fair value of the assets, less costs to sell, was \$200,000.
- The before-tax loss from operations of the division for the year was \$140,000.
- The after-tax income from continuing operations for 2024 was \$400,000.

- The company's effective tax rate is 25%.

Required:

1. Prepare a partial income statement for 2024 beginning with income from continuing operations. Ignore EPS disclosures.
2. Repeat requirement 1 assuming that the estimated net fair value of the horse division's assets was \$400,000, instead of \$200,000.

E 4–9 Discontinued operations; disposal in subsequent year; solving for unknown  **LO4–4**

On September 17, 2024, Ziltech, Inc., entered into an agreement to sell one of its divisions that qualifies as a component of the entity according to generally accepted accounting principles. By December 31, 2024, the company's fiscal year-end, the division had not yet been sold, but was considered held for sale. The net fair value (fair value minus costs to sell) of the division's assets at the end of the year was \$11 million. The pretax income from operations of the division during 2024 was \$4 million. Pretax income from continuing operations for the year totaled \$14 million. The income tax rate is 25%. Ziltech reported net income for the year of \$7.2 million.

Required:

Determine the book value of the division's assets on December 31, 2024.

E 4–10 Earnings per share  **LO4–5**

The Esposito Import Company had 1 million shares of common stock outstanding during 2024. Its income statement reported the following items: income from continuing operations, \$5 million; loss from discontinued operations, \$1.6 million. All of these amounts are net of tax.

Required:

Prepare the 2024 EPS presentation for the Esposito Import Company.

E 4–11 Comprehensive income  **LO4–6**

The Massoud Consulting Group reported net income of \$1,354,000 for its fiscal year ended December 31, 2024. In addition, during the year the company experienced a positive foreign

currency translation adjustment of \$240,000 and an unrealized loss on debt securities of \$80,000. The company's effective tax rate on all items affecting comprehensive income is 25%. Each component of other comprehensive income is displayed net of tax.

Required:

Prepare a separate statement of comprehensive income for 2024.

E 4–12 Statement of cash flows; classifications  **LO4–8**

The statement of cash flows classifies all cash inflows and outflows into one of the three categories shown below and lettered from a through c. In addition, certain transactions that do not involve cash are reported in the statement as noncash investing and financing activities, labeled d.

- a. Operating activities
- b. Investing activities
- c. Financing activities
- d. Noncash investing and financing activities

Required:

For each of the following transactions, use the letters above to indicate the appropriate classification category.

1. _____ Purchase of equipment for cash.
2. _____ Payment of employee salaries.
3. _____ Collection of cash from customers.
4. _____ Cash proceeds from notes payable.
5. _____ Purchase of common stock of another corporation for cash.
6. _____ Issuance of common stock for cash.
7. _____ Sale of equipment for cash.
8. _____ Payment of interest on notes payable.
9. _____ Issuance of bonds payable in exchange for land and building.
10. _____ Payment of cash dividends to shareholders.
11. _____ Payment of principal on notes payable

E 4-13 Statement of cash flows preparation; direct method

LO4-8

The following summary transactions occurred during 2024 for Bluebonnet Bakers:

Cash Received from:

| | |
|--------------------------------|-----------|
| Collections from customers | \$380,000 |
| Interest on notes receivable | 6,000 |
| Collection of notes receivable | 50,000 |
| Sale of investments | 30,000 |
| Issuance of notes payable | 100,000 |

Cash Paid for:

| | |
|---------------------------|---------|
| Purchase of inventory | 160,000 |
| Interest on notes payable | 5,000 |
| Purchase of equipment | 85,000 |
| Salaries to employees | 90,000 |
| Payment of notes payable | 25,000 |
| Dividends to shareholders | 20,000 |

The balance of cash and cash equivalents at the beginning of 2024 was \$17,000.

Required:

Prepare a statement of cash flows for 2024 for Bluebonnet Bakers. Use the direct method for reporting operating activities.

E 4-14 IFRS; statement of cash flows LO4-8, LO4-9

IFRS

Refer to the situation described in  E 4-13.

Required:

Prepare the statement of cash flows assuming that Bluebonnet prepares its financial statements according to International Financial Reporting Standards. Where IFRS allows flexibility, use the classification used most often in IFRS financial statements.

E 4–15 Indirect method; reconciliation of net income to net cash flows from operating activities LO4–8

The accounting records of Hampton Company provided the data below (\$ in thousands).

| | |
|---------------------------------|----------|
| Net income | \$17,300 |
| Depreciation expense | 7,800 |
| Increase in accounts receivable | 4,000 |
| Decrease in inventory | 5,500 |
| Decrease in prepaid insurance | 1,200 |
| Decrease in salaries payable | 2,700 |
| Increase in interest payable | 800 |

Required:

Prepare a reconciliation of net income to net cash flows from operating activities.

E 4–16 Statement of cash flows; directly from transactions LO4–8

The following transactions occurred during March 2024 for the Wainwright Corporation. The company owns and operates a wholesale warehouse. [These are the same transactions analyzed in  Exercise 2–1, when we determined their effect on elements of the accounting equation.]

1. Issued 30,000 shares of common stock in exchange for \$300,000 in cash.
2. Purchased equipment at a cost of \$40,000. Cash of \$10,000 was paid and a note payable to the seller was signed for the balance owed.
3. Purchased inventory on account at a cost of \$90,000. The company uses the perpetual inventory system.
4. Credit sales for the month totaled \$120,000. The cost of the goods sold was \$70,000.
5. Paid \$5,000 in rent on the warehouse building for the month of March.
6. Paid \$6,000 to an insurance company for fire and liability insurance for a one-year period beginning April 1, 2024.
7. Paid \$70,000 on account for the inventory purchased in 3.
8. Collected \$55,000 from customers on account.

9. Recorded depreciation expense of \$1,000 for the month on the equipment.

Required:

1. Analyze each transaction and classify each as a financing, investing, and/or operating activity (a transaction can represent more than one type of activity). In doing so, also indicate the cash effect of each, if any. If there is no cash effect, simply place a check mark (✓) in the appropriate column(s).

Example:

| Operating | Investing | Financing |
|-----------|-----------|-----------|
| 1. | | \$300,000 |

2. Prepare a statement of cash flows, using the direct method to present cash flows from operating activities. Assume the cash balance at the beginning of the month was \$40,000.

E 4-17 Statement of cash flows; indirect method  **LO4-8**

Cemptex Corporation prepares its statement of cash flows using the indirect method to report operating activities. Net income for the 2024 fiscal year was \$624,000. Depreciation and amortization expense of \$87,000 was included with operating expenses in the income statement. The following information describes the changes in current assets and liabilities other than cash:

| | |
|----------------------------------|----------|
| Decrease in accounts receivable | \$22,000 |
| Increase in inventory | 9,200 |
| Increase in prepaid expenses | 8,500 |
| Increase in salaries payable | 10,000 |
| Decrease in income taxes payable | 14,000 |

Required:

Prepare the operating activities section of the 2024 statement of cash flows.

E 4-18 Statement of cash flows; indirect method  **LO4-8**

Chew Corporation prepares its statement of cash flows using the indirect method of reporting operating activities. Net income for the 2024 fiscal year was \$1,250,000.

Depreciation expense of \$140,000 was included with operating expenses in the income statement. The following information describes the changes in current assets and liabilities other than cash:

| | |
|----------------------------------|-----------|
| Increase in accounts receivable | \$152,000 |
| Decrease in inventory | 108,000 |
| Decrease prepaid expenses | 62,000 |
| Decrease in salaries payable | 30,000 |
| Increase in income taxes payable | 44,000 |

Required:

Calculate cash flows from operating activities for 2024.

E 4-19 IFRS; statement of cash flows  **LO4-8**,  **LO4-9**

IFRS

The statement of cash flows for the year ended December 31, 2024, for Bronco Metals is presented below.

BRONCO METALS
Statement of Cash Flows
For the Year Ended December 31, 2024

Cash flows from operating activities:

| | |
|--------------------------------------|----------------|
| Collections from customers | \$353,000 |
| Interest on notes receivable | 4,000 |
| Dividends received from investments | 2,400 |
| Purchase of inventory | (186,000) |
| Payment of operating expenses | (67,000) |
| Payment of interest on notes payable | <u>(8,000)</u> |

Net cash flows from operating activities \$ 98,400

Cash flows from investing activities:

| | |
|--------------------------------|------------------|
| Collection of notes receivable | 100,000 |
| Purchase of equipment | <u>(154,000)</u> |

| | | |
|--|-----------------|-------------------------|
| Net cash flows from investing activities | | (54,000) |
| Cash flows from financing activities: | | |
| Proceeds from issuance of common stock | 200,000 | |
| Dividends paid to shareholders | <u>(40,000)</u> | |
| Net cash flows from financing activities | | <u>160,000</u> |
| Net increase in cash | | 204,400 |
| Cash and cash equivalents, January 1 | | 28,600 |
| Cash and cash equivalents, December 31 | | <u><u>\$233,000</u></u> |

Required:

Page 214

Prepare the statement of cash flows assuming that Bronco prepares its financial statements according to International Financial Reporting Standards. Where IFRS allows flexibility, use the classification used most often in IFRS financial statements.

E 4–20 Statement of cash flows; indirect method  **LO4–8**

Presented below is the 2024 income statement and comparative balance sheet information for Tiger Enterprises.

TIGER ENTERPRISES
Income Statement
For the Year Ended December 31, 2024

(\$ in thousands)

| | | |
|------------------------------------|--------------|--------------|
| Sales revenue | | \$7,000 |
| Operating expenses: | | |
| Cost of goods sold | \$3,360 | |
| Depreciation expense | 240 | |
| Insurance expense | 100 | |
| General and administrative expense | <u>1,800</u> | |
| Total operating expenses | | <u>5,500</u> |
| Income before income taxes | | 1,500 |
| Income tax expense | | (600) |

| | | |
|--|--------------------------|--------------------------|
| Net income | | <u>\$ 900</u> |
| | | |
| Balance Sheet Information (\$ in thousands) | Dec. 31, 2024 | Dec. 31, 2023 |
| Assets: | | |
| Cash | \$ 300 | \$ 200 |
| Accounts receivable | 750 | 830 |
| Inventory | 640 | 600 |
| Prepaid insurance | 50 | 20 |
| Equipment | 2,100 | 1,800 |
| Less: Accumulated depreciation | (840) | (600) |
| Total assets | <u>\$3,000</u> | <u>\$2,850</u> |
| Liabilities and Shareholders' Equity: | | |
| Accounts payable | \$ 300 | \$ 360 |
| Accrued liabilities (for general & admin. expense) | 300 | 400 |
| Income taxes payable | 200 | 150 |
| Notes payable (due 12/31/2025) | 800 | 600 |
| Common stock | 900 | 800 |
| Retained earnings | 500 | 540 |
| Total liabilities and shareholders' equity | <u>\$3,000</u> | <u>\$2,850</u> |

Required:

Prepare Tiger's statement of cash flows, using the indirect method to present cash flows from operating activities. (*Hint:* You will have to calculate dividend payments).

E 4-21 Statement of cash flows; direct method  **LO4-8**

Refer to the situation described in  **E 4-20**.

Required:

Prepare the cash flows from operating activities section of Tiger's 2024 statement of cash flows using the direct method. Assume that all purchases and sales of inventory are on account, and that there are no anticipated bad debts for accounts receivable. (*Hint:* Use the Concept Review Exercise at the end of Part B as a guide to help determine your answers).

E 4–22 FASB codification research LO4–5

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine each of the following:

1. The topic number (Topic XXX) that provides the accounting for earnings per share.
2. The specific eight-digit Codification citation (XXX-XX-XX-X) that describes the additional information for earnings per share that must be included in the notes to the financial statements.
3. The specific eight-digit Codification citation (XXX-XX-XX-X) that requires disclosure of transactions affecting the number of common shares outstanding that occur after the most recent reporting period but before the financial statements are issued.

E 4–23 FASB codification research LO4–5, LO4–6, LO4–8

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) for each of the following:

1. The calculation of the weighted average number of shares for basic earnings per share purposes.
2. The alternative formats permissible for reporting comprehensive income.
3. The four stated objectives of the statement of cash flows.

E 4–24 Concepts; terminology  **LO4–1**,  **LO4–2**,  **LO4–3**,
 **LO4–4**,  **LO4–5**,  **LO4–6**,  **LO4–7**,  **LO4–8**

Listed below are several terms and phrases associated with income statement presentation and the statement of cash flows. Pair each item from List A (by letter) with the item from List B that is most appropriately associated with it.

| List A | | List B |
|-----------|------------------------------------|---|
| _____ 1. | Intraperiod tax allocation | a. An other comprehensive income item. |
| _____ 2. | Comprehensive income | b. Starts with net income and works backwards to convert to cash. |
| _____ 3. | Unrealized gain on debt securities | c. Reports the cash effects of each operating activity directly on the statement. |
| _____ 4. | Operating income | d. Correction of a material error of a prior period. |
| _____ 5. | A discontinued operation | e. Related to the external financing of the company. |
| _____ 6. | Earnings per share | f. Associates tax with income statement item. |
| _____ 7. | Prior period adjustment | g. Total nonowner change in equity. |
| _____ 8. | Financing activities | h. Related to the transactions entering into the determination of net income. |
| _____ 9. | Operating activities (SCF) | i. Related to the acquisition and disposition of long-term assets. |
| _____ 10. | Investing activities | j. Required disclosure for publicly traded corporation. |
| _____ 11. | Direct method | k. A component of an entity. |
| _____ 12. | Indirect method | l. Directly related to principal revenue-generating activities. |

E 4–25 Inventory turnover; calculation and evaluation
 **LO4–10**

The following is a portion of the condensed income statement for Rowan, Inc., a manufacturer of plastic containers:

| | | |
|---------------------------|------------------|--------------------------|
| Net sales | | \$2,460,000 |
| Less: Cost of goods sold: | | |
| Inventory, January 1 | \$ 630,000 | |
| Net purchases | 1,900,000 | |
| Inventory, December 31 | <u>(690,000)</u> | 1,840,000 |
| Gross profit | | <u><u>\$ 620,000</u></u> |

Required:

1. Determine Rowan's inventory turnover.
2. What information does this ratio provide?

E 4–26 Evaluating efficiency of asset management  **LO4–10**

The 2024 income statement of Anderson Medical Supply Company reported net sales of \$8 million, cost of goods sold of \$4.8 million, and net income of \$800,000. The following table shows the company's comparative balance sheets for 2024 and 2023:

| | Page 216 | |
|---|-------------------|----------------|
| | (\$ in thousands) | |
| | <u>2024</u> | <u>2023</u> |
| Assets | | |
| Cash | \$ 300 | \$ 380 |
| Accounts receivable | 700 | 500 |
| Inventory | 900 | 700 |
| Property, plant, and equipment (net) | 2,400 | 2,120 |
| Total assets | <u>\$4,300</u> | <u>\$3,700</u> |
| Liabilities and Shareholders' Equity | | |
| Current liabilities | \$960 | \$830 |
| Bonds payable | 1,200 | 1,200 |
| Common stock | 1,000 | 1,000 |

| | | |
|--|----------------|----------------|
| Retained earnings | 1,140 | 670 |
| Total liabilities and shareholders' equity | <u>\$4,300</u> | <u>\$3,700</u> |

Some industry averages for Anderson's line of business are

| | |
|---------------------------|-----------|
| Inventory turnover | 5 times |
| Average collection period | 25 days |
| Asset turnover | 1.8 times |

Required:

1. Determine the following ratios for 2024:
 - a. Inventory turnover
 - b. Receivables turnover
 - c. Average collection period
 - d. Asset turnover
2. Assess Anderson's asset management relative to its industry.

E 4-27 Profitability ratios  **LO4-10**

The following condensed information was reported by Peabody Toys, Inc., for 2024 and 2023:

| | (\$ in thousands) | |
|--------------------------------------|-------------------|----------------|
| | <u>2024</u> | <u>2023</u> |
| Income statement information | | |
| Net sales | \$5,200 | \$4,200 |
| Net income | 180 | 124 |
| Balance sheet information | | |
| Current assets | \$ 800 | \$ 750 |
| Property, plant, and equipment (net) | 1,100 | 950 |
| Total assets | <u>\$1,900</u> | <u>\$1,700</u> |
| Current liabilities | \$ 600 | \$ 450 |

| | | |
|--------------------------------------|----------------|----------------|
| Long-term liabilities | 750 | 750 |
| Common stock | 400 | 400 |
| Retained earnings | 150 | 100 |
| Liabilities and shareholders' equity | <u>\$1,900</u> | <u>\$1,700</u> |

Required:

- Determine the following ratios for 2024:
 - Profit margin on sales
 - Return on assets
 - Return on equity
- Determine the amount of dividends paid to shareholders during 2024.

E 4–28 DuPont analysis  **LO4–10**

This exercise is based on the Peabody Toys, Inc., data from  **E 4–27**.

Required:

- Determine the following components of the DuPont framework for 2024:
 - Profit margin on sales
 - Asset turnover
 - Equity multiplier
 - Return on equity
- Write an equation that relates these components in calculating ROE. Use the Peabody Toys data to show that the equation is correct.

E 4–29 Interim financial statements; income tax expense

 **Appendix 4**

Joplin Laminating Corporation reported income before income taxes during the first three quarters, and management's estimates of the annual effective tax rate at the end of each quarter as shown below:

| | Quarter | | |
|-------------------------------------|----------|----------|-----------|
| | First | Second | Third |
| Income before income taxes | \$50,000 | \$40,000 | \$100,000 |
| Estimated annual effective tax rate | 22% | 25% | 24% |

Required:

Determine the income tax expense to be reported in the income statement in each of the three quarterly reports.

E 4–30 Interim reporting; recognizing expenses  **Appendix 4**

Security-Rand Corporation determines executive incentive compensation at the end of its fiscal year. At the end of the first quarter, management estimated that the amount will be \$300 million. Depreciation expense for the year is expected to be \$60 million. Also during the quarter, the company realized a gain of \$23 million from selling two of its manufacturing plants.

Required:

What amounts for these items should be reported in the first quarter's income statement?

E 4–31 Interim financial statements; reporting expenses  **Appendix 4**

Shields Company is preparing its interim report for the second quarter ending June 30. The following payments were made during the first two quarters:

Required:

| Expenditure | Date | Amount |
|---|----------|-----------|
| Annual advertising | January | \$800,000 |
| Property tax for the fiscal year | February | 350,000 |
| Annual equipment repairs | March | 260,000 |
| One-time research and development fee to consultant | May | 96,000 |

For each expenditure, indicate the amount that would be reported in the quarterly income statements for the periods ending March 31, June 30, September 30, and December 31.

E 4-32 Interim financial statements Appendix 4

IFRS

Assume the same facts as in  E 4-31, but that Shields Company reports under IFRS. For each expenditure, indicate the amount that would be reported in the quarterly income statements for the periods ending March 31, June 30, September 30, and December 31.

Problems

P 4–1 Comparative income statements; multiple-step format

LO4–1, LO4–3, LO4–4, LO4–5

Selected information about income statement accounts for the Reed Company is presented below (the company's fiscal year ends on December 31).

| | 2024 | 2023 |
|--|-------------|-------------|
| Sales revenue | \$4,400,000 | \$3,500,000 |
| Cost of goods sold | 2,860,000 | 2,000,000 |
| Administrative expense | 800,000 | 675,000 |
| Selling expense | 360,000 | 302,000 |
| Interest revenue | 150,000 | 140,000 |
| Interest expense | 200,000 | 200,000 |
| Loss on sale of assets of discontinued component | 48,000 | — |

On July 1, 2024, the company adopted a plan to discontinue a division that qualifies Page 218 as a component of an entity as defined by GAAP. The assets of the component were sold on September 30, 2024, for \$48,000 less than their book value. Results of operations for the component (*included* in the above account balances) were as follows:

| | 1/1/2024–9/30/2024 | 2023 |
|-------------------------------|--------------------|------------------|
| Sales revenue | \$400,000 | \$500,000 |
| Cost of goods sold | (290,000) | (320,000) |
| Administrative expense | (50,000) | (40,000) |
| Selling expense | (20,000) | (20,000) |
| Operating income before taxes | <u>\$ 40,000</u> | <u>\$120,000</u> |

In addition to the account balances above, several events occurred during 2024 that have *not* yet been reflected in the above accounts:

1. A fire caused \$50,000 in uninsured damages to the main office building. The fire was considered to be an unusual event.
2. Inventory that had cost \$40,000 had become obsolete because a competitor introduced a better product. The inventory was written down to its scrap value of \$5,000.
3. Income taxes have not yet been recorded.

Required:

Prepare a multiple-step income statement for the Reed Company for 2024, showing 2023 information in comparative format, including income taxes computed at 25% and EPS disclosures assuming 300,000 shares of outstanding common stock.

P 4-2 Discontinued operations LO4-4

The following condensed income statements of the Jackson Holding Company are presented for the two years ended December 31, 2024 and 2023:

| | 2024 | 2023 |
|--------------------------|----------------------------|--------------------------|
| Sales revenue | \$15,000,000 | \$9,600,000 |
| Cost of goods sold | <u>9,200,000</u> | <u>6,000,000</u> |
| Gross profit | 5,800,000 | 3,600,000 |
| Operating expenses | <u>3,200,000</u> | <u>2,600,000</u> |
| Operating income | 2,600,000 | 1,000,000 |
| Gain on sale of division | <u>600,000</u> | <u>—</u> |
| | 3,200,000 | 1,000,000 |
| Income tax expense | 800,000 | 250,000 |
| Net income | <u><u>\$ 2,400,000</u></u> | <u><u>\$ 750,000</u></u> |

On October 15, 2024, Jackson entered into a tentative agreement to sell the assets of one of its divisions. The division qualifies as a component of an entity as defined by GAAP. The division was sold on December 31, 2024, for \$5,000,000. Book value of the division's assets was \$4,400,000. The division's contribution to Jackson's operating income before-tax for each year was as follows:

| | |
|------|-----------|
| 2024 | \$400,000 |
| 2023 | \$300,000 |

Assume an income tax rate of 25%.

Required:

1. Prepare revised income statements according to generally accepted accounting principles, beginning with income from continuing operations before income taxes. Ignore EPS disclosures.
2. Assume that by December 31, 2024, the division had not yet been sold but was considered held for sale. The fair value of the division's assets on December 31 was \$5,000,000. What would be the amount presented for discontinued operations?
3. Assume that by December 31, 2024, the division had not yet been sold but was considered held for sale. The fair value of the division's assets on December 31 was \$3,900,000. What would be the amount presented for discontinued operations?

P 4-3 Income statement presentation; discontinued operations; accounting error  **LO4-4**,  **LO4-5**

For the year ending December 31, 2024, Olivo Corporation had income from continuing operations before taxes of \$1,200,000 before considering the following transactions and events. All of the items described below are before taxes and the amounts should be considered material.

1. In November 2024, Olivo sold its PizzaPasta restaurant chain that qualified as a component of an entity. The company had adopted a plan to sell the chain in May 2024. The income from operations of the chain from January 1, 2024, through November was \$160,000 and the loss on sale of the chain's assets was \$300,000.
2. In 2024, Olivo sold one of its six factories for \$1,200,000. At the time of the sale, the factory had a book value of \$1,100,000. The factory was not considered a component of

the entity.

3. In 2022, Olivo's accountant omitted the annual adjustment for patent amortization expense of \$120,000. The error was not discovered until December 2024.

Required:

Prepare Olivo's income statement, beginning with income from continuing operations before taxes, for the year ended December 31, 2024. Assume an income tax rate of 25%. Ignore EPS disclosures.

P 4-4 Restructuring costs; discontinued operations; accounting error  **LO4-3**,  **LO4-4**,  **LO4-5**

The preliminary 2024 income statement of Alexian Systems, Inc., is presented below:

| ALEXIAN SYSTEMS, INC. | |
|---|----------------------|
| Income Statement | |
| For the Year Ended December 31, 2024 | |
| (\$ in millions, except earnings per share) | |
| Revenues and gains: | |
| Sales revenue | \$ 425 |
| Interest revenue | 4 |
| Other income | <u>126</u> |
| Total revenues and gains | <u>555</u> |
| Expenses: | |
| Cost of goods sold | 245 |
| Selling and administrative expense | 154 |
| Income tax expense | <u>39</u> |
| Total expenses | 438 |
| Net Income | <u>\$ 117</u> |
| Earnings per share | <u><u>\$5.85</u></u> |

Additional Information:

1. Selling and administrative expense includes \$26 million in restructuring costs.

2. Included in other income is \$120 million in income from a discontinued operation. This consists of \$90 million in operating income and a \$30 million gain on disposal. The remaining \$6 million is from the gain on sale of investments.
3. Cost of Goods Sold in 2024 includes an increase of \$10 million to correct an understatement of Cost of Goods Sold in 2023. The amount is material.

Required:

For each of the three additional facts listed in the additional information, discuss the appropriate presentation of the item described. Do not prepare a revised statement.

P 4–5 Income statement presentation; restructuring costs; discontinued operations; accounting error  **LO4–1**,  **LO4–3**,  **LO4–4**,  **LO4–5**

[This is a variation of the previous problem focusing on income statement presentation.]

Required:

Refer to the information presented in  **P 4–4**. Prepare a revised income statement for 2024 reflecting the additional facts. Use a multiple-step format similar to  **Illustration 4–4** of this chapter to prepare income from continuing operations, and then add to this the discontinued operations portion of the income statement. Assume that an income tax rate of 25% applies to all income statement items, and that 20 million shares of common stock were outstanding throughout the year.

P 4–6 Income statement presentation; discontinued operations; EPS  **LO4–1**,  **LO4–3**,  **LO4–4**,  **LO4–5**

Rembrandt Paint Company had the following income statement items for the year ended December 31, 2024 (\$ in thousands):

| | |
|------------------------------------|----------|
| Sales revenue | \$18,000 |
| Interest revenue | 100 |
| Interest expense | 300 |
| Cost of goods sold | 10,500 |
| Selling and administrative expense | 2,500 |

In addition, during the year, the company completed the disposal of its plastics business and incurred a loss from operations of \$1.6 million and a gain on disposal of the component's assets of \$2 million. There were 500,000 shares of common stock outstanding throughout 2024. Income tax expense has not yet been recorded. The income tax rate is 25% on all items of income (loss).

Required:

Prepare a multiple-step income statement for 2024, including EPS disclosures. Use a multiple-step format similar to [Illustration 4-4](#) of this chapter to prepare income from continuing operations, and then add to this the discontinued operations portion of the income statement.

P 4-7 Income statement presentation; statement of comprehensive income; unusual items [LO4-1](#), [LO4-3](#) through [LO4-6](#)

The following income statement items appeared on the adjusted trial balance of Schembri Manufacturing Corporation for the year ended December 31, 2024 (\$ in thousands): sales revenue, \$15,300; cost of goods sold, \$6,200; selling expenses, \$1,300; general and administrative expenses, \$800; interest revenue, \$40; interest expense, \$180. Income taxes have not yet been recorded. The company's income tax rate is 25% on all items of income or loss. These revenue and expense items appear in the company's income statement every year. The company's controller, however, has asked for your help in determining the appropriate treatment of the following nonrecurring transactions that also occurred during 2024 (\$ in thousands). All transactions are material in amount.

1. Investments were sold during the year at a loss of \$220. Schembri also had an unrealized gain of \$320 for the year on investments in debt securities that qualify as components of comprehensive income.
2. One of the company's factories was closed during the year. Restructuring costs incurred were \$1,200.

3. During the year, Schembri completed the sale of one of its operating divisions that qualifies as a component of the entity according to GAAP. The division had incurred a loss from operations of \$560 in 2024 prior to the sale, and its assets were sold at a gain of \$1,400.
4. In 2024, the company's accountant discovered that depreciation expense in 2023 for the office building was understated by \$200. The amount is considered material.
5. Negative foreign currency translation adjustment for the year totaled \$240.

Required:

1. Prepare Schembri's single, continuous multiple-step statement of comprehensive income for 2024, including earnings per share disclosures. There were 1,000,000 shares of common stock outstanding at the beginning of the year and an additional 400,000 shares were issued on July 1, 2024. Use a multiple-step format similar to the one in the Concept Review Exercise at the end of Part A of this chapter.
2. Prepare a separate statement of comprehensive income for 2024.

P 4–8 Multiple-step statement of income and comprehensive income  **LO4–1**,  **LO4–3**,  **LO4–5**,  **LO4–6**

Duke Company's records show the following account balances at December 31, 2024:

| | |
|------------------------------------|--------------|
| Sales revenue | \$15,000,000 |
| Cost of goods sold | 9,000,000 |
| General and administrative expense | 1,000,000 |
| Selling expense | 500,000 |
| Interest expense | 700,000 |

Income tax expense has not yet been determined. The following events also occurred during 2024. All transactions are material in amount.

1. \$300,000 in restructuring costs were incurred in connection with plant closings.
2. Inventory costing \$400,000 was written off as obsolete. Material losses of this type are considered to be unusual.
3. It was discovered that depreciation expense for 2023 was understated by \$50,000 due to a mathematical error. The amount is considered material.

4. The company experienced a negative foreign currency translation adjustment of \$200,000 and had an unrealized gain on debt securities of \$180,000.

Required:

Prepare a single, continuous multiple-step statement of comprehensive income for 2024. The company's effective tax rate on all items affecting comprehensive income is 25%. Each component of other comprehensive income should be displayed net of tax. Ignore EPS disclosures. Use a multiple-step format similar to the one in the Concept Review Exercise at the end of Part A of this chapter (excluding discontinued operations shown there).

P 4–9 Statement of cash flows  **LO4–8**

The Diversified Portfolio Corporation provides investment advice to customers. A condensed income statement for the year ended December 31, 2024, appears below:

| | |
|----------------------------|-------------------------|
| Service revenue | \$900,000 |
| Operating expenses | <u>700,000</u> |
| Income before income taxes | 200,000 |
| Income tax expense | <u>50,000</u> |
| Net income | <u><u>\$150,000</u></u> |

The following balance sheet information also is available:

| | 12/31/2024 | 12/31/2023 |
|---|------------|------------|
| Cash | \$305,000 | \$ 70,000 |
| Accounts receivable | 120,000 | 100,000 |
| Accrued liabilities (for operating expenses) | 70,000 | 60,000 |
| Income taxes payable | 10,000 | 15,000 |

In addition, the following transactions took place during the year:

1. Common stock was issued for \$100,000 in cash.
2. Long-term investments were sold for \$50,000 in cash. The original cost of the investments also was \$50,000.
3. \$80,000 in cash dividends was paid to shareholders.

4. The company has no outstanding debt, other than those payables listed above.
5. Operating expenses include \$30,000 in depreciation expense.

Required:

1. Prepare a statement of cash flows for 2024 for the Diversified Portfolio Corporation. Use the direct method for reporting operating activities. Use a format similar to the one in the Concept Review Exercise at the end of Part B of this chapter.
2. Prepare the cash flows from operating activities section of Diversified's 2024 statement of cash flows using the indirect method. Use a format similar to the one in the Concept Review Exercise at the end of Part B of this chapter.

P 4–10 Integration of financial statements;  **Chapters 3** and **4**  **LO4–8**

The chief accountant for Grandview Corporation provides you with the company's 2024 statement of cash flows and income statement. The accountant has asked for your help with some missing figures in the company's comparative balance sheets. These financial statements are shown next (\$ in millions).

GRANDVIEW CORPORATION

Statement of Cash Flows

For the Year Ended December 31, 2024

Cash Flows from Operating Activities:

| | | |
|---|------------|--|
| Collections from customers | \$71 | |
| Payment to suppliers | (30) | |
| Payment of general & administrative expense | (18) | |
| Payment of income taxes | <u>(9)</u> | |

| | | |
|--|--|------|
| Net cash flows from operating activities | | \$14 |
|--|--|------|

Cash Flows from Investing Activities:

| | | |
|---------------------|--|----|
| Sale of investments | | 65 |
|---------------------|--|----|

Cash Flows from Financing Activities:

| | | |
|--|------------|-------------|
| Issuance of common stock | 10 | |
| Payment of dividends | <u>(3)</u> | |
| Net cash flows from financing activities | | 7 |
| Net increase in cash | | <u>\$86</u> |

GRANDVIEW CORPORATION
Income Statement
For the Year Ended December 31, 2024

| | | |
|------------------------------------|-----------|-------------|
| Sales revenue | | \$80 |
| Cost of goods sold | | <u>32</u> |
| Gross profit | | 48 |
| Operating expenses: | | |
| General and administrative expense | \$18 | |
| Depreciation expense | <u>10</u> | |
| Total operating expenses | | <u>28</u> |
| Operating income | | 20 |
| Other income: | | |
| Gain on sale of investments | | <u>15</u> |
| Income before income taxes | | 35 |
| Income tax expense | | <u>7</u> |
| Net income | | <u>\$28</u> |

| Total liabilities and shareholders' equity | <u>\$?</u> | <u>\$?</u> |

Required:

1. Calculate the missing amounts.
2. Prepare the operating activities section of Grandview's 2024 statement of cash flows using the indirect method. Use a format similar to the one in the Concept Review Exercise at the end of Part B of this chapter.

P 4–11 Statement of cash flows; indirect method  **LO4–8**

Presented below are the 2024 income statement and comparative balance sheets for Santana Industries.

SANTANA INDUSTRIES
Income Statement
For the Year Ended December 31, 2024
(\$ in thousands)

| | |
|-----------------|--------------|
| Sales revenue | \$14,250 |
| Service revenue | <u>3,400</u> |

| | | |
|------------------------------------|--------------|------------------------|
| Total revenue | | \$17,650 |
| Operating expenses: | | |
| Cost of goods sold | 7,200 | |
| Selling expense | 2,400 | |
| General and administrative expense | <u>1,500</u> | |
| Total operating expenses | | <u>11,100</u> |
| Operating income | | 6,550 |
| Interest expense | | <u>150</u> |
| Income before income taxes | | 6,400 |
| Income tax expense | | <u>1,600</u> |
| Net income | | <u><u>\$ 4,800</u></u> |

| Balance Sheet Information (\$ in thousands) | <u>Dec. 31,</u> <u>2024</u> | <u>Dec. 31,</u> <u>2023</u> |
|--|--|--|
| Assets: | | |
| Cash | \$ 8,300 | \$ 2,200 |
| Accounts receivable | 2,500 | 2,200 |
| Inventory | 4,000 | 3,000 |
| Prepaid rent | 150 | 300 |
| Equipment | 14,500 | 12,000 |
| Less: Accumulated depreciation | (5,100) | (4,500) |
| Total assets | <u><u>\$24,350</u></u> | <u><u>\$15,200</u></u> |
| Liabilities and shareholders' equity: | | |
| Accounts payable | \$ 1,400 | \$ 1,100 |
| Interest payable | 100 | 0 |
| Deferred revenue | 800 | 600 |
| Income taxes payable | 550 | 800 |
| Notes payable (due 12/31/2026) | 5,000 | 0 |
| Common stock | 10,000 | 10,000 |
| Retained earnings | 6,500 | 2,700 |

| | | |
|--|-----------------|-----------------|
| Total liabilities and shareholders' equity | <u>\$24,350</u> | <u>\$15,200</u> |
|--|-----------------|-----------------|

Additional information for the 2024 fiscal year (\$ in thousands):

Page 223

1. Cash dividends of \$1,000 were declared and paid.
2. Equipment costing \$4,000 was purchased with cash.
3. Equipment with a book value of \$500 (cost of \$1,500 less accumulated depreciation of \$1,000) was sold for \$500.
4. Depreciation of \$1,600 is included in operating expenses.

Required:

Prepare Santana Industries' 2024 statement of cash flows, using the indirect method to present cash flows from operating activities. Use a format similar to the one in the Concept Review Exercise at the end of Part B of this chapter.

P 4–12 Calculating activity and profitability ratios  **LO4–10**

Financial statements for Askew Industries for 2024 are shown below (in thousands):

2024 Income Statement

| | |
|--------------------|----------------|
| Net sales | \$9,000 |
| Cost of goods sold | <u>(6,300)</u> |
| Gross profit | 2,700 |
| Operating expenses | (2,100) |
| Interest expense | (200) |
| Income tax expense | (100) |
| Net income | <u>\$ 300</u> |

Comparative Balance Sheets

| | Dec. 31 | |
|---------------|----------------|-------------|
| | <u>2024</u> | <u>2023</u> |
| Assets | | |

| | | |
|---|----------------|----------------|
| Cash | \$ 600 | \$ 500 |
| Accounts receivable | 600 | 400 |
| Inventory | 800 | 600 |
| Property, plant, and equipment (net) | 2,000 | 2,100 |
| | <u>\$4,000</u> | <u>\$3,600</u> |
| Liabilities and Shareholders' Equity | | |
| Current liabilities | \$1,100 | \$850 |
| Bonds payable | 1,400 | 1,400 |
| Common stock | 600 | 600 |
| Retained earnings | 900 | 750 |
| | <u>\$4,000</u> | <u>\$3,600</u> |

Required:

Calculate the following ratios for 2024.

1. Inventory turnover ratio
2. Average days in inventory
3. Receivables turnover ratio
4. Average collection period
5. Asset turnover ratio
6. Profit margin on sales
7. Return on assets
8. Return on equity
9. Equity multiplier
10. Return on equity (using the DuPont framework)

P 4–13 Use of ratios to compare two companies in the same industry LO4–10

Presented below are condensed financial statements adapted from those of two actual companies competing in the pharmaceutical industry—**Johnson and Johnson (J&J)** and **Pfizer, Inc.** (\$ in millions, except per share amounts).

Required:

Evaluate and compare the two companies by responding to the following questions. Note: Because two-year comparative statements are not provided, you should use year-end balances in place of average balances as appropriate.

1. Which of the two companies appears more efficient in collecting its accounts receivable and managing its inventory?
2. Which of the two firms had greater earnings relative to resources available?
3. Have the two companies achieved their respective rates of return on assets with similar combinations of profit margin and turnover?
4. From the perspective of a common shareholder, which of the two firms provided a greater rate of return?
5. From the perspective of a common shareholder, which of the two firms appears to be using leverage more effectively to provide a return to shareholders above the rate of return on assets?

Balance Sheets

(\$ in millions, except per share data)

| | J&J | Pfizer |
|--|------------------|------------------|
| Assets: | | |
| Cash | \$ 17,305 | \$ 1,305 |
| Short-term investments | 1,982 | 8,525 |

| Inventory | 9,020 | 8,283 |
| Other current assets | <u>2,486</u> | <u>5,966</u> |
| Current assets | 45,274 | 32,803 |
| Property, plant, and equipment (net) | 17,658 | 13,967 |
| Intangibles and other assets | 94,796 | 120,719 |
| Total assets | <u>\$157,728</u> | <u>\$167,489</u> |
| Liabilities and Shareholders' Equity: | | |
| Accounts payable | \$ 8,544 | \$ 4,220 |
| Short-term notes | 1,202 | 16,195 |
| Other current liabilities | <u>26,218</u> | <u>16,889</u> |

| | | |
|---|------------------|-------------------|
| Current liabilities | 35,964 | 37,304 |
| Long-term debt | 26,494 | 35,955 |
| Other long-term liabilities | <u>35,799</u> | <u>30,783</u> |
| Total liabilities | <u>98,257</u> | <u>104,042</u> |
| Common stock (par and additional paid-in capital) | 3,120 | 87,896 |
| Retained earnings | 110,659 | 97,670 |
| Accumulated other comprehensive income (loss) | (15,891) | (11,640) |
| Less: Treasury stock and other equity adjustments | <u>(38,417)</u> | <u>(110,479)</u> |
| Total shareholders' equity | 59,471 | 63,447 |
| Total liabilities and shareholders' equity | <u>\$157,728</u> | <u>\$167,489</u> |
| Income Statements | | |
| Net sales | \$ 82,059 | \$ 51,750 |
| Cost of goods sold | <u>27,556</u> | <u>10,219</u> |
| Gross profit | 54,503 | 41,531 |
| Operating expenses | 34,650 | 20,271 |
| Other (income) expense—net | <u>2,525</u> | <u>3,578</u> |
| Income before taxes | 17,328 | 17,682 |
| Income tax expense | 2,209 | 1,384 |
| Net income | <u>\$ 15,119</u> | <u>\$ 16,298*</u> |
| Basic net income per share | <u>\$ 5.72</u> | <u>\$ 2.92</u> |

*This is before income from discontinued operations.

P 4–14 Creating a balance sheet from ratios;  **Chapters 3** and  **4**  **LO4–10**

Cadux Candy Company's income statement for the year ended December 31, 2024, reported interest expense of \$2 million and income tax expense of \$12 million. Current assets listed

in its balance sheet include cash, accounts receivable, and inventory. Property, plant, and equipment is the company's only noncurrent asset. Financial ratios for 2024 are listed below. Profitability and turnover ratios with balance sheet items in the denominator were calculated using year-end balances rather than averages.

| | |
|--|----------|
| Debt to equity ratio | 1.0 |
| Current ratio | 2.0 |
| Acid-test ratio | 1.0 |
| Times interest earned ratio | 17 times |
| Return on assets | 10% |
| Return on equity | 20% |
| Profit margin on sales | 5% |
| Gross profit margin (gross profit divided by net sales) | 40% |
| Inventory turnover | 8 times |
| Receivables turnover | 20 times |

Required:

Prepare a December 31, 2024, balance sheet for the Cadux Candy Company.

P 4–15 Compare two companies in the same industry;
 **Chapters 3** and  **4**  **LO4–10**

Presented below are condensed financial statements adapted from those of two actual companies competing as the primary players in a specialty area of the food manufacturing and distribution industry (\$ in millions, except per share amounts).

| | Balance Sheets | |
|---------------------------|-----------------------|-----------------|
| | Metropolitan | Republic |
| Assets: | | |
| Cash | \$ 179.3 | \$ 37.1 |
| Accounts receivable (net) | 422.7 | 325.0 |
| Short-term investments | — | 4.7 |
| Inventory | 466.4 | 635.2 |

| | | |
|---|------------------|------------------|
| Prepaid expenses and other current assets | 134.6 | 476.7 |
| Current assets | 1,203.0 | 1,478.7 |
| Property, plant, and equipment (net) | 2,608.2 | 2,064.6 |
| Intangibles and other assets | 210.3 | 464.7 |
| Total assets | <u>\$4,021.5</u> | <u>\$4,008.0</u> |
| Liabilities and Shareholders' Equity | | |
| Accounts payable | \$ 467.9 | \$ 691.2 |
| Short-term notes | 227.1 | 557.4 |
| Accruals and other current liabilities | <u>585.2</u> | <u>538.5</u> |
| Current liabilities | 1,280.2 | 1,787.1 |
| Long-term debt | 535.6 | 542.3 |
| Deferred tax liability | 384.6 | 610.7 |
| Other long-term liabilities | <u>104.0</u> | <u>95.1</u> |
| Total liabilities | <u>2,304.4</u> | <u>3,035.2</u> |
| Common stock (par and additional paid-in capital) | 144.9 | 335.0 |
| Retained earnings | 2,476.9 | 1,601.9 |
| Less: Treasury stock | (904.7) | (964.1) |
| Total liabilities and shareholders' equity | <u>\$4,021.5</u> | <u>\$4,008.0</u> |
| Income Statements | | |
| Net sales | \$5,698.0 | \$7,768.2 |
| Cost of goods sold | <u>(2,909.0)</u> | <u>(4,481.7)</u> |
| Gross profit | 2,789.0 | 3,286.5 |
| Operating expenses | (1,743.7) | (2,539.2) |
| Interest expense | <u>(56.8)</u> | <u>(46.6)</u> |
| Income before taxes | 988.5 | 700.7 |
| Income tax expense | (394.7) | (276.1) |
| Net income | <u>\$ 593.8</u> | <u>\$ 424.6</u> |
| Net income per share | <u>\$ 2.40</u> | <u>\$ 6.50</u> |

Required:

Evaluate and compare the two companies by responding to the following questions.

Note: Because comparative statements are not provided, you should use year-end balances in place of average balances as appropriate.

1. Which of the two firms had greater earnings relative to resources available?
2. Have the two companies achieved their respective rates of return on assets with similar combinations of profit margin and turnover?
3. From the perspective of a common shareholder, which of the two firms provided a greater rate of return?
4. Which company is most highly leveraged and which has made most effective use of financial leverage?
5. Of the two companies, which appears riskier in terms of its ability to pay short-term obligations?
6. How efficiently are current assets managed?
7. From the perspective of a creditor, which company offers the most comfortable margin of safety in terms of its ability to pay fixed interest charges?

P 4–16 Interim financial reporting **Appendix 4**

Branson Electronics Company is a small, publicly traded company preparing its first quarter interim report to be mailed to shareholders. The following information for the quarter has been compiled:

| | | |
|---------------------|---------------|-----------|
| Sales revenue | | \$180,000 |
| Cost of goods sold | | 35,000 |
| Operating expenses: | | |
| Fixed | \$59,000 | |
| Variable | <u>48,000</u> | 107,000 |

Fixed operating expenses include payments of \$50,000 to an advertising firm to promote Branson through various media throughout the year. The income tax rate for Branson's level of operations in the first quarter is 20%, but management estimates the effective rate for the entire year will be 25%.

Required:

Prepare the income statement to be included in Branson's first quarter interim report.

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Analysis Case 4–1 Income statement information LO4–1

Refer to the income statement of **The Home Depot, Inc.**, in  **Illustration 4–2** of this chapter.

Required:

1. Is this income statement presented in the single-step or multiple-step format?
2. What is the company's approximate income tax rate?
3. What is the percentage of net income relative to net sales?

Research Case 4–2 FASB codification; locate and extract relevant information and cite authoritative support for a financial reporting issue; restructuring costs; exit or disposal cost obligations  **LO4–2**,  **LO4–3**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine each of the following:

1. The topic number (Topic XXX) that addresses exit or disposal cost obligations.
2. The specific eight-digit Codification citation (XXX-XX-XX-X) that addresses the initial measurement of these obligations.
3. The amount for which these obligations and related costs are measured.
4. The specific eight-digit Codification citation (XXX-XX-XX-X) that describes the disclosure requirements in the notes to the financial statements for exit or disposal obligations.
5. List the required disclosures.

Judgment Case 4–3 Income statement presentation **LO4–3**, **LO4–4**, **LO4–5**

Each of the following situations occurred during 2024 for one of your audit clients:

1. An inventory write-down due to obsolescence.
2. Discovery that depreciation expenses were omitted by accident from 2023's income statement.
3. The useful lives of all machinery were changed from eight to five years.
4. The depreciation method used for all equipment was changed from the declining-balance to the straight-line method.
5. Restructuring costs were incurred.
6. The Stridewell Company, a manufacturer of shoes, sold all of its retail outlets. It will continue to manufacture and sell its shoes to other retailers. A loss was incurred in the disposition of the retail stores. The retail stores are considered a component of the entity.
7. The inventory costing method was changed from FIFO to average cost.

Required:

1. For each situation, identify the appropriate reporting treatment from the list below (consider each event to be material):
 - a. As an unusual gain or loss
 - b. As a prior period adjustment
 - c. As a change in accounting principle

- d. As a discontinued operation
 - e. As a change in accounting estimate
 - f. As a change in accounting estimate achieved by a change in accounting principle
2. Indicate whether each situation would be included in the income statement in continuing operations (CO) or below continuing operations (BC), or if it would appear as an adjustment to retained earnings (RE). Use the format shown below to answer requirements 1 and 2.

| Situation | Treatment (a-f) | Financial Statement Presentation (CO, BC, or RE) |
|-----------|-----------------|--|
| 1. | | |
| 2. | | |
| 3. | | |
| 4. | | |
| 5. | | |
| 6. | | |
| 7. | | |

Judgment Case 4-4 Income statement presentation  **LO4-3**,  **LO4-4**,  **LO4-5**

The following events occurred during 2024 for various audit clients of your firm. Consider each event to be independent and the effect of each event to be material.

1. A manufacturing company recognized a loss on the sale of investments.
2. An automobile manufacturer sold all of the assets related to its financing component. The operations of the financing business is considered a component of the entity.
3. A company changed its depreciation method from the double-declining-balance method to the straight-line method.
4. Due to obsolescence, a company engaged in the manufacture of high-technology products incurred a loss on inventory write-down.
5. One of your clients discovered that 2023's depreciation expense was overstated. The error occurred because of a miscalculation of depreciation for the office building.
6. A cosmetics company decided to discontinue the manufacture of a line of women's lipstick. Other cosmetic lines will be continued. A loss was incurred on the sale of assets

related to the lipstick product line. The operations of the discontinued line is not considered a component of the entity.

Required:

Determine whether each of the above events would be reported as income from continuing operations, income from discontinued operations, or not reported in the current year's income statement.

Judgment Case 4–5 Income statement presentation; unusual items; comprehensive income  **LO4–3**,  **LO4–4**,  **LO4–5**,  **LO4–6**

Norse Manufacturing Inc. prepares an annual single, continuous statement of income and comprehensive income. The following situations occurred during the company's 2024 fiscal year:

1. Restructuring costs were incurred due to the closing of a factory.
2. Investments were sold, and a loss was recognized.
3. A positive foreign currency translation adjustment was recognized.
4. Interest expense was incurred.
5. A division was sold that qualifies as a separate component of the entity according to GAAP.
6. Obsolete inventory was written off.
7. The controller discovered an error in the calculation of 2023's patent amortization expense.

Required:

1. For each situation, identify the appropriate reporting treatment from the list below (consider each event to be material):
 - a. As a component of operating income
 - b. As a nonoperating income item (other income or expense)
 - c. As a discontinued operation
 - d. As an other comprehensive income item
 - e. As an adjustment to retained earnings

2. Identify the situations that would be reported net-of-tax.

Real-World Case 4–6 Non-GAAP earnings LO4–3

Companies often voluntarily provide non-GAAP earnings when they announce annual or quarterly earnings. These numbers are controversial as they represent management’s view of permanent earnings. The Sarbanes-Oxley Act (SOX), issued in 2002, requires that if non-GAAP earnings are included in any periodic or other report filed with the SEC or in any public disclosure or press release, the company also must provide a reconciliation with earnings determined according to GAAP.

Presented below is the reconciliation of GAAP net income to non-GAAP net income for **Cisco Systems, Inc.**

| | |
|---|------------------|
| (\$ in millions) | |
| GAAP net income | \$ 11,214 |
| Share-based compensation expense | 1,544 |
| Amortization of acquisition-related intangible assets | 752 |
| Acquisition-related/divestiture costs | 249 |
| Legal and indemnification settlements | 4 |
| Significant asset impairments and restructurings | 481 |
| (Gains) and losses on equity investments | (97) |
| Income tax effect of non-GAAP adjustments | (722) |
| Significant tax matters | 233 |
| Total adjustments | 2,444 |
| Non-GAAP net income | <u>\$ 13,658</u> |

Disclosure note: For its internal budgeting process, Cisco’s management uses financial statements that do not include, when applicable, share-based compensation expense, amortization of acquisition-related intangible assets, acquisition-related/divestiture costs, significant asset impairments and restructurings, significant litigation settlements, and other contingencies, gains and losses on equity investments, the income tax effects of the foregoing and significant tax matters. Cisco’s management also uses the foregoing non-GAAP measures, in addition to the corresponding GAAP measures, in reviewing the financial results of Cisco.

Required:

1. Which is typically higher—GAAP net income or non-GAAP net income? Is that true for Cisco?
2. Which line item provides the biggest upward adjustment to GAAP net income in calculating non-GAAP net income?
3. What is a justification management provides for its calculation of non-GAAP net income?
4. A concern with non-GAAP reporting is that managers are excluding normal operating expenses for the purpose of reporting higher performance, which could mislead investors and creditors. For which line item is this most likely the concern?

Integrating Case 4–7 Balance sheet and income statement; Chapters 3 and 4 LO4–3, LO4–4

Rice Corporation is negotiating a loan for expansion purposes and the bank requires financial statements. Before closing the accounting records for the year ended December 31, 2024, Rice’s controller prepared the following financial statements:

RICE CORPORATION
Balance Sheet
At December 31, 2024
(\$ in thousands)

Assets

| | |
|--------------------------------------|----------------|
| Cash | \$ 275 |
| Investments | 78 |
| Accounts receivable | 487 |
| Inventory | 425 |
| Allowance for uncollectible accounts | (50) |
| Property and equipment (net) | 160 |
| Total assets | <u>\$1,375</u> |

Liabilities and Shareholders’ Equity

| | |
|--|--------|
| Accounts payable and accrued liabilities | \$ 420 |
| Notes payable | 200 |
| Common stock | 260 |

| | |
|--|----------------|
| Retained earnings | 495 |
| Total liabilities and shareholders' equity | <u>\$1,375</u> |

RICE CORPORATION
Income Statement
For the Year Ended December 31, 2024
(\$ in thousands)

| | | |
|------------------------------------|------------|---------------|
| Sales revenue | | \$1,580 |
| Expenses: | | |
| Cost of goods sold | \$755 | |
| Selling and administrative expense | 385 | |
| Miscellaneous expense | 129 | |
| Income tax expense | <u>100</u> | |
| Total expenses | | 1,369 |
| Net income | | <u>\$ 211</u> |

Additional Information:

1. The company's common stock is traded on an organized stock exchange.
2. The investment portfolio consists of short-term investments valued at \$57,000. The remaining investments will not be sold until the year 2026.
3. Notes payable consist of two notes: Note 1: \$80,000 face value dated September 30, 2024. Principal and interest at 10% are due on September 30, 2025.
Note 2: \$120,000 face value dated April 30, 2024. Principal is due in two equal installments of \$60,000 plus interest on the unpaid balance. The two payments are scheduled for April 30, 2025, and April 30, 2026.
Interest on both loans has been correctly accrued and is included in accrued liabilities on the balance sheet and selling and administrative expense in the income statement.
4. Included in miscellaneous expense is loss from discontinued operations of \$90,000 (net of tax).

Required:

Identify the deficiencies in the presentation of the statements prepared by the company's controller. Do not prepare corrected statements.

Real World Case 4–8 Income statement format; restructuring costs; earnings per share; comprehensive income; statement of cash flows; Ralph Lauren  **LO4–1**,  **LO4–3**,  **LO4–5**,  **LO4–6**,  **LO4–8**

Real World Financials

Ralph Lauren Corporation is a global leader in the design, marketing, and distribution of premium lifestyle products, including men's, women's and children's apparel. Below are selected financial statements taken from a recent 10-K filing.

Required:

Use the information in the financial statements to answer the following questions.

1. Does the company use the single-step or multiple-step format to present its income statements?
2. Does the company report restructuring costs (yes/no)? If so, how much?
3. Does the company report asset impairments (yes/no)? If so, how much?
4. What amount does the company report for nonoperating income?
5. Does the company choose to report comprehensive income in two consecutive statements or a combined statement?
6. What "other comprehensive items (OCI)" did the company report?
7. What is the amount of comprehensive income?

| RALPH LAUREN CORPORATION | |
|---|------------------|
| CONSOLIDATED STATEMENTS OF OPERATIONS | |
| Fiscal Year Ended | |
| March 28, 2020 (millions, except per share data) | |
| Net revenues | \$ 6,159.8 |
| Cost of goods sold | <u>(2,506.5)</u> |
| Gross profit | <u>3,653.3</u> |

| | |
|--|------------------------|
| Selling, general, and administrative expenses | (3,237.5) |
| Impairment of assets | (31.6) |
| Restructuring and other charges | <u>(67.2)</u> |
| Total other operating expenses, net | <u>(3,336.3)</u> |
| Operating income | 317.0 |
| Interest expense | (17.6) |
| Interest income | 34.4 |
| Other income (expense), net | <u>(7.4)</u> |
| Income before income taxes | 326.4 |
| Income tax benefit (provision) | 57.9 |
| Net income | <u><u>\$ 384.3</u></u> |
| Net income per common share: | |
| Basic | <u><u>\$ 5.07</u></u> |
| Diluted | <u><u>\$ 4.98</u></u> |

RALPH LAUREN CORPORATION
CONSOLIDATED STATEMENTS OF COMPREHENSIVE INCOME

| | Fiscal Year Ended March 28, 2020 (millions) |
|---|--|
| Net income | \$384.3 |
| Other comprehensive income (loss), net of tax: | |
| Foreign currency translation gains (losses) | (11.9) |
| Net gains (losses) on cash flow hedges | (2.2) |
| Net gains (losses) on defined benefit plans | <u>(0.7)</u> |
| Other comprehensive income (loss), net of tax | (14.8) |
| Total comprehensive income | <u><u>\$369.5</u></u> |

Analysis Case 4–9 Relationships among ratios;  **Chapters 3**
and  **4**  **LO4–10**

You are a part-time financial advisor. A client is considering an investment in common stock of a waste recycling firm. One motivation is a rumor the client heard that the company made huge investments in a new fuel creation process. Unable to confirm the rumor, your client asks you to determine whether the firm's assets had recently increased significantly.

Because the firm is small, information is sparse. Last quarter's interim report showed total assets of \$324 million, approximately the same as last year's annual report. The only information more current than that is a press release last week in which the company's management reported "record net income for the year of \$21 million, representing a 14.0% return on equity. Performance was enhanced by the Company's judicious use of financial leverage on a debt/equity ratio of 2 to 1."

Required:

Use the information available to calculate total assets, total liabilities, and total shareholders' equity.

Integrating Case 4–10 Using ratios to test reasonableness of data;  **Chapters 3** and  **4**  **LO4–10**

You are a new staff accountant with a large regional CPA firm, participating in your first audit. You recall from your auditing class that CPAs often use ratios to test the reasonableness of accounting numbers provided by the client. Since ratios reflect the relationships among various account balances, if it is assumed that prior relationships still hold, prior years' ratios can be used to estimate what current balances should approximate. However, you never actually performed this kind of analysis until now. The CPA in charge of the audit of Covington Pike Corporation brings you the list of ratios shown below and tells you these reflect the relationships maintained by Covington Pike in recent years.

Profit margin on sales = 5%

Return on assets = 7.5%

Gross profit margin = 40%

Inventory turnover ratio = 6 times

Receivables turnover ratio = 25 times

Acid-test ratio = 0.9 to one

Current ratio = 2 to 1

Return on equity = 10%

Debt to equity ratio = 1/3

Times interest earned ratio = 12 times

Jotted in the margins are the following notes:

- Net income \$15,000.
- Only one short-term note (\$5,000); all other current liabilities are trade accounts.
- Property, plant, and equipment are the only noncurrent assets.
- Bonds payable are the only noncurrent liabilities.
- The effective interest rate on short-term notes and bonds is 8%.
- No investment securities.
- Cash balance totals \$15,000.

Required:

You are requested to approximate the current year's balances in the form of a balance sheet and income statement, to the extent the information allows. Accompany those financial statements with the calculations you use to estimate each amount reported.

Ethics Case 4–11 Management incentives for change **LO4–2**

It has been suggested that not all accounting choices are made by management in the best interest of fair and consistent financial reporting.

Required:

What motivations can you think of for management's choice of accounting methods?

Communications Case 4–12 Income statement information **LO4–1**, **LO4–3**, **LO4–4**

Real World Financials

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the

majority of their filings. (Some foreign companies file voluntarily.) Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access EDGAR on the Internet. The web address is www.sec.gov.
2. Search for a public company with which you are familiar. Access the most recent 10-K filing. Search or scroll to find the financial statements and related notes.
3. Answer the following questions related to the company's income statement:
 - a. Does the company use the single-step or multiple-step format, or a variation?
 - b. Does the income statement contain any income or loss on discontinued operations? If it does, describe the component of the company that was discontinued. (*Hint: There should be a related disclosure note.*)
 - c. Describe the trend in net income over the years presented.
4. Repeat requirements 2 and 3 for two additional companies.

Communications Case 4–13 Earnings quality LO4–2, LO4–3

The financial community in the United States has become increasingly concerned with the quality of reported company earnings.

Required:

1. Define the term *earnings quality*.
2. Explain the distinction between permanent and temporary earnings as it relates to the concept of earnings quality.
3. How do earnings management practices affect the quality of earnings?
4. Assume that a manufacturing company's annual income statement included a large gain from the sale of investment securities. What factors would you consider in determining whether or not this gain should be included in an assessment of the company's permanent earnings?

Communications Case 4–14 Evaluating profitability and asset management; obtain and compare annual reports from companies in the same industry **LO4–10**

Performance and profitability of a company often are evaluated using the financial information provided by a firm's annual report in comparison with other firms in the same industry. Ratios are useful in this assessment.

Required:

Obtain annual reports from two corporations in the same primary industry. Using techniques you learned in this chapter and any analysis you consider useful, respond to the following questions:

1. How do earnings trends compare in terms of both the direction and stability of income?
2. Which of the two firms had greater earnings relative to resources available?
3. How efficiently are current assets managed?
4. Has each of the companies achieved its respective rate of return on assets with similar combinations of profit margin and turnover?
5. Are there differences in accounting methods that should be taken into account when making comparisons?

Note: You can obtain copies of annual reports from friends who are shareholders, the investor relations department of the corporations, from a friendly stockbroker, or from EDGAR (Electronic Data Gathering, Analysis, and Retrieval) on the Internet (www.sec.gov).

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO4-3, LO4-4, LO4-6, LO4-8

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Required:

1. By what name does Target label its income statement?
2. What amounts did Target report for the following items for the year ended February 1, 2020?
 - a. Sales
 - b. Cost of goods sold (labeled cost of sales)
 - c. Earnings from continuing operations before income taxes
 - d. Net earnings from continuing operations
 - e. Net earnings
3. Does Target report any items as part of its comprehensive income? If so, what are they.
4. Does Target prepare the statement of cash flows using the direct method or the indirect method?
5. Which is higher, net earnings or operating cash flows? Which line item is the biggest reason for this difference? Explain why.
6. What is the largest investing cash flow and the largest financing cash flow reported by the company for the year ended February 1, 2020?

Air France-KLM Case LO4-9

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are provided in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. What amount does AF report for (a) sales and for external expenses related to (b) aircraft fuel and (c) aircraft maintenance (see Note 7).
2. What amount does AF report for amortization, depreciation, and provisions in the income statement? How is this amount listed in the statement of cash flows?
3. Under which account title in the income statement does AF include interest expense and interest revenue?
4. Under which activities in the statement of cash flows are interest paid and interest received included? Under IFRS, what other classifications for these items are allowed?
5. Under which activities in the statement of cash flows are dividends paid and dividends received included? Under IFRS, what other classifications for these items are allowed?

CHAPTER 5

Time Value of Money Concepts

OVERVIEW

Time value of money concepts, specifically future value and present value, are essential in a variety of accounting situations. These concepts and the related computational procedures are the subjects of this chapter. Present values and future values of *single amounts* and present values and future values of *annuities* (series of equal periodic payments) are described separately but shown to be interrelated.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO5-1** Explain the difference between simple and compound interest. (p. 236)
-  **LO5-2** Compute the future value of a single amount. (p. 237)
-  **LO5-3** Compute the present value of a single amount. (p. 238)
-  **LO5-4** Solve for either the interest rate or the number of compounding periods when present value and future value of a single amount are known. (p. 239)
-  **LO5-5** Apply present value techniques in the valuation of notes. (p. 242)
-  **LO5-6** Explain the difference between an ordinary annuity and an annuity due situation. (p. 244)
-  **LO5-7** Compute the future value of both an ordinary annuity and an annuity due. (p. 244)
-  **LO5-8** Compute the present value of an ordinary annuity, an annuity due, and a deferred annuity. (p. 246)

 **LO5-9** Solve for unknown values in annuity situations involving present value. (p. 251)

 **LO5-10** Briefly describe how the concept of the time value of money is incorporated into the valuation of bonds, long-term leases, installment notes, and pension obligations. (p. 255)

FINANCIAL REPORTING CASE

Gabriel Petrescu/Shutterstock

The Winning Ticket

“I was just there to buy it for luck. It was just chance, a chance I had to take,” she said. On a balmy August day, Mavis Wanczyk, 53, of Chicopee, MA, blissfully discovered she had purchased the winning \$758.7 million Powerball ticket, one of the largest jackpot in U.S. history. Imagine her surprise, though, when she was told that, having chosen a lump-sum payout rather than 30-year installment payments, she would get a check for “only” \$336 million. Sure, federal tax was withheld at a 25% rate and Massachusetts added another 5%, but this difference was far more than the amount of the tax.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution

provided at the end of the chapter.

- 1.** Why was Mavis to receive \$336 million rather than the \$758.7 million lottery prize?
- 2.** What interest (discount) rate did the state of Massachusetts use to calculate the \$336 million lump-sum payment?
- 3.** What are some of the accounting applications that incorporate the time value of money into valuation?

PART A

Basic Concepts

Time Value of Money

The key to solving the problem described in the financial reporting case is understanding the concept commonly referred to as the **time value of money**. This concept means that money invested today will grow to a larger dollar amount in the future. For example, \$100 invested in an investment account yielding 6% annually will grow to \$106 in one year. The difference between the \$100 invested now—the present value of the investment—and its \$106 future value represents the time value of money.

The *time value of money* means that money can be invested today to earn interest and grow to a larger dollar amount in the future.

This concept has nothing to do with the worth or buying power of those dollars. Prices in our economy can change. If the inflation rate were higher than 6%, then the \$106 you would have in the investment account actually would be worth less than the \$100 you had a year earlier. The time value of money concept concerns only the growth in the dollar amounts of money, ignoring inflation.

The concepts you learn in this chapter are useful in solving business decisions, such as determining the lottery award presented in the financial reporting case.

Time value of money concepts are useful in valuing several assets and liabilities as well as some revenues and expenses.

More important, the concepts are necessary when valuing assets and liabilities for financial reporting purposes. Most accounting applications that incorporate the time value of money involve the concept of present value. The valuation of leases, bonds, pension obligations, and certain notes receivable and payable are a few prominent examples. It's important that you master the concepts and tools we review here because they are essential for the remainder of your accounting education.

Simple versus Compound Interest

LO5–1 Define interest

Interest is the “rent” paid for the use of money for some period of time. In dollar terms, it is the amount of money paid or received in excess of the amount of money borrowed or lent. If you lend someone \$100 today and “receive” \$106 a year from now, your interest would be \$6. Interest also can be expressed as a rate at which money will grow. In this case, that rate is 6%. It is this interest that gives money its time value.

Interest is the amount of money paid or received in excess of the amount borrowed or lent.

Simple interest is computed by multiplying an initial investment times both the applicable interest rate and the period of time for which the money is used. For example, simple interest earned each year on a \$1,000 investment paying 10% is \$100 ($\$1,000 \times 10\%$).

Compound interest occurs when money remains invested for multiple periods. It results in increasingly larger interest amounts for each period of the investment. The reason is that interest is then being generated not only on the initial investment amount but also on the accumulated interest earned in previous periods.

Compound interest includes interest not only on the initial investment but also on the accumulated interest in previous periods.

For example, suppose you placed \$1,000 in an investment account paying 10% interest *compounded* annually. How much interest will you earn each year, and what will be your investment balance after three years?

| Date | Interest | Balance |
|-----------------|---|----------------|
| | (Interest rate \times Outstanding balance = Interest) | |
| Initial deposit | | \$1,000 |
| End of year 1 | $10\% \times \$1,000 = \100 | \$1,100 |
| End of year 2 | $10\% \times \$1,100 = \110 | \$1,210 |
| End of year 3 | $10\% \times \$1,210 = \121 | \$1,331 |

With compound interest at 10% annually, the \$1,000 investment would grow to **\$1,331** at the end of the three-year period. With simple interest, the investment would have grown to only \$1,300 (\$100 interest in each year). The extra \$31 represents compounding, or interest earned on interest. Nearly all business applications use compound interest, and compound interest is what we use in calculating the time value of money.

Effective rate. More rapid compounding has the effect of increasing the actual rate at which money grows per year, which is called the **effective rate**. It is important to note that interest is typically stated as an annual rate regardless of the length of the compounding period involved. In situations when the compounding period is less than a year, the interest rate per compounding period is determined by dividing the annual rate by the number of periods. Assuming an annual rate of 12%:

The *effective rate* is the rate at which money actually will grow during a full year.

Interest rates are typically stated as annual rates.

| Compounded | Interest Rate per Compounding Period |
|--------------|--------------------------------------|
| Semiannually | $12\% \div 2 = 6\%$ |
| Quarterly | $12\% \div 4 = 3\%$ |
| Monthly | $12\% \div 12 = 1\%$ |

As an example, now let's assume you placed \$1,000 in an investment account paying 10% interest *compounded* twice a year. There are two six-month periods paying interest at 5% (the annual rate divided by two periods). How much interest will you earn the first year, and what will be your investment balance at the end of the year?

| Date | Interest (Interest rate × Outstanding balance = Interest) | Balance |
|------------------|---|-------------------|
| Initial deposit | | \$1,000.00 |
| After six months | $5\% \times \$1,000 = \50.00 | \$1,050.00 |
| End of year 1 | $5\% \times \$1,050 = \52.50 | \$1,102.50 |

The \$1,000 would grow to **\$1,102.50**. This amount is \$2.50 more than if interest were compounded only once a year. The effective annual interest rate of 10% compounded semiannually is 10.25% ($\$102.50 \div \$1,000$).

The *effective annual interest rate* is sometimes referred to as the *annual yield rate*.

Future Value of a Single Amount

LO5–2 Explain compound interest.

In the first example, in which \$1,000 was invested for three years at 10% compounded annually, the **\$1,331** is referred to as the **future value (FV)**. A time diagram is a useful way to visualize this relationship, with today being the date of the initial investment.

The notation at the bottom ($n = 3, i = 10\%$) indicates that the investment grows for three periods at 10% each period. After three years, the future value is $\$1,000 \times 1.10 \times 1.10 \times 1.10 = \$1,331$. In fact, the future value of any invested amount can be determined as follows:

The *future value* of a single amount is the amount of money that a dollar will grow to at some point in the future.

$$FV = I(1 + i)^n$$

where : FV = Future value of the invested amount
 I = Amount invested at the beginning of the period
 i = Interest rate per compounding period
 n = Number of compounding periods

The future value can be determined by using Table 1, Future Value of \$1, located at the end of this book. The table contains the future value of \$1 invested for various periods of time, n , and at various rates, i .

Use this table to determine the future value of any invested amount simply by multiplying that invested amount by the table value at the *intersection* of the column for the desired rate

and the row for the number of compounding periods.  **Illustration 5-1** provides an excerpt from Table 1.

Illustration 5-1 Future Value of \$1 (excerpt from Table 1 located at the end of this book)

| Periods (<i>n</i>) | Interest Rates (<i>i</i>) | | | | | |
|----------------------|-----------------------------|---------|---------|---------|---------|---------|
| | 7% | 8% | 9% | 10% | 11% | 12% |
| 1 | 1.07000 | 1.08000 | 1.09000 | 1.10000 | 1.11000 | 1.12000 |
| 2 | 1.14490 | 1.16640 | 1.18810 | 1.21000 | 1.23210 | 1.25440 |
| 3 | 1.22504 | 1.25971 | 1.29503 | 1.33100 | 1.36763 | 1.40493 |
| 4 | 1.31080 | 1.36049 | 1.41158 | 1.46410 | 1.51807 | 1.57352 |
| 5 | 1.40255 | 1.46933 | 1.53862 | 1.61051 | 1.68506 | 1.76234 |

The table shows various values of $(1 + i)^n$ for different combinations of i and n . From the table you can find the future value factor (table value) for three periods at 10% to be **1.331**. This means that \$1 invested at 10% compounded annually will grow to \$1.331 in three years. So, the future value of \$1,000 invested for three years at 10% is **1,331**:

$$PV = I \times PV \text{ factor}$$

$$PV = \$1,331 \times 0.75131^* = 1,000$$

*Present value of \$1; $n = 3$, $i = 10\%$

Using Excel, enter: `--FV(.10, 3, 0, 1000)`

Output: **1,331**

The future value function in financial calculators or in an Excel spreadsheet calculates future values in the same way. Determining future values (and present values) electronically avoids the need for tables such as those in the appendix. At the end of this chapter, we provide a summary discussion using Excel functions. It's important to remember that the n in the future value formula refers to the number of compounding periods, not necessarily the number of years. For example, suppose you wanted to know the future value *two* years from

today of \$1,000 invested at 12% with *quarterly* compounding. The number of periods is therefore eight, and the compounding rate is 3% (12% annual rate divided by four, the number of quarters in a year). The future value factor from Table 1 is 1.26677, so the future value is \$1,266.77 ($\$1,000 \times 1.26677$).¹

Present Value of a Single Amount

LO5–3 What would cause the annual interest rate to be different from the annual effective rate or yield?

The example used to illustrate future value reveals that \$1,000 invested today is equivalent to \$1,100 received after one year, \$1,210 after two years, or \$1,331 after three years, assuming 10% interest compounded annually. Thus, the **\$1,000** investment (I) is the **present value (PV)** of the single sum of \$1,331 to be received at the end of three years. It is also the present value of \$1,210 to be received in two years or \$1,100 in one year.

The **present value** of a single amount is today's equivalent to a particular amount in the future.

Graphically, the relation between the present value and the future value can be viewed this way:

While the calculation of **future value** of a single sum invested today requires the *inclusion* of compound interest, **present value** problems require the *removal* of compound interest. The process of computing present value *removes* the \$331 of interest earned over the three-year period from the future value of **\$1,331**, just as the process of computing future value *adds* \$331 of interest to the present value of **\$1,000** to arrive at the future value of **\$1,331**.

The calculation of **future value** requires the addition of interest, while the calculation of present value requires the removal of interest.

Remember that the future value of a present amount is the present amount *times* $(1 + i)^n$. Logically, then, that computation can be reversed to find the *present value* of a future amount to be the future amount *divided* by $(1 + i)^n$.

$$PV = \frac{FV}{(1 + i)^n}$$

As with future value, present value computations are simplified by using calculators, Excel, or present value tables. Table 2, Present Value of \$1, provides the solutions of $1/(1 + i)^n$ for various interest rates (i) and compounding periods (n). These amounts represent the present value of \$1 to be received at the *end* of the different periods. The table can be used to find the present value of any single amount to be received in the future by *multiplying* that future amount by the value in the table that lies at the *intersection* of the column for the appropriate rate and the row for the number of compounding periods.²  **Illustration 5-2** provides an excerpt from Table 2.

Illustration 5-2 Present Value of \$1 (excerpt from Table 2)

| Periods (n) | Interest Rates (i) | | | | | |
|-----------------|------------------------|---------|---------|----------------|---------|---------|
| | 7% | 8% | 9% | 10% | 11% | 12% |
| 1 | 0.93458 | 0.92593 | 0.91743 | 0.90909 | 0.90090 | 0.89286 |
| 2 | 0.87344 | 0.85734 | 0.84168 | 0.82645 | 0.81162 | 0.79719 |
| 3 | 0.81630 | 0.79383 | 0.77218 | 0.75131 | 0.73119 | 0.71178 |
| 4 | 0.76290 | 0.73503 | 0.70843 | 0.68301 | 0.65873 | 0.63552 |
| 5 | 0.71299 | 0.68058 | 0.64993 | 0.62092 | 0.59345 | 0.56743 |

Using Excel, enter: `--PV(.10, 3, 0, 1331)`

Output: **1,000**

Using the present value table in  **Illustration 5-2**, the present value of \$1,331 to be received in three years assuming a time value of money of 10% is:

$$FV = I \times \text{FV factor}$$

$$FV = \$1,331 \times 0.75131^* = 1,000$$

*Future value of \$1; $n = 3$, $i = 10\%$

There are two patterns to notice in  **Illustration 5-2**.

1. The higher the interest rate, the lower the present value.
2. The further into the future, the lower the present value.

First, look at any of the *rows*. Notice that the present value factors get smaller and smaller as the interest rates increase. That demonstrates that the higher the interest rate, the lower is the present value of a future amount. That's logical. The higher the return you can get from putting to use money you have now (higher time value of money), the less desirable it is to wait to get the money (lower present value of the future amount).

Second, look at any of the *columns*. Notice that the further into the future the \$1 is to be received, the less valuable it is now. That demonstrates that the longer you have to wait for your money, the more you give up in terms of the return you could be getting if you could put the money to work now, and the lower is the present value of the future amount.

This is the essence of the concept of the time value of money. Given a choice between \$1,000 now and \$1,000 three years from now, you would choose to have the money now. If you have it now, you could put it to use. But the choice between, say, \$740 now and \$1,000 three years from now would depend on your time value of money. If your time value of money is 10%, you would choose the \$1,000 in three years, because the \$740 invested at 10% for three years would grow to only \$984.94 [$\740×1.331 (FV of \$1, $i = 10\%$, $n = 3$)]. On the other hand, if your time value of money is 11% or higher, you would prefer the \$740 now.³ Presumably, you would invest the \$740 now and have it grow to \$1,012.05 ($\740×1.36763) in three years. So, if your time value of money is 11%, you should be indifferent with respect to receiving \$740 now or \$1,012.05 three years from now.

As we demonstrate later in this chapter and in subsequent chapters, present value calculations are incorporated into accounting valuation much more frequently than future value.

Accountants use PV calculations much more frequently than FV.

Solving for Other Values When FV and PV Are Known

LO5-4 Identify the three items of information necessary to calculate the future value of a single amount.

There are four variables in the process of adjusting single cash flow amounts for the time value of money: the present value (PV), the future value (FV), the number of compounding periods (n), and the interest rate (i). If you know any three of these, the fourth can be determined.  **Illustration 5-3** solves for an unknown interest rate and  **Illustration 5-4** determines an unknown number of periods.

Illustration 5-3 Determining i When PV, FV, and n are Known

Suppose a friend asks to borrow \$500 today and promises to repay you \$605 two years from now. What is the annual interest rate you would be agreeing to?

Illustration 5-4 Determining n When PV, FV, and i Are Known

You want to invest \$10,000 today to accumulate \$16,000 for graduate school. If you can invest at an interest rate of 10% compounded annually, how many years will it take to accumulate the required amount?

DETERMINING THE UNKNOWN INTEREST RATE

The following time diagram illustrates the situation:

The interest rate is the rate that will provide a present value of \$500 when determining the present value of the \$605 to be received in two years:

The unknown variable is the interest rate.

$$\text{\$500 (present value)} = \text{\$605 (future value)} \times \text{PV factor}^*$$

*Present value of \$1 : $n = 2$, $i = ?$

Rearranging algebraically, we find that the present value table factor is 0.82645.

$$\text{\$500 (present value)} \div \text{\$605 (future value)} = 0.82645^*$$

*Present value of \$1 : $n = 2$, $i = ?$

When you consult the present value table, Table 2, you search row two ($n = 2$) for this value and find it in the 10% column. So the effective interest rate is 10%. Notice that the computed factor value exactly equals the table factor value.⁴

Using Excel, enter: `=RATE(2, 0, -500, 605, 0)`

Output: **10%**

DETERMINING THE UNKNOWN NUMBER OF PERIODS

The following time diagram illustrates the situation:

The years it will take is the value of n that will provide a present value of **\$10,000** when finding the present value of **\$16,000** at a rate of 10%:

The unknown variable is n , the number of periods.

$$\text{\$10,000 (present value)} = \text{\$16,000 (future value)} \times \text{PV factor}^*$$

*Present value of \$1; $n = ?$, $i = 10\%$

Rearranging algebraically, we find that the present value table factor is 0.625.

$$\text{\$10,000 (present value)} \div \text{\$16,000 (future value)} = 0.625^*$$

*Present value of \$1; $n = ?$, $i = 10\%$

Using Excel, enter: =NPER(.10, 0, -10000, 16000)

Output: **4.93**

When you consult the present value table, Table 2, you search the 10% column ($i = 10\%$) for this value and find 0.62092 in row five. So it would take approximately five years to accumulate \$16,000 in the situation described.

Additional Consideration

Solving for the unknown factor in either of these examples could just as easily be done using the future value tables. The number of years is the value of n that will provide a present value of \$10,000 when \$16,000 is the future amount and the interest rate is 10%.

$$\$16,000 \text{ (future value)} = \$10,000 \text{ (present value)} \times \text{FV factor}^*$$

*Future value of \$1 : $n = ?$, $i = 10\%$

Rearranging algebraically, the future value table factor is 1.6.

$$\$16,000 \text{ (future value)} \div \$10,000 \text{ (present value)} = 1.6^*$$

*Future value of \$1 : $n = ?$, $i = 10\%$

When you consult the future value table, Table 1, you search the 10% column ($i = 10\%$) for this value and find 1.61051 in row five. So it would take approximately five years to accumulate \$16,000 in the situation described.

Concept Review Exercise

VALUING A SINGLE CASH FLOW AMOUNT

Using the appropriate table, answer each of the following independent questions.

1. What is the future value of \$5,000 at the end of six periods at 8% compound interest?
2. What is the present value of \$8,000 to be received eight periods from today assuming a compound interest rate of 12%?
3. What is the present value of \$10,000 to be received two *years* from today assuming an annual interest rate of 24% and *monthly* compounding?
4. If an investment of \$2,000 grew to \$2,520 in three periods, what is the interest rate at which the investment grew? Solve using both present and future value tables.
5. Approximately how many years would it take for an investment of \$5,250 to accumulate to \$15,000, assuming interest is compounded at 10% annually? Solve using both present and future value tables.

Solution:

1. $FV = \$5,000 \times 1.58687^* = \$7,934$

*Future value of \$1: $n = 6$, $i = 8\%$ (from Table 1)

2. $PV = \$8,000 \times 0.40388^* = \$3,231$

^ Present value of \$1: $n = 8, i = 12\%$ (from Table 2)

3. $PV = \$10,000 \times 0.62172^* = \$6,217$

* Present value of \$1: $n = 24, i = 2\%$ (from Table 2)

4. Using present value table,

$$\frac{\$2,000}{\$2,520} = 0.7937^*$$

* Present value of \$1: $n = 3, i = ?$ (from Table 2, i approximately **8%**)

Using future value table,

$$\frac{\$2,520}{\$2,000} = 1.260^*$$

* Future value of \$1: $n = 3, i = ?$ (from Table 1, i approximately **8%**)

5. Using present value table,

$$\frac{\$5,250}{\$15,000} = 0.35^*$$

* Present value of \$1: $n = ?, i = 10\%$ (from Table 2, n approximately **11 years**)

Using future value table,

$$\frac{\$15,000}{\$5,250} = 2.857^*$$

* Future value of \$1: $n = ?, i = 10\%$ (from Table 1, n approximately **11 years**)

Preview of Accounting Applications of Present Value Techniques—Single Cash Amount

LO5–5 Define the present value of a single amount.

Many assets and most liabilities are monetary in nature. **Monetary assets** include money and claims to receive money, the amount of which is fixed or determinable. Examples include cash and most receivables. **Monetary liabilities** are obligations to pay amounts of cash, the amount of which is fixed or determinable. Most liabilities are monetary. For example, if you borrow money from a bank and sign a note payable, the amount of cash to be repaid to the bank is fixed. Monetary receivables and payables are valued based on the fixed amount of cash to be received or paid in the future taking into account the time value of money. In other words, we value most receivables and payables at the present value of future cash flows, reflecting an appropriate time value of money.⁵

Most monetary assets and monetary liabilities are valued at the present value of future cash flows.

The example in  **Illustration 5–5** demonstrates the application of present value techniques in valuing a note receivable and note payable for which the time period is one year and the interest rate is known.

Illustration 5–5 Valuing a Note: One Payment, Explicit Interest

Explicit Interest

The Shoe Company manufactures athletic shoes for sale to retailers. The company recently sold a large order of shoes to Sporting Goods Inc. for \$50,000. The Shoe Company agreed to accept a note in payment for the shoes requiring payment of \$50,000 in one year plus interest at 10%.

How should The Shoe Company value the note receivable and corresponding sales revenue? How should Sporting Goods Inc. value the note payable and corresponding inventory purchased? As long as the interest rate explicitly stated in the agreement properly reflects the time value of money, the answer is \$50,000, the face value of the note. It's important to realize that this amount also equals the present value of future cash flows at 10%. Future cash flows equal **\$55,000**, the \$50,000 note itself plus \$5,000 interest ($\$50,000 \times 10\%$). Here's a time diagram:

In equation form, we can solve for present value as follows:

$$\mathbf{\$55,000} \text{ (future value)} \times 0.90909^* = \$50,000 \text{ (present value)}$$

*Present value of \$1 : $n = 1, i = 10\%$

By calculating the present value of \$55,000 to be received in one year, the interest of \$5,000 is removed from the future value, resulting in the appropriate note receivable/sales revenue value of \$50,000 for The Shoe Company and a \$50,000 note payable/inventory value for Sporting Goods Inc.

While most notes, loans, and mortgages explicitly state an interest rate that will properly reflect the time value of money, there can be exceptions. Consider the example in [Illustration 5-6](#) which uses present value techniques to value a note due in two years and for which the interest rate is not known.

No Explicit Interest

The Shoe Company recently sold a large order of shoes to Sporting Goods Inc. Terms of the sale require a noninterest-bearing note of \$60,500 with payment due in two years.

How should The Shoe Company and Sporting Goods Inc. value the note receivable/payable and corresponding sales revenue/inventory? Even though the agreement states a noninterest-bearing note, the \$60,500 does, in fact, include interest for the two-year period of the loan. We need to remove the interest portion of the \$60,500 to determine the portion that represents the sales price of the shoes. We do this by calculating the present value. The following time diagram illustrates the situation assuming that a rate of 10% reflects the appropriate interest rate for a loan of this type:

Again, using the present value of \$1 table,

$$\text{\$60,500 (future value)} \times 0.82645^* = \text{\$50,000 (present value)}$$

*Present value of \$1 : $n = 2, i = 10\%$

Both the note receivable for The Shoe Company and the note payable for Sporting Goods Inc. initially will be valued at \$50,000. The difference of \$10,500 ($\text{\$60,500} - \text{\$50,000}$) represents interest revenue/expense to be recognized over the life of the note. The appropriate journal entries are illustrated in later chapters.

Additional Consideration

In  **Illustration 5–5**, if Sporting Goods Inc. had prepaid The Shoe Company for delivery of the shoes in two years, rather than buying now and paying later, Sporting Goods Inc. would be viewed as providing a two-year loan to The Shoe Company. Assuming that Sporting Goods Inc. pays The Shoe Company \$41,323, the present value of \$50,000 for two-periods at 10%, The Shoe Company would record interest expense and Sporting Goods Inc. would record interest revenue of \$8,677 ($\$50,000 - \$41,323$) over the two-year period. When delivery occurs in two years, The Shoe Company records sales revenue of \$50,000 and Sporting Goods Inc. values the inventory acquired at \$50,000.

PART B

Basic Annuities

LO5–6 Explain the difference between monetary and nonmonetary assets and liabilities.

The previous examples involved the receipt or payment of a single future amount. Financial instruments frequently involve multiple receipts or payments of cash. If the same amount is to be received or paid each period, the series of cash flows is referred to as an annuity. A common annuity encountered in practice is a loan on which periodic interest is paid in equal amounts. For example, bonds typically pay interest semiannually in an amount determined by multiplying a stated rate by a fixed principal amount. Some loans and most leases are paid in equal installments during a specified period of time.

An **ordinary annuity** involves cash payments being made at the *end* of each period. For example, an installment note payable might require the debtor to make three equal annual payments, with payments due at the end of each year. The following time diagram illustrates an ordinary annuity:

An **annuity due** involves cash payments being made at the *beginning* of each period. For example, a three-year lease of a building may require each year's lease payment to be made at the beginning of the year. The following time diagram illustrates this situation:

Annuity due

Future Value of an Annuity

Future Value of an Ordinary Annuity

LO5-7 What is an annuity?

Let's first consider the future value of an ordinary annuity in [Illustration 5-7](#).

Illustration 5-7 Future Value of an Ordinary Annuity

Suppose you want to accumulate a sum of money to pay for graduate school. Rather than investing a single amount today that will grow to a future value, you decide to invest \$10,000 each year over the next three years in an investment account paying 10% interest compounded annually. You decide to make the first payment to the account one year from today. How much will accumulate in the account by the end of year 3?

The following time diagram illustrates this ordinary annuity situation.

Page 245

Future value of an ordinary annuity

Using the FV of \$1 factors from Table 1, we can calculate the future value of this annuity by calculating the future value of each of the individual payments as follows:

| | Payment | | FV of \$1 $i = 10\%$ | = | Future Value (at the end of year 3) | n |
|----------------|----------|---|----------------------|---|-------------------------------------|-----|
| First payment | \$10,000 | × | 1.21 | = | \$12,100 | 2 |
| Second payment | 10,000 | × | 1.10 | = | 11,100 | 1 |
| Third payment | 10,000 | × | 1.00 | = | 10,000 | 0 |
| Total | | | <u>3.31</u> | | <u>\$33,100</u> | |

From the time diagram, we can see that the first payment has two compounding periods to earn interest. The factor used, 1.21, is the FV of \$1 invested for two periods at 10%. The second payment has one compounding period, and the last payment does not earn any interest because it is invested on the last day of the three-year annuity period. Therefore, the factor used is 1.00.

In an ordinary annuity, the last cash payment will not include any interest.

This illustration shows that it's possible to calculate the future value of the annuity by separately calculating the FV of each payment and then adding these amounts together. Fortunately, that's not necessary. Table 3, Future Value of an Ordinary Annuity of \$1, simplifies the computation by summing the individual FV of \$1 factors for various factors of n and i .  **Illustration 5-8** contains an excerpt from Table 3.

Illustration 5-8 Future Value of an Ordinary Annuity of \$1 (excerpt from Table 3)

| Periods (n) | Interest Rates (i) | | | | | |
|-----------------|------------------------|--------|--------|--------|--------|--------|
| | 7% | 8% | 9% | 10% | 11% | 12% |
| 1 | 1.0000 | 1.0000 | 1.0000 | 1.0000 | 1.0000 | 1.0000 |
| 2 | 2.0700 | 2.0800 | 2.0900 | 2.1000 | 2.1100 | 2.1200 |
| 3 | 3.2149 | 3.2464 | 3.2781 | 3.3100 | 3.3421 | 3.3744 |
| 4 | 4.4399 | 4.5061 | 4.5731 | 4.6410 | 4.7097 | 4.7793 |
| 5 | 5.7507 | 5.8666 | 5.9847 | 6.1051 | 6.2278 | 6.3528 |

The future value of \$1 at the end of each of three periods invested at 10% is shown in Table 3 to be **\$3.31**. We can simply multiply this factor by \$10,000 to derive the FV of our ordinary annuity (FVA):

$$FVA = \$10,000 \text{ (annuity amount)} \times 3.31^* = \$33,100$$

*Future value of an ordinary annuity of \$1 : $n = 3, i = 10\%$

Using Excel, enter: `=-FV(.10, 3, 10000, 0, 1)`

Output: **33,100**

Future Value of an Annuity Due

Let's modify the previous illustration to create an annuity due in [Illustration 5-9](#).

Illustration 5-9 Future Value of an Annuity Due

Suppose you want to accumulate a sum of money to pay for graduate school. Rather than investing a single amount today that will grow to a future value, you decide to invest \$10,000 each year over the next three years in an investment account paying 10% interest compounded annually. You decide to make the first payment to the account immediately. How much will accumulate in the account by the end of year 3?

The following time diagram depicts the situation.

Future value of an annuity due

The future value can be found by separately calculating the FV of each of the three payments and then summing those individual future values:

In an annuity due, the last cash payment will include interest.

| | Payment | | FV of \$1 $i = 10\%$ | = | Future Value (at the end of year 3) | n |
|----------------|----------|---|----------------------|---|-------------------------------------|-----|
| First payment | \$10,000 | × | 1.331 | = | \$13,310 | 3 |
| Second payment | 10,000 | × | 1.210 | = | 12,100 | 2 |
| Third payment | 10,000 | × | 1.100 | = | 11,000 | 1 |
| Total | | | <u>3.641</u> | | <u>\$36,410</u> | |

And, again, this same future value can be found by using the future value of an annuity due (FVAD) factor from Table 5, Future Value of an Annuity Due of \$1 as follows:

$$\text{FVAD} = \$10,000 (\text{annuity amount}) \times 3.641^* = \$36,410$$

*Future value of an annuity due of \$1 : $n = 3, i = 10\%$

Of course, if *unequal* amounts are invested each year, we can't solve the problem by using the annuity tables. The future value of each payment would have to be calculated separately using the Future Value of \$1 for each individual period and adding them together.

Using Excel, enter: `--FV(.10, 3, 10000, 0, 1)`

Output: **36,410**

Present Value of an Annuity

Present Value of an Ordinary Annuity

LO5–8 Explain the difference between an ordinary annuity and an annuity due.

You will learn in later chapters that liabilities and receivables, with the exception of certain trade receivables and payables, are reported in financial statements at their present values. Most of these financial instruments specify equal periodic interest payments or installment payments (which represent a combination of interest and principal). As a result, the most common accounting applications of the time value of money involve determining the present value of annuities. As in the future value applications we discussed above, an annuity can be either an ordinary annuity or an annuity due. Let's look at an ordinary annuity first in [Illustration 5–10](#).

Illustration 5–10 Present Value of an Ordinary Annuity

Suppose you want to determine the cost today of a three-year graduate program. The program's cost is \$10,000 each year, with payments made at the end of each year. You use a 10% interest rate. What is the cost today of the program?

The following time diagram depicts the situation.

Present value of an ordinary annuity

The present value can be found by separately calculating the PV of each of the three payments and then summing those individual present values as follows:

| | Payment | | PV of \$1 $i = 10\%$ | = | Present Value (at the beginning of year 1) | n |
|----------------|----------|---|----------------------|---|--|-----|
| First payment | \$10,000 | × | 0.90909 | = | \$ 9,091 | 1 |
| Second payment | 10,000 | × | 0.82645 | = | 8,265 | 2 |
| Third payment | 10,000 | × | 0.75131 | = | 7,513 | 3 |
| Total | | | <u>2.48685</u> | | <u>\$24,869</u> | |

This means that the cost today of the graduate program is **\$24,869**. In other words, the cost today of making a \$10,000 payment each year for the next three years is equivalent to paying \$24,869 today, assuming the time value of money is 10%.

A more efficient method of calculating present value is to use Table 4, Present Value of an Ordinary Annuity of \$1.  **Illustration 5-11** contains an excerpt from Table 4.

Illustration 5-11 Present Value of an Ordinary Annuity of \$1 (excerpt from Table 4)

| Periods (n) | Interest Rates (i) | | | | | |
|-----------------|------------------------|---------|---------|----------------|---------|---------|
| | 7% | 8% | 9% | 10% | 11% | 12% |
| 1 | 0.93458 | 0.92593 | 0.91743 | 0.90909 | 0.90090 | 0.89286 |
| 2 | 1.80802 | 1.78326 | 1.75911 | 1.73554 | 1.71252 | 1.69005 |
| 3 | 2.62432 | 2.57710 | 2.53129 | 2.48685 | 2.44371 | 2.40183 |
| 4 | 3.38721 | 3.31213 | 3.23972 | 3.16987 | 3.10245 | 3.03735 |
| 5 | 4.10020 | 3.99271 | 3.88965 | 3.79079 | 3.69590 | 3.60478 |

Using Table 4, we calculate the PV of the ordinary annuity (PVA) as follows:

$$\text{PVA} = \$10,000 (\text{annuity amount}) \times 2.48685^* = \$24,869$$

*Present value of an ordinary annuity of \$1 : $n = 3, i = 10\%$

Using Excel, enter: `=-PV(.10, 3, 10000, 0, 0)`

Output: **24,869**

Present Value of an Annuity Due

Illustration 5-12 Present Value of an Annuity Due

Suppose you want to determine the cost today of a three-year graduate program. The program's cost is \$10,000 each year, with payments made at the beginning of each year. You use a 10% interest rate. What is the cost today of the program?

The following time diagram depicts this situation:

Present value of an annuity due

Once again, using individual PV factors of \$1 from Table 2, the PV of the annuity due can be calculated as follows:

| | Payment | | PV of \$1 $i = 10\%$ | | Present Value (at the beginning of year 1) | n |
|---------------|----------|---|----------------------|---|--|-----|
| First payment | \$10,000 | × | 1.00000 | = | \$ 10,000 | 0 |

| | Payment | | PV of \$1 $i = 10\%$ | = | Present Value (at the beginning of year 1) | n |
|----------------|---------|---|----------------------|---|--|-----|
| Second payment | 10,000 | × | 0.90909 | = | 9,091 | 1 |
| Third payment | 10,000 | × | 0.82645 | = | 8,264 | 2 |
| Total | | | <u>2.73554</u> | | <u>\$27,355</u> | |

The first payment does not contain any interest since it is made on the first day of the three-year annuity period. Therefore, the factor used is 1.00. The second payment has one compounding period and the factor used of 0.90909 is the PV factor of \$1 for one period and 10%, and we need to remove two compounding periods of interest from the third payment. The factor used of 0.82645 is the PV factor of \$1 for two periods and 10%. The cost today of your graduate program is **\$27,355**.

In an annuity due, the first cash payment won't include interest.

A more efficient method of calculating this present value is to use Table 6, Present Value of an Annuity Due of \$1. [Illustration 5-13](#) contains an excerpt from Table 6.

Illustration 5-13 Present Value of an Annuity Due of \$1 (excerpt from Table 6)

| Periods (n) | Interest Rates (i) | | | | | |
|-----------------|------------------------|---------|---------|----------------|---------|---------|
| | 7% | 8% | 9% | 10% | 11% | 12% |
| 1 | 1.00000 | 1.00000 | 1.00000 | 1.00000 | 1.00000 | 1.00000 |
| 2 | 1.93458 | 1.92593 | 1.91743 | 1.90909 | 1.90090 | 1.89286 |
| 3 | 2.80802 | 2.78326 | 2.75911 | 2.73554 | 2.71252 | 2.69005 |
| 4 | 3.62432 | 3.57710 | 3.53129 | 3.48685 | 3.44371 | 3.40183 |
| 5 | 4.38721 | 4.31213 | 4.23972 | 4.16987 | 4.10245 | 4.03735 |

Using Table 6, we can calculate the PV of the annuity due (PVAD):

$$PVAD = \$10,000 \text{ (annuity amount)} \times 2.73554^* = \$27,355$$

*Present value of an annuity due of \$1 : $n = 3, i = 10\%$

Using Excel, enter: `=-PV(.10, 3, 10000, 0, 1)`

Output: **27,355**

To better understand the relationship between Tables 4 and 6, notice that the PVAD factor for three periods, 10%, from Table 6 is **2.73554**. This is simply the PVA factor for two periods, 10%, of 1.73554, plus 1.0. The addition of 1.0 reflects the fact that the first payment occurs immediately and thus includes no interest.

Of course, if payment amounts are *not the same* each year, we don't have an annuity and can't find a solution by using the annuity tables. In that case, we'd need to find the present value of each payment separately using the Present Value of \$1 for each individual period and add them together.

Present Value of a Deferred Annuity

Accounting valuations often involve the present value of annuities in which the first cash flow is expected to occur more than one time period after the date of the agreement. As the inception of the annuity is deferred beyond a single period, this type of annuity is referred to as a **deferred annuity**.⁶ An example of a deferred annuity is given in  **Illustration 5-14**.

A deferred annuity exists when the first cash flow occurs more than one period after the date the agreement begins.

Illustration 5-14 Deferred Annuity

Today, you are considering acquiring an investment that will provide three equal payments of \$10,000 each to be received at the end of three consecutive years. However, the first payment is not expected until three years from now. The time value of money is 10%. How much would you be willing to pay for this investment today?

The following time diagram depicts this situation:

The present value of the deferred annuity can be calculated by summing the present values of the three individual cash flows, as of today.

| | Payment | | PV of \$1 $i = 10\%$ | = | Present Value | n |
|----------------|----------|---|----------------------|---|------------------------|-----|
| First payment | \$10,000 | × | 0.75131 | = | \$ 7,513 | 3 |
| Second payment | 10,000 | × | 0.68301 | = | 6,830 | 4 |
| Third payment | 10,000 | × | 0.62092 | = | 6,209 | 5 |
| | | | | | <u><u>\$20,552</u></u> | |

Another way of calculating the present value of a deferred annuity involves a two-step process.

1. Calculate the PV of the annuity *as of the beginning of the annuity period*.
2. Reduce the single amount calculated in (1) to its present value *as of today*.

The following time diagram illustrates this two-step process:

For step 1, we compute the present value of the annuity as of the end of year 2 by multiplying the annuity amount by the three-period ordinary annuity factor:

$$PVA = \$10,000 \text{ (annuity amount)} \times 2.48685^* = \mathbf{\$24,869}$$

*Present value of an ordinary annuity of \$1 : $n = 3, i = 10\%$

For step 2, we compute the present value of **\$24,869** by multiplying this amount by the two-period present value factor:

$$PVAD = \mathbf{\$24,869} \text{ (future amount)} \times 0.82645^* = \mathbf{\$20,552} \text{ (\$1 difference due to rounding)}$$

*Present value of \$1 : $n = 2, i = 10\%$

If you recall the concepts you learned in this chapter, you might think of other ways the present value of a deferred annuity can be determined. Among them:

1. Calculate the PV of an annuity due, rather than an ordinary annuity, and then reduce that amount **three** periods rather than two:

$$PVAD = \$10,000 \text{ (annuity amount)} \times 2.73554^* = \$27,355$$

*Present value of an annuity due of \$1 : $n = 3, i = 10\%$

This is the present value as of the end of year 3. This single amount is then reduced to present value today by making the following calculation:

$$PV = \$27,355 \times 0.75131^* = \mathbf{\$20,552}$$

*Present value of \$1 : $n = 3, i = 10\%$

2. From Table 4, subtract the two-period PVA factor (1.73554) from the five-period PVA factor (3.79079) and multiply the difference (2.05525) by \$10,000 to get **\$20,552**.

Solving for Unknown Values in Present Value Situations

LO5–9 Explain the relationship between Table 2, Present Value of \$1, and Table 4, Present Value of an Ordinary Annuity of \$1.

In present value problems involving annuities, there are four variables: (1) present value of an ordinary annuity (PVA) or present value of an annuity due (PVAD), (2) the amount of each annuity payment, (3) the number of periods, n , and (4) the interest rate, i . If you know any three of these, the fourth can be determined.

Determining the Annuity Amount When Other Variables Are Known

Illustration 5–15 Determining the Annuity Amount When Other Variables Are Known

Assume you borrow \$700 from a friend and intend to repay the amount in four equal annual installments beginning one year from today. Your friend wishes to be reimbursed for the time value of money at an 8% annual rate. What is the required annual payment that must be made (the annuity amount), to repay the loan in four years?

The following time diagram shows the situation in [Illustration 5–15](#):

The required payment is the annuity amount that will provide a present value of \$700 when using an interest rate of 8%.

The unknown variable is the annuity amount.

$$\text{\$700 (present value)} = 3.31213^* \times \text{annuity amount}$$

*Present value of an ordinary annuity of \$1 : $n = 4, i = 8\%$

Rearranging algebraically, we find that the annuity amount is \$211.34.

$$\text{\$700 (present value)} \div 3.31213^* = \text{\$211.34 annuity amount}$$

*Present value of an ordinary annuity of \$1 : $n = 4, i = 8\%$

Using Excel, enter: `=-PMT(.08, 4, 700, 0, 0)`

Output: **211.34**

You would have to make four annual payments of \$211.34 to repay the loan. Total payments of \$845.36 ($4 \times \211.34) would include \$145.36 in interest ($\$845.36 - \700.00).

Determining the Periods When Other Variables Are Known

Illustration 5-16 Determining n When Other Variables Are Known

Assume you borrow \$700 from a friend and intend to repay the amount in equal installments of \$100 per year over a period of years. The payments will be made at the end of each year beginning one year from now. Your friend wishes to be

reimbursed for the time value of money at a 7% annual rate. How many years would it take before you repaid the loan?

Once again, this is an ordinary annuity situation because the first payment takes place one year from now. The following time diagram shows the situation in

 **Illustration 5-16:**

The number of years is the value of n that will provide a present value of \$700 when finding the present value of \$100 payments using an interest rate of 7%:

The unknown variable is the number of periods.

$$\text{\$700 (present value)} = \$100 \text{ (annuity amount)} \times \text{PVA factor}^*$$

$$^* \text{Present value of an ordinary annuity of \$1 : } n = ?, i = 7\%$$

Rearranging algebraically, we find that the PVA table factor is 7.0.

$$\text{\$700 (present value)} \div \$100 \text{ (annuity amount)} = 7.0^*$$

$$^* \text{Present value of an ordinary annuity of \$1 : } n = ?, i = 7\%$$

When you consult the PVA table, Table 4, you search the 7% column ($i = 7\%$) for this value and find 7.02358 in row 10. So it would take approximately 10 years to repay the loan in the situation described.

Using Excel, enter: = NPER(.07, 100, -700, 0, 0)

Determining the Rate When Other Variables Are Known

Illustration 5-17 Determining i When Other Variables Are Known

Suppose a friend asked to borrow \$331 today (present value) and promised to repay you \$100 (the annuity amount) at the end of each of the next four years. What is the annual interest rate implicit in this agreement?

First of all, we are dealing with an ordinary annuity situation as the payments are at the end of each period. The following time diagram shows the situation in [Illustration 5-17](#):

The interest rate is the rate that will provide a present value of \$331 when finding the present value of the \$100 four-year ordinary annuity.

The unknown variable is the interest rate.

$$\text{\$331 (present value)} = \$100 (\text{annuity amount}) \times \text{PVA factor}^*$$

$$^*\text{Present value of an ordinary annuity of } \$1 : n = 4, i = ?$$

Rearranging algebraically, we find that the PVA table factor is 3.31.

$$\text{\$331 (present value)} \div \$100 (\text{annuity amount}) = 3.31^*$$

$$^*\text{Present value of an ordinary annuity of } \$1 : n = 4, i = ?$$

Using Excel, enter: `=RATE(4, -100, 331, 0, 0)`

Output: **0.08**

When you consult the PVA table, Table 4, you search row four ($n = 4$) for this value and find it in the 8% column. So the effective interest rate is 8%.

Determining When Other Variables Are Known—Unequal Cash Flows

Illustration 5-18 Determining i When Other Variables Are Known—Unequal Cash Flows

Suppose you borrowed \$400 from a friend and promised to repay the loan by making three annual payments of \$100 at the end of each of the next three years plus a final payment of \$200 at the end of year 4. What is the interest rate implicit in this agreement?

The following time diagram shows the situation in **Illustration 5-18**:

The interest rate is the rate that will provide a present value of \$400 when finding the present value of the \$100 three-year ordinary annuity plus the \$200 to be received in four

years:

The unknown variable is the interest rate.

$$\text{\$400 (present value)} = \$100 (\text{annuity}) \times \text{PVA factor}^* + \$200 (\text{payment}) \times \text{PV factor}^\dagger$$

*Present value of an ordinary annuity of \$1 : $n = 3, i = ?$

†Present value of \$1 : $n = 4, i = ?$

This equation involves two unknowns and is not as easily solved as the two previous examples. One way to solve the problem is to trial-and-error the answer. For example, if we assumed i to be 9%, the total PV of the payments would be calculated as follows:

$$\text{Present value} = \$100 (2.53129^*) + \$200 (0.70843^\dagger) = \$395$$

*Present value of an ordinary annuity of \$1 : $n = 3, i = 9\%$

†Present value of \$1 : $n = 4, i = 9\%$

Because the present value computed is less than the \$400 borrowed, using 9% removes too much interest. Recalculating PV with $i = 8\%$ results in a PV of \$405. This indicates that the interest rate implicit in the agreement is between 8% and 9%.

Concept Review Exercise

ANNUITIES

Using the appropriate table, answer each of the following independent questions.

1. What is the future value of an annuity of \$2,000 invested at the *end* of each Page 254 of the next six periods at 8% interest?

2. What is the future value of an annuity of \$2,000 invested at the *beginning* of each of the next six periods at 8% interest?
3. What is the present value of an annuity of \$6,000 to be received at the *end* of each of the next eight periods assuming an interest rate of 10%?
4. What is the present value of an annuity of \$6,000 to be received at the *beginning* of each of the next eight periods assuming an interest rate of 10%?
5. You bought a \$3,000 audio system and agreed to pay for the purchase in 10 equal annual installments of \$408 beginning one year from today. What is the interest rate implicit in this agreement?
6. You bought a \$3,000 audio system and agreed to pay for the purchase in 10 equal annual installments beginning one year from today. The interest rate is 12%. What is the amount of the annual installment?
7. You bought a \$3,000 audio system and agreed to pay for the purchase by making nine equal annual installments beginning one year from today plus a lump-sum payment of \$1,000 at the end of 10 periods. The interest rate is 10%. What is the required annual installment?
8. You bought an audio system and agreed to pay for the purchase by making four equal annual installments of \$800 beginning one year from today plus a lump-sum payment of \$1,000 at the end of five years. The interest rate is 12%. What was the cost of the audio system? (*Hint: What is the present value of the cash payments?*)
9. You bought an audio system and agreed to pay for the purchase by making five equal annual installments of \$1,100 beginning four years from today. The interest rate is 12%. What was the cost of the audio system? (*Hint: What is the present value of the cash payments?*)

Solution:

$$1. FVA = \$2,000 \times 7.3359^* = \$14,672$$

*Future value of an ordinary annuity of \$1: $n = 6$, $i = 8\%$ (from Table 3)

$$2. FVAD = \$2,000 \times 7.9228^* = \$15,846$$

*Future value of an annuity due of \$1: $n = 6$, $i = 8\%$ (from Table 5)

$$3. PVA = \$6,000 \times 5.33493^* = \$32,010$$

*Present value of ordinary annuity of \$1: $n = 8$, $i = 10\%$ (from Table 4)

$$4. PVAD = \$6,000 \times 5.86842^* = \$35,211$$

*Present value of an annuity due of \$1: $n = 8, i = 10\%$ (from Table 6)

5. Approximately 6%*

$\$3,000/\$408 = 7.35$ (Present value factor of an ordinary annuity of \$1 for $n = 10, i = ?$). From Table 4, i is approximately 6%.

6.
$$\text{Each annuity payment} = \frac{\$3,000}{5.65022^*} = \$531$$

*Present value of an ordinary annuity of \$1 : $n = 10, i = 12\%$ (from Table 4)

7.
$$\text{Each annuity payment} = \frac{\$3,000 - [\text{PV of } \$1,000 (n = 10, i = 10\%)]}{5.75902^*}$$

$$\text{Each annuity payment} = \frac{\$3,000 - (\$1,000 \times .38554^\dagger)}{5.75902^*}$$

$$\text{Each annuity payment} = \frac{\$2,614}{5.75902^*} = \$454$$

*Present value of an ordinary annuity of \$1: $n = 9, i = 10\%$ (from Table 4)

†Present value of \$1: $n = 10, i = 10\%$ (from Table 2)

8.
$$\text{PV} = \$800 \times 3.03735^* + \$1,000 \times 0.56743^\dagger = \$2,997$$

*Present value of an ordinary annuity of \$1: $n = 4, i = 12\%$ (from Table 4)

†Present value of \$1: $n = 5, i = 12\%$ (from Table 2)

9.
$$\text{PVA} = \$1,100 \times 3.60478^* = \$3,965$$

*Present value of an ordinary annuity of \$1: $n = 5, i = 12\%$ (from Table 4)

This is the present value three years from today (the beginning of the five-year ordinary annuity). This single amount is then reduced to present value as of today by making the following calculation:

$$\text{PV} = \$3,965 \times 0.71178^\dagger = \$2,822$$

†Present value of \$1: $n = 3, i = 12\%$, (from Table 2)

Preview of Accounting Applications of Present Value Techniques—Annuities

LO5–10 Prepare a time diagram for the present value of a four-year ordinary annuity of \$200. Assume an interest rate of 10% per year.

The time value of money has many applications in accounting. Most of these applications involve the concept of present value. Because financial instruments typically specify equal periodic payments, these applications quite often involve annuity situations. For example, let's consider one accounting situation using both an ordinary annuity and the present value of a single amount (long-term bonds), two using an annuity due (long-term leases and installment notes), and a fourth using a deferred annuity (pension obligations).

Valuation of Long-Term Bonds

You will learn in Chapter 14 that a long-term bond usually requires the issuing (borrowing) company to repay a specified amount at maturity and make periodic stated interest payments over the life of the bond. The *stated* interest payments are equal to the contractual stated rate multiplied by the face value of the bonds. At the date the bonds are issued (sold), the marketplace will determine the price of the bonds based on the *market* rate of interest for investments with similar characteristics. The market rate at date of issuance may not equal the bonds' stated rate, in which case the price of the bonds (the amount the issuing company actually is borrowing) will not equal the bonds' face value. Bonds issued at more than face value are said to be issued at a premium, while bonds issued at less than face value are said to be issued at a discount. Consider the example in  **Illustration 5-19**.

Illustration 5-19 Valuing a Long-Term Bond Liability

On June 30, 2024, Fumatsu Electric issued 10% stated rate bonds with a face amount of \$200 million. The bonds mature on June 30, 2044 (20 years). The market rate of interest for similar issues was 12%. Interest is paid semiannually (5%) on June 30 and December 31, beginning December 31, 2024. The interest payment

is \$10 million ($5\% \times \200 million). What was the price of the bond issue? What amount of interest expense will Fumatsu record for the bonds in 2024?

To determine the price of the bonds, we calculate the present value of the 40-period annuity (40 semiannual interest payments of \$10 million) and the lump-sum (single amount) payment of \$200 million paid at maturity using the semiannual market rate of interest of 6%. In equation form,

$$\begin{aligned} \text{PVA} &= \$10 \text{ million (annuity amount)} \times 15.04630^* = \$150,463,000 \\ \text{PV} &= \$200 \text{ million (lump-sum)} \times 0.09722^\dagger = 19,444,000 \\ \text{Price of the bond issue} &= \$169,907,000 \end{aligned}$$

*Present value of an ordinary annuity of \$1 : $n = 40, i = 6\%$

†Present value of \$1 : $n = 40, i = 6\%$

The bonds will sell for \$169,907,000, which represents a discount of \$30,093,000 ($\$200,000,000 - \$169,907,000$). The discount results from the difference between the semiannual stated rate of 5% and the market rate of 6%. Fumatsu records a \$169,907,000 increase in cash and a corresponding liability for bonds payable.

Interest expense for the first six months is determined by multiplying the carrying value (book value) of the bonds (\$169,907,000) by the semiannual effective rate (6%) as follows:

$$\$169,907,000 \times 6\% = \$10,194,420$$

The difference between interest expense (\$10,194,420) and interest paid (\$10,000,000) increases the carrying value of the bond liability. Interest for the second six months of the bonds' life is determined by multiplying the new carrying value by the 6% semiannual effective rate.⁷

We discuss the specific accounts used to record these transactions in Chapters 12 and 14.

Valuation of Long-Term Leases

Companies frequently acquire the use of assets by leasing rather than purchasing them. Leases usually require the payment of fixed amounts at regular intervals over the life of the

lease. You will learn in Chapter 15 that certain leases are treated in a manner similar to an installment purchase by the lessee. In other words, the lessee records an asset and corresponding lease liability at the present value of the lease payments. Consider the example in [Illustration 5-20](#).

Illustration 5-20 Valuing a Long-Term Lease Liability

On January 1, 2024, The Shoe Company signed a 25-year lease agreement for an office building. Terms of the lease call for annual lease payments of **\$10,000** at the beginning of each year, with the first payment due on January 1, 2024. Assuming an interest rate of 10% properly reflects the time value of money in this situation, how should the company value the asset acquired and the corresponding lease liability?

Once again, by computing the present value of the lease payments, we remove the portion of the payments that represents interest, leaving the portion that represents payment for the asset itself. Because the first payment is due immediately, as is common for leases, this is an annuity due situation. In equation form:

Leases require the recording of an asset and corresponding liability at the present value of future lease payments.

$$PVAD = \$10,000 (\text{annuity amount}) \times 9.98474^* = \$99,847$$

*Present value of an annuity due of \$1 : $n = 25, i = 10\%$

The company values the leased asset and corresponding lease liability at \$99,847.

Journal entry at the beginning of the lease

| | | |
|--------------------|--------|--------|
| Right-of-use asset | 99,847 | |
| Lease payable | | 99,847 |

The difference between this amount and total future cash payments of \$250,000 ($\$10,000 \times 25$) represents the interest that is implicit in this agreement. That difference is recorded as interest over the life of the lease.

Valuation of Installment Notes

If you have purchased a car, or maybe a house, unless you paid cash, you signed a note promising to pay a portion of the purchase price over, say, five years for the car or 30 years for the house. Such notes usually call for payment in monthly installments rather than by a single amount at maturity. Corporations also often borrow using installment notes. Usually, installment payments are equal amounts each period so they constitute an annuity. Each payment includes both an amount that represents interest and an amount that represents a reduction of the outstanding balance (principal reduction). The periodic reduction of the balance is sufficient that, at maturity, the note is completely paid. If we know the amount of the periodic installment payments, we can calculate the amount at which to record the note in precisely the same way as we did in the previous illustration for a lease. But, suppose instead that we know the amount of the loan and want to calculate the amount of the installment payments. In that case, rather than multiplying the payment by the appropriate present value of an annuity factor to get the present value, we would invert the calculation and divide the amount of the loan by that present value factor. For instance, consider the example in [Illustration 5-21](#).

Illustration 5-21 Calculating Installment Note Payments

On January 1, 2024, The Shoe Company purchased a \$35,000 machine, with a \$5,000 down payment and a 5-year installment note for the remaining \$30,000. Terms of the note call for annual installment payments at the beginning, with the first payment due on January 1, 2024, and at each December 31 thereafter. Assuming an interest rate of 4%, what is the amount of the annual installment payments?

The annual installment payment amount that would pay a \$30,000 loan over five years at a 4% interest rate is:

$$\$30,000 \div 4.62990^* = \$6,480$$

* present value of an annuity due of \$1 : $n = 5, i = 4\%$

The company initially will record the machine at its \$35,000 cost with credits to cash and notes payable.

| | |
|---------|--------|
| Machine | 35,000 |
| Cash | 5,000 |

Notes payable 30,000

The company will record the first installment payment at the date of purchase:

Notes payable 6,480
Cash 6,480

No interest is needed for the first installment payment because no time had yet passed, so no interest had accrued. With the second payment, though, the payment represents part interest and part reduction of the loan:

Interest expense* 941
Notes payable 5,539
Cash 6,480

*Interest expense is 4% times the amount owed initially reduced by the first payment a year earlier, or $4\% \times (\$30,000 - \$6,480) = \$941$.

Valuation of Pension Obligations

Pension plans are important compensation vehicles used by many U.S. companies. These plans are essentially forms of deferred compensation as the pension benefits are paid to employees after they retire. You will learn in Chapter 17 that some pension plans create obligations during employees' service periods that must be paid during their retirement periods. These obligations are funded during the employment period. This means companies contribute cash to pension funds annually with the intention of accumulating sufficient funds to pay employees the retirement benefits they have earned. The amounts contributed are determined using estimates of retirement benefits. The actual amounts paid to employees during retirement depend on many factors, including future compensation levels and length of life. Consider  **Illustration 5-22**.

Illustration 5-22 Valuing a Pension Obligation

On January 1, 2024, The Shoe Company hired a new manager. The manager is expected to work for 25 years before retirement on December 31, 2048. Annual

retirement payments will be paid at the end of each year during his retirement period, expected to be 20 years. The first payment will be on December 31, 2049. During 2024 the manager earned an annual retirement benefit estimated to be **\$2,000** per year. The company plans to contribute cash to a pension fund that will accumulate to an amount sufficient to pay this benefit. Assuming the company anticipates earning 6% on all funds invested in the pension plan, how much would the company have to contribute at the end of 2024 to pay for pension benefits earned in 2024?

To determine the required contribution, we calculate the present value on December 31, 2024, of the deferred annuity of **\$2,000** that begins on December 31, 2049, and is expected to end on December 31, 2068.

The following time diagram depicts this situation:

We can calculate the present value of the annuity using a two-step process. The first step computes the present value of the annuity as of December 31, 2048, by multiplying the annuity amount by the 20-period ordinary annuity factor.

$$PVA = \$2,000 \text{ (annuity amount)} \times 11.46992^* = \$22,940$$

*Present value of an ordinary annuity of \$1 : $n = 20, i = 6\%$

This is the present value as of December 31, 2048. This single amount is then reduced to present value as of December 31, 2024, by a second calculation.

$$PV = \$22,940 \text{ (future amount)} \times 0.24698^* = \$5,666$$

*Present value of \$1 : $n = 24, i = 6\%$

The Shoe Company would have to contribute \$5,666 at the end of 2024 to fund the estimated pension benefits earned by its employee in 2024. Viewed in reverse, \$5,666 invested now at 6% will accumulate a fund balance of \$22,940 at December 31, 2048. If the fund balance remains invested at 6%, \$2,000 can be withdrawn each year for 20 years before the fund is depleted.

Among the other situations you'll encounter using present value techniques are valuing notes ([📄 Chapters 10](#) and [📄 14](#)) and other postretirement benefits ([📄 Chapter 17](#)).

Summary of Time Value of Money with Excel

As previously mentioned, Excel can be a useful way to solve future value and present value problems. Excel can handle interest rates or number of periods not shown in the tables, and Excel avoids any rounding issues (factors in the tables are rounded to the fourth or fifth decimal place).

In Excel, we can use the FV function to calculate the future value of any amount for any interest rate and any number of periods:

FV function in Excel

$$= -\text{FV}(\text{rate}, \text{nper}, \text{pmt}, [\text{pv}], [\text{type}])$$

- **rate** The interest rate per period.
- **nper** The total number of periods.
- **pmt** Payment amount each period. Enter 0 for a single amount.
- **pv** The present value, or the lump-sum amount, today. Enter 0 for annuities.
- **type** The number 0 or 1 to indicate whether annuity payments are made at the end (=0) or beginning (=1) of each period. If type is omitted, it is assumed to be 0.

Notice that we include the minus sign in front of the Excel formula. The reason is that the Excel output is negative by default, under the assumption that the amount being calculated represents a payment. To avoid confusion, we include the minus sign so the output is positive.

 **Illustration 5-23** summarizes the future value concepts discussed in the chapter and includes the FV Excel function.

| Concept | Summary | Example | Table | Excel Input | Output |
|---|---|--|---------|--------------------------------------|--------|
| Future value (FV) of \$1 | The amount of money a dollar will grow to at some point in the future. | Future value of \$1,000 in three years at 10% compounded annually. | Table 1 | <code>=FV(.10, 3, 0, 1000, 0)</code> | 1,331 |
| Future value of an <i>ordinary annuity</i> (FVA) of \$1 | The future value of a series of equal-sized payments made at the <i>end</i> of each period. | Future value of \$1,000 paid at the end of each year for three years at 10% compounded annually. | Table 3 | <code>=FV(.10, 3, 1000, 0, 0)</code> | 3,310 |
| Future value of an <i>annuity due</i> (FVAD) of \$1 | The future value of a series of equal-sized payments made at the <i>beginning</i> of each period. | Future value of \$1,000 paid at the beginning of each year for three years at 10% compounded annually. | Table 5 | <code>=FV(.10, 3, 1000, 0, 1)</code> | 3,641 |

The Present Value (PV) function in Excel works similarly:

PV function in Excel

$$= -PV(\text{rate}, \text{nper}, \text{pmt}, [\text{fv}], [\text{type}])$$

 **Illustration 5-24** summarizes the present value concepts discussed in the chapter and includes the PV Excel function.

Illustration 5-24 Present Values

| Concept | Summary | Example | Table | Excel Input | Output |
|---------------------------|---|---|---------|--------------------------------------|--------|
| Present value (PV) of \$1 | The amount of money today that is equivalent to a | Present value of \$1,000 in three years | Table 2 | <code>=PV(.10, 3, 0, 1000, 0)</code> | 751.31 |

| Concept | Summary | Example | Table | Excel Input | Output |
|--|--|---|------------|----------------------------|----------|
| | given amount in the future. | at 10% compounded annually. | $i = 10\%$ | | |
| Present value of an <i>ordinary annuity</i> (PVA) of \$1 | The present value of a series of equal-sized payments made at the <i>end</i> of each period. | Present value of \$1,000 paid at the end of each year for three years at 10% compounded annually. | Table 4 | $=-PV(.10, 3, 1000, 0)$ | 2,486.85 |
| Present value of an <i>annuity due</i> (PVAD) of \$1 | The present value of a series of equal-sized payments made at the <i>beginning</i> of each period. | Present value of \$1,000 paid at the beginning of each year for three years at 10% compounded annually. | Table 6 | $=-PV(.10, 3, 1000, 0, 1)$ | 2,735.54 |

As indicated above, Excel can be particularly useful for interest rates or time periods not shown in the tables. As just one simple example, in  **Illustration 5-25** we calculate the future value of \$1,000 after three years at 7% using various compounding periods. We could use Table 1 for annual and semiannual compounding but not for quarterly or monthly compounding because the table includes FV factors for $i = 7\%$ and 3.5% but not for 1.75% or 0.5833% and not for $n = 36$.

Illustration 5-25 FV Function in Excel for Various Periods of Compounding

| Example | Compounding | Table 1 | Excel Input | Output |
|---|--------------|--------------------|--------------------------------|----------|
| Future value of \$1,000 in three years at 7%. | Annually | $n = 3, i = 7\%$ | $=-FV(.07, 3, 0, 1000, 0)$ | 1,225.04 |
| | Semiannually | $n = 6, i = 3.5\%$ | $=-FV(.07/2, 3*2, 0, 1000, 0)$ | 1,229.26 |

| Example | Compounding | Table 1 | Excel Input | Output |
|---------|-------------|-----------|--------------------------------|----------|
| | Quarterly | Not shown | =-FV(.07/4, 3*4, 0, 1000, 0) | 1,231.44 |
| | Monthly | Not shown | =-FV(.07/12, 3*12, 0, 1000, 0) | 1,232.93 |

Notice for semiannual compounding, we divide the annual interest rate by 2 and multiply the number of periods by 2. We make corresponding adjustments for quarterly compounding (4) and monthly compounding (12).

Similar to Excel, financial calculators (handheld or online) allow similar calculations for any combination of interest rate and number of periods. The buttons and procedures used to compute time values can vary depending on the brand of calculator or website.

Financial Reporting Case Solution

Gabriel Petrescu/Shutterstock

- 1. Why was Mavis to receive \$336 million rather than the \$758.7 million lottery prize?** Mavis chose to receive her lottery winnings in one lump-sum payment immediately rather than in 30 installment payments. The state calculates the present value of the payments, withholds the necessary federal and state income tax, and pays Mavis the remainder.
- 2. What interest (discount) rate did the state of Massachusetts use to calculate the \$336 million lump-sum payment** Assuming equal annual installment payments beginning immediately, the amount of the payments is determined by dividing \$758.7 million by 30 periods:

| | |
|------------------------|--------------|
| \$758.7 million ÷ 30 = | \$25,290,000 |
| Less: 30% income tax | (7,587,000) |
| | <hr/> |

Net-of-tax payment

\$17,703,000

Because the first payment is made immediately, this is an annuity due situation. We must find the interest rate that provides a present value of \$336 million. $\$336,000,000 \div \$17,703,000$ is 18.98, the present value factor that equates the payments and their present value. Searching for that factor in row 30 of Table 6, we find the factor closest to 18.98 in the 3.5% column. So, the discount rate used by the state was approximately 3.5%.

- 3. What are some of the accounting applications that incorporate the time value of money into valuation?** Accounting applications that incorporate the time value of money techniques into valuation include the valuation of long-term notes receivable and various long-term liabilities that include bonds, notes, leases, pension obligations, and other postretirement benefits. We study these in detail in later chapters. ●

The Bottom Line

-  **LO5-1** Compound interest includes interest not only on the initial investment, but also on the accumulated interest in previous periods. (*p. 236*)
-  **LO5-2** The future value of a single amount is the amount of money that a dollar will grow to at some point in the future. It is computed by *multiplying* the single amount by $(1 + i)^n$, where i is the interest rate and n the number of compounding periods. The Future Value of \$1 table allows for the calculation of future value for any single amount by providing the factors for various combinations of i and n . (*p. 237*)
-  **LO5-3** The present value of a single amount is the amount of money today that is equivalent to a given amount to be received or paid in the future. It is computed by *dividing* the future amount by $(1 + i)^n$. The Present Value of \$1 table simplifies the calculation of the present value of any future amount. (*p. 238*)
-  **LO5-4** There are four variables in the process of adjusting single cash flow amounts for the time value of money: present value (PV), future value (FV), i , and n . If we know any three of these, the fourth can be computed easily. (*p. 239*)
-  **LO5-5** We value most notes receivable and notes payable at the present value of future cash flows they call for, reflecting an appropriate time value of money. (*p. 242*)
-  **LO5-6** An annuity is a series of equal-sized cash flows occurring over equal intervals of time. An ordinary annuity exists when the cash flows occur at the end of each period. An annuity due exists when the cash flows occur at the beginning of each period. (*p. 244*)
-  **LO5-7** The future value of an ordinary annuity (FVA) is the future value of a series of equal-sized cash flows with the first payment taking place at the end of the first compounding period. The last payment will not earn any interest since it is made at the end of the annuity period. The future value of an annuity due (FVAD) is the future value of a series of equal-sized cash flows with the first payment taking place at the beginning of the annuity period (the beginning of the first compounding period). (*p. 244*)
-  **LO5-8** The present value of an ordinary annuity (PVA) is the present value of a series of equal-sized cash flows with the first payment taking place at the end of the

first compounding period. The present value of an annuity due (PVAD) is the present value of a series of equal-sized cash flows with the first payment taking place at the beginning of the annuity period. The present value of a deferred annuity is the present value of a series of equal-sized cash flows with the first payment taking place more than one time period after the date of the agreement. (*p. 246*)

 **LO5-9**

In present value problems involving annuities, there are four variables: PVA or PVAD, the annuity amount, the number of compounding periods (n), and the interest rate (i). If you know any three of these, you can determine the fourth. (*p. 251*)

 **LO5-10**

Most accounting applications of the time value of money involve the present values of annuities. The initial valuation of long-term bonds is determined by calculating the present value of the periodic stated interest payments and the present value of the lump-sum payment made at maturity. Certain leases require the lessee to compute the present value of future lease payments to value the leased asset and corresponding lease obligation. Similarly, installment notes sometimes require us to calculate the present value of installment payments as the amount at which to record the note. Also, pension plans require the payment of deferred annuities to retirees. (*p. 255*)

Questions For Review of Key Topics

- Q 5-1** Define interest.
- Q 5-2** Explain compound interest.
- Q 5-3** What would cause the annual interest rate to be different from the annual effective rate or yield?
- Q 5-4** Identify the three items of information necessary to calculate the future value of a single amount.
- Q 5-5** Define the present value of a single amount.
- Q 5-6** Explain the difference between monetary and nonmonetary assets and liabilities.
- Q 5-7** What is an annuity?
-
- Page 262
- Q 5-8** Explain the difference between an ordinary annuity and an annuity due.
- Q 5-9** Explain the relationship between Table 2, Present Value of \$1, and Table 4, Present Value of an Ordinary Annuity of \$1.
- Q 5-10** Prepare a time diagram for the present value of a four-year ordinary annuity of \$200. Assume an interest rate of 10% per year.
- Q 5-11** Prepare a time diagram for the present value of a four-year annuity due of \$200. Assume an interest rate of 10% per year.
- Q 5-12** What is a deferred annuity?
- Q 5-13** Assume that you borrowed \$500 from a friend and promised to repay the loan in five equal annual installments beginning one year from today. Your friend wants to be reimbursed for the time value of money at an 8% annual rate. Explain how you would compute the required annual payment.
- Q 5-14** Compute the required annual payment in Question 5-13.
- Q 5-15** Explain how the time value of money concept is incorporated into the valuation of certain leases.

Brief Exercises

BE 5-1 Simple versus compound interest LO5-1

You have two investment opportunities. The interest rate for both investments is 8%. Interest on the first investment will compound annually, while interest on the second will compound quarterly. Which investment opportunity should you choose? Why?

BE 5-2 Future value; single amount LO5-2

You are saving for a new car. You place \$10,000 into an investment account today. How much will you have after four years if the account earns (a) 4%, (b) 6%, or (c) 8% compounded annually?

BE 5-3 Future value; single amount LO5-2

You are saving for a new boat. You place \$25,000 in an investment account today that earns 6% compounded annually. How much will be in the account after (a) three years, (b) four years, or (c) five years?

BE 5-4 Future value; single amount LO5-2

Suppose a husband wants to take his wife on a trip three years from now to Europe to celebrate their 40th anniversary. He has just received a \$20,000 inheritance from an uncle and intends to invest it for the trip. The husband estimates the trip will cost \$23,500 and he believes he can earn 5% interest, compounded annually, on his investment. Will he be able to pay for the trip with the accumulated investment amount?

BE 5-5 Future value; solving for unknown; single amount LO5-4

Refer to the situation described in BE 5-4. Assume that the trip will cost \$26,600. What interest rate, compounded annually, must be earned to accumulate enough to pay for the trip?

BE 5-6 Present value; single amount LO5-3

You have entered into an agreement for the purchase of land. The agreement specifies that you will take ownership of the land immediately. You have agreed to pay \$50,000 today and another \$50,000 in three years. Calculate the total cost of the land today, assuming a discount rate of (a) 5%, (b) 7%, or (c) 9%.

BE 5-7 Present value; single amount  **LO5-3**

You believe you have discovered a new medical device. You anticipate it will take additional time to get the device fully operational, run clinical trials, obtain FDA approval, and sell to a buyer for \$250,000. Assume a discount rate of 7% compounded annually. What is the value today of discovering the medical advice, assuming you sell it for \$250,000 in (a) two years, (b) three years, or (c) four years?

BE 5-8 Present value; single amount  **LO5-3**

You have an investment opportunity that promises to pay you \$16,000 in four years. You could earn a 6% annual return investing elsewhere. What is the maximum amount you would be willing to invest in this opportunity?

BE 5-9 Present value; solving for unknown; single amount  **LO5-4**

Refer to the situation described in BE 5-8. Suppose the opportunity requires you to invest \$13,200 today. What is the interest rate you would earn on this investment?

BE 5-10 Future value; ordinary annuity  **LO5-7**

You are saving for a new house. You place \$40,000 into an investment account each year for five years. How much will you have after five years if the account earns (a) 3%, (b) 6%, or (c) 9% compounded annually?

BE 5-11 Future value; ordinary annuity  **LO5-7**

You want to buy a nice road bike. You place \$3,000 each year in an investment account that earns 8% compounded annually. How much will be in the account after (a) two years, (b) three years, or (c) four years?

BE 5-12 Future value; ordinary annuity  **LO5-7**

You would like to contribute to a savings account over the next three years in order to accumulate enough money to take a trip to Europe. Assuming an interest rate of 4%, compounded quarterly, how much will accumulate in three years by depositing \$500 at the *end* of each of the next 12 quarters?

BE 5-13 Future value; annuity due  **LO5-7**

Refer to the situation described in BE 5-12. How much will accumulate in three years by depositing \$500 at the *beginning* of each of the next 12 quarters?

BE 5-14 Present value; ordinary annuity  **LO5-8**

You have entered into an agreement to purchase a local accounting firm. The agreement specifies you will pay the seller \$150,000 each year for six years. What is the cost today of the purchase, assuming a discount rate of (a) 8%, (b) 10%, or (c) 12%?

BE 5-15 Present value; ordinary annuity  **LO5-8**

You have been issued a patent giving you exclusive rights to sell a new type of software. You believe the patent will produce sales of \$200,000 each year as long as the software remains in demand. Assume a discount rate of 7% compounded annually. What is the value today of having the patent, assuming sales last for (a) three years, (b) four years, or (c) five years?

BE 5-16 Present value; ordinary annuity; installment notes  **LO5-8, LO5-10**

A company borrowed money from a local bank. The note the company signed requires five annual installment payments of \$10,000 beginning one year from today. The interest rate on the note is 7%. What amount did the company borrow?

BE 5-17 Present value; annuity due; installment notes  **LO5-8, LO5-10**

Refer to the situation described in BE 5-16. What amount did the company borrow, assuming that the first \$10,000 payment was due immediately?

BE 5-18 Deferred annuity  **LO5-8, LO5-10**

Refer to the situation described in BE 5-16. What amount did the company borrow, assuming that the first of the five annual \$10,000 payments was not due for three years?

BE 5-19 Solve for unknown; annuity  **LO5-9**

A company borrowed \$100,000 from a local bank. The loan requires 10 equal annual payments beginning one year from today. Assuming an interest rate of 8%, what is the amount of each annual payment?

BE 5-20 Price of a bond  **LO5-10**

On December 31, 2024, a company issued 6% stated rate bonds with a face amount of \$100 million. The bonds mature on December 31, 2054. Interest is payable annually on each December 31, beginning in 2025. Determine the price of the bonds on December 31, 2024, assuming that the market rate of interest for similar bonds was 7%.

BE 5-21 Lease payment  **LO5-10**

On September 30, 2024, a company leased a warehouse. Terms of the lease require 10 annual lease payments of \$55,000 with the first payment due immediately. Accounting standards require the company to record a lease liability when recording this type of lease. Assuming an 8% interest rate, at what amount should be recorded for the lease liability on September 30, 2024, before the first payment is made?

Exercises

E 5–1 Future value; single amount LO5–2

Determine the future value of the following single amounts:

| | Invested Amount | Interest Rate | No. of Periods |
|----|-----------------|---------------|----------------|
| 1. | \$15,000 | 6% | 12 |
| 2. | 20,000 | 8 | 10 |
| 3. | 30,000 | 12 | 20 |
| 4. | 50,000 | 4 | 12 |

E 5–2 Future value; single amount LO5–2

The four people below have the following investments. Determine which of the four people will have the greatest investment accumulation in six years.

| | Invested Amount | Interest Rate | Compounding |
|--------|-----------------|---------------|--------------|
| Jerry | \$13,000 | 12% | Quarterly |
| Elaine | 16,000 | 6 | Semiannually |
| George | 23,000 | 8 | Annually |
| Kramer | 19,000 | 10 | Annually |

E 5–3 Future value; single amount LO5–2

Alec, Daniel, William, and Stephen decide today to save for retirement. Each person wants to retire by age 65 and puts \$11,000 into an account earning 10% compounded annually. Calculate how much each person will have accumulated by the age of 65.

| Person | Age | Initial Investment | Accumulated Investment by Retirement (age 65) |
|--------|-----|--------------------|---|
| Alec | 55 | \$11,000 | \$ _____ |
| Daniel | 45 | 11,000 | \$ _____ |

| Person | Age | Initial Investment | Accumulated Investment by Retirement (age 65) |
|---------|-----|--------------------|---|
| William | 35 | 11,000 | \$ _____ |
| Stephen | 25 | 11,000 | \$ _____ |

E 5-4 Present value; single amounts LO5-3

Determine the present value of the following single amounts:

| | Future Amount | Interest Rate | No. of Periods |
|----|---------------|---------------|----------------|
| 1. | \$20,000 | 7% | 10 |
| 2. | 14,000 | 8 | 12 |
| 3. | 25,000 | 12 | 20 |
| 4. | 40,000 | 10 | 8 |

E 5-5 Present value; single amount LO5-3

Four actors have just signed a contract to star in a dramatic movie about relationships among hospital doctors. Filming is expected to take two years to complete. Each person signs independent contracts today with terms below. Assuming an annual discount rate of 9%, which of the four actors is actually being paid the most?

| | Contract Terms | |
|----------|-----------------|--------------|
| | Contract Amount | Payment Date |
| Derek | \$600,000 | 2 years |
| Isabel | 640,000 | 3 years |
| Meredith | 500,000 | Today |
| George | 500,000 | 1 year |

E 5-6 Present value; single amount LO5-3

Ray and Rachel are considering the purchase of two deluxe kitchen ovens. The first store offers the two ovens for \$3,500 with payment due today. The second store offers the two ovens for \$3,700 due in one year. Assuming an annual discount rate of 9%, from which store should Ray and Rachel buy their ovens?

E 5–7 Solving for unknowns; single amounts LO5–4

For each of the following situations involving single amounts, solve for the unknown (?). Assume that interest is compounded annually. (i = interest rate, and n = number of years)

| | Present Value | Future Value | i | n |
|----|---------------|--------------|-----|-----|
| 1. | ? | \$40,000 | 10% | 5 |
| 2. | \$36,289 | 65,000 | ? | 10 |
| 3. | 15,884 | 40,000 | 8 | ? |
| 4. | 46,651 | 100,000 | ? | 8 |
| 5. | 15,376 | ? | 7 | 20 |

E 5–8 Noninterest-bearing note; single payment LO5–5

The Field Detergent Company sold merchandise to a customer on June 30, 2024. Payment was made in the form of a noninterest-bearing note requiring the customer to pay \$85,000 on June 30, 2026. Assume that a 10% interest rate properly reflects the time value of money in this situation.

Required:

Calculate the amount at which Field should record the note receivable and corresponding sales revenue on June 30, 2024.

E 5–9 Noninterestbearing note; single payment LO5–5

Lights, Camera, and More sells filmmaking equipment. George is considering buying equipment from Lights, Camera, and More for \$150,000 and has the following payment options: (1) pay \$150,000 today, (2) pay \$75,000 today and issue a non-interest bearing note promising to pay \$82,500 in one year, or (3) pay nothing down and issue a non-interest bearing note promising to pay \$172,500 in one year. Assuming an annual discount rate of 11%, calculate which option's cost has the lowest present value.

E 5–10 Concepts; terminology LO5–1 through LO5–3, LO5–6

Listed below are several terms and phrases associated with concepts discussed in the chapter. Pair each item from List A with the item from List B (by letter) that is most

appropriately associated with it.

| List A | | List B |
|-----------|----------------------------------|---|
| _____ 1. | Interest | a. First cash flow occurs one period after agreement begins |
| _____ 2. | Monetary asset | b. The rate at which money will actually grow during a year |
| _____ 3. | Compound interest | c. First cash flow occurs on the first day of the agreement |
| _____ 4. | Simple interest | d. The amount of money that a dollar will grow to |
| _____ 5. | Annuity | e. Amount of money paid/received in excess of amount borrowed/lent |
| _____ 6. | Present value of a single amount | f. Obligation to pay a sum of cash, the amount of which is fixed |
| _____ 7. | Annuity due | g. Money can be invested today and grow to a larger amount |
| _____ 8. | Future value of a single amount | h. No fixed dollar amount attached |
| _____ 9. | Ordinary annuity | i. Computed by multiplying an invested amount by the interest rate |
| _____ 10. | Effective rate or yield | j. Interest calculated on invested amount plus accumulated interest |
| _____ 11. | Nonmonetary asset | k. A series of equal-sized cash flows |
| _____ 12. | Time value of money | l. Amount of money required today that is equivalent to a given future amount |
| _____ 13. | Monetary liability | m. Claim to receive a fixed amount of money |

E 5–11 Future value; ordinary annuity LO5–7

You would like to start saving for retirement. Assuming you are now 25 years old and want to retire at age 55, you have 30 years to watch your investment grow. You decide to invest in the stock market, which has earned about 13% per year over the past 80 years and is expected to continue at this rate. You decide to invest \$2,000 at the end of each year for the

next 30 years. Calculate how much your accumulated investment is expected to be in 30 years.

E 5–12 Future value; annuities **LO5–7**

A company plans to make four annual deposits of \$200,000 each to a special building fund. The fund's assets will be invested in mortgage instruments expected to pay interest at 12% on the fund's balance. Determine how much will be accumulated in the fund after four years under each of the following situations:

1. The \$200,000 annual deposits are made at the end of each of the four years and interest is compounded annually.
2. The \$200,000 annual deposits are made at the beginning of each of the four years and interest is compounded annually.
3. The \$200,000 annual deposits are made at the beginning of each of the four years and interest is compounded quarterly.
4. The \$200,000 annual deposits are made at the beginning of each of the four years interest is compounded annually, *and* interest earned is withdrawn at the end of each year.

E 5–13 Present value; ordinary annuity **LO5–8**

Denzel needs a new car. At the dealership, he finds the car that he likes. The dealership gives him two payment options: (1) pay \$35,000 today for the car or (2) pay \$4,000 at the end of each quarter for three years. Assuming Denzel uses a discount rate of 12% (or 3% quarterly), determine which option gives him the lower cost.

E 5–14 Present value; annuities **LO5–8**

Assuming a 12% annual interest rate, determine the present value of a five-period annual annuity of \$5,000 under each of the following situations:

1. The payments are received at the end of each of the five years and interest is compounded annually.
2. The payments are received at the beginning of each of the five years and interest is compounded annually.
3. The payments are received at the end of each of the five years and interest is compounded

quarterly.

E 5–15 Future and present value **LO5–3, LO5–7, LO5–8**

Answer each of the following independent questions.

1. You recently won a lottery and have the option of receiving one of the following three prizes: (1) \$64,000 cash immediately, (2) \$20,000 cash immediately and a six-year annual annuity of \$8,000 beginning one year from today, or (3) a six-year annual annuity of \$13,000 beginning one year from today. Assuming an interest rate of 6% compounded annually, which option should you choose?
2. A company wants to accumulate a sum of money to repay certain debts due in the future. The company will make annual deposits of \$100,000 into a special bank account at the end of each of 10 years. Assuming the bank account pays 7% interest compounded annually, what will be the fund balance after the last payment is made in ten years?

E 5–16 Deferred annuities **LO5–8**

President Company purchased merchandise from Captain Corp. on September 30, 2024. Payment was made in the form of a noninterest-bearing note requiring President to make six annual payments of \$5,000 on each September 30, beginning on September 30, 2027.

Required:

Calculate the amount at which President should record the note payable and corresponding purchase on September 30, 2024, assuming that an interest rate of 10% properly reflects the time value of money in this situation.

E 5–17 Future value; solving for annuities and single amount **LO5–4, LO5–9**

Parents want to accumulate \$100,000 to be used for their child's college education. The parents would like to have the amount available on December 31, 2029. Assume that the funds will accumulate in an account paying 8% interest compounded annually.

Required:

Answer each of the following independent questions.

1. If they were to deposit a single amount, how much would they have to invest on December 31, 2024?
2. If they were to make five equal deposits on each December 31, beginning on December 31, 2025, what is the required amount of each deposit?
3. If they were to make five equal deposits on each December 31, beginning on December 31, 2024, what is the required amount of each deposit?

E 5–18 Solving for unknowns; annuities LO5–9

For each of the following situations involving annuities, solve for the unknown (?). Assume that interest is compounded annually and that all annuity amounts are received at the *end* of each period. (i = interest rate, and n = number of years)

| | Present Value | Annuity Amount | i | n |
|----|---------------|----------------|-----|-----|
| 1. | ? | \$3,000 | 8% | 5 |
| 2. | \$242,980 | 75,000 | ? | 4 |
| 3. | 161,214 | 20,000 | 9 | ? |
| 4. | 500,000 | 80,518 | ? | 8 |
| 5. | 250,000 | ? | 10 | 4 |

E 5–19 Solving for unknown annuity amount LO5–9

A student just graduated from State University with a bachelor’s degree in history. During four years at the university, \$12,000 in student loans were accumulated. The student asks for your help in determining the amount of the *quarterly* loan payment. The loan must be paid back in five years and that the annual interest rate is 8%. Payments begin in three months.

Required:

Determine the quarterly loan payment.

E 5–20 Deferred annuities; solving for annuity amount LO5–8, LO5–9

On April 1, 2024, Antonio purchased appliances from the Acme Appliance Company for \$1,200. In order to increase sales, Acme allows customers to pay in installments and will

defer any payments for six months. Antonio will make 18 equal monthly payments, beginning October 1, 2024. The annual interest rate implicit in this agreement is 24%.

Required:

Calculate the monthly payment necessary for Antonio to pay for his purchases.

E 5–21 Price of a bond  **LO5–9, LO5–10**

On September 30, 2024, the Techno Corporation issued 8% stated rate bonds with a face amount of \$300 million. The bonds mature on September 30, 2044 (20 years). The market rate of interest for similar bonds was 10%. Interest is paid semiannually on March 31 and September 30.

Required:

Determine the price of the bonds on September 30, 2024.

E 5–22 Price of a bond; interest expense  **LO5–9, LO5–10**

On June 30, 2024, Single Computers issued 6% stated rate bonds with a face amount of \$200 million. The bonds mature on June 30, 2039 (15 years). The market rate of interest for similar bond issues was 5% (2.5% semiannual rate). Interest is paid semiannually (3%) on June 30 and December 31, beginning on December 31, 2024.

Required:

1. Determine the price of the bonds on June 30, 2024.
2. Calculate the interest expense Single reports in 2024 for these bonds.

E 5–23 Solving for unknown annuity payment; installment notes  **LO5–9, LO5–10**

Juan purchased a new automobile for \$20,000. Juan made a cash down payment of \$5,000 and agreed to pay the remaining balance in 30 monthly installments, beginning one month from the date of purchase. Financing is available at a 24% *annual* interest rate.

Required:

Calculate the amount of the required monthly payment.

E 5–24 Solving for unknown interest rate; installment notes **LO5–9, LO5–10**

Big Warehouses borrowed \$100,000 from a bank and signed a note requiring 20 annual payments of \$13,388 beginning one year from the date of the agreement.

Required:

Determine the interest rate implicit in this agreement.

E 5–25 Lease payments **LO5–9, LO5–10**

On June 30, 2024, Fly-By-Night Airlines leased a jumbo jet from **Boeing Corporation**. The terms of the lease require Fly-By-Night to make 20 annual payments of \$400,000 on each June 30. Generally accepted accounting principles require this lease to be recorded as a liability for the present value of scheduled payments. Assume that a 7% interest rate properly reflects the time value of money in this situation.

Required:

1. At what amount should Fly-By-Night record the lease liability on June 30, 2024, assuming that the first payment will be made on June 30, 2025?
2. At what amount should Fly-By-Night record the lease liability on June 30, 2024, *before* any payments are made, assuming that the first payment will be made on June 30, 2024?

E 5–26 Lease payments; solve for unknown interest rate **LO5–9, LO5–10**

On March 31, 2024, Southwest Gas leased equipment from a supplier and agreed to pay \$200,000 annually for 20 years beginning March 31, 2025. Generally accepted accounting principles require that a liability be recorded for this lease agreement for the present value of scheduled payments. Accordingly, at inception of the lease, Southwest recorded a \$2,293,984 lease liability.

Required:

Determine the interest rate implicit in the lease agreement.

E 5–27 Future and present and values; Excel **LO 5–2, 5–3, 5–7, 5–8**

Note: This exercise is designed to offer examples of time value problems that cannot be solved using the time value tables at the book of the book. Instead, they can be solved using Excel or a financial calculator. Compute the value for each of the following independent situations.

1. To save for their new child's college education, a couple places \$25,000 in an account. What amount will accumulate in the account at the end of 18 years, assuming an interest rate of 7.25% compounded annually?
2. An individual has just inherited a piece of land. The individual plans to hold the Page 268 land for three years and then expects the land to sell for \$200,000. What is the value today of inheriting the land, assuming an interest rate of 8.5% compounded annually?
3. To save money for the down payment on a house, an individual places \$5,000 in an account at the end of each quarter. What amount will accumulate in the account at the end of four years, assuming an interest rate of 9.75% compounded quarterly?
4. To purchase a car, an individual agrees to pay \$800 at the end of each month for the next six years. What is the cost of the car today, assuming an interest rate of 6.5%.
5. To help repay debt that will come due in 12 years, a company places \$20,000 in an account at the beginning of each six-month period. What amount will accumulate in the account at the end of 12 years, assuming an interest rate of 4.5% compounded semiannually?
6. To rent office space, a company signs a lease agreeing to pay \$2,500 at the beginning of each month for the next three years. What is the cost today of the lease, assuming an interest rate of 5% compounded monthly?

Problems

P5-1 Analysis of alternatives LO5-3, LO5-8

Esquire Company needs to acquire a molding machine to be used in its manufacturing process. Two types of machines that would be appropriate are presently on the market. The company has determined the following:

Machine A could be purchased for \$48,000. It will last 10 years with annual maintenance costs of \$1,000 per year. After 10 years the machine can be sold for \$5,000.

Machine B could be purchased for \$40,000. It also will last 10 years and will require maintenance costs of \$4,000 in year three, \$5,000 in year six, and \$6,000 in year eight. After 10 years, the machine will have no salvage value.

Required:

Determine which machine Esquire should purchase. Assume an interest rate of 8% properly reflects the time value of money in this situation and that maintenance costs are paid at the end of each year. Ignore income tax considerations.

P5-2 Present and future value LO5-7, LO5-8, LO5-10

Stone Company is facing several decisions regarding investing and financing activities. Address each decision independently.

1. On June 30, 2024, the Stone Company purchased equipment from Paper Corp. Stone agreed to pay \$10,000 on the purchase date and the balance in five annual installments of \$8,000 on each June 30 beginning June 30, 2025. Assuming that an interest rate of 10% properly reflects the time value of money in this situation, at what amount should Stone value the equipment?
2. Stone needs to accumulate sufficient funds to pay a \$400,000 debt that comes due on December 31, 2029. The company will accumulate the funds by making five equal annual deposits to an account paying 6% interest compounded annually. Determine the required annual deposit if the first deposit is made on December 31, 2024.

3. On January 1, 2024, Stone leased an office building. Terms of the lease require Johnstone to make 20 annual lease payments of \$120,000 beginning on January 1, 2024. A 10% interest rate is implicit in the lease agreement. At what amount should Stone record the lease liability on January 1, 2024, *before* any lease payments are made?

Hard Hat Company is in the process of purchasing several large pieces of equipment from Machine Corporation. Several financing alternatives have been offered by Machine:

P5-3 Analysis of alternatives  **LO5-3**,  **LO5-8**

1. Pay \$1,000,000 in cash immediately.
2. Pay \$420,000 immediately and the remainder in 10 annual installments of \$80,000, with the first installment due in one year.
3. Make 10 annual installments of \$135,000 with the first payment due immediately.
4. Make one lump-sum payment of \$1,500,000 five years from date of purchase.

Required:

Determine the best alternative for Hard Hat, assuming that Hard Hat can borrow funds at an 8% interest rate.

P5-4 Investment analysis; uneven cash flows  **LO5-3**,
 **LO5-8**

Helga is considering the purchase of a small restaurant. The purchase price listed by the seller is \$800,000. Helga has used past financial information to estimate that the net cash flows (cash inflows less cash outflows) generated by the restaurant would be as follows:

| Years | Amount |
|-------|----------|
| 1-6 | \$80,000 |
| 7 | 70,000 |
| 8 | 60,000 |
| 9 | 50,000 |
| 10 | 40,000 |

If purchased, the restaurant would be held for 10 years and then sold for an estimated \$700,000.

Required:

Assuming that Helga desires a 10% rate of return on this investment, should the restaurant be purchased? (Assume that all cash flows occur at the end of the year.)

P5–5 Investment decision; varying rates  **LO5–3**,  **LO5–8**

The Claussens are considering the purchase of a hardware store. The Claussens anticipate that the store will generate cash flows of \$70,000 per year for 20 years. At the end of 20 years, they intend to sell the store for an estimated \$400,000. The Claussens will finance the investment with a variable rate mortgage. Interest rates will increase twice during the 20-year life of the mortgage. Accordingly, the Claussens' desired rate of return on this investment varies as follows:

| | |
|-------------|-----|
| Years 1–5 | 8% |
| Years 6–10 | 10% |
| Years 11–20 | 12% |

Required:

What is the maximum amount the Claussens should pay for the hardware store? (Assume that all cash flows occur at the end of the year.)

P5–6 Solving for unknowns  **LO5–4**,  **LO5–9**

The following situations should be considered independently.

1. You want to accumulate \$60,000 for a down payment on a small business. You will invest \$30,000 today in a bank account paying 8% interest compounded annually. Approximately how long will it take you to reach this goal?
2. The Jasmine Tea Company purchased merchandise from a supplier for \$28,700. Payment was a noninterest-bearing note requiring Jasmine to make five annual payments of \$7,000

beginning one year from the date of purchase. What is the interest rate implicit in this agreement?

3. You borrowed \$10,000 from a friend and promised to pay the loan in 10 equal annual installments beginning one year from the date of the loan. Your friend would like to be reimbursed for the time value of money at a 9% annual rate. What is the annual payment you must make to pay back your friend?

P5-7 Deferred annuities **LO5-8**

On January 1, 2024, the Mountain Company agreed to purchase a building by making six payments. The first three are to be \$25,000 each, and will be paid on December 31, 2024, 2025, and 2026. The last three are to be \$40,000 each and will be paid on December 31, 2027, 2028, and 2029. Mountain borrowed other money at a 10% annual rate.

Required:

1. At what amount should Mountain record the note payable and corresponding cost of the building on January 1, 2024?
2. How much interest expense on this note will Mountain recognize in 2024?

P5-8 Deferred annuities **LO5-8**

Shuai is 55 years old and has been asked to accept early retirement from his company. The company has offered Shuai three alternative compensation packages to induce Shuai to retire.

1. \$180,000 cash payment to be paid immediately
2. A 20-year annuity of \$16,000 beginning immediately
3. A 10-year annuity of \$50,000 beginning on July 1 of the year John reaches age 65 (after 10 years)

Required:

Determine the present value of each alternative, assuming that Shuai is able to invest funds at a 7% rate. Which alternative should he choose?

P5-9 Noninterest-bearing note; annuity and lump-sum payment **LO5-3**, **LO5-8**

On January 1, 2024, The Barrel Company purchased merchandise from a supplier. Payment was a noninterest-bearing note requiring five annual payments of \$20,000 on each December 31 beginning on December 31, 2024, and a lump-sum payment of \$100,000 on December 31, 2028. A 10% interest rate properly reflects the time value of money in this situation.

Required:

Calculate the amount at which Barrel should record the note payable and corresponding merchandise purchased on January 1, 2024.

P5–10 Solving for unknowns; installment notes  **LO5–9,**
 **LO5–10**

Lowlife Company defaulted on a \$250,000 loan that was due on December 31, 2024. The bank has agreed to allow Lowlife to repay the \$250,000 by making a series of equal annual payments beginning on December 31, 2025.

Required:

1. Calculate the required annual payment if the bank's interest rate is 10% and four payments are to be made.
2. Calculate the required annual payment if the bank's interest rate is 8% and five payments are to be made.
3. If the bank's interest rate is 10%, how many annual payments of \$51,351 would be required to repay the debt?
4. If three payments of \$104,087 are to be made, what interest rate is the bank charging Lowlife?

P5–11 Solving for unknown lease payment  **LO5–9,**
 **LO5–10**

Bravo Manufacturing Company is negotiating with a customer for the lease of a large machine manufactured by Bravo. The machine has a cash price of \$800,000. Bravo wants to be reimbursed for financing the machine at an 8% annual interest rate.

Required:

1. Determine the required lease payment if the lease agreement calls for 10 equal annual payments beginning immediately.
2. Determine the required lease payment if the first of 10 annual payments will be made one year from the date of the agreement.
3. Determine the required lease payment if the first of 10 annual payments will be made immediately and Bravo will be able to sell the machine to another customer for \$50,000 at the end of the 10-year lease.

P5-12 Solving for unknown lease payment; compounding periods of varying length  **LO5-9**,  **LO5-10**

[This is a variation of P 5-11 focusing on compounding periods of varying length.]

Bravo Manufacturing Company is negotiating with a customer for the lease of a large machine manufactured by Bravo. The machine has a cash price of \$800,000. Bravo wants to be reimbursed for financing the machine at a 12% annual interest rate over the five-year lease term.

Required:

1. Determine the required lease payment if the lease agreement calls for 10 equal semiannual payments beginning six months from the date of the agreement.
2. Determine the required lease payment if the lease agreement calls for 20 equal quarterly payments beginning immediately.
3. Determine the required lease payment if the lease agreement calls for 60 equal monthly payments beginning one month from the date of the agreement. The present value of an ordinary annuity factor for $n = 60$ and $i = 1\%$ is 44.9550.

P5-13 Lease vs. buy alternatives  **LO5-3**,
 **LO5-8**,  **LO5-10**

Kiddy Toy Corporation needs to acquire the use of a machine to be used in its manufacturing process. The machine needed is manufactured by Lollie Corp. The machine can be used for 10 years and then sold for \$10,000 at the end of its useful life. Lollie has presented Kiddy with the following options:

1. *Buy machine.* The machine could be purchased for \$160,000 in cash. All insurance costs,

which approximate \$5,000 per year, would be paid by Kiddy.

2. *Lease machine.* The machine could be leased for a 10-year period for an annual lease payment of \$25,000 with the first payment due immediately. All insurance costs will be paid for by the Lollie Corp. and the machine will revert back to Lollie at the end of the 10-year period.

Required:

Assuming that a 12% interest rate properly reflects the time value of money in this situation and that all maintenance and insurance costs are paid at the end of each year, determine which option Kiddy should choose. Ignore income tax considerations.

P5-14 Deferred annuities; pension obligation  **LO5-8,**
 **LO5-10**

Three employees of the Horizon Distributing Company will receive annual pension payments from the company when they retire. The employees will receive their annual payments for as long as they live. Life expectancy for each employee is 15 years beyond retirement. Their names, the amount of their annual pension payments, and the date they will receive their first payment are shown below:

| Employee | Annual Payment | Date of First Payment |
|----------|----------------|-----------------------|
| Tinkers | \$20,000 | 12/31/2027 |
| Evers | 25,000 | 12/31/2028 |
| Chance | 30,000 | 12/31/2029 |

Required:

1. Compute the present value of the pension obligation to these three employees as of December 31, 2024. Assume an 11% interest rate.
2. The company wants to have enough cash invested at December 31, 2027, to provide for all three employees. To accumulate enough cash, they will make three equal annual contributions to a fund that will earn 11% interest compounded annually. The first

contribution will be made on December 31, 2024. Compute the amount of this required annual contribution.

P5–15 Bonds and leases; deferred annuities  **LO5–3**,
 **LO5–8**,  **LO5–10**

On the last day of its fiscal year ending December 31, 2024, the Safe & Reliable (S&R) Glass Company completed two financing arrangements. The funds provided by these initiatives will allow the company to expand its operations.

1. S&R issued 8% stated rate bonds with a face amount of \$100 million. The bonds mature on December 31, 2044 (20 years). The market rate of interest for similar bond issues was 9% (4.5% semiannual rate). Interest is paid semiannually (4%) on June 30 and December 31, beginning on June 30, 2025.
2. The company leased two manufacturing facilities. Lease A requires 20 annual lease payments of \$200,000 beginning on January 1, 2025. Lease B also is for 20 years, beginning January 1, 2025. Terms of the lease require 17 annual lease payments of \$220,000 beginning on January 1, 2028. Generally accepted accounting principles require both leases to be recorded as liabilities for the present value of the scheduled payments. Assume that a 10% interest rate properly reflects the time value of money for the lease obligations.

Required:

What amounts will appear in S&R's December 31, 2024, balance sheet for the bonds and for the leases?

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Analysis Case 5–1 Present value of an annuity **LO5–8**

On a rainy afternoon two years ago, John Smiley left work early to attend a family birthday party. Eleven minutes later, a careening truck slammed into his SUV on the freeway causing John to spend two months in a coma. Now he can't hold a job or make everyday decisions and is in need of constant care. Last week, the 40-year-old Smiley won an out-of-court settlement from the truck driver's company. He was awarded payment for all medical costs and attorney fees, plus a lump-sum settlement of \$2,330,716. At the time of the accident, John was president of his family's business and earned approximately \$200,000 per year. He had anticipated working 25 more years before retirement.⁸

John's sister, Sara, an acquaintance of yours from college, has asked you to explain to her how the attorneys came up with the settlement amount. "They said it was based on his lost future income and a rate of some kind," she explained. "But it was all 'legal-speak' to me."

Required:

To aid in your explanation to Sara, determine the effective interest rate used to determine the amount of the lump-sum settlement.

Analysis Case 5–2 Bonus alternatives; present value analysis

 LO5–3,  LO5–8

A manager has performed well as the chief financial officer of the Maxtech Computer Company and has earned a bonus. The manager has a choice among the following three bonus plans:

1. A \$50,000 cash bonus paid now.
2. A \$10,000 annual cash bonus to be paid each year over the next six years, with the first \$10,000 paid now.
3. A three-year \$22,000 annual cash bonus with the first payment due three years from now.

Required:

Evaluate the three alternative bonus plans. The manager can earn a 6% annual return on investments.

1. What is the present value of the first alternative?
2. What is the present value of the second alternative?
3. What is the present value of the third alternative?

Judgment Case 5–3 Replacement decision LO5–3,

 LO5–8

A company is considering replacing a machine used in the manufacturing process with a new, more efficient model. The purchase price of the new machine is \$150,000 and the old machine can be sold for \$100,000. Output for the two machines is identical; they will both be used to produce the same amount of product for five years. However, the annual operating costs of the old machine are \$18,000 compared to \$10,000 for the new machine. Also, the new machine has a salvage value of \$25,000, but the old machine will be worthless at the end of the five years.

You are deciding whether the company should sell the old machine and purchase the new model. You have determined that an 8% rate properly reflects the time value of money in this situation and that all operating costs are paid at the end of the year. For this initial comparison you ignore the effect of the decision on income taxes.

Required:

1. What is the incremental cash outflow required to acquire the new machine?
2. What is the present value of the benefits of acquiring the new machine?

Real World Case 5–4 Zero-coupon bonds; Johnson & Johnson

 LO5–3,  LO5–10

Real World Financials

Johnson & Johnson is one of the world’s largest manufacturers of health care products. The company’s July 2, 2017, financial statements included the following information in the long-term debt disclosure note:

| | (\$ in millions) |
|---|------------------|
| | July 2, 2017 |
| Zero-coupon convertible subordinated debentures, due 2020 | \$69 |

The bonds were issued at the beginning of 2000. The disclosure note stated that the effective interest rate for these bonds is 3% annually. Some of the original convertible bonds have been converted into Johnson & Johnson shares of stock. The \$69 million is the present value of the bonds not converted and thus reported in the financial statements. Each individual bond had a maturity value (face amount) of \$1,000. The maturity value indicates the amount that Johnson & Johnson paid bondholders at the beginning of 2020. Zero-coupon bonds pay no cash interest during the term to maturity. The company is “accreting” (gradually increasing) the issue price to maturity value using the bonds’ effective interest rate computed on a semiannual basis.

Required:

Page 273

1. Determine to the nearest million dollars the maturity value of the zero-coupon bonds that Johnson & Johnson paid bondholders at the beginning of 2020.
2. Determine to the nearest dollar the issue price at the beginning of 2000 of a single, \$1,000 maturity-value bond.

Real World Case 5–5 Leases; Southwest Airlines LO5–3,

 LO5–10

Real World Financials

Southwest Airlines provides scheduled air transportation services in the United States. Like many airlines, Southwest leases many of its planes from **Boeing Company**. In its long-term debt disclosure note included in the financial statements for the year ended December 31, 2019, the company listed \$627 million in lease obligations. The existing leases had an approximate ten-year remaining life and future lease payments average approximately \$75 million per year.

Required:

1. Determine (to the nearest one-half percent) the effective interest rate the company used to determine the lease liability assuming that lease payments are made at the end of each fiscal year.
2. Repeat requirement 1 assuming that lease payments are made at the beginning of each fiscal year.

Communication Case 5–6 Present value of annuities  **LO5–8**

An all-league professional football player has just declared free agency. Two teams, the San Francisco 49ers and the Dallas Cowboys, have made the following offers to the player:

49ers: \$1 million signing bonus payable immediately and an annual salary of \$1.5 million for the five-year term of the contract.

Cowboys: \$2.5 million signing bonus payable immediately and an annual salary of \$1 million for the five-year term of the contract.

With both contracts, the annual salary will be paid in one lump sum at the end of the football season.

Required:

You have been hired as a consultant to evaluate the two contracts. Write a short letter with your recommendation including the method you used to reach your conclusion. Assume that the player has no preference between the two teams and that the decision will be based entirely on monetary considerations. Also assume the player can invest money and earn an 8% annual return.

Ethics Case 5–7 Rate of return  **LO5–1**

The Upward Investment Company manages a mutual fund composed mostly of speculative stocks. You recently saw an ad claiming that investments in the funds have been earning a rate of return of 21%. This rate seemed quite high so you called a friend who works for one of Upward competitors. The friend told you that the 21% return figure was determined by dividing the two-year appreciation on investments in the fund by the average investment. In other words, \$100 invested in the fund two years ago would have grown to \$121 ($\$21 \div \$100 = 21\%$).

Required:

Discuss the ethics of the 21% return claim made by the Upward Investment Company.

Continuing Cases

Target Case LO5-3, LO5-8 LO5-10

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com). Target leases most of its facilities.

Required:

1. Refer to disclosure note 17 following Target's financial statements. Find the schedule showing the lease payments over the next five years and beyond. What are the total lease payments for operating leases and finance leases? What are the present values of those lease payments for each type of lease? What accounts for the difference between the two amounts?
2. What are the weighted average discount rates used to calculate the present value of each type of lease?
3. Does Target report its lease liabilities for the total amount of the lease payments or the present value of those lease payments?

Air France-KLM Case LO5-10

IFRS

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com). The presentation of financial statements often differs between U.S. GAAP and IFRS, particularly with respect to the balance sheet.

Using IFRS, companies discount their pension obligations using an interest rate approximating the average interest rate on high-quality corporate bonds. U.S. GAAP allows much more flexibility in the choice of a discount rate. By both sets of standards, the rate used is reported in the disclosure note related to pensions.

Required:

Refer to AF's Note 29.2, "Description of the actuarial assumptions and related sensitivities."

1. What are the average discount rates used to measure AF's (a) 10- to 15-year and (b) 15-year and more pension obligations in the "euro" geographic zone in 2019?
2. If the rate used had been 1% (100 basis points) higher, what change would have occurred in the pension obligation in 2019? What if the rate had been 1% lower?

CHAPTER 6

Revenue Recognition

OVERVIEW

In  **Chapter 4**, we discussed net income and its presentation in the income statement.  **Chapter 6** focuses on revenue recognition, which determines when and how much revenue appears in the income statement. In Part A of this chapter, we discuss the general approach for recognizing revenue in three situations—at a point in time, over a period of time, and for contracts that include multiple parts that might require recognizing revenue at different times. In Part B, we see how to deal with special issues that affect the revenue recognition process. In Part C, we discuss how to account for revenue in long-term contracts.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO6-1** State the core revenue recognition principle and the five key steps in applying it. (*p. 276*)
-  **LO6-2** Explain when it is appropriate to recognize revenue at a single point in time. (*p. 278*)
-  **LO6-3** Explain when it is appropriate to recognize revenue over a period of time. (*p. 278*)
-  **LO6-4** Allocate a contract's transaction price to multiple performance obligations. (*p. 280*)
-  **LO6-5** Determine whether a contract exists and whether some frequently encountered features of contracts qualify as performance obligations. (*p. 285*)
-  **LO6-6** Understand how variable consideration and other aspects of contracts affect the calculation and allocation of the transaction price.

(p. 288)

-  **LO6-7** Determine the timing of revenue recognition with respect to licenses, franchises, and other common arrangements. (p. 295)
-  **LO6-8** Understand the disclosures required for revenue recognition, accounts receivable, contract assets, and contract liabilities. (p. 299)
-  **LO6-9** Demonstrate revenue recognition for long-term contracts, both at a point in time when the contract is completed and over a period of time according to the percentage completed. (p. 300)
-  **LO6-10** Discuss the primary differences between U.S. GAAP and IFRS with respect to revenue recognition. (p. 285, 290, and 297)

FINANCIAL REPORTING CASE

Hero Images/Getty Images

Ask the Oracle

“Good news! I got the job,” Ava said, closing the door.

Your roommate, a software engineer, goes on to explain that she accepted a position at **Oracle Corporation**, a world leader in enterprise software, computer hardware, and cloud-computing services.

“The salary’s good, too,” your roommate continued. “Plus, Mr. Watson, my supervisor, said I’ll be getting a bonus tied to the amount of revenue my projects produce. So I started looking at Oracle’s financial statements, but I can’t even understand when they get to recognize revenue. Sometimes they recognize it all

at once, sometimes over time, and sometimes they seem to break apart a sale and recognize revenue for different parts at different times. And sometimes they recognize revenue before they are even done with a project, according to the percentage they have completed so far. You're the accountant. What determines when Oracle gets to recognize revenue?"

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Under what circumstances do companies recognize revenue at a point in time?
Over a period of time?
2. When do companies break apart a sale and treat its parts differently for purposes of recognizing revenue?
3. How do companies account for long-term contracts that qualify for revenue recognition over time?

What is **revenue**? According to the FASB's conceptual framework, "Revenues are inflows or other enhancements of assets of an entity or settlements of its liabilities (or a combination of both) from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations."¹ In simpler terms, revenue is the inflow of cash or accounts receivable that a business receives when it provides goods or services to its customers.

For many companies, revenue is the single largest number reported in the financial statements. Its pivotal role in the picture painted by the financial statements makes measuring and reporting revenue one of the most critical aspects of financial reporting. It is important not only to determine *how much* revenue to recognize (record), but also *when* to recognize it. A one-year income statement should report a company's revenues for only that one-year period. Sometimes, though, it's difficult to determine how much revenue to recognize in a particular period. Also, you can imagine that a manager who is evaluated according to how much revenue the firm generates each period might be tempted to recognize more revenue than is appropriate. In fact, the SEC has

cracked down on revenue-recognition abuses in the past, and its enforcement division continues to do so.²

Revenue recognition accounting standards help ensure that the appropriate amount of revenue appears in each period's income statement.

Revenue recognition criteria help ensure that an income statement reflects the actual accomplishments of a company for the period.

The FASB and IASB worked together to develop a new revenue recognition standard, which the FASB issued as *Accounting Standards Update (ASU) No. 2014-09*, "Revenue from Contracts with Customers," on May 28, 2014.³

Page 276

In this chapter, we focus on the revenue recognition approach described in *ASU No. 2014-09* (and clarified in subsequent guidance).

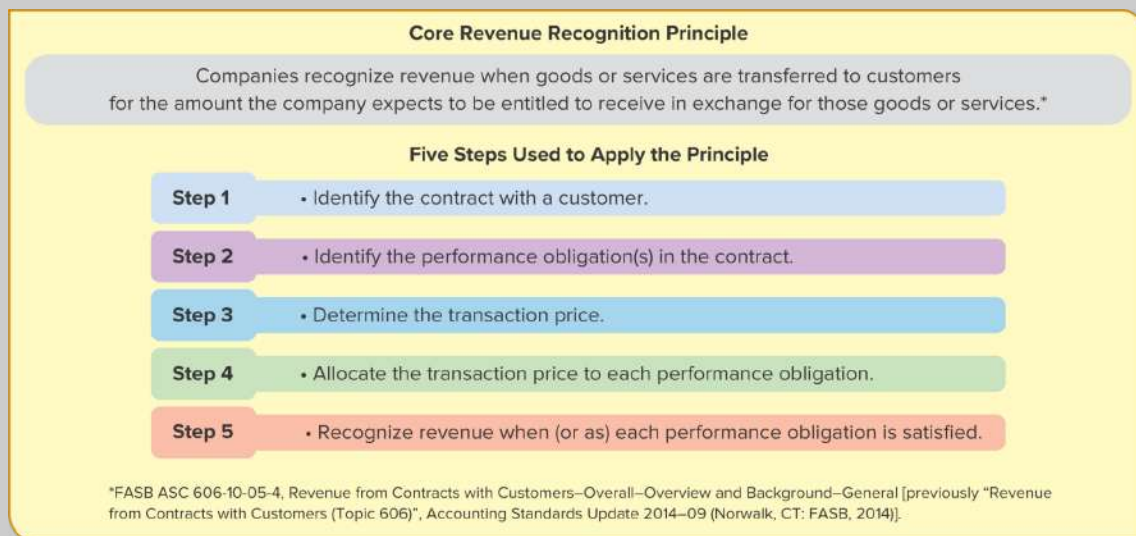

PART A

Introduction to Revenue Recognition

Let's start with the core revenue recognition principle and the key steps we use to apply that principle. These are shown in  **Illustration 6-1**.

LO6-1 State the core revenue recognition principle and the five key steps in applying it.

Illustration 6-1 Core Revenue Recognition Principle and the Five Steps Used to Apply the Principle

All revenue recognition starts with a contract between a seller and a customer. You may not have realized it, but you have been a party to several such contracts very recently. Maybe you bought a cup of **Starbucks** coffee or a breakfast biscuit at **McDonald's** this morning. Or maybe you bought this textbook through **Amazon** or had a checkup at your doctor's office.

Even though these transactions weren't accompanied by written and signed agreements, they are considered contracts for purposes of revenue recognition. The key is that, implicitly or explicitly, you entered into an arrangement that specifies the legal rights and obligations of a seller and a customer.

Contracts between a seller and a customer contain one or more **performance obligations**, which are promises by the seller to transfer goods or services to a customer. The seller recognizes revenue when it satisfies a performance obligation by transferring the promised good or service. We consider transfer to have occurred when the customer has *control* of the good or service. *Control* means that the customer has direct influence over the use of the good or service and obtains its benefits.

Performance obligations are promises to transfer goods or services to a customer.

For many contracts, following this approach is very straightforward. In particular, if a contract includes only one performance obligation, we typically just have to decide when the seller delivers the good or provides the service to a customer, and then makes sure that the seller recognizes revenue at that time.

Performance obligations are satisfied when the seller transfers control of goods or services to the customer.

As a simple example, assume **Macy's** sells a jacket to Sofia for \$75 that Macy's previously purchased from a wholesaler for \$40. How would Macy's account for the sale to Sofia?

Page 277

- 1. Identify the contract with a customer:** In this case, the contract may not be written, but it is clear—Macy's delivers the jacket to Sofia, and Sofia agrees to pay \$75 to Macy's.
- 2. Identify the performance obligation(s) in the contract:** Macy's has only a single performance obligation—to deliver the jacket.
- 3. Determine the transaction price:** Macy's is entitled to receive \$75 from Sofia.
- 4. Allocate the transaction price to each performance obligation:** With only one performance obligation, Macy's allocates the full transaction price of \$75 to delivery of the jacket.
- 5. Recognize revenue when (or as) each performance obligation is satisfied:** Macy's satisfies its performance obligation when it delivers the jacket to Sofia, so Macy's records the following journal entries at that time:

Cash

75

| | | |
|---------------------|----|----|
| Sales revenue | | 75 |
| Cost of goods sold* | 40 | |
| Inventory | | 40 |

*This second journal entry assumes that Macy's uses a "perpetual" inventory system, by which we record increases and decreases in inventory as they occur ("perpetually"). We reviewed this method briefly in [Chapter 2](#) and explore it in more depth in [Chapter 8](#).

Revenue recognition gets more complicated when a contract contains more than one performance obligation. For example, when **Verizon** signs up a new cell phone customer, the sales contract might require Verizon to provide (1) a smartphone, (2) related software, (3) a warranty on the phone, (4) ongoing network access, and (5) optional future upgrades. Verizon must determine which of these goods and services constitute performance obligations, allocate the transaction price to those performance obligations, and recognize revenue when (or as) each performance obligation is satisfied.

In Part A of this chapter, we apply the five steps for recognizing revenue to various types of contracts. First, we'll focus on contracts that have only one performance obligation to deliver a good or service at a single point in time, like when Macy's sells a jacket to Sofia. Then we'll consider situations in which one performance obligation to deliver goods and services is satisfied over time, like a landlord renting an apartment or a bank lending money. After that, we'll consider contracts that contain multiple performance obligations, like the Verizon example we just discussed. [Illustration 6-2](#) summarizes some key considerations we will return to throughout this chapter.

Illustration 6-2 Key Considerations When Applying the Five Steps to Revenue Recognition

| Five Steps to Recognizing Revenue | For Transactions Involving Single and Multiple Performance Obligations | | |
|--|--|--|---|
| Step 1 Identify the contract | Legal rights of seller and customer established | | |
| Step 2 Identify the performance obligation(s) | <i>Single</i> performance obligation | <i>Multiple</i> performance obligations | |
| Step 3 Determine the transaction price | Amount seller is entitled to receive from customer | Amount seller is entitled to receive from customer | |
| Step 4 Allocate the transaction price | No allocation required | | Allocate a portion to each performance obligation |
| Step 5 Recognize revenue when (or as) each performance obligation is satisfied | At a point in time | Over a period of time | At whatever time is appropriate for each performance obligation |

Recognizing Revenue at a Single Point in Time

LO6-2 Explain when it is appropriate to recognize revenue at a single point in time.

First, we consider a simple contract that includes only one performance obligation and is satisfied at a single point in time. The performance obligation is satisfied when control of the goods or services is transferred from the seller to the customer. Usually, it's obvious that transfer occurs at the time of delivery. In our Macy's example above, the performance obligation is satisfied at the time of the sale when the jacket is transferred to Sofia.

In other cases, transfer of control can be harder to determine.  **Illustration 6-3** lists five key indicators we use to decide whether control has passed from the seller to the customer. Sellers should evaluate these indicators individually and in combination to decide whether control has been transferred, and revenue can be recognized.

Illustration 6-3 Indicators That Control Has Been Transferred from the Seller to the Customer

The customer is more likely to control a good or service if the customer has:

- An obligation to pay the seller.
- Legal title to the asset.
- Physical possession of the asset.
- Assumed the risks and rewards of ownership.
- Accepted the asset.*

*These indicators apply to both goods and services. It may seem strange to talk about the customer accepting an asset with respect to a service, but think of a service as an asset that is consumed as the customer receives it.

In  **Illustration 6-4**, we apply these indicators to TrueTech Industries, a company we will revisit throughout this chapter to illustrate revenue recognition.

Illustration 6-4 Recognizing Revenue at a Point in Time

TrueTech Industries sells the Tri-Box, a gaming console that allows users to play video games individually or in multiplayer environments over the Internet. A Tri-Box is only a gaming module and includes no other goods or services. When should TrueTech recognize revenue for the following sale of 1,000 Tri-Boxes to CompStores?

- **December 20, 2023: CompStores orders 1,000 Tri-Boxes at a price of \$240 each, promising payment within 30 days after delivery.** TrueTech has received the order but hasn't fulfilled its performance obligation to deliver Tri-Boxes. In light of this and other indicators, TrueTech's judgment is that control has not been transferred and revenue should not be recognized.
- **January 1, 2024: TrueTech delivers 1,000 Tri-Boxes to CompStores, and title to the Tri-Boxes transfers to CompStores.** TrueTech has delivered the Tri-Boxes, and CompStores has accepted delivery, so CompStores has physical possession, legal title, the risks and rewards of ownership, and an obligation to pay TrueTech. TrueTech's performance obligation has been

satisfied, so TrueTech can recognize revenue and a related account receivable of \$240,000.*

| | | |
|-------------------------------------|---------|---------|
| Accounts receivable (\$240 × 1,000) | 240,000 | |
| Sales revenue | | 240,000 |

- **January 25, 2024: TrueTech receives \$240,000 from CompStores.** This transaction does not affect revenue. We recognize revenue when performance obligations are satisfied, not when cash is received. TrueTech simply records collection of the account receivable.

| | | |
|---------------------|---------|---------|
| Cash | 240,000 | |
| Accounts receivable | | 240,000 |

*TrueTech also would debit cost of goods sold and credit inventory to recognize the cost of inventory sold.

Recognizing Revenue over a Period of Time

LO6-3 Explain when it is appropriate to recognize revenue over a period of time.

Services such as lending money, performing audits, and providing consulting advice are performed over a period of time. Some construction contracts require construction over months or even years. In these situations, should a company recognize revenue continuously over time as a product or service is being provided, or wait to recognize revenue at the single point in time when the company has finished providing the product or service? As we'll see next, in most situations like these, companies should recognize revenue over time as the service or product is being provided.

Page 279

Criteria for Recognizing Revenue over Time

Let's assume once again that we have a contract with a customer that includes a single performance obligation and a known transaction price. As indicated in [Illustration 6-5](#), we recognize revenue over time if *any* of the three criteria is met.

Illustration 6-5 Criteria for Recognizing Revenue over Time

We recognize revenue over time if any of three criteria is met.

Revenue is recognized over time if either:

- 1. The customer consumes the benefit of the seller's work as it is performed**, as when a company provides cleaning services to a customer for a period of time, or
- 2. The customer controls the asset as it is created**, as when a contractor builds an extension onto a customer's existing building, or
- 3. The seller is creating an asset that has no alternative use to the seller, and the seller has the legal right to receive payment for progress to**

Revenue is recognized over time if either:

date, as when a company manufactures customized fighter jets for the U.S. Air Force.

If a performance obligation meets at least one of these criteria, we recognize revenue over time, in proportion to the amount of the performance obligation that has been satisfied. If, say, one-third of a service has been performed, then one-third of the performance obligation has been satisfied, so one-third of the

revenue should be recognized. For example, **Planet Fitness** recognizes revenue from enrollment fees over the expected duration of a membership, and **Six Flags Entertainment** recognizes revenue for season passes over the operating season based on member traffic. Often these arrangements involve receiving cash in advance of satisfying a performance obligation, which requires recognition of a liability, deferred revenue. For example, consider  **Illustration 6-6**.

When a performance obligation is satisfied over time, revenue is recognized in proportion to the amount of the performance obligation that has been satisfied.

Illustration 6-6 Recognizing Revenue over a Period of Time

TrueTech Industries sells one-year subscriptions to the Tri-Net multiuser platform of Internet-based games. TrueTech sells 1,000 subscriptions for \$60 each on January 1, 2024.

TrueTech has a single performance obligation—to provide a service to subscribers by allowing them access to the gaming platform for one year. Because Tri-Net users consume the benefits of access to that service over time, under the first criterion in  **Illustration 6-5** TrueTech recognizes revenue from the subscriptions over the one-year time period.

On January 1, 2024, TrueTech records the following journal entry:

| | | |
|---------------------|--------|---------------|
| Cash (\$60 × 1,000) | 60,000 | |
| Deferred revenue | | 60,000 |

TrueTech recognizes no revenue on January 1. Rather, TrueTech recognizes a deferred revenue liability for \$60,000 associated with receiving cash prior to

satisfying its performance obligation to provide customers with access to the Tri-Net games for a year.

Tri-Net subscribers receive benefits each day they have access to the Tri-Net network, so TrueTech uses “proportion of time” as its measure of progress toward completion. At the end of each of the 12 months following the sale, TrueTech would record the following entry to recognize Tri-Net subscription revenue:

| | |
|---|--------------|
| Deferred revenue ($\$60,000 \div 12$) | 5,000 |
| Service revenue | 5,000 |

After 12 months TrueTech will have recognized the entire \$60,000 of Tri-Net subscription revenue, and the deferred revenue liability will be reduced to zero.

| Deferred Revenue | | |
|------------------|--------------|---------------|
| 1/1 | | 60,000 |
| 1/31 | 5,000 | |
| 2/28 | 5,000 | |
| ... | ... | |
| 12/31 | 5,000 | |
| 12/31 | | 0 |

| Service Revenue | | |
|-----------------|-----|--------------|
| 1/1 | | 0 |
| 1/31 | | 5,000 |
| 2/28 | | 5,000 |
| ... | ... | |
| 12/31 | | 5,000 |
| 12/31 | | 60,000 |

Most long-term construction contracts qualify for revenue recognition over time. For example, many long-term construction contracts are structured such

Most long-term construction contracts qualify for revenue recognition over time.

that the customer owns the work-in-process (WIP) as it is constructed, which satisfies the second criterion in  **Illustration 6-5**. Also, the third criterion is satisfied if the asset the seller is constructing has no alternate use to the seller and the contract stipulates that the seller is paid for performance. We discuss accounting for long-term construction contracts in more detail in Part C of this chapter.

If a performance obligation doesn't meet any of the three criteria for recognizing revenue over time, we recognize revenue at the point in time when the performance obligation has been completely satisfied, which usually occurs at the end of the contract.

Many services are so short term in nature that companies don't bother with recognizing revenue over time even if they qualify for doing so. For example, a house painting service provides benefit to its customer as work is being performed, so it meets the first criterion for revenue recognition over time. However, it likely is easier to simply recognize revenue for the painting service at the conclusion of a painting assignment. This departure from GAAP is immaterial given the short duration of the painting service and the lack of additional useful information that would be provided by more precise timing of revenue recognition.

Determining Progress toward Completion

Because progress toward completion is the basis for recognizing revenue over time, the seller needs to estimate that progress in a way that reflects when control of goods or services is transferred to the customer.

Sellers sometimes use an *output-based* estimate of progress toward completion, measured as the proportion of the goods or services transferred to date.

For our Tri-Net example in  **Illustration 6-6**, output

is measured by the passage of time, because the

performance obligation being satisfied is to provide access to the Tri-Net gaming platform.

Other times sellers use an *input-based* estimate of progress toward completion, measured as the proportion of effort expended thus far relative to the total effort expected to satisfy the performance obligation. For example, sellers often use the ratio of costs incurred to date compared to total costs estimated to complete the job.⁴ In Part C of this chapter, we

continue our discussion of output- and input-based measures of progress toward completion and also consider how to deal with changes in estimates of progress toward completion.

Input or output methods can be used to estimate progress toward completion when performance obligations are satisfied over time.

Recognizing Revenue for Contracts that Contain Multiple Performance Obligations

LO6-4 Allocate a contract's transaction price to multiple performance obligations.

The same contract can contain multiple performance obligations that require recognition at different times. For example, consider the arrangements offered by **Peloton Interactive, Inc.** Sale of a Peloton bike might be bundled with a prepaid 12-month subscription to Peloton's library of live and on-demand fitness classes. Revenue for the bike should be recognized upon delivery, but revenue for the subscription should be recognized over the life of the subscription. How should a single sales price for the bundle be allocated between these two performance obligations? To answer that question, turn to  **Illustration 6-7**, in which we combine the two TrueTech examples we already have discussed. In the first example ( **Illustration 6-4**), TrueTech sold Tri-Box modules and recognized revenue at a single point in time (upon delivery). In the second example ( **Illustration 6-6**), TrueTech sold one-year subscriptions to the Tri-Net platform and recognized revenue over time (one-twelfth each month over the year). Now, let's consider how TrueTech would recognize revenue if these two items were sold as a package deal for a single price.

Illustration 6-7 Contract Containing Multiple Performance Obligations

TrueTech Industries manufactures the Tri-Box System, a multiplayer gaming system allowing players to compete with each other over the Internet.

- The Tri-Box System includes the physical Tri-Box module as well as a one-year subscription to the Tri-Net multiuser platform of Internet-based games and other applications.
- TrueTech sells individual one-year subscriptions to the Tri-Net platform for \$60. Customers can access the Tri-Net using a Tri-Box as well as other gaming modules.

- TrueTech sells individual Tri-Box modules for \$240. Customers can use a Tri-Box to access the Tri-Net as well as other multiuser gaming platforms.
- As a package deal, TrueTech sells the Tri-Box System (module plus subscription) for \$250.

On January 1, 2024, TrueTech delivers 1,000 Tri-Box Systems to CompStores at a price of \$250 per system. TrueTech receives \$250,000 from CompStores on January 25, 2024.

We'll assume TrueTech has concluded that it has a contract with CompStores, so step 1 of revenue recognition is satisfied. We'll start with step 2.

Step 2: Identify the Performance Obligation(s)

Sellers account for a promise to provide a good or service as a performance obligation if the good or service is **distinct** from other goods or services in the contract. The idea is to separate contracts into parts that can be viewed on a stand-alone basis. That way, the financial statements can better reflect the timing of the transfer of separate goods and services and the profit generated on each one. Goods or services that are not distinct are combined and treated as a single performance obligation.

Promises to provide goods and services are performance obligations when the goods and services are *distinct*.

A good or service is distinct if it is *both*

1. **Capable of being distinct.** The customer could use the good or service on its own or in combination with other goods or services it could obtain elsewhere.
2. **Separately identifiable from other goods or services in the contract.** The promises to transfer goods and services are distinct in the *context of the contract*, because the seller is promising to provide goods and services *individually* as opposed to promising to provide a *combined* good or service for which the individual goods or services are inputs.

As an example of applying these criteria, think of going to a store like **The Home Depot** to purchase lumber, paint, and other building supplies for a home project. Each of those products is capable of being distinct, because you can buy it individually and use it however you desire. Each also is separately identifiable from other goods and services, because Home

Depot's only performance obligation is to deliver the individual items. So, Home Depot can view its promise to deliver each of these items as a separate performance obligation.

Now think about signing an agreement with a construction contractor like **Toll Brothers** to build a house for you. Like Home Depot, the contractor is selling you lumber, paint, and other building supplies. However, while those items are capable of being distinct, they aren't separately identifiable in the context of the contract, because the contractor's performance obligation is to combine those inputs and deliver a completed building. Therefore, Toll Brothers views itself as having a single performance obligation that is satisfied when a home is delivered and title is transferred to a buyer. As we discuss further in Part C of this chapter, most long-term construction contracts are viewed as including a single performance obligation because the seller provides the service of combining goods and services into a combined output.

Construction contracts aren't the only ones that fail the "separately identifiable" criterion. Goods and services also aren't considered separately identifiable if they are highly interdependent or if one significantly modifies or customizes another. For example, consider a company that offers online access to a clip-art library. The only way customers can access the clip art is by using the online access service. Even though a clip-art library and an online access service might be capable of being distinct outside the context of the contract, within the contract, they are so intertwined that they are more appropriately thought of as a single performance obligation.⁵

In  **Illustration 6-8** we apply these criteria to identify the performance obligations for our TrueTech example.

Illustration 6-8 Determining Whether Goods or Services Are Distinct

Assume the same facts as in  **Illustration 6-7**. Do the Tri-Box module and the Tri-Net subscription qualify as performance obligations in TrueTech's contract with CompStores?

Which of the goods and services promised in the contract are distinct?

Both the Tri-Box module and the Tri-Net subscription can be used on their own by a customer, so they are capable of being distinct. The module and subscription are not highly interrelated and do not modify or customize each other, and the nature of TrueTech's promise is not to integrate the module

and service into a combined unit, so they are separately identifiable in the context of the contract.

Conclusion: The module and subscription are distinct, so the contract has two performance obligations: (1) delivery of a Tri-Box module and (2) fulfillment of a one-year Tri-Net subscription.

Step 3: Determine the Transaction Price

The **transaction price** is the amount the seller expects to be entitled to receive from the customer in exchange for providing goods or services.⁶ Determining the transaction price is simple if the customer pays a fixed amount immediately or soon after the sale. That's the case with our True

The transaction price is the amount the seller expects to be entitled to receive from the customer in exchange for providing goods or services.

Tech example. The transaction price is \$250,000, equal to \$250 per system × 1,000 systems.

Step 4: Allocate the Transaction Price to Each Performance Obligation

If a contract includes more than one performance obligation, the seller allocates the transaction price to each one in proportion to the stand-alone selling prices of the goods or services underlying all the performance obligations in the contract. The **stand-alo**

We allocate the transaction price to performance obligations in proportion to their relative stand-alone selling prices.

ne selling price is the amount at which the good or service is sold separately under similar circumstances. If a stand-alone selling price can't be directly observed, the seller should estimate it.⁷

Look at  **Illustration 6-9** to see how we allocate the transaction price to each of the performance obligations in our TrueTech example.

Step 5: Recognize Revenue When (or as) Each Performance Obligation Is Satisfied

As we discussed earlier, performance obligations can be satisfied either at a point in time or over a period of time, and revenue with respect to a performance obligation is recognized when (or as) the performance obligation is satisfied. We determine the timing of revenue recognition for each performance obligation individually.

Revenue with respect to each performance obligation is recognized when (or as) that performance obligation is satisfied.

Illustration 6–9 Allocating the Transaction Price to Performance Obligations Based on Relative Selling Prices

Assume the same facts as in [Illustration 6–7](#), specifically:

- The transaction price of one Tri-Box System is \$250.
- The stand-alone price of a Tri-Box module is \$240.
- The stand-alone price of a Tri-Net subscription is \$60.

Because the stand-alone price of a Tri-Box module (\$240) represents 80% of the sum of the stand-alone selling prices [$\$240 \div (\$240 + \$60)$], and the stand-alone price of a Tri-Net subscription comprises 20% of the total [$\$60 \div (\$240 + \$60)$], we allocate 80% of the transaction price to the Tri-Box module and 20% of the transaction price to the Tri-Net subscription, as follows:

Additional Consideration

Discounts in Contracts with Multiple Performance Obligations. Note that [Illustration 6–9](#) shows that Tri-Box systems are sold at a discount—TrueTech sells the system for a transaction price (\$250) that’s less than the \$300 sum of the stand-alone selling prices of the Tri-Box module (\$240) and the subscription to Tri-Net (\$60). Because there is no evidence that the discount relates to only one of the performance obligations, it is spread between them in the allocation process. If TrueTech had clear evidence from sales of those goods and services that the discount related to only one of them, the entire discount would be allocated to that good or service.

Returning to our Tri-Box System example, the \$200,000 of revenue associated with the Tri-Box modules is recognized when those modules are delivered to CompStores on January 1, but the \$50,000 of revenue associated with the Tri-Net subscriptions is recognized over the one-year subscription term. The timing of revenue recognition for each performance obligation is shown in [Illustration 6–10](#).

Illustration 6–10 Recognizing Revenue for Multiple Performance Obligations

Given the allocation of transaction price indicated in [Illustration 6–9](#), TrueTech records the following journal entry at the time of the sale to CompStores (ignoring any entry to record the reduction in inventory and the corresponding cost of goods sold):

January 1, 2024:

| | | |
|--|---------|---------------|
| Accounts receivable | 250,000 | |
| Sales revenue ($\$250,000 \times 80\%$) | | 200,000 |
| Deferred revenue ($\$250,000 \times 20\%$) | | 50,000 |

In each of the 12 months subsequent to the sale, TrueTech records the following entry to recognize Tri-Net subscription revenue:

| | | |
|---|--------------|--------------|
| Deferred revenue ($\$50,000 \div 12$) | 4,167 | |
| Service revenue | | 4,167 |

After 12 months TrueTech will have recognized the entire \$50,000 of Tri-Net subscription revenue, and the deferred revenue liability will have been reduced to zero.

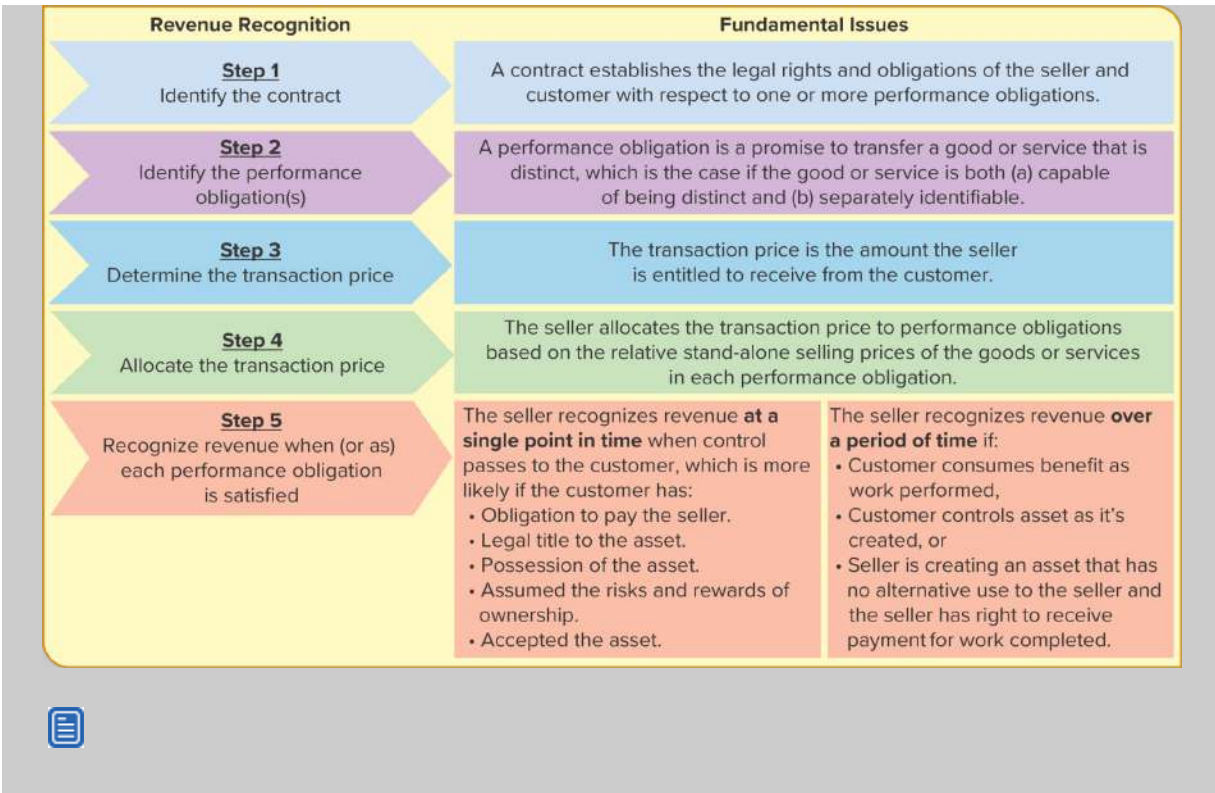

| Deferred Revenue | | |
|------------------|-------|--------|
| 1/1 | | 50,000 |
| 1/31 | 4,167 | |
| 2/28 | 4,167 | |
| ... | ... | |
| 12/31 | 4,167 | |
| 12/31 | | 0 |

| Service Revenue | | |
|-----------------|--|--------|
| 1/1 | | 0 |
| 1/31 | | 4,167 |
| 2/28 | | 4,167 |
| ... | | ... |
| 12/31 | | 4,167 |
| 4,167 | | 50,000 |

It is interesting to compare the journal entries in [Illustration 6-10](#) to those made in [Illustrations 6-4](#) and [6-6](#). Because \$200,000 of the \$250,000 transaction price is allocated to the Tri-Box module, less revenue is recognized upon delivery than when the module was sold separately for \$240,000. Similarly, because \$50,000 of the \$250,000 transaction price is allocated to the Tri-Net subscription, less revenue is recognized each month for the subscription (\$4,167 per month) than when the subscription was sold separately for \$60,000 (\$5,000 per month). In other words, the lower revenue recognized for the Tri-Box module and the Tri-Net subscription reflects an allocation of the discount for bundling the items.

Illustration 6-11 summarizes Part A's discussion of the fundamental issues related to recognizing revenue.

Illustration 6-11 Summary of Fundamental Issues Related to Recognizing Revenue

Concept Review Exercise

REVENUE RECOGNITION FOR CONTRACTS WITH MULTIPLE PERFORMANCE OBLIGATIONS

Macrovision sells a variety of satellite TV packages. The popular \$600 Basic Package includes a hardware component (consisting of a satellite dish and receiver) along with a twelve-month subscription to 130 TV channels. Macrovision sells the hardware

component without a subscription for \$180 and sells a 12-month subscription to the same 130 channels without hardware for \$540/year. Let's account for the sale of one Basic Package for \$600 on January 1, 2024.

Required:

1. Identify the performance obligations in the Basic Package contract, and determine when revenue for each should be recognized.
2. For the single Basic Package sold on January 1, 2024, allocate the \$600 transaction price to the performance obligations in the contract, and prepare a journal entry to record the sale (ignoring any entry to record the reduction in inventory and the corresponding cost of goods sold).
3. Prepare any journal entry necessary to record revenue related to the same contract on January 31, 2024.

Solution:

1. Identify the performance obligations in the Basic Package contract, and determine when revenue for each should be recognized.

The hardware component and the 12-month subscription are *capable of being distinct* (they are sold separately) and are *separately identifiable* (the hardware and services are not highly intertwined, so it makes sense to consider them separately). Therefore, the hardware component and the 12-month subscription are distinct from each other and should be treated as separate performance obligations.

Revenue for the hardware component should be recognized on January 1, 2024, because transfer of control of the hardware occurs when the hardware is delivered to the customer. Revenue for the subscription should be recognized over the next 12 months as the customer receives the benefit of having access to TV channels.

2. For the single Basic Package sold on January 1, 2024, allocate the \$600 transaction price to the performance obligations in the contract, and prepare a journal entry to record the sale (ignoring any entry to record the reduction in inventory and the corresponding cost of goods sold).

Because the stand-alone price of the hardware component (\$180) represents 25% of the total of all the stand-alone selling prices ($\$180 \div [\$180 + \$540]$), and the stand-alone price of the 12-month subscription comprises 75% of the total ($\$540 \div [\$180 + \$540]$), we allocate 25% of the transaction price to the hardware component and

75% of the transaction price to the 12-month subscription. The transaction price of \$600 would be allocated as follows:

Hardware Component: $\$600 \times 25\% = \150 .

Twelve-Month Subscription: $\$600 \times 75\% = \450 .

The journal entry recorded on January 1, 2024, would be:

| | | |
|--|-----|-----|
| Cash | 600 | |
| Sales revenue (for delivery of hardware) | | 150 |
| Deferred revenue (for subscription) | | 450 |

3. Prepare any journal entry necessary to record revenue for the same contract on January 31, 2024.

| | | |
|--------------------------------------|-------|-------|
| Deferred revenue ($\$450 \div 12$) | 37.50 | |
| Service revenue | | 37.50 |

Special Issues in Revenue Recognition

LO6–5 Determine whether a contract exists and whether some frequently encountered features of contracts qualify as performance obligations.

Now that we’ve covered the basics, let’s consider some important issues that occur in practice with respect to each of the five steps. We’ll cover each step in turn.

Special Issues for Step 1: Identify the Contract

A **contract** is an agreement that creates legally enforceable rights and obligations. We normally think of a contract as specified in a written document, but contracts can be oral rather than written. Contracts also can be *implicit* based on the typical business practices that a company follows.

A contract is an agreement that creates legally enforceable rights and obligations.

Remember from our example in Part A, just buying a jacket from Macy’s implies a contract for purposes of recognizing revenue. The key is that all parties to the contract are committed to performing their obligations and enforcing their rights.⁸

For a contract to exist for purposes of revenue recognition, the seller must believe it’s probable that it will collect substantially all of the amount it’s entitled to receive in exchange for the goods or services that it will provide to the customer. This collectibility

A seller must believe collectibility is probable for a contract to exist for purposes of revenue recognition.

threshold makes sure that revenue really reflects an inflow of net assets from the customer. However, even if a contract doesn’t exist, the seller still can recognize an amount of revenue equal to any nonrefundable payments it has received, so long as the seller has transferred control of the goods or services and does not have any further obligations to transfer goods or services to the customer.

A contract does not exist if (a) neither the seller nor the customer has performed any obligations under the contract and (b) both the seller and the customer can terminate the contract without penalty. In other words, either the seller or the customer must have done something that has commercial substance for the seller to start accounting for revenue.

 **Illustration 6-12** provides an example.

Illustration 6-12 Determining Whether a Contract Exists for Revenue Recognition

Purposes

Recall from  **Illustration 6-7** that CompStores ordered 1,000 Tri-Box systems on December 20, 2023, at a price of \$250 per unit. Assume that CompStores and TrueTech can cancel the order without penalty prior to delivery. TrueTech made delivery on January 1, 2024, and received \$250,000 on January 25, 2024. When does TrueTech's arrangement with CompStores qualify as a contract for purposes of revenue recognition? The arrangement qualifies as a contract on January 1, 2024. That's the date TrueTech makes delivery to CompStores. Prior to delivery, neither TrueTech nor CompStores had performed an obligation under the contract, and both parties could cancel the order without penalty, so the arrangement didn't qualify as a contract for purposes of revenue recognition.

LO6-10 Discuss the primary differences between U.S. GAAP and IFRS with respect to revenue recognition.

International Financial Reporting Standards

ASU No. 2014-09 defines “probable” as “likely to occur.” Similarly, *SFAC No. 6* defines “probable” to mean an amount can “reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved,” which implies a relatively high likelihood of occurrence. IFRS defines

“probable” as a likelihood that is greater than 50%, which is lower than the definition in U.S. GAAP. Therefore, some contracts might not meet this threshold under U.S. GAAP that do meet it under IFRS.

Additional Consideration

Contract Modifications. A customer and seller might agree to modify a contract in some way. For instance, they might change the transaction price, change the performance obligations, or add another performance obligation. The way we account for a contract modification depends on the nature of the modification:

1. Sometimes, a modification is really just a separate new contract. That happens when the modification adds another distinct good or service and requires the customer to pay an additional amount equal to the stand-alone selling price of the added good or service. In that case, we view the modification as a separate contract.
2. Other times, a modification is to a contract for which the remaining goods and services are distinct from those already transferred, but the modification doesn't qualify as a separate contract. In that case, the seller acts as if the old contract has been terminated and a new contract has been created. The new contract includes whatever performance obligations remain after the modification, and its transaction price is equal to the amount that hasn't yet been recognized as revenue under the old contract plus or minus any change in price required by the modification. We allocate the revised transaction price to all performance obligations remaining in the contract based on their stand-alone selling prices at that time.
3. Finally, sometimes we modify a contract for which the remaining performance obligations are not distinct and therefore form a single performance obligation that is being satisfied over time. In that case, we need to update our assessment of progress toward completion and adjust

revenue as appropriate to reflect progress to date, just like we treat other changes in estimates.

Special Issues for Step 2: Identify the Performance Obligation(s)

Previously we saw that promises to provide goods and services are treated as performance obligations when the goods and services are distinct. Now let's consider several aspects of contracts we often encounter and determine if they qualify as performance obligations. We discuss prepayments, warranties, and options.

PREPAYMENTS

Some contracts require nonrefundable up-front fees for particular activities (for example, **LA Fitness** charges up-front initiation fees for gym memberships). We don't consider such **prepayments** to be performance obligations because they aren't a promise to transfer a product or service to a customer. Instead, the up-front fee is an advance payment by the customer for future products or services and should be included in the transaction price, allocated to the various performance obligations in the contract, initially recorded as deferred revenue, and recognized as revenue when (or as) each performance obligation is satisfied.

A prepayment is not a performance obligation.

WARRANTIES

Most products are sold with a warranty that obligates the seller to make repairs or replace products that later are found to be defective or unsatisfactory. These warranties are not sold separately and either can be stated explicitly or be implicit based on normal business practice. We call these **quality-assurance warranties**. A quality-assurance warranty (sometimes called an "assurance-type warranty") is not a performance obligation. Rather, it is a cost of satisfying the performance obligation to deliver products of acceptable quality. The seller recognizes this cost in the period of sale as a warranty expense and related contingent liability. Because the exact amount of the cost usually is not known at the time of the sale, it

A quality-assurance warranty obligates the seller to repair or replace defective products.

A quality-assurance warranty is not a performance obligation.

must be estimated. For example, **Deere & Company**, which manufactures equipment used for agriculture, construction, landscaping, and other purposes, reported a quality-assurance warranty liability of \$1.218 billion at the end of its 2019 fiscal year.

Extended warranties, on the other hand, are offered as an additional service that covers new problems arising after the customer takes control of the product. It's unusual these days to buy a phone, digital tablet, car, or almost any durable consumer product without being asked to buy an extended warranty. An extended warranty (sometimes called a "service-type warranty") provides protection beyond the manufacturer's quality-assurance warranty. Because an extended warranty usually is priced and sold separately from the product, it constitutes a performance obligation and can be viewed as a separate sales transaction. The price is recorded as a deferred revenue liability and then recognized as revenue over the extended warranty period. If an extended warranty is included along with the related product as part of a single contract, the extended warranty is treated as a separate performance obligation, allocated a portion of the transaction price, and that portion of the transaction price is recorded as deferred revenue. Deere & Company reported a liability for deferred extended warranty revenue of \$1.010 billion at the end of its 2019 fiscal year.

An extended warranty is an additional service that covers new problems arising after a customer takes control of a product.

An extended warranty is a separate performance obligation.

How can you tell if a warranty should be treated as a quality-assurance warranty or an extended warranty? A warranty should be treated as an extended warranty if either (a) the customer has the option to purchase the warranty separately from the seller or (b) the warranty provides a service to the customer beyond only assuring that the seller delivered a product or service that was free from defects. The specifics of the warranty have to be considered when making this determination. For example, if the warranty period is very long, it's likely the warranty is covering more than just the quality of the product at the date of delivery, so it likely would represent an extended warranty.

We discuss accounting for warranties more in [Chapter 13](#).

CUSTOMER OPTIONS FOR ADDITIONAL GOODS OR SERVICES

In some contracts the seller grants the customer an *option* to receive additional goods or services at no cost or a discount. Examples include software upgrades, customer loyalty

programs (frequent flyer miles, credit card points), discounts on future goods or services, and contract renewal options. Options for additional goods or services are considered performance obligations if they provide a *material right* to the customer that the customer would not receive otherwise.⁹ For example, if a shoe seller always discounts its products by 5% from the list price but advertises a special deal by which customers who purchase one pair of shoes receive a 20% discount off the next pair of shoes purchased at the same store, the extra discount of 15% (20% - 5%) is a material right, as it is a discount customers would not receive had they not bought the first pair of shoes. In that case, the seller has two performance obligations associated with the sale of the first pair of shoes: (1) delivery of the shoes and (2) provision of the extra 15% discount on the next pair of shoes purchased at the same store.

When a contract includes an option that provides a material right, the seller must allocate part of the contract's transaction price to the option. Just like for other performance obligations, that allocation process requires the seller to estimate the stand-alone selling price of the option, as well as taking into account the likelihood that the customer will actually exercise the option. The seller recognizes revenue associated with the option when the option is exercised or expires.  **Illustration 6-13** provides an example.

An option for additional goods or services is a performance obligation if it confers a material right to the customer.

Illustration 6-13 Customer Options for Additional Goods or Services.

TrueTech offers a promotional coupon with every Tri-Box it sells for \$240.

- The coupon gives the Tri-Box customer an opportunity to buy a headset that normally sells for \$150 for only \$90 (a 40% discount).
- The coupon must be redeemed within one year of the Tri-Box purchase.
- TrueTech estimates that 80% of customers will take advantage of the coupon.

How would TrueTech account for the cash sale of 100 Tri-Boxes sold under this promotion on January 1, 2024?

The coupon provides a material right to the customer because it allows the customer to receive a discount of $\$150 \times 40\% = \60 . Therefore, the coupon provides an option that constitutes a performance obligation, and TrueTech must allocate the \$240 transaction price of the Tri-Box to two performance

obligations: the Tri-Box and the right to acquire a headset at a discount upon presentation of the coupon.

Because TrueTech expects only 80% of the coupons to be used, it estimates the stand-alone selling price of the coupon to be the \$48, computed as the value of the opportunity to receive a discount (\$60) multiplied by the probability a customer will take advantage of that opportunity (80%).* The sum of the stand-alone selling prices of the performance obligations is \$288, equal to the Tri-Box module (\$240) plus the coupon (\$48). The Tri-Box module (\$240) represents five-sixths (or 83.33%) of the total ($\$240 \div \288), and the coupon comprises one-sixth (or 16.67%) of the total ($\$48 \div \288), so TrueTech allocates five-sixths of the \$240 transaction price to the Tri-Box module and one-sixth to the coupon, as follows:

January 1, 2024:

| | | |
|---|--------|--------|
| Cash | 24,000 | |
| Sales revenue ($\$240 \times 5/6 \times 100$ units) | | 20,000 |
| Deferred revenue—coupons ($\$240 \times 1/6 \times 100$ units) | | 4,000 |

When the coupons are later redeemed or expire, TrueTech will debit deferred revenue—coupons and credit revenue.

*It may seem strange that we consider the likelihood that the customer will use the coupon when estimating the coupon's stand-alone selling price, but think about it from TrueTech's perspective. Each coupon saves a customer \$60, but on average TrueTech will only have to provide discounts of \$48, so \$48 is its estimate of the average stand-alone value of its performance obligation.

Special Issues for Step 3: Determine the Transaction Price

LO6–6 Understand how variable consideration and other aspects of contracts affect the calculation and allocation of the transaction price.

Until now, we've assumed that contracts indicate a fixed **transaction price** that will be paid at or soon after delivery. However, in some contracts, the transaction price is less clear. Specific situations affecting the transaction price are (a) variable consideration and the constraint on its recognition, (b) sales with a right of return (a particular type of variable consideration), (c) identifying whether the seller is acting as a principal or an agent, (d) the time value of money, and (e) payments by the seller to the customer. Let's consider these one at a time to see how recording revenue will be affected when there is variable consideration.

The *transaction price* is the amount the seller expects to be entitled to receive from the customer.

VARIABLE CONSIDERATION

Sometimes a transaction price is uncertain because some of the price depends on the outcome of future events. Contracts that include this **variable consideration** are commonplace in many industries, including construction (incentive payments), entertainment and media (royalties), health care (Medicare and Medicaid reimbursements), manufacturing (volume discounts and product returns), and telecommunications (rebates).

Variable consideration is the portion of a transaction price that depends on the outcome of future events.

Additional Consideration

Shipping Costs. **Amazon Prime** includes “free” two-day shipping. You pay one price, but Amazon has two obligations: to provide a good and to ship that good. Are these considered separate performance obligations that require Amazon to allocate the transaction price for purposes of revenue recognition? It depends.

If shipping is provided *prior* to the seller transferring control of goods to the buyer (for example, if title passes to the customer upon delivery), then shipping is viewed as just another cost of doing business.¹⁰ In that case, shipping is not treated as a separate performance obligation, and none of the transaction price would be allocated to it.

If shipping is provided *after* the customer has taken control of goods, then shipping could be viewed as a separate service and treated as a separate

performance obligation. However, allocating a small portion of the transaction price to “shipping revenue” might be more trouble than it’s worth. Therefore, the FASB allows companies to choose whether to treat shipping provided after the customer takes control as either (a) just a cost of doing business or (b) a separate performance obligation (which requires sellers to allocate a portion of the transaction price to shipping and then to recognize shipping revenue when shipping is completed). The seller’s policy must be disclosed clearly.¹¹ The IASB does not allow this choice, so some companies that apply IFRS might be forced to recognize “shipping revenue” when they would prefer not to go to the trouble of doing so.

Estimating Variable Consideration. When an amount to be received depends

Page 289

on some uncertain future event, the seller still should include the uncertain amount in the transaction price by estimating it. A seller estimates variable consideration as either (a) the *expected value*

Variable consideration is estimated as either the expected value or the most likely amount.

(calculated as the sum of each possible amount multiplied by its probability) or (b) the *most likely amount*, depending on which estimation approach better predicts the amount that the seller will receive. If there are several possible outcomes, the expected value will be more appropriate. On the other hand, if only two outcomes are possible, the most likely amount might be the best indication of the amount the seller will likely receive.  **Illustration 6-14** provides an example.

Illustration 6-14 Accounting for Variable Consideration

TrueTech enters into a contract with ProSport Gaming to add ProSport’s online games to the Tri-Net network. ProSport offers popular games like Brawl of Bands and wants those games offered on the Tri-Net so ProSport can sell gems, weapons, health potions, and other game features that allow players to advance more quickly in a game.

On January 1, 2024, ProSport pays TrueTech an up-front fixed fee of \$300,000 for six months of featured access. ProSport also will pay TrueTech a bonus of \$180,000 if Tri-Net users access ProSport games for at least 15,000 hours during the six-month period. TrueTech estimates a 75% chance that it will achieve the usage target and receive the \$180,000 bonus.

TrueTech records the following entry for the receipt of the cash on January 1, 2024:

| | | |
|------------------|---------|---------|
| Cash | 300,000 | |
| Deferred revenue | | 300,000 |

Subsequent entries to recognize revenue depend on whether TrueTech estimates the transaction price as the expected value or the most likely amount.

Alternative 1: Expected Value

The expected value is calculated as a probability-weighted transaction price.

| Possible Amounts | Probabilities | Expected Amounts |
|---|---------------|--------------------------|
| \$480,000 (\$300,000 fixed fee + 180,000 bonus) | × 75% = | \$ 360,000 |
| \$300,000 (\$300,000 fixed fee + 0 bonus) | × 25% = | 75,000 |
| Expected value of the contract price at inception | | <u><u>\$ 435,000</u></u> |

Alternative 2: Most Likely Amount

Because there is a greater chance of qualifying for the bonus than of not qualifying for the bonus, a transaction price based on the most likely amount is \$300,000 + \$180,000, or **\$480,000**.

Let's assume that TrueTech bases the estimate on the most likely amount, **\$480,000**. In each successive month TrueTech recognizes one month's revenue based on a total transaction price of **\$480,000**. Because it previously recorded \$300,000 as deferred revenue, at the end of each month, TrueTech reduces deferred revenue by one-sixth of the \$300,000 as well as recognizing a bonus receivable for one-sixth of the \$180,000 bonus it expects to receive.

| | | |
|---|--------|---------------|
| Deferred revenue (\$300,000 ÷ 6 months) | 50,000 | |
| Bonus receivable (\$180,000 ÷ 6 months). | | 30,000 |
| Service revenue (\$480,000 ÷ 6 months)* | | 80,000 |

After six months, TrueTech's deferred revenue account has been reduced to a zero balance, and the bonus receivable account has a balance of \$180,000 (\$30,000 × 6). At that point, TrueTech knows if the usage of

ProSport products had reached the bonus threshold and records one of the following two journal entries:

| If TrueTech receives the bonus: | | If TrueTech does not receive the bonus: | |
|---------------------------------|----------------|---|----------------|
| Cash | 180,000 | Service revenue | 180,000 |
| Bonus receivable | 180,000 | Bonus receivable | 180,000 |

*If TrueTech instead used the expected value as its estimate of the transaction price, the journal entries would be the same except that the amount of revenue recognized each month would be \$72,500 (**\$435,000** ÷ 6 months). The reduction in the deferred revenue liability each month would still be \$50,000, and the amount of bonus receivable accrued each month would be \$22,500 ($\$135,000 \div 6$ months).

Bonus Receivable

| | | |
|------|---------------|----------------|
| 1/1 | 0 | |
| 1/31 | 30,000 | |
| 2/28 | 30,000 | |
| 3/31 | 30,000 | |
| 4/30 | 30,000 | |
| 5/31 | 30,000 | |
| 6/30 | 30,000 | 180,000 |
| 6/30 | 0 | |

Service Revenue

| | |
|------|---------------|
| 1/1 | 0 |
| 1/31 | 80,000 |
| 2/28 | 80,000 |
| 3/31 | 80,000 |
| 4/30 | 80,000 |
| 5/31 | 80,000 |
| 6/30 | 80,000 |

| Service Revenue | |
|-----------------|---------|
| 6/30 | 480,000 |

The seller must reassess its estimate of the transaction price in each period to determine whether circumstances have changed. If the seller revises its estimate of the amount of variable consideration it will receive, it must revise any receivable it has recorded and reflect the adjustment in that period's revenue, as we see in

Illustration 6-15.

Illustration 6-15 Accounting for Variable Consideration

Assume the same facts as in [Illustration 6-14](#), but that, after three months, TrueTech concludes that, due to low usage of ProSport's games, the most likely outcome is that True-Tech will *not* receive the \$180,000 bonus. TrueTech records the following entry at the start of April to reduce its bonus receivable to zero and reflect the adjustment in revenue:

| | |
|---|--------|
| Service revenue | 90,000 |
| Bonus receivable (reducing the account to zero) | 90,000 |

For the remainder of the contract, TrueTech only recognizes revenue in each month associated with the up-front fixed payment of \$300,000.

| | |
|---|--------|
| Deferred revenue (\$300,000 ÷ 6 months) | 50,000 |
| Service revenue | 50,000 |

| Bonus Receivable | |
|------------------|--------|
| 1/1 | 0 |
| 1/31 | 30,000 |
| 2/28 | 30,000 |
| 3/31 | 30,000 |
| 4/1 | 90,000 |
| 4/1 | 0 |

| Service Revenue | |
|-----------------|---------|
| 1/1 | 0 |
| 1/31 | 80,000 |
| 2/28 | 80,000 |
| 3/31 | 80,000 |
| 4/1 | 90,000 |
| 4/30 | 50,000 |
| 5/31 | 50,000 |
| 6/30 | 50,000 |
| 6/30 | 300,000 |

 **Illustration 6-16** shows how **Emcor Group, Inc.**, a large construction and industrial services firm, explained its estimates of variable consideration in its 2019 annual report.

Illustration 6-16 Disclosure of Estimation of Variable Consideration

Real World Financials

Note 3 – Revenue from Contracts with Customers (in part)

Determine the transaction price: To the extent the performance obligation includes variable consideration, including contract bonuses and penalties that can either increase or decrease the transaction price, the Company estimates the amount of variable consideration to be included in the transaction price utilizing one of two prescribed methods, depending on which method better predicts the amount of consideration to which the entity will be entitled. . . . The expected value method is typically utilized in situations where a contract contains a large number of possible outcomes, while the most likely amount method is typically utilized in situations where a contract has only two possible outcomes.

Constraint on Recognizing Variable Consideration. Sometimes sellers lack sufficient information to make a good estimate of variable consideration. The concern is that a seller might overestimate variable consideration, recognize revenue based on a transaction price that is too high, and later have to reverse that revenue (and reduce net income) to correct

the estimate. To guard against this, sellers only include an estimate of variable consideration in the transaction price to the extent it is “probable” that a significant reversal of revenue recognized to date will not occur when the uncertainty associated with the variable consideration is resolved in the future.

LO6–10 Discuss the primary differences between U.S. GAAP and IFRS with respect to revenue recognition.

International Financial Reporting Standards

IFRS uses the term “highly probable” instead of “probable” in this case. Because IFRS defines “probable” to mean a likelihood greater than 50%, its use of “highly probable” is intended to convey the same likelihood as is conveyed by “probable” in U.S. GAAP.

Applying this constraint requires judgment on the part of the seller, taking into account all information available. Indicators that a significant revenue reversal could occur include

(a) poor evidence on which to base an estimate, (b) dependence of the estimate on factors outside the seller’s control, (c) a history of the seller changing payment terms on similar contracts, (d) a broad range of outcomes that could occur, and (e) a long delay before uncertainty resolves.

Sellers are limited to recognizing variable consideration to the extent that it is probable that a significant revenue reversal will not occur in the future.

If a seller changes its opinion regarding whether a constraint on variable consideration is necessary, the seller should update the transaction price in the current reporting period, just as the seller would do for other changes in estimated variable consideration.

 **Illustration 6–17** provides an example.

Assume the same facts as in [Illustration 6–14](#), but that initially TrueTech can't conclude that it is probable that a significant revenue reversal will not occur in the future. In that case, TrueTech is constrained from recognizing revenue associated with variable consideration. TrueTech includes only the up-front fixed payment of \$300,000 in the transaction price, and recognizes revenue of \$50,000 each month.

| | | |
|---|--------|--------|
| Deferred revenue ($\$300,000 \div 6$ months) | 50,000 | |
| Service revenue | | 50,000 |

On April 1, after three months of the contract have passed, TrueTech concludes it can make an accurate enough bonus estimate for it to be probable that a significant revenue reversal will not occur. As in [Illustration 6–14](#), TrueTech estimates a 75% likelihood it will receive the bonus and bases its estimate on the “most likely amount” of \$180,000. Since on April 1 the contract is one-half finished (3 of the 6 months have passed), TrueTech records a bonus receivable and service revenue for \$90,000 ($\$180,000 \times \frac{3}{6}$), the cumulative amount that would have been recognized over the first three months of the contract if an estimate of variable consideration had been included in the transaction price to begin with:

| | | |
|---|---------------|---------------|
| Bonus receivable ($\$180,000 \times \frac{3}{6}$) | 90,000 | |
| Service revenue | | 90,000 |

In the final three months of the contract, TrueTech recognizes the remaining revenue assuming a transaction price of \$480,000, exactly as if it had included an estimate of variable consideration in the transaction price all along:

| | | |
|---|--------|--------|
| Deferred revenue ($\$300,000 \div 6$ months) | 50,000 | |
| Bonus receivable ($\$180,000 \div 6$ months) | 30,000 | |
| Service revenue ($\$480,000 \div 6$ months) | | 80,000 |

| Bonus Receivable | |
|------------------|---------------|
| 1/1 | 0 |
| 4/1 | 90,000 |
| 4/30 | 30,000 |

| Bonus Receivable | |
|------------------|---------|
| 5/31 | 30,000 |
| 6/30 | 30,000 |
| 6/30 | 180,000 |

| Service Revenue | |
|-----------------|---------|
| 1/1 | 0 |
| 1/31 | 50,000 |
| 2/28 | 50,000 |
| 3/31 | 50,000 |
| 4/1 | 90,000 |
| 4/30 | 80,000 |
| 5/31 | 80,000 |
| 6/30 | 80,000 |
| 6/30 | 480,000 |

RIGHT OF RETURN

Retailers usually give customers the right to return merchandise if customers decide they don't want it, are not satisfied with it, or are unable to resell it. For example, video-game manufacturers like **Take-Two Interactive Software** often give customers a **right of return** for unsold products.

The right to return merchandise does not create a performance obligation for the seller. Instead, it represents a potential failure to satisfy the original performance obligation to provide goods that the customer wants to keep.

A right of return is not a performance obligation.

Because the total amount of cash a seller is entitled to receive depends on the amount of returns, a right of return creates a situation involving variable

A right of return is a form of variable consideration.

consideration. The actual consideration the seller receives will be sales revenue minus the portion of those sales returned by customers, which we call *sales returns*. The sales returns account is a "contra revenue" account that has the effect of reducing revenue. As a result, we report sales revenue net of the amount expected to be returned.

Based on past experience, a seller usually can estimate the returns that will result from a given volume of sales, so the seller reduces revenue by the estimated returns. For example, assume that TruTech sold 1,000 Tri-Boxes to CompStores for \$240 each, for a total of \$240,000 of revenue. If TruTech estimated that CompStores will return 5% of the Tri-Boxes purchased, TruTech would report net sales revenue of \$228,000 in its income statement, equal to gross revenue of \$240,000 less estimated returns of \$12,000 ($\$240,000 \times 5\%$ estimated returns).

Sellers report net sales revenue in the income statement, equal to gross sales revenue less actual and estimated returns.

| | |
|---|------------------|
| Sales revenue ($\$240 \times 1,000$ Tri-Boxes) | \$240,000 |
| Less: Estimated returns (5%) | (12,000) |
| Net sales revenue | <u>\$228,000</u> |

Conceptually, sellers should account for returns each time they make a sale. In practice, though, most companies find it impractical to do that. Instead, they simply record sales revenue at the time of sale, record sales returns during the period as customers return products and receive refunds, and account for additional estimated returns at the end of the accounting period. Importantly, though, that practical expedient takes us to the same amounts reported in the financial statements. The seller reports net sales revenue in the income statement and also reports a refund liability in the balance sheet for any additional amounts it expects to refund to customers who make returns. We discuss these and other aspects of accounting for returns in more detail in [Chapter 7](#).

What if the seller lacks sufficient information to be able to accurately estimate returns? In that case, the constraint on recognizing variable consideration we discussed earlier applies, and the seller should recognize revenue only to the extent it is probable that a significant revenue reversal will not occur later if the estimate of returns changes.

IS THE SELLER A PRINCIPAL OR AGENT?

Sometimes more than one company is involved in providing goods or services to a customer. In those situations, we need to determine whether a company is acting as a **principal**, providing the good or service to the customer, or an **agent**, only arranging for another company to provide the good or service.

We view the seller as a principal if it obtains control of the goods or services before they are transferred to the customer. Various indicators help determine whether a seller obtains control. Control is indicated if the seller has primary responsibility for providing a product or service that the customer finds acceptable, if the seller has discretion in setting prices, and/or if the seller is vulnerable to risks associated with holding inventory or having inventory returned to it.

A principal controls goods or services and is responsible for providing them to the customer.

A principal's performance obligation is to provide goods and services. In contrast, an agent doesn't primarily provide goods or services but acts as a facilitator who receives a commission for helping sellers provide goods and services to buyers. An agent's performance obligation is to facilitate a transaction between a principal and a customer.

An agent doesn't control goods or services, but rather facilitates transfers between sellers and customers.

Many examples of agents occur in business. You're familiar with is a real estate agent. Real estate agents don't own the houses they sell but rather charge a commission to help homeowners transact with home buyers. Similarly, online auction houses like **eBay**, travel facilitators like **Expedia, Inc.** and **priceline.com**, and broad web-based retailers like **Amazon** act as agents for a variety of sellers. Complicating matters, these same companies also act as principals on some other arrangements, selling their own products and services directly to customers.

 **Illustration 6-18** shows how Amazon described its roles as principal and agent in its 2019 annual report.

Illustration 6-18 Disclosure of Role as Principal and Agent

Real World Financials

Note 1—Description of Business and Accounting Policies: Revenue (in part)

Retail sales—We offer consumer products through our online and physical stores. Revenue is recognized when control of the goods is transferred to the customer, which generally occurs upon our delivery to a third-party carrier or, in the case of an Amazon delivery, to the customer.

Note 1—Description of Business and Accounting Policies: Revenue (in part)

Third-party seller services—We offer programs that enable sellers to sell their products in our stores and fulfill orders through us. We are not the seller of record in these transactions. The commissions and any related fulfillment and shipping fees we earn from these arrangements are recognized when the services are rendered, which generally occurs upon delivery of the related products to a third-party carrier or, in the case of an Amazon delivery, to the customer.

The distinction between a principal and an agent is important because it affects the amount of revenue that a company can record. If the company is a principal, it records revenue equal to the total sales price paid by customers as well as cost of goods sold equal to the cost of the item to the company. On the other hand, if the company is an agent, it records as revenue only the commission it receives on the transaction.

An agent only records its commission as revenue.

We see from  **Illustration 6-19** that whether the seller is a principal or an agent can have a significant effect on its revenue. This is particularly important for start-ups or growth-oriented companies that may be valued more for growth in revenue than for growth in net income.

Illustration 6-19 Comparison of Revenue Recognition by Principals and Agents

Mustafa buys a Tri-Box module from an online retailer for \$290. Let's consider accounting for that sale by two retailers, PrinCo and AgenCo.

- PrinCo purchases Tri-Box modules directly from TrueTech for \$240, has the modules shipped to its distribution center in Kansas, and then ships individual modules to buyers when a sale is made. PrinCo offers occasional price discounts according to its marketing strategy. Because PrinCo is responsible for fulfilling the contract, bears the risk of holding

inventory, and has latitude in setting sales prices, the evidence suggests that PrinCo is a principal in this transaction.

- AgenCo serves as a web portal by which multiple game module manufacturers like TrueTech can offer their products for sale. The manufacturers ship directly to buyers when a sale is made. AgenCo receives a \$50 commission on each sale that occurs via its web portal. Given that AgenCo is not primarily responsible for fulfilling the contract, bears no inventory risk, has no latitude in setting sales prices, and is paid on commission, the evidence suggests AgenCo is an agent in this transaction.

The first part of the income statement for each retailer is shown below. Notice that the same amount of gross profit, \$50, is recognized by the principal and the agent. What differ are the amounts of revenue and expense that are recognized and reported.

| A Principal Records Gross Revenue (PrinCo) | | An Agent Records Net Revenue (AgenCo) | |
|---|-------|--|----------|
| Revenue | \$290 | Revenue | \$50 |
| Less: Cost of goods sold | (240) | Less: Cost of goods sold | <u>0</u> |
| Gross profit | \$ 50 | Gross profit | \$50 |

THE TIME VALUE OF MONEY

It's common for contracts to specify that payment occurs either before or after delivery. We recognize an account receivable when payment occurs *after* delivery. In that case, the seller can be viewed as making a loan to the customer between delivery and payment. We recognize deferred revenue if payment occurs *before* delivery. In that case, the customer can be viewed as making a loan to the seller by paying in advance.

As you learned in [Chapter 5](#), there is an interest charge (a “time value of money”) implicit in these arrangements. If the time value of money is a significant part of the contract, the seller should view the transaction price as consisting of two components:

1. A *delivery component*, equal to the cash price of the good or service, and

If the time value of money is significant, a contract is viewed as

2. A *financing component*, which is interest considered paid to the customer (in the case of a prepayment) or to the seller (in the case of a receivable).

including *delivery and financing components*.

In  **Illustration 6-20**, we see both the prepayment and receivable cases:

Illustration 6-20 Accounting for the Time Value of Money

On January 1, 2024, TrueTech enters into a contract with GameStop Stores to deliver four \$240 Tri-Box modules that have a combined fair value of \$960.

- **Prepayment Case:** GameStop pays TrueTech \$873 on January 1, 2024, and TrueTech agrees to deliver the modules on December 31, 2024. Because GameStop pays in advance of delivery, we view TrueTech as borrowing money from GameStop, so TrueTech will incur interest expense.
- **Receivable Case:** TrueTech delivers the modules on January 1, 2024, and GameStop agrees to pay TrueTech \$1,056 on December 31, 2024. Because TrueTech delivers the modules in advance of payment, we view TrueTech as lending money to GameStop, so TrueTech will earn interest revenue.

In both cases, TrueTech views the financing component to be significant, and the applicable interest rate is 10%. In the following table we compare TrueTech’s accounting for the contract for the two cases (ignoring the entry for cost of goods sold):

| Prepayment (collection before delivery) | | Receivable (collection after delivery) | |
|--|------|---|--------------|
| January 1, 2024 | | January 1, 2024 | |
| When collection occurs: | | When delivery occurs: | |
| Cash | 873 | Notes receivable | 1056 |
| Deferred revenue | 873* | Discount on notes receivable | 96 |
| | | Sales revenue | 960** |
| December 31, 2024 | | December 31, 2024 | |

| When subsequent delivery occurs: | | When subsequent collection occurs: | |
|---|------------|---|-------|
| Interest expense (\$837 × 10%) | 87 | Cash | 1,056 |
| Deferred revenue | 873 | Discount on notes receivable | 96 |
| Sales revenue | 960 | Interest revenue (\$960 × 10%) | 96 |
| | | Notes receivable | 1,056 |

*\$873 = \$960 × 0.90909 (present value of \$1, n = 1, I = 10%; from Table 2)

**\$960 = \$1,056 × 0.90909 (present value of \$1, n = 1, I = 10%; from Table 2)

Notice in  **Illustration 6-20** that, even though in both cases the customer is buying a product with a cash price of \$960, the customer pays less in the prepayment case (\$873) than in the receivable case (\$1,056). That's because the customer is *lending* money to the seller in the prepayment case and so is getting some compensation for the time value of money, but the customer is *borrowing* money from the seller in the receivable case and so is having to pay compensation for the time value of money.

When is a financing component considered *significant*? As with other applications of the materiality concept, that's a matter of professional judgment, but there are indicators that might suggest significance. If the customer would pay a substantially different amount if it paid cash at the time the good or service was delivered, the financing component likely is significant. Also, the financing component is more likely to be significant as the time between delivery and payment increases, or if the interest rate implicit in the contract is large. As a practical matter, sellers can assume the financing component is not significant if the period between delivery and payment is less than a year.

We discuss further how sellers make adjustments for the time value of money for accounts receivable in  **Chapter 7** and for prepayments in  **Chapter 13**.

PAYMENTS BY THE SELLER TO THE CUSTOMER

Usually, it's the customer who pays the seller for goods or services. Occasionally, though, a *seller* also makes payments to a *customer*. For example, **Samsung** sells TVs, smartphones, tablets, and other products to **BestBuy**. However, Samsung also might pay BestBuy for dedicated space in BestBuy stores or to conduct special Samsung-focused advertising programs. The question is whether a payment by Samsung is a purchase of goods or services from BestBuy, or really just a refund of some of the price paid by BestBuy to purchase Samsung products.

The way we account for payments by a seller to a customer depends on the specifics of the arrangement. If the seller is purchasing distinct goods or services from the customer at the fair value of those goods or services, we account for that purchase as a separate transaction. If a seller pays more for distinct goods or services purchased from its customer than the fair value of those goods or services, those excess payments are viewed as a refund. They are subtracted from the amount the seller is entitled to receive when calculating the transaction price of the sale to the customer. In our Samsung example, if Samsung pays more for dedicated floor space at BestBuy than the fair value of that floor space, Samsung should treat that excess payment as a refund to BestBuy of part of the price paid by BestBuy for Samsung products.

Special Issues for Step 4: Allocate the Transaction Price to the Performance Obligations

We already discussed the need for the seller to allocate the transaction price to each performance obligation in a contract in proportion to the stand-alone selling prices of the goods or services. We also noted that when goods and services aren't normally sold separately, sellers must estimate those stand-alone selling prices. Various approaches are available to estimate stand-alone selling prices. Examples include the following:

1. **Adjusted market assessment approach:** The seller considers what it could sell the product or services for in the market in which it normally conducts business, perhaps referencing prices charged by competitors.
2. **Expected cost plus margin approach:** The seller estimates its costs of satisfying a performance obligation and then adds an appropriate profit margin.
3. **Residual approach:** The seller estimates an unknown (or highly uncertain) stand-alone selling price by subtracting the sum of the known or estimated stand-alone selling prices

of other goods or services in the contract from the total transaction price of the contract. The residual approach is allowed only if the stand-alone selling price is highly uncertain, either because the seller hasn't previously sold the good or service and hasn't yet determined a price for it or because the seller provides the same good or service to different customers at substantially different prices.  **Illustration 6-21** provides an example of the residual approach.

The residual approach is used to estimate a stand-alone selling price that is very uncertain.

Illustration 6-21 Allocating Transaction Price to Performance Obligations Using the Residual Approach

Assume the same facts as  **Illustration 6-7**, with the Tri-Box System comprised of the Tri-Box module and the Tri-Net subscription. The normal selling price of each system is \$250, and the standalone price of each Tri-Box is \$240, but the stand-alone selling price of the one-year Tri-Net subscription is highly uncertain because TrueTech hasn't sold that service previously and hasn't established a price for it. Under the residual approach, the value of the subscription would be estimated as follows:

| | |
|---|------------------|
| Total price of Tri-Box with Tri-Net subscription ($\$250 \times 1,000$) | \$250,000 |
| Stand-alone price of Tri-Box sold without subscription ($\$240 \times 1,000$) | <u>(240,000)</u> |
| Estimated stand-alone price of Tri-Net subscription | \$ 10,000 |

Based on these relative stand-alone selling prices, if CompStores orders 1,000 Tri-Box Systems at the normal wholesale price of \$250 each, TrueTech records the following journal entry (ignoring any entry to record the reduction in inventory and corresponding cost of goods sold):

| | | |
|---------------------|---------|---------|
| Accounts receivable | 250,000 | |
| Sales revenue | | 240,000 |
| Deferred revenue | | 10,000 |

TrueTech would convert the \$10,000 of deferred revenue to revenue (debit deferred revenue; credit service revenue) over the one-year term of the Tri-Net subscription.

Additional Consideration

Allocating Variable Consideration. What if a contract that has variable consideration includes multiple performance obligations? Typically the seller would include the variable consideration in the transaction price that is allocated to each of those performance obligations according to their relative stand-alone selling prices. Also, changes in estimated variable consideration are allocated to performance obligations on the same basis. However, if the variable consideration relates only to one performance obligation, it is allocated to only that performance obligation.

Special Issues for Step 5: Recognize Revenue When (or as) Each Performance Obligation Is Satisfied

LO6–7 Determine the timing of revenue recognition with respect to licenses, franchises, and other common arrangements.

Previously, we discussed recognizing revenue at a point in time and over a period of time. Now let's look at a few commonplace arrangements that occur in practice that make it more difficult to determine when revenue should be recognized. In particular, we discuss licenses, franchises, bill-and-hold sales, consignment arrangements, and gift cards.

LICENSES

Customers sometimes pay a licensing fee to access a company's intellectual property (IP). **Licenses** are common in the software, technology, media, and entertainment (including motion pictures and music) industries. The accounting question is when to recognize revenue for these arrangements, which the FASB recently addressed in *ASU 2016-10*.¹²

Licenses allow the customer to access the seller's intellectual property.

Functional intellectual property: Some licenses transfer a *right of use* to IP that has *significant stand-alone functionality*, meaning that it can perform a function or a task or be played or aired over various types of media. The benefit the customer receives from the license isn't affected by the seller's ongoing activity. Examples of this *functional IP* include software, drug formulas, and media content like books, music, and movies. For licenses of functional IP, sellers typically recognize revenue at the *point in time* that the customer can start using the IP.

Licenses of functional IP transfer a right of use, so sellers typically recognize revenue at a point in time.

For example, once you download a Rihanna hit from **Apple's** iTunes, you can enjoy listening to that song as often as you like, regardless of future actions by Rihanna or iTunes. You probably didn't realize it, but you had just purchased a license to use IP (and that license came with some restrictions, like not being able to copy and sell the music or broadcast it publicly). Apple recognized revenue at the point in time that the download occurred because that is when you could start listening to the downloaded music.

Symbolic intellectual property: Other licenses provide the customer with the *right of access* to the seller's IP with the understanding that the IP does not have significant stand-alone functionality. Rather, the seller will undertake ongoing activities during the license period that benefit the customer. The seller might make changes to the IP over the course of the license or could perform marketing or other activities that affect the value of the license to the customer. Examples of this *symbolic IP* include trademarks, logos, brand names, and franchise rights. For licenses of symbolic IP, sellers recognize revenue *over time* because that is when they satisfy their performance obligation.

Licenses of symbolic IP transfer a right of access, so sellers recognize revenue over time.

For example, suppose the **NBA** sells a five-year license that allows **Adidas** to manufacture shirts and hats with NBA team logos. Adidas agrees to the license arrangement with the understanding that the NBA will continue to play games and promote the league during the

license period. These activities affect the value of the shirts and hats and thus the license to Adidas. Therefore, the NBA satisfies its performance obligation under the license agreement through its ongoing activities and will recognize revenue over the *period of time* for which access is provided.

 **Illustration 6-22** includes a disclosure of revenue recognition for both types of licenses that was included in the **Walt Disney Company's** 2019 annual report.

Illustration 6-22 Disclosure of Revenue Recognition for Licenses

Real World Financials

Note 2—Summary of Significant Accounting Policies: Revenue Recognition (in part)

Revenue guidance defines two types of licenses of intellectual property (“IP”): IP that has “standalone functionality,” which is called functional IP, and all other IP, which is called symbolic IP. Revenue related to the license of functional IP is generally recognized upon delivery (availability) of the IP to the customer. The substantial majority of the Company’s film and television content distribution activities at the Media Networks, Studio Entertainment, and DTCL segments is considered licensing of functional IP. Revenue related to the license of symbolic IP is generally recognized over the term of the license. The Company’s primary revenue stream derived from symbolic IP is the licensing of trade names, characters, and visual and literary properties at the Parks, Experiences, and Products segment.

Additional Consideration

This distinction between functional and symbolic intellectual property can have very material consequences. For example, when **Microsoft** early-adopted the revenue recognition ASU on July 1, 2017, it determined that Windows 10 qualified as functional intellectual property. Therefore, Microsoft had to change to recognizing revenue upon delivery, rather than deferring

revenue at the time of delivery and recognizing revenue over the life of the related device, ranging from 2 to 4 years, as it had been doing. Microsoft reported that the impact of adopting the new standard would be to increase its revenue by \$6.6 billion in 2017 and \$5.8 billion in 2016.

Sometimes functional IP also requires revenue recognition over time. This happens when the seller is expected to change the functionality over the license period, and the customer is required to use the updated version. For example, that's the case with some software products, like virus protection. In that case, even though the license involves functional IP, we view the license as transferring a right of access, so revenue must be recognized over the license period.

Finally, sometimes a license isn't considered to be a separate performance obligation because it's not *distinct* from other goods or services provided in the same transaction. For example, an online service might grant a license to customers to access content at a website. In that case, the license isn't distinct from the website content because the purpose of the license is to access the content. As a result, the website access and license would be treated as a single performance obligation, and revenue would be recognized over time as customers are provided access to the website.

LO6–10 Discuss the primary differences between U.S. GAAP and IFRS with respect to revenue recognition.

International Financial Reporting Standards

The IASB's licensing guidance doesn't rely on the functional/symbolic classifications, so it differs from U.S. GAAP by not requiring revenue recognition over time for all symbolic intellectual property. Instead, the IASB requires the seller to recognize revenue over time only if the seller's ongoing activities affect the benefits the customer obtains from the IP. This distinction usually doesn't matter, but there are exceptions. For example, given that the Brooklyn Dodgers played their last baseball game in 1957, it is unlikely that

their ongoing activities affect the benefit of licensing the Brooklyn Dodgers logo. Therefore, under IFRS, the seller would recognize revenue for licensing that logo at the point in time the customer can use the logo. However, because U.S. GAAP would focus on the logo being symbolic IP, U.S. GAAP would require the seller to recognize revenue over the license period.

Additional Consideration

Variable Consideration and Licenses. Previously you learned about sellers being able to recognize revenue associated with variable consideration. There's an exception if variable consideration is based on sales or usage of a license. Those amounts (often called "royalties") are only included in the transaction price when the sales or usage has actually occurred, such that they are known rather than needing to be estimated.

FRANCHISES

Many retail outlets for fast food, restaurants, hotels, and auto rental agencies are operated as franchises. In franchise arrangements, the **franchisor**, such as **Subway**, grants to the **franchisee**, often an individual, a right to sell the franchisor's products and use its name

for a specified period of time. The franchisor also typically provides initial start-up services (such as identifying locations, remodeling or constructing facilities, selling equipment, and providing training to the franchisee) as well as providing ongoing products and services (such as franchise-branded products and advertising and administrative services). So, a franchise involves a *license* to use the franchisor's intellectual property, but also involves *initial sales* of products and services and *ongoing sales* of products and services. The franchisor must evaluate each part of the franchise arrangement to identify the performance obligations.  **Illustration 6-23** gives an example.

In a *franchise arrangement*, a franchisor grants to the franchisee the right to sell the franchisor's products and use its name.

Assume that TrueTech starts selling TechStop franchises. TrueTech charges franchisees an initial fee in exchange for (a) the exclusive right to operate the only TechStop in a particular area for a five-year period, (b) the equipment necessary to distribute and repair TrueTech products, and (c) training services to be provided over a two-year period. Similar equipment and training can be purchased elsewhere. What are the performance obligations in this arrangement, and when would TrueTech recognize revenue for each of them?

1. The exclusive five-year right to operate the only TechStop in a particular area is distinct because it can be used with other goods or services (furnishings, equipment, products) that the customer could obtain elsewhere.
2. The equipment is distinct because similar equipment is sold separately.
3. The training is distinct because similar training could be acquired elsewhere.

TrueTech would allocate the initial franchise fee to three separate performance obligations based on their relative stand-alone prices: (1) the right to operate a TechStop, (2) equipment, and (3) training. TrueTech would recognize revenue for the right to operate a TechStop over the five-year license period because the TechStop name qualifies as symbolic IP (TrueTech's ongoing activities over the license period affect the value of the right to run a TechStop). TrueTech would recognize revenue for the equipment at the time the equipment is delivered to the franchisee. TrueTech would recognize revenue for the training over the two-year period that the training is provided, just as it would treat revenue from any ongoing services provided to franchisees.

BILL-AND-HOLD ARRANGEMENTS

A **bill-and-hold** arrangement exists when a customer purchases goods but requests that the seller retain physical possession of the goods until a later date. For example, a customer might buy equipment and ask the

A bill-and-hold arrangement occurs when a customer purchases goods but requests that shipment occur at a later date.

seller to store the equipment until an installation site has been prepared.

For bill-and-hold arrangements, the key issue is that the customer doesn't have physical possession of the asset until the seller has delivered it. Remember, physical possession is one of the indicators that control may have been transferred, as listed in  **Illustration 6-3**. Bill-and-hold arrangements might arise normally in the course of business, but they also have been abused by some companies in the past. Managers at companies like **Sunbeam**, **NutraCea**, and **Nortel Networks** are alleged to have overstated revenue by falsely claiming that unsold inventory had been sold under a bill-and-hold arrangement.

The physical possession indicator normally overshadows other control indicators in a bill-and-hold arrangement, so sellers usually conclude that control has not been transferred and revenue should not be recognized until actual delivery to the customer occurs. Consistent with SEC guidance, sellers can recognize revenue prior to delivery only if (a) they conclude that the customer controls the product, (b) there is a good reason for the bill-and-hold arrangement, and (c) the product is specifically identified as belonging to the customer and is ready for shipment.¹³

Revenue recognition usually occurs at delivery for a bill-and-hold arrangement.

COVID-19: Accounting and Reporting Implications

Drug manufacturers supply vaccines that the U.S. federal government holds in reserve in its Strategic National Stockpile in case an epidemic occurs. These could be viewed as bill-and-hold arrangements because delivery to the end user (the person who eventually is vaccinated) is delayed, perhaps for years. What if drug companies stopped manufacturing vaccines because they couldn't recognize revenue for such a long time? To avoid this dangerous possibility, the SEC clarified in 2017 that control of specified vaccines passes to a customer when the vaccine is transferred to a stockpile, allowing revenue recognition at that point in time. During 2020, COVID-19 was clearly an epidemic, but as pharmaceutical companies scrambled to create vaccines, there was no indication that they

would be transferring those vaccines to the Strategic National Stockpile, so there was significant risk that revenue would need to be deferred. Also, given that some vaccine production contracts spanned multi-period contracts, the amount of revenue to be recognized in any particular period was difficult to estimate. Thus, a small part of the havoc caused by COVID-19 is related to accounting for revenue.

Ethical Dilemma

The Precision Parts Corporation manufactures automobile parts. The company has reported a profit every year since the company's inception in 1980. Management prides itself on this accomplishment and believes one important contributing factor is the company's incentive plan that rewards top management a bonus equal to a percentage of operating income if the operating income goal for the year is achieved. However, 2024 has been a tough year, and prospects for attaining the income goal for the year are bleak. Tony Smith, the company's chief financial officer, has determined a way to increase December sales by an amount sufficient to boost operating income over the goal for the year and secure bonuses for all top management. A reputable customer ordered \$120,000 of normally stocked parts to be shipped on January 5, 2025. Tony told the rest of top management, "I know we can get that order ready by December 31. We can then just leave the order on the loading dock until shipment. I see nothing wrong with recognizing the sale in 2024 since the parts will have been manufactured, and we do have a firm order from a reputable customer." The company's normal procedure is to ship goods f.o.b. destination and to recognize sales revenue when the customer receives the parts.

CONSIGNMENT ARRANGEMENTS

Sometimes a company arranges for another company to sell its product under **consignment**. In these arrangements, the "consignor" physically transfers the goods to the other company (the consignee), but the consignor retains legal title. If a buyer is found, the consignee

remits the selling price (less commission and approved expenses) to the consignor. If the consignee can't find a buyer within an agreed-upon time, the consignee returns the goods to the consignor.

When does control transfer from the consignor, allowing the consignor to recognize revenue? Referring to the indicators listed in  **Illustration 6-3**, the

Revenue recognition occurs upon sale to an end customer in a consignment arrangement.

consignor still has title and retains many of the risks and rewards of ownership for goods it has placed on consignment. Therefore, it's likely that the consignor would be judged to retain control after transfer to the consignee and would postpone recognizing revenue until sale to an end customer occurs.  **Illustration 6-24** provides an example of a consignment arrangement by **Boston Scientific Corporation** in its 2019 annual report. We discuss accounting for consignment arrangements further in  **Chapter 8**.

Illustration 6-24 Disclosure of Revenue Recognition Policy for Consignment Arrangements—Boston Scientific Corporation

Real World Financials

Note A — Significant Accounting Policies: Revenue Recognition (in part)

Transfer of control is evidenced upon passage of title and risk of loss to the customer unless we are required to provide additional services. . . We recognize revenue from consignment arrangements based on product usage, or implant, which indicates that the sale is complete.

GIFT CARDS

Let's assume you received an **Apple gift card** that allows you to download songs or audiobooks later.

Sales of gift cards are recognized as deferred revenue.

When your friend bought that gift card, Apple recorded a deferred revenue liability in anticipation of recording revenue when you used your gift card to get songs. But, what if you lose the card or fail to redeem it for some other reason? Sellers like Apple, **Target**, **Amazon**, and others will recognize revenue at the point

when they have concluded based on past experience that there is only a “remote likelihood” that customers will use the cards.¹⁴ We discuss accounting for gift card liabilities further in  Chapter 13.

Disclosures

INCOME STATEMENT DISCLOSURE

LO6–8 Understand the disclosures required for revenue recognition, accounts receivable, contract assets, and contract liabilities.

Of course, a seller reports revenue in its income statement. In addition, that seller is required to either include in its income statement or disclosure notes any bad debt expense and any interest revenue or interest expense associated with significant financing components of long-term contracts.

Page 300

BALANCE SHEET DISCLOSURE

A seller reports accounts receivable, “contract liabilities,” and “contract assets” on separate lines of its balance sheet. We discuss each in turn.

If a customer pays the seller before the seller has satisfied a performance obligation, we saw earlier that the seller records deferred revenue. For example, we recorded deferred revenue in  **Illustration 6–6** when TrueTech received payment for Tri-Net subscriptions prior to providing that service. A **contract liability** is a label we give to deferred revenue (or unearned revenue) accounts.

On the other hand, if the seller satisfies a performance obligation *before* the customer has paid for it, the seller records either a contract asset or accounts receivable. The seller recognizes an **account receivable** if the seller has an unconditional right to receive payment, which

The seller recognizes **contract liabilities, contract assets, and accounts receivable** on separate lines of its balance sheet.

The seller has a **contract liability** if it received payment prior to satisfying a performance obligation.

A seller has an **account receivable** if it has an unconditional right to receive payment after satisfying a performance obligation.

is the case if only the passage of time is required before the payment is due. In other words, the seller has satisfied all of its performance obligations and is just waiting to be paid.

If, instead, the seller satisfies a performance obligation, but payment depends on something other than the passage of time, the seller recognizes a **contract asset**.

A seller has a **contract asset** if it has a conditional right to receive payment after satisfying a performance obligation.

For example, construction companies sometimes complete a significant amount of work prior to when the construction contract indicates they can bill their clients for progress payments. As we will see in Part C of this chapter, a construction company in that situation reports a contract asset called “construction-in-progress in excess of billings” to reflect that the company will be able to bill its client in the future for the work that has been completed.

DISCLOSURE NOTES

Several important aspects of revenue recognition must be disclosed in the notes to the financial statements. For example, sellers must separate their revenue into categories that help investors understand the nature, amount, timing, and uncertainty of revenue and cash flows. Categories might include product lines, geographic regions, types of customers, or types of contracts. Sellers also must disclose amounts included in revenue that were previously recognized as deferred revenue or that resulted from changes in transaction prices.

Sellers also must describe their outstanding performance obligations, discuss how performance obligations typically are satisfied, and describe

Companies provide detailed disclosures about revenues.

important contractual provisions like payment terms and policies for refunds, returns, and warranties. They also must disclose any significant judgments used to estimate transaction prices, to allocate transaction prices to performance obligations, and to determine when performance obligations have been satisfied.

Sellers also must explain significant changes in contract assets and contract liabilities that occurred during the period.

The objective of these disclosures is to help users of financial statements understand the revenue and cash flows arising from contracts with customers. Of course, the downside of these disclosures is that sellers also are providing information to competitors, suppliers, and customers.

Illustration 6-25 provides a summary of both Parts A and B of this chapter to provide a comprehensive review of revenue recognition.

Illustration 6-25 Summary of Fundamental and Special Issues Related to Recognizing Revenue

| Revenue Recognition | Fundamental Issues (Part A) | Special Issues (Part B) |
|--|--|---|
| Step 1 Identify the contract | A contract establishes the legal rights and obligations of the seller and customer with respect to one or more performance obligations. | A contract exists if it (a) has commercial substance, (b) has been approved by both the seller and the customer, (c) specifies the seller's and customer's rights and obligations, (d) specifies payment terms, and (e) is probable that the seller will collect the amounts it is entitled to receive. A contract does not exist if (a) neither the seller nor the customer has performed any obligations under the contract, and (b) both the seller and the customer can terminate the contract without penalty. |
| Step 2 Identify the performance obligation(s) | A performance obligation is a promise to transfer a good or service that is distinct, which is the case if the good or service is both (a) capable of being distinct and (b) separately identifiable. | The following do not qualify as performance obligations: <ul style="list-style-type: none"> • Quality assurance warranties • Customer prepayments The following do qualify as performance obligations: <ul style="list-style-type: none"> • Extended warranties • Customer options for additional goods and services that provide a material right |
| Step 3 Determine the transaction price | The transaction price is the amount the seller is entitled to receive from the customer. | The seller adjusts the transaction price for: <ul style="list-style-type: none"> • Variable consideration (estimated as either the expected value or the most likely amount). Constraint: Variable consideration is recognized only to the extent it is probable that a significant revenue reversal will not occur in the future. • Whether the seller is acting as a principal or agent • A significant financing component • Any payments by the seller to the customer |
| Step 4 Allocate the transaction price | The seller allocates the transaction price to performance obligations based on relative stand-alone selling prices of the goods or services in each performance obligation. | Various approaches are available to estimate stand-alone selling prices: <ul style="list-style-type: none"> • Adjusted market assessment approach • Expected cost plus margin approach • Residual approach |
| Step 5 Recognize revenue when (or as) each performance obligation is satisfied | The seller recognizes revenue at a single point in time when control passes to the customer, which is more likely if the customer has: <ul style="list-style-type: none"> • Obligation to pay seller. • Legal title to the asset. • Possession of the asset. • Assumed the risks and rewards of ownership. • Accepted the asset. | The seller recognizes revenue over a period of time if: <ul style="list-style-type: none"> • Customer consumes benefit as work performed, • Customer controls asset as it's created, or • Seller is creating an asset that has no alternative use to the seller and the seller has right to receive payment for work completed. |
| | | The seller must determine the timing of revenue recognition for: <ul style="list-style-type: none"> • Licenses (if functional intellectual property, usually recognize revenue at beginning of license; if symbolic intellectual property, recognize revenue over license period). • Franchises (initial fees recognized when goods and services are transferred; continuing fees recognized over time). • Bill-and-hold arrangements (typically do not transfer control, so recognize upon delivery of goods to customer). • Consignment arrangements (do not transfer control, so recognize after sale to end customer occurs). • Gift cards (initially deferred and then recognized as redeemed or expire). |

PART C

Accounting for Long-Term Contracts

LO6–9 Demonstrate revenue recognition for long-term contracts, both at a point in time when the contract is completed and over a period of time according to the percentage completed.

A survey of reporting practices of 500 large public companies indicates that approximately one in every eight companies participates in long-term contracts.¹⁵ These are not only construction companies.  **Illustration 6–26** lists just a sampling of companies that use long-term contracts, many of which you might recognize.

Illustration 6–26 Companies Engaged in Long-Term Contracts

| Company | Type of Industry or Product |
|-------------------------------------|--|
| Oracle Corp. | Computer software, license, and consulting fees |
| Lockheed Martin Corporation | Aircraft, missiles, and spacecraft |
| HP | Information technology |
| Northrop Grumman Corporation | Shipbuilding |
| Cisco | Networking hardware, software, and other high-technology services and products |
| SBA Communications Corp. | Telecommunications |
| Layne Christensen Company | Water supply services and geotechnical construction |
| KB Home | Commercial and residential construction |
| Raytheon Company | Defense electronics |

| Company | Type of Industry or Product |
|-------------|-------------------------------|
| Halliburton | Construction, energy services |

The five-step process for recognizing revenue described in Parts A and B of this chapter also applies to long-term contracts. However, steps 2 and 5 merit special attention.

Page 301

Page 302

Step 2, “Identify the performance obligation(s) in the contract,” is important because long-term contracts typically include many products and services that could be viewed as separate performance obligations. For example, constructing a building requires the builder to deliver many different materials and other products (concrete, lumber, furnace, bathroom fixtures, carpeting) and to provide many different services (surveying, excavating, construction, fixture installation, painting, landscaping). These products and services are capable of being distinct, but they are not separately identifiable, because the seller’s role is to combine those products and services for purposes of delivering a completed building to the customer. Therefore, it’s the bundle of products and services that comprise a single performance obligation. Most long-term contracts should be viewed as including a single performance obligation.

Step 5, “Recognize revenue when (or as) each performance obligation is satisfied,” is important because there can be a considerable difference for long-term contracts between recognizing revenue over time and recognizing revenue only when the contract has been completed. Imagine a builder who spends years constructing a skyscraper but only gets to recognize revenue at the end of the contract. Such delayed revenue recognition would do a poor job of informing financial statement users about the builder’s economic activity. Fortunately, most long-term contracts qualify for revenue recognition over time. Often the customer owns the seller’s work in process, such that the seller is creating an asset that the customer controls as it is completed. Also, often the seller is creating an asset that is customized for the customer, so the seller has no other use for the asset and has the right to be paid for progress even if the customer cancels the contract. In either of those cases, the seller recognizes revenue over time.

Long-term contracts are complex, and specialized accounting approaches have been developed to handle that complexity. We next demonstrate the journal entries necessary to account for revenue over time and those used to account for revenue at a point in time for long-term contracts.”

Accounting for a Profitable Long-Term Contract

Much of the accounting for long-term contracts is the same regardless of whether we recognize revenue over the contract period or upon completion of the contract. So, we start by discussing the similarities between the two approaches and then the differences. You'll see that we recognize the same total amounts of revenue and profit over the life of the contract either way. Only the timing of recognition differs.

 **Illustration 6-27** provides information for a typical long-term construction contract that we'll use to consider accounting for long-term contracts.

Illustration 6-27 Example of Long-Term Construction Contract

At the beginning of 2024, the Harding Construction Company received a contract to build an office building for \$5 million. Harding will construct the building according to specifications provided by the buyer, and the project is estimated to take three years to complete. According to the contract, Harding will bill the buyer in installments over the construction period according to a prearranged schedule. Information related to the contract is as follows:

| | 2024 | 2025 | 2026 |
|---|----------------------------|----------------------------|----------------------------|
| Construction costs incurred during the year | \$ 1,500,000 | \$ 1,000,000 | \$ 1,600,000 |
| Construction costs incurred in prior years | <u>0</u> | <u>1,500,000</u> | <u>2,500,000</u> |
| Cumulative actual construction costs | 1,500,000 | 2,500,000 | 4,100,000 |
| Estimated costs to complete at end of year | 2,250,000 | 1,500,000 | 0 |
| Total estimated and actual construction costs | <u><u>\$ 3,750,000</u></u> | <u><u>\$ 4,000,000</u></u> | <u><u>\$ 4,100,000</u></u> |
| Billings made during the year | \$ 1,200,000 | \$ 2,000,000 | \$ 1,800,000 |
| Cash collections during year | 1,000,000 | 1,400,000 | 2,600,000 |

Construction costs include the labor, materials, and overhead costs directly related to the construction of the building. Notice how the total of estimated and actual construction costs changes from period to period. Cost revisions are typical in long-term contracts because costs are estimated over long periods of time.

ACCOUNTING FOR THE COST OF CONSTRUCTION AND ACCOUNTS RECEIVABLE

Summary journal entries are shown in  **Illustration 6-27A** for actual construction costs, billings, and cash receipts. These journal entries are not affected by the timing of revenue recognition.

The first journal entry shows Harding incurring various costs during the construction process and recording them in an asset account called **construction**

Construction in progress (CIP) is the contractor's work-in-process inventory.

in progress (or CIP for short). This asset account is equivalent to work-in-process inventory in a manufacturing company. This is logical because the construction project is essentially an inventory item in process for the contractor.

Illustration 6-27A Journal Entries—Costs, Billings, and Cash Collections

| | 2024 | 2025 |
|--------------------------------------|-----------|-----------|
| Construction in progress (CIP) | 1,500,000 | 1,000,000 |
| Cash, materials, etc | 1,500,000 | 1,000,000 |
| <i>To record construction costs.</i> | 1,200,000 | 2,000,000 |
| Accounts receivable | | |
| Billings on construction contract | 1,200,000 | 2,000,000 |
| <i>To record progress billings.</i> | 1,000,000 | 1,400,000 |
| Cash | | |
| Accounts receivable | 1,000,000 | 1,400,000 |
| <i>To record cash collections.</i> | | |

The second journal entry occurs when Harding bills its customer according to whatever schedule the contract permits. Notice that periodic billings are credited to **billings on construction contract**. This account is a contra account to the CIP asset. At the end of each period, the balances in these two accounts are compared. If the net amount is a debit, it is reported in the balance sheet as a contract asset and might be named “Construction in progress in excess of billings” or something similar. Conversely, if the net amount is a credit, it is reported as a contract liability and might be named “Billings in excess of construction in progress” or something similar.¹⁶

Accounting for costs, billings, and cash receipts does not depend on the timing of revenue recognition.

To understand why we use the **billings on construction contract** account (or billings for short), consider a key difference between accounting for a long-term contract and accounting for a more normal sale of inventory to a customer. In the normal case, the seller debits an account receivable and credits revenue, and also debits cost of goods sold and credits inventory. Thus, the seller gives up its physical asset (inventory) and recognizes cost of goods sold at the same time it gets a financial asset (an account receivable) and recognizes revenue. First, the physical asset is in the balance sheet, and then the financial asset, but the two are not in the balance sheet at the same time.

The *billings on construction contract* account prevents “double counting” assets by reducing CIP whenever an account receivable is recognized.

Now consider our Harding Construction example. Harding is creating a physical asset (CIP) in the same periods, it recognizes a financial asset (first recognizing accounts receivable when the customer is billed and then recognizing cash when the receivable is collected). Having both the physical asset and the financial asset in the balance sheet at the same time constitutes double counting the same arrangement. The billings account solves this problem. Whenever an account receivable is recognized, the other side of the journal entry increases the billings account, which is contra to (and thus reduces) CIP. As a result, the financial asset (accounts receivable) increases, and the physical asset (the net amount of CIP and billings) decreases, and no double counting occurs.

Remember, we recognize accounts receivable when the seller has an unconditional right to receive payment, which is the case if only the passage of time is required before the payment is due, and we recognize a contract asset when the seller’s right to receive payment depends on something other than the passage of time. Consistent with those definitions, Harding will report an account receivable for amounts it has billed the client and not yet been paid, and

will report a contract asset (computed as CIP - Billings) for the remaining amount of work completed, for which it eventually will be paid once it is able to bill the client.

REVENUE RECOGNITION—GENERAL APPROACH

Now let’s consider revenue recognition. The top portion of [Illustration 6-27B](#) shows the single journal entry to recognize revenue, cost of construction (think of this as cost of goods sold), and gross profit when recognizing revenue upon completion of the contract, while the bottom portion shows the journal entries that achieve this when recognizing revenue over the term of the contract. At this point focus on the structure of the journal entries (what is debited and credited). We’ll discuss how to calculate the specific amounts later in the chapter.

Illustration 6-27B Journal Entries—Revenue Recognition

| | 2024 | 2025 | |
|--|-----------|-----------|-----------|
| Recognizing Revenue upon Completion | | | |
| Construction in progress (CIP) | | | 900,000 |
| Cost of construction | | | 4,100,000 |
| Revenue from long-term contracts | | | |
| <i>To record gross profit.</i> | | | |
| Recognizing Revenue Over Time According to Percentage of Completion | | | |
| Construction in progress (CIP) | 500,000 | 125,000 | 2,000,000 |
| Cost of construction | 1,500,000 | 1,000,000 | 1,600,000 |
| Revenue from long-term contracts | | 1,125,000 | |
| <i>To record gross profit.</i> | | | |

It's important to understand two key aspects of  **Illustration 6-27B**. First, the same amounts of revenue (the \$5 million contract price), cost, and gross profit are recognized whether it's over the term of the contract or only upon completion. The only difference is timing. To check this, we can add together all of the revenue recognized for both methods over the three years, as follows:

The same total amount of revenue is recognized whether it's over the term of the contract or only upon completion, but the timing of recognition differs.

| | Revenue Recognition | |
|---------------------|---------------------|---------------------|
| | Over Time | Upon Completion |
| Revenue recognized: | | |
| 2024 | \$ 2,000,000 | \$ 0 |
| 2025 | 1,125,000 | 0 |
| 2026 | 1,875,000 | 5,000,000 |
| Total revenue | <u>\$ 5,000,000</u> | <u>\$ 5,000,000</u> |

Second, notice that, regardless of the timing of revenue recognition, we add gross profit (the difference between revenue and cost) to the CIP asset. That seems odd—why add profit to what is essentially an inventory account? The key here is that, when Harding recognizes gross profit, Harding is acting like it has sold some portion of the asset to the customer, but Harding keeps the asset in Harding's own balance sheet (in the CIP account) until delivery to the customer. Putting recognized gross profit into the CIP account just updates that account to reflect the total value (Cost + Gross profit = Sales price) of the customer's asset. But don't forget that the billings account is contra to the CIP account. Over the life of the construction project, Harding will bill the customer for the entire sales price of the asset. Therefore, at the end of the contract, the CIP account (containing total cost and gross profit) and the billings account (containing all amounts billed to the customer) will have equal balances that exactly offset to create a net value of zero.

CIP includes profits and losses on the contract that have been recognized to date.

Now let's discuss the timing of revenue recognition in more detail.

REVENUE RECOGNITION UPON THE COMPLETION OF THE CONTRACT

If a contract doesn't qualify for revenue recognition over time, revenue is recognized at the point in time that control transfers from the seller to the customer, which typically occurs when the contract has been completed. At that time, the seller views itself as

If a contract doesn't qualify for revenue recognition over time, revenue is recognized when the project is completed.

selling the asset and recognizes revenues and expenses associated with the sale. As shown in **Illustration 6-27B** and the T-accounts below, completion occurs in 2026 for our Harding example. Prior to then, CIP includes only costs, showing a cumulative balance of \$1,500,000 and \$2,500,000 at the end of 2024 and 2025, respectively, and totaling \$4,100,000 (\$1,500,000 + \$1,000,000 + \$1,600,000) when the project is completed in 2026. Upon completion, Harding recognizes revenue of \$5,000,000 and cost of construction (similar to cost of goods sold) of \$4,100,000 because the asset is viewed as "sold" on that date. Harding includes the resulting **\$900,000** gross profit in CIP, increasing its balance to the \$5,000,000 total cost + gross profit for the project.

If revenue is recognized upon completion of the contract, CIP is updated to include gross profit at that point in time.

| Recognizing Revenue upon Completion | | | | | |
|-------------------------------------|--------------------------------|--|-----------------------------------|-----------|-------------------|
| | Construction in Progress (CIP) | | Billings on Construction Contract | | |
| 2024 construction costs | 1,500,000 | | | 1,200,000 | 2024 billings |
| End balance, 2024 | 1,500,000 | | | 1,200,000 | End balance, 2024 |
| 2025 construction costs | 1,000,000 | | | 2,000,000 | 2025 billings |
| End balance, 2025 | 2,500,000 | | | 3,200,000 | End balance, 2025 |

| Recognizing Revenue upon Completion | | | | | |
|-------------------------------------|--------------------------------|--|-----------------------------------|------------------|-------------------------|
| | Construction in Progress (CIP) | | Billings on Construction Contract | | |
| 2026 construction costs | 1,600,000 | | | 1,800,000 | 2026 billings |
| Total gross profit | 900,000 | | | | |
| Balance, before closing | <u>5,000,000</u> | | | <u>5,000,000</u> | Balance, before closing |

RECOGNIZING REVENUE OVER TIME ACCORDING TO PERCENTAGE OF COMPLETION

If a contract qualifies for revenue recognition over time, revenue is recognized based on progress towards completion. How should progress to date be estimated?

As discussed in Part A of this chapter, one approach to estimating progress towards completion is to use output-based measures, like the number of units produced or delivered, achievement of milestones, and surveys or appraisals of performance completed to

If a contract qualifies for revenue recognition over time, revenue is recognized over time as the project is completed.

date. A shortcoming of output measures is that they may provide a distorted view of actual progress to date.¹⁷ For example, an output measure for highway construction might be finished miles of road, but that measure could be deceptive if not all miles of road require the same effort. A highway contract for the state of Arizona would likely pay the contractor more for miles of road blasted through the mountains than for miles paved across flat desert. Another shortcoming of some output measures is that the information they require, such as surveys or appraisals, might be costly to obtain.

Another way to estimate progress is to base it on the seller's *input*, measured as the proportion of effort expended thus far relative to the total effort expected to satisfy the performance obligation. Measures of effort include costs incurred, labor hours expended, machine hours used, or time lapsed. The most common approach to estimating progress toward completion is to use a "cost-to-cost ratio" that compares total cost incurred to date to the total estimated cost to complete the project.¹⁸ When using that approach, sellers have to

make sure to exclude from the ratio costs that don't reflect progress toward completion. For example, inefficiencies in production could lead to wasted materials, labor, or other resources. Those costs must be expensed as incurred, but not included in the cost-to-cost ratio.

Regardless of the specific approach used to estimate progress towards completion, we determine the amount of revenue recognized in each period using the following logic:

$$\begin{array}{ccccccc}
 \text{Revenue} & & \text{Total} & \text{Percentage} & & \text{Revenue} & \\
 \text{recognized this} & = & \text{estimated} & \times \text{ completed} & - & \text{recognized in} & \\
 \text{period} & & \text{revenue} & \text{to date} & & \text{prior periods} & \\
 & & & \text{Cumulative revenue to be} & & & \\
 & & & \text{recognized to date} & & &
 \end{array}$$

 **Illustration 6-27C** shows the calculation of revenue for each of the years for our Page 306

Harding Construction Company example, with progress to date estimated using the cost-to-cost ratio. Notice that this approach automatically includes changes in estimated cost to complete the job, and therefore in estimated percentage completion, by first calculating the cumulative amount of revenue to be recognized to date and then subtracting revenue recognized in prior periods to determine revenue recognized in the current period. Refer to the following T-accounts to see that the gross profit recognized in each period is added to the CIP account.

When recognizing revenue over the term of the contract, CIP is updated each period to include gross profit.

| Recognizing Revenue over the Term of the Contract | | | | | |
|---|-----------|--|-----------------------------------|-----------|-------------------|
| Construction in Progress (CIP) | | | Billings on Construction Contract | | |
| 2024 construction costs | 1,500,000 | | | 1,200,000 | 2024 billings |
| 2024 gross profit | 500,000 | | | | |
| End balance, 2024 | 2,000,000 | | | 1,200,000 | End balance, 2024 |

| | Recognizing Revenue over the Term of the Contract | | | |
|-------------------------|---|--|-----------------------------------|-------------------------|
| | Construction in Progress (CIP) | | Billings on Construction Contract | |
| 2025 construction costs | 1,000,000 | | 2,000,000 | 2025 billings |
| 2025 gross profit | 125,000 | | | |
| End balance, 2025 | 3,125,000 | | 3,200,000 | End balance, 2025 |
| 2026 construction costs | 1,600,000 | | 1,800,000 | 2026 billings |
| 2026 gross profit | 275,000 | | | |
| Balance, before closing | <u>5,000,000</u> | | <u>5,000,000</u> | Balance, before closing |

Illustration 6-27C Allocation of Revenue to Each Period

| | 2024 | 2025 | 2026 |
|--|--|--|--|
| Construction costs: | | | |
| Construction costs incurred during the year | \$1,500,000 | \$1,000,000 | \$1,600,000 |
| Construction costs incurred in prior years | 0 | 1,500,000 | 2,500,000 |
| Actual costs to date | 1,500,000 | 2,500,000 | 4,100,000 |
| Estimated remaining costs to complete | 2,250,000 | 1,500,000 | 0 |
| Total cost (estimated + actual) | <u>\$3,750,000</u> | <u>\$4,000,000</u> | <u>\$4,100,000</u> |
| Contract price | \$5,000,000 | \$5,000,000 | \$5,000,000 |
| Multiplied by: | × | × | × |
| Percentage of completion | $\left(\frac{\$1,500,000}{\$3,750,000}\right)$ | $\left(\frac{\$2,500,000}{\$4,000,000}\right)$ | $\left(\frac{\$4,100,000}{\$4,100,000}\right)$ |
| Actual costs to date | $\left(\frac{\$3,750,000}{\$3,750,000}\right)$ | $\left(\frac{\$4,000,000}{\$4,000,000}\right)$ | $\left(\frac{\$4,100,000}{\$4,100,000}\right)$ |
| Total cost (est. + actual) | = 40% | = 62.5% | = 100% |
| Equals: | | | |
| Cumulative revenue to be recognized to date | \$2,000,000 | \$3,125,000 | \$5,000,000 |
| Less: | | | |
| Revenue recognized in prior periods | 0 | (2,000,000) | (3,125,000) |
| Equals: | | | |
| Revenue recognized in the current period | <u>\$2,000,000</u> | <u>\$1,125,000</u> | <u>\$1,875,000</u> |
| Journal entries to recognize revenue: | | | |
| Construction in progress (CIP) | 500,000 | 125,000 | 275,000 |
| Cost of construction | 1,500,000 | 1,000,000 | 1,600,000 |
| Revenue from long-term contracts | 2,000,000 | 1,125,000 | 1,875,000 |

If a contract qualifies for revenue recognition over time, the income statement for each year will report the appropriate revenue and cost of construction amounts. For example, in 2024, the income statement

will report revenue of \$2,000,000 (40% of the \$5,000,000 contract price) less \$1,500,000 cost of construction, yielding gross profit of \$500,000.¹⁹ The table in Illustration 6-27D shows the revenue, cost of construction, and gross profit recognized in each of the three years of our example.

The income statement includes revenue, cost of construction, and gross profit.

Illustration 6-27D Recognition of Revenue and Cost of Construction in Each Period

2024

| | |
|--|--------------------------|
| Revenue recognized (\$5,000,000 × 40%) | \$2,000,000 |
| Cost of construction | (1,500,000) |
| Gross profit | <u>\$ 500,000</u> |

| | | |
|--|--------------------|--------------------|
| 2025 | | |
| Revenue recognized to date (\$5,000,000 × 62.5%) | \$ 3,125,000 | |
| Less: Revenue recognized in 2024 | <u>(2,000,000)</u> | |
| Revenue recognized | | \$1,125,000 |
| Cost of construction | | <u>(1,000,000)</u> |
| Gross profit | | \$ 125,000 |
| 2026 | | |
| Revenue recognized to date (\$5,000,000 × 100%) | \$ 5,000,000 | |
| Less: Revenue recognized in 2024 and 2025 | <u>(3,125,000)</u> | |
| Revenue recognized | | \$1,875,000 |
| Cost of construction | | <u>(1,600,000)</u> |
| Gross profit | | \$ 275,000 |

COMPLETION OF THE CONTRACT

After the job is finished, the only task remaining is for Harding to officially transfer title to the finished asset to the customer. At that time, Harding will prepare a journal entry that removes the contract from its balance sheet by debiting billings and crediting CIP for

the entire value of the contract. As shown in [Illustration 6-27E](#), the same journal entry is recorded to close out the billings on construction contract and CIP accounts whether revenue is recognized over the term of the contract or at the completion of the contract.

We record the same journal entry to close out the billings and CIP accounts regardless of whether revenue is recognized over time or upon completion.

Illustration 6-27E Journal Entry to Close Billings and CIP Accounts upon Contract Completion

A Comparison of Revenue Recognized over the Term of the Contract and at the Completion of Contract

INCOME RECOGNITION

Illustration 6-27B shows the journal entries that would determine the amount of revenue, cost, and therefore gross profit that would appear in the income statement when we recognize revenue over the term of the contract and at the completion of contract. Comparing the gross profit patterns produced by each method of revenue recognition demonstrates the essential difference between them:

Timing of revenue recognition does not affect the total amount of profit or loss recognized.

| | Revenue Recognition | |
|---------------------------------|---------------------|-------------------|
| | Over Time | Upon Completion |
| Gross profit recognized: | | |
| 2024 | \$ 500,000 | \$ 0 |
| 2025 | 125,000 | 0 |
| 2026 | 275,000 | 900,000 |
| Total gross profit | <u>\$ 900,000</u> | <u>\$ 900,000</u> |

Whether revenue is recognized over time or upon completion does not affect the total gross profit of \$900,000 recognized over the three-year contract, but the timing of gross profit recognition is affected. When the contract does not qualify for recognizing revenue over time, we defer all gross profit to 2026, when the project is completed. Obviously, recognizing

revenue over the term of the contract provides a better measure of the company’s economic activity and progress over the three-year term. As indicated previously, most long-term contracts qualify for revenue recognition over time.²⁰ Revenue is deferred until the completion of the contract only if the seller doesn’t qualify for revenue recognition over time according to the criteria listed in [Illustration 6-5](#).

BALANCE SHEET RECOGNITION

The balance sheet presentation for the construction-related accounts for both methods is shown in [Illustration 6-27F](#).

Illustration 6-27F Balance Sheet Presentation

| Balance Sheet (End of Year) | | |
|---|---------------|---------------|
| | 2024 | 2025 |
| Projects for which Revenue Recognized upon Completion: | | |
| <i>Current assets:</i> | | |
| Accounts receivable | \$ 200,000 | \$ 800,000 |
| CIP (\$1,500,000) in excess of billings (\$1,200,000) | 300,000 | |
| <i>Current liabilities:</i> | | |
| Billings (\$3,200,000) in excess of CIP (\$2,500,000) | | \$ 700,000 |
| Projects for which Revenue Recognized over Time: | | |
| <i>Current assets:</i> | | |
| Accounts receivable | \$ 200,000 | \$ 800,000 |
| CIP (\$2,000,000) in excess of billings (\$1,200,000) | 800,000 | |
| <i>Current liabilities:</i> | | |

| Balance Sheet (End of Year) | | |
|--|------|-----------|
| | 2024 | 2025 |
| Billings (\$3,200,000) in excess of CIP (\$3,125,000) | | \$ 75,000 |

In the balance sheet, the construction in progress (CIP) account is offset against the billings on construction contract account, with CIP > Billings viewed as a contract asset and labeled as “CIP in excess of Billings,” and Billings > CIP viewed as a

Billings on construction contracts are subtracted from CIP to determine balance sheet presentation.

contract liability and labeled as “Billing in excess of CIP.” Rather than referring to CIP, companies sometimes refer to what the CIP account contains. When revenue is recognized over the term of the contract, CIP contains cost and gross profit; if revenue is recognized upon the completion of the contract, CIP typically contains only costs. Because a company may have some contracts that have a net asset position and others that have a net liability position, it is not unusual to see both contract assets and contract liabilities shown in a balance sheet at the same time.

CIP in excess of billings is treated as a contract asset rather than an accounts receivable because something other than the passage of time must occur for the company to be paid for that amount. Although Harding has incurred construction costs (and is recognizing gross profit over the term of the contract) for which it will be paid by the buyer, those amounts are not yet billable according to the construction contract. Once Harding has made progress sufficient to bill the customer, it will debit accounts receivable and credit billings, which will increase the accounts receivable asset and reduce CIP in excess of billings (by increasing billings).

On the other hand, *Billings in excess of CIP* is treated as a contract liability. It reflects that Harding has billed its customer for more work than it actually has done. This is similar to the deferred revenue liability that is recorded when a customer pays for a product or service in advance. The advance is properly shown as a liability that represents the obligation to provide the good or service in the future.

Long-Term Contract Losses

The Harding Construction Company example above involves a situation in which an overall profit was anticipated at each stage of the contract. Unfortunately, losses sometimes occur on long-term contracts. As facts change, sellers must update their estimates and recognize losses if necessary to properly account for the amount of revenue that should have been recognized to date. How we treat losses in any one period depends on whether the contract is profitable overall.

PERIODIC LOSS OCCURS FOR PROFITABLE PROJECT

When a project qualifies for revenue recognition over time, a loss sometimes must be recognized in at least one period along the way, even though the project as a whole is expected to be profitable. We determine the loss in precisely the same way we determine the profit in profitable years. For example, assume the same \$5 million contract for Harding Construction Company described earlier in [Illustration 6-27](#) but with the following cost information:

| | 2024 | 2025 | 2026 |
|---|---------------------------|----------------------------------|---------------------------|
| Construction costs incurred during the year | \$ 1,500,000 | \$ 1,260,000 | \$ 1,840,000 |
| Construction costs incurred in prior years | <u>0</u> | <u>1,500,000</u> | <u>2,760,000</u> |
| Cumulative construction costs | 1,500,000 | 2,760,000 | 4,600,000 |
| Estimated costs to complete at end of year | 2,250,000 | 1,840,000 | 0 |
| Total estimated and actual construction costs | <u><u>\$3,750,000</u></u> | <u><u>\$4,600,000</u></u> | <u><u>\$4,600,000</u></u> |

At the end of 2024, 40% of the project is complete ($\$1,500,000 \div \$3,750,000$). Revenue of \$2,000,000 – cost of construction of \$1,500,000 = gross profit of \$500,000 is recognized in 2024, as previously determined.

At the end of 2025, though, the company now forecasts a total profit of \$400,000 (equal to \$5,000,000 – \$4,600,000) on the project and, at that time, the project is estimated to be 60% complete ($\$2,760,000 \div \$4,600,000$). Applying this percentage to the anticipated revenue of

\$5,000,000 results in revenue *to date* of \$3,000,000. This implies that gross profit recognized to date should be \$240,000 (equal to \$3,000,000 - **\$2,760,000**). But remember, gross profit of \$500,000 was recognized the previous year.

We treat a situation like this as a *change in accounting estimate* because it results from a change in the estimation of costs to complete at the end of 2024. Total estimated costs to complete the project at the end of 2025 of \$4,600,000 were much higher than the 2024 year-end estimate of \$3,750,000. Recall from our discussion of changes in accounting estimates in [Chapter 4](#) that we don't go back and restate the prior year's income statement. Instead, the 2025 income statement reports *a loss of \$260,000* (computed as \$500,000 - \$240,000) so that the cumulative amount of gross profit recognized to date is \$240,000. The loss consists of 2025 revenue of \$1,000,000 (computed as \$5,000,000 × 60% = \$3,000,000 revenue to be recognized by end of 2025 less 2024 revenue of \$2,000,000) less cost of construction of \$1,260,000 (cost incurred in 2025). Just as gross profit gets debited to the CIP account, this gross loss gets credited to the CIP account, so that CIP includes the cumulative amount of gross profit or loss recognized to date. The following journal entry records the loss in 2025:

Recognized losses on long-term contracts reduce the CIP account.

| | |
|--|-----------|
| Cost of construction | 1,260,000 |
| Revenue from long-term contracts (below) | 1,000,000 |
| Construction in progress (CIP) | 260,000 |

In 2026 the company recognizes \$2,000,000 in revenue (equal to \$5,000,000 less revenue of \$3,000,000 recognized in 2024 and 2025) and \$1,840,000 in cost of construction (cost incurred in 2026), yielding a gross profit of \$160,000.

| | |
|----------------------------|-------------------|
| Revenue | \$ 2,000,000 |
| Less: Cost of construction | (1,840,000) |
| Gross profit | <u>\$ 160,000</u> |

Of course, if revenue is instead recognized upon the completion of the contract, rather than over time, no profit or loss is recorded in 2024 or 2025. Instead, revenue of \$5,000,000, cost of construction of \$4,600,000, and gross profit of \$400,000 are recognized in 2026.

LOSS IS PROJECTED ON THE ENTIRE PROJECT

If an overall loss is projected on the entire contract, the total loss must be recognized in the period in which that loss becomes evident, regardless of whether revenue is recognized over the term of the contract or only upon the completion of the contract. Again, consider the Harding Construction Company example but with the following cost information:

| | 2024 | 2025 | 2026 |
|---|---------------------|------------------|---------------------|
| Construction costs incurred during the year | \$ 1,500,000 | \$ 1,260,000 | \$ 2,440,000 |
| Construction costs incurred in prior years | <u>0</u> | <u>1,500,000</u> | <u>2,760,000</u> |
| Cumulative construction costs | 1,500,000 | 2,760,000 | 5,200,000 |
| Estimated costs to complete at end of year | 2,250,000 | 2,340,000 | 0 |
| Total estimated and actual construction costs | <u>\$ 3,750,000</u> | <u>5,100,000</u> | <u>\$ 5,200,000</u> |

At the end of 2025, revised costs indicate an estimated loss of \$100,000 for the entire project (computed as contract revenue of \$5,000,000 less estimated construction costs of **\$5,100,000**). In this situation, the *total* anticipated loss must be recognized in 2025 regardless of whether revenue is recognized over the

An estimated loss on a long-term contract is fully recognized in the first period the loss is anticipated, regardless of the whether revenue is recognized over time or upon completion.

term of the contract or only upon the completion of the contract. If revenue is being recognized over the term of the contract, a gross profit of \$500,000 was recognized in 2024, so a *\$600,000 loss is recognized in 2025* to make the cumulative amount recognized to date total a \$100,000 loss. Once again, this situation is treated as a change in accounting estimate, with no restatement of 2024 income. On the other hand, if revenue is being recognized only upon the completion of the contract, no gross profit is recognized in 2024, and the \$100,000 loss for the project is recognized in 2025. This is accomplished by debiting a loss from long-term contracts and crediting CIP for \$100,000.

Why recognize the estimated overall loss of \$100,000 in 2025, rather than at the end of the contract? If the loss is not recognized in 2025, CIP would be valued at an amount greater than the company expects to realize from the contract. To avoid that problem, the loss reduces the CIP account to \$2,660,000 (computed as \$2,760,000 in costs to date less

\$100,000 estimated total loss). This amount combined with the estimated costs to complete of \$2,340,000 equals the contract price of \$5,000,000. Recognizing losses on long-term contracts in the period the losses become known is similar to measuring inventory at the lower of cost or net realizable value, a concept we will study in [Chapter 9](#).

The pattern of gross profit (loss) over the contract term is summarized in the following table. Notice that in 2026 an additional unanticipated increase in costs of \$100,000 causes a further loss of \$100,000 to be recognized.

| | Revenue Recognition | |
|---------------------------------|---------------------|---------------------|
| | Over Time | Upon Completion |
| Gross profit (loss) recognized: | | |
| 2024 | \$ 500,000 | \$ 0 |
| 2025 | (600,000) | (100,000) |
| 2026 | <u>(100,000)</u> | <u>(100,000)</u> |
| Total project loss | <u>\$ (200,000)</u> | <u>\$ (200,000)</u> |

The table in [Illustration 6-27G](#) shows the revenue and cost of construction recognized in each of the three years, assuming the contract qualifies for recognizing revenue over time. Revenue is recognized in the usual way by multiplying a percentage of completion by the total contract price. In situations where a loss is expected on the entire project, cost of construction for the period will no longer be equal to cost incurred during the period. The easiest way to compute the cost of construction is to add the amount of the loss recognized to the amount of revenue recognized. For example, in 2025 revenue recognized of \$706,000 is added to the loss of \$600,000 to arrive at the cost of construction of \$1,306,000.²¹

Illustration 6-27G Allocation of Revenue and Cost of Construction to Each Period—Loss on Entire Project

2024

| | |
|--|--------------------|
| Revenue recognized ($\$5,000,000 \times 40\%$) | \$ 2,000,000 |
| Cost of construction | <u>(1,500,000)</u> |
| Gross profit | <u>\$ 500,000</u> |

2025

| | | |
|--|--------------------|----------------------------|
| Revenue recognized to date (\$5,000,000 × 54.12%)* | \$ 2,706,000 | |
| Less: Revenue recognized in 2024 | <u>(2,000,000)</u> | |
| Revenue recognized | | \$ 706,000 |
| Cost of construction [†] | | <u>(1,306,000)</u> |
| Loss | | <u><u>\$ (600,000)</u></u> |
| 2026 | | |
| Revenue recognized to date (\$5,000,000 × 100%) | \$ 5,000,000 | |
| Less: Revenue recognized in 2024 and 2025 | <u>(2,706,000)</u> | |
| Revenue recognized | | \$2,294,000 |
| Cost of construction [†] | | <u>(2,394,000)</u> |
| Loss | | <u><u>\$ (100,000)</u></u> |
| * $\$2,760,000 \div \$5,100,000 = 54.12\%$ | | |
| [†] The difference between revenue and loss | | |

The journal entries to record the losses in 2025 and 2026 are as follows:

| | | |
|----------------------------------|-----------|-----------|
| 2025 | | |
| Cost of construction | 1,306,000 | |
| Revenue from long-term contracts | | 706,000 |
| Construction in progress (CIP) | | 600,000 |
| 2026 | | |
| Cost of construction | 2,394,000 | |
| Revenue from long-term contracts | | 2,294,000 |
| Construction in progress (CIP) | | 100,000 |

Recognizing revenue over time, in this case, produces a large overstatement of income in 2024 and a large understatement in 2025 because of a change in the estimation of future costs. These estimate revisions occasionally happen when revenue is recognized over time.

When the contract does not qualify for recognizing revenue over time, no revenue or cost of construction is recognized until the contract is complete. In 2025, a loss on long-term contracts (an income statement account) of \$100,000 is recognized. In 2026, the income statement will report revenue of \$5,000,000 and cost of construction of \$5,100,000, combining for an additional loss of \$100,000. The journal entries to record the losses in 2025 and 2026 are as follows:

| | | |
|----------------------------------|-----------|-----------|
| 2025 | | |
| Loss on long-term contracts | 100,000 | |
| Construction in progress (CIP) | | 100,000 |
| 2026 | | |
| Cost of construction | 5,100,000 | |
| Revenue from long-term contracts | | 5,000,000 |
| Construction in progress (CIP) | | 100,000 |

Concept Review Exercise

LONG-TERM CONSTRUCTION CONTRACTS

During 2024, the Samuelson Construction Company began construction on an office building for the City of Gernon. The contract price is \$8,000,000, and the building will take approximately 18 months to complete. Completion is scheduled for early in 2026. The company's fiscal year ends on December 31.

The following is a year-by-year recap of construction costs incurred and the estimated costs to complete the project as of the end of each year. Progress billings and cash collections also are indicated.

| | 2024 | 2025 | 2026 |
|--|--------------|------------------|------------------|
| Actual costs incurred during the year | \$ 1,500,000 | \$ 4,500,000 | \$ 1,550,000 |
| Actual costs incurred in prior years | <u>0</u> | <u>1,500,000</u> | <u>6,000,000</u> |
| Cumulative actual costs incurred to date | 1,500,000 | 6,000,000 | 7,550,000 |

| | 2024 | 2025 | 2026 |
|--|---------------------|---------------------|---------------------|
| Estimated costs to complete at end of year | 4,500,000 | 1,500,000 | 0 |
| Total costs (actual + estimated) | <u>\$ 6,000,000</u> | <u>\$ 7,500,000</u> | <u>\$ 7,550,000</u> |
| Billings made during the year | \$ 1,400,000 | \$ 5,200,000 | \$ 1,400,000 |
| Cash collections during year | 1,000,000 | 4,000,000 | 3,000,000 |

Required:

- Determine the amount of construction revenue, construction cost, and gross profit or loss to be recognized in each of the three years, assuming (a) the contract qualifies for recognizing revenue over time and (b) the contract does *not* qualify for recognizing revenue over time.
- Assuming the contract qualifies for recognizing revenue over time, prepare Page 313 the necessary summary journal entries for each of the three years to account for construction costs, construction revenue, contract billings, and cash collections, and to close the construction accounts in 2026.
- Assuming the contract qualifies for recognizing revenue over time, prepare a partial balance sheet for 2024 and 2025 that includes all construction-related accounts.

Solution:

- Determine the amount of construction revenue, construction cost, and gross profit or loss to be recognized in each of the three years, assuming (a) the contract qualifies for recognizing revenue over time and (b) the contract does *not* qualify for recognizing revenue over time.

| | The Contract Qualifies for Recognizing Revenue over Time | | |
|---|--|--------------|--------------|
| | 2024 | 2025 | 2026 |
| Contract price | \$ 8,000,000 | \$ 8,000,000 | \$ 8,000,000 |
| Multiplied by % of completion* | <u>25%</u> | <u>80%</u> | <u>100%</u> |
| Cumulative revenue to be recognized to date | 2,000,000 | 6,400,000 | 8,000,000 |

| | The Contract Qualifies for Recognizing Revenue over Time | | |
|--|--|---------------------|------------------|
| | 2024 | 2025 | 2026 |
| Less revenue recognized in prior years | 0 | (2,000,000) | (6,400,000) |
| Revenue recognized this year | 2,000,000 | 4,400,000 | 1,600,000 |
| Less actual costs incurred this year | (1,500,000) | (4,500,000) | 1,550,000 |
| Gross profit (loss) recognized this year | <u>\$ 500,000</u> | <u>\$ (100,000)</u> | <u>\$ 50,000</u> |

*Estimated percentage of completion

$$\frac{1,500,000}{6,000,000} = 25\% \quad \frac{6,000,000}{7,500,000} = 80\% \quad \text{Project complete} = 100\%$$

| | The Contract Does Not Qualify for Recognizing Revenue over Time | | |
|--------------------------------------|---|-------------|-------------------|
| | 2024 | 2025 | 2026 |
| Revenue recognized | \$ 0 | \$ 0 | \$8,000,000 |
| Less cost of construction recognized | 0 | 0 | (7,550,000) |
| Gross profit recognized | <u>\$ 0</u> | <u>\$ 0</u> | <u>\$ 450,000</u> |

2. Assuming the contract qualifies for recognizing revenue over time, prepare the necessary summary journal entries for each of the three years to account for construction costs, construction revenue, contract billings, and cash collections, and to close the construction accounts in 2026.

| | 2024 | 2025 | 2026 |
|--------------------------------|-----------|-----------|-----------|
| Construction in progress (CIP) | 1,500,000 | 4,500,000 | 1,550,000 |

| | 2024 | 2025 | 2026 |
|--|-----------|-----------|-----------|
| Cash, materials, etc | 1,500,000 | 4,500,000 | |
| <i>To record construction costs.</i> | | | |
| Construction in progress (CIP) | 500,000 | | 50,000 |
| Cost of construction | 1,500,000 | | 1,550,000 |
| Revenue | 2,000,000 | | |
| <i>To record revenue and gross profit.</i> | | | |
| Cost of construction | | 4,500,000 | |
| Revenue | | 4,400,000 | |
| Construction in progress (CIP) | | 100,000 | |
| <i>To record revenue and gross loss.</i> | | | |
| Accounts receivable | 1,400,000 | 5,200,000 | 1,400,000 |
| Billings on construction contract | 1,400,000 | 5,200,000 | |
| <i>To record progress billings.</i> | | | |
| Cash | 1,000,000 | 4,000,000 | 3,000,000 |
| Accounts receivable | 1,000,000 | 4,000,000 | |

| | 2024 | 2025 | 2026 |
|------------------------------------|------|-----------|------|
| <i>To record cash collections.</i> | | | |
| Billings on construction contract | | 8,000,000 | |
| Construction in progress (CIP) | | | |
| <i>To close accounts.</i> | | | |

3. Assuming the contract qualifies for recognizing revenue over time, prepare a partial balance sheet for 2024 and 2025 that includes all construction-related accounts.

| Balance Sheet (End of Year) | | |
|---|------------|--------------|
| | 2024 | 2025 |
| Current assets: | | |
| Accounts receivable | \$ 400,000 | \$ 1,600,000 |
| CIP (\$2,000,000) in excess of billings (\$1,400,000) | 600,000 | |
| Current liabilities: | | |
| Billings (\$6,600,000) in excess of CIP (\$6,400,000) | | \$ 200,000 |

Hero Images/Getty Images

- 1. Under what circumstances do companies recognize revenue at a point in time? Over a period of time?** A seller recognizes revenue when it satisfies a performance obligation, which happens when the seller transfers control of a good or service to the customer. Indicators that transfer of control has occurred include customer acceptance and physical possession of the good or service, as well as the seller having a right to receive payment. Some performance obligations are satisfied at a point in time when the seller has finished transferring the good or service to the customer. Other performance obligations are satisfied over time. For example, the customer might consume the benefit of the seller's work as it is performed, or the customer might control an asset as the seller creates it.
- 2. When do companies break apart a sale and treat its parts differently for purposes of recognizing revenue?** Sellers must break apart a contract if the contract contains more than one performance obligation. Goods and services are viewed as separate performance obligations if they are both capable of being distinct (for example, if the goods and services could be sold separately) and if they are separately identifiable (which isn't the case if the point of the contract is to combine various goods and services into a completed product, as occurs with construction contracts). To account for contracts with multiple performance obligations, the seller allocates the contract's transaction price to the performance obligations according to their stand-alone selling prices and then recognizes revenue for each performance obligation when it is satisfied.

3. How do companies account for long-term contracts that qualify for revenue recognition over time? When contracts qualify for revenue recognition over time, the seller recognizes revenue each period as the contract is being fulfilled. The amount recognized is based on progress to date, which usually is estimated as the fraction of the project's cost incurred to date divided by total estimated costs. To calculate the total amount of revenue that should be recognized up to a given date, the estimated percentage of completion is multiplied by the contract price. To calculate the amount of revenue to be recognized in the current period, the amount of revenue recognized in prior periods is subtracted from the total amount of revenue that should be recognized as of the end of the current period. ●

The Bottom Line

-  **LO6-1** Companies recognize revenue when goods or services are transferred to customers for the amount the company expects to be entitled to receive in exchange for those goods or services. That core principle is implemented by (1) identifying a contract with a customer, (2) identifying the performance obligations in the contract, (3) determining the transaction price of the contract, (4) allocating that price to the performance obligations, and (5) recognizing revenue when (or as) each performance obligation is satisfied. (p. 276)
-  **LO6-2** Revenue should be recognized *at a single point in time* when control of a good or service is transferred to the customer on a specific date. Indicators that transfer has occurred and that revenue should be recognized include the seller having the right to receive payment, the customer having legal title and physical possession of the asset, the customer formally accepting the asset, and the customer assuming the risks and rewards of ownership. (p. 278)
-  **LO6-3** Revenue should be recognized *over time* when a performance obligation is satisfied over time. That occurs if (1) the customer consumes the benefit of the seller's work as it is performed; (2) the customer controls the asset as the seller creates it; or (3) the asset has no alternative use to the seller, and the seller can be paid for its progress even if the customer cancels the contract. (p. 278)
-  **LO6-4** A contract's transaction price is allocated to its performance obligations. The allocation is based on the *stand-alone selling prices* of the goods and services underlying those performance obligations. The stand-alone selling price must be estimated if a good or service is not sold separately. (p. 280)
-  **LO6-5** A contract exists when it has commercial substance, and all parties to the contract are committed to performing the obligations and enforcing the rights that it specifies. Performance obligations are promises by the seller to transfer goods or services to a customer. A promise to transfer a good or service is a separate performance obligation if it is *distinct*, which is the case if it is both *capable of being distinct* (meaning that the customer could use the good or service on its own or in combination with other goods and services

it could obtain elsewhere), and *it is separately identifiable* (meaning that the good or service is not highly interrelated with other goods and services in the contract, so it is distinct in the context of the contract). Prepayments, rights to return merchandise, and normal quality-assurance warranties do not qualify as performance obligations because they don't transfer a good or service to the customer. On the other hand, extended warranties and customer options to receive goods or services in some preferred manner (for example, at a discount) qualify as performance obligations. (*p.* 285)

 **LO6-6**

When a contract includes consideration that depends on the outcome of future events, sellers estimate that variable consideration and include it in the contract's transaction price. The seller's estimate is based either on the most likely outcome or the expected value of the outcome. However, a constraint applies—variable consideration only should be included in the transaction price to the extent it is probable that a significant revenue reversal will not occur. The estimate of variable consideration is updated each period to reflect changes in circumstances. A seller also needs to determine if it is a principal (and recognizes as revenue the amount received from the customer) or an agent (and recognizes its commission as revenue), consider time value of money, and consider the effect of any payments by the seller to the customer. Once the transaction price is estimated, we allocate it to performance obligations according to their stand-alone selling prices, which can be estimated using the adjusted market assessment approach, the expected cost plus margin approach, or the residual approach. (*p.* 288)

 **LO6-7**

If the seller's activity over the license period is expected to affect the benefits the customer receives from the intellectual property being licensed, as with symbolic IP, the seller recognizes revenue over the license period. Otherwise, the seller recognizes revenue at the point in time that the customer obtains access to the seller's intellectual property. Franchises are an example of contracts that typically include licenses as well as other performance obligations. Revenue for bill-and-hold sales should be recognized when the seller transfers control of goods to the customer, even if the seller retains physical possession of the goods, and for consignment sales when goods are delivered to the end customer. Revenue for gift cards should be recognized when the gift card is redeemed, expires, or viewed as broken. (*p.* 295)

 **LO6-8** Much disclosure is required for revenue recognition. For example, a seller recognizes contract liabilities, contract assets, and accounts receivable on separate lines of its balance sheet. If the customer makes payment to the seller before the seller has satisfied performance obligations, the seller records a contract liability, such as deferred revenue. If the seller satisfies a performance obligation before the customer has paid for it, the seller records either a contract asset or an account receivable. The seller recognizes an account receivable if only the passage of time is required before the payment is due. If instead the seller's right to payment depends on something other than the passage of time, the seller recognizes a contract asset. (*p. 299*)

 **LO6-9** Long-term contracts usually qualify for revenue recognition over time. We recognize revenue over time by assigning a share of the project's revenues and costs to each reporting period over the life of the project according to the percentage of the project completed to date. If long-term contracts don't qualify for revenue recognition over time, we recognize revenues and expenses at the point in time when the project is complete. (*p. 300*)

 **LO6-10** IFRS interprets the word "probable" as indicating a lower probability threshold than does U.S. GAAP. As a consequence, a seller could conclude a contract meets the "probable that it will collect the amounts it's entitled to receive" threshold and recognize revenue under IFRS but not under U.S. GAAP. Also, IFRS doesn't tie the timing of revenue recognition for licenses to whether a license involves "functional" versus "symbolic" intellectual property, so IFRS might allow revenue recognition at a point in time for "symbolic IP" licenses that would require revenue recognition over time under U.S. GAAP. (*p. 285, 290, and 297*) ●

Questions For Review of Key Topics

- Q 6-1** What are the five key steps a company follows to apply the core revenue recognition principle?
- Q 6-2** What indicators suggest that a performance obligation has been satisfied at a single point in time?
- Q 6-3** What criteria determine whether a company can recognize revenue over time?

Page 316

- Q 6-4** We recognize service revenue either at one point in time or over a period of time. Explain the rationale for recognizing service revenue using these two approaches.
- Q 6-5** What characteristics make a good or service a performance obligation?
- Q 6-6** How does a seller allocate a transaction price to a contract's performance obligations?
- Q 6-7** What must a contract include for the contract to exist for purposes of revenue recognition?

IFRS

- Q 6-8** How might the definition of “probable” affect determining whether a contract exists under IFRS as compared to U.S. GAAP?
- Q 6-9** When a contract includes an option to buy additional goods or services, when does that option give rise to a performance obligation?
- Q 6-10** Is variable consideration included in the calculation of a contract's transaction price? If so, how is the amount of variable consideration estimated?
- Q 6-11** How are sellers constrained from recognizing variable consideration, and under what circumstances does the constraint apply?
- Q 6-12** Is a customer's right to return merchandise a performance obligation of the seller? How should sellers account for a right of return?
- Q 6-13** What is the difference between a principal and an agent for determining the amount of revenue to recognize?
- Q 6-14** Under what circumstances should sellers consider the time value of money when recognizing revenue?

- Q 6–15** When should a seller view a payment to its customer as a refund of part of the price paid by the customer for the seller’s products or services?
- Q 6–16** What are three methods for estimating stand-alone selling prices of goods and services that normally are not sold separately?
- Q 6–17** When is revenue recognized with respect to licenses?
- Q 6–18** In a franchise arrangement, what are a franchisor’s typical performance obligations?
- Q 6–19** When does a company typically recognize revenue for a bill-and-hold sale?

IFRS

- Q 6–20** How might a license for symbolic intellectual property be treated differently under IFRS as compared to U.S. GAAP?
- Q 6–21** When does a consignor typically recognize revenue for a consignment sale?
- Q 6–22** When does a company recognize revenue for a sale of a gift card?
- Q 6–23** Must bad debt expense be reported on its own line on the income statement? If not, how should it be disclosed?
- Q 6–24** Explain the difference between contract assets, contract liabilities, and accounts receivable.
- Q 6–25** Explain how to account for revenue on a long-term contract over time as opposed to at a point in time. Under what circumstances should revenue be recognized at the point in time a contract is completed?
- Q 6–26** Periodic billings to the customer for a long-term construction contract are recorded as billings on a construction contract. How is this account reported in the balance sheet?
- Q 6–27** When is an estimated loss on a long-term contract recognized, both for contracts that recognize revenue over time and those that recognize revenue at the point in time the contract is completed?

Brief Exercises

BE 6–1 Revenue recognition at a point in time LO6–2

On July 1, 2024, Apache Company, a real estate developer, sold a parcel of land to a construction company for \$3,000,000. The book value of the land on Apache’s books was \$1,200,000. Terms of the sale required a down payment of \$150,000 and 19 annual payments of \$150,000 plus interest at an appropriate interest rate due on each July 1 beginning in 2025. How much revenue will Apache recognize for the sale (ignoring interest), assuming that it recognizes revenue at the point in time at which it transfers the land to the construction company?

BE 6–2 Timing of revenue recognition LO6–3

Estate Construction is constructing a building for CyberB, an online retailing company. Under the construction agreement, if for any reason Estate can’t complete construction, CyberB would own the partially completed building and could hire another construction company to complete the job. When should Estate recognize revenue: as the building is constructed, or after construction is completed?

BE 6–3 Timing of revenue recognition LO6–3

On May 1, 2024, Varga Tech Services signed a \$6,000 consulting contract with Shaffer Holdings. The contract requires Varga to provide computer technology support services whenever requested over the period from May 1, 2024, to April 30, 2025, with Shaffer paying the entire \$6,000 on May 1, 2024. How much revenue should Varga recognize in 2024?

BE 6–4 Allocating the transaction price LO6–4

Sarjit Systems sold software to a customer for \$80,000. As part of the contract, Sarjit promises to provide “free” technical support over the next six months. Sarjit sells the same software without technical support for \$70,000 and a stand-alone six-month technical

support contract for \$30,000, so these products would sell for \$100,000 if sold separately. Prepare Sarjit's journal entry to record the sale of the software.

BE 6–5 Existence of a contract **LO6–5**

Tulane Tires wrote a contract for a \$100,000 sale of tires to the new Garden District Tour Company. Tulane only anticipates a slightly greater than 50 percent chance that Garden will be able to pay the amounts that Tulane is entitled to receive under the contract. Upon delivery of the tires, assuming no payment has yet been made by Garden, how much revenue should Tulane recognize under U.S. GAAP?

BE 6–6 Existence of a contract; IFRS **LO6–5**, **LO6–10**

IFRS

Assume the same facts as in BE 6–5 but that Tulane Tires reports under IFRS. How much revenue should Tulane recognize under IFRS?

BE 6–7 Performance obligations; prepayments **LO6–5**

eLean is an online fitness community offering access to workout routines, nutrition advice, and eLean coaches. Customers pay a \$50 fee to become registered on the website, and then pay \$5 per month for access to all eLean services. How many performance obligations exist in the implied contract when a customer registers for the services?

BE 6–8 Performance obligations; warranties **LO6–5**

Vroom Vacuums sells the Tornado vacuum cleaner. Each Tornado has a one-year warranty that covers any product defects. When customers purchase a Tornado, they also have the option to purchase an extended three-year warranty that covers any breakage or maintenance. The extended warranty sells for the same amount regardless of whether it is purchased at the same time as the Tornado or at some other time. How many performance obligations exist in the implied contract for the purchase of a vacuum cleaner?

BE 6–9 Performance obligations; warranties **LO6–5**

Assume the same facts as in BE 6–8 but that customers pay 20% less for the extended warranty if they buy it at the same time they buy a Tornado. How many performance

obligations exist in the implied contract for the purchase of a vacuum cleaner?

BE 6–10 Performance obligations; options  **LO6–5**

McAfee sells a subscription to its antivirus software along with a subscription renewal option that allows renewal at half the prevailing price for a new subscription. How many performance obligations exist in this contract?

BE 6–11 Performance obligations; construction  **LO6–5**

Precision Equipment, Inc., specializes in designing and installing customized manufacturing equipment. On February 1, 2024, it signs a contract to design a fully automated wristwatch assembly line for \$2 million, which will be settled in cash upon completion of construction. Precision Equipment will install the equipment on the client’s property, furnish it with a customized software package that is integral to operations, and provide consulting services that integrate the equipment with Precision’s other assembly lines. How many performance obligations exist in this contract?

BE 6–12 Performance obligations; construction  **LO6–5**

On January 1, 2024, Lego Construction Company signed a contract to build a custom garage for a customer and received \$10,000 in advance for the job. The new garage will be built on the customer’s land. To complete this project, Lego must first build a concrete floor, construct wooden pillars and walls, and finally install a roof. Lego normally charges stand-alone prices of \$3,000, \$4,000, and \$5,000, respectively, for each of these three smaller tasks if done separately. How many performance obligations exist in this contract?

BE 6–13 Performance obligations; right of return  **LO6–5**,
 **LO6–6**

Aria Perfume, Inc., sold 3,210 boxes of white musk soap during January of 2024 at the price of \$90 per box. The company offers a full refund to unsatisfied customers for any product returned within 30 days from the date of purchase. Based on historical experience, Aria expects that 3% of sales will be returned. How many performance obligations are there in each sale of a box of soap? How much revenue, sales returns, and net revenue should Aria recognize in January?

BE 6–14 Variable consideration LO6–6

Leo Consulting enters into a contract with Highgate University to restructure Highgate’s processes for purchasing goods from suppliers. The contract states that Leo will earn a fixed fee of \$25,000 and earn an additional \$10,000 if Highgate achieves \$100,000 of cost savings. Leo estimates a 50% chance that Highgate will achieve \$100,000 of cost savings. Assuming that Leo determines the transaction price as the expected value of expected consideration, what transaction price will Leo estimate for this contract?

Page 318

BE 6–15 Variable consideration LO6–6

In January 2024, Continental Fund Services, Inc., enters into a one-year contract with a client to provide investment advisory services. The company will receive a management fee, prepaid at the beginning of the contract, that is calculated as 1% of the client’s \$150 million total assets being managed. In addition, the contract specifies that Continental will receive a performance bonus of 20% of any returns in excess of the return on the Dow Jones Industrial Average market index. Continental estimates that it will earn a \$2 million performance bonus, but is very uncertain of that estimate, given that the bonus depends on a highly volatile stock market. On what transaction price should Continental base revenue recognition?

BE 6–16 Right of return LO6–6

Finerly Corporation sells cosmetics through a network of independent distributors. Finerly shipped cosmetics to its distributors and is considering whether it should record \$300,000 of revenue upon shipment of a new line of cosmetics. Finerly expects the distributors to be able to sell the cosmetics but is uncertain because it has little experience with selling cosmetics of this type. Finerly is committed to accepting the cosmetics back from the distributors if the cosmetics are not sold. How much revenue should Finerly recognize upon delivery to its distributors?

BE 6–17 Principal or agent LO6–6

Assume that **Amazon.com** sells the MacBook Pro, a computer produced by **Apple**, for a retail price of \$1,500. Amazon arranges its operations such that customers receive products directly from Apple Stores rather than Amazon. Customers purchase from Amazon using

credit cards, and Amazon forwards cash to Apple equal to the retail price minus a \$150 commission that Amazon keeps. In this arrangement, how much revenue will Amazon recognize for the sale of one MacBook Pro?

BE 6–18 Time value of money **LO6–6**

On January 1, 2024, Wooten Technology Associates sold computer equipment to the Denison Company. Delivery was made on January 1, 2024, but payment for the equipment of \$10,000 is not due until December 31, 2024. Assuming that Wooten views the time value of money to be a significant component of this transaction and that an 8% interest rate is applicable, how much sales revenue would Wooten recognize on January 1, 2024?

BE 6–19 Time value of money **LO6–6**

On January 1, 2024, Hodge Beanery received \$8,000 from the Kennedy Company in exchange for a coffee roaster that it will deliver to Kennedy on December 31, 2024. Assuming that Hodge views the time value of money to be a significant component of this transaction and that a 9% interest rate is applicable, how much deferred revenue would Hodge recognize on January 1, 2024?

BE 6–20 Payments by the seller to the customer **LO6–6**

Lewis Co. sold merchandise to AdCo for \$60,000 and received \$60,000 for that sale one month later. One week prior to receiving payment from AdCo, Lewis made a \$10,000 payment to AdCo for advertising services that have a fair value of \$7,500. After accounting for any necessary adjustments, how much revenue should Lewis Co. record for the merchandise sold to AdCo?

BE 6–21 Estimating stand-alone selling prices: adjusted market assessment approach **LO6–6**

O'Hara Associates sells golf clubs, and with each sale of a full set of clubs provides complimentary club-fitting services. A full set of clubs with the fitting services sells for \$1,500. Similar club-fitting services are offered by other vendors for \$110, and O'Hara generally charges approximately 10% more than do other vendors for similar services. Assuming that the golf clubs and the club-fitting services are separate performance

obligations, estimate the stand-alone selling price of the club-fitting services using the adjusted market assessment approach.

BE 6–22 Estimating stand-alone selling prices: expected cost plus margin approach  **LO6–6**

O’Hara Associates sells golf clubs, and with each sale of a full set of clubs provides complimentary club-fitting services. A full set of clubs with the fitting services sells for \$1,500. O’Hara estimates that it incurs \$60 of staff compensation and other costs to provide the fitting services, and normally earns 30% over cost on similar services. Assuming that the golf clubs and the club-fitting services are separate performance obligations, estimate the stand-alone selling price of the club-fitting services using the expected cost plus margin approach.

BE 6–23 Estimating stand-alone selling prices; residual approach  **LO6–6**

O’Hara Associates sells golf clubs, and with each sale of a full set of clubs provides complimentary club-fitting services. A full set of clubs with the fitting services sells for \$1,500. O’Hara sells the same clubs without the fitting service for \$1,400. Assuming that the golf clubs and the club-fitting services are separate performance obligations, estimate the stand-alone selling price of the club fitting services using the residual approach.

BE 6–24 Timing of revenue recognition; licenses  **LO6–7**

Saar Associates sells two licenses to Kim & Company on September 1, 2024. First, in exchange for \$100,000, Saar provides Kim with a copy of its proprietary investment management software, which Saar does not anticipate updating and which Kim can use permanently. Second, in exchange for \$90,000, Saar provides Kim with a three-year right to market Kim’s financial advisory services under the name of Saar Associates, which Saar advertises on an ongoing basis. How much revenue will Saar recognize in 2024 under this arrangement?

BE 6–25 Timing of revenue recognition; licenses  **LO6–7,**
 **LO6–10**

IFRS

Assume the same facts as in BE 6-24 except that the trade name “Saar Associates” is not well known in the market place, and the owner provides no advertising or other benefits to a licensee of the Saar Associates trade name during the license period. How much revenue will Saar recognize in 2024 under this arrangement if Saar reports under U.S. GAAP?

BE 6-26 Timing of revenue recognition; licenses **LO6-7**, **LO6-10**

IFRS

Assume the same facts as in BE 6-25. How much revenue will Saar recognize in 2024 under this arrangement if Saar reports under IFRS?

BE 6-27 Timing of revenue recognition; franchises **LO6-7**

TopChop sells hairstyling franchises. TopChop receives \$50,000 from a new franchisee for providing initial training, equipment, and furnishings that have a stand-alone selling price of \$50,000. TopChop also receives \$30,000 per year for use of the TopChop name and for ongoing consulting services (starting on the date the franchise is purchased). Carlos became a TopChop franchisee on July 1, 2024, and on August 1, 2024, had completed training and was open for business. How much revenue in 2024 will TopChop recognize for its arrangement with Carlos?

BE 6-28 Timing of revenue recognition; bill-and-hold **LO6-7**

Dowell Fishing Supply, Inc., sold \$50,000 of Dowell Rods on December 15, 2024, to Bassadrome. Because of a shipping backlog, Dowell held the inventory in Dowell’s warehouse until January 12, 2025 (having assured Bassadrome that it would deliver sooner if necessary). How much revenue should Dowell recognize in 2024 for the sale to Bassadrome?

BE 6-29 Timing of revenue recognition; consignment **LO6-7**

Kerianne paints landscapes, and in late 2024 placed four paintings with a retail price of \$250 each in the Holmstrom Gallery. Kerianne's arrangement with Holmstrom is that Holmstrom will earn a 20% commission on paintings sold to gallery patrons. As of December 31, 2024, one painting had been sold by Holmstrom to gallery patrons. How much revenue with respect to these four paintings should Kerianne recognize in 2024?

BE 6–30 Timing of revenue recognition; gift card  **LO6–7**

GoodBuy sells gift cards redeemable for GoodBuy products either in store or online. During 2024, GoodBuy sold \$1,000,000 of gift cards, and \$840,000 of the gift cards were redeemed for products. As of December 31, 2024, \$30,000 of the remaining gift cards had passed the date at which GoodBuy concludes that the cards will never be redeemed. How much gift card revenue should GoodBuy recognize in 2024?

BE 6–31 Contract assets and contract liabilities  **LO6–8**

Holt Industries received a \$2,000 prepayment from the Ramirez Company for the sale of new office furniture. Holt will bill Ramirez an additional \$3,000 upon delivery of the furniture to Ramirez. Upon receipt of the \$2,000 prepayment, how much should Holt recognize for a contract asset, a contract liability, and accounts receivable?

BE 6–32 Contract assets and contract liabilities  **LO6–8,**
 **LO6–9**

As of December 31, 2024, Cady Construction has one construction job for which the construction in progress (CIP) account has a balance of \$20,000, and the billings on the construction contract account has a balance of \$14,000. Cady has another construction job for which the construction in progress account has a balance of \$3,000, and the billings on the construction contract account has a balance of \$5,000. Indicate the amount of contract asset and/or contract liability that Cady would show in its December 31, 2024, balance sheet.

BE 6–33 Long-term contract; revenue recognition over time;
profit recognition  **LO6–9**

A construction company entered into a fixed-price contract to build an office building for \$20 million. Construction costs incurred during the first year were \$6 million, and estimated

costs to complete at the end of the year were \$9 million. The company recognizes revenue over time according to percentage of completion. How much revenue and gross profit or loss will appear in the company's income statement in the first year of the contract?

BE 6–34 Long-term contract; revenue recognition over time; balance sheet  **LO6–8**,  **LO6–9**

Refer to the situation described in BE 6–33. Assume that, during the first year the company billed its customer \$7 million, of which \$5 million was collected before year-end. What would appear in the year-end balance sheet related to this contract?

BE 6–35 Long-term contract; revenue recognition upon completion  **LO6–9**

Refer to the situation described in BE 6–33. Assume that the building was completed during the second year, and construction costs incurred during the second year were \$10 million. How much revenue and gross profit or loss will the company recognize in the first and second year if it recognizes revenue upon contract completion?

BE 6–36 Long-term contract; revenue recognition; loss on entire project  **LO6–9**

Franklin Construction entered into a fixed-price contract to build a freeway-connecting ramp for \$30 million. Construction costs incurred in the first year were \$16 million and estimated remaining costs to complete at the end of the year were \$17 million. How much gross profit or loss will Franklin recognize in the first year if it recognizes revenue over time according to percentage of completion? What if instead Franklin recognizes revenue upon contract completion?

Exercises

E 6–1 FASB codification research LO6–1, LO6–2, LO6–3

Access the *FASB's Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

Determine the specific nine-digit Codification citation (XXX-XX-XX-XX) for accounting for each of the following items:

1. What are the five key steps to applying the revenue recognition principle?
2. What are indicators that control has passed from the seller to the buyer, such that it is appropriate to recognize revenue at a point in time?
3. Under what circumstances can sellers recognize revenue over time?

E 6–2 Service revenue LO6–3

Ski West, Inc., operates a downhill ski area near Lake Tahoe, California. An all-day adult lift ticket can be purchased for \$85. Adult customers also can purchase a season pass that entitles the pass holder to ski any day during the season, which typically runs from December 1 through April 30. Ski West expects its season pass holders to use their passes equally throughout the season. The company's fiscal year ends on December 31.

On November 6, 2024, Jake Lawson purchased a season pass for \$450.

Required:

1. When should Ski West recognize revenue from the sale of its season passes?

2. Prepare the appropriate journal entries that Ski West would record on November 6 and December 31.
3. What will be included in the Ski West 2024 income statement and balance sheet related to the sale of the season pass to Jake Lawson?

E 6–3 Allocating transaction price **LO6–4**

Video Planet (VP) sells a big screen TV package consisting of a 60-inch plasma TV, a universal remote, and on-site installation by VP staff. The installation includes programming the remote to have the TV interface with other parts of the customer’s home entertainment system. VP concludes that the TV, remote, and installation service are separate performance obligations. VP sells the 60-inch TV separately for \$1,700, sells the remote separately for \$100, and offers the installation service separately for \$200. The entire package sells for \$1,900.

Required:

How much revenue would be allocated to the TV, the remote, and the installation service?

E 6–4 FASB codification research **LO6–4**, **LO6–5**

Access the *FASB Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

Determine the specific nine-digit Codification citation (XXX-XX-XX-XX) for accounting for each of the following items:

1. On what basis is a contract’s transaction price allocated to its performance obligations?
2. What are indicators that a promised good or service is separately identifiable from other goods and services promised in the contract?
3. Under what circumstances is an option viewed as a performance obligation?

E 6–5 Performance obligations **LO6–2**, **LO6–4**, **LO6–5**

On March 1, 2024, Gold Examiner receives \$147,000 from a local bank and promises to deliver 100 units of certified 1-oz. gold bars on a future date. The contract states that ownership passes to the bank when Gold Examiner delivers the products to Brink's, a third-party carrier. In addition, Gold Examiner has agreed to provide a replacement shipment at no additional cost if the product is lost in transit. The stand-alone price of a gold bar is \$1,440 per unit, and Gold Examiner estimates the stand-alone price of the replacement insurance service to be \$60 per unit. Brink's picked up the gold bars from Gold Examiner on March 30, and delivery to the bank occurred on April 1.

Required:

1. How many performance obligations are in this contract?
2. Prepare the journal entry Gold Examiner would record on March 1.
3. Prepare the journal entry Gold Examiner would record on March 30.
4. Prepare the journal entry Gold Examiner would record on April 1.

E 6-6 Performance obligations; customer option for additional goods or services; residual method  **LO6-2**,  **LO6-4**,  **LO6-5**,  **LO6-6**

Clarks Inc., a shoe retailer, sells boots in different styles. In early November, the company starts selling "SunBoots" to customers for \$70 per pair. When a customer purchases a pair of SunBoots, Clarks also gives the customer a 30% discount coupon for any additional future purchases made in the next 30 days. Customers can't obtain the discount coupon otherwise. Clarks anticipates that approximately 20% of customers will utilize the coupon, and that on average those customers will purchase additional goods that normally sell for \$100.

Required:

1. How many performance obligations are in a contract to buy a pair of SunBoots?
2. Assume Clarks cannot estimate the standalone selling price of a pair of SunBoots sold without a coupon. Prepare a journal entry to record revenue for the sale of 1,000 pairs of SunBoots, assuming that Clarks uses the residual method to estimate the stand-alone selling price of SunBoots sold without the discount coupon.

E 6-7 Performance obligations; customer option for additional goods or services; prepayment  **LO6-3**,  **LO6-4**,  **LO6-5**

A New York City daily newspaper called *Manhattan Today* charges an annual subscription fee of \$135. Customers prepay their subscriptions and receive 260 issues over the year. To attract more subscribers, the company offered new subscribers the ability to pay \$130 for an annual subscription that also would include a coupon to receive a 40% discount on a one-hour ride through Central Park in a horse-drawn carriage. The list price of a carriage ride is \$125 per hour. The company estimates that approximately 30% of the coupons will be redeemed.

Required:

1. How much revenue should *Manhattan Today* recognize upon receipt of the \$130 subscription price?
2. How many performance obligations exist in this contract?
3. Prepare the journal entry to recognize sale of 10 new subscriptions, clearly identifying the revenue or deferred revenue associated with each performance obligation.

E 6–8 Performance obligations; customer option for additional goods or services  **LO6–4**,  **LO6–5**

On May 1, 2024, Meta Computer, Inc., enters into a contract to sell 5,000 units of Comfort Office Keyboard to one of its clients, Bionics, Inc., at a fixed price of \$95,000, to be settled by a cash payment on May 1. Delivery is scheduled for June 1, 2024. As part of the contract, the seller offers a 25% discount coupon to Bionics for any purchases in the next six months. The seller will continue to offer a 5% discount on all sales during the same time period, which will be available to all customers. Based on experience, Meta Computer estimates a 50% probability that Bionics will redeem the 25% discount voucher and that the coupon will be applied to \$20,000 of purchases. The stand-alone selling price for the Comfort Office Keyboard is \$19.60 per unit.

Required:

1. How many performance obligations are in this contract?
2. Prepare the journal entry that Meta would record on May 1, 2024.
3. Assume the same facts and circumstances as above, except that Meta gives a 5% discount option to Bionics instead of 25%. In this case, what journal entry would Meta record on May 1, 2024?

E 6–9 Variable consideration; estimation and constraint

LO6–6

Thomas Consultants provided Bran Construction with assistance in implementing various cost-savings initiatives. Thomas’s contract specifies that it will receive a flat fee of \$50,000 and an additional \$20,000 if Bran reaches a prespecified target amount of cost savings. Thomas estimates that there is a 20% chance that Bran will achieve the cost-savings target.

Required:

1. Assuming Thomas uses the expected value as its estimate of variable consideration, calculate the transaction price.
2. Assuming Thomas uses the most likely value as its estimate of variable consideration, calculate the transaction price.
3. Assume Thomas uses the expected value as its estimate of variable consideration, but is very uncertain of that estimate due to a lack of experience with similar consulting arrangements. Calculate the transaction price.

E 6–10 Variable consideration—most likely amount; change in estimate LO6–3, LO6–6

Rocky Guide Service provides guided 1–5 day hiking tours throughout the Rocky Mountains. Wilderness Tours hires Rocky to lead various tours that Wilderness sells. Rocky receives \$1,000 per tour day, and shortly after the end of each month, Rocky learns whether it will receive a \$100 bonus per tour day it guided during the previous month if its service during that month received an average evaluation of “excellent” by Wilderness customers. The \$1,000 per day and any bonus due are paid in one lump payment shortly after the end of each month.

- On July 1, based on prior experience, Rocky estimated there is a 30% chance it will earn the bonus for July tours. It guided a total of 10 days from July 1–July 15.
- On July 16, based on Rocky’s view that it had provided excellent service during the first part of the month, Rocky revised its estimate to an 80% chance it would earn the bonus for all July tours. Rocky also guided customers for 15 days from July 16–July 31.
- On August 5, Rocky learned it did not receive an average evaluation of “excellent” for its July tours, so it would not receive any bonus for July, and received all payment due for the

July tours.

Rocky bases estimates of variable consideration on the most likely amount it expects to receive.

Required:

1. Prepare Rocky's July 15 journal entry to record revenue for tours given from July 1–July 15.
2. Prepare Rocky's July 31 journal entry to record revenue for tours given from July 16–July 31.
3. Prepare Rocky's August 5 journal entry to record any necessary adjustments to revenue and receipt of payment from Wilderness.

E 6–11 Variable consideration—expected value; change in estimate  **LO6–3**,  **LO6–6**

Assume the same facts as in E 6–10.

Required:

Complete the requirements of E 6–10, assuming that Rocky bases estimates of variable consideration on the expected value it expects to receive.

E 6–12 Time value of money for accounts receivable  **LO6–6**

Arctic Cat sold Seneca Motor Sports a shipment of snowmobiles. The snowmobiles were delivered on January 1, 2024, and Arctic received a note from Seneca indicating that Seneca will pay Arctic \$40,000 on a future date. Unless informed otherwise, assume that Arctic views the time value of money component of this arrangement to be significant and that the relevant interest rate is 8%.

Required:

1. Assume the note indicates that Seneca is to pay Arctic the \$40,000 due on the note on December 31, 2024. Prepare the journal entry for Arctic to record the sale on January 1, 2024.
2. Assume the same facts as in requirement 1, and prepare the journal entry for Arctic to record collection of the payment on December 31, 2024.

3. Assume instead that Seneca is to pay Arctic the \$40,000 due on the note on December 31, 2025. Prepare the journal entry for Arctic to record the sale on January 1, 2024.
4. Assume instead that Arctic does not view the time value of money component of this arrangement to be significant and that the note indicates that Seneca is to pay Arctic the \$40,000 due on the note on December 31, 2024. Prepare the journal entry for Arctic to record the sale on January 1, 2024.

E 6–13 Time value of money for deferred revenue **LO6–6**

[This is a variation of E 6–12 focusing on deferred revenue.]

Arctic Cat sold Seneca Motor Sports a shipment of snowmobiles that have a fair market value of \$40,000. Seneca paid for the snowmobiles on January 1, 2024, with delivery to occur subsequently. Unless informed otherwise, assume that Arctic views the time value of money component of this arrangement to be significant and that the relevant interest rate is 8%.

Required:

1. Assume that, on January 1, 2024, Seneca prepays Arctic for a December 31, 2024, delivery of the snowmobiles. Prepare the journal entry for Arctic to record collection on January 1, 2024, assuming Seneca prepays the present value of the snowmobiles.
2. Prepare the journal entry for Arctic to record delivery of the snowmobiles on December 31, 2024.
3. Assume instead that delivery is to occur on December 31, 2025. Prepare the journal entry for Arctic to record collection on January 1, 2024, assuming Seneca prepays the present value of the snowmobiles.
4. Assume instead that Arctic does not view the time value of money component of this arrangement to be significant. Also assume that, on January 1, 2024, Seneca prepays Arctic for a December 31, 2024, delivery of the snowmobiles and that Seneca prepays the present value of the snowmobiles. Prepare the journal entry for Arctic to record collection on January 1, 2024.

E 6–14 Consideration payable to customer; collectibility of transaction price **LO6–2**, **LO6–5**, **LO6–6**

Furtastic manufactures imitation fur garments. On June 1, 2024, Furtastic made a sale to Willett's Department Store under terms that require Willett to pay \$150,000 to Furtastic on June 30, 2024. In a separate transaction on June 15, 2024, Furtastic purchased brand advertising services from Willett for \$12,000. The fair value of those advertising services is \$5,000. Furtastic expects that 3% of all sales will prove uncollectible.

Required:

1. Prepare the journal entry to record Furtastic's sale on June 1, 2024.
2. Prepare the journal entry to record Furtastic's purchase of advertising services from Willett on June 15, 2024. Assume all of the advertising services are delivered on June 15, 2024.
3. Prepare the journal entry to record Furtastic's receipt of \$150,000 from Willett on June 30, 2024.
4. How would Furtastic's expectation regarding uncollectible accounts affect its recognition of revenue from the sale to Willett's Department Store on June 1, 2024? Explain briefly.

E 6-15 Approaches for estimating stand-alone selling prices

 **LO6-6**

(This exercise is a variation of E 6-3.)

Video Planet (VP) sells a big screen TV package consisting of a 60-inch plasma TV, a universal remote, and on-site installation by VP staff. The installation includes programming the remote to have the TV interface with other parts of the customer's home entertainment system. VP concludes that the TV, remote, and installation service are separate performance obligations. VP sells the 60-inch TV separately for \$1,750, sells the remote separately for \$100, and offers the entire package for \$1,900. VP does not sell the installation service separately. VP is aware that other similar vendors charge \$150 for the installation service. VP also estimates that it incurs approximately \$100 of compensation and other costs for VP staff to provide the installation service. VP typically charges 40% above cost on similar sales.

Required:

1. Estimate the stand-alone selling price of the installation service using the adjusted market assessment approach.
2. Estimate the stand-alone selling price of the installation service using the expected cost plus margin approach.

3. Estimate the stand-alone selling price of the installation service using the residual approach.

E 6–16 FASB codification research **LO6–6**, **LO6–7**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

Determine the specific nine-digit Codification citation (XXX-XX-XX-XX) for accounting for each of the following items:

1. What alternative approaches can be used to estimate variable consideration?
2. What alternative approaches can be used to estimate the stand-alone selling price of performance obligations that are not sold separately?
3. What determines the timing of revenue recognition with respect to licenses of symbolic intellectual property?
4. What indicators suggest that a seller is a principal rather than an agent?

E 6–17 Franchises; residual method **LO6–6**, **LO6–7**

Monitor Muffler sells franchise arrangements throughout the United States and Canada. Under a franchise agreement, Monitor receives \$600,000 in exchange for satisfying the following separate performance obligations: (1) franchisees have a five-year right to operate as a Monitor Muffler retail establishment in an exclusive sales territory, (2) franchisees receive initial training and certification as a Monitor Mechanic, and (3) franchisees receive a Monitor Muffler building and necessary equipment. The stand-alone selling price of the initial training and certification is \$15,000, and \$450,000 for the building and equipment. Monitor estimates the stand-alone selling price of the five-year right to operate as a Monitor Muffler establishment using the residual approach.

Monitor received \$75,000 on July 1, 2024, from Perkins and accepted a note receivable for the rest of the franchise price. Monitor will construct and equip Perkins's building and train

and certify Perkins by September 1, and Perkins's five-year right to operate as a Monitor Muffler establishment will commence on September 1 as well.

Required:

1. What amount would Monitor calculate as the stand-alone selling price of the five-year right to operate as a Monitor Muffler retail establishment?
2. What journal entry would Monitor record on July 1, 2024, to reflect the sale of a franchise to Dan Perkins?
3. How much revenue would Monitor recognize in the year ended December 31, 2024, with respect to its franchise arrangement with Perkins? (Ignore any interest on the note receivable.)

E 6–18 FASB codification research  **LO6–8**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

Determine the specific nine-digit Codification citation (XXX-XX-XX-XX) for accounting for each of the following items:

1. What disclosures are required with respect to performance obligations that the seller is committed to satisfying but that are not yet satisfied?
2. What disclosures are required with respect to uncollectible accounts receivable, Page 324 also called impairments of receivables?
3. What disclosures are required with respect to significant changes in contract assets and contract liabilities?

E 6–19 Long-term contract; revenue recognition over time and at a point in time  **LO6–9**

Assume **Avaya** contracted to provide a customer with Internet infrastructure for \$2,000,000. The project began in 2024 and was completed in 2025. Data relating to the contract are summarized below:

| | 2024 | 2025 |
|---|------------|-------------|
| Costs incurred during the year | \$ 300,000 | \$1,575,000 |
| Estimated costs to complete as of 12/31 | 1,200,000 | 0 |
| Billings during the year | 380,000 | 1,620,000 |
| Cash collections during the year | 250,000 | 1,750,000 |

Required:

1. Compute the amount of revenue and gross profit or loss to be recognized in 2024 and 2025, assuming Avaya recognizes revenue over time according to percentage of completion.
2. Compute the amount of revenue and gross profit or loss to be recognized in 2024 and 2025, assuming this project does not qualify for revenue recognition over time.
3. Prepare a partial balance sheet to show how the information related to this contract would be presented at the end of 2024, assuming Avaya recognizes revenue over time according to percentage of completion.
4. Prepare a partial balance sheet to show how the information related to this contract would be presented at the end of 2024, assuming this project does not qualify for revenue recognition over time.

E 6–20 Long-term contract; revenue recognition over time vs. upon project completion  **LO6–9**

On June 15, 2024, Sanderson Construction entered into a long-term construction contract to build a baseball stadium in Washington, D.C., for \$220 million. The expected completion date is April 1, 2026, just in time for the 2026 baseball season. Costs incurred and estimated costs to complete at year-end for the life of the contract are as follows (\$ in millions):

| | 2024 | 2025 | 2026 |
|---|-------|-------|-------|
| Costs incurred during the year | \$ 40 | \$ 80 | \$ 50 |
| Estimated costs to complete as of December 31 | 120 | 60 | — |

Required:

1. How much revenue and gross profit will Sanderson report in its 2024, 2025, and 2026 income statements related to this contract, assuming Sanderson recognizes revenue over

time according to percentage of completion?

2. How much revenue and gross profit will Sanderson report in its 2024, 2025, and 2026 income statements related to this contract, assuming this project does not qualify for revenue recognition over time?
3. Suppose the estimated costs to complete at the end of 2025 are \$80 million instead of \$60 million. Determine the amount of revenue and gross profit or loss to be recognized in 2025, assuming Sanderson recognizes revenue over time according to percentage of completion.

E 6–21 Long-term contract; revenue recognition over time; loss projected on entire project **LO6–9**

On February 1, 2024, Arrow Construction Company entered into a three-year construction contract to build a bridge for a price of \$8,000,000. During 2024, costs of \$2,000,000 were incurred with estimated costs of \$4,000,000 yet to be incurred. Billings of \$2,500,000 were sent, and cash collected was \$2,250,000.

In 2025, costs incurred were \$2,500,000 with remaining costs estimated to be \$3,600,000. 2025 billings were \$2,750,000, and \$2,475,000 cash was collected. The project was completed in 2026 after additional costs of \$3,800,000 were incurred. The company's fiscal year-end is December 31. Arrow recognizes revenue over time according to percentage of completion.

Required:

1. Calculate the amount revenue and gross profit or loss to be recognized in each of the three years.
2. Prepare journal entries for 2024 and 2025 to record the transactions described (credit "various accounts" for construction costs incurred).
3. Prepare a partial balance sheet to show the presentation of the project as of December 31, 2024 and 2025.

E 6–22 Long-term contract; revenue recognition upon project completion; loss projected on entire project **LO6–8**, **LO6–9**

[This is a variation of E 6–21 focusing on the revenue recognition upon project completion.]

On February 1, 2024, Arrow Construction Company entered into a three-year construction contract to build a bridge for a price of \$8,000,000. During 2024, costs of \$2,000,000 were incurred, with estimated costs of \$4,000,000 yet to be incurred. Billings of \$2,500,000 were sent, and cash collected was \$2,250,000.

In 2025, costs incurred were \$2,500,000 with remaining costs estimated to be \$3,600,000. 2025 billings were \$2,750,000, and \$2,475,000 cash was collected. The project was completed in 2026 after additional costs of \$3,800,000 were incurred. The company's fiscal year-end is December 31. This project does not qualify for revenue recognition over time.

Required:

1. Calculate the amount of revenue and gross profit or loss to be recognized in each of the three years.
2. Prepare journal entries for 2024 and 2025 to record the transactions described (credit "various accounts" for construction costs incurred).
3. Prepare a partial balance sheet to show the presentation of the project as of December 31, 2024 and 2025. Indicate whether any of the amounts shown are contract assets or contract liabilities.

E 6–23 Income (loss) recognition; Long-term contract; revenue recognition over time vs. upon project completion  **LO6–9**

Brady Construction Company contracted to build an apartment complex for a price of \$5,000,000. Construction began in 2024 and was completed in 2026. The following is a series of independent situations, numbered 1 through 6, involving differing costs for the project. All costs are stated in thousands of dollars.

| Situation | Costs Incurred during Year | | | Estimated Costs to Complete (As of the End of the Year) | | |
|-----------|----------------------------|----------|--------|--|-------|------|
| | 2024 | 2025 | 2026 | 2024 | 2025 | 2026 |
| 1 | \$1,500 | \$ 2,100 | \$ 900 | \$3,000 | \$900 | — |
| 2 | 1,500 | 900 | 2,400 | 3,000 | 2,400 | — |
| 3 | 1,500 | 2,100 | 1,600 | 3,000 | 1,500 | — |
| 4 | 500 | 3,000 | 1,000 | 3,500 | 875 | — |
| 5 | 500 | 3,000 | 1,300 | 3,500 | 1,500 | — |

| Situation | Costs Incurred during Year | | | Estimated Costs to Complete (As of the End of the Year) | | |
|-----------|----------------------------|-------|-------|--|-------|------|
| | 2024 | 2025 | 2026 | 2024 | 2025 | 2026 |
| 6 | 500 | 3,000 | 1,800 | 4,600 | 1,700 | — |

Required:

Copy and complete the following table:

| Situation | Gross Profit (Loss) Recognized | | | | | | |
|-----------|--------------------------------|------|------|--|-----------------|------|------|
| | Over Time | | | | Upon Completion | | |
| | 2024 | 2025 | 2026 | | 2024 | 2025 | 2026 |
| 1 | | | | | | | |
| 2 | | | | | | | |
| 3 | | | | | | | |
| 4 | | | | | | | |
| 5 | | | | | | | |
| 6 | | | | | | | |

E 6-24 Long-term contract; revenue recognition over time; solve for unknowns  **LO6-9**

In 2024, Long Construction Corporation began construction work under a three-year contract. The contract price is \$1,600,000. Long recognizes revenue over time according to percentage of completion for financial reporting purposes. The financial statement presentation relating to this contract at December 31, 2024, is as follows:

Balance Sheet

| | | |
|---|-----------------|----------|
| Accounts receivable (from construction progress billings) | | \$30,000 |
| Construction in progress | \$100,000 | |
| Less: Billings on construction contract | <u>(94,000)</u> | |

| | |
|--|-------|
| Cost and profit of uncompleted contracts in excess of billings | 6,000 |
|--|-------|

Income Statement

| | |
|--|----------|
| Income (before tax) on the contract recognized in 2024 | \$20,000 |
|--|----------|

Required:

1. What was the cost of construction actually incurred in 2024?
2. How much cash was collected in 2024 on this contract?
3. What was the estimated cost to complete as of the end of 2024?
4. What was the estimated percentage of completion used to calculate revenue in 2024?

(AICPA adapted)

Problems

P 6–1 Upfront fees; performance obligations LO6–4, LO6–5

Fit & Slim (F&S) is a health club that offers members various gym services.

Required:

1. Assume F&S offers a deal whereby enrolling in a new membership for \$700 provides a year of unlimited access to facilities and also entitles the member to receive a voucher redeemable for 25% off yoga classes for one year. The yoga classes are offered to gym members as well as to the general public. A new membership normally sells for \$720, and a one-year enrollment in yoga classes sells for an additional \$500. F&S estimates that approximately 40% of the vouchers will be redeemed. F&S offers a 10% discount on all one-year enrollments in classes as part of its normal promotion strategy.
 - a. How many performance obligations are included in the new member deal?
 - b. How much of the contract price would be allocated to each performance obligation?
Explain your answer.
 - c. Prepare the journal entry to recognize revenue for the sale of a new membership.
Clearly identify revenue or deferred revenue associated with each performance obligation.
2. Assume F&S offers a “Fit 50” coupon book with 50 prepaid visits over the next year. F&S has learned that Fit 50 purchasers make an average of 40 visits before the coupon book expires. A customer purchases a Fit 50 book by paying \$500 in advance, and for any additional visits over 50 during the year after the book is purchased, the customer can pay a \$15 visitation fee per visit. F&S typically charges \$15 to nonmembers who use the facilities for a single day.
 - a. How many separate performance obligations are included in the Fit 50 member deal?
Explain your answer.

- b. How much of the contract price would be allocated to each separate performance obligation? Explain your answer.
- c. Prepare the journal entry to recognize revenue for the sale of a new Fit 50 book.

P 6–2 Performance obligations; warranties; option  **LO6–2**,
 **LO6–4**,  **LO6–5**

Creative Computing sells a tablet computer called the Protab. The \$780 sales price of a Protab Package includes the following:

- One Protab computer.
- A six-month limited warranty. This warranty guarantees that Creative will cover any costs that arise due to repairs or replacements associated with defective products for up to six months.
- A coupon to purchase a Creative Probook e-book reader for \$200, a price that represents a 50% discount from the regular Probook price of \$400. It is expected that 20% of the discount coupons will be utilized.
- A coupon to purchase a one-year extended warranty for \$50. Customers can buy the extended warranty for \$50 at other times as well. Creative estimates that 40% of customers will purchase an extended warranty.
- Creative does not sell the Protab without the limited warranty, option to purchase a Probook, and the option to purchase an extended warranty, but estimates that if it did so, a Protab alone would sell for \$760.

Required:

1. How many performance obligations are included in a Protab Package? Explain your answer.
2. List the performance obligations in the Protab Package in the following table, and complete it to allocate the transaction price of 100,000 Protab Packages to the performance obligations in the contract.

| Performance Obligation | Stand-Alone Selling Price of the Performance Obligation | Percentage of the Sum of the Stand-Alone Selling Prices of the Performance Obligations (to two decimal places) | Allocation of Total Transaction Price to the Performance Obligation |
|------------------------|---|--|---|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

3. Prepare a journal entry to record sales of 100,000 Protab Packages (ignore any sales of extended warranties).

P 6–3 Performance obligations; warranties; option  **LO6–2**,  **LO6–4**,  **LO6–5**

Assume the same facts as in P 6–2, except that customers must pay \$75 to purchase the extended warranty if they don't purchase it with the \$50 coupon that was included in the Protab Package. Creative estimates that 40% of customers will use the \$50 coupon to purchase an extended warranty. Complete the same requirements as in P 6–2.

P 6–4 Performance obligations; customer options for additional goods and services  **LO6–2**,  **LO6–4**,  **LO6–5**

Supply Club, Inc., sells a variety of paper products, office supplies, and other products used by businesses and individual consumers. During July 2024, it started a loyalty program through which qualifying customers can accumulate points and redeem those points for discounts on future purchases. Redemption of a loyalty point reduces the price of one dollar of future purchases by 20% (equal to 20 cents). Customers do not earn additional loyalty points for purchases on which loyalty points are redeemed. Based on past experience, Supply Club estimates a 60% probability that any point issued will be redeemed for the

discount. During July 2024, the company redeemed 10,000 points and sold additional product of \$125,000, so it recorded \$135,000 of revenue. The aggregate stand-alone selling price of the purchased products is \$135,000. Eighty percent of sales were cash sales, and the remainder were credit sales.

Required:

1. Prepare Supply Club's journal entry to record July sales.
2. During August, customers redeem loyalty points on \$60,000 of merchandise. Seventy-five percent of those sales were for cash, and the remainder were credit sales. Prepare Supply Club's journal entry to record those sales.

P 6–5 Variable consideration  **LO6–3**,  **LO6–6**

On January 1, Revis Consulting entered into a contract to complete a cost reduction program for Green Financial over a six-month period. Revis will receive \$20,000 from Green at the end of each month. If total cost savings reach a specific target, Revis will receive an additional \$10,000 from Green at the end of the contract, but if total cost savings fall short, Revis will refund \$10,000 to Green. Revis estimates an 80% chance that cost savings will reach the target and calculates the contract price based on the expected value of future payments to be received.

Required:

Prepare the following journal entries for Revis:

1. Prepare the journal entry on January 31 to record the collection of cash and recognition of the first month's revenue.
2. Assuming total cost savings exceed target, prepare the journal entry on June 30 to record receipt of the bonus.
3. Assuming total cost savings fall short of target, prepare the journal entry on June 30 to record payment of the penalty.

P 6–6 Variable consideration; change of estimate  **LO6–3**,
 **LO6–6**

Since 1970, Super Rise, Inc., has provided maintenance services for elevators. On January 1, 2024, Super Rise obtains a contract to maintain an elevator in a 90-story building in New York City for 10 months and receives a fixed payment of \$80,000. The contract specifies

that Super Rise will receive an additional \$40,000 at the end of the 10 months if there is no unexpected delay, stoppage, or accident during the year. Super Rise estimates variable consideration to be the most likely amount it will receive.

Required:

1. Assume that, because the building sees a constant flux of people throughout the day, Super Rise is allowed to access the elevators and related mechanical equipment only between 3 a.m. and 5 a.m. on any given day, which is insufficient to perform some of the more time-consuming repair work. As a result, Super Rise believes that unexpected delays are likely and that it will not earn the bonus. Prepare the journal entry Super Rise would record on January 1.
2. Assume instead that Super Rise knows at the inception of the contract that it will be given unlimited access to the elevators and related equipment each day, with the right to schedule repair sessions any time. When given these terms and conditions, Super Rise has never had any delays or accidents in the past. Prepare the journal entry Super Rise would record on January 31 to record one month of revenue.
3. Assume the same facts as requirement 1. In addition, assume that, on May 31, Super Rise determines that it does not need to spend more than two hours on any given day to operate the elevator safely because the client's elevator is relatively new. Therefore, Super Rise believes that unexpected delays are very unlikely. Prepare the journal entry Super Rise would record on May 31 to recognize May revenue and any necessary revision in its estimated bonus receivable.

P 6–7 Variable consideration; constraint and change of estimate

 **LO6–3**,  **LO6–6**

Assume the same facts as P 6–6.

Required:

1. Assume that Super Rise anticipates it will earn the performance bonus, but is highly uncertain about its estimate given unfamiliarity with the building and uncertainty about its access to the elevators and related equipment. Prepare the journal entry Super Rise would record on January 1.
2. Assume the same facts as requirement 1. In addition, assume that, on May 31, Super Rise determines that it has sufficient experience with the company to make an accurate estimate of the likelihood that it will earn the performance bonus, and concludes that it is

likely to earn the performance bonus. Prepare the journal entry Super Rise would record on May 31 to recognize May revenue and any necessary revision in its estimated bonus receivable.

P 6–8 Variable transaction price  **LO6–3**,  **LO6–6**

Velocity, a consulting firm, enters into a contract to help Burger Boy, a fast-food restaurant, design a marketing strategy to compete with **Burger King**. The contract spans eight months. Burger Boy promises to pay \$60,000 at the end of each month. At the end of the contract, Velocity either will give Burger Boy a refund of \$20,000 or will be entitled to an additional \$20,000 bonus, depending on whether sales at Burger Boy at year-end have increased to a target level. At the inception of the contract, Velocity estimates an 80% chance that it will earn the \$20,000 bonus and calculates the contract price based on the expected value of future payments to be received. At the start of the fifth month, circumstances change, and Velocity revises to 60% its estimate of the probability that it will earn the bonus. At the end of the contract, Velocity receives the additional consideration of \$20,000.

Required:

1. Prepare the journal entry to record revenue at the end of each month for the first four months of the contract.
2. Prepare the journal entry that the Velocity Company would record at the start of the fifth month to recognize the change in estimate associated with the reduced likelihood that the \$20,000 bonus will be received.
3. Prepare the journal entry to record the revenue at the end of each month for the second four months of the contract.
4. Prepare the journal entry after eight months to record receipt of the \$20,000 cash bonus.

P 6–9 Variable transaction price  **LO6–3**,  **LO6–6**,
 **LO6–7**

Tran Technologies licenses its functional intellectual property to Lyon Industries. Terms of the arrangement require Lyon to pay Tran \$500,000 on April 1, 2024, when Lyon first obtains access to Tran’s intellectual property, and then in the future to pay Tran a royalty of 4% of future sales of products that utilize that intellectual property. Tran anticipates receiving sales-based royalties of \$1,000,000 during 2024 and \$1,500,000/year for the years 2025–2029. Assume Tran accounts for the Lyon license as a right of use, because Tran’s actions subsequent to April 1, 2024, will not affect the benefits that Lyon receives from access to Tran’s intellectual property.

Required:

1. Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Identify the specific nine-digit Codification citation (XXX-XX-XX-XX) for accounting for variable consideration arising from sales-based royalties on licenses of intellectual property, and consider the relevant GAAP. When can Tran recognize revenue from sales-based royalties associated with the Lyon license?
2. What journal entry would Tran record on April 1, 2024, when it receives the \$500,000 payment from Lyon?
3. Assume on December 31, 2024, Tran receives \$1,000,000 for all sales-based royalties from Lyon in 2024. What journal entry would Tran record on December 31, 2024, to recognize any revenue that should be recognized in 2024 with respect to the Lyon license that it has not already recognized?
4. Assume Tran accounts for the Lyon license as a five-year right to access Tran’s symbolic intellectual property from April 1, 2024, through March 31, 2029. Tran expects that its ongoing marketing efforts will affect the value of the license to Lyon during the five-year license period. Repeat requirements 2 and 3.

P 6–10 Long-term contract; revenue recognition over time

 **LO6–8**,  **LO6–9**

In 2024, the Westgate Construction Company entered into a contract to construct a road for Santa Clara County for \$10,000,000. The road was completed in 2026. Information related to the contract is as follows:

| | 2024 | 2025 | 2026 |
|-------------------------------|-------------|-------------|-------------|
| Cost incurred during the year | \$2,400,000 | \$3,600,000 | \$2,200,000 |

| | 2024 | 2025 | 2026 |
|--|-----------|-----------|-----------|
| Estimated costs to complete as of year-end | 5,600,000 | 2,000,000 | 0 |
| Billings during the year | 2,000,000 | 4,000,000 | 4,000,000 |
| Cash collections during the year | 1,800,000 | 3,600,000 | 4,600,000 |

Westgate recognizes revenue over time according to percentage of completion.

Required:

1. Calculate the amount of revenue and gross profit to be recognized in each of the three years.
2. Prepare all necessary journal entries for each of the years (credit "Cash, Materials, etc." for construction costs incurred).
3. Prepare a partial balance sheet for 2024 and 2025 showing any items related to the contract. Indicate whether any of the amounts shown are contract assets or contract liabilities.
4. Calculate the amount of revenue and gross profit to be recognized in each of the three years, assuming the following costs incurred and costs to complete information:

| | 2024 | 2025 | 2026 |
|--|-------------|-------------|-------------|
| Cost incurred during the year | \$2,400,000 | \$3,800,000 | \$3,200,000 |
| Estimated costs to complete as of year-end | 5,600,000 | 3,100,000 | 0 |

5. Calculate the amount of revenue and gross profit to be recognized in each of the three years, assuming the following costs incurred and costs to complete information:

| | 2024 | 2025 | 2026 |
|-------------------------------|-------------|-------------|-------------|
| Cost incurred during the year | \$2,400,000 | \$3,800,000 | \$3,900,000 |

| | 2024 | 2025 | 2026 |
|--|-----------|-----------|------|
| Estimated costs to complete as of year-end | 5,600,000 | 4,100,000 | 0 |

P 6–11 Long-term contract; revenue recognition upon completion  **LO6–9**

[This is a variation of P 6-10 modified to focus on revenue recognition upon project completion.]

Required:

Complete the requirements of P 6-10, assuming that Westgate Construction’s contract with Santa Clara County does *not* qualify for revenue recognition over time.

P 6–12 Long-term contract; revenue recognized over time vs. upon project completion; loss projected on entire project  **LO6–9**

Curtiss Construction Company, Inc., entered into a fixed-price contract with Axelrod Associates on July 1, 2024, to construct a four-story office building. At that time, Curtiss estimated that it would take between two and three years to complete the project. The total contract price for construction of the building is \$4,000,000. Curtiss concludes that the contract does not qualify for revenue recognition over time. The building was completed on December 31, 2026. Estimated percentage of completion, accumulated contract costs incurred, estimated costs to complete the contract, and *accumulated* billings to Axelrod under the contract were as follows:

| | At 12-31-2024 | At 12-31-2025 | At 12-31-2026 |
|-----------------------------|---------------|---------------|---------------|
| Percentage of completion | 10% | 60% | 100% |
| Costs incurred to date | \$ 350,000 | \$2,500,000 | \$4,250,000 |
| Estimated costs to complete | 3,150,000 | 1,700,000 | 0 |

| | At 12-31- 2024 | At 12-31- 2025 | At 12-31- 2026 |
|------------------------------|-------------------|-------------------|-------------------|
| Billings to Axelrod, to date | 720,000 | 2,170,000 | 3,600,000 |

Required:

1. For each of the three years, prepare a schedule to compute total gross profit or loss to be recognized as a result of this contract.
2. Assuming Curtiss recognizes revenue over time according to percentage of completion, compute gross profit or loss to be recognized in each of the three years.
3. Assuming Curtiss recognizes revenue over time according to percentage of completion, compute the amount to be shown in the balance sheet at the end of 2024 and 2025 as either cost in excess of billings or billings in excess of costs.

(AICPA adapted)

P 6–13 Long-term contract; revenue recognition over time vs. upon project completion  **LO6–9**

Citation Builders, Inc., builds office buildings and single-family homes. The office buildings are constructed under contract with reputable buyers. The homes are constructed in developments ranging from 10–20 homes and are typically sold during construction or soon after. To secure the home upon completion, buyers must pay a deposit of 10% of the price of the home with the remaining balance due upon completion of the house and transfer of title. Failure to pay the full amount results in forfeiture of the down payment. Occasionally, homes remain unsold for as long as three months after construction. In these situations, sales price reductions are used to promote the sale.

During 2024, Citation began construction of an office building for Altamont Corporation. The total contract price is \$20 million. Costs incurred, estimated costs to complete at year-end, billings, and cash collections for the life of the contract are as follows:

| | 2024 | 2025 | 2026 |
|--|--------------|--------------|--------------|
| Costs incurred during the year | \$ 4,000,000 | \$ 9,500,000 | \$ 4,500,000 |
| Estimated costs to complete as of year-end | 12,000,000 | 4,500,000 | — |
| Billings during the year | 2,000,000 | 10,000,000 | 8,000,000 |
| Cash collections during the year | 1,800,000 | 8,600,000 | 9,600,000 |

Also during 2024, Citation began a development consisting of 12 identical homes. Citation estimated that each home will sell for \$600,000, but individual sales prices are negotiated with buyers. Deposits were received for eight of the homes, three of which were completed during 2024 and paid for in full for \$600,000 each by the buyers. The completed homes cost \$450,000 each to construct. The construction costs incurred during 2024 for the nine uncompleted homes totaled \$2,700,000.

Required:

1. Briefly explain the difference between recognizing revenue over time and upon project completion when accounting for long-term construction contracts.
2. Answer the following questions, assuming that Citation concludes it does not qualify for revenue recognition over time for its office building contracts:
 - a. How much revenue related to this contract will Citation report in its 2024 and 2025 income statements?
 - b. What is the amount of gross profit or loss to be recognized for the Altamont contract during 2024 and 2025?
 - c. What will Citation report in its December 31, 2024, balance sheet related to this contract? (Ignore cash.)
3. Answer requirements 2a through 2c, assuming that Citation recognizes revenue over time according to percentage of completion for its office building contracts.
4. Assume the same information for 2024 and 2025, but that as of year-end 2025 the estimated cost to complete the office building is \$9,000,000. Citation recognizes revenue over time according to percentage of completion for its office building contracts.

- a. How much revenue related to this contract will Citation report in the 2025 income statement?
 - b. What is the amount of gross profit or loss to be recognized for the Altamont contract during 2025?
 - c. What will Citation report in its 2025 balance sheet related to this contract? (Ignore cash.)
5. When should Citation recognize revenue for the sale of its single-family homes?
 6. What will Citation report in its 2024 income statement and 2024 balance sheet related to the single-family home business (ignore cash in the balance sheet)?

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Research Case 6–1 Earnings management with respect to revenues **LO6–1**

An article published in *Accounting Horizons* describes various techniques that companies use to manage their earnings.

Required:

In your library, on the Internet, or from some other source, locate the article “How Are Earnings Managed? Evidence from Auditors” in *Accounting Horizons*, 2003 (Supplement), and answer the following questions:

1. What are the four most common revenue-recognition abuses identified by auditors in that article? From the examples provided in the article, briefly explain each abuse.
2. What is the revenue-recognition abuse identified in the article related to the recognizing revenue in proportion to the percentage completed to date?
3. What effect did these revenue-recognition abuses tend to have on net income in the year they occurred? Indicate “increase” or “decrease” and the percentage of the time they had that effect.
4. Did auditors tend to require their clients to make adjustments that reduced the revenue-recognition abuses they detected? Indicate “yes” or “no” and the percentage of the time

auditors required adjustment.

Judgment Case 6–2 Satisfaction of performance obligations

LO6–2

Cutler Education Corporation developed a software product to help children under age 12 learn mathematics. The software contains two separate parts: Basic Level (Level I) and Intermediate Level (Level II). Parents purchase each level separately and are eligible to purchase the access code for Level II only if their children pass the Level I exam.

Kerry purchases the Level I software at a price of \$50 for his son, Tom, on December 1. Suppose Tom passed the Level I test on December 10, and Kerry immediately purchased the access code for Level II for an additional \$30. Cutler provided Kerry with the access code to Level II on December 20.

Required:

Indicate the date upon which Cutler would recognize revenue for the sale of Level I and Level II software.

Judgment Case 6–3 Satisfying performance obligations

LO6–2, LO6–3

Consider each of the following scenarios separately:

Scenario 1: Crown Construction Company entered into a contract with Star Hotel for building a highly sophisticated, customized conference room to be completed for a fixed price of \$400,000. Nonrefundable progress payments are made on a monthly basis for work completed during the month. Legal title to the conference room equipment is held by Crown until the end of the construction project, but if the contract is terminated before the conference room is finished, Star retains the partially completed job and must pay for any work completed to date.

Scenario 2: Regent Company entered into a contract with Star Hotel for constructing and installing a standard designed gym for a fixed price of \$400,000. Nonrefundable progress payments are made on a monthly basis for work completed during the month. Legal title to the gym passes to Star upon completion of the building process. If Star cancels the contract before the gym construction is completed, Regent removes all the installed equipment, and Star must compensate Regent for any loss of profit on sale of the gym to another customer.

Scenario 3: On January 1, the CostDriver Company, a consulting firm, entered into a three-month contract with Coco Seafood Restaurant to analyze its cost structure in order to find a way to reduce operating costs and increase profits. CostDriver promises to share findings with the restaurant every two weeks and to provide the restaurant with a final analytical report at the end of the contract. This service is customized to Coco, and CostDriver would need to start from scratch if it provided a similar service to another client. Coco promises to pay \$5,000 per month. If Coco chooses to terminate the contract, it is entitled to receive a report detailing analyses to that stage.

Scenario 4: Assume International Tower (Phase II) is developing luxury residential real estate and begins to market individual apartments during their construction. The Tower entered into a contract with Edwards for the sale of a specific apartment. Edwards pays a deposit that is refundable only if the Tower fails to deliver the completed apartment in accordance with the contract. The remainder of the purchase price is paid on completion of the contract when Edwards obtains possession of the apartment.

Required:

For each of the scenarios, determine whether the seller should recognize revenue (a) over time or (b) when the product or service is completed. Explain your answer.

Real World Case 6–4 Determining progress towards completion; disclosures

Verizon, Lockheed Martin, TriNet LO6-3

Consider the following excerpts from revenue recognition disclosure notes:

1. **Verizon:** “We offer wireless services through a variety of plans on a postpaid or prepaid basis. For wireless service, we recognize revenue ... either as the service allowance units are used or as time elapses, because it reflects the pattern by which we satisfy our performance obligation through the transfer of service to the customer.”
2. **Lockheed Martin:** “For performance obligations to deliver products with continuous transfer of control to the customer, revenue is recognized based on the extent of progress towards completion of the performance obligation, generally using the percentage-of-completion cost-to-cost measure of progress for our contracts because it best depicts the transfer of control to the customer as we incur costs on our contracts. Under the percentage-of-completion cost-to-cost measure of progress, the extent of progress towards

completion is measured based on the ratio of costs incurred to date to the total estimated costs to complete the performance obligation(s).”

3. **TriNet:** “Revenues associated with this performance obligation are reported as professional service revenues and recognized using a ... method in which the promised services are transferred when a client’s payroll is processed by us...”

Required:

Based only on the information provided in each excerpt, determine whether the company is using an input-based or output-based approach for recognizing revenue over time.

Research Case 6–5 Performance obligations, options, allocating transaction price, timing of revenue recognition

 **LO6–4**,  **LO6–5**,  **LO6–6**

Mars Marine produces outboard motors for a variety of recreational and commercial boating configurations. Martin Quint, the owner of Mars Marine, is planning to provide to any person purchasing a Mars motor a coupon entitling them to a 40% discount on a ten-year maintenance contract. However, Mars Marine has never offered such maintenance contracts before. As an accountant employed at FirstBank, which is Mars Marine’s largest lender, you have voiced concern that this new idea could affect Mars Marine’s revenue recognition, potentially requiring that some of each sale be deferred and possibly putting the company in violation of earnings-based debt covenants as a result. “A sale is a sale!” Quint grumbled. “I don’t see why I can’t just recognize all the revenue for the sale of a motor when I sell the motor, and then I’ll cover the maintenance if I have to provide it in the future. Prove to me I can’t handle it that way!”

Required:

Access the FASB Accounting Standards Codification at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific nine-digit Codification citation (XXX-XX-XX-XX) that indicates the authoritative support in the Codification for each of the following aspects relevant to Quint’s request.

1. One question is whether the coupon for the maintenance contract should even be considered a separate performance obligation. What Codification citation indicates the

criteria for determining whether an option to purchase a maintenance contract constitutes a material right that gives rise to a performance obligation?

2. Assuming the maintenance contract is viewed as a separate performance obligation, what Codification citation indicates that the transaction price should be allocated to performance obligations based on their standalone selling prices?
3. Mars Marine has never offered this sort of maintenance contract before. What Codification citation indicates the approaches that it might use to estimate the standalone selling price of the maintenance contract?
4. Quint is likely to say that, even if some of a transaction price can be allocated to multiple performance obligations, the entire transaction price should be recognized as revenue at the time the motor is sold. What Codification citation indicates that the portion of the transaction price that is assigned to the maintenance contract should only be recognized as revenue when that performance obligation is satisfied?

Judgment Case 6–6 Performance obligation; licensing

LO6–5, LO6–7

Assume that **Pfizer**, a large research-based pharmaceutical company, enters into a contract with a start-up biotechnology company called HealthPro and promises to

1. Grant HealthPro the exclusive rights to use Pfizer's Technology A for the life of its patent. The license gives HealthPro the exclusive right to market, distribute, and manufacture Drug B as developed using Technology A. Pfizer views the patent as functional intellectual property.
2. Assign four full-time equivalent employees to perform research and development services for HealthPro in a specially designated Pfizer lab facility. The primary objective of these services is to receive regulatory approval to market and distribute Drug B using Technology A.

HealthPro is required to use Pfizer's lab to perform the research and development services necessary to develop Drug B using Technology A, because the expertise related to Technology A is proprietary to Pfizer and not available elsewhere.

Required:

Are the license and R&D development services separate performance obligations? Indicate "yes" or "no," and explain your reasoning.

Judgment Case 6–7 Principal or agent LO6–6

AuctionCo.com sells used products collected from different suppliers. Assume a customer purchases a used bicycle through AuctionCo.com for \$300. AuctionCo.com agrees to pay the supplier \$200 for the bicycle. The bicycle will be shipped to the customer by the original bicycle owner.

Required:

1. Assume AuctionCo.com takes control of this used bicycle before the sale and pays \$200 to the supplier. Under this assumption, how much revenue would AuctionCo.com recognize at the time of the sale to the customer?
2. Assume AuctionCo.com never takes control of this used bicycle before the sale. Instead, the bicycle is shipped directly to the customer by the original bicycle owner, and then AuctionCo.com pays \$200 to the supplier. Under this assumption, how much revenue would AuctionCo.com recognize at the time of the sale to the customer?
3. Assume AuctionCo.com promises to pay \$200 to the supplier regardless of whether the bicycle is sold, but the bicycle will continue to be shipped directly from the supplier to the customer. Under this assumption, how much revenue would AuctionCo.com recognize at the time of the sale to the customer?

Real World Case 6–8 Principal agent considerations LO6–6

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Some foreign companies file voluntarily.) Form 10-K, which includes the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access EDGAR on the Internet. The web address is www.sec.gov.
2. Search for the most recent 10-K's of **Expedia Group, Inc.**, and **Booking Holdings Inc.** (which includes Priceline). Search or scroll to find the revenue recognition note in the financial statements.

3. For each of the following types of revenue, indicate whether the amount shown in the income statement is “net” or “gross” (the terms used with respect to revenue recognition in the chapter), and briefly explain your answer.
 - a. Expedia’s “merchant hotel” revenues
 - b. Priceline’s “Name Your Own Price” services
 - c. Priceline’s “Merchant revenues”
4. Did Priceline change how it accounts for “Name Your Own Price” revenue upon adoption of the new revenue accounting standard? Indicate “yes” or “no,” and indicate the affect of any change on revenue, cost of revenue and net income.

Research Case 6–9 FASB codification; locate and extract relevant information and authoritative support for a financial reporting issue; reporting revenue as a principal or as an

 **LOG-6**

The birth of the Internet in the 1990s led to the creation of a new industry of online retailers such as **Amazon**, **Overstock.com**, and **Insight Enterprises, Inc.** Many of these companies often act as intermediaries between the manufacturer and the customer without ever taking possession of the merchandise sold. Revenue recognition for this type of transaction is challenging because it depends on whether a seller is classified for a particular transaction as a principal or an agent. Principals provide a “gross” presentation that includes revenue, cost of goods sold and profit. Agents provide a “net” presentation that includes as commission revenue only the difference between revenue and cost of goods sold.

Required:

1. Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. What is the specific nine-digit Codification citation (XXX-XX-XX-XX) that indicates what an entity assesses to determine whether the nature of its promise is to act as a principal or agent?
2. What indicators does the Codification list that suggest an entity is a principal? Determine the specific nine-digit Codification citation (XXX-XX-XX-XX).

3. Using EDGAR (www.sec.gov), access **Alphabet, Inc.**'s 2020 10-K. Locate the disclosure note that discusses the company's revenue recognition policy with respect to ads placed on Google Network Members' properties.
4. Do you agree with Alphabet's reasoning with respect to choosing whether it reports revenue gross versus net with respect to these advertising services? Indicate "yes" or "no," and explain.

Real World Case 6–10 Time value of money; disclosures; financial statement effects

Deere & Company LO6-6

The following is an excerpt from Note 2 of **Deere & Company**'s annual report: "Under the terms of sales agreements with dealers, interest-free periods are determined based on the type of equipment sold and the time of year of the sale. These periods range from one to twelve months for most equipment. ... If the interest-free or below market interest rate period exceeds one year, the company adjusts the expected sales revenue for the effects of the time value of money using a current market interest rate. The revenue related to the financing component is recognized in "Finance and interest income" using the interest method. The company does not adjust the sales price to account for a financing component if the expected interest-free or below market period is one year or less."

Required:

1. Is Deere & Company accounting appropriately for revenue on contracts with interest-free periods of:
 - a. Less than one year?
 - b. Greater than one year?
2. Imagine Deere sells two identical tractors, one to SoonCo and one to LaterCo, and in each case records an accounts receivable for the entire sale. The SoonCo receivable is due in 11.5 months. The LaterCo receivable is due in 12.5 months. Neither sales contract specifies any interest associated with the outstanding receivable. Consider the effects of these sales on Deere's financial statements. Compared to Deere's sale to LaterCo, how will Deere's sale to SoonCo's affect the following?
 - a. Total receivable at time of sale

- b. Sales revenue at time of sale
- c. Interest revenue at time of sale
- d. Interest revenue in period after sale
- e. Cash received upon collection of the receivable

Real World Case 6–11 Estimating standalone selling price; disclosures

eBay, Oracle, Lockheed Martin, EMCOR  **LO6-6**

Consider the following excerpts from revenue recognition disclosure notes:

1. **eBay:** “The transaction price is allocated to each performance obligation based on its stand-alone selling price (SSP). In instances where SSP is not directly observable, we generally estimate selling prices based on when they are sold to customers of a similar nature and geography. These estimates are generally based on pricing strategies, market factors, strategic objectives and observable inputs.”
2. **Oracle:** “We are unable to establish the SSP for our cloud licenses and on-premise licenses based on observable prices given the same products are sold for a broad range of amounts (that is, the selling price is highly variable) and a representative SSP is not discernible from past transactions or other observable evidence. As a result, the SSP for a cloud license and an on-premise license included in a contract with multiple performance obligations is determined by applying an ... approach whereby all other performance obligations within a contract are first allocated a portion of the transaction price based upon their respective SSPs, with any (remaining) amount of transaction price allocated to cloud license and on-premise license revenues.”
3. **Lockheed Martin:** “We primarily sell customized solutions unique to a customer’s specifications. When it is necessary to allocate the transaction price to multiple performance obligations, we typically use the expected cost plus a reasonable profit margin to estimate the standalone selling price of each product or service.”
4. **EMCOR:** “The Company determines the standalone selling price based on the price at which the performance obligation would have been sold separately in similar circumstances to similar customers. If the standalone selling price is not observable, the Company estimates the standalone selling price taking into account all available information such as market conditions and internal pricing guidelines.”

5. **EMCOR:** “In certain circumstances, the standalone selling price is determined using an expected profit margin on anticipated costs related to the performance obligation.”

Required:

Based only on the information provided in each excerpt, identify the approach used by the company to estimate stand-alone selling prices.

Real World Case 6–12 Identifying performance obligations; recognizing revenue at a point in time  **LO6–2**,  **LO6–4**

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor’s Discussion Material, can be obtained from the Deloitte Foundation at its website www.deloitte.com/us/truebloodcases.

Case 20-4: Customized Software

This case requires identification of performance obligations and the timing of revenue recognition.

Trueblood Accounting Case 6–13 Applying the five-step revenue recognition process  **LO6–1**,  **LO6–4**,  **LO6–5**,  **LO6–6**

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor’s Discussion Material, can be obtained from the Deloitte Foundation at its website www.deloitte.com/us/truebloodcases.

Case 17.7: Mesmerizing Marketers

This case concerns application of ASC 606 for purposes of recognizing revenue from contracts with customers.

Trueblood Accounting Case 6–14 Principal or agent  **LO6-6**

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The

case, along with Professor's Discussion Material, can be obtained from the Deloitte Foundation at its website www.deloitte.com/us/truebloodcases.

Case 20-3: *Hi-Tech Commerce Co.*

This case requires students to determine whether a seller is a principal or an agent.

Trueblood Accounting Case 6–15 Principal or agent financial statement effects; IFRS  **LO6–6**,  **LO6–10**

IFRS

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor's Discussion Material, can be obtained from the Deloitte Foundation at its website www.deloitte.com/us/truebloodcases.

Case 19.3: *Yeah, Science!*

This case concerns the presentation of revenue on a gross or net basis under U.S. GAAP and IFRS.

Communication Case 6–16 Performance obligations; loyalty program  **LO6–5**

Jerry's Ice Cream Parlor is considering a marketing plan to increase sales of ice cream cones. The plan will give customers a free ice cream cone if they buy 10 ice cream cones at regular prices. Customers will be issued a card that will be punched each time an ice cream cone is purchased. After 10 punches, the card can be turned in for a free cone.

Jerry Donovan, the company's owner, is not sure how the new plan will affect accounting procedures. He realizes that the company will be incurring costs each time a free ice cream cone is awarded, but there will be no corresponding revenue or cash inflow.

The focus of this case is on how to account for revenue if the new plan is adopted. Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to reach consensus on the appropriate accounting treatment for the new plan. That treatment should describe when revenue is recognized and how it will be calculated.

Required:

1. Each group member should deliberate the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10–15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group treatment.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Communication Case 6–17 Long-term contract; revenue recognition over time vs. upon project completion LO6–9

Willingham Construction is in the business of building high-priced, custom, single-family homes. The company, headquartered in Anaheim, California, operates throughout the Southern California area. The construction period for the average home built by Willingham is six months, although some homes have taken as long as nine months.

You have just been hired by Willingham as the assistant controller, and one of your first tasks is to evaluate the company's revenue recognition policy. The company presently recognizes revenue upon completion for all of its projects, and management is now considering whether revenue recognition over time is appropriate.

Required:

Write a one- to two-page memo to Virginia Reynolds, company controller, describing the differences between the effects of recognizing revenue over time and upon project completion on the income statement and balance sheet. Indicate any criteria specifying when revenue should be recognized. Be sure to include references to GAAP as they pertain to the choice of method. Do not address the differential effects on income taxes nor the effect on the financial statements of switching between methods.

Ethics Case 6–18 Revenue recognition LO6–2

Horizon Corporation manufactures personal computers. The company began operations in 2019 and reported profits for the years 2019 through 2022. Due primarily to increased competition and price slashing in the industry, 2023's income statement reported a loss of

\$20 million. Just before the end of the 2024 fiscal year, a memo from the company's chief financial officer to Jim Fielding, the company controller, included the following comments:

If we don't do something about the large amount of unsold computers already manufactured, our auditors will require us to write them off. The resulting loss for 2024 will cause a violation of our debt covenants and force the company into bankruptcy. I suggest that you ship half of our inventory to J.B. Sales, Inc., in Oklahoma City. I know the company's president, and he will accept the merchandise and acknowledge the shipment as a purchase. We can record the sale in 2024, which will boost profits to an acceptable level. Then J.B. Sales will simply return the merchandise in 2025 after the financial statements have been issued.

Page 335

Required:

Discuss the ethical dilemma faced by Jim Fielding.

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO6-2, LO6-6, LO6-7

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company's website (www.target.com).

Required:

1. What was the amount of revenue Target reported in its income statement for the fiscal year ended February 1, 2020.
2. Disclosure Note 2 indicates that Target generally records revenue in retail stores at the point of sale. Does that suggest that Target generally records revenue at a point in time or over a period of time? Explain.
3. Disclosure Note 2 indicates that customers ("guests") can return some merchandise within 90 days of purchase and can return other merchandise within a year of purchase. How is Target's revenue and net income affected by returns, given that it does not know at the time a sale is made which items will be returned?
4. Disclosure Note 2 discusses Target's accounting for gift card sales. Does Target recognize revenue when it sells a gift card to a customer? If not, when does it recognize revenue? Explain.
5. Disclosure Note 4 discussed how Target accounts for consideration received from vendors, which they call "vendor income." Does that consideration produce revenue for Target? Does that consideration produce revenue for Target's vendors? Explain.

Air France-KLM Case LO6-2, LO6-4, LO6-5

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. In note 4.6, AF indicates that “Sales related to air transportation, which consist of passenger and freight transportation, are recognized when the transportation service is provided,” so passenger and freight tickets “are consequently recorded as ‘Deferred revenue upon issuance date.’”
 - a. Examine AF’s balance sheet. What is the total amount of deferred revenue on ticket sales as of December 31, 2019?
 - b. When transportation services are provided with respect to the deferred revenue on ticket sales, what journal entry would AF make to reduce deferred revenue?
 - c. Does AF’s treatment of deferred revenue under IFRS appear consistent with how these transactions would be handled under U.S. GAAP? Explain.
2. Assume that AF is forced to cancel a flight due to mechanical trouble, requiring it to promise €50,000 of compensation to affected passengers. Prepare the journal entry that AF would make to record this event.
3. AF has a frequent flyer program (also called a “loyalty program”), “Flying Blue,” which allows members to acquire “miles” as they fly on AF or partner airlines that are redeemable for free flights or other benefits.
 - a. Does AF treat “Miles” as a separate performance obligation?
 - b. Does AF report any liability associated with these miles as of December 31, 2019?
 - c. Is AF’s accounting for its frequent flier program consistent with IFRS 15?

CHAPTER 7

Cash and Receivables

OVERVIEW

We begin our study of assets by looking at cash and receivables—the two assets typically listed first in a balance sheet. For cash, the key issues are internal control and classification in the balance sheet. For receivables, the key issues are valuation and the related income statement effects of transactions involving accounts receivable and notes receivable.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO7-1** Define what is meant by internal control and describe some key elements of an internal control system for cash receipts and disbursements. (p. 338)
-  **LO7-2** Explain the possible restrictions on cash and their implications for classification in the balance sheet. (p. 339)
-  **LO7-3** Distinguish between the gross and net methods of accounting for cash discounts. (p. 342)
-  **LO7-4** Describe the accounting treatment for merchandise returns. (p. 344)
-  **LO7-5** Describe the accounting treatment of anticipated uncollectible accounts receivable. (p. 348)
-  **LO7-6** Describe how to estimate the allowance for uncollectible accounts using the CECL model. (p. 350)
-  **LO7-7** Describe the accounting treatment of notes receivable. (p. 354)
-  **LO7-8** Differentiate between the use of receivables in financing arrangements accounted for as a secured borrowing and those

accounted for as a sale. (p. 360)

 **LO7-9** Describe the variables that influence a company's investment in receivables and calculate the key ratios used by analysts to monitor that investment. (p. 368)

 **LO7-10** Discuss the primary differences between U.S. GAAP and IFRS with respect to cash and receivables. (pp. 340, 359, and 367)

FINANCIAL REPORTING CASE

PhotosIndia.com/Glow Images

Bad Debt Trouble

Your roommate, Karen Buckley, was searching for some information about her future employer, **Community Health Systems**. Karen, a nursing major, noticed an article online titled “CHS Missed Big in Q4.” “This doesn’t look good,” Karen said. “This article says my new employer’s provision for bad debts is \$200 million. Does that mean those patients haven’t paid? What is CHS doing for cash—I want my paycheck to clear!” You look over the article and start to explain. “First of all, the term *provision* just means expense. The company uses what is called the allowance method to account for bad debts. It looks like CHS recorded more in expense and increased the allowance for uncollectible accounts. That doesn’t necessarily mean they have a cash flow problem.” Karen was not happy with your answer. “So, it isn’t that the patients haven’t paid, it’s that they aren’t going to pay? How does CHS know what they are going to do? And here is another article saying that CHS is securitizing its receivables to get more cash. Does that mean

they are making the receivables more secure?” “Okay,” you offer, “let’s start at the beginning.”

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Explain the allowance method of accounting for bad debts.
2. What approaches might CHS have used to arrive at the \$200 million bad debt provision?
3. Are there any alternatives to the allowance method?
4. What does it mean for CHS to securitize its receivables?

In the earlier chapters of this text, we studied the underlying measurement and reporting concepts for the basic financial statements presented to external decision makers. Now we turn our attention to the elements of those financial statements. Specifically, we further explore the elements of the balance sheet, and also consider the income statement effects of transactions involving these elements. We first address assets, then liabilities, and finally, shareholders’ equity. This chapter focuses on the current assets cash and cash equivalents and receivables.

PART A

Cash and Cash Equivalents

Cash includes currency and coins, balances in checking accounts, and items acceptable for deposit in these accounts, such as checks and money orders received from customers. These forms of cash represent amounts readily available to pay off debt or to use in operations, without any legal or contractual restriction.

Managers typically invest temporarily idle cash to earn interest on those funds rather than keep an unnecessarily large checking account. These amounts are essentially equivalent to cash because they can quickly become available for use as cash. So, short-term, highly liquid investments that can be readily converted to cash with little risk of loss are viewed as cash equivalents. For financial reporting, we make no distinction between cash in the form of currency or bank account balances and amounts held in cash-equivalent investments.

Cash equivalents include money market funds, treasury bills, and commercial paper. To be classified as cash equivalents, these investments must have a maturity date no longer than three months *from the date of purchase*. Companies are permitted flexibility in designating cash equivalents and must establish individual policies regarding which short-term, highly liquid investments are classified as cash equivalents. A company's policy should be consistent with the usual motivation for acquiring these investments. The policy should be disclosed in the notes to the financial statements.

A company's policy concerning which short-term, highly liquid investments it classifies as cash equivalents should be described in a disclosure note.

Page 338

 **Illustration 7-1** shows a note from the 2019 annual report of **Walgreens Boots Alliance, Inc.**, which operates the second largest drugstore chain in the United States.

Illustration 7-1 Disclosure of Cash Equivalents—Walgreens Boots Alliance, Inc.

Real World Financials

Note 1: Summary of Major Accounting Policies (in part) Cash and Cash Equivalents

Cash and cash equivalents include cash on hand and highly liquid investments with an original maturity of three months or less. Credit and debit card receivables, which generally settle within two to seven business days, of \$90 million and \$127 million were included in cash and cash equivalents at August 31, 2019 and 2018, respectively.

Source: Walgreens Boots Alliance, Inc.

The measurement and reporting of cash and cash equivalents are largely straightforward because cash generally presents no measurement problems. It is the standard medium of exchange and the basis for measuring assets and liabilities. Cash and cash equivalents usually are combined and reported as a single amount in the balance sheet. However, cash that is not available for use in current operations because it is restricted for a special purpose usually is classified in one of the noncurrent asset categories. Restricted cash is discussed later in this chapter.

Credit and debit card receivables often are included in cash equivalents.

All assets must be safeguarded against possible misuse. However, cash is the most liquid asset and the asset most easily stolen. As a result, a system of internal control of cash is a key accounting issue.

Internal Control

LO7-1 Define what is meant by internal control and describe some key elements of an internal control system for cash receipts and disbursements.

The success of any business enterprise depends on an effective system of **internal control**. Internal control refers to a company's plan to (a) encourage adherence to company policies and procedures, (b) promote operational efficiency, (c) minimize errors and theft, and (d) enhance the reliability and accuracy of accounting data. From a financial accounting perspective, the focus is on controls intended to improve the accuracy and reliability of accounting information and to safeguard the company's assets.

Recall from Chapter 1 that Section 404 of the *Sarbanes-Oxley Act of 2002* requires that companies document their internal controls and assess their adequacy. The Public Company Accounting Oversight Board AS 2201 further requires the auditor to express its own opinion on whether the company has maintained effective internal control over financial reporting.

The Sarbanes-Oxley Act requires a company to document and assess its internal controls. Auditors express an opinion on management's assessment.

Many companies have incurred significant costs in an effort to comply with the requirements of Section 404.¹ A framework for designing an internal control system is provided by the *Committee of Sponsoring Organizations (COSO)* of the Treadway Commission.² Formed in 1985, the organization is dedicated to improving the quality of financial reporting through, among other things, effective internal controls.

COSO defines internal control as a process, undertaken by an entity's board of directors, management, and other personnel, designed to provide reasonable assurance regarding the achievement of objectives in the following categories:

- Effectiveness and efficiency of operations.
- Reliability of financial reporting.
- Compliance with applicable laws and regulations.³

Internal Control Procedures—Cash Receipts

As cash is the most liquid of all assets, a well-designed and functioning system of internal control must surround all cash transactions. **Separation of duties** is critical. Individuals who have physical responsibility for assets should not also have access to accounting records. So, employees who handle cash should not be involved in or have access to accounting records, nor be involved in the reconciliation of cash book balances to bank balances.

Employees involved in recordkeeping should not also have physical access to the assets.

Consider the cash receipts process. Most nonretail businesses receive payment for goods by checks received through the mail. An approach to internal control over cash receipts that utilizes separation of duties might include the following steps:

1. Employee A opens the mail each day and prepares a multicopy listing of all checks, including the amount and payor's name.
2. Employee B takes the checks, along with one copy of the listing, to the person responsible for depositing the checks in the company's bank account.
3. A second copy of the check listing is sent to the accounting department, where Employee C enters receipts into the accounting records.

Good internal control helps ensure accuracy as well as safeguard against theft. The bank-generated deposit slip can be compared with the check listing to verify that the amounts received were also deposited. And, because the person opening the mail is not the person who maintains the accounting records, it's impossible for one person to steal checks and alter accounting records to cover up their theft.

Internal Control Procedures—Cash Disbursements

Proper controls for cash disbursements should be designed to prevent any unauthorized payments and ensure that disbursements are recorded in the proper accounts. Important elements of a cash disbursement control system include the following:

1. All disbursements, other than very small disbursements from petty cash, should be made by check. This provides a permanent record of all disbursements.

2. All expenditures should be *authorized* before a check is prepared. For example, a vendor invoice for the purchase of inventory should be compared with the purchase order and receiving report to ensure the accuracy of quantity, price, part numbers, and so on. This process should include verification of the proper ledger accounts to be debited.
3. Checks should be signed only by authorized individuals.

Once again, separation of duties is important. Responsibilities for check signing, check writing, check mailing, cash disbursement documentation, and recordkeeping should be separated whenever possible. That way, a single person can't write checks to himself and disguise that theft as a payment to an approved vendor.

An important part of any system of internal control of cash is the periodic reconciliation of book balances and bank balances to the correct balance. In addition, a petty cash system is employed by many business enterprises. We cover these two topics in [Appendix 7A](#).

Restricted Cash and Compensating Balances

LO7-2 Explain the possible restrictions on cash and their implications for classification in the balance sheet.

We discussed the classification of assets and liabilities in  **Chapter 3**. You should recall that only cash available for current operations or to satisfy current liabilities is classified as a current asset. Cash that is restricted in some way and not available for current use usually is reported as a noncurrent asset such as *investments* or *other assets*.

Restrictions on cash can be informal, arising from management's intent to use a certain amount of cash for a specific purpose. For example, a company may set aside funds for future plant expansion. This cash, if material, should be classified as investments or other assets. Sometimes restrictions are contractually imposed. Debt instruments, for instance, frequently require the borrower to set aside funds (often referred to as a sinking fund) for the future payment of a debt. In these instances, the restricted cash is classified as noncurrent investments or other assets if the debt is classified as noncurrent. On the other hand, if the liability is current, the restricted cash also is classified as current. Disclosure notes should describe any material restrictions of cash and indicate the amounts and line items in which restricted cash appears in the balance sheet. Also, on the statement of cash flows, restricted cash and cash equivalents should be included with cash and cash equivalents when reconciling the beginning-of-period and end-of-period cash balances.

Banks frequently require cash restrictions in connection with loans or loan commitments (lines of credit). Typically, the borrower is asked to maintain a specified balance in a low interest or noninterest-bearing account at the bank (creditor). The required balance usually is some percentage of the committed amount (say 2% to 5%). These are known as **compensating balances** because they compensate the bank for granting the loan or extending the line of credit.

A compensating balance results in the borrower's paying an effective interest rate higher than the stated rate on the debt. For example, suppose that a company

The effect of a compensating balance is a higher effective interest rate on the debt.

borrowed \$10,000,000 from a bank at an interest rate of 12%. If the bank requires a compensating balance of \$2,000,000 to be held in a noninterest-bearing checking account, the company really is borrowing only \$8,000,000 (the loan less the compensating balance). This means an effective interest rate of 15% (\$1,200,000 interest divided by \$8,000,000 cash available for use).

The classification and disclosure of a compensating balance depends on the nature of the restriction and the classification of the related debt.⁴ If the restriction is legally binding, the cash is classified as either current or noncurrent (investments or other assets) depending on the classification of the related debt. In either case, note disclosure is appropriate.

A material compensating balance must be disclosed regardless of the classification of the cash.

If the compensating balance arrangement is informal with no contractual agreement that restricts the use of cash, the compensating balance can be reported as part of cash and cash equivalents, with note disclosure of the arrangement.

 **Illustration 7-2** provides an example of a note disclosure from **Walgreens'** annual report.

Illustration 7-2 Disclosure of Restricted Cash—Walgreens Boots Alliance, Inc.

Real World Financials

Note 1: Summary of Major Accounting Policies (in part) Restricted Cash

The Company is required to maintain cash deposits with certain banks which consist of deposits restricted under contractual agency agreements and cash restricted by law and other obligations. At August 31, 2019 and 2018, the amount of such restricted cash was \$184 million and \$190 million, respectively, and is reported in other current assets on the Consolidated Balance Sheets.

Source: Walgreens Boots Alliance, Inc.

LO7-10 Discuss the primary differences between U.S. GAAP and IFRS with respect to cash and receivables.

International Financial Reporting Standards

Cash and Cash Equivalents. In general, cash and cash equivalents are treated similarly under IFRS and U.S. GAAP. One difference relates to bank overdrafts, which occur when withdrawals from a bank account exceed the available balance. U.S. GAAP requires that overdrafts typically be treated as liabilities. In contrast, *IAS No.7* allows bank overdrafts to be offset against other cash accounts when overdrafts are payable on demand and fluctuate between positive and negative amounts as part of the normal cash management program that a company uses to minimize its cash balance.⁵ For example, LaDonia Company has two cash accounts with the following balances as of December 31, 2024:

| | |
|---------------|-----------|
| National Bank | \$300,000 |
| Central Bank | (15,000) |

Under U.S. GAAP, LaDonia's 12/31/24 balance sheet would report a cash asset of \$300,000 and an overdraft current liability of \$15,000. Under IFRS, LaDonia would report a cash asset of \$285,000.

Decision Makers' Perspective

Cash often is called a *nonearning* asset because it earns little or no interest. For this reason, managers invest idle cash in either cash equivalents or short-term investments, both of which provide a larger return than a checking account. Management's goal is to hold the minimum amount of cash necessary to conduct normal business operations, meet its obligations, and take advantage of opportunities. Too much cash reduces profits through lost returns, while too little cash increases risk. This trade-off between risk and return is an ongoing choice made by management (internal decision makers). Whether the choice made is appropriate is an ongoing assessment made by investors and creditors (external decision makers).

A company must have cash available for the compensating balances we discussed in the previous section, as well as for planned disbursements related to normal operating, investing, and financing cash flows.

Companies hold cash to pay for planned and unplanned transactions and to satisfy compensating balance requirements.

However, because cash inflows and outflows can vary from planned amounts, a company needs an additional cash cushion as a precaution against unexpected events. The size of the cushion depends on the company's ability to convert cash equivalents and short-term investments into cash quickly, along with its short-term borrowing capacity.

Liquidity is a measure of a company's cash position and overall ability to obtain cash in the normal course of business to pay liabilities as they come due. A company is assumed to be liquid if it has sufficient cash or is capable of converting its other assets to cash in a relatively short period of time so that current needs can be met. Frequently, liquidity is measured with respect to the ability to pay currently maturing debt. The current ratio is one of the most common ways of measuring liquidity and is calculated by dividing current assets by current liabilities. By comparing liabilities that must be satisfied in the near term with assets that either are cash or will be converted to cash in the near term, we have a base measure of a company's liquidity. We can refine the measure by adjusting for the implicit assumption of the current ratio that all current assets are equally liquid. In the acid-test or quick ratio, the numerator consists of "quick assets," which include only cash and cash equivalents, short-term investments, and accounts receivable. By eliminating inventories and prepaid expenses, the current assets that are less readily convertible into cash, we get a more

precise indication of a company's short-term liquidity than with the current ratio. We discussed and illustrated these liquidity ratios in  **Chapter 3**.

We should evaluate the adequacy of any ratio in the context of the industry in which the company operates and other specific circumstances. Bear in mind, though, that industry averages are only one indication of acceptability, and any ratio is but one indication of liquidity. Profitability, for instance, is perhaps the best long-run indication of liquidity. And a company may be very efficient in managing its current assets so that receivables are more liquid than they otherwise would be. The receivables turnover ratio we discuss in Part B of this chapter offers a measure of management's efficiency in this regard.

There are many techniques that a company can use to manage cash balances. A discussion of these techniques is beyond the scope of this text. However, it is sufficient here to understand that management must make important decisions related to cash that have a direct impact on a company's profitability and risk. Because the lack of prudent cash management can lead to the failure of an otherwise sound company, it is essential that managers, as well as outside investors and creditors, maintain close vigil over this facet of a company's health. ●

A manager should actively monitor the company's cash position.

PART B

Current Receivables

Receivables represent a company's claims to the future collection of cash, other assets, or services. Receivables resulting from the sale of goods or services on account (also called *credit sales*) are called **accounts receivable** and often are referred to as *trade receivables*. *Nontrade receivables* are those other than trade receivables and include tax refund claims, interest receivable, and advances to employees. When a receivable, trade or nontrade, is accompanied by a formal promissory note, it is referred to as a *note receivable*. We consider notes receivable after first discussing accounts receivable.

As you study receivables, realize that one company's claim to the future collection of cash corresponds to another company's (or individual's) obligation to pay cash. For example, one company's account receivable will be the mirror image of another company's account payable.  **Chapter 13** addresses accounts payable and other current liabilities.

An account receivable and an account payable reflect opposite sides of the same transaction.

Accounts Receivable

Accounts receivable are created when sellers recognize revenue associated with a credit sale. Recall from Chapter 6 that revenue is recognized when a seller satisfies a performance obligation. For most products or services, the performance obligation is satisfied at the point of delivery of the product or service, so revenue and the related receivable are recognized at that time.

Typically, revenue and related accounts receivable are recognized at the point of delivery of the product or service.

Most businesses provide credit to their customers, either because it's not practical to require immediate cash payment or to encourage customers to purchase the company's product or service. Accounts receivable are *informal* credit arrangements supported by an

Accounts receivable are current assets because their normal collection period falls within one year (or the company's operating cycle, if longer).

invoice and normally are due in 30 to 60 days after the sale. They almost always are classified as current assets because their normal collection period falls within one year (or the company's operating cycle, if longer).

Initial Valuation of Accounts Receivable

You learned in  Chapter 6 that sellers recognize an amount of revenue equal to the amount they are entitled to receive in exchange for satisfying a performance obligation. Sellers allocate the transaction price to the various performance obligations in a contract and then recognize revenue (and the corresponding receivable for credit sales) when performance obligations are satisfied. Clearly, revenue recognition and accounts receivable recognition are closely related. That means that some of the complexities that affect revenue recognition also affect accounts receivable.

One potential complexity relates to time value of money. Because credit sales allow a customer to get goods or services now but pay for them in the future,

Accounts receivable typically are not shown at present value.

you can view a credit sale as providing a loan in addition to whatever goods or services are included in a contract. However, as you learned in  Chapter 6, sellers can ignore this “financing component” when it is not significant, which typically is the case when

receivables are due in less than one year. Therefore, sellers usually record relatively short-term accounts receivable at the entire amount the seller expects to receive, rather than at the present value of that amount.⁶ For long-term receivables, the financing component is more significant, and sellers have to account for it, as you will see when we cover notes receivable later in this section.

Another type of complexity relates to variable consideration. As you learned in  **Chapter 6**, contracts can include some aspect of variable consideration that must be estimated when determining the transaction price, and therefore the amount of the receivable. In particular, contracts can allow cash discounts as well as sales returns and allowances. Let's discuss each of those complexities in turn.

DISCOUNTS

LO7-3 Distinguish between the gross and net methods of accounting for cash discounts.

There are two types of discounts that companies commonly offer, trade discounts and cash discounts.

Companies frequently offer **trade discounts** to customers, which usually are a percentage reduction

from the list price. For example, a manufacturer might list a machine part at \$2,500 but sell it to an important customer at a 10% discount. That discount of \$250 is reflected by recording the sale at the agreed-upon price of \$2,250.

Trade discounts allow a customer to pay an amount that is below the list price.

Trade discounts are not variable consideration, because the amount the company is entitled to receive from the customer doesn't depend on the outcome of a

future event. Trade discounts are simply a way to specify the current transaction price and thus affect reported revenue at that time. Many companies use trade discounts to offer reduced prices to certain customers (such as college students at the nearby pizza restaurant or senior citizens at the local ballgame), to give quantity discounts to large customers, or perhaps to disguise real prices from competitors.

Trade discounts are not variable consideration.

Sales discounts, often called *cash discounts*, represent reductions in the amount to be received by the company from a customer that makes payment within a specified period

of time. A sales discount provides an incentive for quick payment. The amount of a sales discount and the time period within which it's available usually are conveyed by terms like 2/10, n/30 (meaning a 2% discount if paid within 10 days, otherwise full payment within 30 days).

Sales discounts reduce the amount to be received from the customer if payment occurs within a specified short period of time.

Sales discounts are variable consideration, because the amount to be received by the company depends on a future event—whether cash is received from the customer within the discount period. However, it is usually difficult for a seller to estimate the amount of discount that will be taken with every sale. Therefore, sellers use two methods in practice that simplify the process of recording sales discounts: the *gross method* and the *net method*. To see how these methods work, consider the example in [Illustration 7-3](#).

Sales discounts are variable consideration.

Illustration 7-3 Sales Discounts Using the Gross Method versus Net Method

The Hawthorne Manufacturing Company offers credit customers a 2% sales discount if the sales price is paid within 10 days. Any amounts not paid within 10 days are due in 30 days. These payment terms are stated as 2/10, n/30.

The following events occurred:

1. On October 5, 2024, Hawthorne sold merchandise at a price of \$20,000.
2. The customer paid \$13,720 (\$14,000 less the 2% cash discount) on October 14.
3. The customer paid the remaining balance of \$6,000 on November 4.

The appropriate journal entries to record the sale and cash collection, comparing the gross and net methods are as follows:

| Gross Method | | Net Method | |
|-------------------------|---------------|-------------------------|---------------|
| October 5, 2024 | | October 5, 2024 | |
| Accounts receivable | 20,000 | Accounts receivable | 19,600 |
| Sales revenue | 20,000 | Sales revenue | 19,600 |
| October 14, 2024 | | October 14, 2024 | |

| | | | | |
|-------------------------|------------|--------|---------------------------|------------|
| Cash | 13,720 | | Cash | 13,720 |
| Sales discounts | 280 | | Accounts receivable | 13,720 |
| | | 14,000 | | |
| Accounts receivable | | | | |
| November 4, 2024 | | | November 4, 2024 | |
| Cash | 6,000 | | Cash | 6,000 |
| Accounts receivable | | 6,000 | Accounts receivable | 5,880 |
| | | | Sales discounts forfeited | 120 |

Using the **gross method**, we initially record the revenue and related receivable at the full **\$20,000** price. Using the **net method**, we record revenue and the related accounts receivable at the agreed-upon price *less* the 2% discount offered, yielding **\$19,600** of revenue at the time of sale. Subsequent accounting under both methods depends on whether payment occurs within the discount period.

Payment within the discount period. On October 14, Hawthorne receives payment for \$14,000 of the \$20,000 merchandise sold. Because payment is within the 10-day discount period, the company allows a discount of **\$280** ($\$14,000 \times 2\%$) and receives only \$13,720 ($\$14,000 - \280). Under the gross method, we record the discount as a debit to an account called *sales discounts*. This is a contra account to sales revenue and is deducted from sales revenue to derive the net sales revenue reported in the income statement. Under the net method, we simply debit cash and credit accounts receivable for \$13,720, because the discount was recorded at the time of the sale.

The **gross method** assumes customers won't take sales discounts and then reduces revenue for any discounts taken.

Payment *not* within the discount period. On November 4, Hawthorne receives final payment for the remaining \$6,000 of merchandise sold. This payment is after the 10-day discount period, and the customer

The **net method** assumes customers will take sales

forfeits the possible discount of **\$120** ($\$6,000 \times 2\%$).

discounts and then increases revenue for discounts forfeited.

Under the gross method, we simply record the collection on account for \$6,000, the gross amount of receivable originally recorded. Under the net method, we reduce the receivable by \$5,880 and record the \$120 discount not taken by the customer as a credit to an account called *sales discounts forfeited*. This account is added to sales revenue to calculate net sales revenue.⁷

With both methods, net sales revenue ends up being reduced by only those discounts that are actually taken. Therefore, both methods get us to the same place from the perspective of net sales revenue and total net income recognized, as shown below:

| | Gross Method | Net Method |
|--------------------------|-----------------|-----------------|
| Sales revenue | \$20,000 | \$19,600 |
| Less: Sales discounts | (280) | 0 |
| Add: Discounts forfeited | 0 | 120 |
| Net sales revenue | <u>\$19,720</u> | <u>\$19,720</u> |

Which method is correct? Remember from

 **Chapter 6** that sales revenue and the corresponding accounts receivable should be stated at the amount of consideration the seller expects to be entitled to

The net method is more correct conceptually.

receive. The net method typically better reflects that amount, because the discount is a savings that prudent customers are unwilling to forgo. To appreciate the size of that savings, consider a 2/10, n/30 discount offer on a \$100 sale. In order to save \$2 (equal to $\$100 \times 2\%$), the customer must pay \$98 twenty days earlier than otherwise due, effectively “investing” \$98 to “earn” \$2. That equals a rate of return of 2.04% ($\$2/\98) for a 20-day period. To convert this 20-day rate to an annual rate, we multiply by 365/20:

$$2.04\% \times 365/20 = 37.23\% \text{ effective rate}$$

Wouldn't you like to earn a sure return of over 37%? You can see why customers try to take the discount if at all possible. That's why recording the receivable net of the discount more accurately reflects the amount the seller expects to be entitled to receive. Still, even though the net method is more correct conceptually, both methods are used in practice, because many sellers prefer to record receivables at gross and then make downward adjustments at

the time the receivable is collected. The dollar value of the difference between methods usually is viewed as immaterial.

SALES RETURNS

LO7-4 Describe the accounting treatment for merchandise returns.

Customers frequently are given the right to return merchandise they purchase. When practical, a customer might be given a special price reduction as an incentive to keep the merchandise they want to return.⁸ We use the term **sales returns** to refer to these returns and other adjustments. Sales returns are common in industries such as food products, publishing, and retailing.

As we discussed in **Chapter 6**, sales returns are a form of variable consideration. Because products might be returned or prices adjusted, there is uncertainty as to the final amount the seller will be entitled to receive (the transaction price). Recognizing returns only at the time they happen might cause revenue and profit to be overstated in the period the sale is made and understated in the return period. For example, assume merchandise is sold to a customer for \$10,000 in December 2024, the last month in the selling company's fiscal year, and that the merchandise cost \$6,000. The company would recognize a gross profit of \$4,000 in 2024 (\$10,000 - \$6,000). If all of the merchandise is returned in 2025, after financial statements for 2024 are issued, gross profit will be overstated in 2024 and understated in 2025 by \$4,000. The 2024 balance sheet also is affected, with a refund liability understated by \$10,000 and inventory understated by \$6,000.

Sales returns are variable consideration.

To avoid overstating revenue and net assets in 2024, the seller should reduce revenue for all returns of current-period sales, including those that occur in the current period as well as those the seller estimates will occur eventually. We accomplish this by debiting a contra revenue account, **sales returns**, which reduces sales revenue indirectly. This way, the income statement will report net sales revenue (sales revenue minus actual and estimated sales returns).

Sellers should reduce revenue for estimated future sales returns.

Timing of Return Recognition. When should estimated returns be recognized? Technically, the seller should estimate returns each time a sale is made and adjust the transaction price accordingly at that time.

However, as we noted in [Chapter 6](#), it is impractical for most sellers to estimate returns every time they make a sale. For that reason, sellers typically account for any returns during the reporting period when the returns actually occur, and then use an adjusting entry

at the end of the reporting period to recognize additional future returns expected to occur as a result of the current period's sales transactions. In that adjusting entry, the seller debits sales returns and credits a **refund liability** for the amount the seller estimates will be refunded to customers who make returns. We see that approach in [Illustration 7-4](#).

As shown in [Illustration 7-4](#), Hawthorne initially sells merchandise to customers for \$2,000,000. The company records the cash collected and sales revenue. At the same time, the company also records cost of goods sold and a decrease in inventory of \$1,200,000.

A contra revenue account used to reduce revenue for actual and estimated sales returns.

Sales revenue

Less: Sales returns

Net sales revenue

A refund liability reflects the amount the seller estimates will be refunded to customers who make returns.

Illustration 7-4 Accounting for Sales Returns

During 2024, its first year of operations, the Hawthorne Manufacturing Company sold merchandise for \$2,000,000 cash. This merchandise cost Hawthorne \$1,200,000 (60% of the selling price). Industry experience indicates that 10% of all sales will be returned, which equals \$200,000 ($\$2,000,000 \times 10\%$) in this case. Customers returned \$130,000 of sales during 2024. Hawthorne uses a perpetual inventory system.

| | | | |
|---|--------------------|-----------|-----------|
| Sales of \$2,000,000 occurred in 2024, with cost of goods sold of \$1,200,000. | Cash | 2,000,000 | |
| | Sales revenue | | 2,000,000 |
| | Cost of goods sold | 1,200,000 | |
| | Inventory | | 1,200,000 |

| | | | |
|--|-------------------------|---------------|---------------|
| Sales returns of \$130,000 occurred during 2024. The cost of returned inventory is \$78,000 (\$130,000 × 60%). | Sales returns | 130,000 | |
| | Cash | | 130,000 |
| | Inventory | 78,000 | |
| | Cost of goods sold | | 78,000 |
| At the end of 2024, an additional \$70,000 of sales returns are expected. The cost of the inventory expected to be returned is \$42,000 (\$70,000 × 60%). | Sales returns | 70,000 | |
| | Refund liability | | 70,000 |
| | Inventory—est. returns | 42,000 | |
| | Cost of goods sold | | 42,000 |
| Sales returns of \$70,000 occurred during 2025. The cost of returned inventory is \$42,000. | Refund liability | 70,000 | |
| | Cash | | 70,000 |
| | Inventory | 42,000 | |
| | Inventory—est. returns | | 42,000 |

Actual Returns. As actual returns occur, the company needs to reduce the sales revenue previously recognized. This is done by debiting sales returns, a contra revenue account. The credit to cash represents the amount of the refund. If the sales initially had been made on credit, Hawthorne would have debited accounts receivable rather than cash at the time of sale. Then, if the receivable was still outstanding at the time the return occurred, Hawthorne would credit accounts receivable to show that the receivable is no longer outstanding.

Hawthorne also must adjust inventory to account for the returned merchandise. In a perpetual inventory system, we record increases (debits) and decreases (credits) in the inventory account as events occur. So, when actual returns occur, Hawthorne increases

inventory to include the \$78,000 cost of returned items. The return also means that the previous amount for cost of goods sold should be reduced.

Estimated Returns. At the end of the period, Hawthorne estimates that another \$70,000 of sales will be returned. One common way of making this estimate would be to base it on the difference between an estimate of the total amount of returns of current year sales (\$200,000) and the amount already returned during the year (\$130,000). To account for this estimate of \$70,000 of future returns, we reduce revenue in the current period by debiting sales returns and recognizing a refund liability. The refund liability represents an estimate of additional cash that will be refunded when customers return products in the future. Even if the initial sale was for credit and cash had not yet been received, Hawthorne still would recognize a refund liability for estimated future returns.⁹ The \$42,000 of inventory *expected* to be returned in 2025 is included as an asset, *Inventory—estimated returns*, which reflects Hawthorne’s right to any inventory that is returned. That asset is shown in Hawthorne’s 2024 balance sheet, separate from Hawthorne’s normal inventory.

Be sure to notice that this accounting approach reports Hawthorne’s 2024 income net of *actual* and *estimated* returns. Hawthorne’s 2024 income statement reports net sales revenue of \$1,800,000, which is gross sales revenue of \$2,000,000 reduced by actual and estimated returns of \$200,000 (\$130,000 + \$70,000). Hawthorne’s 2024 cost of goods sold equals \$1,080,000, which is \$1,200,000 reduced by the cost of actual and estimated returns of \$120,000 (\$78,000 + \$42,000).¹⁰

Sometimes a customer will return damaged or defective merchandise. This possibility is included in a company’s estimate of returns. As we will see in [Chapter 9](#), the amount recorded in inventory for damaged or defective merchandise reflects a value less than its original cost.

Changes in Estimated Returns. What happens if Hawthorne’s estimate of future returns is wrong, such that returns end up being more or less than \$70,000?

Hawthorne won’t revise prior years’ financial statements to reflect the new estimate. Instead, as you learned in Chapter 6, Hawthorne must adjust the accounts to reflect the change in estimated returns, with any effect on income recognized in the period in which the adjustment is made. For example, suppose in our illustration that only \$60,000 of 2024 sales were returned in 2025, instead of the \$70,000 that Hawthorne anticipated, and that Hawthorne estimates that no more returns will occur. In that case, the refund liability still has a pre-adjustment balance of **\$10,000**

Changes in estimated returns are recorded in whatever period the estimate changes.

remaining from 2024 sales. Likewise, the inventory—estimated returns account still has a pre-adjustment balance of **\$6,000** ($60\% \times \$10,000$) remaining from 2024 sales.

| Refund liability | | |
|------------------------|---------------|---------------|
| 1/1/2025 | | 70,000 |
| 2025 returns | 60,000 | |
| Pre-adjustment balance | | 10,000 |
| Change in estimate | 10,000 | |
| 12/31/2025 | | 0 |

| Inventory—estimated returns | | |
|-----------------------------|--------------|--------------|
| 1/1/2025 | 42,000 | |
| 2025 returns | | 36,000 |
| Pre-adjustment balance | 6,000 | |
| Change in estimate | | 6,000 |
| 12/31/2025 | 0 | |

In 2025, Hawthorne would record its change in estimated returns of 2024 sales as follows:

| | | |
|---|---------------|--------------|
| Refund liability | 10,000 | |
| Sales returns (\$70,000 – \$60,000) | | 10,000 |
| Cost of goods sold ($60\% \times \$10,000$) | 6,000 | |
| Inventory—estimated returns | | 6,000 |

These adjustments remove the remaining 2024 balance from the refund liability and inventory—estimated returns. They also increase net sales revenue (by reducing sales returns) and cost of goods sold in 2025, the period in which the change in estimate occurs.

Experience guides firms when estimating returns.

How do companies estimate returns? They rely on past history, but they also consider any changes that might affect future experience. For example, changes in customer base, payment terms offered to customers, and overall economic conditions might suggest that future returns will differ from past returns. The task of estimating returns is made easier for

many large retail companies whose fiscal year-end is the end of January. Since retail companies generate a large portion of their annual sales during the Christmas season, most returns from these sales already have been accounted for by the end of January. In fact, that's an important motivation for those companies to choose to end their fiscal years at the end of January.

AVX Corporation is a leading manufacturer of electronic components.  **Illustration 7-5**, drawn from AVX's 2019 annual report, describes the company's approach to estimating returns.

Illustration 7-5 Disclosure of Sales Returns Policy—AVX Corporation

Real World Financials

Revenue Recognition and Accounts Receivable (in part): Returns

Sales revenue and cost of sales reported in the statement of operations are reduced to reflect estimated returns. We record an estimated right of return liability for returns at the time of sale based on historical trends, current pricing and volume information, other market-specific information, and input from sales, marketing, and other key management personnel. The liability accrued reflects the variable consideration not expected to be received. The estimated value of the return to the customer's inventory is recorded as an asset. These procedures require the exercise of significant judgments. We believe these procedures enable us to make reliable estimates of future returns. Our actual results have historically approximated our estimates. When the product is returned and verified, the customer is given credit against their accounts receivable.

Source: AVX Corporation

In some industries, returns typically are small and infrequent. Companies in these industries usually don't bother to estimate returns and simply record returns in the period they occur, because the effect on income measurement and asset valuation is immaterial. Also, companies sometimes lack sufficient information to make a good estimate of returns. As you learned in  **Chapter 6**, companies must recognize only the amount of revenue that is probable to not require reversal in the future. That way, sales are less likely to be overstated

in the period of the transfer of goods or services. Difficulty estimating returns requires a larger estimate of returns (and therefore a smaller amount of net sales revenue recognized) than would be the case if a more precise estimate was possible.

Subsequent Valuation of Accounts Receivable

LO7–5 Describe the accounting treatment of anticipated uncollectible accounts receivable.

You learned in [Chapter 6](#) that revenue and a corresponding receivable are recognized for the amount the seller is *entitled* to receive for satisfying a performance obligation. However, being entitled to receive payment doesn't necessarily mean that the seller *will* be paid. In fact, **credit losses** (bad debts) are an inherent cost of granting credit. How should we account for the fact that not every account receivable is likely to be collected?

DIRECT WRITE-OFF METHOD (NOT GAAP)

A simple approach to recognizing bad debts that is *not* allowed by GAAP is to wait until a particular account is deemed uncollectible and write it off at that time. This approach is called the direct write-off method. For example, if a customer goes bankrupt and it becomes clear that a \$15,000 account receivable will not be collected, the company would reduce net income for the amount of the bad debt, and eliminate the receivable from total assets, because the account is no longer expected to be collected:

| | | |
|---------------------|--------|--------|
| Bad debt expense | 15,000 | |
| Accounts receivable | | 15,000 |

The two shortcomings of the direct write-off method are that it:

1. Overstates the balance in accounts receivable in the periods prior to the write-off, because it fails to anticipate that some accounts receivable will prove uncollectible.
2. Distorts net income by postponing recognition of any bad debt expense until the period in which the customer actually fails to pay, even though some bad debt expense was predictable before that time.

These conceptual problems are why the direct write-off method isn't allowed for financial reporting purposes unless the amount of bad debt is not material. However, the direct write-off method is required for income tax purposes for most companies.

ALLOWANCE METHOD (GAAP)

GAAP requires use of the **allowance method** whenever the amount of bad debts is material. Under the allowance method, companies use a contra-asset account, the **allowance for uncollectible accounts** (also referred to as the “allowance for credit losses”), to

reduce the carrying value of accounts receivable to the amount of cash they expect to collect.¹¹ Both the carrying value and the amount of the allowance typically are shown on the face of the balance sheet. For example,  **Illustration 7-6** shows how **Johnson & Johnson**, the large pharmaceutical company, reported accounts receivable in its comparative balance sheets for 2019 and 2018.

The carrying value of accounts receivable is reduced by the allowance for uncollectible accounts.

Illustration 7-6 Disclosure of Accounts Receivable—Johnson & Johnson

Real World Financials

| | 2019 | 2018 |
|--|--------|--------|
| Accounts receivable trade, less allowances for doubtful accounts \$226 (2018, \$248) | 14,481 | 14,098 |

Johnson & Johnson's balance sheet communicates that, as of year-end 2019, it had net accounts receivable of \$14,481 and an allowance for doubtful accounts of \$226, which implies a gross accounts receivable of $\$14,481 + \$226 = \$14,707$.

Under the allowance method, bad debt expense is *not* recognized when specific accounts are written off. Rather, bad debt expense is recognized earlier, when accounts are *estimated* to be uncollectible and the allowance is created. Later, when a specific account receivable is deemed *actually* uncollectible, both the allowance and the specific account receivable are reduced to write off the receivable.

The allowance method recognizes bad debt expense when the allowance is adjusted for estimated bad debts, not when specific accounts are written off.

An example will clarify how the allowance method works. Assume the Hawthorne Manufacturing Company started operations in 2024. It had sales of \$1,200,000 and collections of \$895,000, leaving a balance of **\$305,000** in accounts receivable as of December 31, 2024.

| Accounts Receivable | | |
|---------------------|----------------|---------|
| 1/1/2024 | 0 | |
| Sales | 1,200,000 | |
| Collections | | 895,000 |
| 12/31/2024 | 305,000 | |

Recognizing Allowance for Uncollectible Accounts (end of first year). Hawthorne's analysis indicates it expects to collect \$280,000 of its accounts receivable, so it must establish an allowance for uncollectible accounts of **\$25,000** (**\$305,000** - \$280,000). (Later we'll talk about how Hawthorne would estimate the allowance. For now let's assume that number.)

| Allowance for Uncollectible Accounts | |
|--------------------------------------|---------------|
| 1/1/2024 | 0 |
| Bad debt expense | 25,000 |
| 12/31/2024 | 25,000 |

Hawthorne establishes the necessary allowance with the following journal entry:

| | | |
|--------------------------------------|--------|---------------|
| Bad debt expense | 25,000 | |
| Allowance for uncollectible accounts | | 25,000 |

The balances in accounts receivable (**\$305,000**) and the contra asset allowance for uncollectible accounts (**\$25,000**) offset to carry receivables at a net amount of \$280,000 on the balance sheet.

Of course, at this point Hawthorne doesn't know which particular accounts receivable will prove uncollectible. (If it could predict that perfectly, it wouldn't have made those sales to begin with!) Hawthorne only can record an **estimate** of the amount of uncollectible accounts for its outstanding receivables. That estimate both reduces net income (through bad debt expense) and reduces the carrying value of Hawthorne's accounts receivable.

When Accounts Are Deemed Uncollectible. On April 24, 2025, Hawthorne concludes that it will not collect a \$15,000 account receivable from a customer that recently has gone bankrupt. Hawthorne would make the following journal entry:

| | | |
|--------------------------------------|---------------|--------|
| Allowance for uncollectible accounts | 15,000 | |
| Accounts receivable | | 15,000 |

| Accounts Receivable | | Allowance for Uncollectible Accounts | |
|---------------------|----------------|--------------------------------------|---------------|
| 1/1/2025 | 305,000 | 1/1/2025 | 25,000 |
| Specific write-off | 15,000 | Specific write-off | 15,000 |
| | 290,000 | | 10,000 |

Note that the journal entry didn't affect net income, and that accounts receivable still are carried at a net amount of \$280,000 (**\$290,000 - \$10,000**) on the balance sheet.

The write-off of an account receivable reduces both gross receivables and the allowance, thus having no effect on net income or financial position.

When Previously Written-Off Accounts Are Reinstated.

Occasionally, a receivable that has been written off is later reinstated because the company gets new information and now believes the receivable will be collected in part or in full. When this happens, the entry to write off the account is reversed. For example, assume Hawthorne learns on May 30 that the financial situation of its customer has improved and it will collect \$1,200 of the receivable that previously was written off. Hawthorne reinstates that amount of the receivable with the following journal entry:

| | | |
|--------------------------------------|-------|--------------|
| Accounts receivable | 1,200 | |
| Allowance for uncollectible accounts | | 1,200 |

| Accounts Receivable | | Allowance for Uncollectible Accounts | |
|---------------------|----------------|--------------------------------------|---------------|
| | 290,000 | | 10,000 |
| Reinstatement | 1,200 | Reinstatement | 1,200 |
| | 291,200 | | 11,200 |

Note that, once again, the journal entry didn't affect net income and that accounts receivable still are carried at a net amount of \$280,000 (**\$291,200 - \$11,200**) on the balance sheet. Just as the carrying value of accounts receivable was not affected by writing off a specific receivable, it also is not affected by reversing the write-off of a specific receivable.

Reinstating a previously written-off accounts receivable increases both gross receivables and the allowance, thus having no effect on net income or financial position.

Once the receivable is reinstated, collection is recorded the same way it would be if the receivable had never been written off, debiting cash and crediting accounts receivable.

ESTIMATING THE ALLOWANCE FOR UNCOLLECTIBLE ACCOUNTS

LO7-6 Describe how to estimate the allowance for uncollectible accounts using the CECL model.

Basing bad debt expense on the appropriate carrying value of accounts receivable is very much a **balance sheet approach**. The company estimates what the ending balance of the allowance for uncollectible accounts should be to have the carrying value of accounts receivable reflect the net amount expected to be collected. The company then records whatever amount of bad debt expense that's necessary to adjust the allowance to that desired balance.

Companies estimate the necessary balance in the allowance for uncollectible accounts using the **CECL (Current Expected Credit Loss) model**.¹² That model does not specify a particular method for estimating bad debts ("credit losses"). Rather, it allows a company to apply any method that reasonably captures its expectation of credit losses, so that the resulting carrying value of net accounts receivable reflects the cash the company expects to collect. That estimate should consider all receivables and be based on all relevant information, including historical experience, current conditions, and reasonable and supportable forecasts. Estimation could be done by analyzing each customer account, by applying an estimate of the percentage of bad debts to the entire outstanding receivable balance, or by applying different percentages to accounts receivable balances depending on the length of time outstanding. This latter approach employs an accounts receivable aging schedule and is

very common in practice. For example, [Illustration 7-7](#) shows the aging schedule for Hawthorne’s December 31, 2024, accounts receivable balance of \$305,000.

Illustration 7-7 Accounts Receivable Aging Schedule

| Customer | Accounts Receivable | | | | |
|--------------------------------------|---------------------|---------------------------------|------------------------|-----------------|-----------------|
| | 12/31/2024 | 0–60 Days | 61–90 Days | 91–120 Days | Over 120 Days |
| Axel Manufacturing Co. | \$ 20,000 | \$ 14,000 | \$ 6,000 | | |
| Banner Corporation | 33,000 | | 20,000 | \$10,000 | \$ 3,000 |
| Dando Company | 60,000 | 50,000 | 10,000 | | |
| ... | ... | ... | ... | ... | ... |
| ... | ... | ... | ... | ... | ... |
| Xicon Company | 18,000 | 10,000 | 4,000 | 3,000 | 1,000 |
| Totals | <u>\$305,000</u> | <u>\$220,000</u> | <u>\$50,000</u> | <u>\$25,000</u> | <u>\$10,000</u> |
| Summary | | | | | |
| Age Group | Amount | Estimated Percent Uncollectible | Estimated Allowance | | |
| 0–60 days | \$220,000 | 5% | \$11,000 | | |
| 61–90 days | 50,000 | 10% | 5,000 | | |
| 91–120 days | 25,000 | 20% | 5,000 | | |
| Over 120 days | 10,000 | 40% | <u>4,000</u> | | |
| Allowance for uncollectible accounts | | | <u>\$25,000</u> | | |

The schedule classifies the year-end receivable balances according to their length of time outstanding. Typically, the longer an account has been outstanding, the more

likely it will prove uncollectible. Therefore, the schedule applies higher estimated default percentages to groups of older receivables. Because the schedule calculates a necessary balance in the allowance of **\$25,000**, Hawthorne would adjust the balance of the allowance to that amount, as shown previously in this section.

Recognizing Allowance for Uncollectible Accounts (end of second year). At the end of the second year of operations (and each year thereafter), Hawthorne must once again estimate what the carrying value of its accounts receivable should be and adjust the allowance as necessary to produce that carrying value. Let's suppose that at the end of 2025 Hawthorne has a gross accounts receivable balance of **\$400,000** but believes it only will collect \$360,000. That implies that Hawthorne needs an allowance of **\$40,000** (**\$400,000** – \$360,000). Unlike the first year, the balance of the allowance for uncollectible accounts in later years may not be zero at the time Hawthorne makes the adjustment. In our example, the pre-adjustment balance is \$11,200. What adjustment is needed to update the allowance account from \$11,200 to the new estimate of **\$40,000**? The adjusting entry is a “plug” of **\$28,800**.

| Allowance for Uncollectible Accounts | |
|--------------------------------------|---------------|
| (Pre-adjustment balance) | 11,200 |
| Bad debt expense | 28,800 |
| (Post-adjustment balance) | 40,000 |

| | |
|--------------------------------------|---------------|
| Bad debt expense | 28,800 |
| Allowance for uncollectible accounts | 28,800 |

Be sure to understand that the amount of bad debt expense recognized in this journal entry is purely a plug that is determined by the difference between the pre-adjustment balance and the necessary post-adjustment balance in the allowance. For example, if Hawthorne had written off so many accounts receivable during 2025 that the adjustment account had a pre-adjustment balance that was a *debit* of \$2,000, Hawthorne would have to *credit* the allowance for **\$42,000** (and debit bad debt expense for the same amount) to reach the necessary **\$40,000** post-adjustment balance.

| Allowance for Uncollectible Accounts | |
|--------------------------------------|--------------------------------|
| Pre-adjustment balance | 2,000 |
| | 42,000 Bad debt expense |

Allowance for Uncollectible Accounts

| | |
|--|--------------------------------|
| | 40,000 Post-Adjustment Balance |
|--|--------------------------------|

On the other hand, if the pre-adjustment balance in the allowance was a *credit* of \$11,200 and the quality of Hawthorne’s receivables improved so much that Hawthorne believed the post-adjustment balance in the allowance should be only \$5,000, Hawthorne would need to *debit* the allowance for \$6,200.

Allowance for Uncollectible Accounts

| | |
|------------------|-------------------------------|
| | 11,200 Pre-adjustment balance |
| Bad debt expense | 6,200 |
| | 5,000 Post-adjustment balance |

A debit to the allowance requires a credit to bad debt expense. While crediting an expense looks weird, think of it as driven by a change in an estimate. The allowance was increased by too much in a prior period, so Hawthorne has to reduce it this period. As with changes in other estimates, we don’t restate prior year financial statements, but instead show the effect of the change in estimate in current-period net income.

Income Statement Approach. An alternative to the balance sheet approach is to estimate bad debt expense directly as a percentage of each period’s net credit sales. This percentage usually is determined by reviewing the company’s recent history of the relationship between credit sales and actual bad debts. For a relatively new company, this percentage may be estimated by referring to other sources such as industry averages. For example, if Hawthorne had sales of \$1,200,000 in 2024, and estimated that 2% of those sales would prove uncollectible, it would debit bad debt expense and credit the allowance for uncollectible accounts for \$24,000 (= \$1,200,000 × 2%).

It’s important to notice that this **income statement approach** focuses on the current year’s credit sales, so the effect on the balance sheet—the allowance for uncollectible accounts and hence net accounts receivable—is an incidental result of estimating the expense. An income statement approach should be used only if it doesn’t provide a distorted estimate of the net amount of cash that is expected to be collected from accounts receivable.

Combined Approaches. Some companies use a combination of approaches when estimating bad debts. For example, Hawthorne might decide it’s more convenient to estimate bad debts on a quarterly basis using the income statement approach and then refine

the estimate by employing the balance sheet approach at the end of the year based on an aging of receivables. In our example, Hawthorne recognized \$24,000 in the allowance and the bad debt expense accounts during the year under the income statement approach. If at the end of the year Hawthorne’s aging schedule indicated that a total of **\$25,000** was needed in the allowance, Hawthorne would recognize an additional **\$1,000** of allowance and bad debt expense to adjust the total to the necessary balance.

| Allowance for Uncollectible Accounts | |
|--------------------------------------|---------------|
| | 24,000 |
| 1,000 | |
| | 25,000 |

| | |
|--------------------------------------|--------------|
| Bad debt expense | 1,000 |
| Allowance for uncollectible accounts | 1,000 |

Ethical Dilemma

The management of the Auto Parts Division of the Santana Corporation receives a bonus if the division’s income achieves a specific target. For 2024, the target will be achieved by a wide margin. Mary Beth Williams, the controller of the division, has been asked by Philip Stanton, the head of the division’s management team, to try to reduce this year’s income and “bank” some of the profits for future years. Mary Beth suggests that the division’s bad debt expense as a percentage of the gross accounts receivable balance for 2024 be increased from 3% to 5%. She believes that 3% is the more accurate estimate but knows that both the corporation’s internal auditors as well as the external auditors allow some flexibility when estimates are involved. Does Mary Beth’s proposal present an ethical dilemma?

 **Illustration 7–8** summarizes the key issues involving measuring and reporting accounts receivable.

Recognition

Depends on revenue recognition; for most credit sales, revenue and the related receivables are recognized at the point of delivery.

Initial valuation

Initially recorded at the amount of consideration the seller is entitled to receive. Affected by cash discounts and variable consideration such as sales discounts and sales returns.

Subsequent valuation

Initial valuation reduced by allowance for uncollectible accounts, so accounts receivable are shown at the amount of cash the seller expects to receive.

Classification

Almost always classified as a current asset.

COVID-19: Accounting and Reporting Implications

Recall from Chapter 1 that political pressures sometimes affect accounting standards. As an example, the *Coronavirus Aid, Relief, and Economic Security (CARES) Act* included a provision that enabled banks and some other financial institutions to avoid applying the provisions of ASU No. 2016-13 between March 27, 2020, and December 31, 2020. That delay would enable banks to avoid recognizing large losses on outstanding receivables that they would have to recognize if applying CECL. In response to this provision, the American Accounting Association issued a resolution indicating that it “opposes direct action by Congress or other regulators outside of the established independent standards-setting framework. Such intervention

undermines the authority of independent boards, does not allow for full participation of all stakeholders and is less transparent.”¹³

Despite the flexibility provided by the CARES Act, many banks did not delay their planned CECL implementation. As a consequence, this provision of the CARES Act created non-comparability between the financial statements of banks that did and didn’t adopt CECL.

Concept Review Exercise

UNCOLLECTIBLE ACCOUNTS RECEIVABLE

The Crowe Company offers 30 days of credit to its customers. At the end of the year, bad debts expense is estimated and the allowance for uncollectible accounts is adjusted based on an aging of accounts receivable. The company began 2025 with the following balances in its accounts:

| | |
|--------------------------------------|------------------|
| Accounts receivable | \$350,000 |
| Allowance for uncollectible accounts | (30,000) |
| Net accounts receivable | <u>\$320,000</u> |

During 2025, sales on credit were \$1,300,000, cash collections from customers were \$1,253,000, and actual write-offs of accounts were \$25,000.

Crowe Company Accounts Receivable Aging December 31, 2025 Summary

| Age Group | Amount | Estimated Percent Uncollectible |
|---------------|-------------------|---------------------------------|
| 0–60 days | \$250,000 | 6% |
| 61–90 days | 80,000 | 15% |
| 91–120 days | 32,000 | 25% |
| Over 121 days | 10,000 | 50% |
| Total | <u>\$372,0000</u> | |

Required:

- Determine the balances in accounts receivable and allowance for uncollectible accounts at the end of 2025.

- Determine bad debt expense for 2025.
- Prepare journal entries to write off receivables and to recognize bad debt expense for 2025.

Solution:

- Determine the balances in accounts receivable and allowance for uncollectible accounts at the end of 2025.

| Accounts Receivable | |
|---------------------|-----------------------|
| 12/31/2024 | 350,000 |
| Sales | 1,300,000 |
| | 1,253,000 Collections |
| | 25,000 Write-offs |
| 12/31/2025 | 372,000 |

| Crowe Company Accounts Receivable Aging December 31, 2025 Summary | | | |
|---|------------------|------------------------------------|------------------------|
| Age Group | Amount | Estimated Percent Uncollectible | Estimated Allowance |
| 0–60 days | \$250,000 | 6% | \$15,000 |
| 61–90 days | 80,000 | 15% | 12,000 |
| 91–120 days | 32,000 | 25% | 8,000 |
| Over 121 days | 10,000 | 50% | 5,000 |
| Total | <u>\$372,000</u> | | <u>\$40,000</u> |

| Allowance for Uncollectible Accounts | |
|--------------------------------------|--------------------------------|
| | 30,000 12/31/2024 |
| Write-offs | 25,000 |
| | 35,000 Bad debt expense |
| | 40,000 12/31/2025 |

As shown in the T-account, the ending balance in accounts receivable is **\$372,000**. As shown in the calculation within the aging of accounts receivable, the required ending balance in the allowance for uncollectible accounts is **\$40,000**.

2. determine bad debt expense for 2025.

As shown in the T-account above, the plug necessary to reach the required ending balance in the allowance for uncollectible accounts is **\$35,000**, so that is bad debt expense for 2025.

3. Prepare journal entries to write off receivables and to recognize bad debt expense for 2025.

| | | |
|---|--------|---------------|
| Allowance for uncollectible accounts | 25,000 | |
| Accounts receivable | | 25,000 |
| <i>Write-off of accounts receivable as they are determined uncollectible.</i> | 35,000 | |
| Bad debt expense | | |
| Allowance for uncollectible accounts | | 35,000 |
| <i>Year-end adjusting entry for bad debts.</i> | | |

Notes Receivable

LO7-7 Describe the accounting treatment of notes receivable

Notes receivable are formal credit arrangements between a creditor (lender) and a debtor (borrower) that specify payment terms. Notes arise from loans made to people and companies who need cash, including stockholders and employees, as well as from the sale of merchandise, other assets, or services under relatively long-term payment arrangements. Notes receivable are classified as either current or noncurrent depending on the expected collection date(s).

When the term of a note is less than a year, it is reported as a short-term note. We start by discussing short-term notes, and then discuss long-term notes.

Page 355

Short-Term Interest-Bearing Notes

The typical **interest-bearing note receivable** involves collection of a specified face amount, also called principal, at a specified maturity date or dates. In addition, interest is received at a stated percentage of the face amount. Interest on notes is calculated as

$$\text{Face amount} \times \text{Annual rate} \times \text{Fraction of the annual period}$$

For an example, consider  **Illustration 7-9**.

Illustration 7-9 Interest-Bearing Notes Receivable

The Stridewell Wholesale Shoe Company manufactures athletic shoes that it sells to retailers. On May 1, 2024, the company sold shoes to Harmon Sporting Goods. Stridewell agreed to accept a \$700,000, 6-month, 12% note in payment for the shoes. Interest is receivable at maturity. Assume that an interest rate of 12% is appropriate for a note of this type.

Stridewell would account for the note as follows:*

May 1, 2024

| | | |
|---|---------|---------|
| Notes receivable | 700,000 | |
| Sales revenue | | 700,000 |
| <i>To record the sale of goods in exchange for a note receivable.</i> | | |

November 1, 2024

| | | |
|--|---------|---------|
| Cash (\$700,000 + \$42,000) | 742,000 | |
| Interest revenue (\$700,000 × 12% × 6/12) | | 42,000 |
| Notes receivable | | 700,000 |
| <i>To record the collection of the note at maturity.</i> | | |

*To focus on recording the note we intentionally omit the entry required for the cost of the goods sold if the perpetual inventory system is used.

If the sale in the illustration instead occurred on August 1, 2021, and the company's fiscal year-end is December 31, a year-end adjusting entry accrues interest earned.

December 31, 2024

| | | |
|---|--|---------------|
| Interest receivable | | 35,000 |
| Interest revenue (\$700,000 × 12% × 5/12) | | 35,000 |

The February 1 collection is then recorded as follows:

February 1, 2025

| | | |
|--|---------|---------------|
| Cash (\$700,000 + [\$700,000 × 12% × 6/12]) | 742,000 | |
| Interest revenue (\$700,000 × 12% × 1/12) | | 7,000 |
| Interest receivable (accrued at December 31, 2024) | | 35,000 |
| Notes receivable | | 700,000 |

Short-Term Noninterest-Bearing Notes

Sometimes a receivable assumes the form of a so-called **noninterest-bearing note**. The name is a misnomer, though. Noninterest-bearing notes actually do bear interest, but the interest is deducted (or *discounted*) from the face amount to determine the cash proceeds made

available to the borrower at the outset. For example, what if Stridewell accepted a six-month, \$700,000 noninterest-bearing note in exchange for delivering goods that have a cash sales price of \$658,000?

You learned in Chapter 6 that, as a practical matter, a seller can assume the time value of money is not significant if the period between delivery and payment is less than a year. If Stridewell views the financing component of the note to be insignificant, it would ignore the interest rate and simply record sales revenue and an account receivable for \$700,000. However, Stridewell could view the financing component of the contract to be significant. In that case, \$42,000 (= \$700,000 – \$658,000) interest would be discounted at the outset rather than explicitly stated, and sales revenue of \$658,000 recognized upon delivery. Stridewell still receives total revenue of \$700,000, but that total revenue is recognized as sales revenue of \$658,000 and interest revenue of \$42,000. Assuming a May 1, 2024, sale, the transaction is recorded as follows:¹⁴

| | | |
|---|---------------|---------------|
| May 1, 2024 | | |
| Notes receivable (face amount) | 700,000 | |
| Discount on notes receivable (to balance) | | 42,000 |
| Sales revenue | | 658,000 |
| November 1, 2024 | | |
| Discount on notes receivable | 42,000 | |
| Interest revenue | | 42,000 |
| Cash | 700,000 | |
| Notes receivable (face amount) | | 700,000 |

The discount on notes receivable is a contra account to the notes receivable account. That is, the notes receivable would be reported in the balance sheet net (less) any remaining discount. The discount represents future interest revenue that will be recognized as it is earned over time. We can calculate the effective interest rate as follows.

$$\begin{array}{rcl}
 \$ 42,000 & \text{Interest for 6 months} & \\
 \div \$658,000 & \text{Sales price} & \\
 = & 6.383 \% & \text{Rate for 6 months} \\
 \times & 2^* & \text{To annualize the rate} \\
 \hline
 \hline
 = & 12.766 \% & \text{Effective interest rate}
 \end{array}$$

*Two 6-month periods

Using a calculator,
 enter: N 1 I .06383
 PMT - 700000
 Output: PV 658,000

Using Excel, enter: = PV (.06383,1,700000

Output: 658,000

This note should be valued at the present value of future cash receipts. The present value of \$700,000 to be received in six months using an effective interest rate of 6.383% is \$658,000 (= \$700,000 ÷ 1.06383 = \$658,000). The use of present value techniques for valuation purposes was introduced in [Chapter 5](#), and we'll use these techniques extensively in subsequent chapters to value various long-term notes receivable, investments, and liabilities.

In the illustration, if the sale occurs on August 1, the December 31, 2024, adjusting entry and the entry to record the cash collection on February 1, 2025, are recorded as follows:

December 31, 2024

| | | |
|-----------------------------------|--------|--------|
| Discount on notes receivable | 35,000 | |
| Interest revenue (\$42,000 × 5%)* | | 35,000 |

February 1, 2025

| | | |
|----------------------------------|-------|-------|
| Discount on notes receivable | 7,000 | |
| Interest revenue (\$42,000 × 5%) | | 7,000 |

| | | |
|--------------------------------|---------|---------|
| Cash | 700,000 | |
| Notes receivable (face amount) | | 700,000 |

*We also can calculate interest revenue by multiplying the net notes receivable balance by the effective interest rate ($\$658,000 \times 12.766\% \times 5/12 = \$35,000$).

In the December 31, 2024 balance sheet, the note receivable is shown at \$693,000: the face amount (\$700,000) less remaining discount (\$7,000).

Page 357

Long-Term Notes Receivable

We account for long-term notes receivable the same way we account for short-term notes receivable, but the time value of money has a larger effect. Therefore, if long-term notes are received in exchange for goods and services, the financing component of the transaction typically is viewed as significant for revenue recognition purposes. To provide an example, [Illustration 7-10](#) modifies the facts in [Illustration 7-9](#) to have Stridewell agree on January 1, 2024, to accept a two-year noninterest-bearing note.

Illustration 7-10 Long-Term Noninterest-Bearing Notes Receivable

The Stridewell Wholesale Shoe Company manufactures athletic shoes that it sells to retailers. On January 1, 2024, the company sold shoes to Harmon Sporting Goods. Stridewell agreed to accept a \$700,000, two-year note in payment for the shoes. Assuming a 12% effective interest rate, Stridewell would account for the note as follows:*

January 1, 2024

| | | |
|------------------------------|---------|----------------|
| Notes receivable | 700,000 | |
| Discount on notes receivable | | 141,964 |
| Sales revenue [†] | | 558,036 |

To record the sale of goods in exchange for a two-year note receivable.

December 31, 2024

| | | |
|--|--------|---------------|
| Discount on notes receivable | 66,964 | |
| Interest revenue (\$558,036 × 12%) | | 66,964 |

To record interest revenue in 2024.

December 31, 2025

| | | |
|---|---------|---------|
| Discount on notes receivable | 75,000 | |
| Interest revenue $[(\$558,036 + \$66,964) \times 12\%]$ | | 75,000 |
| Cash | 700,000 | |
| Notes receivable | | 700,000 |

To record interest revenue in 2025 and collection of the note.

*To focus on recording the note we intentionally omit the entry required for the cost of the goods sold if the perpetual inventory system is used.

† $\$700,000 \times \text{Present value of } \$1; n = 2, i = 12\%$

Using a calculator,

enter: $N \ 2 \ I \ .12$

$FV \ - \ 700000$

Output: $PV \ 558,036$

Using Excel, enter: $=PV(0.12,2,0,-700000)$

Output: 558,036

It's useful to consider a couple of aspects of [Illustration 7-10](#). First, notice that the sales revenue in 2024 is not recorded for the full \$700,000. Instead, sales revenue is calculated as **(\$558,036)**, the *present value* of the amount (\$700,000) to be received in two years. The net amount of the note receivable equals its present value (\$558,036), which is the notes receivable of \$700,000 less the discount on notes receivable of \$141,964. Recall from [Chapter 6](#) that sellers need to recognize the financing component of a contract when the time value of money is significant. That is what Stridewell is doing. It earns sales revenue of

\$558,036 from selling shoes, and interest revenue totaling \$141,964 (= \$66,964 + \$75,000) for financing the transaction.

Second, interest revenue each period is calculated based on the *net* notes receivable as of the beginning of that period. As a consequence, interest revenue differs between periods because the net notes receivable increases over time. In our example, Stridewell's 2024

In the *effective interest method*, interest is determined by multiplying the outstanding balance by the effective interest rate.

interest revenue of **\$66,964** is calculated based on the initial net notes receivable balance ($\$558,036 \times 12\%$). We reduce the discount on notes receivable for 2024 interest revenue, which increases the net notes receivable balance to \$625,000 (= **\$558,036** + **\$66,964**). So, Stridewell's 2025 interest revenue of \$75,000 is calculated based on that higher net notes receivable balance ($\$625,000 \times 12\%$), reducing the discount on notes receivable to zero by the end of 2025. At that point, the book value of the note, sometimes called the carrying value, carrying amount, or amortized cost basis, is \$700,000, and that is the amount of cash that is collected. The effective interest rate stays the same over time, but interest revenue increases as that rate is multiplied by a receivable balance that increases over time. This is an application of the **effective interest method**, by which we calculate interest revenue or interest expense by multiplying the outstanding balance of a long-term receivable or liability by the effective interest rate. As you will see in later chapters, that method is used for all long-term receivables and liabilities.

We discuss long-term notes receivable in greater detail in [Chapter 14](#) at the same time we discuss accounting for long-term notes payable. That discussion provides more examples of accounting for long-term noninterest-bearing notes, as well as long-term interest-bearing notes, and also considers accounting for notes receivable that are collected in equal installment payments.

Marriott International accepts both interest-bearing and noninterest-bearing notes from developers and franchisees of new hotels. The 2019 disclosure note shown in **Illustration 7-11** describes the company's accounting policy for these notes.

Illustration 7-11 Disclosure of Notes Receivable—Marriott International

Real World Financials

Note 2: Summary of Significant Accounting Policies (in part)

We may make senior, mezzanine, and other loans to owners of hotels that we operate or franchise, generally to facilitate the development of a hotel and sometimes to facilitate brand programs or initiatives. We expect the owners to repay the loans in accordance with the loan agreements or earlier as the hotels mature and capital markets permit.

Note 12: Notes Receivable (in part)

Notes Receivable Principal Payments (net of reserves and unamortized discounts) and Interest Rates (\$ in millions)

| | Amount |
|---|---------|
| Balance at year-end 2019 | \$126 |
| Range of stated interest rates at year-end 2019 | 0 to 9% |

NOTES RECEIVED SOLELY FOR CASH

If a note with an unrealistic interest rate—even a noninterest-bearing note—is received *solely* in exchange for cash, the cash paid to the issuer is considered to be the note's present value.¹⁵ Even if this means

recording interest at a ridiculously low or zero rate, the

amount of cash exchanged is the basis for valuing the note. If the noninterest-bearing note in the previous example had been received solely in exchange for \$700,000 cash, the transaction would be recorded as follows:

When a noninterest-bearing note is received solely in exchange for cash, the amount of cash exchanged is the basis for valuing the note.

| | | |
|--------------------------------|---------|---------|
| Notes receivable (face amount) | 700,000 | |
| Cash (given) | | 700,000 |

Subsequent Valuation of Notes Receivable

Similar to accounts receivable, companies are required to estimate bad debts (also called credit losses) on notes receivable, and use an allowance account to reduce the receivable to the appropriate carrying value. The process of recording bad debt expense is the same as with accounts receivable.

Under the CECL model, companies consider all relevant information when assessing credit losses, including reasonable and supportable forecasts about the future. Companies can use a variety of approaches to estimate uncollectible notes receivable, including the aging method illustrated for accounts receivable. They often use discounted cash flow techniques, estimating the amount of necessary allowance by comparing the balance in notes receivable to the present value of the cash flows expected to be received, discounted at the interest rate that was effective when each note was initially recognized. An example of that approach is included in [Appendix 7B](#).

One of the more difficult measurement problems facing banks and other lending institutions is the estimation of bad debts on their long-term notes (loans). It's difficult to predict uncollectible accounts for these arrangements. As an example, **Wells Fargo & Company**, a large bank holding company, reported the following in the asset section of its December 31, 2019, balance sheet:

| (\$ in millions) | Year Ended December 31, 2019 | Year Ended December 31, 2018 |
|---------------------------|------------------------------------|------------------------------------|
| Loans | \$962,265 | \$953,110 |
| Allowance for loan losses | (9,551) | (9,775) |
| Net loans | <u>\$952,714</u> | <u>\$952,714</u> |

A disclosure note, reproduced in [Illustration 7-12](#), describes Wells Fargo's loan loss policy.

Illustration 7-12 Disclosure of Allowance for Loan Losses—Wells Fargo & Company

Note 1: Summary of Significant Accounting Policies: ALLOWANCE FOR CREDIT LOSSES

The allowance for credit losses (ACL) is management's estimate of credit losses inherent in the loan portfolio, including unfunded credit commitments, at the balance sheet date. We have an established process to determine the appropriateness of the ACL that assesses the losses inherent

Note 1: Summary of Significant Accounting Policies: ALLOWANCE FOR CREDIT LOSSES

in our portfolio and related unfunded credit commitments. We develop and document our ACL methodology at the portfolio segment level—commercial loan portfolio and consumer loan portfolio. While we attribute portions of the ACL to our respective commercial and consumer portfolio segments, the entire ACL is available to absorb credit losses inherent in the total loan portfolio and unfunded credit commitments.

Source: Wells Fargo & Company

Sometimes a company grants a concession to a borrower because the borrower faces financial difficulties. In the case of such a *troubled debt restructuring*, the creditor modifies the terms of the receivable and no longer expects to collect all amounts that were due to it originally. Accounting for troubled debt restructurings is discussed in Appendix 7B.

GAAP requires that companies disclose the fair value of their notes receivable in the disclosure notes (they don't have to disclose the fair value of accounts receivable when the book value of the receivables approximates fair value).¹⁶ Also, companies can choose to carry receivables at fair value in their balance sheets, with changes in fair value recognized as gains or losses in the income statements.¹⁷ This "fair value option" is discussed in  Chapter 12.

LO7–10 Discuss the primary differences between U.S. GAAP and IFRS with respect to cash and receivables.

International Financial Reporting Standards

Accounts and Notes Receivable. *IFRS No. 9* governs treatment of accounts and notes receivable. Its requirements are similar to U.S. GAAP with respect to trade and cash discounts, sales returns, recognition of interest on notes receivable, and use of an allowance for uncollectible accounts (which typically

is called a “provision for bad debts” under IFRS).¹⁸ A few key differences remain. IFRS and U.S. GAAP both allow a “fair value option” for accounting for receivables, but the IFRS standard restricts the circumstances in which that option is allowed (we discuss this more in Chapter 12). Also, U.S. GAAP allows “available for sale” accounting for investments in debt securities, but *IFRS No. 9* does not allow that approach (we also discuss that approach further in Chapter 12). Also, U.S. GAAP requires more disaggregation of accounts and notes receivable in the balance sheet or notes to the financial statements. For example, companies need to separately disclose accounts receivable from customers, from related parties, and from others. IFRS recommends but does not require separate disclosure.

A final important difference relates to estimating bad debts. IFRS uses the ECL (“Expected Credit Loss”) model. For most receivables, the ECL model reports a “12-month ECL,” which bases expected credit losses only on defaults that could occur within the next twelve months. Only if a receivable’s credit quality has deteriorated significantly does the creditor instead report the “lifetime ECL,” which also includes credit losses expected to occur from defaults after twelve months. IFRS 9 also allows a “simplified approach” for trade receivables that allows companies to recognize lifetime expected losses, without the need to identify significant increases in credit risk, as is done for all receivables under the CECL model used in U.S. GAAP. As a result of this lack of convergence, it is likely that accruals for credit losses under IFRS will be lower, and occur later, than under U.S. GAAP.

Financing with Receivables

LO7–8 Differentiate between the use of receivables in financing arrangements accounted for as a secured borrowing and those accounted for as a sale.

Financial institutions have developed a wide variety of ways for companies to use their receivables to obtain immediate cash. Companies can find this attractive because it shortens their operating cycles by providing cash immediately rather than having to wait until credit customers pay the amounts due. Also, many companies avoid the difficulties of servicing (billing and collecting) receivables by having financial institutions take on that role. Of course, financial institutions require compensation for providing these services, usually interest and/or a finance charge.

The various approaches used to finance with receivables differ with respect to which rights and risks are retained by the *transferor* (the company who was the original holder of the receivables) and which are passed on to the *transferee* (the new holder, the financial institution). Despite this diversity, any of these approaches can be described as either

1. *A secured borrowing.* Under this approach, the transferor (borrower) simply acts like it borrowed money from the transferee (lender), with the receivables remaining in the transferor's balance sheet and serving as collateral for the loan. On the other side of the transaction, the transferee recognizes a note receivable.
2. *A sale of receivables.* Under this approach, the transferor (seller) "derecognizes" (removes) the receivables from its balance sheet, acting like it sold them to the transferee (buyer). On the other side of the transaction, the transferee recognizes the receivables as assets in its balance sheet and measures them at their fair value.

As you will see in the examples that follow, the transferor (borrower) debits cash regardless of whether the transaction is treated as a secured borrowing or a sale of receivables. What differs is whether the borrower credits a liability (for a secured borrowing) or credits the receivable asset (for a sale of receivables). Let's discuss each of these approaches in more detail as they apply to accounts receivable and notes receivable. Then we'll discuss the circumstances under which GAAP requires each approach.

Secured Borrowing

Sometimes companies **pledge** accounts receivable as collateral for a loan. Assets that serve as collateral are forfeited if the borrower defaults on the loan. No particular receivables are associated with the loan.

Rather, the entire receivables balance serves as collateral. The responsibility for collection of the receivables remains solely with the company. No special accounting treatment is needed for pledged receivables, but the arrangement should be described in a disclosure note. For example,  **Illustration 7-13** shows a portion of the long-term debt disclosure note included in the 2019 annual report of **Virco Mfg. Corporation**, a manufacturer of office furniture.

When companies *pledge* accounts receivable as collateral for debt, a disclosure note describes the arrangement.

Illustration 7-13 Disclosure of Receivables Used as Collateral—Virco Mfg. Corporation

Real World Financials

Line of Credit

The Revolving Credit Facility is an asset-based line of credit that is subject to a borrowing base limitation and generally provides for advances of up to 85% of eligible accounts receivable ...

Source: Virco Mfg. Corporation

Alternatively, financing arrangements can require that companies **assign** particular receivables to serve as collateral for loans. You already may be familiar with the concept of assigning an asset as collateral if you or someone you know has a mortgage on a home. The bank or other financial institution holding the mortgage will require that, if the homeowner defaults on the mortgage payments, the home be sold and the proceeds used to pay off the mortgage debt. Similarly, in the case of an assignment of receivables, nonpayment of a debt will require the proceeds from collecting the assigned receivables to go directly toward repayment of the debt.

In these arrangements, the lender typically lends an amount of money that is less than the amount of receivables assigned by the borrower. The difference provides some protection for the lender to allow for possible uncollectible accounts. Also, the lender (sometimes called

an *assignee*) usually charges the borrower (sometimes called an *assignor*) an upfront finance charge in addition to stated interest on the loan. The receivables might be collected either by the lender or the borrower, depending on the details of the arrangement. [Illustration 7-14](#) provides an example.

Illustration 7-14 Assignment of Accounts Receivable

On December 1, 2024, the Santa Teresa Glass Company borrowed \$500,000 from Finance Bank and signed a promissory note. Interest at 12% is payable monthly. The company assigned **\$620,000** of its receivables as collateral for the loan. Finance Bank charges a finance fee equal to 1.5% of the accounts receivable assigned.

Santa Teresa Glass records the borrowing as follows:

| | | |
|--|---------|----------------|
| Cash (difference) | 490,700 | |
| Finance charge expense* (1.5% × \$620,000) | 9,300 | |
| Notes payable | | 500,000 |

*In theory, this fee should be allocated over the entire period of the loan rather than recorded as an expense in the initial period. However, amounts usually are small and the loan period usually is short. For expediency, then, we expense the entire fee immediately.

Santa Teresa will continue to collect the receivables, and will record any discounts, sales returns, and bad debt write-offs, but will remit the cash to Finance Bank, usually on a monthly basis. If \$400,000 of the receivables assigned are collected in December, Santa Teresa Glass records the following entries:

| | | |
|--|---------|---------|
| Cash | 400,000 | |
| Accounts receivable | | 400,000 |
| Interest expense ($\$500,000 \times 12\% \times \frac{1}{12}$) | 5,000 | |
| Notes payable | 400,000 | |
| Cash | | 405,000 |

| Accounts Receivable | |
|---------------------|---------|
| 620,000 | |
| | 400,000 |
| 220,000 | |

| Notes Payable | |
|---------------|---------|
| | 500,000 |
| 400,000 | |
| | 100,000 |

In Santa Teresa's financial statements, the arrangement is described in a disclosure note.

Sale of Receivables

Accounts and notes receivable, like any other assets, can be sold at a gain or a loss. The basic accounting treatment for the sale of receivables is similar to accounting for the sale of other assets. The seller (transferor) (a) removes from the accounts the receivables (and any allowance for bad debts associated with them), (b) recognizes at fair value any assets acquired or liabilities assumed by the seller in the transaction, and (c) records the difference as a gain or loss.

The sale of accounts receivable is a popular method of financing. A technique once used by companies in a few industries or with poor credit ratings, the sale of receivables is now a common occurrence for many different types of companies. For example, **General Motors**, **Deere & Co.**, and **Bank of America** all sell receivables. The two most common types of selling arrangements are **factoring** and **securitization**. We'll now discuss each type.

In a **factoring** arrangement, the company sells its accounts receivable to a financial institution. The financial institution typically buys receivables for cash, handles the billing and collection of the receivables, and charges a fee for this service. Actually, credit cards like **VISA** and **Mastercard** are forms of factoring arrangements. The seller relinquishes all rights to the future cash receipts in exchange for cash from the buyer (the *factor*).

Two popular arrangements used for the sale of receivables are **factoring** and **securitization**.

The specifics of sale accounting vary depending on the particular arrangement between the seller and buyer (transferee).¹⁹ One key feature is whether the receivables are transferred **wi**

thout recourse or with recourse.

SALE WITHOUT RECOURSE

If a factoring arrangement is made **without recourse**, the buyer can't ask the seller for more money if the receivables prove to be uncollectible. Therefore, the buyer assumes the risk of bad debts.

The buyer assumes the risk of uncollectibility when accounts receivable are sold *without recourse*.

As an example,  **Illustration 7-15** shows an excerpt from the website of **BusinessCash.Com**, a financial institution that offers factoring as one of its services.

Illustration 7-15 Advertisement of Factoring BusinessCash.Com

Real World Financials

Accounts Receivable Factoring

0.79-1.99% 30-Day Rates!

Funding in 24-48 hours!

Non-recourse accounts receivable factoring is an effective financing method for small to medium businesses to access immediate working capital. AR factoring is the selling or assigning of your unpaid invoices to creditworthy clients to a factoring company. Once your invoices are verified and assigned to the factoring company, a factor will advance you up to 92% against your invoices. You will receive the remaining balance once your customer has paid minus low cost fees. Non-recourse lowers risk in case of a client bankruptcy. Factoring allows businesses to skip the unreliability and drama of today's bank loans and lack of lending.

Notice that the factor, BusinessCash.com, advances only up to 92% of the factored receivables. The remaining balance is retained as security until all of the receivables are collected and then remitted to the transferor, net of the factor's fee. The interest rate charged by this factor might seem low, but realize it is a 30-day rate. Multiply it by 12, and you will see a range of annual interest rates from 9.5% to almost 24%. The specific rate charged depends on, among other things, the quality of the receivables and the length of

time before payment is required.  **Illustration 7-16** provides an example of receivables factored without recourse.

Illustration 7-16 Accounts Receivable Factored without Recourse

In December 2024, the Santa Teresa Glass Company entered into the following factoring arrangement with **Factor** Bank:

- Santa Teresa transferred accounts receivable that had a book value of \$600,000.
- The transfer was made without recourse.
- Factor immediately remitted to Santa Teresa cash equal to 90% of the factored amount ($90\% \times \$600,000 = \$540,000$).
- Factor retains the remaining 10% to cover its factoring fee (equal to 4% of the total factored amount; $4\% \times \$600,000 = \$24,000$) and to provide a cushion against potential sales returns and allowances.
- After Factor has collected cash equal to the amount advanced to Santa Teresa plus the factoring fee, Factor will remit the excess to Santa Teresa. Therefore, Santa Teresa has a “beneficial interest” in the transferred receivables equal to the fair value of the last 10% of the receivables to be collected (which management estimates to equal **\$50,000**), less the 4% factoring fee.*

Santa Teresa Glass records the transfer as follows:

| | |
|--|---------|
| Cash ($90\% \times \$600,000$) | 540,000 |
| Loss on sale of receivables (to balance) | 34,000 |
| Receivable from factor (\$50,000 – \$24,000 fee) | 26,000 |
| Accounts receivable (book value sold) | 600,000 |

*  **Illustration 7-16** depicts an arrangement in which the factor’s fee is paid out of the 10% of receivables retained by the factor. Alternatively, a factoring arrangement could be structured to have the factor’s fee withheld from the cash advanced to the company at the start of the arrangement. In that case, in  **Illustration 7-16** the journal entry recorded by Santa Teresa would be

| | |
|---|---------|
| Cash ($[(90\% \times \$600,000) - \$24,000 \text{ fee}]$) | 516,000 |
| Loss on sale of receivables (to balance) | 34,000 |
| Receivable from factor | 50,000 |

Accounts receivable (book value sold)

600,000

Note that in [Illustration 7-16](#) the fair value (**\$50,000**) of the last 10% of the receivables to be collected is less than 10% of the total book value of the receivables ($10\% \times \$600,000 = \$60,000$). That's common, because the last receivables to be collected are likely to be reduced by sales returns and allowances, and therefore have a lower fair value. The amount of receivable recorded is the fair value of the receivable less any fee that will be taken. The loss on sale of receivables **is a balancing number that is equal to** the write-down of the receivable to fair value plus the financing fee.

Another popular arrangement used to sell receivables is **securitization**. In a typical accounts receivable securitization, the company creates a “special purpose entity” (SPE), usually a trust or a subsidiary. The SPE buys a pool of trade receivables, credit card receivables, or loans from the company, and then sells related securities, typically debt such as bonds or commercial paper, that are backed (collateralized) by the receivables. Securitizing receivables using an SPE can provide significant economic advantages, allowing companies to reach a large pool of investors and to obtain more favorable financing terms.²⁰

As an example of a securitization, [Illustration 7-17](#) shows a portion of the disclosure note included in the 2020 annual report of **Flextronics International Limited**, a worldwide leader in design, manufacturing, and logistics services, describing the securitization of its trade accounts receivables.

Page 363

The Company continuously sells designated pools of trade receivables ... to affiliated special purpose entities, each of which in turn sells the receivables to unaffiliated financial institutions ... The company services, administers and collects the receivables on behalf of the special purpose entities and receives a servicing fee of 0.1% to 0.5% of serviced receivables per annum.

Source: Flextronics International Limited

SALE WITH RECOURSE

When a company sells accounts receivable **with recourse**, the seller retains all of the risk of bad debts. In effect, the seller guarantees that the buyer will be paid even if some receivables prove to be uncollectible. To compensate the seller for retaining the risk of bad debts, the buyer usually charges a lower factoring fee when receivables are sold with recourse.

The seller retains the risk of uncollectibility when accounts receivable are sold *with recourse*.

In [Illustration 7-16](#), even if the receivables were sold with recourse, Santa Teresa Glass still could account for the transfer as a sale so long as the conditions for sale treatment are met. The only difference is the additional requirement that Santa Teresa record the estimated fair value of its recourse obligation as a liability. The recourse obligation is the estimated amount that Santa Teresa will have to pay Factor Bank as a reimbursement for uncollectible receivables. [Illustration 7-18](#) provides an example of receivables factored with recourse.

Illustration 7-18 Accounts Receivable Factored with Recourse

Assume the same facts as in [Illustration 7-16](#), except that Santa Teresa sold the receivables to Factor Bank *with recourse* and estimates the fair value of the recourse obligation to be \$5,000. Santa Teresa records the transfer as follows:

| | | |
|--|---------|--------------|
| Cash (90% × \$600,000) | 540,000 | |
| Loss on sale of receivables (to balance) | 39,000 | |
| Receivable from factor (\$50,000 – \$24,000 fee) | 26,000 | |
| Recourse liability | | 5,000 |
| Accounts receivable (book value sold) | | 600,000 |

When comparing [Illustrations 7-16](#) and [7-18](#), notice that the estimated recourse liability of **\$5,000** increases the loss on sale by \$5,000. If the factor eventually collects all of the receivables, Santa Teresa eliminates the recourse liability and recognizes a gain.

Transfers of Notes Receivable

We handle transfers of notes receivable in the same manner as transfers of accounts receivable. A note receivable can be used to obtain immediate cash from a financial institution either by pledging the note as collateral for a loan or by selling the note. Notes also can be securitized.

The transfer of a note to a financial institution is referred to as **discounting**. The financial institution accepts the note and gives the seller cash equal to the maturity value of the note reduced by a discount. The discount is computed by applying a discount rate to the maturity value and represents the financing fee the financial institution charges for the transaction.  **Illustration 7-19** provides an example of the calculation of the proceeds received by the transferor.

The transfer of a note receivable to a financial institution is called *discounting*.

Illustration 7-19 Discounting a Note Receivable

STEP 1: Accrue interest earned on the note receivable prior to its being discounted.

STEP 2: Add interest to maturity to calculate maturity value.

STEP 3: Deduct discount to calculate cash proceeds.

On December 31, 2024, the Stridewell Wholesale Shoe Company sold land in exchange for a nine-month, 10% note. The note requires the payment of \$200,000 plus interest on September 30, 2025. The company’s fiscal year-end is December 31. The 10% rate properly reflects the time value of money for this type of note. On March 31, 2025, Stridewell discounted the note at the Bank of the East. The bank’s discount rate is 12%.

Because the note had been outstanding for three months before it was discounted at the bank, Stridewell first records the interest that has accrued prior to being discounted:

March 31, 2025

| | | |
|--|-------|-------|
| Interest receivable | 5,000 | |
| Interest revenue ($\$200,000 \times 10\% \times 3/12$) | | 5,000 |

Next, the value of the note if held to maturity is calculated. Then the discount for the time remaining to maturity is deducted to determine the cash proceeds from discounting the note:

| | |
|------------------|--|
| \$ 200,000 | Face amount |
| 15,000 | Interest to maturity ($\$200,000 \times 10\% \times 9/12$) |
| 215,000 | Maturity value |
| (12,900) | Discount ($\$215,000 \times 12\% \times 6/12$) |
| \$202,100 | Cash proceeds |

Similar to accounts receivable, Stridewell potentially could account for the transfer as a sale or a secured borrowing. For example, [Illustration 7-20](#) shows the appropriate journal entry to account for the transfer as a sale without recourse.

Illustration 7-20 Discounted Note Treated as a Sale

| | | |
|---|----------------|---------|
| Cash (proceeds determined above) | 202,100 | |
| Loss on sale of notes receivable (to balance) | 2,900 | |
| Notes receivable (face amount) | | 200,000 |
| Interest receivable (accrued interest determined above) | | 5,000 |

Deciding Whether to Account for a Transfer as a Sale or a Secured Borrowing

Transferors usually prefer to use the sale approach rather than the secured borrowing approach to account for the transfer of a receivable because the sale approach makes the transferor seem less leveraged, more liquid, and perhaps more profitable than does the secured borrowing approach. [Illustration 7-21](#) explains why by describing particular effects on key accounting metrics.

Illustration 7-21 Why Do Transferors of Receivables Generally Want to Account for the Transfer as a Sale?

| Does the Accounting Approach | Transfer of Receivables Accounted for as | | | Why Sales Approach Is Preferred by the Transferor |
|--|---|-------------------|-----------------------------|---|
| | Sale | Secured Borrowing | | |
| Derecognize A/R, causing a larger decrease in assets? | | Yes | No | Sale approach produces lower total assets and higher return on assets (ROA). |
| Recognize liability for cash received? | | No | Yes | Sale approach produces lower liabilities and less leverage (debt/equity). |
| Where is cash received shown in the statement of cash flows? | May be in operating or financing sections | | Always in financing section | Sale approach can produce higher cash flow from operations at time of transfer. |
| Recognize gain on transfer? | More likely | | Less likely | Sale approach can produce higher income at time of transfer. |

So when is a company allowed to account for the transfer of receivables as a sale? Page 365

The most critical element is the extent to which the company (the transferor) *surrenders control over the assets transferred*. For some arrangements, surrender of control is clear (e.g., when a receivable is sold without recourse and without any other involvement by the transferor). However, for other arrangements this distinction is not obvious. Indeed, some companies appear to structure transactions in ways that qualify for sale treatment but retain enough involvement to have control. This led the FASB to provide guidelines designed to constrain inappropriate use of the sale approach. Specifically, the transferor (defined to include the company, its consolidated affiliates, and people acting on behalf of the company) is determined to have surrendered control over the receivables if and only if all of the following conditions are met:²¹

1. The transferred assets have been isolated from the transferor—beyond the reach of the transferor and its

If the transferor is deemed to have surrendered control over the

creditors.

2. Each transferee has the right to pledge or exchange the assets it received.
3. The transferor does not maintain *effective control* over the transferred assets, for example, by structuring the transfer such that the assets are likely to end up returned to the transferor.

transferred receivables, the arrangement is accounted for as a sale; otherwise as a secured borrowing.

If *all* of these conditions are met, the transferor accounts for the transfer as a sale. If *any* of the conditions are not met, the transferor treats the transaction as a secured borrowing.

It is not surprising that some companies have aggressively tried to circumvent these conditions by creating elaborate transactions to qualify for sale treatment. The most famous case in recent history was Lehman Brothers' use of "Repo 105" transactions, discussed in

 **Illustration 7-22.**

Illustration 7-22 Repo 105 Transactions—Lehman Brothers

Real World Financials

Lehman Brothers' bankruptcy in 2008 was the largest ever to occur in the United States. One factor that likely contributed to investor losses was Lehman's use of "Repo 105" transactions that concealed how overburdened with liabilities the company had become. Here is how a Repo 105 transaction worked. Near the end of each quarter, Lehman would transfer financial assets like receivables to a bank or other financial institution in exchange for cash and would account for that transfer as a sale of the financial assets. Lehman would use the cash obtained from the transfer to pay down liabilities, so the net effect of the transaction was to reduce assets, reduce liabilities, and therefore make Lehman appear less leveraged and less risky. Lehman also agreed to repurchase ("repo") the assets in the next quarter for an amount of cash that exceeded the amount it initially received.

In substance, this transaction is a loan, since Lehman ended up retaining the financial assets and paying amounts equivalent to principal and interest. However, Lehman argued that the assets were beyond its *effective control*, because the cash it received for transferring the assets was insufficient to enable Lehman to repurchase those assets (the "105" in "Repo 105" refers

to the assets being worth at least 105% of the cash Lehman was getting for them). Although Lehman’s interpretation was supported by the GAAP in effect at the time, these transactions were very poorly disclosed, and when they eventually came to light, the financial markets and investing public reacted very negatively. In response to the Lehman debacle, the FASB has taken steps to close the loophole that allowed Repo 105 transactions to be accounted for as sales.*

*FASB ASC 860–10–55: Transfers and Servicing—Overall—Implementation Guidance and Illustrations.

Source: Lehman Brothers

 **Illustration 7-23** summarizes the decision process that is used to determine whether a transfer of a receivable is accounted for as a secured borrowing or a sale.

Illustration 7-23 Accounting for the Financing of Receivables

Disclosures

Much disclosure is required when the transferor has continuing involvement in the transferred assets but accounts for the transfer as a sale. Why? Those are the circumstances under which it's most likely that the transferor may still bear significant risk associated with the arrangement, so those are the arrangements that analysts often view instead as a secured borrowing. As a result, transferors must provide enough information about the transfer to allow financial statement users to fully understand (a) the transfer, (b) any continuing involvement with the transferred assets, and (c) any ongoing risks to the transferor.

The company also has to provide information about the quality of the transferred assets. For example, for transferred receivables, the company needs to disclose the amount of receivables that are past due and any credit losses occurring during the period. Among the other information the company must disclose are these:

- How fair values were estimated when recording the transaction.
- Any cash flows occurring between the transferor and the transferee.
- How any continuing involvement in the transferred assets will be accounted for on an ongoing basis.²²

Additional Consideration

Participating Interests. What if, rather than transferring all of a particular receivable, a company transfers only part of it? For example, what if a company transfers the right to receive future interest payments on a note, but retains the right to receive the loan principal? U.S. GAAP requires that a partial transfer be treated as a secured borrowing unless the amount transferred qualifies as a “participating interest” as well as meeting the “surrender of control” requirements described above. Participating interests are defined as having a proportionate ownership interest in the receivable and sharing proportionally in the cash flows of the receivable. Many common securitization arrangements do not qualify as participating interests, so this change in GAAP makes it harder for partial transfers to qualify for the sale approach.

International Financial Reporting Standards

Transfers of Receivables. *IFRS No.9* and *FASB ASC 860* cover financing with receivables under IFRS and U.S. GAAP, respectively.^{23,24} The international and U.S. guidance often lead to similar accounting treatments. Both seek to determine whether an arrangement should be treated as a secured borrowing or a sale, and, having concluded which approach is appropriate, both account for the approaches in a similar fashion.

Where IFRS and U.S. GAAP most differ is in the conceptual basis for their choice of accounting approaches and in the decision process they require to determine which approach to use. As you have seen in this chapter, U.S. GAAP focuses on whether control of assets has shifted from the transferor to the transferee. In contrast, IFRS requires a more complex decision process. The company has to have transferred the rights to receive the cash flows from the receivable and then considers whether the company has transferred “substantially all of the risks and rewards of ownership,” as well as whether the company has transferred control. Under IFRS,

1. If the company *transfers* substantially all of the risks and rewards of ownership, the transfer is treated as a sale.
2. If the company *retains* substantially all of the risks and rewards of ownership, the transfer is treated as a secured borrowing.
3. If neither conditions 1 or 2 hold, the company accounts for the transaction as a sale if it has transferred control, and as a secured borrowing if it has retained control.

Whether risks and rewards have been transferred is evaluated by comparing how variability in the amounts and timing of the cash flows of the transferred asset affect the company before and after the transfer.

This is a broad overview of the IFRS guidance. Application of the detailed rules is complex, and, depending on the specifics of an arrangement, a company could have different accounting under IFRS and U.S. GAAP.

Concept Review Exercise

FINANCING WITH RECEIVABLES

The Hollywood Lumber Company obtains financing from the Midwest Finance Company by factoring (or discounting) its receivables. During June 2024, the company factored \$1,000,000 of accounts receivable to Midwest. The transfer was made *without* recourse. The factor, Midwest Finance, remits 80% of the factored receivables and retains 20%. When the receivables are collected by Midwest, the retained amount, less a 3% fee (3% of the total factored amount), will be remitted to Hollywood Lumber. Hollywood estimates that the fair value of the amount retained by Midwest is \$180,000.

In addition, on June 30, 2024, Hollywood discounted a note receivable without recourse. The note, which originated on March 31, 2024, requires the payment of \$150,000 *plus* interest at 8% on March 31, 2025. Midwest's discount rate is 10%. The company's fiscal year-end is December 31.

Required:

Prepare journal entries for Hollywood Lumber for the factoring of accounts receivable and the note receivable discounted on June 30. Assume that the required criteria are met and the transfers are accounted for as sales.

Solution:

The Factoring of Receivables

| | |
|--|---------|
| Cash ($\$1,000,000 \times 80\%$) | 800,000 |
| Loss on sale of receivables (to balance) | 50,000 |
| Receivable from factor ($\$180,000 - \$30,000$ fee) | 150,000 |

| | | |
|---|----------------|-----------|
| Accounts receivable (balance sold) | | 1,000,000 |
| The Note Receivable Discounted | | |
| Interest receivable | 3,000 | |
| Interest revenue ($\$150,000 \times 8\% \times 3/12$) | | 3,000 |
| Cash (proceeds determined below) | 149,850 | |
| Loss on sale of notes receivable (difference) | 3,150 | |
| Notes receivable (face amount) | | 150,000 |
| Interest receivable (accrued interest determined above) | | 3,000 |

| | |
|------------------|--|
| \$ 150,000 | Face amount |
| 12,000 | Interest to maturity ($\$150,000 \times 8\%$) |
| 162,000 | Maturity value |
| (12,150) | Discount ($\$162,000 \times 10\% \times 9/12$) |
| \$149,850 | Cash proceeds |

Decision Makers' Perspective

RECEIVABLES MANAGEMENT

LO7–9 Describe the variables that influence a company's investment in receivables and calculate the key ratios used by analysts to monitor that investment.

A company's investment in receivables is influenced by several variables, including the level of sales, the nature of the product or service sold, and credit and collection policies. These variables are, of course, related. For example, a change in credit policies could affect sales. In fact, more liberal credit policies—allowing customers a longer time to pay or offering cash discounts for early payment—often are initiated with the specific objective of increasing sales volume.

Management's choice of credit and collection policies often involves trade-offs. For example, offering cash discounts may increase sales volume, accelerate customer payment, and reduce bad debts. These

Management must evaluate the costs and benefits of any change in credit and collection policies.

benefits are not without cost. The cash discounts reduce the amount of cash collected from customers who take advantage of the discounts. Extending payment terms also may increase sales volume. However, this creates an increase in the required investment in receivables and may increase bad debts.

The ability to use receivables as a method of financing also offers management alternatives. Assigning, factoring, and discounting receivables are alternative methods of financing operations that must be evaluated relative to other financing methods such as lines of credit or other types of short-term borrowing.

Investors, creditors, and financial analysts can gain important insights by monitoring a company's investment in receivables. Chapter 4 introduced the receivables turnover ratio and the related average collection period, ratios designed to monitor receivables. Recall that these ratios are calculated as follows:

$$\text{Receivables turnover ratio} = \frac{\text{Net sales}}{\text{Average accounts receivable (net)}}$$

$$\text{Average collection period} = \frac{365 \text{ days}}{\text{Receivables turnover ratio}}$$

The turnover ratio shows the number of times during a period that the average accounts receivable balance is collected, and the average collection period is an approximation of the number of days the average accounts receivable balance is outstanding.

As a company's sales grow, receivables also will increase. If the percentage increase in receivables is greater than the percentage increase in sales, the receivables turnover ratio will decline (the average collection period will increase). This could indicate customer dissatisfaction with the product or that the company has extended too generous payment terms in order to attract new customers, which, in turn, could increase sales returns and bad debts.

These ratios also can be used to compare the relative effectiveness of companies in Page 369 managing the investment in receivables. Of course, it would be meaningless to compare the receivables turnover ratio of a computer products company such as **IBM** with that of, say, a food products company like **Hershey**. A company selling high-priced, low-volume products like mainframe computers generally will grant customers longer payment terms than a company selling lower-priced, higher-volume food products. [Illustration 7-24](#) lists the 2020 receivables turnover ratio for some well-known companies. The differences are as expected, given the nature of the companies' products and operations. In particular, companies designing expensive products for medical and business applications turn over their receivables less frequently than do consumer-goods manufacturers and wholesalers.

Illustration 7-24 Receivables Turnover Ratios

| Company | 2020 Receivables Turnover Ratio |
|--|---------------------------------|
| Medtronic (medical technology) | 5.32 |
| Autodesk (design software) | 5.81 |
| General Mills (wholesale consumer foods) | 10.70 |

To illustrate receivables analysis in more detail, let's compute the 2019 receivables turnover ratio and the average collection period for two companies in the software industry, **NortonLifeLock, Inc.** and **Broadcom, Inc.**

| (\$ in millions) | NortonLifeLock, Inc. | | Broadcom, Inc. |
|---------------------------|----------------------|--------|-----------------|
| | 2019 | 2018 | 2019 |
| Accounts receivable (net) | \$708 | \$809 | \$3,259 |
| Two-year averages | | \$ 759 | \$ 3,29 |
| Net sales—2019 | \$ 4,731 | | \$ 18,11 |

$$\begin{aligned} \text{Receivables turnover} &= \frac{\$4,731}{\$759} = 6.23 \text{ times} &= \frac{\$18,117}{\$3,292} = 5.50 \text{ times} \\ \text{Average collection period} &= \frac{365}{6.23} = 58.59 \text{ days} &= \frac{365}{5.50} = 66.36 \text{ days} \end{aligned}$$

On average, NortonLifeLock collects its receivables 8 days sooner than does Broadcom, but 12 days slower than the industry average. A major portion of NortonLifeLock's sales of products, like Norton antivirus software, are made directly to consumers online who pay immediately with credit cards, significantly accelerating payment. Broadcom, on the other hand, sells primarily to businesses, which take longer to pay.

EARNINGS QUALITY

Recall our discussion in Chapter 4 concerning earnings quality. We learned that managers have the ability, to a limited degree, to manipulate reported income and that many observers believe this practice diminishes earnings quality because it can mask “permanent” earnings. Former SEC Chairman Arthur Levitt listed discretionary accruals, which he called “Miscellaneous Cookie Jar Reserves,” as one of the most popular methods companies use to manipulate income.

Bad debt expense is one of a variety of discretionary accruals that provide management with the opportunity to manipulate income.

Sometimes financial statement users can examine accounts receivable, the allowance for bad debts, and other accounts to detect low earnings quality. For example, in an analysis that

eventually led to an important SEC fraud case, **PaineWebber Inc.** downgraded its stock recommendation for **Sunbeam, Inc.**, after noticing unusually high accounts receivable and unexpected increases in sales of certain products. Also, Sunbeam's allowance for uncollectible accounts had shown large increases in prior periods. It eventually came to light that Sunbeam had been manipulating its income by using a "bill and hold" strategy with retail buyers. This involved selling products at large discounts to retailers before they normally would buy and then holding the products in third-party warehouses, with delivery at a later date. More generally, research indicates that companies sometimes manage earnings by building up large allowances for bad debts in good periods and then reducing those allowances to increase earnings in bad periods.²⁵

Another area for accounting-quality concern is the sale method used to account for transfers of receivables. Research suggests that some companies manage earnings by distorting the fair value estimates that are made as part of recording securitizations.²⁶ Also, some firms classify cash flows associated with selling their accounts receivable in the operating section of the statement of cash flows, such that changes in the extent to which accounts receivable are sold can be used to manipulate cash flow from operations. In fact, evidence suggests that sophisticated investors and bond-rating agencies undo sales accounting to treat transfers of receivables as secured borrowings before assessing the riskiness of a company's debt.²⁷ Still, Wall Street is very good at identifying clever ways to structure transactions around accounting standards, so it is important to be vigilant regarding the accounting for these transactions. ●

Financial Reporting Case Solution

PhotosIndia.com/Glow Images

- 1. Explain the allowance method of accounting for bad debts.** The allowance method is used to report the carrying value of accounts receivable at the net amount expected to be collected. In an adjusting entry, we record bad debt expense and reduce accounts receivable

indirectly by crediting a contra account to accounts receivable for an estimate of the amount that eventually will prove uncollectible.

2. What approaches might CHS have used to arrive at the \$200 million bad debt provision?

CHS would determine the balance in the allowance for uncollectible accounts that is necessary to show net accounts receivable at the appropriate carrying value and then would record whatever adjustment and corresponding bad debt expense resulted in that balance. It likely would use an aging of accounts receivable to calculate the appropriate balance. It might also use a percentage of net sales to estimate bad debt expense, particularly on an interim basis, but that approach would only be allowed if it produced a similar carrying value as the balance sheet approach.

3. Are there any alternatives to the allowance method?

An alternative to the allowance method is the direct write-off method. Using this method, adjusting entries are not recorded, and any bad debt that does arise simply is written off as bad debt expense. The direct write-off method is not permitted by GAAP except in limited circumstances.

4. What does it mean for CHS to securitize its receivables?

Securitization is a method used to sell accounts receivable. In a typical securitization, a company creates a “special purpose entity” that buys receivables from the company and issues securities that are collateralized by the receivables. Securitization allows CHS to obtain cash for its receivables sooner than it could otherwise, and to reach a large pool of investors at favorable financing rates. ●

The Bottom Line

-  **LO7-1** Internal control refers to the plan designed to encourage adherence to company policies and procedures; promote operational efficiency; minimize errors, thefts, or fraud; and maximize the reliability and accuracy of accounting data. Key elements of an internal control system for cash receipts and disbursements include separation of record keeping from control of cash duties and the periodic preparation of a bank reconciliation. (*p. 338*)
-  **LO7-2** Cash can be informally restricted by management for a particular purpose. Restrictions also can be contractually imposed. If restricted cash is available for current operations or to pay current liabilities, it's classified as a current asset; otherwise, it's classified as investments and funds or other assets. (*p. 339*)
-  **LO7-3** The gross method of accounting for cash discounts considers a discount not taken as part of sales revenue. The net method considers a discount not taken as a sales discount forfeited. (*p. 342*)
-  **LO7-4** When merchandise returns are anticipated, a refund liability should be recorded, and sales revenue should be reduced by anticipated sales returns. (*p. 344*)
-  **LO7-5** At the end of each period, the company estimates the necessary balance in the allowance for uncollectible accounts and then records whatever adjustment to the allowance and corresponding bad debt expense is necessary to reach that balance. (*p. 348*)
-  **LO7-6** The balance sheet approach determines bad debt expense by estimating the appropriate carrying value of accounts receivable to be reported in the balance sheet and then adjusting the allowance for uncollectible accounts as necessary to reach that carrying value. The income statement approach estimates bad debt expense based on the notion that a certain percentage of each period's credit sales will prove to be uncollectible. (*p. 350*)
-  **LO7-7** Notes receivable are formal credit arrangements between a creditor (lender) and a debtor (borrower). The typical note receivable requires the payment of a specified face amount, also called principal, at a specified maturity date or dates. In addition, interest is paid at a stated percentage of the face amount.

Interest on notes is calculated by multiplying the face amount by the annual rate by the fraction of the annual period. (*p.* 354)

 **LO7-8**

A wide variety of methods exists for companies to use their receivables to obtain immediate cash. These methods can be described as either a secured borrowing or a sale of receivables. If three conditions indicating surrender of control are met, the transferor accounts for the transfer of receivables as a sale; otherwise as a secured borrowing. (*p.* 360)

 **LO7-9**

A company's investment in receivables is influenced by several related variables, to include the level of sales, the nature of the product or service, and credit and collection policies. Investors, creditors, and financial analysts can gain important insights by monitoring a company's investment in receivables. The receivables turnover and average collection period ratios are designed to monitor receivables. (*p.* 368)

 **LO7-10**

Accounting for cash and accounts receivable are similar under U.S. GAAP and IFRS. Other than some differences in terminology and balance sheet classifications, the most important differences involve accounting for transfers of receivables. Both IFRS and U.S. GAAP seek to distinguish between determining whether a sales treatment or secured borrowing treatment is appropriate, but they use different conceptual frameworks to guide that choice. U.S. GAAP focuses on whether control of the receivables is transferred, while IFRS uses a more complex decision process that also considers whether substantially all of the risks and rewards of ownership have been transferred. (*p.* 340, 359, and 367) ●

APPENDIX 7A Cash Controls

Bank Reconciliation

One of the most important tools used in the control of cash is the **bank reconciliation**. Since all cash receipts are deposited into the bank account and cash disbursements are made by check, the bank account provides a separate record of cash. It's desirable to periodically compare the bank balance with the balance in the company's own records and reconcile any differences.

You probably know from your own personal experience that the ending balance in your checking account reported on your monthly bank statement rarely equals the balance you have recorded in your checkbook. Differences arise from two types of items: timing differences and errors. Page 372

Timing differences occur when the company and the bank record transactions at different times. At any point in time, the company may have adjusted the cash balance for items of which the bank is not yet aware.

Likewise, the bank may have adjusted its record of that balance by items of which the company is not yet aware. For example, checks written and cash deposits are not all processed by the bank in the same month that the company records them. Also, the bank may adjust the company's account for items such as service charges that the company is not aware of until the bank statement is received.

Differences between the cash book and bank balance occur due to differences in the timing of recognition of certain transactions and errors.

Errors can be made either by the company or the bank. For example, a check might be written for \$210 but recorded on the company's books as a \$120 disbursement; a deposit of \$500 might be processed incorrectly by the bank as a \$50 deposit. In addition to serving as a safeguard of cash, the bank reconciliation also uncovers errors such as these and helps ensure that the proper cash balance is reported in the balance sheet.

Bank reconciliations include adjustments to the balance per bank for timing differences involving transactions already reflected in the company's

accounting records that have not yet been processed by the bank. These adjustments usually include *checks outstanding* and *deposits outstanding* (also called *deposits in transit*). In

STEP 1: Adjust the bank balance to the corrected cash balance.

addition, the balance per bank would be adjusted for any bank errors discovered. These adjustments produce an adjusted bank balance that represents the corrected cash balance.

The balance per books is similarly adjusted for timing differences involving transactions already reflected by the bank of which the company is unaware until the

STEP 2: Adjust the book balance to the corrected cash balance.

bank statement is received. These would include service charges, charges for NSF (nonsufficient funds) checks, and collections made by the bank on the company's behalf. In addition, the balance per books is adjusted for any company errors discovered, resulting in an adjusted book balance that will also represent the corrected cash balance. *Each of these adjustments requires a journal entry to correct the book balance.* Only adjustments to the book balance require journal entries.  **Illustration 7A-1** recaps these reconciling items.

Illustration 7A-1 Bank Reconciliation— Reconciling Items

Balance per Bank

+ Deposits outstanding

- Checks outstanding

± Errors

Corrected balance

Balance per Book

+ Collections by bank

- Service charges

- NSF checks

± Errors

Corrected balance

The two corrected balances must equal.

Step 1: Adjustments to Bank Balance

1. *Add deposits outstanding.* These represent cash amounts received by the company and debited to cash that have not been deposited in the bank by the bank statement cutoff date and cash receipts deposited in the bank near the end of the period that are not recorded by the bank until after the cutoff date.

2. *Deduct checks outstanding.* These represent checks written and recorded by the company as credits to cash that have not yet been processed by the bank before the cutoff date.
3. *Bank errors.* These will either be increases or decreases depending on the nature of the error.

Step 2: Adjustments to Book Balance

1. *Add collections made by the bank* on the company’s behalf and other increases in cash that the company is unaware of until the bank statement is received.
2. *Deduct service and other charges* made by the bank that the company is unaware of until the bank statement is received.
3. *Deduct NSF (nonsufficient funds) checks.* These are checks previously deposited for which the payors do not have sufficient funds in their accounts to cover the amount of the checks. The checks are returned to the company whose responsibility it is to seek payment from payors.
4. *Company errors.* These will either be increases or decreases depending on the nature of the error.

To demonstrate the bank reconciliation process, consider  **Illustration 7A-2.**

Illustration 7A-2 Bank Reconciliation

The Hawthorne Manufacturing Company maintains a general checking account at the First Pacific Bank. First Pacific provides a bank statement and copies of canceled checks once a month. The cutoff date is the last day of the month. The bank statement for the month of May is summarized as follows:

| | |
|----------------------|-----------|
| Balance, May 1, 2024 | \$ 32,120 |
| Deposits | 82,140 |
| Checks processed | (78,433) |

| | |
|--|-----------------|
| Service charges | (80) |
| NSF checks | (2,187) |
| Note payment collected by bank (includes \$120 interest) | 1,120 |
| Balance, May 31, 2024 | <u>\$34,680</u> |

The company's general ledger cash account has a balance of \$35,276 at the end of May. A review of the company records and the bank statement reveals the following:

1. Cash receipts not yet deposited totaled \$2,965.
2. A deposit of \$1,020 was made on May 31 that was not credited to the company's account until June.
3. All checks written in April have been processed by the bank. Checks written in May that had not been processed by the bank total \$5,536.
4. A check written for \$1,790 was incorrectly recorded by the company as a \$790 disbursement. The check was for payment to a supplier of raw materials.

The bank reconciliation prepared by the company appears as follows:

Step 1: Bank Balance to Corrected Balance

| | |
|----------------------------|------------------|
| Balance per bank statement | \$34,680 |
| Add: Deposits outstanding | 3,985* |
| Deduct: Checks outstanding | (5,536) |
| Corrected cash balance | <u>\$ 33,129</u> |

Step 2: Book Balance to Corrected Balance

| | |
|-------------------------------|------------------|
| Balance per books | \$35,276 |
| Add: Note collected by bank | 1,120 |
| Deduct: | |
| Service charges | (80) |
| NSF checks | (2,187) |
| Error-understatement of check | (1,000) |
| Corrected cash balance | <u>\$ 33,129</u> |

*\$2,965 + 1,020 = \$3,985

The next step is to prepare adjusting journal entries to reflect each of the adjustments to the balance per books. These represent amounts the company was not previously aware of until receipt of the bank statement. No adjusting entries are needed for the adjustments to the balance per bank because the company has already recorded these items. However, the bank needs to be notified of any errors discovered.

To record the receipt of principal and interest on note collected directly by the bank

| | | |
|------------------|-------|-------|
| Cash | 1,120 | |
| Notes receivable | | 1,000 |
| Interest revenue | | 120 |

To record credits to cash revealed by the bank reconciliation

| | | |
|---|-------|-------|
| Miscellaneous expense (bank service charges) | 80 | |
| Accounts receivable (NSF checks) | 2,187 | |
| Accounts payable (error in check to supplier) | 1,000 | |
| Cash | | 3,267 |

After these entries are posted, the general ledger cash account will equal the corrected balance of \$33,129.

Petty Cash

Most companies keep a small amount of cash on hand to pay for low-cost items such as postage, office supplies, delivery charges, and entertainment expenses. It would be inconvenient, time-consuming, and costly to process a check each time these small payments are made. A petty cash fund provides a more efficient way to handle these payments.

A petty cash fund is established by transferring a specified amount of cash from the company's general checking account to an employee designated as the petty cash custodian. The amount of the fund should approximate the expenditures made from the fund during a relatively short period of time (say a week or a month). The custodian disburses

The petty cash fund always should have cash and receipts that together equal the amount of the fund.

cash from the fund when the appropriate documentation is presented, such as a receipt for the purchase of office supplies. At any point in time, the custodian should be in possession of cash and appropriate receipts that sum to the amount of the fund. The receipts serve as the basis for recording appropriate expenses each time the fund is replenished. Consider the example in [Illustration 7A-3](#).

Illustration 7A-3 Petty Cash Fund

On May 1, 2024, the Hawthorne Manufacturing Company established a \$200 petty cash fund. John Ringo is designated as the petty cash custodian. The fund will be replenished at the end of each month. On May 1, 2024, a check is written for \$200 made out to John Ringo, petty cash custodian. During the month of May, John paid bills totaling \$160 summarized as follows:

| | |
|------------------|---------------|
| Postage | \$ 40 |
| Office supplies | 35 |
| Delivery charges | 55 |
| Entertainment | 30 |
| Total | \$ 160 |

In journal entry form, the transaction to establish the fund would be recorded as follows:

| | | |
|-------------------------|-----|-----|
| May 1, 2024 | | |
| Petty Cash | 200 | |
| Cash (checking account) | | 200 |

No entries are recorded at the time the actual expenditures are made from the fund. The expenditures are recorded when reimbursement is requested at the end of the month. At that time, a check is written to John Ringo, petty cash custodian, for the total of the fund receipts, \$160 in this case. John cashes the check and replenishes the fund to \$200. In journal entry form, replenishing the fund would be recorded as follows:

A petty cash fund is established by writing a check to the custodian.

| May 31, 2024 | | |
|-------------------------|----|------------|
| Postage expense | 40 | |
| Office supplies expense | 35 | |
| Delivery expense | 55 | |
| Entertainment expense | 30 | |
| Cash (checking account) | | 160 |

The petty cash account is not debited when replenishing the fund. If, however, the size of the fund is increased at time of replenishment, the account is debited for the increase. Similarly, petty cash would be credited if the size of the fund is decreased.

The appropriate expense accounts are debited when the petty cash fund is reimbursed.

To maintain the control objective of separation of duties, the petty cash custodian should not be involved in the process of writing or approving checks, nor in recordkeeping. In addition, management should arrange for surprise counts of the fund.

APPENDIX 7B Accounting for a Troubled Debt Restructuring²⁸

Sometimes a creditor changes the original terms of a debt agreement in response to the debtor's financial difficulties. The creditor makes concessions to the debtor that make it easier for the debtor to pay, with the goal of maximizing the amount of cash that the

A troubled debt restructuring occurs when the creditor makes concessions to the debtor in response to the debtor's financial difficulties.

creditor can collect. In that case, the new arrangement is referred to as a **troubled debt restructuring**. Because identifying an arrangement as a troubled debt restructuring requires recognizing any loss associated with the arrangement, creditors might be reluctant to conclude that a troubled debt restructuring has occurred, so the FASB provides guidance to help ensure that all troubled debt restructurings are properly identified.²⁹

WHEN THE RECEIVABLE IS CONTINUED, BUT WITH MODIFIED TERMS

In a troubled debt restructuring, it's likely that the creditor allows the receivable to continue but with the terms of the debt agreement modified to make it easier for the debtor to comply. The creditor might agree to reduce or delay the scheduled interest payments. Or, it may agree to reduce or delay the maturity amount. Often a troubled debt restructuring will call for some combination of these concessions.

The CECL approach used to account for credit losses also applies to accounting for troubled debt restructurings. The creditor uses its normal methodology to calculate credit losses. Often that methodology involves calculating discounted cash flows, so that is what we illustrate in  **Illustration 7B-1**.

Illustration 7B-1 Troubled Debt Restructuring with Modified Terms

The discounted present value of the cash flows prior to the loss is the same as the receivable's book value.

The discounted present value of the cash flows after the loss is less than book value.

The difference is a credit loss, debited to bad debt expense.

The date is January 1, 2024. Brillard Properties owes First Prudent Bank \$30 million under a 10% note with two years remaining to maturity. Due to Brillard's financial difficulties, the previous year's interest (\$3 million) was not paid. First Prudent and Brillard renegotiated Brillard's debt as follows:

1. forgive the interest accrued from last year,
 2. reduce the two remaining interest payments from \$3 million each to \$2 million each, and
 3. reduce the face amount from \$30 million to \$25 million
- How would First Prudent account for this troubled debt restructuring?

Analysis

Previous Value

| | | |
|--|-------------------|--------------|
| Accrued interest (10% × \$30,000,000) | \$ 3,000,000 | |
| Principal | <u>30,000,000</u> | |
| Book value of the receivable | | \$33,000,000 |

New Value (based on estimated cash flows to be received)

| | | | |
|---|---|---------------------|--------------|
| Present value of accrued interest | | = \$ 0 | |
| Present value of future interest | \$ 2 million × 1.73554* | = 3,471,080 | |
| Present value of estimated principal | \$25 million × 0.82645 [†] | = <u>20,661,250</u> | |
| Present value of the receivable | | | (24,132,330) |

Loss

\$ 8,867,670

*Present value of an ordinary annuity of \$1: $n = 2, i = 10\%$

[†]Present value of \$1: $n = 2, i = 10\%$

Journal Entry on January 1, 2024

| | |
|-----------------------------------|------------------|
| Bad debt expense (to balance)# | 8,867,670 |
|-----------------------------------|------------------|

| | |
|---|-----------|
| Interest receivable | 3,000,000 |
| Allowance for uncollectible accounts [@] | 5,867,670 |
| (\$30,000,000 – \$24,132,330) | |

#Rather than debiting bad debt expense, First Prudent might debit Loss on troubled debt restructuring or some similar title.

@This account might also be called Allowance for loan losses, Allowance for credit losses, or some similar title.

Note that the interest rate used in the illustration is the original rate (10%) included in the original credit agreement. That is because a troubled debt restructuring does not result in a new loan, but rather is part of the creditor’s ongoing efforts to collect the original loan.

As First Prudent receives the reduced interest payments and principal, it will record receipt of cash and reduce the allowance for uncollectible accounts for the difference between the amount of interest it was supposed to receive originally and the amount it receives under the troubled debt restructuring:

| December 31, 2024 | |
|---|-----------|
| Cash (per agreement) | 2,000,000 |
| Allowance for uncollectible accounts (to balance) | 413,233 |
| Interest revenue $((\$30,000,000 - \$5,867,670) \times 10\%)$ | 2,413,233 |

Reducing the allowance increases the carrying value of the note receivable, so under the effective interest method the interest revenue associated with the receivable is higher in the next period:

| December 31, 2025 | |
|---|-----------|
| Cash (per agreement) | 2,000,000 |
| Allowance for uncollectible accounts (to balance) | 454,556 |
| Interest revenue $((\$30,000,000 - (\$5,867,670 - \$413,233)) \times 10\%)$ | 2,454,556 |

When the note matures, First Prudent records receipt of cash and reduces the note receivable and related allowance for uncollectible accounts to zero.

WHEN THE RECEIVABLE IS SETTLED OUTRIGHT

Sometimes a receivable in a troubled debt restructuring is actually settled at the time of the restructuring by the debtor making a payment of cash, some other noncash assets, or even shares of the debtor's stock. In that case, the creditor records a loss for the difference between the carrying amount of the receivable and the fair value of the asset(s) or equity securities received.  **Illustration 7B-2** provides an example.

Illustration 7B-2 Debt Settled at the Time of a Restructuring

First Prudent Bank is owed \$30 million by Brillard Properties under a 10% note with two years remaining to maturity. Due to Brillard's financial difficulties, the previous year's interest (\$3 million) was not received. The bank agrees to settle the receivable (and not receive the accrued interest receivable) in exchange for property having a fair value of \$20 million. Assume that \$2 million of bad debt expense has previously been accrued for this loan, resulting in a balance of \$2 million in the allowance for uncollectible accounts. First Prudent, the creditor, would record the following journal entry:

| | (\$ in millions) |
|---|------------------|
| Land (fair value) | 20 |
| Allowance for uncollectible accounts [@] | 2 |
| Bad debt expense (to balance) [*] | 11 |
| Interest receivable (10% × \$30 million) | 3 |
| Notes receivable (account balance) | 30 |

[@]This account might also be called Allowance for loan losses, Allowance for credit losses, or some similar title.

^{*}Rather than debiting bad debt expense, First Prudent might debit Loss on troubled debt restructuring or some similar title.

You may be wondering whether recognizing a loss on a troubled debt restructuring leads to a double counting of bad debt expense. After all, the receivable first was included in a group of receivables for which bad debt expense was estimated, and then was

singled out for recognition of a loss. Creditors avoid this problem by separately estimating bad debt expense for the restructured troubled debt receivable and for the rest of the receivables. That way there is no double counting.

In this appendix, we have focused on creditors' accounting for troubled debt restructurings. We discuss those topics from the standpoint of the debtor in [Chapter 14](#), [Appendix B](#).

COVID-19: Accounting and Reporting Implications

The COVID-19 pandemic had very negative effects on a variety of businesses, such as hotels, restaurants, and transportation services. Many of these businesses had outstanding loans payable but did not have enough cash to make their scheduled payments. To avoid forcing a borrower into bankruptcy, a bank or other lender could modify agreements to defer payments of principal or interest, but those modifications normally would trigger recognition of a loss due to a troubled debt restructuring. Lenders concerned about showing losses might be reluctant to modify loans, so more businesses would be pushed into bankruptcy, worsening the economic downturn associated with the pandemic. To address this concern, another provision of the *Coronavirus Aid, Relief, and Economic Security (CARES) Act* enabled banks and some other financial institutions to suspend troubled-debt-restructuring accounting with respect to modifications of loans that were past due as a result of the effects of the COVID-19 pandemic. This is another example of Congress intervening to affect standard setting in an attempt to produce particular economic outcomes.

Questions For Review of Key Topics

- Q 7-1** Define cash equivalents.
- Q 7-2** Explain the primary functions of internal controls procedures in the accounting area. What is meant by separation of duties?
- Q 7-3** What are the responsibilities of management described in Section 404 of the Sarbanes-Oxley Act? What are the responsibilities of the company's auditor?
- Q 7-4** Is restricted cash included in the reconciliation of cash balances on a statement of cash flows? Explain.
- Q 7-5** Define a compensating balance. How are compensating balances reported in financial statements?
- Q 7-6** Do U.S. GAAP and IFRS differ in how bank overdrafts are treated? Explain.
-  **IFRS**
- Q 7-7** Explain the difference between a trade discount and a cash discount.
- Q 7-8** Distinguish between the gross and net methods of accounting for cash discounts.
- Q 7-9** Briefly explain the accounting treatment for sales returns.
- Q 7-10** Explain the typical way companies account for uncollectible accounts receivable (bad debts). When is it permissible to record bad debt expense only at the time when receivables actually prove uncollectible?
- Q 7-11** Define the CECL model for accounts receivable. On what does it base the estimate of the allowance for uncollectible accounts?
- COVID-19**
- Q 7-12** How did the CARES Act affect adoption of the CECL model?
- Q 7-13** Define the ECL model for accounts receivable. How does it differ from the CECL model?
-  **IFRS**
- Q 7-14** Briefly explain the difference between the income statement approach and the balance sheet approach to estimating bad debts.
- Q 7-15** If a company has accounts receivable from ordinary customers and from related parties, can they combine those receivables in their financial statements under U.S. GAAP? Under IFRS?

IFRS

- Q 7-16** Is any special accounting treatment required for the assigning of accounts receivable in general as collateral for debt?
- Q 7-17** Explain any possible differences between accounting for an account receivable factored with recourse compared with one factored without recourse.
- Q 7-18** Do U.S. GAAP and IFRS differ in the criteria they use to determine whether a transfer of receivables is treated as a sale? Explain.

Page 378

IFRS

- Q 7-19** What is meant by the discounting of a note receivable? Describe the four-step process used to account for discounted notes.
- Q 7-20** What are the key variables that influence a company's investment in receivables? Describe the two ratios used by financial analysts to monitor a company's investment in receivables.
- Q 7-21** (Based on Appendix 7A) In a two-step bank reconciliation, identify the items that might be necessary to adjust the bank balance to the corrected cash balance. Identify the items that might be necessary to adjust the book balance to the corrected cash balance.
- Q 7-22** (Based on Appendix 7A) How is a petty cash fund established? How is the fund replenished?
- Q 7-23** (Based on Appendix 7B) Marshall Companies, Inc., holds a note receivable from a former subsidiary. Due to financial difficulties, the former subsidiary has been unable to pay the previous year's interest on the note. Marshall agreed to restructure the debt by both delaying and reducing remaining cash payments. The concessions result in a credit loss on the creditor's investment in the receivable. How is the credit loss on the troubled debt restructuring calculated?
- COVID-19**
- Q 7-24** How did the CARES Act affect accounting for loan modifications as Troubled Debt Restructurings?

Brief Exercises

BE 7-1 Internal control LO7-1

Janice Dodds opens the mail for the Ajax Plumbing Company. She lists all customer checks on a spreadsheet that includes the name of the customer and the check amount. The checks, along with the spreadsheet, are then sent to Jim Seymour in the accounting department who records the checks and deposits them daily in the company's checking account. How could the company improve its internal control procedure for the handling of its cash receipts?

BE 7-2 Bank overdrafts; financial statement effects LO7-2, LO7-10

Cutler Company has a cash account with a balance of \$250,000 with Wright Bank and a cash account with an overdraft of \$5,000 at Lowe Bank. What would the current assets section of Cutler's balance sheet include for "cash" under IFRS? Under U.S. GAAP?

BE 7-3 Cash and cash equivalents; financial statement effects LO7-2

The following items appeared on the year-end trial balance of Consolidated Freight Corporation: cash in a checking account, U.S. Treasury bills that mature in six months, undeposited customer checks, cash in a savings account, and currency and coins. Which of these items would be included in the company's balance sheet as cash and cash equivalents?

BE 7-4 Cash discounts; gross method LO7-3

On December 28, 2024, Tristar Communications sold 10 units of its new satellite uplink system to various customers for \$25,000 each. The terms of each sale were 1/10, n/30. Tristar uses the gross method to account for sales discounts. In what year will income before

tax be affected by discounts, assuming that all customers paid the net-of-discount amount on January 6, 2025? By how much?

BE 7-5 Cash discounts; net method  **LO7-3**

Refer to the situation described in BE 7-4. Answer the questions assuming that Tristar uses the net method to account for sales discounts.

BE 7-6 Sales returns  **LO7-4**

During 2024, its first year of operations, Hollis Industries recorded sales of \$10,600,000 and experienced returns of \$720,000. Cost of goods sold totaled \$6,360,000 (60% of sales). The company estimates that 8% of all sales will be returned. Prepare the year-end adjusting journal entries to account for anticipated sales returns under the assumption that all sales are made for cash (no accounts receivable are outstanding).

BE 7-7 Sales returns  **LO7-4**

Refer to the situation described in BE 7-6. Prepare the year-end adjusting journal entries to account for anticipated sales returns, assuming that all sales are made on credit and all accounts receivable are outstanding.

BE 7-8 Accounts receivable classification  **LO7-5**,
 **LO7-10**

Singletary Associates has accounts receivable due from normal credit customers and also has an account receivable due from a director of the company. Singletary would like to combine both of those receivables on one line in the current assets section of their balance sheet and in the disclosure notes. Is that permissible under U.S. GAAP? Under IFRS? Explain.

BE 7-9 Uncollectible accounts; establishing an allowance
 **LO7-5**,  **LO7-6**

At the end of the first year of operations, Gaur Manufacturing had gross accounts receivable of \$300,000. Gaur's management estimates that 6% of the accounts will prove uncollectible. What journal entry should Gaur record to establish an allowance for uncollectible accounts?

BE 7-10 Uncollectible accounts; adjusting the allowance, credit balance  **LO7-5**,  **LO7-6**

At the end of the year, Breyer Associates had a *credit* balance in its allowance for uncollectible accounts of \$12,000 before adjustment. The balance in Breyer's gross accounts receivable is \$600,000. Breyer's management estimates that 10% of its accounts receivable balance will not be collected. What journal entry should Breyer record to adjust its allowance for uncollectible accounts?

BE 7-11 Uncollectible accounts; adjusting the allowance, debit balance  **LO7-5**,  **LO7-6**

At the end of the year, Syer Associates had a *debit* balance in its allowance for uncollectible accounts of \$12,000 before adjustment. The balance in Syer's gross accounts receivable is \$600,000. Syer's management estimates that 10% of its accounts receivable balance will not be collected. What journal entry should Syer record to adjust its allowance for uncollectible accounts?

BE 7-12 Calculate uncollectible accounts using the aging method  **LO7-5**,  **LO7-6**

Crell Computers categorizes its accounts receivable into four age groups for purposes of estimating its allowance for uncollectible accounts.

1. Accounts not yet due = \$60,000; estimated uncollectible = 5%.
2. Accounts 1-30 days past due = \$15,000; estimated uncollectible = 10%.
3. Accounts 31-60 days past due = \$10,000; estimated uncollectible = 20%.
4. Accounts more than 60 days past due = \$5,000; estimated uncollectible = 30%.

What should be the balance in Crell's allowance for uncollectible accounts?

BE 7-13 Uncollectible accounts; income statement approach  **LO7-5**,  **LO7-6**

The following information relates to a company's accounts receivable: gross accounts receivable balance at the beginning of the year, \$300,000; allowance for uncollectible accounts at the beginning of the year, \$25,000 (credit balance); credit sales during the year, \$1,500,000; accounts receivable written off during the year, \$16,000; cash collections from customers, \$1,450,000. Assuming the company estimates bad debts at an amount equal to 2% of credit sales, calculate (1) bad debt expense for the year and (2) the year-end balance in the allowance for uncollectible accounts.

BE 7-14 Uncollectible accounts; balance sheet approach

 **LO7-5**,  **LO7-6**

Refer to the situation described in BE 7-13. Answer the two questions assuming the company estimates that future bad debts will equal 10% of the year-end balance in accounts receivable.

BE 7-15 Uncollectible accounts; solving for unknown

 **LO7-5**,  **LO7-6**

A company's year-end balance in accounts receivable is \$2,000,000. The allowance for uncollectible accounts had a beginning-of-year credit balance of \$30,000. An aging of accounts receivable at the end of the year indicates a required allowance of \$38,000. If bad debt expense for the year was \$40,000, what was the amount of bad debts written off during the year?

BE 7-16 Uncollectible accounts; solving for unknown

 **LO7-5**,  **LO7-6**

Refer to the situation described in BE 7-15. If credit sales for the year were \$8,200,000 and \$7,950,000 was collected from credit customers, what was the beginning-of-year balance in accounts receivable?

BE 7-17 Note receivable **LO7-7**

On December 1, 2024, Davenport Company sold merchandise to a customer for \$20,000. In payment for the merchandise, the customer signed a 6% note requiring the payment of interest and principal on March 1, 2025. How much interest revenue will the company recognize during 2024? In 2025?

BE 7-18 Long-term notes receivable **LO7-7**

On April 19, 2024, Millipede Machinery sold a tractor to Thomas Hartwood, accepting a note promising payment of \$120,000 in five years. The applicable effective interest rate is 7%. What amount of sales revenue would Millipede recognize on April 19, 2024, for the Hartwood transaction?

BE 7-19 Factoring of accounts receivable; financial statement effects **LO7-8**

Logitech Corporation transferred \$100,000 of accounts receivable to a local bank. The transfer was made without recourse. The local bank remits 85% of the factored amount to Logitech and retains the remaining 15%. When the bank collects the receivables, it will remit to Logitech the retained amount less a fee equal to 3% of the total amount factored. Logitech estimates a fair value of its 15% interest in the receivables of \$11,000 (not including the 3% fee). What is the effect of this transaction on the company's assets, liabilities, and income before income taxes?

BE 7-20 Factoring of accounts receivable **LO7-8**

Refer to the situation described in BE 7-19. Assuming that the sale criteria are not met, describe how Logitech would account for the transfer.

BE 7-21 Transfers of accounts receivable **LO7-8**, **LO7-10**

Huling Associates plans to transfer \$300,000 of accounts receivable to Mitchell Inc. in exchange for cash. Huling has structured the arrangement so that it retains substantially all the risks and rewards of ownership but shifts control over the receivables to Mitchell. Assuming all other criteria are met for recognizing the transfer as a sale, how would Huling account for this transaction under IFRS? Under U.S. GAAP?

BE 7-22 Discounting a note **LO7-8**

On March 31, Dower Publishing discounted a \$30,000 note at a local bank. The note was dated February 28 and required the payment of the principal amount and interest at 6% on

May 31. The bank's discount rate is 8%. How much cash will Dower receive from the bank on March 31?

BE 7-23 Receivables turnover  **LO7-9**

Camden Hardware's credit sales for the year were \$320,000. Accounts receivable at the beginning and end of the year were \$50,000 and \$70,000, respectively. Calculate the accounts receivable turnover ratio and the average collection period for the year.

BE 7-24 Bank reconciliation  **Appendix 7A**

Marin Company's general ledger indicates a cash balance of \$22,340 as of September 30, 2024. Early in October Marin received a bank statement indicating that during September Marin had an NSF check of \$1,500 returned to a customer and incurred service charges of \$45. Marin also learned it had incorrectly recorded a check received from a customer on September 15 as \$500 when in fact the check was for \$550. Calculate Marin's correct September 30, 2024, cash balance.

BE 7-25 Bank reconciliation  **Appendix 7A**

Shan Enterprises received a bank statement listing its May 31, 2024, bank balance as \$47,582. Shan determined that as of May 31 it had cash receipts of \$2,500 that were not yet deposited and checks outstanding of \$7,224. Calculate Shan's correct May 31, 2024, cash balance.

BE 7-26 Troubled debt restructuring  **Appendix 7B**

Thaler Inc. holds a \$1 million receivable (\$800,000 principal, \$200,000 accrued interest) from Einhorn Industries, and agrees to settle the receivable outright for \$900,000 given Einhorn's difficult financial situation. How much gain or loss should Thaler recognize on this troubled debt restructuring?

Exercises

E 7-1 Cash and cash equivalents; restricted cash; financial statement effects LO7-2

The controller of the Red Wing Corporation is in the process of preparing the company's 2024 financial statements. She is trying to determine the correct balance of cash and cash equivalents to be reported as a current asset in the balance sheet. The following items are being considered:

- a. Balances in the company's accounts at the First National Bank; checking \$13,500, savings \$22,100.
- b. Undeposited customer checks of \$5,200.
- c. Currency and coins on hand of \$580.
- d. Savings account at the East Bay Bank with a balance of \$400,000. This account is being used to accumulate cash for future plant expansion (in 2026).
- e. \$20,000 in a checking account at the East Bay Bank. The balance in the account represents a 20% compensating balance for a \$100,000 loan with the bank. Red Wing may not withdraw the funds until the loan is due in 2027.
- f. U.S. Treasury bills; 2-month maturity bills totaling \$15,000, and 7-month bills totaling \$20,000.

Required:

1. Determine the correct balance of cash and cash equivalents to be reported in the current asset section of the 2024 balance sheet.
2. For each of the items not included in your answer to requirement 1, explain the correct classification of the item.

E 7-2 Cash and cash equivalents; financial statement effects LO7-2

Delta Automotive Corporation has the following assets listed in its 12/31/2024 trial balance:

| | |
|---|-----------|
| Cash in bank—checking account | \$ 22,500 |
| U.S. Treasury bills (mature in 60 days)* | 5,000 |
| Cash on hand (currency and coins) | 1,350 |
| U.S. Treasury bills (mature in six months)* | 10,000 |
| Undeposited customer checks | 1,840 |

*Purchased on 11/30/2024

Required:

1. Determine the correct balance of cash and cash equivalents to be reported in the current asset section of the 2024 balance sheet.
2. For each of the items not included in your answer to requirement 1, explain the correct classification of the item.

E 7-3 FASB codification research  **LO7-2**,  **LO7-6**,
 **LO7-7**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access.

Required:

Indicate the specific seven-digit Codification citation (XXX-XX-XX) for each of the following items:

1. Accounts receivables from related parties should be shown separately from trade receivables
2. The definition of cash equivalents (*Hint: See Statement of Cash Flows.*)
3. The requirement to value notes exchanged for cash at the cash proceeds
4. The two conditions that must be met to accrue a loss on an accounts receivable

E 7-4 Bank overdrafts; financial statement effects  **LO7-2**,
 **LO7-10**

Parker Inc. has the following cash balances:

| | |
|--------------------|------------------|
| First Bank | \$150,000 |
| Second Bank | (10,000) |
| Third Bank | 25,000 |
| Fourth Bank | (5,000) |

Required:

1. Prepare the current assets and current liabilities section of Parker's 2024 balance sheet, assuming Parker reports under U.S. GAAP.
2. Prepare the current assets and current liabilities section of Parker's 2024 balance sheet, assuming Parker reports under IFRS.

E 7-5 Trade and cash discounts; the gross method and the net method compared **LO7-3**

Tracy Company, a manufacturer of air conditioners, sold 100 units to Thomas Company on November 17, 2024. The units have a list price of \$600 each, but Thomas was given a 30% trade discount. The terms of the sale were 2/10, n/30.

Required:

1. Prepare the journal entries to record the sale on November 17 (ignore cost of goods) and collection on November 26, 2024, assuming that the gross method of accounting for cash discounts is used.
2. Prepare the journal entries to record the sale on November 17 (ignore cost of goods) and collection on December 15, 2024, assuming that the gross method of accounting for cash discounts is used.
3. Repeat requirements 1 and 2 assuming that the net method of accounting for cash discounts is used.

E 7-6 Cash discounts; the gross method **LO7-3**

Harwell Company manufactures automobile tires. On July 15, 2024, the company sold 1,000 tires to the Nixon Car Company for \$50 each. The terms of the sale were 2/10, n/30. Harwell uses the gross method of accounting for cash discounts.

Required:

1. Prepare the journal entries to record the sale on July 15 (ignore cost of goods) and collection on July 23, 2024.
2. Prepare the journal entries to record the sale on July 15 (ignore cost of goods) and collection on August 15, 2024.

E 7-7 Cash discounts; the net method  **LO7-3**

[This is a variation of E 7-6 modified to focus on the net method of accounting for cash discounts.]

Harwell Company manufactures automobile tires. On July 15, 2024, the company sold 1,000 tires to the Nixon Car Company for \$50 each. The terms of the sale were 2/10, n/30. Harwell uses the net method of accounting for cash discounts.

Required:

1. Prepare the journal entries to record the sale on July 15 (ignore cost of goods) and payment on July 23, 2024.
2. Prepare the journal entries to record the sale on July 15 (ignore cost of goods) and payment on August 15, 2024.

E 7-8 Sales returns  **LO7-4**

Halifax Manufacturing allows its customers to return merchandise for any reason up to 90 days after delivery and receive a credit to their accounts. All of Halifax's sales are for credit (no cash is collected at the time of sale). The company began 2024 with a refund liability of \$300,000. During 2024, Halifax sold merchandise on account for \$11,500,000. Halifax's merchandise costs are 65% of merchandise selling price. Also during the year, customers returned \$450,000 in sales for credit, with \$250,000 of those being returns of merchandise sold prior to 2024, and the rest being merchandise sold during 2024. Sales returns, estimated to be 4% of sales, are recorded as an adjusting entry at the end of the year.

Required:

1. Prepare entries to (a) record actual returns in 2024 of merchandise that was sold *prior to* 2024; (b) record actual returns in 2024 of merchandise that was sold *during* 2024; and (c) adjust the refund liability to its appropriate balance at year end.
2. What is the amount of the year-end refund liability after the adjusting entry is recorded?

E 7–9 Sales returns **LO7–4**

[This is a variation of E 7–8 modified to include a right of return that does not expire.]

Halifax Manufacturing allows its customers to return merchandise for any reason and receive a credit to their accounts. All of Halifax’s sales are for credit (no cash is collected at the time of sale). The company began 2024 with a refund liability of \$300,000. During 2024, Halifax sold merchandise on account for \$11,500,000. Halifax’s merchandise costs it 65% of merchandise selling price. Also during the year, customers returned \$450,000 in sales for credit, with \$250,000 of those being returns of merchandise sold prior to 2024, and the rest being merchandise sold during 2024. Sales returns, estimated to be 4% of sales, are recorded as an adjusting entry at the end of the year.

Required:

- a. Prepare entries to (a) record actual returns in 2024 of merchandise that was sold *prior to* 2024; (b) record actual returns in 2024 of merchandise that was sold *during* 2024; and (c) adjust the refund liability to its appropriate balance at year end.
- b. What is the amount of the year-end refund liability after the adjusting entry is recorded?

E 7–10 FASB codification research **LO7–5**

The *FASB Accounting Standards Codification* represents the single source of authoritative U.S. generally accepted accounting principles.

Required:

1. Obtain the relevant authoritative literature on accounting for accounts receivable using the FASB’s Codification Research System at the FASB website (www.fasb.org) and select Basic View for free access. What is the specific eight-digit Codification citation (XXX-XX-

XX-X) that describes the information about loans and trade receivables that is to be disclosed in the summary of significant accounting policies?

2. List the disclosure requirements.

E 7-11 Establish an allowance and account for bad debts

 **LO7-5**,  **LO7-6**

Pincus Associates uses the allowance method to account for bad debts. 2024 was the first year of operations for Pincus, so it had a \$0 opening balance in its allowance for uncollectible accounts. During 2024, Pincus provided a total of \$250,000 of services on account. In 2024, the company wrote off uncollectible accounts of \$10,000. By the end of 2024, cash collections on accounts receivable totaled \$210,000. Pincus estimates that 20% of the accounts receivable balance at 12/31/2024 will prove uncollectible.

Required:

1. What journal entry did Pincus record to write off uncollectible accounts during 2024?
2. What journal entry should Pincus record to recognize bad debt expense for 2024?

E 7-12 Uncollectible accounts; allowance method vs. direct write-off method **LO7-5**, **LO7-6**

Johnson Company calculates its allowance for uncollectible accounts as 10% of its ending balance in gross accounts receivable. The allowance for uncollectible accounts had a credit balance of \$30,000 at the beginning of 2024. No previously written-off accounts receivable were reinstated during 2024. At 12/31/2024, gross accounts receivable totaled \$500,000, and prior to recording the adjusting entry to recognize bad debts expense for 2024, the allowance for uncollectible accounts had a debit balance of 55,000.

Required:

1. What was the balance in gross accounts receivable as of 12/31/2024?
2. What journal entry should Johnson record to recognize bad debt expense for 2024?
3. Assume Johnson made no other adjustment of the allowance for uncollectible accounts during 2024. Determine the amount of accounts receivable written off during 2024.
4. If Johnson instead used the direct write-off method, what would bad debt expense be for 2024?

E 7–13 Uncollectible accounts; allowance method estimating bad debts as percentage of net sales vs. direct write-off method

 **LO7–5**,  **LO7–6**

Ervin Company uses the allowance method to account for uncollectible accounts receivable. The allowance account is adjusted based on bad debt expense as a percentage of credit sales. For 2024, net credit sales totaled \$4,500,000, and the estimated bad debt percentage is 1.5%. No previously written-off accounts receivable were reinstated during 2024. The allowance for uncollectible accounts had a credit balance of \$42,000 at the beginning of 2024 and \$40,000, after adjusting entries, at the end of 2024.

Required:

1. What is bad debt expense for 2024 as a percent of net credit sales?
2. Assume Ervin makes no other adjustment of bad debt expense during 2024. Determine the amount of accounts receivable written off during 2024.
3. If the company uses the direct write-off method, what would bad debt expense be for 2024?

E 7–14 Calculate uncollectible accounts using the aging method; record adjustment  **LO7–5**,  **LO7–6**

Dhaliwal Digital categorizes its accounts receivable into three age groups for purposes of estimating its allowance for uncollectible accounts.

1. Accounts not yet due = \$180,000; estimated uncollectible = 10%.
2. Accounts 1–45 days past due = \$25,000; estimated uncollectible = 20%.
3. Accounts more than 45 days past due = \$10,000; estimated uncollectible = 30%.

Before recording any adjustments, Dhaliwal has a debit balance of \$45,000 in its allowance for uncollectible accounts.

Required:

1. Estimate the appropriate 12/31/2024 balance for Dhaliwal's allowance for uncollectible accounts.
2. What journal entry should Dhaliwal record to adjust its allowance for uncollectible accounts?

E 7–15 Calculate uncollectible accounts using the aging method; record adjustments  **LO7–5**,  **LO7–6**

Zuo Software categorizes its accounts receivable into four age groups for purposes of estimating its allowance for uncollectible accounts.

1. Accounts not yet due = \$400,000; estimated uncollectible = 8%.
2. Accounts 1–30 days past due = \$50,000; estimated uncollectible = 15%.
3. Accounts 31–90 days past due = \$40,000; estimated uncollectible = 30%
4. Accounts more than 90 days past due = \$30,000; estimated uncollectible = 50%.

At 12/31/2024, before recording any adjustments, Zuo has a credit balance of \$22,000 in its allowance for uncollectible accounts.

Required:

1. Estimate the appropriate 12/31/2024 balance for Zuo’s allowance for uncollectible accounts.
2. What journal entry should Zuo record to adjust its allowance for uncollectible accounts?
3. Calculate Zuo’s 12/31/2024 net accounts receivable balance.

E 7–16 Uncollectible accounts; allowance method; balance sheet approach; financial statement effects  **LO7–5**,  **LO7–6**

Colorado Rocky Cookie Company offers credit terms to its customers. At the end of 2024, accounts receivable totaled \$625,000. The allowance method is used to account for uncollectible accounts. The allowance for uncollectible accounts had a credit balance of \$32,000 at the beginning of 2024 and \$21,000 in receivables were written off during the year as uncollectible. Also, \$1,200 in cash was received in December from a customer whose account previously had been written off. The company estimates bad debts by applying a percentage of 10% to accounts receivable at the end of the year.

Required:

1. Prepare journal entries to record the write-off of receivables, the collection of \$1,200 for previously written off receivables, and the year-end adjusting entry for bad debt expense.
2. How would accounts receivable be shown in the 2024 year-end balance sheet?

E 7–17 Uncollectible accounts; allowance method and direct write-off method compared; solving for unknown  **LO7–6**

Castle Company provides estimates for its uncollectible accounts. The allowance for uncollectible accounts had a credit balance of \$17,280 at the beginning of 2024 and a \$22,410 credit balance at the end of 2024 (after adjusting entries). If the direct write-off method had been used to account for uncollectible accounts (bad debt expense equals actual write-offs), the income statement for 2024 would have included bad debt expense of \$17,100 and revenue of \$2,200 from the collection of previously written off bad debts.

Required:

Determine bad debt expense for 2024 according to the allowance method.

E 7–18 Uncollectible accounts; allowance method; solving for unknowns; General Mills  **LO7–5**,  **LO7–6**

Real World Financials

General Mills reported the following information in its 2020 financial statements (\$ in millions):

| | 2020 | 2019 |
|--------------------------|------------|-----------|
| Balance Sheet: | | |
| Accounts receivable, net | \$1,615.1 | \$1,679.7 |
| Income statement: | | |
| Sales revenue | \$17,626.6 | |

A note disclosed that the allowance for uncollectible accounts had a balance of \$33.2 million and \$28.8 million at the end of 2020 and 2019, respectively. Bad debt expense for 2020 was \$25.9 million.

Required:

Determine the amount of cash collected from customers during 2020.

E 7–19 Notes receivable; financial statement effects  **LO7–7**

On June 30, 2024, the Esquire Company sold some merchandise to a customer for \$30,000. In payment, Esquire agreed to accept a 6% note requiring the payment of interest and principal on March 31, 2025. The 6% rate is appropriate in this situation.

Required:

1. Prepare journal entries to record the sale of merchandise (omit any entry that might be required for the cost of the goods sold), the December 31, 2024 interest accrual, and the March 31, 2025 collection.
2. If the December 31 adjusting entry for the interest accrual is not prepared, by how much will income before income taxes be over- or understated in 2024 and 2025?

E 7–20 Noninterest-bearing notes receivable  **LO7–7**

[This is a variation of E7–19 modified to focus on a noninterest-bearing note.]

On June 30, 2024, the Esquire Company sold merchandise to a customer and accepted a noninterest-bearing note in exchange. The note requires payment of \$30,000 on March 31, 2025. The fair value of the merchandise exchanged is \$28,200. Esquire views the financing component of this contract as significant.

Required:

1. Prepare journal entries to record the sale of merchandise (omit any entry that might be required for the cost of the goods sold), any December 31, 2024 interest accrual, and the March 31, 2025 collection.
2. What is the *effective* interest rate on the note?

E 7–21 Long-term notes receivable  **LO7–7**

On January 1, 2024, Wright Transport sold four school buses to the Elmira School District. In exchange for the buses, Wright received a note requiring payment of \$515,000 by Elmira on December 31, 2026. The effective interest rate is 8%.

Required:

1. How much sales revenue would Wright recognize on January 1, 2024, for this transaction?
2. Prepare journal entries to record the sale of merchandise on January 1, 2024 (omit any entry that might be required for the cost of the goods sold), the December 31, 2024,

interest accrual, the December 31, 2025, interest accrual, and receipt of payment of the note on December 31, 2026.

E 7–22 Interest-bearing notes receivable; solving for unknown rate **LO7–7**

On January 1, 2024, the Apex Company exchanged some shares of common stock it had been holding as an investment for a note receivable. The note principal plus interest is due on January 1, 2025. The 2024 income statement reported \$2,200 in interest revenue from this note and a \$6,000 gain on sale of investment in stock. The stock's book value was \$16,000. The company's fiscal year ends on December 31.

Required:

1. What is the note's effective interest rate?
2. Reconstruct the journal entries to record the sale of the stock on January 1, 2024, and the adjusting entry to record interest revenue at the end of 2024. The company records adjusting entries only at year-end.

E 7–23 Assigning of specific accounts receivable **LO7–8**

On June 30, 2024, the High Five Surfboard Company had outstanding accounts receivable of \$600,000. On July 1, 2024, the company borrowed \$450,000 from the Equitable Finance Corporation and signed a promissory note. Interest at 10% is payable monthly. The company assigned specific receivables totaling \$600,000 as collateral for the loan. Equitable Finance charges a finance fee equal to 1.8% of the accounts receivable assigned.

Required:

Prepare the journal entry to record the borrowing on the books of High Five Surfboard.

E 7–24 Factoring of accounts receivable without recourse **LO7–8**

Mountain High Ice Cream Company transferred \$60,000 of accounts receivable to the Prudential Bank. The transfer was made *without recourse*. Prudential remits 90% of the factored amount to Mountain High and retains 10%. When the bank collects the receivables, it will remit to Mountain High the retained amount (which Mountain estimates has a fair value of \$5,000) less a 2% fee (2% of the total factored amount).

Required:

Prepare the journal entry to record the transfer on the books of Mountain High assuming that the sale criteria are met.

E 7–25 Factoring of accounts receivable with recourse

 **LO7–8**

[This is a variation of E 7–24 modified to focus on factoring with recourse.]

Mountain High Ice Cream Company transferred \$60,000 of accounts receivable to the Prudential Bank. The transfer was made *with recourse*. Prudential remits 90% of the factored amount to Mountain High and retains 10% to cover sales returns and allowances. When the bank collects the receivables, it will remit to Mountain High the retained amount (which Mountain estimates has a fair value of \$5,000). Mountain High anticipates a \$3,000 recourse obligation. The bank charges a 2% fee (2% of \$60,000), and requires that amount to be paid at the start of the factoring arrangement.

Required:

Prepare the journal entry to record the transfer on the books of Mountain High assuming that the sale criteria are met.

E 7–26 Factoring of accounts receivable with recourse under

IFRS  **LO7–8**,  **LO7–10**

 **IFRS**

[This is a variation of E 7–25 modified to focus on factoring with recourse under IFRS.]

Mountain High Ice Cream Company reports under IFRS. Mountain High transferred \$60,000 of accounts receivable to the Prudential Bank. The transfer was made *with recourse*. Prudential remits 90% of the factored amount to Mountain High and retains 10% to cover sales returns and allowances. When the bank collects the receivables, it will remit to Mountain High the retained amount (which Mountain estimates has a fair value of \$5,000). Mountain High anticipates a \$3,000 recourse obligation. The bank charges a 2% fee (2% of \$60,000), and requires that amount to be paid at the start of the factoring arrangement. Mountain High has transferred control over the receivables, but determines that it still retains substantially all risks and rewards associated with them.

Required:

Prepare the journal entry to record the transfer on the books of Mountain High, considering whether the sale criteria under IFRS have been met.

E 7-27 Discounting a note receivable  **LO7-8**

Selkirk Company obtained a \$15,000 note receivable from a customer on January 1, 2024. The note, along with interest at 10%, is due on July 1, 2024. On February 28, 2024, Selkirk discounted the note at Unionville Bank. The bank's discount rate is 12%.

Required:

Prepare the journal entries required on February 28, 2024, to accrue interest and to record the discounting (round all calculations to the nearest dollar) for Selkirk. Assume that the discounting is accounted for as a sale.

E 7-28 Concepts; terminology  **LO7-1** through  **LO7-8**

Listed below are several terms and phrases associated with cash and receivables. Pair each item from List A (by letter) with the item from List B that is most appropriately associated with it.

| List A | | List B | |
|----------|------------------------------|--------|--|
| _____ 1. | Internal control | a. | Restriction on cash. |
| _____ 2. | Trade discount | b. | Cash discount not taken is sales revenue. |
| _____ 3. | Cash equivalents | c. | Includes separation of duties. |
| _____ 4. | Allowance for uncollectibles | d. | Bad debt expense a % of credit sales. |
| _____ 5. | Cash discount | e. | Recognizes bad debts as they occur. |
| _____ 6. | Balance sheet | f. | Sale of receivables to a financial institution. |
| | | g. | Include highly liquid investments. |
| | | h. | Estimate of bad debts. |
| | | i. | Reduction in amount paid by credit customer. |
| | | j. | Reduction below list price. |
| | | k. | Cash discount not taken is sales discount forfeited. |

| List A | | List B |
|-----------|---------------------------|---|
| _____ 7. | Income statement approach | l. Bad debt expense determined by estimating amount of accounts receivable expected to be received. |
| _____ 8. | Net method | m. Sale of note receivable to a financial institution. |
| _____ 9. | Compensating balance | |
| _____ 10. | Discounting | |
| _____ 11. | Gross method | |
| _____ 12. | Direct write-off method | |
| _____ 13. | Factoring | |

E 7–29 Receivables; transaction analysis  **LO7–3**,  **LO7–5** through  **LO7–8**

Weldon Corporation’s fiscal year ends December 31. The following is a list of transactions involving receivables that occurred during 2024:

- Mar. 17 Accounts receivable of \$1,700 were written off as uncollectible. The company uses the allowance method.
- 30 Loaned an officer of the company \$20,000 and received a note requiring principal and interest at 7% to be paid on March 30, 2025.
- May 30 Discounted the \$20,000 note at a local bank. The bank’s discount rate is 8%. The note was discounted without recourse and the sale criteria are met.
- June 30 Sold merchandise to the Blankenship Company for \$12,000. Terms of the sale are 2/10, n/30. Weldon uses the gross method to account for cash discounts.
- July 8 The Blankenship Company paid its account in full.
- Aug. 31 Sold stock in a nonpublic company with a book value of \$5,000 and accepted a \$6,000 noninterest-bearing note with a discount rate of

8%. The \$6,000 payment is due on February 28, 2025. The stock has no ready market value.

Dec. 31 Weldon estimates that the allowance for uncollectible accounts should have a balance in it at year-end equal to 2% of the gross accounts receivable balance of \$700,000. The allowance had a balance of \$12,000 at the start of 2024.

Required:

1. Prepare journal entries for each of the above transactions (round all calculations to the nearest dollar).
2. Prepare any additional year-end adjusting entries indicated.

E 7–30 Ratio analysis; Microsoft  **LO7–9**

Real World Financials

Microsoft Corporation reported the following information in its financial statements for three successive quarters (\$ in millions):

| | Three Months Ended | | |
|--------------------------|--------------------|-------------------|--------------------|
| | 6/30/2020 (Q4) | 3/31/2020 (Q3) | 12/31/2019 (Q2) |
| Balance sheets: | | | |
| Accounts receivable, net | \$32,011 | \$22,699 | \$23,525 |
| Income statements: | | | |
| Sales revenue | \$38,033 | \$35,021 | \$36,906 |

Required:

Compute the receivables turnover ratio and the average collection period for Q4 and Q3. Assume that each quarter consists of 91 days.

E 7–31 Ratio analysis  **LO7–9**

The current asset section of the Moorcroft Outboard Motor Company’s balance sheet reported the following amounts:

| | 12/31/2024 | 12/31/2023 |
|--------------------------|------------|------------|
| Accounts receivable, net | \$400,000 | \$300,000 |

The average collection period for 2024 is 50 days.

Required:

Determine net sales for 2024.

E 7–32 Petty cash  **Appendix 7A**

Loucks Company established a \$200 petty cash fund on October 2, 2024. The fund is replenished at the end of each month. At the end of October 2024, the fund contained \$37 in cash and the following receipts:

| | |
|-----------------|------|
| Office supplies | \$76 |
| Advertising | 48 |
| Postage | 20 |
| Miscellaneous | 19 |

Required:

Prepare the necessary general journal entries to establish the petty cash fund on October 2 and to replenish the fund on October 31.

E 7–33 Petty cash  **Appendix 7A**

The petty cash fund of Ricco’s Automotive contained the following items at the end of September 2024:

| | |
|--|-------------|
| Currency and coins | \$ 58 |
| Receipts for the following expenditures: | |
| Delivery charges | \$16 |
| Printer paper | 11 |
| Paper clips and rubber bands | <u>8</u> 35 |
| Lent money to an employee | 25 |
| Postage | 32 |

Total

\$150

The petty cash fund was established at the beginning of September with a transfer of \$150 from cash to the petty cash account.

Required:

Prepare the journal entry to replenish the fund at the end of September.

E 7–34 Bank reconciliation  **Appendix 7A**

Jansen Company's general ledger showed a checking account balance of \$23,820 at the end of May 2024. The May 31 cash receipts of \$2,340, included in the general ledger balance, were placed in the night depository at the bank on May 31 and were processed by the bank on June 1. The bank statement dated May 31, 2024, showed bank service charges of \$38. All checks written by the company had been processed by the bank by May 31 and were listed on the bank statement except for checks totaling \$1,890.

Required:

Prepare a bank reconciliation as of May 31, 2024. (*Hint:* You will need to compute the balance that would appear on the bank statement.)

E 7–35 Bank reconciliation and adjusting entries

 **Appendix 7A**

Harrison Company maintains a checking account at the First National City Bank. The bank provides a bank statement along with canceled checks on the last day of each month. The July 2024 bank statement included the following information:

| | |
|--|-----------------|
| Balance, July 1, 2024 | \$55,678 |
| Deposits | 179,500 |
| Checks processed | (192,610) |
| Service charges | (30) |
| NSF checks | (1,200) |
| Monthly payment on note, deducted directly by bank from account (includes \$320 in interest) | (3,320) |
| Balance, July 31, 2024 | <u>\$38,018</u> |

The company's general ledger account had a balance of \$38,918 at the end of July. Deposits outstanding totaled \$6,300 and all checks written by the company were processed by the bank except for those totaling \$8,420. In addition, a \$2,000 July deposit from a credit customer was recorded as a \$200 debit to cash and credit to accounts receivable, and a check correctly recorded by the company as a \$30 disbursement was incorrectly processed by the bank as a \$300 disbursement.

Required:

1. Prepare a bank reconciliation for the month of July.
2. Prepare the necessary journal entries at the end of July to adjust the general ledger cash account.

E 7–36 Troubled debt restructuring  **Appendix 7B**

At January 1, 2024, Clayton Hoists Inc. owed Third BancCorp \$12 million, under a 10% note due December 31, 2025. Interest was paid last on December 31, 2022. Clayton was experiencing severe financial difficulties and asked Third BancCorp to modify the terms of the debt agreement. After negotiation Third BancCorp agreed to do the following:

- Forgive the interest accrued for the year just ended.
- Reduce the remaining two years' interest payments to \$1 million each.
- Reduce the principal amount to \$11 million.

Required:

Prepare the journal entries by Third BancCorp necessitated by the restructuring of the debt at

1. January 1, 2024.
2. December 31, 2024.
3. December 31, 2025.

E 7–37 General Ledger Exercise  **LO7–5**,  **LO7–6**,
 **LO7–7**,  **LO7–9**

On January 1, 2024, the general ledger of 3D Family Fireworks includes the following account balances:

| Accounts | Debit | Credit |
|---------------------------------------|-----------|-----------|
| Cash | \$ 23,900 | |
| Accounts Receivable | 13,600 | |
| Allowance for Uncollectible Accounts | | \$ 1,400 |
| Supplies | 2,500 | |
| Notes Receivable (6%, due in 2 years) | 20,000 | |
| Land | 77,000 | |
| Accounts Payable | | 7,200 |
| Common Stock | | 96,000 |
| Retained Earnings | | 32,400 |
| Totals | \$137,000 | \$137,000 |

During January 2024, the following transactions occur:

- 1. January 2 Provide services to customers for cash, \$35,100.**
- 2. January 6 Provide services to customers on account, \$72,400.**
- 3. January 15 Write off accounts receivable as uncollectible, \$1,000.**
- 4. January 20 Pay cash for salaries, \$31,400.**
- 5. January 22 Receive cash on accounts receivable, \$70,000.**
- 6. January 25 Pay cash on accounts payable, \$5,500.**
- 7. January 30 Pay cash for utilities during January, \$13,700.**

The following information is available on January 31, 2024.

1. At the end of January, \$5,000 of accounts receivable are past due, and the company estimates that 20% of these accounts will not be collected. Of the remaining accounts receivable, the company estimates that 5% will not be collected. The note receivable of \$20,000 is considered fully collectible and therefore is not included in the estimate of uncollectible accounts.
2. Supplies at the end of January total \$700.
3. Accrued interest revenue on notes receivable for January. Interest is expected to be received each December 31.
4. Unpaid salaries at the end of January are \$33,500.

Required:

1. Record each of the transactions listed above in the “General Journal” tab (these are shown as items 1-7). Review the “General Ledger” and the “Trial Balance” tabs to see the effect of the transactions on the account balances.
2. Record adjusting entries on January 31. in the “General Journal” tab (these are shown as items 8-11).
3. Review the adjusted “Trial Balance” as of January 31, 2024, in the “Trial Balance” tab.
4. Prepare an income statement for the period ended January 31, 2024, in the “Income Statement” tab.
5. Prepare a classified balance sheet as of January 31, 2024, in the “Balance Sheet” tab.
6. Record closing entries in the “General Journal” tab (these are shown as items 12 and 13).
7. Using the information from the requirements above, complete the “Analysis” tab.

Problems

P 7–1 Uncollectible accounts; allowance method; income statement and balance sheet approach; financial statement effects  **LO7–5**,  **LO7–6**

Swathmore Clothing Corporation grants its customers 30 days' credit. The company uses the allowance method for its uncollectible accounts receivable. During the year, a monthly bad debt accrual is made by multiplying 3% times the amount of credit sales for the month. At the fiscal year-end of December 31, an aging of accounts receivable schedule is prepared and the allowance for uncollectible accounts is adjusted accordingly.

At the end of 2023, accounts receivable were \$574,000 and the allowance account had a credit balance of \$54,000. Accounts receivable activity for 2024 was as follows:

| | |
|--------------------------|-------------------------|
| Beginning balance | \$574,000 |
| Credit sales | 2,620,000 |
| Collections | (2,483,000) |
| Write-offs | (68,000) |
| Ending balance | <u>\$643,000</u> |

The company's controller prepared the following aging summary of year-end accounts receivable:

| Summary | | |
|---------------|-------------------------|-----------------------|
| Age Group | Amount | Percent Uncollectible |
| 0–60 days | \$430,000 | 4% |
| 61–90 days | 98,000 | 15 |
| 91–120 days | 60,000 | 25 |
| Over 120 days | <u>55,000</u> | 40 |
| Total | <u>\$643,000</u> | |

Required:

1. Prepare a summary journal entry to record the monthly bad debt accrual and the write-offs during the year.
2. Prepare the necessary year-end adjusting entry for bad debt expense.
3. What is total bad debt expense for 2024? How would accounts receivable appear in the 2024 balance sheet?

P 7–2 Uncollectible accounts; EMC Corporation  **LO7–5**

Real World Financials

Dell Technologies is a leading global end-to-end technology provider, with a portfolio of hardware, software and service solutions. In a recent annual report, the balance sheet included the following information (\$ in millions):

| | 2020 | 2019 |
|---|-----------------|-----------------|
| Current assets: | | |
| Receivables, less allowance of \$94 in 2020 and \$85 in 2019 | \$12,484 | \$12,371 |

In addition, the income statement reported sales revenue of \$92,154 million for the current year. All sales are made on a credit basis. The statement of cash flows indicates that cash collected from customers during the current year was \$91,868 million. There could have been significant recoveries of accounts receivable previously written off.

Required:

1. Compute the following (\$ in millions):
 - a. The amount of bad debts written off by Dell during 2020 (*Hint*: Treat it as a plug in the gross accounts receivable account).
 - b. The amount of bad debt expense that Dell included in its income statement for 2020 (*Hint*: Treat it as a plug in the allowance for uncollectible accounts).
 - c. The approximate percentage that Dell used to estimate bad debts for 2020, assuming that it used the income statement approach.

2. Suppose that Dell had used the direct write-off method to account for bad debts. Compute the following (\$ in millions):
- The accounts receivable information that would be included in the 2020 year-end balance sheet.
 - The amount of bad debt expense that Dell would include in its 2020 income statement.

P 7–3 Bad debts; Nike, Inc.  **LO7–5**

Real World Financials

Nike, Inc., is a leading manufacturer of sports apparel, shoes, and equipment. The company’s 2020 financial statements contain the following information (\$ in millions):

| | 2020 | 2019 |
|--------------------------------------|-----------|---------|
| Balance Sheet: | | |
| Accounts receivable, net | \$ 2,749 | \$4,272 |
| Allowance for uncollectible accounts | 214 | 30 |
| Income Statements: | | |
| Sales revenue | \$ 37,403 | |
| Statement of Cash Flows: | | |
| Amortization, impairment and other | \$ 398 | |
| Decrease in accounts receivable | 1,239 | |

Assume that all sales are made on a credit basis.

Required:

- What is the amount of gross (total) accounts receivable due from customers at the end of 2020 and 2019?
- Assume that bad debt expense is included in “amortization, impairment and other,” such that the 2020 decrease in accounts receivable of \$1,239 reflects only the difference between sales and collections. Prepare a T account that depicts how sales (S), collections (C), bad debt expense (E), and writeoffs of bad debts (W) affect the balance of net

accounts receivable with a debit, a credit or not at all, and estimate Nike's 2020 bad debt expense.

3. Prepare a T account that depicts how bad debt expense (E) and writeoffs of bad debts (W) affect the balance of the allowance for uncollectible accounts with a debit, credit or not at all, and estimate the amount of bad debts written off by Nike during 2020.
4. Analyze changes in the **gross** accounts receivable account to calculate the amount of cash received from customers during 2020.
5. Analyze changes in **net** accounts receivable to calculate the amount of cash received from customers during 2020.

P 7-4 Uncollectible accounts; financial statement effects

 LO7-5,  LO7-6

Raintree Cosmetic Company sells its products to customers on a credit basis. An adjusting entry for bad debt expense is recorded only at December 31, the company's fiscal year-end. The 2023 balance sheet disclosed the following:

Current assets:

Receivables, net of allowance for uncollectible accounts of \$432,000
\$30,000

During 2024, credit sales were \$1,750,000, cash collections from customers \$1,830,000, and \$35,000 in accounts receivable were written off. In addition, \$3,000 was collected from a customer whose account was written off in 2023. An aging of accounts receivable at December 31, 2024, reveals the following:

| Age Group | Percentage of Year-End Receivables in Group | Percent Uncollectible |
|------------------|--|--------------------------|
| 0-60 days | 65% | 4% |
| 61-90 days | 20 | 15 |
| 91-120 days | 10 | 25 |
| Over 120 days | 5 | 40 |

Required:

1. Prepare summary journal entries to account for the 2024 write-offs and the collection of the receivable previously written off.
2. Prepare the year-end adjusting entry for bad debts according to each of the following situations:
 - a. Bad debt expense is estimated to be 3% of credit sales for the year.
 - b. Bad debt expense is estimated by adjusting the allowance for uncollectible accounts to the balance that reduces the carrying value of accounts receivable to the amount of cash expected to be collected. The allowance for uncollectible accounts is estimated to be 10% of the year-end balance in accounts receivable.
 - c. Bad debt expense is estimated by adjusting the allowance for uncollectible accounts to the balance that reduces the carrying value of accounts receivable to the amount of cash expected to be collected. The allowance for uncollectible accounts is determined by an aging of accounts receivable.
3. For situations (a)-(c) in requirement 2 above, what would be the net amount of accounts receivable reported in the 2024 balance sheet?

P 7-5 Receivables; bad debts and returns; Avon Products, Inc.

 **LO7-4**,  **LO7-5**

Real World Financials

Avon Products, Inc., located in New York City, is one of the world's largest producers of beauty and related products. The company's consolidated balance sheets for the 2016 and 2015 fiscal years included the following (\$ in thousands):

| | 2016 | 2015 |
|---|------------------|------------------|
| Current assets: | | |
| Receivables, less allowances of \$131,100 in 2016 and \$86,700 in 2015 | \$458,900 | \$440,000 |

A disclosure note accompanying the financial statements reported the following (\$ in thousands):

| | Year Ended | |
|---|----------------|----------------|
| | 2016 | 2015 |
| Calculation of account receivables, net: | | |
| Receivables | \$590,000 | \$526,700 |
| Less: allowance for doubtful accounts | (122,900) | (77,600) |
| Less: reserve for product returns | <u>(8,200)</u> | <u>(9,100)</u> |
| Trade accounts receivable, net | \$458,900 | \$440,000 |

Assume that the company reported bad debt expense in 2016 of \$191,000 and had products returned for credit totaling \$187,000 (sales price). Net sales for 2016 were \$5,578,800 (\$ in thousands).

Required:

1. What is the amount of accounts receivable due from customers at the end of 2016 and 2015?
2. What amount of accounts receivable did Avon write off during 2016?
3. What is the amount of Avon's gross sales for the 2016 fiscal year?
4. Assuming that all sales are made on a credit basis, what is the amount of cash Avon collected from customers during the 2016 fiscal year?

P 7-6 Notes receivable; solving for unknowns; financial statement effects  **LO7-7**

Cypress Oil Company's December 31, 2024, balance sheet listed \$645,000 of notes receivable and \$16,000 of interest receivable included in current assets. The following notes make up the notes receivable balance:

Note 1 Dated 8/31/2024, principal of \$300,000 and interest at 10% due on 2/28/2025.

Note 2 Dated 6/30/2024, principal of \$150,000 and interest due 3/31/2025.

Note 3 \$200,000 face value noninterest-bearing note dated 9/30/2024, due 3/31/2025. Note was issued in exchange for merchandise.

The company records adjusting entries only at year-end. There were no other notes receivable outstanding during 2024.

Required:

1. Determine the rate used to discount the noninterest-bearing note.
2. Determine the explicit interest rate on Note 2.
3. What is the amount of interest revenue that appears in the company's 2024 income statement related to these notes?

P 7-7 Factoring versus assigning of accounts receivable;
disclosures  **LO7-8**

Lonergan Company occasionally uses its accounts receivable to obtain immediate cash. At the end of June 2024, the company had accounts receivable of \$780,000. Lonergan needs approximately \$500,000 to capitalize on a unique investment opportunity. On July 1, 2024, a local bank offers Lonergan the following two alternatives:

- a. Borrow \$500,000, sign a promissory note, and assign the entire receivable balance as collateral. At the end of each month, a remittance will be made to the bank that equals the amount of receivables collected plus 12% interest on the unpaid balance of the note at the beginning of the period.
- b. Transfer \$550,000 of specific receivables to the bank without recourse. The bank will charge a 2% factoring fee on the amount of receivables transferred. The bank will collect the receivables directly from customers. The sale criteria are met.

Required:

1. Prepare the journal entries that would be recorded on July 1 for each of the alternatives.
2. Assuming that 80% of all June 30 receivables are collected during July, prepare the necessary journal entries to record the collection and the remittance to the bank.
3. For each alternative, explain any required note disclosures that would be included in the July 31, 2024, financial statements.

P 7–8 Factoring of accounts receivable; without recourse

LO7–8

Samson Wholesale Beverage Company regularly factors its accounts receivable with the Milpitas Finance Company. On April 30, 2024, the company transferred \$800,000 of accounts receivable to Milpitas. The transfer was made without recourse. Milpitas remits 90% of the factored amount and retains 10%. When Milpitas collects the receivables, it remits to Samson the retained amount less a 4% fee (4% of the total factored amount). Samson estimates the fair value of the last 10% of its receivables to be \$60,000.

Required:

Prepare the journal entry for Samson Wholesale Beverage for the transfer of accounts receivable on April 30, assuming the sale criteria are met.

P 7–9 Cash and accounts receivable under IFRS; financial statement effects LO7–2, LO7–5, LO7–8, LO7–10

The following facts apply to Walken Company during December 2024:

- a. Walken began December with an accounts receivable balance (net of bad debts) of €25,000.
- b. Walken had credit sales of €85,000.
- c. Walken had cash collections of €30,000.
- d. Walken factored €20,000 of net accounts receivable with Reliable Factor Company, transferring all risks and rewards associated with the receivable, and otherwise meeting all criteria necessary to qualify for treating the transfer of receivables as a sale.
- e. Walken factored €15,000 of net accounts receivable with Dependable Factor Company, retaining all risks and rewards associated with the receivable, and otherwise meeting all criteria necessary to qualify for treating the transfer of receivables as a sale.
- f. Walken did not recognize any additional bad debts expense, and had no write-offs of bad debts during the month.
- g. At December 31, 2024, Walken had a balance of €40,000 of cash at M&V Bank and an overdraft of (€5,000) at First National Bank. (That cash balance includes any effects on cash of the other transactions described in this problem.)

Required:

Prepare the cash and accounts receivable lines of the current assets section of Walken's balance sheet, as of December 31, 2024.

P 7–10 Miscellaneous receivable transactions; financial statement effects  **LO7–3**,  **LO7–4**,  **LO7–7**,  **LO7–8**

Evergreen Company sells lawn and garden products to wholesalers. The company's fiscal year-end is December 31. During 2024, the following transactions related to receivables occurred:

- Feb. 28** Sold merchandise to Lennox, Inc., for \$10,000 and accepted a 10%, 7-month note. 10% is an appropriate rate for this type of note.
- Mar. 31** Sold merchandise to Maddox Co. that had a fair value of \$7,200, and accepted a noninterest-bearing note for which \$8,000 payment is due on March 31, 2025.
- Apr. 3** Sold merchandise to Carr Co. for \$7,000 with terms 2/10, n/30. Evergreen uses the gross method to account for cash discounts.
- 11** Collected the entire amount due from Carr Co.
- 17** A customer returned merchandise costing \$3,200. Evergreen reduced the customer's receivable balance by \$5,000, the sales price of the merchandise. Sales returns are recorded by the company as they occur.
- 30** Transferred receivables of \$50,000 to a factor without recourse. The factor charged Evergreen a 1% finance charge on the receivables transferred. The sale criteria are met.
- June 30** Discounted the Lennox, Inc., note at the bank. The bank's discount rate is 12%. The note was discounted without recourse.
- Sep. 30** Lennox, Inc., paid the note amount plus interest to the bank.

Required:

1. Prepare the necessary journal entries for Evergreen for each of the above dates. For transactions involving the sale of merchandise, ignore the entry for the cost of goods sold (round all calculations to the nearest dollar).

2. Prepare any necessary adjusting entries at December 31, 2024. Adjusting entries are only recorded at year-end (round all calculations to the nearest dollar).
3. Prepare a schedule showing the effect of the journal entries in requirements 1 and 2 on 2024 income before taxes.

P 7–11 Discounting a note receivable LO7–7

Descriptors are provided below for six situations involving notes receivable being discounted at a bank. In each case, the maturity date of the note is December 31, 2024, and the principal and interest are due at maturity.

| Note | Note Face Value | Date of Note | Interest Rate | Date Discounted | Discount Rate |
|------|-----------------|--------------|---------------|-----------------|---------------|
| 1 | \$50,000 | 3/31/2024 | 8% | 6/30/2024 | 10% |
| 2 | 50,000 | 3/31/2024 | 8 | 9/30/2024 | 10 |
| 3 | 50,000 | 3/31/2024 | 8 | 9/30/2024 | 12 |
| 4 | 80,000 | 6/30/2024 | 6 | 10/31/2024 | 10 |
| 5 | 80,000 | 6/30/2024 | 6 | 10/31/2024 | 12 |
| 6 | 80,000 | 6/30/2024 | 6 | 11/30/2024 | 10 |

Required:

For each situation, determine the proceeds received from the bank on discounting the note.

P 7–12 Accounts and notes receivable; discounting a note receivable; receivables turnover ratio; financial statement effects LO7–5, LO7–6, LO7–7, LO7–8, LO7–9

Additional Information:

Chamberlain Enterprises Inc. reported the following receivables in its December 31, 2024, year-end balance sheet:

Current assets:

| | |
|---|------------------|
| Accounts receivable, net of \$24,000 in allowance for uncollectible accounts | \$218,000 |
| Interest receivable | 6,800 |
| Notes receivable | 260,000 |

1. The notes receivable account consists of two notes, a \$60,000 note and a \$200,000 note. The \$60,000 note is dated October 31, 2024, with principal and interest payable on October 31, 2025. The \$200,000 note is dated June 30, 2024, with principal and 6% interest payable on June 30, 2025.
2. During 2025, sales revenue totaled \$1,340,000, \$1,280,000 cash was collected from customers, and \$22,000 in accounts receivable were written off. All sales are made on a credit basis. Bad debt expense is recorded at year-end by adjusting the allowance account to an amount equal to 10% of year-end accounts receivable.
3. On March 31, 2025, the \$200,000 note receivable was discounted at the Bank of Commerce. The bank's discount rate is 8%. Chamberlain accounts for the discounting as a sale.

Required:

1. In addition to sales revenue, what revenue and expense amounts related to receivables will appear in Chamberlain's 2025 income statement?
2. What amounts will appear in the 2025 year-end balance sheet for accounts receivable?
3. Calculate the receivables turnover ratio for 2025.

P 7–13 Bank reconciliation and adjusting entries; cash and cash equivalents; financial statement effects  **Appendix 7A**

The bank statement for the checking account of Management Systems Inc. (MSI) showed a December 31, 2024, balance of \$14,632.12. Information that might be useful in preparing a bank reconciliation is as follows:

- a. Outstanding checks were \$1,320.25.

- b. The December 31, 2024, cash receipts of \$575 were not deposited in the bank until January 2, 2025.
- c. One check written in payment of rent for \$246 was correctly recorded by the bank but was recorded by MSI as a \$264 disbursement.
- d. In accordance with prior authorization, the bank withdrew \$450 directly from the checking account as payment on a note payable. The interest portion of that payment was \$350. MSI has made no entry to record the automatic payment.
- e. Bank service charges of \$14 were listed on the bank statement.
- f. A deposit of \$875 was recorded by the bank on December 13, but it did not belong to MSI. The deposit should have been made to the checking account of MIS, Inc.
- g. The bank statement included a charge of \$85 for an NSF check. The check was returned with the bank statement and the company will seek payment from the customer.
- h. MSI maintains a \$200 petty cash fund that was appropriately reimbursed at the end of December.
- i. According to instructions from MSI on December 30, the bank withdrew \$10,000 from the account and purchased U.S. Treasury bills for MSI. MSI recorded the transaction in its books on December 31 when it received notice from the bank. Half of the Treasury bills mature in two months and the other half in six months.

Required:

1. Prepare a bank reconciliation for the MSI checking account at December 31, 2024. You will have to compute the balance per books.
2. Prepare any necessary adjusting journal entries indicated.
3. What amount would MSI report as cash and cash equivalents in the current asset section of the December 31, 2024, balance sheet?

P 7–14 Bank reconciliation and adjusting entries

 **Appendix 7A**

El Gato Painting Company maintains a checking account at American Bank. Bank statements are prepared at the end of each month. The November 30, 2024, reconciliation of the bank balance is as follows:

Balance per bank, November 30

\$3,231

| | | |
|---|--------------|------------------------------|
| Add: Deposits outstanding | | 1,200 |
| Less: Checks outstanding | | |
| #363 | \$123 | |
| #365 | 201 | |
| #380 | 56 | |
| #381 | 86 | |
| #382 | 340 | (806) |
| Adjusted balance per bank, November 30 | | <u><u>\$3,625</u></u> |

The company's general ledger checking account showed the following for December:

| | |
|-----------------------------|-------------------------------|
| Balance, December 1 | \$ 3,625 |
| Receipts | 42,650 |
| Disbursements | (41,853) |
| Balance, December 31 | <u><u>\$ 4,422</u></u> |

The December bank statement contained the following information:

| | |
|-----------------------------|-------------------------------|
| Balance, December 1 | \$ 3,231 |
| Deposits | 43,000 |
| Checks processed | (41,918) |
| Service charges | (22) |
| NSF checks | (440) |
| Balance, December 31 | <u><u>\$ 3,851</u></u> |

The checks that were processed by the bank in December include all of the outstanding checks at the end of November except for check #365. In addition, there are some December checks that had not been processed by the bank by the end of the month. Also, you discover that check #411 for \$320 was correctly recorded by the bank but was incorrectly recorded on the books as a \$230 disbursement for advertising expense. Included in the bank's deposits is a \$1,300 deposit incorrectly credited to the company's account. The deposit should have been posted to the credit of the Los Gatos Company. The NSF checks have not been redeposited and the company will seek payment from the customers involved.

Required:

1. Prepare a bank reconciliation for the El Gato checking account at December 31, 2024.
2. Prepare any necessary adjusting journal entries indicated.

P 7–15 Troubled debt restructuring  **Appendix 7B**

Rothschild Chair Company, Inc., was indebted to First Lincoln Bank under a \$20 million, 10% unsecured note. The note was signed January 1, 2014, and was due December 31, 2027. Annual interest was last paid on December 31, 2022. At January 1, 2024, Rothschild Chair Company was experiencing severe financial difficulties and negotiated a restructuring of the terms of the debt agreement.

Required:

Prepare all journal entries by First Lincoln Bank to record the restructuring and any remaining transactions, for current and future years, relating to the debt under each of the independent circumstances below:

1. First Lincoln Bank agreed to settle the debt in exchange for land having a fair value of \$16 million but carried on Rothschild Chair Company's books at \$13 million.
2. First Lincoln Bank agreed to (a) forgive the interest accrued from last year, (b) reduce the remaining four interest payments to \$1 million each, and (c) reduce the principal to \$15 million.

Decision Makers' Perspective

©Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Judgment Case 7-1 Internal control LO7-1

For each of the following independent situations, indicate whether there is an apparent internal control weakness, and, if one exists, suggest alternative procedures to eliminate the weakness.

1. John Smith is the petty cash custodian. John approves all requests for payment out of the \$200 fund, which is replenished at the end of each month. At the end of each month, John submits to his supervisor a list of all accounts and amounts to be charged, along with supporting documentation. Once the supervisor indicates approval, a check is written to replenish the fund for the total amount. John's supervisor performs surprise counts of the fund to ensure that the cash and/or receipts equal \$200 at all times.
2. All of the company's cash disbursements are made by check. Each check must be supported by an approved voucher, which is in turn supported by the appropriate invoice and, for purchases, a receiving document. The vouchers are approved by Dean Leiser, the chief accountant, after reviewing the supporting documentation. Betty Hanson prepares the checks for Leiser's signature. Leiser also maintains the company's check register (the cash disbursements journal) and reconciles the bank account at the end of each month.
3. Fran Jones opens the company's mail and makes a listing of all checks and cash received from customers. A copy of the list is sent to Jerry McDonald, who maintains the general

ledger accounts. Fran prepares and makes the daily deposit at the bank. Fran also maintains the subsidiary ledger for accounts receivable, which is used to generate monthly statements to customers.

Judgment Case 7–2 Accounts receivable; financial statement effects **LO7–3**, **LO7–7**, **LO7–8**

Hogan Company uses the net method of accounting for sales discounts. Hogan offers trade discounts to various groups of buyers.

On August 1, 2024, Hogan factored some accounts receivable on a without recourse basis. Hogan incurred a finance charge.

Hogan also has some notes receivable bearing an appropriate rate of interest. The principal and total interest are due at maturity. The notes were received on October 1, 2024, and mature on September 30, 2025. Hogan’s operating cycle is less than one year.

Required:

- Using the net method, do sales discounts affect the amount recorded as sales revenue and accounts receivable at the time of sale? What is the rationale for the amount recorded as sales under the net method?
 - Using the net method, is there an effect on Hogan’s sales revenues and net income when customers do not take the sales discounts?
- Do trade discounts affect the amount recorded as sales revenue and accounts receivable? Why?
- Should Hogan decrease accounts receivable to account for the receivables factored on August 1, 2024? Why?
- Would Hogan classify the interest-bearing notes receivable as current or non-current in its December 31, 2024, balance sheet? Why?

(AICPA adapted)

Real World Case 7–3 Accounts receivable; sales returns; factoring; disclosures; financial statement effects

Toughbuilt Industries, Inc.  **LO7–4**,  **LO7–5**,  **LO7–8**

Real World Financials

Toughbuilt Industries, Inc., designs, manufactures, and distributes tools and accessories to the do-it-yourself and professional building industry.

Required:

1. Access EDGAR on the Internet. The web address is www.sec.gov.
2. Search for **Toughbuilt Industries, Inc.** Access the 10-K filing for the year ended December 31, 2020. Search or scroll to find the financial statements.
3. Read the discussion of Accounts Receivable in Note 2, and answer the following questions:
 - a. What is the balance in Toughbuilt's allowance for doubtful accounts as of December 31, 2019 and 2018?
 - b. Compare the size of the allowance for doubtful accounts to the amount Toughbuilt lists as Accounts Receivable, Net in its Balance Sheet. Is the balance in Toughbuilt's allowance for doubtful accounts surprising to you? Why or why not?
 - c. What approach for accounting for bad debts would be consistent with the balance in the allowance for doubtful accounts that you observe for Toughbuilt? Is that approach consistent with GAAP? If not, how might Toughbuilt justify using it?
4. Read the discussion of Sales Returns and Allowances in Note 10, and answer Page 396
the following questions:
 - a. What is the balance in Toughbuilt's reserve for sales returns and allowances as of December 31, 2019, and 2018?
 - b. Compare the change in the reserve for sales returns and allowances to the change in Toughbuilt's Accounts Receivable, Net in its Balance Sheet. Is that comparison of concern to you? Why or why not?
5. Read the discussion of Toughbuilt's factoring arrangement under Accounts Receivable in Note 2 and in Note 3, and answer the following questions:
 - a. Does Toughbuilt account for its factoring arrangement as a secured borrowing or a sale of receivables?
 - b. Is the factoring arrangement with recourse or without recourse.
 - c. What is the amount of loan payable to the factor as of December 31, 2019, and where is that amount listed in Toughbuilt's balance sheet?

Real World Case 7–4 Receivables; bad debts; Cisco Systems, Inc. LO7–5

Real World Financials

EDGAR, the Electronic Data Gathering, Analysis, and Retrieval system, performs automated collection, validation, indexing, and forwarding of submissions by companies and others who are required by law to file forms with the U.S. Securities and Exchange Commission (SEC). All publicly traded domestic companies use EDGAR to make the majority of their filings. (Some foreign companies file voluntarily). Form 10-K or 10-KSB, which include the annual report, is required to be filed on EDGAR. The SEC makes this information available on the Internet.

Required:

1. Access EDGAR on the Internet. The web address is www.sec.gov.
2. Search for **Cisco Systems, Inc.** Access the 10-K filing for the fiscal year ended July 27, 2019. Search or scroll to find the financial statements.
3. Answer the following questions related to the company's accounts receivable and bad debts:
 - a. What is the amount of gross trade accounts receivable at the end of the year?
 - b. What is the amount of bad debt expense for the year? (*Hint*: check the statement of cash flows).
 - c. Determine the amount of actual bad debt write-offs made during the year. Assume that all bad debts relate only to trade accounts receivable.
 - d. Using only information from the balance sheets, income statements, and your answer to requirement 3(c), determine the amount of cash collected from customers during the year. Assume that all sales are made on a credit basis, that the company provides no allowances for sales returns, that no previously written-off receivables were collected, and that all sales relate to trade accounts receivable.

Integrating Case 7–5 Change in estimate of bad debts; disclosures LO7–5

McLaughlin Corporation uses the allowance method to account for bad debts. At the end of the company's fiscal year, accounts receivable are analyzed and the allowance for

uncollectible accounts is adjusted. At the end of 2024, the company reported the following amounts:

| | |
|---|----------------------------|
| Accounts receivable | \$10,850,000 |
| Less: Allowance for uncollectible accounts | (450,000) |
| Accounts receivable, net | <u>\$10,400,000</u> |

In 2025, it was determined that \$1,825,000 of year-end 2024 receivables had to be written off as uncollectible. This was due in part to the fact that Hughes Corporation, a long-standing customer that had always paid its bills, unexpectedly declared bankruptcy in 2025. Hughes owed McLaughlin \$1,400,000. At the end of 2024, none of the Hughes receivable was considered uncollectible.

Required:

Should McLaughlin's underestimation of bad debts be treated as an error correction (requiring retroactive restatement) or a change in estimate (and accounted for prospectively)? Describe the appropriate accounting treatment and required disclosures in the financial statements issued for the 2024 fiscal year.

Real World Case 7–6 Financing with receivables; disclosures; financial statement effects Sanofi-Aventis  **LO7–5**,  **LO7–8**,  **LO7–10**

Search on the Internet for the 2019 annual report for **Sanofi-Aventis**. Find the accounts receivable disclosure note.

Required:

1. Has Sanofi-Aventis factored or securitized accounts receivable? How do you know?
2. Assume that Sanofi-Aventis decided to increase the extent to which it securitizes its accounts receivable, changing to a policy of securitizing accounts receivable immediately upon making a sale and treating the securitization as a sale of accounts receivable. Indicate the likely effect of that change in policy on

- a. Accounts receivable in the period of the change (reduce, increase, or no change from prior period)
 - b. Cash flow from operations in the period of the change (reduce, increase, or no change from prior period)
 - c. Accounts receivable in subsequent periods (stabilize at higher, lower or same level as in periods prior to the change)
 - d. Cash flow from operations in subsequent periods (stabilize at higher, lower or same level as in periods prior to the change)
3. Given your answers to requirement 2, could a company change the extent to which it factors or securitizes receivables to create one-time changes in its cash flow? Answer yes or no, and explain.

Research Case 7–7 Locate and extract relevant information and authoritative support for a financial reporting issue; financing with receivables  **LO7–8**

You are spending the summer working for a local wholesale furniture company, Samson Furniture, Inc. The company is considering a proposal from a local financial institution, Old Reliant Financial, to factor Samson’s receivables. The company controller is unfamiliar with the prevailing GAAP that deals with accounting for the transfer of financial assets and has asked you to do some research. The controller wants to make sure the arrangement with the financial institution is structured in such a way as to allow the factoring to be accounted for as a sale.

Old Reliant has offered to factor all of the company’s receivables on a “without recourse” basis. Old Reliant will remit to Samson 90% of the factored amount, collect the receivables from Samson’s customers, and retain the remaining 10% until all of the receivables have been collected. When Old Reliant collects all of the receivables, it will remit to Samson the retained amount, less a 4% fee (4% of the total factored amount).

Required:

1. Access the relevant authoritative literature on accounting for the transfer of financial assets using the *FASB Accounting Standards Codification*. You might gain access at the FASB website (www.fasb.org), from your school library, or some other source. What conditions must be met for a transfer of receivables to be accounted for as a sale (or in accounting terms, “derecognized”)? What is the specific seven-digit Codification citation (XXX-XX-XX) that Samson would rely on in applying that accounting treatment?
2. Assuming that the conditions for treatment as a sale are met, prepare Samson’s journal entry to record the factoring of \$400,000 of receivables. Assume that the fair value of the last 10% of Samson’s receivables is equal to \$25,000.
3. What is the specific seven-digit Codification citation (XXX-XX-XX) that Samson would rely on to answer the following: An agreement that both entitles and obligates the transferor, Samson, to repurchase or redeem transferred assets from the transferee, Old Reliant, maintains the transferor’s effective control over those assets and the transfer is accounted for as a secured borrowing, not a sale, if and only if what conditions are met?

Analysis Case 7–8 Compare receivables management using ratios; Tyson Foods Inc. and Pilgrim’s Pride Corp. LO7–9

Real World Financials

The table below contains selected financial information included in the 2016 financial statements of **Tyson Foods Inc.** and **Pilgrim’s Pride Corp.**

| | Tyson | | Pilgrim’s Pride | |
|---------------------------------|-----------------|-----------------|-----------------|---------------|
| | 2019 | 2018 | 2019 | 2018 |
| Balance Sheets: | | | | |
| Accounts receivable, net | \$ 2,173 | \$ 1,723 | \$ 741 | \$ 562 |
| Income statements: | | | | |
| Net sales | 42,405 | 40,052 | 11,409 | 10,938 |

Required:

1. Calculate the 2019 receivables turnover ratio and average collection period for both companies. Evaluate the management of each company’s investment in receivables.
2. Obtain annual reports from three corporations in the same primary industry and compare the management of each company’s investment in receivables.

Note: You can obtain copies of annual reports from your library, from the investor relations department of the corporations, or from EDGAR (Electronic Data Gathering, Analysis, and Retrieval) on the Internet (www.sec.gov).

Trueblood Accounting Case 7–9 Financing with receivables

LO7–8

The following Trueblood case is recommended for use with this chapter. The case provides an excellent opportunity for class discussion, group projects, and writing assignments. The case, along with Professor’s Discussion Material, can be obtained from the Deloitte Foundation at its website www.deloitte.com/us/truebloodcases.

Case 18-2: *Transfer of Financial Assets*

This case requires students to determine whether the criteria for a sale of a financial asset are met and how to account for situations in which the criteria have not been met.

Communication Case 7–10 Uncollectible accounts LO7–5

You have been hired as a consultant by a parts manufacturing firm to provide advice as to the proper accounting methods the company should use in some key areas. In the area of receivables, the company president does not understand your recommendation to use the allowance method for uncollectible accounts. She stated, “Financial statements should be based on objective data rather than the guesswork required for the allowance method. Besides, since my uncollectibles are fairly constant from period to period, with significant variations occurring infrequently, the direct write-off method is just as good as the allowance method.”

Required:

Draft a one-page response in the form of a memo to the president in support of your recommendation for the company to use the allowance method.

Ethics Case 7–11 Uncollectible accounts LO7–5

You have recently been hired as the assistant controller for Stanton Industries, a large, publicly held manufacturing company. Your immediate superior is the controller, who, in turn, is responsible to the vice president of finance.

The controller has assigned you the task of preparing the year-end adjusting entries. In the receivables area, you have prepared an aging of accounts receivable and have applied historical percentages to the balances of each of the age categories. The analysis indicates that an appropriate balance for the allowance for uncollectible accounts is \$180,000. The existing balance in the allowance account prior to any adjusting entry is a \$20,000 credit balance.

After showing your analysis to the controller, he tells you to change the aging category of a large account from over 120 days to current status and to prepare a new invoice to the customer with a revised date that agrees with the new aging category. This will change the required allowance for uncollectible accounts from \$180,000 to \$135,000. Tactfully, you ask the controller for an explanation for the change and he tells you, "We need the extra income; the bottom line is too low."

Required:

1. What is the effect on income before taxes of the change requested by the controller?
2. Discuss the ethical dilemma you face. Consider your options and responsibilities along with the possible consequences of any action you might take.

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau cases](#).

Continuing Cases

Target Case LO7-2, LO7-5

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material also is available under the Investor Relations link at the company's website ( www.target.com).

Page 399

Required:

1. In what note does Target disclose its policy for designating investments as cash equivalents?
2. What is Target's balance of cash equivalents for the fiscal year ended February 1, 2020?
3. In what note does Target disclose its policy with respect to accounting for merchandise returns?
4. Does Target have accounts receivable? Speculate as to why it has the balance that it has. (*Hint: See Disclosure Notes 2, 7, and 9*).

Air France-KLM Case LO7-8

IFRS

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

1. In note 4.11, AF describes how it values trade receivables. Is this approach consistent with U.S. GAAP?
2. In note 25, AF reconciles the beginning and ending balances of its valuation allowances for trade accounts receivable. Prepare a T-account for the valuation allowance and include

entries for the beginning and ending balances as well as any reconciling items that affected the account during 2019.

3. Examine note 27. Does AF have any bank overdrafts? If so, are the overdrafts shown in the balance sheet the same way they would be shown under U.S. GAAP?

CHAPTER 8

Inventories: Measurement

OVERVIEW

The next two chapters continue our study of assets by investigating the measurement and reporting issues involving inventories and the related expense—cost of goods sold. Inventory refers to the assets a company (1) intends to sell in the normal course of business, (2) has in production for future sale, or (3) uses currently in the production of goods to be sold.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO8-1** Explain the types of inventory and the differences between a perpetual inventory system and a periodic inventory system. (p. 402)
-  **LO8-2** Explain which physical units of goods should be included in inventory. (p. 406)
-  **LO8-3** Account for transactions that affect net purchases and prepare a cost of goods sold schedule. (p. 407)
-  **LO8-4** Differentiate between the specific identification, FIFO, LIFO, and average cost methods used to determine the cost of ending inventory and cost of goods sold. (p. 410)
-  **LO8-5** Discuss the factors affecting a company's choice of inventory method. (p. 418)
-  **LO8-6** Understand supplemental disclosures of LIFO reserves and the effect of LIFO liquidations on net income. (p. 420)
-  **LO8-7** Calculate the key ratios used by analysts to monitor a company's investment in inventories. (p. 425)

 **LO8-8** Determine ending inventory using the dollar-value LIFO inventory method. (p. 429)

 **LO8-9** Discuss the primary difference between U.S. GAAP and IFRS with respect to determining the cost of inventory. (p. 418)

FINANCIAL REPORTING CASE

SDI Productions/E+/Getty Images

Inventory Measurement at Kroger Company

As you were reading the annual report of **Kroger Company**, one of the world's largest grocery retailers, you notice the company accounts for nearly all of its grocery inventory based on a LIFO method (last-in, first-out). This means the company reports its most recent inventory purchases as sold *first*. However, you understand that most grocery inventory consists of perishable food items, meaning that the company in reality almost certainly sells its most recent purchases *last*. Otherwise, there would be considerable inventory spoilage. You decide to look a little deeper and notice the following discussion in the company's annual report:

Inventories (in part)

Inventories are stated at the lower of cost (principally on a last-in, first-out "LIFO" basis) or market. In total, approximately 91% of inventories in 2019 and 90% of inventories in 2018 were valued using the LIFO method. Replacement cost was higher than the carrying amount by \$1,380 at February 1, 2020, and \$1,277 at February 2, 2019.

| (\$ in millions) | February 1, 2020 | February 2, 2019 |
|----------------------|------------------|------------------|
| FIFO Inventory | \$8,464 | \$ 8,123 |
| LIFO reserve | (1,380) | (1,277) |
| Reported inventories | <u>\$7,084</u> | <u>\$6,846</u> |

After seeing this information, you are further confused because you don't understand why Kroger would choose to report inventory for \$1.38 billion below its replacement cost. Doesn't that make the company's inventory look less valuable and therefore the company less profitable?

You do some more research and find that other retail companies, as well as companies in industries such as automobiles, consumer products, energy, manufacturing, and mining, also use the LIFO method. Each of these companies most likely sells its actual inventory on a first-in, first-out (FIFO) basis, so why are they assuming the opposite?

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How is the LIFO method used to calculate inventories? Is this permissible according to GAAP?
2. What is the purpose of disclosing the difference between the reported LIFO inventory amounts and replacement cost, assuming that replacement cost is equivalent to a FIFO basis?
3. Are you correct that, by using LIFO, Kroger reports lower inventory and lower profits? Why would Kroger do that?

Recording and Measuring Inventory

Inventory refers to the assets a company (1) intends to sell in the normal course of business, (2) has in production for future sale (work in process), or (3) uses currently in the production of goods to be sold (raw materials). The computers produced by **HP** that are intended for sale to customers are inventory, as are partially completed components, computer chips, and memory modules that will go into computers produced later. The computers *used* by HP's employees to maintain its accounting system and other company operations, however, are not available for sale to customers and therefore are classified and accounted for as equipment. Similarly, the stocks and bonds a securities dealer holds for sale are inventory, whereas HP would classify the securities it holds as investments.

Inventories consist of assets that a retail or wholesale company acquires for resale or goods that manufacturers produce for sale.

Cost of goods sold is the expense related to inventory. The inventory amount in the balance sheet represents the cost of the inventory still on hand (not yet sold) at the end of the period, while cost of goods sold in the income statement represents the cost of the inventory sold during the period.

Inventory usually is one of the most valuable assets listed in the balance sheet for manufacturing, wholesale, and retail companies (enterprises that produce revenue by selling goods). Similarly, cost of goods sold typically is the largest expense in the income statement of these companies. For example, a recent balance sheet for **Best Buy** reported inventories of \$5.2 billion, which represented 58% of current assets. The company's income statement reported cost of goods sold of \$33.6 billion, representing 81% of operating expenses.

As we'll see in this and the next chapter, it's usually difficult to measure inventory and cost of goods sold at the exact cost of the actual physical quantities on hand and sold. Fortunately, accountants can use one of several techniques to approximate the desired result and satisfy our measurement objectives.

Types of Inventory

Merchandising Inventory

LO8–1 Explain the types of inventory and the differences between a perpetual inventory system and a periodic inventory system.

Wholesale and retail companies purchase goods that are primarily in finished form. These companies are intermediaries in the process of moving goods from the manufacturer to the end-user. They often are referred to as merchandising companies and their inventory as merchandise inventory. *The cost of merchandise inventory includes the purchase price plus any other costs necessary to get the goods in condition and location for sale.* We discuss the concept of condition and location and the types of costs that typically constitute inventory later in this chapter.

Manufacturing Inventories

Unlike merchandising companies, manufacturing companies actually produce the goods they sell to wholesalers, retailers, other manufacturers, or consumers. Inventory for a manufacturer consists of (1) raw materials, (2) work in process, and (3) finished goods.

Inventory for a manufacturing company consists of raw materials, work in process, and finished goods.

Raw materials represent the cost of components purchased from suppliers that will become part of the finished product. For example, HP's raw materials inventory includes semiconductors, circuit boards, plastic, and glass that go into the production of personal computers.

Work-in-process inventory refers to the products that are not yet complete in the manufacturing process. The cost of work in process includes the cost of raw materials used in production, the cost of labor that can be directly traced to the goods in process, and an allocated portion of other manufacturing costs, called *manufacturing overhead*. Overhead

costs include electricity and other utility costs to operate the manufacturing facility, depreciation of manufacturing equipment, and many other manufacturing costs that cannot be directly linked to the production of specific goods.

Finished goods are goods that have been completed in the manufacturing process but have not yet been sold. They have reached their final stage and now await sale to a customer. Their cost includes the cost of all raw materials and work in process used in production.

Manufacturing companies generally disclose, either in a note or directly in the balance sheet, the dollar amount of each inventory category. For example, **Intel**, one of the world's largest semiconductor chip manufacturers, reports inventory as shown in  **Illustration 8-1**.

ILLUSTRATION 8-1 Inventories Disclosure—Intel Corporation

Real World Financials

| (\$ in millions) | December 28, 2019 | December 29, 2018 |
|-------------------|-------------------|-------------------|
| Raw materials | \$ 840 | \$ 813 |
| Work in process | 6,225 | 4,511 |
| Finished goods | 1,679 | 1,929 |
| Total inventories | <u>\$8,744</u> | <u>\$7,253</u> |

Source: Intel Corporation

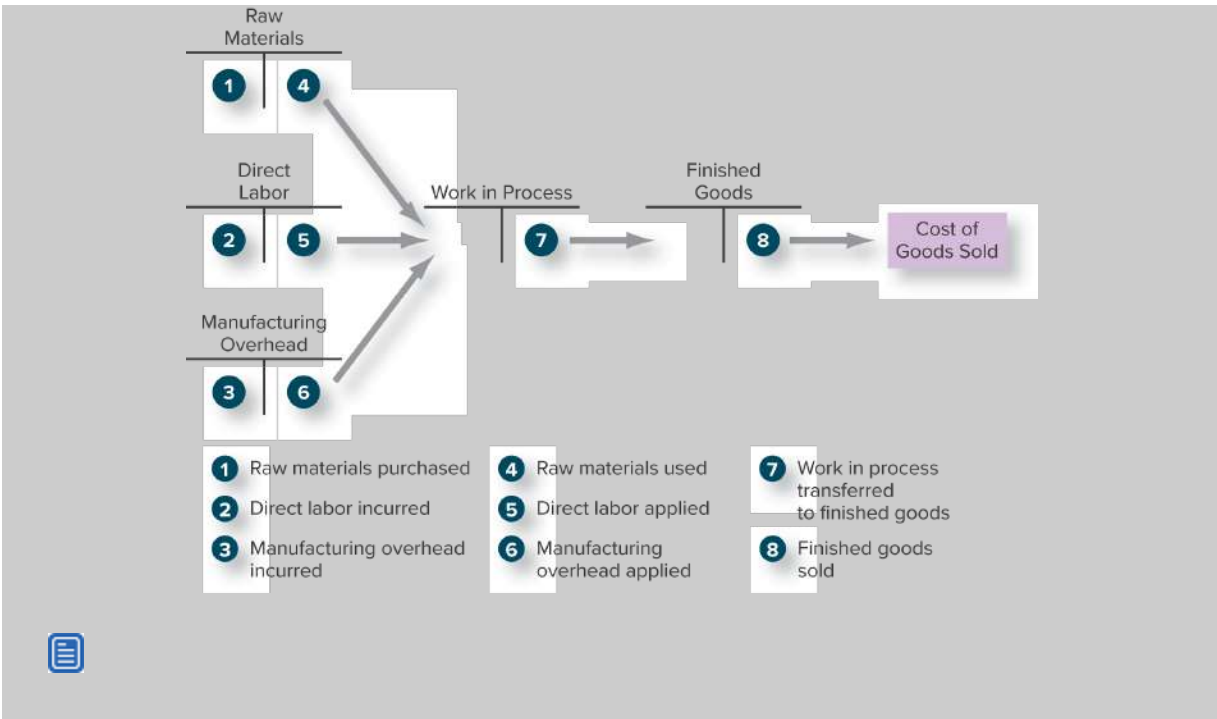

The inventory accounts and the cost flows for a typical manufacturing company are shown using T-accounts in  **Illustration 8-2**. The costs of raw materials used, direct labor applied, and manufacturing overhead applied flow into work in process and then to finished goods. When the goods are sold, the cost of those goods flows to cost of goods sold.

Illustration 8-2 Inventory Components and Cost Flow for a Manufacturing Company

The costs of inventory units follow their physical movement from one stage of activity to another.

We focus in this text primarily on merchandising companies (wholesalers and retailers). Still, most of the accounting principles and procedures discussed here also apply to manufacturing companies. The unique problems involved with accumulating the direct costs of raw materials and labor and with allocating manufacturing overhead are addressed in managerial and cost accounting textbooks.

Types of Inventory Systems

Perpetual Inventory System

Two accounting systems are used to record transactions involving inventory: the **perpetual inventory system** and the **periodic inventory system**. The perpetual system was introduced in  **Chapter 2**. The system is aptly termed perpetual because the *inventory* account is continually adjusted for each change in inventory, whether it's caused by a purchase, a sale, or a return of inventory (a *purchase return* for the buyer, a *sales return* for the seller).¹ In addition, the *cost of goods sold* account is adjusted each time goods are sold or are returned by a customer. The perpetual inventory system is applied to the Lothridge Wholesale Beverage Company for which inventory information is provided in  **Illustration 8-3**. This hypothetical company also will be used in the next several illustrations.

ILLUSTRATION 8-3 Perpetual Inventory System

The Lothridge Wholesale Beverage Company purchases soft drinks from producers and then sells them to retailers. The company begins 2024 with inventory of \$120,000 on hand. The following information relates to inventory transactions during 2024:

1. Additional soft drink inventory is purchased on account at a cost of \$600,000.
2. Sales for the year, all on account, totaled \$820,000.
3. The cost of the soft drink inventory sold is \$540,000.

Lothridge uses the **perpetual inventory system** to keep track of both inventory quantities and inventory costs. The system indicates that the cost of inventory on hand at the end of the year is \$180,000.

The following summary journal entries record the inventory transactions for the Lothridge Company:

During 2024

| | |
|-----------|---------|
| Inventory | 600,000 |
|-----------|---------|

| | | |
|---|---------|---------|
| Accounts payable | | 600,000 |
| <i>To record the purchase of inventory.</i> | | |
| During 2024 | | |
| Accounts receivable | 820,000 | |
| Sales revenue | | 820,000 |
| <i>To record sales on account.</i> | | |
| Cost of goods sold | 540,000 | |
| Inventory | | 540,000 |
| <i>To record the cost of sales.</i> | | |

An important feature of a perpetual system is that it is designed to track inventory quantities from their acquisition to their sale. If the system is accurate, it allows management to determine how many goods are on hand on any date without having to take a physical count. However, physical counts of inventory usually are made anyway, either at the end of the fiscal year or on a sample basis throughout the year, to verify that the perpetual system is correctly tracking quantities. Differences between the quantity of inventory determined by the physical count and the quantity of inventory according to the perpetual system could be caused by system errors, theft, breakage, or spoilage. In addition to keeping up with inventory purchases, a perpetual system also directly determines how many items are sold during a period.

When a company uses a perpetual inventory system to record inventory and cost of goods sold transactions, inventory cost data also is included in the system. That way, when inventory is purchased/sold, the system records not only the addition/reduction in inventory *quantity* but also the addition/reduction in inventory *cost*.

A perpetual inventory system continuously tracks both inventory quantities and inventory costs.

TECHNOLOGY AND INVENTORY ACCOUNTING

You're familiar with the barcode scanning mechanisms used at grocery stores and other checkout counters. Scanners, such as these, are linked to a company's accounting records to allow for continuous tracking of

Nearly all major companies use a perpetual inventory system to maintain a record of inventory transactions.

inventory. Each time inventory is purchased or sold, employees scan barcodes attached to inventory. This provides management with real-time information about inventory levels and cost. In addition to barcode scanning, companies have developed techniques to further automate their management and recording of inventory. For example, some companies use inventory software linked to radio frequency identification (RFID) tags, allowing inventory to be recorded automatically as it moves in and out of a company. Companies are developing “smart” systems to use with “big data” to monitor customer trends and automatically initiate orders in real time as those trends change. These types of technological advances help to reduce the burden of physical inventory counts and manual record keeping, and make the use of a perpetual inventory system easier and more efficient. *That’s why nearly all major companies use a perpetual inventory system, and that’s why we focus on the use of the perpetual system in this chapter.* Nevertheless, even with the advances in technology to improve the automation of inventory accounting, many companies still must physically count the inventory on hand at the end of the period to verify the accuracy of the accounting records and to account for inventory damaged or stolen.

Periodic Inventory System

A **periodic inventory system** does not maintain a continual record of inventory quantity or cost during the period. Instead, the quantity of inventory is determined only at the end of the period based on a physical count. The balance of the inventory account is updated for purchases and sales that occurred during the year using a year-end adjusting entry. A periodic system also does not maintain a record of the cost of goods sold with each sale. The balance is established in the year-end adjusting entry for an amount that equals beginning inventory plus net purchases during the year (total purchases plus freight-in less purchase returns and discounts) minus ending inventory:

A periodic inventory system adjusts inventory and records cost of goods sold only at the end of each reporting period.

Cost of goods sold equation

$$\text{Beginning inventory} + \text{Net purchases} - \text{Ending inventory} = \text{Cost of goods sold}$$

Implied in the calculation of cost of goods sold is that any beginning inventory or net purchases that are not included in ending inventory must have been sold. This may not be the case if inventory items were either damaged or stolen. If damaged and stolen inventory

are identified, they may be removed from beginning inventory or purchases before calculating cost of goods sold and then classified as a separate expense item.

 **Illustration 8-4** looks at the periodic system using the Lothridge Wholesale Beverage Company example.

ILLUSTRATION 8-4 Periodic Inventory System

The Lothridge Wholesale Beverage Company purchases soft drinks from producers and then sells them to retailers. The company begins 2024 with inventory of \$120,000 on hand. The following information relates to inventory transactions during 2024:

1. Additional soft drink inventory is purchased on account at a cost of \$600,000.
2. Sales for the year, all on account, totaled \$820,000.

Lothridge uses the **periodic inventory system**. After a physical count of inventory at the end of the year, the cost of ending inventory is determined to be \$180,000.

The following summary journal entries record the inventory transactions for the Lothridge Company:

During 2024

| | | |
|------------------|---------|---------|
| Purchases | 600,000 | |
| Accounts payable | | 600,000 |

To record the purchase of inventory.

During 2024

| | | |
|---------------------|---------|---------|
| Accounts receivable | 820,000 | |
| Sales revenue | | 820,000 |

To record sales on account.

No entry is recorded for the cost of inventory sold at the time of the sale. Cost of inventory sold will be recorded at the end of the year after a physical inventory count.

December 31, 2024

| | | |
|--------------------|----------------|--|
| Cost of goods sold | 540,000 | |
|--------------------|----------------|--|

| | | |
|-----------------------|---------|---------|
| Inventory (ending) | 180,000 | |
| Inventory (beginning) | | 120,000 |
| Purchases | | 600,000 |

To adjust inventory, close the purchases account, and record cost of goods sold.

Cost of goods sold for 2024 is determined as follows:

Page 406

| | |
|---|-------------------------|
| Beginning inventory | \$ 120,000 |
| Plus: Purchases | <u>600,000</u> |
| Cost of goods available for sale | 720,000 |
| Less: Ending inventory (per physical count) | <u>(180,000)</u> |
| Cost of goods sold | <u><u>\$540,000</u></u> |

A Comparison of the Perpetual and Periodic Inventory Systems

Beginning inventory plus net purchases during the period is the *cost of goods available for sale*. The main difference between a perpetual and a periodic system is that the periodic system allocates cost of goods available for sale between ending inventory and cost of goods sold *only at the end of the period* (periodically). In contrast, the perpetual system updates the balance of inventory and cost of goods sold *each time goods are sold* (perpetually).

The impact on the financial statements of choosing one system over the other generally is not significant. The choice between the two approaches usually is motivated by management control considerations as well as the comparative costs of implementation. Perpetual systems can provide more information about the dollar amounts of inventory levels on a continuous basis. They also facilitate the preparation of interim (for example, quarterly) financial statements by providing fairly accurate information without the necessity of a physical count of inventory. Periodic systems require a physical count of inventory, complicating preparation of interim financial statements unless an inventory estimation technique is used.²

On the other hand, a perpetual system may be more expensive to implement than a periodic system. This is particularly true for inventories consisting of large numbers of low-cost items. Perpetual systems are more workable with inventories of high-cost items such as construction equipment or automobiles. However, with the help of computers and electronic sales devices such as cash register systems with barcode scanners or RFID tags, the perpetual inventory system now is available to many small businesses that previously could not afford them and is economically feasible for a broader range of inventory items than before.

A perpetual system provides more timely information but generally is more costly.

What Is Included in Inventory?

Physical Units Included in Inventory

LO8–2 Explain which physical units of goods should be included in inventory.

Regardless of the system used, the measurement of inventory and cost of goods sold starts with determining the physical units of goods. Typically, determining the physical units that should be included in inventory is a simple matter because it consists of items in the possession of the company. However, in some situations, the identification of items that should be included in inventory is more difficult. Consider, for example, goods in transit, goods on consignment, and sales returns.

GOODS IN TRANSIT

At the end of a reporting period, it's important to ensure a proper inventory cutoff. This means ownership must be determined for goods that are in transit between the company and its customers as well as between the company and its suppliers.

For example, in December 2024, the Lothridge Wholesale Beverage Company sold goods to the Jabbar Company.

1. The goods were shipped from Lothridge on December 29, 2024, but
2. The goods didn't arrive at Jabbar until January 3, 2025.

If both companies have December 31 fiscal year ends, whose inventory is it on December 31, 2024? In other words, which company will report these goods in ending inventory in the balance sheet as of December 31, 2024? The answer depends on who owns the goods on December 31. Ownership depends on the terms of the agreement between the two companies.

If the goods are shipped **f.o.b. (free on board) shipping point**, then legal title to the goods passes from the seller to the buyer at the *point of shipment* (when the

seller hands over the goods to the delivery company, such as **FedEx**). In this case, the buyer is responsible for shipping costs and transit insurance. Lothridge records the sale of inventory on December 29, 2024, and Jabbar records the purchase of inventory on that same day. Jabbar will include these goods in its 2024 ending inventory even though the company is not in physical possession of the goods on the last day of the fiscal year.

purchaser's inventory as soon as the inventory is shipped.

On the other hand, if the goods are shipped **f.o.b. destination**, then legal title to the goods does not pass from the seller to the buyer until the goods arrive at their *destination* (the customer's location). In this case, the seller is responsible for shipping costs and transit insurance. In our example, if the goods are shipped f.o.b. destination, Lothridge waits to record the sale until January 3, 2025, and Jabbar records the purchase of inventory on that same day. Lothridge includes the goods in its 2024 ending inventory even though the inventory has already been shipped as of the last day of the financial statement reporting period.

Inventory shipped f.o.b. destination is included in the purchaser's inventory only after it reaches the purchaser's destination.

GOODS ON CONSIGNMENT

Sometimes a company arranges for another company to sell its product under **consignment**. The goods are physically transferred to the other company (the consignee), but the transferor (consignor) retains legal title. If the consignee can't find a buyer, the goods are returned to the consignor. If a buyer is found, the consignee remits the selling price (less commission and approved expenses) to the consignor.

Goods held on consignment are included in the inventory of the consignor until sold by the consignee.

For example, suppose Premier Clothing (consignor) ships inventory to Regal Outlets (consignee). The arrangement specifies that Regal will attempt to sell the inventory, and in return, Premier will pay to Regal a 10% sales commission on any inventory sold. Any inventory not sold within six months will be returned to Premier. In this arrangement, Regal obtains physical possession of the inventory and has responsibility to sell to customers, but Premier retains legal title to the inventory and risk of ownership and therefore keeps this inventory in its own records until the inventory is sold to a customer. We discussed this issue in [Chapter 6](#). The sale is not complete (revenue is not recognized) until an eventual sale

to a third party occurs. In addition, any costs paid by Premier to ship the inventory to Regal would be included in Premier's cost of inventory at the time the cost was incurred. However, other costs incurred by Premier, such as advertising or sales commissions to Regal, would be expensed as incurred and not included in the cost of inventory.

SALES RETURNS

Recall from our discussions in [Chapters 6](#) and [7](#) that when the right of return exists, a seller must be able to estimate those returns before revenue can be recognized. The adjusting entry for estimated sales returns includes a debit to sales returns and a credit to refund liability. At the same time, cost of goods sold is reduced and an estimate of inventory to be returned is made (see [Illustration 7-4](#)). As a result, a company includes in ending inventory the cost of inventory sold that it anticipates will be returned.

Now that we've considered which goods are part of inventory, let's examine the types of costs associated with those inventory units.

Transactions Affecting Net Purchases

LO8-3 Account for transactions that affect net purchases and prepare a cost of goods sold schedule.

As mentioned earlier, the cost of inventory includes all necessary expenditures to acquire the inventory and bring it to its desired *condition* and *location* for sale or for use in the manufacturing process. Obviously, the cost includes the purchase price of the goods. But usually the cost of acquiring inventory also includes freight charges on incoming goods borne by the buyer; insurance costs incurred by the buyer while the goods are in transit (if shipped f.o.b. shipping point); and the costs of unloading, unpacking, and preparing inventory for sale or raw materials inventory for use.³ The costs included in inventory are called **product costs**. They are associated with products and *expensed as cost of goods sold only when the related products are sold*.⁴

Expenditures necessary to bring inventory to its *condition* and *location* for sale or use are included in its cost.

FREIGHT-IN ON PURCHASES

Freight-in on purchases is commonly included in the cost of inventory. These costs clearly are necessary to get the inventory in location for sale or use and can generally be associated with particular goods. Freight costs are added to the *inventory* account in a perpetual system.

The cost of *freight-in* paid by the purchaser generally is part of the cost of inventory.

In a periodic system, freight costs generally are recorded in a temporary account called **freight-in** or **transportation-in**, which is added to total purchases in determining net purchases for inclusion in cost of goods sold. (See also the cost of goods sold schedule in  **Illustration 8-6** later in this section.) From a control perspective, by recording freight-in as a separate item, management can more easily track its freight costs. The same perspectives pertain to purchase returns and purchase discounts, which are discussed in the next sections.

Shipping charges on outgoing goods (freight-out) are not included in the cost of inventory. They are reported in the income statement either as part of cost of goods sold or as an operating expense, usually among selling expenses. If a company adopts a policy of not including shipping charges in cost of goods sold, both the amounts incurred during the period as well as the income statement classification of the expense must be disclosed.⁵

Shipping charges on outgoing goods are reported either as part of cost of goods sold or as an operating expense, usually among selling expenses.

PURCHASE RETURNS

In  **Chapter 7** we discussed inventory returns from the perspective of the selling company. At the time a customer returns inventory, the seller records a sales return (a contra revenue account). We now address returns from the buyer's point of view. When inventory is returned, the buyer records a **purchase return**. In a perpetual inventory system, the purchase return is recorded directly as a reduction to the *inventory* account. In a periodic system, we use a *purchase returns* account to temporarily accumulate these amounts. Recall our earlier discussion of the cost of goods sold calculation ($\text{Beginning inventory} + \text{Net purchases} - \text{Ending inventory} = \text{Cost of goods sold}$). Purchase returns are subtracted from total purchases to calculate net purchases. (See also the cost of goods sold schedule in  **Illustration 8-6** later in this section.)

PURCHASE DISCOUNTS

Cash discounts were discussed from the seller's perspective in [Chapter 7](#). Here, we discuss them from the buyer's perspective. Discounts offer incentives to the buyer to make quick payment. The amount of the discount and the time period within which it's available are conveyed by terms like 2/10, n/30 (meaning a 2% discount if paid within 10 days, otherwise full payment within 30 days). As with the seller, the purchaser can record these **purchase discounts** using either the **gross method** or the **net method**.

Purchase discounts represent reductions in the amount to be paid if remittance is made within a designated period of time.

Consider [Illustration 8-5](#). On October 5, Lothridge purchases \$20,000 of inventory and is offered a discount of 2% for any amount paid within 10 days. The full invoice is due within 30 days. Under the *gross method*, we record the purchase for the full (or gross) amount of the inventory's cost. Under the *net method*, we record the purchase of inventory for its \$20,000 cost minus the possible discount of \$400 ($= \$20,000 \times 2\%$), resulting in a net purchase amount of \$19,600.

Illustration 8-5 Purchase Discounts Using the Gross Method versus Net Method—
Perpetual System

Consider the following transactions for the Lothridge Wholesale Beverage Company that uses a perpetual inventory system:

1. October 5—Purchased inventory with a cost of \$20,000. The payment terms are stated as 2/10, n/30.
2. October 14—Paid \$13,720 (\$14,000 of the invoice less a 2% cash discount on that amount).
3. November 4—Paid the remaining \$6,000 balance of the invoice.

| | Gross Method | | Net Method |
|-------------------|-------------------------|-------------------|-----------------------|
| October 5 | | October 5 | |
| Inventory* | 20,000 | Inventory* | 19,600 |
| Accounts payable | 20,000 | Accounts payable | 19,600 |
| October 14 | | October 14 | |

| | | | |
|-------------------|--------|-------------------------|--------|
| Accounts payable | 14,000 | Accounts payable | 13,720 |
| Inventory** | 280 | Cash | 13,720 |
| Cash | 13,720 | | |
| November 4 | | November 4 | |
| Accounts payable | 6,000 | Accounts payable | 5,880 |
| Cash | 6,000 | Purchase discounts lost | 120 |
| | | Cash | 6,000 |

*The purchases account is used in a periodic inventory system.

**The purchase discounts account is used in a periodic inventory system.

Payment within the Discount Period. On October 14, Lothridge decides to make payment for \$14,000 of the \$20,000 purchase. Because payment is within the 10-day discount period, the company receives a discount of \$280 ($=\$14,000 \times 2\%$) and must pay only \$13,720 ($=\$14,000 - \280). The discount effectively reduces the cost of inventory. Under the gross method, we record the discount by decreasing the inventory account. Under the net method, the discount was recorded at the time of the purchase, so no further reduction to the inventory account is needed at the time of payment.

Payment *Not* within the Discount Period. On November 4, Lothridge makes final payment for the remaining \$6,000 of inventory. This payment is after the 10-day discount period. Lothridge loses the possible discount of \$120 ($=\$6,000 \times 2\%$). Under the gross method, we simply record the payment on account. Under the net method, we record the purchase discount lost. Most companies that use the net method expect to pay within the discount period. In practice, purchase discounts lost are generally immaterial.⁶

RECORDING TRANSACTIONS IN A PERPETUAL AND PERIODIC SYSTEM

 **Illustration 8-6** compares the perpetual and periodic inventory systems, using the gross method. A schedule to demonstrate the calculation of cost of goods sold is provided at the end.

ILLUSTRATION 8-6 Inventory Transactions Using the Gross Method—Perpetual and Periodic Systems

The Lothridge Wholesale Beverage Company purchases soft drinks from producers and then sells them to retailers. The company began the year with inventory of \$120,000 on hand. During the year, additional inventory transactions include:

- Purchases of inventory on account totaled \$620,000, with terms 2/10, n/30.
- Freight charges paid by Lothridge were \$16,000.
- Inventory with a cost of \$20,000 was returned to suppliers for credit.
- All purchases on account were paid within the discount period.
- Sales on account totaled \$830,000. The cost of soft drinks sold was \$550,000.
- Inventory remaining on hand at the end of the year totaled \$174,000.

The above transactions are recorded in summary form according to both the perpetual and periodic inventory systems using the gross method:

(\$ in thousands)

Inventory Cost Flow Assumptions

LO8–4 Differentiate between the specific identification, FIFO, LIFO, and average cost methods used to determine the cost of ending inventory and cost of goods sold.

Regardless of whether the perpetual or periodic system is used, it's necessary to assign dollar amounts to the physical quantities of goods sold and goods remaining in ending inventory. Unless each item of inventory is specifically identified and traced through the system, assigning dollars is accomplished by making an assumption regarding how units of goods (and their associated costs) flow through the system. We examine the common cost flow assumptions next. In previous illustrations, dollar amounts of the cost of goods sold and the cost of ending inventory were assumed known. However, if various portions of inventory are acquired at different costs, we need a way to decide which units were sold and which remain in inventory.  **Illustration 8–7** will help explain.

Illustration 8–7 Inventory Information

Goods available for sale include beginning inventory plus purchases.

The Converse Company has the following inventory information for 2024:

Beginning Inventory and Purchases during 2024

| Date | Units | Unit Cost* | Total Cost |
|------------------------------|---------------|-------------------|-------------------|
| Jan. 1 (Beginning Inventory) | 4,000 | \$5.50 | \$22,000 |
| Purchases: | | | |
| Jan. 17 | 1,000 | 6.00 | 6,000 |
| Mar. 22 | 3,000 | 7.00 | 21,000 |
| Oct. 15 | 3,000 | 7.50 | 22,500 |
| Goods available for sale | 11,000 | | \$71,500 |

Sales

| Date of Sale | Units |
|---------------------|--------------|
|---------------------|--------------|

The Converse Company has the following inventory information for 2024:

Beginning Inventory and Purchases during 2024

| Date | Units | Unit Cost* | Total Cost |
|-------------|--------------|------------|------------|
| Jan. 10 | 2,000 | | |
| Apr. 15 | 1,500 | | |
| Nov. 20 | 3,000 | | |
| Total sales | <u>6,500</u> | | |

*Includes purchase price and cost of freight.

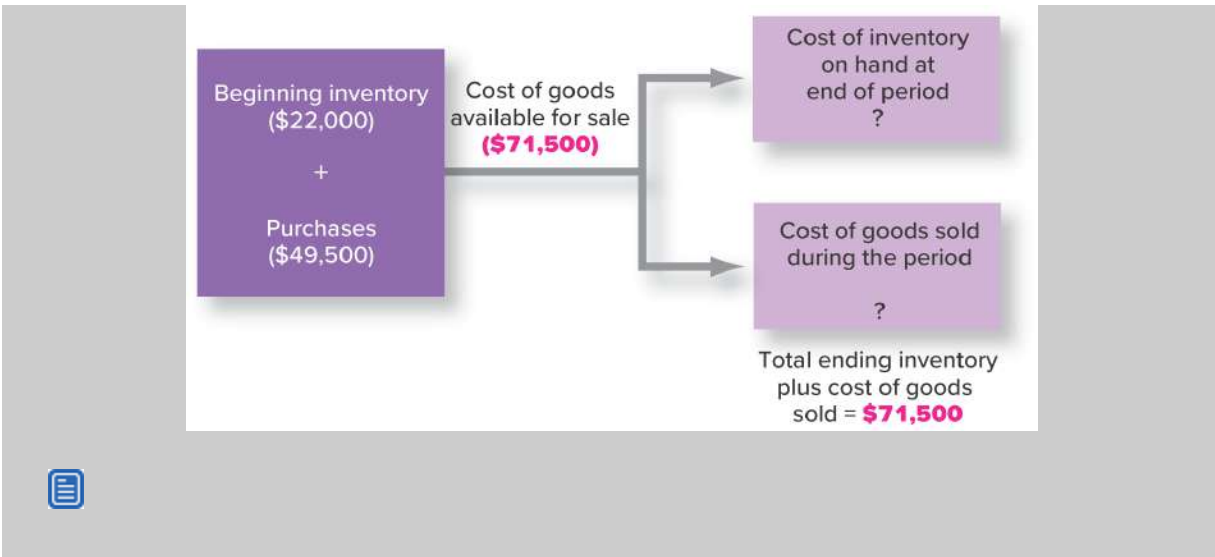

Converse began the year with 4,000 units and purchased another 7,000 units, so there were **11,000** units available for sale. Of this amount, 6,500 units were sold. This means 4,500 units remain in ending inventory. This allocation of units is depicted in [Illustration 8-7A](#).

Illustration 8-7A Allocation of Units Available for Sale

But what is the *cost* of the 6,500 units sold? What is the *cost* of the 4,500 units remaining on hand at the end of the year? To answer this, let's first consider that the total cost of the 11,000 goods available for sale (beginning inventory plus purchases during the year) is **\$71,500**. This total amount will be allocated to ending inventory and cost of goods sold. The allocation decision is depicted in [Illustration 8-7B](#).

Illustration 8-7B Allocation of Cost of Goods Available for Sale

The allocation of the total cost of goods available for sale to ending inventory and cost of goods sold is also depicted in the schedule below. We'll use this schedule in the following sections.

| | |
|---|-----------------|
| Beginning inventory (4,000 units @ \$5.50) | \$22,000 |
| Plus: Purchases (7,000 units @ various prices) | <u>49,500</u> |
| Cost of goods available for sale (11,000 units) | \$71,500 |
| Less: Ending inventory (4,500 units @ \$?) | <u>?</u> |
| Cost of goods sold (6,500 units @ \$?) | <u><u>?</u></u> |

Let's turn our attention now to the various inventory costing methods that can be used to achieve the allocation between ending inventory and cost of goods sold.

Specific Identification

It's sometimes possible for each unit sold during the period or each unit on hand at the end of the period to be matched with its actual cost. Actual costs can be determined by reference to the invoice representing the purchase of the item. The **specific identification method** is used frequently by companies selling unique, expensive products with low sales volume, which makes it relatively easy and economically feasible to associate each

The specific identification method records actual units sold.

specific identification method

item with its actual cost. For example, automobiles have unique serial numbers that can be used to match a specific auto with the invoice identifying the actual purchase price.

In our example for Converse Company, we might have been able to track each of the 6,500 units sold. Suppose the *actual* units sold include 4,000 units of beginning inventory, 800 units of the January 17 purchase, 1,400 units from the March 22 purchase, and 300 units of the October 15 purchase. The cost of those 6,500 units would be reported as cost of goods sold. The cost of the 4,500 units remaining (consisting of 200 from the January 17 purchase, 1,600 from the March 22 purchase, and 2,700 units from the October 15 purchase) would be reported as ending inventory.

However, keeping track of each unit of inventory typically is not practicable for most companies. Consider the inventory at **The Home Depot, Inc.** or **Macy's**: large stores and numerous items, many of which are relatively inexpensive. Specific identification would be very difficult for such merchandisers. Although bar codes and RFID tags now make it possible to instantly track purchases and sales of specific types of inventory, it may be too costly to know the specific unit cost for each individual sale. For that reason, the specific identification method is used primarily by companies with unique, expensive products with low sales volume.

Most companies instead use one of the three inventory cost flow assumptions—average cost, FIFO, or LIFO.

FIFO, LIFO, and weighted-average assume which units are sold.

Note the use of the word *assumptions*. FIFO, LIFO, and weighted-average cost *assume* a particular pattern of inventory cost flows. However, the *actual* flow of inventory does not need to match the *assumed* cost flow in order for the company to use a particular method. That's okay. Companies are allowed to report inventory costs by *assuming* which units of inventory are sold and not sold, even if this does not match the *actual* flow. This is another example of using estimates in financial accounting.

Average Cost

The **average cost method** assumes that cost of goods sold and ending inventory consist of a mixture of all the goods available for sale. The average unit cost applied to goods sold or to ending inventory is an average unit cost *weighted* by the number of units

The average cost method assumes that items sold and items in ending inventory come from a mixture of all the goods available for sale.

acquired at the various unit costs. The average is not simply an average of the various unit costs of purchases during the period.

PERIODIC AVERAGE COST

In a periodic inventory system, this weighted average is calculated only at the end of the period as follows:

In a periodic inventory system, the average cost is computed only at the end of the period.

$$\text{Weighted-average unit cost} = \frac{\text{Cost of goods available for sale}}{\text{Quantity available for sale}}$$

The calculation of average cost is demonstrated in  **Illustration 8-7C** using data from  **Illustration 8-7**.

Page 413

Illustration 8-7C Average Cost—Periodic Inventory System

| | |
|---|------------------------|
| Beginning inventory (4,000 units @ \$5.50) | \$22,000 |
| Plus: Jan. 17 Purchase (1,000 units @ \$6.00) | 6,000 |
| Mar. 22 Purchase (3,000 units @ \$7.00) | 21,000 |
| Oct. 15 Purchase (3,000 units @ \$7.50) | <u>22,500</u> |
| Cost of goods available for sale (11,000 units)* | 71,500 |
| Less: Ending inventory (4,500 units @ \$6.50) | <u>(29,250)</u> |
| Cost of goods sold (6,500 units @ \$6.50) | <u>\$42,250</u> |
| * Weighted-average unit cost = $\frac{\$71,500}{11,000 \text{ units}} = \mathbf{\$6.50}$ | |

The weighted-average unit cost of **\$6.50** is calculated as the cost of goods available for sale (\$71,500) divided by total units in beginning inventory plus units purchased during the year (11,000 units). The units in ending inventory and the units sold are assigned this average. Cost of goods sold also could be determined by subtracting ending inventory from the cost of goods available for sale.

PERPETUAL AVERAGE COST

The weighted-average unit cost in a perpetual inventory system becomes a moving-average unit cost. *A new weighted-average unit cost is calculated each time additional units are purchased.* The new average is determined after each purchase by (1) summing the cost of the previous inventory balance and the cost of the new purchase, and (2) dividing this new total cost (cost of goods available for sale) by the number of units on hand (the inventory units that are available for sale). This average is then used to cost any units sold before the next purchase is made. The moving-average concept is applied in  **Illustration 8-7D**.

In a perpetual inventory system, the average cost method is applied by computing a moving-average unit cost each time additional inventory is purchased.

Illustration 8-7D Average Cost—Perpetual Inventory System

| Date | Purchased | Cost of Goods Sold | Inventory Balance |
|-----------------------|---|----------------------------------|---|
| Beginning inventory | 4,000 @ \$5.50 = \$22,000 | | 4,000 @ \$5.50 = \$22,000 |
| Jan. 10 | | 2,000 @ \$5.50 = \$11,000 | 2,000 @ \$5.50 = \$11,000 |
| Jan. 17 | 1,000 @ \$6.00 = \$6,000 | | 3,000 @ \$5.667 = \$17,000 |
| Average cost per unit | → $\left[\frac{\$11,000 + \$6,000}{3,000 \text{ units}^a} \right] = \mathbf{\$5.667/\text{unit}}$ | | |
| Mar. 22 | 3,000 @ \$7.00 = \$21,000 | | 6,000 @ \$6.333 = \$38,000 |
| Average cost per unit | → $\left[\frac{\$17,000 + \$21,000}{6,000 \text{ units}^b} \right] = \mathbf{\$6.333/\text{unit}}$ | | |
| Apr. 15 | | 1,500 @ \$6.333 = \$9,500 | 4,500 @ \$6.333 = \$28,500 |
| Oct. 15 | 3,000 @ \$7.50 = \$22,500 | | 7,500 @ \$6.80 = \$51,000 |
| Average cost per unit | → $\left[\frac{\$28,500 + \$22,500}{7,500 \text{ units}^c} \right] = \mathbf{\$6.80/\text{unit}}$ | | |
| Nov. 20 | | 3,000 @ \$6.80 = \$20,400 | 4,500 @ \$6.80 = \$30,600 |
| | Total cost of goods sold | = \$40,900 | |

^a 2,000 existing units + 1,000 units purchased on Jan. 17.
^b 3,000 existing units + 3,000 units purchased on Mar. 22.
^c 4,500 existing units + 3,000 units purchased on Oct. 15.

On January 17, the new average of **\$5.667** (rounded) is calculated by dividing the \$17,000 cost of goods available (= \$11,000 from beginning inventory + \$6,000 purchased on January 17) by the 3,000 units available (= 2,000 units from beginning inventory + 1,000 units acquired on January 17). The average is updated to **\$6.333** (rounded) with the March 22 purchase. The 1,500 units sold on April 15 are then costed at the average cost of **\$6.333**. The average is updated once again to **\$6.80** with the October 15 purchase, and 3,000 units are costed at that unit cost on November 20.

Cost of goods sold for the year equals the assumed cost of inventory sold for all sales, which equals **\$40,900** in this example. Ending inventory equals the number of units in ending inventory times the most recently computed average inventory cost. That amount is **\$30,600**. Periodic average cost and perpetual average cost generally produce different allocations to cost of goods sold and ending inventory.

First-In, First-Out (FIFO)

The **first-in, first-out (FIFO) method** assumes that the first units purchased are the first ones sold. Beginning inventory is sold first, followed by purchases during the period in the chronological order of their acquisition.

Ending inventory applying FIFO consists of the most recently acquired items.

Using the example in [Illustration 8-7](#), 6,500 units were sold during 2024. Applying FIFO, these would be the 4,000 units in beginning inventory, the 1,000 units purchased on January 17, and 1,500 of the 3,000 units purchased on March 22.

Ending inventory consists of the remaining units assumed not to be sold. In this case, the 4,500 units in ending inventory consist of 1,500 of the 3,000 units purchased on March 22 and all of the 3,000 units purchased on October 15. Graphically, the flow is as follows:

| | | Units Available | | | |
|--------------------------|-------|-----------------|---------|-------|------------------|
| Assumed order sold | ↓ | Beg. inv. | 4,000 | } | |
| | | Jan. 17 | 1,000 | | |
| | | Mar. 22 | 1,500 | | 6,500 units sold |
| | | | Mar. 22 | 1,500 | } |
| | | | Oct. 15 | 3,000 | |
| | Total | 11,000 | | | |

PERIODIC FIFO

Recall that we determine physical quantities on hand in a periodic inventory system by taking a physical count. Costing the 4,500 units in ending inventory this way automatically gives us the cost of goods sold as well. Using the numbers from our illustration, we determine cost of goods sold to be **\$38,500** by subtracting the **\$33,000** ending inventory from \$71,500 cost of goods available for sale as shown in [Illustration 8-7E](#).

Illustration 8-7E FIFO—Periodic Inventory System

| | |
|---|---|
| Beginning inventory (4,000 units @ \$5.50) | \$22,000 |
| Plus: Jan. 17 Purchase (1,000 units @ \$6.00) | 6,000 |
| Mar. 22 Purchase (3,000 units @ \$7.00) | 21,000 |
| Oct. 15 Purchase (3,000 units @ \$7.50) | <u>22,500</u> |
| Cost of goods available for sale (11,000 units) | 71,500 |
| Less: Ending inventory* (determined below) | (33,000) |
| Cost of goods sold (6,500 units) | <u>\$38,500</u> |
| *Cost of Ending Inventory: | |
| Date of Purchase | Units Unit Cost Total Cost |
| Mar. 22 | 1,500 \$7.00 \$10,500 |
| Oct. 15 | 3,000 7.50 22,500 |
| Total ending inventory | <u>4,500</u> <u>\$33,500</u> |

Of course, the 6,500 units sold could be costed directly as follows:

| <u>Date of Purchase</u> | <u>Units</u> | <u>Unit Cost</u> | <u>Total Cost</u> |
|------------------------------|--------------|------------------|------------------------|
| Jan. 1 (Beginning inventory) | 4,000 | \$5.50 | \$22,000 |
| Jan. 17 | 1,000 | 6.00 | 6,000 |
| Mar. 22 | 1,500 | 7.00 | 10,500 |
| Total goods sold | <u>6,500</u> | | <u>\$38,500</u> |

PERPETUAL FIFO

The ending inventory and cost of goods sold will have the same amounts in a perpetual inventory system as in a periodic inventory system when FIFO is used. This is because the same units and costs are first in and first out whether cost of goods sold is determined as each sale is made or at the end of the period as a residual amount. The application of FIFO in a perpetual system is shown in [Illustration 8-7F](#).

Perpetual FIFO results in cost of goods sold and ending inventory amounts that are the same as those obtained using periodic FIFO.

Illustration 8-7F FIFO—Perpetual Inventory System

| Date | Purchased | Cost of Goods Sold | Inventory Balance |
|---------------------|---------------------------|--|---|
| Beginning inventory | 4,000 @ \$5.50 = \$22,000 | | 4,000 @ \$5.50 = \$22,000 |
| Jan. 10 | | 2,000 @ \$5.50 = \$ 11,000 | 2,000 @ \$5.50 = \$11,000 |
| Jan. 17 | 1,000 @ \$6.00 = \$ 6,000 | | 2,000 @ \$5.50 } 1,000 @ \$6.00 } \$17,000 |
| Mar. 22 | 3,000 @ \$7.00 = \$21,000 | | 2,000 @ \$5.50 } 1,000 @ \$6.00 } \$38,000 3,000 @ \$7.00 } |
| Apr. 15 | | 1,500 @ \$5.50 = \$ 8,250 | 500 @ \$5.50 } 1,000 @ \$6.00 } \$29,750 3,000 @ \$7.00 } |
| Oct. 15 | 3,000 @ \$7.50 = \$22,500 | | 500 @ \$5.50 } 1,000 @ \$6.00 } \$52,250 3,000 @ \$7.00 } 3,000 @ \$7.50 } |
| Nov. 20 | | 500 @ \$5.50 + 1,000 @ \$6.00 + 1,500 @ \$7.00 = \$ 19,250 | 1,500 @ \$7.00 } 3,000 @ \$7.50 } <u>\$33,000</u> |
| | Total cost of goods sold | = <u>\$38,500</u> | |

Last-In, First-Out (LIFO)

The **last-in, first-out (LIFO) method** assumes that the last units purchased are the first ones sold. This is opposite the assumption of FIFO. In reality, virtually no company actually sells

its inventory on a LIFO basis, but companies are allowed to assume LIFO for reporting purposes.

PERIODIC LIFO

Let's use the information in [Illustration 8-7](#) to determine LIFO amounts under a periodic inventory system. The 6,500 units sold for the year are assumed to consist of the 6,500 units most recently purchased *from the end of the year*. This includes the 3,000 units purchased on October 15, the 3,000 units purchased on March 22, and 500 of the 1,000 units purchased on January 17. Ending inventory, then, consists of the remaining units assumed not sold; in this case, 500 of the 1,000 units purchased on January 17 and all of the 4,000 units from beginning inventory. Graphically, the flow is as follows:

Ending inventory applying LIFO consists of the items acquired first.

Page 416

| <u>Units Available</u> | | | |
|--------------------------|---------|---------------------------------|------------------|
| Beg. inv. | 4,000 | } | |
| Jan. 17 | 500 | | |
| | | 4,500 units in ending inventory | |
| Assumed order sold | Jan. 17 | 500 | } |
| | Mar. 22 | 3,000 | |
| | Oct. 15 | 3,000 | |
| | Total | 11,000 | 6,500 units sold |

As shown in [Illustration 8-7G](#), the cost of the 4,500 units assumed in ending inventory is **\$25,000**. We subtract this amount from the cost of goods available for sale to calculate cost of goods sold of **\$46,500**.

Illustration 8-7G LIFO—Periodic Inventory System

| | |
|---|---------------|
| Beginning inventory (4,000 units @ \$5.50) | \$22,000 |
| Plus: Jan. 17 Purchase (1,000 units @ \$6.00) | 6,000 |
| Mar. 22 Purchase (3,000 units @ \$7.00) | 21,000 |
| Oct. 15 Purchase (3,000 units @ \$7.50) | <u>22,500</u> |

| | | | | |
|---|--------------|------------------|-------------------|------------------------|
| Cost of goods available for sale (11,000 units) | | | | 71,500 |
| Less: Ending inventory* (determined below) | | | | (25,000) |
| Cost of goods sold (6,500 units) | | | | <u>\$46,500</u> |
| *Cost of Ending Inventory: | | | | |
| Date of Purchase | Units | Unit Cost | Total Cost | |
| Jan. 1 (Beginning inventory) | 4,000 | \$5.50 | \$22,000 | |
| Jan. 17 | 500 | 6.00 | 3,000 | |
| Total ending inventory | <u>4,500</u> | | <u>\$25,000</u> | |

Cost of goods sold could be calculated directly as follows:

| Date of Purchase | Units | Unit Cost | Total Cost |
|-------------------------|--------------|------------------|-------------------|
| Oct. 15 | 3,000 | \$7.50 | \$22,500 |
| Mar. 22 | 3,000 | 7.00 | 21,000 |
| Jan. 17 | 500 | 6.00 | 3,000 |
| Total goods sold | <u>6,500</u> | | <u>\$46,500</u> |

PERPETUAL LIFO

In contrast to the periodic system, a perpetual system using LIFO assumes that units are sold based on the last units purchased *at the time of the sale*. However, for reasons we discuss later, *companies rarely, if ever, actually use a perpetual inventory system when reporting on a LIFO basis*. In practice, companies using LIFO report inventory and cost of goods sold based on calculations similar to the periodic system presented previously in Illustration 8-7G. We demonstrate the perpetual system here to emphasize the differences between periodic and perpetual amounts.

The application of LIFO in a perpetual system is shown in  **Illustration 8-7H**. The 2,000 units sold on January 10 are assumed to include the units most recently purchased—

beginning inventory. However, as we saw previously when using the periodic system, those 2,000 units sold on January 10 were assumed to come from the last purchase of the year—the November 20 purchase.

Illustration 8–7H LIFO—Perpetual Inventory System

| Date | Purchased | Cost of Goods Sold | Inventory Balance |
|--------------------------|---------------------------|---------------------------|---|
| Beginning inventory | 4,000 @ \$5.50 = \$22,000 | | 4,000 @ \$5.50 = \$22,000 |
| Jan. 10 | | 2,000 @ \$5.50 = \$11,000 | 2,000 @ \$5.50 = \$11,000 |
| Jan. 17 | 1,000 @ \$6.00 = \$6,000 | | 2,000 @ \$5.50 } 1,000 @ \$6.00 } \$17,000 |
| Mar. 22 | 3,000 @ \$7.00 = \$21,000 | | 2,000 @ \$5.50 } 1,000 @ \$6.00 } 3,000 @ \$7.00 } \$38,000 |
| Apr. 15 | | 1,500 @ \$7.00 = \$10,500 | 2,000 @ \$5.50 } 1,000 @ \$6.00 } 1,500 @ \$7.00 } \$27,500 |
| Oct. 15 | 3,000 @ \$7.50 = \$22,500 | | 2,000 @ \$5.50 } 1,000 @ \$6.00 } 1,500 @ \$7.00 } 3,000 @ \$7.50 } \$50,000 |
| Nov. 20 | | 3,000 @ \$7.50 = \$22,500 | 2,000 @ \$5.50 } 1,000 @ \$6.00 } 1,500 @ \$7.00 } \$27,500 |
| Total cost of goods sold | | = \$44,000 | |

Additional purchases of 1,000 units on January 17 and 3,000 units on March 22 add to inventory. Then the sale of 1,500 units on April 15 is assumed to include the units most recently purchased—those purchased on March 22. This process continues with each purchase and sale throughout the year.

Notice that the total cost of goods available for sale is allocated **\$44,000** to cost of goods sold and **\$27,500** to ending inventory (the balance after the last transaction), which is different from the periodic LIFO result of **\$46,500** and **\$25,000**. *If inventory costs are*

Perpetual LIFO generally results in cost of goods sold and inventory amounts that are

rising throughout the year, periodic LIFO will generally result in lower cost of ending inventory and higher cost of goods sold than when applying perpetual LIFO.

different from those obtained by applying periodic LIFO.

Comparison of Cost Flow Methods

The three cost flow methods are compared below assuming a periodic inventory system.

| | Average | FIFO | LIFO |
|--------------------------|------------------------|------------------------|------------------------|
| Cost of goods sold | \$42,250 | \$38,500 | \$46,500 |
| Ending inventory | 29,250 | 33,000 | 25,500 |
| Goods available for sale | <u>\$71,500</u> | <u>\$71,500</u> | <u>\$71,500</u> |

Notice that the average cost method in this example produces amounts that fall between the FIFO and LIFO amounts for both cost of goods sold and ending inventory. This will usually be the case. Whether it will be FIFO or LIFO that produces the highest or lowest value of cost of goods sold depends on the pattern of the actual unit cost changes during the period.

During periods of rising costs, as in our example, FIFO results in a lower cost of goods sold because the lower costs of the earliest purchases are assumed sold. LIFO cost of goods sold will include the more recent higher cost purchases. On the other hand, FIFO ending inventory includes the most recent higher cost purchases, which results in a higher ending inventory. LIFO ending inventory includes the lower costs of the earliest purchases. Conversely, if costs are declining, then FIFO will result in a higher cost of goods sold and lower ending inventory.⁷

If unit costs are increasing, LIFO will result in a higher cost of goods sold and lower ending inventory.

All three methods are permissible according to generally accepted accounting principles and are frequently used in practice. Also, a company need not use the same method for its entire inventory. For example, **International Paper Company** uses LIFO for

its raw materials and finished pulp and paper products, and both the FIFO and average cost methods for other inventories. Because of the importance of inventories and the possible differential effects of different methods on the financial statements, a company must identify

A company must disclose the inventory method(s) it uses.

in a disclosure note the method(s) it uses. The chapter's opening case included an example of this disclosure for **Kroger**, and you will encounter additional examples later in the chapter.

 **Illustration 8-8** shows the results of a survey of inventory methods used by 500 large public companies.⁸ FIFO is the most popular method, but both LIFO and average cost are used by many companies. Notice that the column total for the number of companies is greater than 500, indicating that many companies included in this sample do use multiple methods.

Illustration 8-8 Inventory Cost Flow Methods Used in Practice

Real World Financials

| | Number of Companies | Percent of Companies |
|--------------------------|---------------------|----------------------|
| FIFO | 312 | 47% |
| LIFO | 163 | 24 |
| Average | 133 | 20 |
| Other* and not disclosed | 61 | 9 |
| Total | <u>669</u> | <u>100%</u> |

*Other includes the specific identification method and miscellaneous less popular methods.

LO8-9 Discuss the primary difference between U.S. GAAP and IFRS with respect to determining the cost of inventory.

International Financial Reporting Standards

Real World Financials

Inventory Cost Flow Assumptions. *IAS No. 2* does not permit the use of LIFO.⁹ Because of this restriction, many U.S. multinational companies use LIFO only for their domestic inventories and FIFO or average cost for their foreign

subsidiaries. A disclosure note included in a recent annual report of **General Mills** provides an example:

Inventories (in part)

All inventories in the United States other than grain are valued at the lower of cost, using the last-in, first-out (LIFO) method, or market. Inventories outside of the United States generally are valued at the lower of cost, using the first-in, first-out (FIFO) method, or net realizable value.

This difference could prove to be a significant impediment to U.S. convergence to international standards. Unless the U.S. Congress repeals the LIFO conformity rule, convergence would cause many corporations to lose a valuable tax shelter, the use of LIFO for tax purposes. If these companies were immediately taxed on the difference between LIFO inventories and inventories valued using another method, it would cost companies billions of dollars. Some industries would be particularly hard hit. Most oil companies and auto manufacturers, for instance, use LIFO. The government estimates that the repeal of the LIFO method would increase federal tax revenues by \$76 billion over a ten-year period.¹⁰ The companies affected most certainly will lobby heavily to retain the use of LIFO for tax purposes.

Factors Influencing Method Choice

LO8–5 Discuss the factors affecting a company's choice of inventory method.

What factors motivate companies to choose one method over another? What factors have caused the increased popularity of LIFO? Choosing among alternative accounting methods is a complex issue. Often such choices are not made in isolation but in such a way that the combination of inventory cost flow assumptions, depreciation methods, pension assumptions, and other choices meet a particular objective. Also, many believe managers sometimes make these choices to maximize their own personal benefits rather than those of the company or its external constituents. But regardless of the motive, the impact on reported numbers is an important consideration in each choice of method. The inventory choice determines (a) how closely reported costs reflect the actual physical flow of inventory, (b) the timing of reported income and income tax expense, and (c) how well costs are matched with associated revenues.

PHYSICAL FLOW

If a company wanted to choose a method that most closely approximates specific identification, then the actual physical flow of inventory in and out of the company would motivate the choice of method.

For example, companies often attempt to sell the oldest goods in inventory first for some of their products. This certainly is the case with perishable goods such as many grocery items. The FIFO method best mirrors the physical flow in these situations. The average cost method might be used for liquids such as chemicals where items sold are taken from a mixture of inventory acquired at different times and different prices. There are very few inventories that actually flow in a LIFO manner. It is important for you to understand that there is no requirement that companies choose an inventory method that approximates actual physical flow, and few companies make a choice on this basis. In fact, as we discuss next, the effect of the inventory method on income and income taxes is the primary motivation that influences method choice.

A company is not required to choose an inventory method that approximates actual physical flow.

INCOME TAXES AND NET INCOME

If the unit cost of inventory changes during a period, the inventory method chosen can have a significant effect on the amount of income reported by the company to external parties and also on the amount of income taxes paid to the Internal Revenue Service (IRS) and state and local taxing authorities. Over the entire life of a company, cost of goods sold for all years will equal actual costs of items sold regardless of the inventory method used. However, as we have discussed, different inventory methods can produce significantly different results in each particular year.

When inventory costs rise and inventory quantities are not decreasing, LIFO produces a higher cost of goods sold and, therefore, lower net income than the other methods. The company's income tax returns will report a lower taxable income using LIFO and lower taxes will be paid currently. Taxes are not reduced permanently, only deferred. The reduced amount will be paid to the taxing authorities when either the unit cost of inventory or the quantity of inventory subsequently declines. However, we know from our discussion of the time value of money that it is

Many companies choose LIFO in order to reduce income taxes in periods when prices are rising.

advantageous to save a dollar today even if it must be paid back in the future. In the past, high inflation (increasing prices) periods motivated many companies to switch to LIFO in order to gain this tax benefit. This is also why companies using LIFO calculate cost of goods sold using a periodic system instead of a perpetual system. As inventory costs rise throughout the year, companies are able to reduce taxes by a greater amount by assuming the last purchase of the year (highest cost units) are the first ones sold.

A corporation's taxable income comprises revenues, expenses (including cost of goods sold), gains, and losses measured according to the regulations of the appropriate taxing authority. Income before tax as reported in the income statement does not always equal taxable income. In some cases, differences are caused by the use of different measurement

methods.¹¹ However, IRS regulations, which determine federal taxable income, require that if a company uses LIFO to measure taxable income, the company also must use LIFO for external financial reporting. This is known as the **LIFO conformity rule** with respect to inventory methods.

If a company uses LIFO to measure its taxable income, IRS regulations require that LIFO also be used to measure income reported to investors and creditors (the *LIFO conformity rule*).

Because of the LIFO conformity rule, to obtain the tax advantages of using LIFO in periods of rising prices, lower net income is reported to shareholders, creditors, and other external parties. The income tax motivation for using LIFO may be offset by a desire to report higher net income. Reported net income could have an effect on a corporation's share price,¹² on bonuses paid to management, or on debt agreements with lenders. For example, research has indicated that the managers of companies with bonus plans tied to income measures are more likely to choose accounting methods that maximize their bonuses (often those that increase net income).¹³

The LIFO conformity rule permits LIFO users to report non-LIFO inventory valuations in a disclosure note, but not on the face of the income statement. For example,  **Illustration 8-9** shows the notes provided in a recent annual report of **Dollar General Corporation**, a large variety store chain, disclosing its use of LIFO to value its inventories.

Illustration 8-9 Inventories Disclosures—Dollar General Corporation

Real World Financials

Inventories

Inventories are stated at the lower of cost or market with cost determined using the retail last-in, first-out (“LIFO”) method as this method results in a better matching of costs and revenues.

The excess of current cost over LIFO cost was approximately \$110.7 million and \$103.7 million at January 31, 2020 and February 1, 2019, respectively. Current cost is determined using the RIM on a first-in, first-out basis.

LIFO Reserves and LIFO Liquidation

LIFO RESERVES

LO8–6 Understand supplemental disclosures of LIFO reserves and the effect of LIFO liquidations on net income.

Many companies maintain their internal records throughout the reporting period using FIFO or average cost but use LIFO for external reporting and income tax purposes at the end of the reporting period. There are many reasons that companies choose not to maintain internal records on a LIFO basis, including (1) the high record-keeping costs for LIFO, (2) contractual agreements such as bonus or profit-sharing plans that calculate net income with a method other than LIFO, and (3) using FIFO or average cost information for pricing decisions.

Generally, the conversion to LIFO from the internal records occurs at the end of the reporting period without actually entering the adjustment into the company’s records. Some companies, though, enter the conversion adjustment—the difference between the internal method and LIFO—directly into the records as a “contra account” to inventory. This contra account is called the **LIFO reserve** or the *LIFO allowance*.

An increase in the LIFO reserve reduces reported profits.

Let’s look at an example in  **Illustration 8-10**. In 2024 (first year of operations), the LIFO reserve is established as the difference between ending inventory under FIFO versus LIFO. The LIFO reserve (a contra asset) has a normal credit balance, so the adjusting entry to increase its balance by \$10,000 includes a credit to LIFO reserve. The adjusting entry also

includes an increase to cost of goods sold. The increase to cost of goods sold increases total expenses and therefore lowers reported profitability.

Illustration 8–10 LIFO Reserve

Doubletree Corporation began operations in 2024. The company maintains its internal inventory records using FIFO but reports ending inventory and cost of goods sold using LIFO. Internal records reveal the following for the first three years of operations:

| | 2024 | 2025 | 2026 |
|-------------------------|-------------|-------------|-------------|
| FIFO Ending inventory | \$120,000 | \$160,000 | \$175,000 |
| FIFO Cost of goods sold | 600,000 | 720,000 | 850,000 |

2024 (first year of operations)—LIFO ending inventory is calculated as \$110,000. Therefore, the LIFO reserve is \$10,000 (= \$120,000 FIFO – \$110,000 LIFO) and is established with the following year-end adjusting entry.

| | | |
|--------------------|--------|--------|
| Cost of goods sold | 10,000 | |
| LIFO reserve | | 10,000 |

2025—LIFO ending inventory is calculated as \$130,000. Therefore, the LIFO reserve is \$30,000 (= \$160,000 FIFO – \$130,000 LIFO) and is increased with the following adjusting entry

| | | |
|---------------------------------|--------|--------|
| Cost of goods sold | 20,000 | |
| LIFO reserve(\$30,000–\$10,000) | | 20,000 |

2026—LIFO ending inventory is calculated as \$150,000. Therefore, the LIFO reserve is \$25,000 (= \$175,000 FIFO – \$150,000 LIFO) and is decreased with the following adjusting entry

| | | |
|---------------------------------|-------|-------|
| LIFO reserve(\$30,000–\$25,000) | 5,000 | |
| Cost of goods sold | | 5,000 |

Doubletree would report the following LIFO amounts in its financial statements.

| | 2024 | 2025 | 2026 |
|-----------------------|-----------------|-----------------|-----------------|
| FIFO Ending inventory | \$120,000 | \$160,000 | \$175,000 |
| Less: LIFO reserve | <u>(10,000)</u> | <u>(30,000)</u> | <u>(25,000)</u> |

| | | | |
|-------------------------|-----------|-----------|-----------|
| LIFO Ending inventory | \$110,000 | \$130,000 | \$150,000 |
| LIFO Cost of goods sold | \$610,000 | \$740,000 | \$845,000 |

In 2025, the LIFO reserve increases to \$30,000. This means we need to increase the LIFO reserve account balance by \$20,000 (from its balance of \$10,000 in 2024 to its new balance of \$30,000 in 2025). The increase in cost of goods sold reduces profits in 2025 by the amount of the adjusting entry.

In 2026, the LIFO reserve *decreases* to \$25,000. This means we need to decrease the LIFO reserve account balance by \$5,000 (from its balance of \$30,000 in 2025 to its new balance of \$25,000 in 2026). The adjusting entry includes a debit to LIFO reserve to decrease its balance. In addition, notice that the adjusting entry also reduces cost of goods sold, which *increases* reported profitability. Thus, when the LIFO reserve decreases, reported profits under LIFO will be higher even though reported inventory is lower.

A decrease in the LIFO reserve increases reported profits.

As an example of the disclosure of the LIFO reserve, [Illustration 8-11](#) provides a disclosure note of **McKesson Corporation**, an American company distributing pharmaceuticals at a retail sale level and providing health information technology, medical supplies, and care management tools. The note shows the company's inventories valued at average cost (the internal method), less the LIFO reserve, to arrive at the LIFO amount reported in the company's balance sheet.

Illustration 8-11 Inventories Disclosure—McKesson Corporation

Real World Financials

| (\$ in millions) | Inventories (in part) | |
|-------------------------------|-----------------------|-----------------|
| | 2020 | 2019 |
| Inventories (at average cost) | \$17,178 | \$17,405 |
| Less: LIFO reserve | 444 | 696 |
| Net inventories (at LIFO) | <u>\$16,734</u> | <u>\$16,709</u> |

Under LIFO, inventory is reported in the 2020 balance sheet at a lower amount, which indicates the need for a LIFO reserve of \$444 million. The LIFO reserve at the beginning of 2020 was \$696 million, so its balance needs to be decreased by \$252 million ($= \$696 - \444). The decrease is recorded with a debit to the LIFO reserve. At the same time, we decrease (or credit) cost of goods sold, thereby increasing reported profit.

LIFO LIQUIDATIONS

A disadvantage of LIFO is that inventory costs in the balance sheet generally are out of date because they reflect old purchase transactions. It is not uncommon for a company's LIFO inventory balance to be based on unit costs actually incurred several years earlier.

Proponents of LIFO argue that it results in a better match of revenues and expenses. Under LIFO, sales reflect the most recent selling prices, and cost of goods sold includes the costs of the most recent purchases. However, that's not always the case.

When inventory quantities decline during a period, then these out-of-date inventory layers are liquidated and cost of goods sold will partially match noncurrent

LIFO liquidations occur when inventory quantities decline.

costs with current selling prices. This occurrence is known as a **LIFO liquidation**. If costs have been increasing (decreasing), LIFO liquidations produce higher (lower) net income than would have resulted if the liquidated inventory were included in cost of goods sold at current costs. The paper profits (losses) caused by including out-of-date, low (high) costs in cost of goods sold is referred to as the effect on income of liquidations of LIFO inventory.

To illustrate this problem, consider the example in [Illustration 8-12](#).

Illustration 8-12 LIFO Liquidation

National Distributors, Inc., uses the LIFO inventory method. The company began the year with inventory of 20,000 units that cost \$16 per unit. During the year, 30,000 units were purchased for \$20 each. The cost of goods available for sale is determined as:

| | | |
|---------------------|--------------------------------|-----------|
| Beginning inventory | 20,000 units @ \$16 per unit = | \$320,000 |
|---------------------|--------------------------------|-----------|

| | | |
|---|---------------------------------------|------------------|
| Purchases during the year | 30,000 units @ \$20 per unit = | 600,000 |
| Goods available for sale | <u>50,000</u> units | <u>\$920,000</u> |
| By the end of the year, 45,000 units were sold. Under the LIFO assumption, cost of goods sold is determined as: | | |
| From Beginning inventory | 15,000 units @ \$16 per unit = | \$240,000 |
| From purchases | 30,000 units @ \$20 per unit = | 600,000 |
| Cost of goods sold | <u>45,000</u> units | <u>\$840,000</u> |
| Ending inventory equals \$80,000 (= 5,000 units of beginning inventory @ \$16 per unit). | | |

Under the LIFO assumption, the 45,000 units sold include the **30,000** units purchased during the year and **15,000** units of beginning inventory. If the company had purchased at least 45,000 units, no liquidation in beginning inventory would have occurred. Then cost of goods sold would have been \$900,000 (45,000 units × \$20 per unit) instead of \$840,000. The difference between these two cost of goods sold figures is \$60,000 (= \$900,000 - \$840,000). This is the before-tax income effect of the LIFO liquidation. We also can determine the \$60,000 before-tax LIFO liquidation profit by multiplying the **15,000** beginning units liquidated by the difference between the \$20 *current cost* per unit and the \$16 *acquisition cost* per unit we included in cost of goods sold (15,000 units × [\$20 - \$16] = \$60,000).

The after-tax LIFO liquidation effect (assuming a 25% income tax rate) is an increase to net income of \$45,000 [\$60,000 × (1 - 0.25)]. The lower the costs of the units liquidated, the more severe the effect on cost of goods sold and net income. National Distributors must disclose that the LIFO liquidation increased net income by \$45,000 in 2024, assuming that this effect is considered material.

Concept Review Exercise

INVENTORY COST FLOW METHODS

Assume a company uses a perpetual FIFO system to maintain internal records of inventory transactions. Inventory transactions for the first six months of the year are as follows:

| Date | Transaction |
|---------|---|
| Jan. 1 | Beginning inventory of 10 million units at a cost of \$5 each. |
| Feb. 15 | Purchased, on account, 15 million units at a cost of \$6 each. |
| Mar. 20 | Sold, on account, 12 million units at a selling price of \$12 each. |
| Apr. 30 | Purchased, on account, 5 million units at a cost of \$7 each. |

On June 30, units on hand were 18 million.

Required:

1. Record the inventory purchases and sales during the year, using a perpetual FIFO system.
2. Calculate the balance of ending inventory using perpetual FIFO.
3. Assume the company uses periodic LIFO for financial reporting purposes.
 - a. Calculate the amounts to be reported for cost of goods sold and ending inventory.
 - b. Record the adjusting entry for the LIFO reserve on June 30, assuming the balance of the reserve at the beginning of the year was \$11 million.
4. Calculate the amounts to be reported for cost of goods sold and ending inventory assuming the company instead uses
 - a. A perpetual average cost system.
 - b. A periodic average cost system.

Solution:

1. Record the inventory purchases and sales during the year, using a perpetual FIFO system.

| February 15 | | (\$ in millions) |
|---|-----|------------------|
| Inventory (15 million × \$6) | 90 | |
| Accounts payable | | 90 |
| <i>To record the purchase of inventory.</i> | | |
| March 20 | | |
| Accounts receivable (12 million × \$12) | 144 | |
| Sales revenue | | 144 |
| <i>To record sales on account.</i> | | |
| Cost of goods sold (determined below) | 62 | |
| Inventory | | 62 |
| <i>To record cost of goods sold.</i> | | |
| April 30 | | |
| Inventory (5 million × \$7) | 35 | |
| Accounts payable | | 35 |
| <i>To record the purchase of inventory.</i> | | |

Cost of goods sold assuming FIFO:

| Units Sold | Cost of Units Sold | Total Cost |
|-----------------------------------|--------------------|-------------|
| 10 million (from Beg. inv.) | \$5 | \$50 |
| 2 million (from Feb. 15 purchase) | 6 | 12 |
| <u>12 million</u> | | <u>\$62</u> |

2. Calculate the balance of ending inventory using perpetual FIFO.

Page 424

| Units in Ending Inventory | Cost of Units Sold | Total Cost |
|------------------------------------|--------------------|------------|
| 13 million (from Feb. 15 purchase) | \$6 | \$78 |

| | | |
|-----------------------------------|---|--------------|
| 5 million (from Apr. 30 purchase) | 7 | 35 |
| <u>18 million</u> | | <u>\$113</u> |

3. Assume the company uses periodic LIFO for financial reporting purposes.

a. Calculate the amounts to be reported for cost of goods sold and ending inventory.

Cost of goods sold:

| Units Sold | Cost of Units Sold | Total Cost |
|-----------------------------------|--------------------|-------------|
| 5 million (from Apr. 30 purchase) | \$7 | \$35 |
| 7 million (from Feb. 15 purchase) | 6 | 42 |
| <u>12 million</u> | | <u>\$77</u> |

Cost of ending inventory:

| Units in Ending Inventory | Cost of Units | Total Cost |
|-----------------------------------|---------------|-------------|
| 10 million (from Beg. inv.) | \$5 | \$50 |
| 8 million (from Feb. 15 purchase) | \$6 | 48 |
| <u>18 million</u> | | <u>\$98</u> |

b. Record the adjusting entry for the LIFO reserve on June 30, assuming the balance of the reserve at the beginning of the year was \$11 million.

| | | |
|---|---|------------------|
| June 30 | | (\$ in millions) |
| Cost of goods sold | 4 | |
| LIFO reserve (determined below) | | 4 |
| <i>To record the LIFO reserve adjustment.</i> | | |

| | |
|---|-------------|
| Ending inventory under FIFO (above) | \$113 |
| Less: Ending inventory under LIFO (above) | <u>(98)</u> |

| | |
|--------------------------------|-------------|
| Ending LIFO reserve | \$15 |
| Less: Beginning LIFO reserve | (1) |
| LIFO reserve adjustment needed | <u>\$ 4</u> |

4. Calculate the amounts to be reported for cost of goods sold and ending inventory assuming the company instead uses:

a. A perpetual average cost system.

Cost of goods sold:

| Date | Purchased | Sold | Balance |
|-----------|---|---|------------------------|
| Beg. inv. | 10 million @ \$5 = \$50 | | \$50 |
| Feb. 15 | 15 million @ \$6 = \$90 | | \$50 + \$90 = \$140 |
| | $\frac{\$140}{25 \text{ million units}} = \$5.60/\text{unit}$ | | |
| Mar. 20 | | 12 million @ \$5.60 = \$67.2 | |

Cost of ending inventory:

| Units in Ending Inventory | Cost of Units | Total Cost |
|--|---------------|-----------------------|
| 13 million (from Beg. inv. and Feb. 15 purchase) | \$5.60 | \$ 72.8 |
| 5 million (from Apr. 30 purchase) | 7.00 | 35.0 |
| <u>18 million</u> | | <u>\$107.8</u> |

b. A periodic average cost system.

Page 425

| Date | Units | Unit Cost | Total Cost |
|-----------|------------|-----------|------------|
| Beg. inv. | 10 million | \$5 | \$ 50 |
| Feb. 15 | 15 million | 6 | 90 |

| | | | |
|--------------------------|-------------------|---|--------------|
| Apr 30 | 5 million | 7 | 35 |
| Goods available for sale | <u>30 million</u> | | <u>\$175</u> |

$$\text{Weighted-average unit cost} = \frac{\$175}{30 \text{ million units}} = \$5.83$$

Cost of good sold: 12 million × \$5.83 (above) = **\$70**

Cost of ending inventory: 18 million × \$5.83 (above) = **\$105**

Decision Makers' Perspective— Inventory Management

LO8–7 Calculate the key ratios used by analysts to monitor a company's investment in inventories.

Managers closely monitor inventory levels to (1) ensure that the inventories needed to sustain operations are available and to (2) hold the cost of ordering and carrying inventories to the lowest possible level.¹⁴ Unfortunately, these objectives often conflict with one another. Companies must maintain sufficient quantities of inventory to meet customer demand. However, maintaining inventory is costly. Fortunately, a variety of tools are available, including computerized inventory control systems and the outsourcing of inventory component production, to help balance these conflicting objectives.¹⁵

A **just-in-time (JIT) system** is another valuable technique that many companies have adopted to assist them with inventory management. JIT is a system used by a manufacturer to coordinate production with suppliers so that raw materials or components arrive just as they are needed in the production process.

A company should maintain sufficient inventory quantities to meet customer demand while at the same time minimizing inventory ordering and carrying costs.

Harley-Davidson is a company known for its custom-ordered motorcycles, and the company's JIT inventory system is an important part of the company's success. This system enables Harley-Davidson to maintain relatively low inventory balances. At the same time, the company's efficient production techniques, along with its excellent relationships with

suppliers ensuring prompt delivery of components, enables it to quickly meet customer demand.

As we discussed in [Chapter 4](#), one factor financial analysts use to evaluate management's success is how well the company utilizes its assets. This evaluation, which often is based on the calculation of certain ratios, is influenced by the company's inventory method choice. The different inventory methods affect reported amounts, requiring analysts to make adjustments when comparing companies that use different methods. For companies that use LIFO, supplemental disclosures help to convert inventory amounts to those that would have been reported using FIFO, allowing a better comparison to a company that reports using FIFO.

For example, **Harley-Davidson** uses the LIFO method. Additional inventory information from the company's recent financial statements is provided below.

Real World Financials

| (\$ in millions) | For the Year Ended | |
|---------------------------|--------------------|-------------------|
| | December 31, 2019 | December 31, 2018 |
| Balance sheets: | | |
| Inventories | \$ 603.6 | \$ 556.1 |
| Income statements: | | |
| Net sales | \$4,572.7 | \$4,968.6 |
| Cost of goods sold | 3,229.8 | 3,351.8 |

Suppose an analyst wanted to compare Harley-Davidson with a competitor that used all FIFO, or that used both LIFO and FIFO but with different percentages of LIFO and FIFO. To compare apples with apples, we can convert Harley-Davidson's inventories and cost of goods sold (and the competitor's if necessary) to a 100% FIFO basis before comparing the two companies. The information necessary for this conversion is provided as a supplemental disclosure by Harley-Davidson:

Supplemental LIFO disclosures can be used to convert LIFO inventories and cost of goods sold amounts.

| | 2019 | 2018 |
|-------------------------|-------------|-------------|
| Inventories (LIFO) | \$603.6 | \$556.1 |
| Add: conversion to FIFO | <u>56.4</u> | <u>58.6</u> |

Inventories (100% FIFO) \$660.0 \$614.7

If Harley-Davidson had used FIFO instead of LIFO, ending inventory in 2019 would have been \$56.4 million higher. The large difference in reported inventory can have a material effect on financial ratios (as demonstrated below).

The use of FIFO versus LIFO also affects the calculation of cost of goods sold and therefore gross profit and net income. For Harley-Davidson, the *difference* between FIFO and LIFO inventory decreased by \$2.2 million during 2019 (from \$58.6 to \$56.4 million). This means the company would have recorded a decrease of \$2.2 million in the LIFO reserve in 2019, along with a decrease in cost of goods sold (see earlier discussion of the LIFO reserve adjustment). The decrease in cost of goods sold indicates that reported profits under LIFO were higher than if FIFO had been used. If the LIFO reserve had increased during the year, profits would have been lower under LIFO than FIFO.

One useful profitability indicator that involves cost of goods sold is the **gross profit ratio**. The ratio is computed as follows:

$$\text{Gross profit ratio} = \frac{\text{Gross profit}}{\text{Net sales}} \text{ or } \frac{\text{Net sales} - \text{Cost of goods sold}}{\text{Net sales}}$$

This ratio provides a measure of how much of each sales dollar is available to pay for expenses other than cost of goods. For example, inventory that costs \$100 and sells for \$125 provides a gross profit of \$25 (= \$125 - \$100) and a gross profit ratio of 20% (= \$25 ÷ \$125). This means that each \$1 of sales generates \$0.20 that can be used to help pay for expenses other than cost of goods sold or remain as profit. If that same inventory can be sold for \$150, gross profit increases to \$50, and the gross profit ratio increases to 33% (= \$50 ÷ \$150).

The gross profit ratio provides a measure of how much of each sales dollar is available to pay for expenses other than cost of goods.

The gross profit for Harley-Davidson's motorcycle sales is \$1,342.9 million (equal to sales of \$4,572.7 million minus cost of goods sold of \$3,229.8 million). That's a gross profit ratio of 29.4%. The industry average is 20.0%. Harley-Davidson is able to sell its products at significantly higher markups. If the LIFO reserve adjustment that increased cost of goods sold in 2019 had not been made, cost of goods sold on a FIFO basis would have been \$2.2 million higher, and gross profit would have been lower than reported for the year.

Monitoring the gross profit ratio over time can provide valuable insights. For example, a declining ratio might indicate that the company is unable to offset rising costs with corresponding increases in selling price, or perhaps that sales prices are declining without a commensurate reduction in costs. In either case, the decline in the ratio has important implications for future profitability.

In [Chapter 4](#), we were introduced to an important ratio, the **inventory turnover ratio**, which is designed to evaluate a company's effectiveness in managing its investment in inventory. The ratio shows the number of times the average inventory balance is sold during a reporting period. The more frequently a business is able to sell or turn over its inventory, the lower its investment in inventory must be for a given level of sales. Monitoring the inventory turnover ratio over time can highlight potential problems. A declining ratio generally is unfavorable and could be caused by the presence of obsolete or slow-moving products, or poor marketing and sales efforts.

Recall that the ratio is computed as follows:

$$\text{Inventory turnover ratio} = \frac{\text{Cost of goods sold}}{\text{Average inventory}}$$

If the analysis is prepared for the fiscal year reporting period, we can divide the inventory turnover ratio into 365 days to calculate the **average days in inventory**, which indicates the average number of days it normally takes the company to sell its inventory. In 2019, Harley-Davidson's inventory turnover ratio using reported LIFO amounts is 5.57 [= \$3,229.8 ÷ [(\$603.6 + \$556.1) ÷ 2]] and the average days in inventory is 65.5 days (= 365 ÷ 5.57).

Alternatively, if we convert amounts to those under FIFO, we see that Harley-Davidson's inventory turnover ratio would have been only 5.07 [= \$3,232.0 ÷ [(\$660.0 + \$614.7) ÷ 2]] and the average days in inventory would have been 72.0 days (= 365 ÷ 5.07). The difference in inventory turnover ratios between LIFO and FIFO is caused primarily by lower average inventory under LIFO and demonstrates the noticeable effect that the choice of inventory method can have on financial ratios.

EARNINGS QUALITY

Changes in the ratios we discussed above often provide information about the quality of a company's current period earnings. For example, a slowing turnover ratio combined with

higher than normal inventory levels may indicate the potential for decreased production, obsolete inventory, or a need to decrease prices to sell inventory (which will then decrease gross profit ratios and net income). This proposition was tested in an important academic research study. Professors Lev and Thiagarajan empirically demonstrated the importance of a set of 12 fundamental variables in valuing companies' common stock. The set of variables included inventory (change in inventory minus change in sales). The inventory variable was found to be a significant indicator of returns on investments in common stock, particularly during high and medium inflation years.¹⁶

The choice of which inventory method to use also affects earnings quality, particularly in times of rapidly changing prices. Earlier in this chapter, we discussed the effect of a LIFO liquidation on company profits. A LIFO liquidation profit (or loss) reduces the quality of current period earnings. Fortunately for analysts, companies must disclose these profits or losses, if material. In addition, LIFO cost of goods sold determined using a periodic inventory system is more susceptible to manipulation than is FIFO. Year-end purchases can have a dramatic effect on LIFO cost of goods sold in rapid cost-change environments. Recall again our discussion in [Chapter 4](#) concerning earnings quality. Many believe that manipulating income reduces earnings quality because it can mask permanent earnings. Inventory write-downs and changes in inventory method are two additional inventory-related techniques a company could use to manipulate earnings. We discuss these issues in the next chapter. ●

PART B

Methods of Simplifying LIFO

The LIFO method described and illustrated to this point is called *unit LIFO*¹⁷ because the last-in, first-out concept is applied to individual units of inventory. One

problem with unit LIFO is that it can be very costly to implement. It requires records of each unit of inventory. The costs of maintaining these records can be significant, particularly when a company has numerous individual units of inventory and when unit costs change often during a period.

The recordkeeping costs of unit LIFO can be significant.

In the previous section, a second disadvantage of unit LIFO was identified—the possibility that LIFO layers will be liquidated if the quantity of a particular inventory unit declines below its beginning balance.

Another disadvantage of unit LIFO is the possibility of LIFO liquidation.

Even if a company's total inventory quantity is stable or increasing, if the quantity of any particular inventory unit declines, unit LIFO will liquidate all or a portion of a LIFO layer of inventory. When inventory quantity declines in a period of rising costs, noncurrent lower costs will be included in cost of goods sold and matched with current selling prices, resulting in LIFO liquidation profit.

This part of the chapter discusses techniques that can be used to significantly reduce the record-keeping costs of LIFO and to minimize the probability of LIFO inventory layers being liquidated. Specifically, we discuss the use of inventory pools and the dollar-value LIFO method.

LIFO Inventory Pools

The objectives of using **LIFO inventory pools** are to simplify record-keeping by grouping inventory units into pools based on physical similarities of the individual units and to reduce the risk of LIFO layer

liquidation. For example, a glass company might group its various grades of window glass into a single window pool. Other pools might be auto glass and sliding-door glass. A lumber company might pool its inventory into hardwood, framing lumber, paneling, and so on.

This allows a company to account for a few inventory pools rather than every specific type of inventory separately. Within pools, all purchases during a period are considered to have been made at the same time

and at the same cost. Individual unit costs are converted to an average cost for the pool. If the quantity of ending inventory for the pool increases, then ending inventory will consist of the beginning inventory plus a single layer added during the period at the average acquisition cost for that pool.

Here's an example. Let's say Diamond Lumber Company has a rough-cut lumber inventory pool that includes three types: pine, oak, and maple. The beginning inventory consisted of the following:

| Beginning inventory | Quantity (board feet) | Cost (per foot) | Total Cost |
|----------------------------|------------------------------|------------------------|-------------------|
| Pine | 16,000 | \$2.20 | \$35,200 |
| Oak | 10,000 | 3.00 | 30,000 |
| Maple | 14,000 | 2.40 | 33,600 |
| | <u>40,000</u> | | <u>\$98,800</u> |

The average cost for this pool is \$2.47 per board foot ($= \$98,800 \div 40,000$ board feet). Now assume that during the next reporting period Diamond purchased 50,000 board feet of lumber as follows:

| Purchases | Quantity (board feet) | Cost (per foot) | Total Cost |
|------------------|------------------------------|------------------------|-------------------|
|------------------|------------------------------|------------------------|-------------------|

A pool consists of inventory units grouped according to natural physical similarities.

The average cost for all of the pool purchases during the period is applied to the current year's LIFO layer.

| | | | |
|-------|---------------|--------|------------------|
| Pine | 20,000 | \$2.20 | \$ 45,000 |
| Oak | 14,000 | 3.00 | 42,000 |
| Maple | 16,000 | 2.50 | 40,000 |
| | <u>50,000</u> | | <u>\$127,000</u> |

The average cost for this pool is **\$2.54** per board foot (= \$127,000 ÷ 50,000 board feet). Assuming that Diamond sold 46,000 board feet during this period, the quantity of inventory for the pool increased by **4,000** board feet (50,000 purchased less 46,000 sold). Ending inventory includes the beginning 40,000 feet of inventory and a new LIFO layer consisting of the **4,000** board feet purchased this period. We would add this LIFO layer at the average cost of purchases made during the period, **\$2.54**. The ending inventory of \$108,960 now consists of two layers:

| | Quantity (board feet) | Cost (per foot) | Total Cost |
|-------------------------|-----------------------|-----------------|------------------|
| Beginning inventory | 40,000 | \$2.47 | \$ 98,800 |
| LIFO layer added | 4,000 | 2.54 | 10,160 |
| Ending inventory | <u>44,000</u> | | <u>\$108,960</u> |

Despite the advantages of LIFO inventory pools, it's easy to imagine situations in which its benefits are not achieved. Suppose, for instance, that a company discontinues a certain product included in one of its pools. The old costs that existed in prior layers of inventory would be recognized as cost of goods sold and produce LIFO liquidation profit. Even if the product is replaced with another product, the replacement may not be similar enough to be included in the same inventory pool. In fact, the process itself of having to periodically redefine pools as changes in product mix occur can be expensive and time-consuming. Next, we discuss the dollar-value LIFO approach, which helps overcome these problems.

Dollar-Value LIFO

LO8–8 Determine ending inventory using the dollar-value LIFO inventory method.

Many companies that report inventory using LIFO actually use a method called **dollar-value LIFO (DVL)**.

DVL extends the concept of inventory pools by

allowing a company to combine a large variety of

goods into one pool. Pools are not based on physical units. Instead, an inventory pool is

viewed as comprising layers of dollar value from different periods. Specifically, a pool should consist of those goods that are likely to be subject to the same cost change pressures.

A DVL pool is made up of items that are likely to face the same cost change pressures.

Cost Indexes

In either the unit LIFO approach or the pooled LIFO approach, we determine whether a new LIFO layer was added by comparing the ending quantity with the beginning quantity.

The focus is on *units* of inventory. Under DVL, we determine whether a new LIFO layer was added by comparing the ending dollar amount with the beginning dollar amount. The focus is on inventory *value*, not units. However, if the price level has changed, we need a way to determine whether an observed increase is a real increase (an increase in the quantity of inventory) or one caused by an increase in prices. *So before we compare the beginning and ending inventory amounts, we need to deflate inventory dollar amounts by any increase in prices so that both the beginning and ending amounts are measured in terms of the same price level.*

We accomplish this by using cost indexes. A cost index for a particular layer year is determined as follows:

$$\text{Cost index in layer year} = \frac{\text{Cost in layer year}}{\text{Cost in base year}}$$

The base year is the year in which the DVL method is adopted, and the layer year is any subsequent year in which an inventory layer is created. The cost index for

The cost index for the base year (the year DVL is initially adopted) is set at 1.00.

the base year is set at 1.00. Subsequent years' indexes reflect cost changes relative to the base year. For example, if a "basket" of inventory items cost \$120 at the end of the current year and \$100 at the end of the base year, the cost index for the current year would be: $\$120 \div \$100 = 120\%$, or 1.20. This index simply tells us that costs in the layer year are 120% of what they were in the base year (i.e., costs increased by 20%).

There are several techniques that can be used to determine an index for a DVL pool. An external index like the Consumer Price Index (CPI) or the Producer Price Index (PPI) can be used. For example, assume that a company adopted the DVL method on January 1, 2024, when the CPI was 200. This amount is set equivalent to 1.00, the base year index. Then, the index in the layer year, say the end of 2024, would be determined relative to 200. So, if the CPI is 210 at the end of 2024, the 2024 index for DVL purposes would be 1.05 ($210 \div 200$).

However, in most cases, these indexes would not properly reflect cost changes for any individual DVL pool. Instead, most companies use an internally generated index. These indexes can be calculated using one of several techniques, such as the *double-extension method* or the *link-chain method*. A discussion of these methods is beyond the scope of this text. In our examples and illustrations, we assume cost indexes are given.

The DVL Inventory Estimation Technique

To see the calculation of ending inventory using DVL, consider the following example. Assume that Hillside Company adopted DVL on January 1, 2024, when the inventory cost was \$400,000. On December 31, 2024, Hillside determines the year-end cost of inventory is \$462,000. This amount is obtained by taking the physical units of inventory on hand at the end of the year and multiplying by year-end costs. It's not necessary for Hillside to track the item-by-item cost of purchases during the year.

Assuming a cost index for 2024 of 1.05 (105%), we'll use three steps to calculate the amount to report for ending inventory using dollar-value LIFO.

STEP 1: Convert Ending Inventory to Base Year Cost. Notice inventory increased from \$400,000 at the beginning of the year to \$462,000 at the end of the year. Does this \$62,000 increase in inventory represent an increase in the *quantity* and/or an increase in the *cost* of inventory? To determine this, the first step is to convert the ending inventory from year-end costs to base year costs. We do this by dividing ending inventory by the year's cost index.

$$\text{Ending inventory at base year cost} = \frac{\$462,000}{1.05} = \$440,000$$

STEP 2: Identify the Layers of Ending Inventory Created Each Year. The 2024 ending inventory deflated to base year cost is \$440,000. From this, we can determine that the \$62,000 increase in the cost of total inventory for the year consists of a \$40,000 increase due to quantity (new inventory layer added in 2024) plus \$22,000 due to an increase in the cost index of inventory (= \$440,000 × 5%).

The calculation above is important for identifying the two layers of inventory *quantity* for applying the LIFO concept: (1) beginning inventory layer of \$400,000 and (2) \$40,000 layer added in 2024. These are the costs as if each layer was acquired at base year prices. The increase in inventory due to rising costs (\$22,000) does not represent more units purchased.

| | |
|------------------|---|
| \$400,000 | (beginning inventory cost in 2024; beginning layer) |
| + 40,000 | (increase in <i>quantity</i> in 2024; new layer) |
| + 22,000 | (increase in <i>cost</i> = \$440,000 × 5%) |
| <u>\$462,000</u> | (ending inventory cost in 2024) |

STEP 3: Restate Each Layer Using the Cost Index in the Year Acquired. Once the layers are identified, each is restated to prices existing when the layers were purchased. This is done by multiplying each layer by the cost index for the year it was purchased. The \$400,000 layer was purchased when prices were 1.00, and the \$40,000 layer was purchased when prices were 1.05. All layers are added, and ending inventory under DVL would be reported at **\$442,000**.¹⁸

| Date | Ending Inventory at Base Year Cost | × | Cost Index | = | Ending Inventory at DVL Cost |
|------------|---------------------------------------|---|---------------|---|---------------------------------|
| 1/1/2024 | \$400,000 | | 1.00 | | \$400,000 |
| 2024 layer | 40,000 | | 1.05 | | 42,000 |
| Totals | \$440,000 | | | | \$442,000 |

In cases where the quantity of inventory *decreases*, no layer would be added in the current year. In our example, if inventory at the end of 2024 had a base year cost of only \$380,000

rather than \$440,000, then no layer would have been added in 2024. Instead, the existing layer at the beginning of the year is reduced by \$20,000. If more than one layer existed at the beginning of the year, then layers are reduced in LIFO order. The remaining layers are multiplied by the cost index that existed in the year those layers were added. Then, any future increases in inventory quantity (in 2025 or after) would add new layers beyond the \$380,000 at the cost index relating to the year of the additional layer.

The identification of inventory layers is demonstrated further in the Concept Review Exercise below. In years when there is an increase in inventory at base year cost (2025 and 2027), a new inventory layer is added. In years when there is a decrease in inventory at base year cost (2026), we use LIFO and assume the inventory sold was from the last layer added.

Concept Review Exercise

DOLLAR-VALUE LIFO

On January 1, 2024, the Jolly Company adopted the dollar-value LIFO method. The inventory value on this date was \$500,000. Inventory data for 2024 through 2027 are as follows:

| Date | Ending Inventory at Year-End Costs | Cost Index |
|------------|------------------------------------|------------|
| 12/31/2024 | \$556,500 | 1.05 |
| 12/31/2025 | 596,200 | 1.10 |
| 12/31/2026 | 615,250 | 1.15 |
| 12/31/2027 | 720,000 | 1.25 |

Required:

Calculate Jolly's ending inventory for the years 2024 through 2027.

Solution:

JOLLY COMPANY

| Date | Ending Inventory at Year-End Cost | Step 1 | Step 2 | S |
|------------|-----------------------------------|--|---|--|
| | | Ending Inventory at Base Year Cost | Inventory Layers at Base Year Cost | Inventory Layers Converted to Acquisition Year Cost |
| 1/1/2024 | \$500,000 (base year) | $\frac{\$500,000}{1.00} = \$500,000$ | \$500,000 (base) | \$500,000 1.00 = \$500,000 |
| 12/31/2024 | 556,500 | $\frac{\$556,500}{1.05} = \$530,000$ | \$500,000 (base) 30,000 (2024) | \$500,000 1.00 = \$500,000 30,000 × 1.05 = 31,500 |
| 12/31/2025 | 596,200 | $\frac{\$596,200}{1.10} = \$542,000$ | \$500,000 (base) 30,000 (2024) 12,000 (2025) | \$500,000 1.00 = \$500,000 30,000 × 1.05 = 31,500 12,000 × 1.10 = 13,200 |
| 12/31/2026 | 615,250 | $\frac{\$615,250}{1.15} = \$535,000^*$ | \$500,000 (base) 30,000 (2024) 5,000 (2025) | \$500,000 1.00 = \$500,000 30,000 × 1.05 = 31,500 5,000 |

| JOLLY COMPANY | | | | |
|---------------|-----------------------------------|--------------------------------------|--|--|
| | Ending Inventory at Year-End Cost | Step 1 | Step 2 | S |
| | | Ending Inventory at Base Year Cost | Inventory Layers at Base Year Cost | Inventory Layers Converted to Acquisition Year Costs |
| | | | | 1.10 = 5,500 |
| 12/31/2027 | 720,000 | $\frac{\$720,000}{1.25} = \$576,000$ | \$500,000 (base) 30,000 (2024) 5,000 (2025) 41,000(2027) | \$500,000 1.00 = \$500,000 30,000 × 1.05 = 31,500 5,000 × 1.10 = 5,500 41,000 × 1.25 = 51,250 |

*Since inventory declined during 2026 (from \$542,000 to \$535,000 at base year costs), no new layer is added. Instead the most recently acquired layer, 2025, is reduced by \$7,000 (from \$12,000 to \$5,000).

Advantages of DVL

The DVL method has important advantages. First, it simplifies the record-keeping procedures compared to unit LIFO because no information is needed about unit flows. Second, it minimizes the probability of the liquidation of LIFO inventory layers, even more so than the use of pools alone, through the aggregation of many types of inventory into larger pools. In addition, the method can be used by firms that do not replace units sold with new units of the same kind. For firms whose products are subject to annual model

changes, for example, the items in one year's inventory are not the same as those of the prior year. Under pooled LIFO, however, the new replacement items must be substantially identical to previous models to be included in the same pool. Under DVL, no distinction is drawn between the old and new inventory on the basis of their physical characteristics, so a much broader range of goods can be included in the pool. That is, the acquisition of the new items is viewed as replacement of the dollar value of the old items. Because the old layers are maintained, this approach retains the benefits of LIFO by matching the most recent acquisition cost of goods with sales measured at current selling prices.

Financial Reporting Case Solution

©SDI Productions/E+/Getty Images

- 1. How is the LIFO method used to calculate inventories? Is this permissible according to GAAP?** The LIFO method uses the assumption that the most recent inventory purchased is sold first. Yes, this method is permissible according to generally accepted accounting principles. A company need not use the same method that represents its actual inventory flow.
- 2. What is the purpose of disclosing the difference between the reported LIFO inventory amounts and replacement cost, assuming that replacement cost is equivalent to a FIFO basis?** The LIFO conformity rule requires that if a company uses LIFO to measure taxable income, it also must use LIFO for external financial reporting. The choice of using LIFO instead of FIFO for financial reporting, however, will affect amounts reported for inventory and cost of goods sold. This difference makes it harder to

The Bottom Line

-  **LO8-1** Inventory for a manufacturing company includes raw materials, work in process, and finished goods. Inventory for a merchandising company includes goods primarily in finished form ready for sale. In a perpetual inventory system, inventory is continually adjusted for each change in inventory. Cost of goods sold is adjusted each time goods are sold or returned by a customer. A periodic inventory system adjusts inventory and records cost of goods sold only at the end of a reporting period. (*p. 402*)
-  **LO8-2** Generally, determining the physical quantity that should be included in inventory is a simple matter because it consists of items in the possession of the company. However, at the end of a reporting period it's important to determine the ownership of goods that are in transit between the company and its customers as well as between the company and its suppliers. Also, goods on consignment should be included in inventory of the consignor even though the company doesn't have physical possession of the goods. In addition, a company anticipating sales returns includes in inventory the cost of inventory it estimates will be returned. (*p. 406*)
-  **LO8-3** The cost of inventory includes all expenditures necessary to acquire the inventory and bring it to its desired condition and location for sale or use. Generally, these expenditures include the purchase price of the goods reduced by any returns and purchase discounts, plus freight-in charges. (*p. 407*)
-  **LO8-4** Once costs are determined, the cost of goods available for sale must be allocated between cost of goods sold and ending inventory. Unless each item is specifically identified and traced through the system, the allocation requires an assumption regarding the flow of costs. First-in, first-out (FIFO) assumes that units sold are the first units acquired. Last-in, first-out (LIFO) assumes that the units sold are the most recent units purchased. The average cost method assumes that cost of goods sold and ending inventory consist of a mixture of all the goods available for sale. (*p. 410*)
-  **LO8-5** A company's choice of inventory method will be influenced by (a) how closely cost flow reflects the actual physical flow of its inventory, (b) the

timing of income tax expenses, and (c) how costs are matched with revenues. (p. 418)

 **LO8-6**

The LIFO conformity rule requires that if a company uses LIFO to measure taxable income, it also must use LIFO for external financial reporting. LIFO users often provide a disclosure note describing the effect on inventories of using another method for inventory valuation rather than LIFO. If a company uses LIFO and inventory quantities decline during a period, then out-of-date inventory layers are liquidated, and the cost of goods sold will partially match noncurrent costs with current selling prices. If costs have been increasing (decreasing), LIFO liquidations produce higher (lower) net income than would have resulted if the liquidated inventory were included in cost of goods sold at current costs. The paper profits (losses) caused by including out-of-date, low (high) costs in cost of goods sold is referred to as the effect on income of liquidations of LIFO inventory. (p. 420)

 **LO8-7**

Investors, creditors, and financial analysts can gain important insights by monitoring a company's investment in inventories. The gross profit ratio, inventory turnover ratio, and average days in inventory are designed to monitor inventories. (p. 425)

 **LO8-8**

The dollar-value LIFO method converts ending inventory at year-end cost to base year cost using a cost index. After identifying the layers in ending inventory with the years they were created, each year's base year cost measurement is converted to layer year cost measurement using the layer year's cost index. The layers are then summed to obtain total ending inventory at cost. (p. 429)

 **LO8-9**

The primary difference between U.S. GAAP and IFRS with respect to determining the cost of inventory is that IFRS does not allow the use of the LIFO method to value inventory. (p. 418) ●

Questions For Review of Key Topics

- Q 8-1** Describe the three types of inventory of a manufacturing company.
- Q 8-2** What is the main difference between a perpetual inventory system and a periodic inventory system? Which system is used more often by major companies?
- Q 8-3** The Cloud Company employs a perpetual inventory system, and the Sky Corporation uses a periodic system. Describe the differences between the two systems in accounting for the following events: (1) purchase of inventory, (2) sale of inventory, (3) return of inventory to supplier, and (4) payment of freight charge on inventory purchased. Indicate which inventory-related accounts would be debited or credited for each event.
- Q 8-4** The Boxcar Company shipped inventory to Depot Corporation on December 28, 2024. Depot received the shipment on January 3, 2025. December 31 is the fiscal year-end for both companies. The inventory was shipped f.o.b. shipping point. Explain the difference in the accounting treatment of the inventory if the shipment had instead been designated f.o.b. destination.
- Q 8-5** What is a consignment arrangement? Explain the accounting treatment of goods held on consignment.
- Q 8-6** Distinguish between the gross and net methods of accounting for purchase discounts.
- Q 8-7** The Esquire Company employs a periodic inventory system. Indicate the effect (increase or decrease) of the following items on cost of goods sold:
1. Beginning inventory
 2. Purchases
 3. Ending inventory
 4. Purchase returns
 5. Freight-in
- Q 8-8** Identify four inventory costing methods for assigning cost to ending inventory and cost of goods sold and briefly explain the difference in the methods.
- Q 8-9** It's common in the electronics industry for unit costs of raw materials inventories to decline over time. In this environment, explain the difference

between LIFO and FIFO in terms of the effect on cost of goods sold and ending inventory. Assume that inventory quantities remain the same for the period.

- Q 8–10** Explain why proponents of LIFO argue that it provides a better match of revenue and expenses. In what situation would it not provide a better match?
- Q 8–11** Explain what is meant by the Internal Revenue Service conformity rule with respect to the inventory method choice.
- Q 8–12** Describe the ratios used by financial analysts to monitor a company's investment in inventories.
- Q 8–13** What is a LIFO inventory pool? How is the cost of ending inventory determined when pools are used?
- Q 8–14** Identify two advantages of dollar-value LIFO compared with unit LIFO.
- Q 8–15** The Austin Company uses the dollar-value LIFO inventory method with internally developed price indexes. Assume that ending inventory at year-end cost has been determined. Outline the remaining steps used in the dollar-value LIFO computations.

IFRS

- Q 8–16** Identify any differences between U.S. GAAP and International Financial Reporting Standards in the methods allowed to value inventory.

Brief Exercises

BE 8-1 Determining ending inventory LO8-1

A company began its fiscal year with inventory of \$186,000. Purchases and cost of goods sold for the year were \$945,000 and \$982,000, respectively. What was the amount of ending inventory reported in the balance sheet?

BE 8-2 Perpetual system; journal entries LO8-1

A company uses a perpetual inventory system. The company began its fiscal year with inventory of \$267,000. Purchases of inventory on account during the year totaled \$845,000. Inventory costing \$902,000 was sold on account for \$1,420,000. Prepare the journal entries to record these transactions.

BE 8-3 Periodic system; journal entries LO8-1

Refer to the situation described in  BE 8-2. Prepare the journal entries to record these transactions using a periodic inventory system.

BE 8-4 Goods in transit LO8-2

Kryoton Corporation shipped goods to a customer f.o.b. destination on December 29, 2024. The goods arrived at the customer's location in January. In addition, one of Kryoton's major suppliers shipped goods to Kryoton f.o.b. shipping point on December 30. The inventory arrived at Kryoton's location in January. Which shipments should be included in Kryoton's December 31 inventory?

BE 8-5 Goods on consignment LO8-2

Dinoland Manufacturing shipped consignment inventory of \$200,000 to Storing Company on December 1, 2024. Storing agrees to sell the inventory for a 10% sales commission, while Dinoland maintains title and control over pricing. By the end of the year, \$60,000 of the

inventory has been sold by Storing to customers for \$90,000. How much of this inventory, if any, would Dinoland include in ending inventory on its December 31, 2024, balance sheet?

BE 8–6 Freight-in on purchase; perpetual system  **LO8–3**

A company purchased inventory on account for \$100,000. Freight charges to have the inventory shipped to the company's location were \$5,000 (paid in cash). Record (1) the purchase of inventory on account and (2) freight charges, assuming the company uses a perpetual inventory system.

BE 8–7 Freight-in on purchase; periodic system  **LO8–3**

Refer to the situation described in  **BE 8–6**. Record (1) the purchase of inventory on account and (2) freight charges, assuming the company uses a periodic inventory system.

BE 8–8 Purchase return; perpetual system  **LO8–3**

A company purchased inventory on account for \$250,000. The company returned \$20,000 of the inventory to the supplier for credit. Record (1) the purchase of inventory on account and (2) the purchase return, assuming the company uses a perpetual inventory system.

BE 8–9 Purchase return; periodic system  **LO8–3**

Refer to the situation described in  **BE 8–8**. Record (1) the purchase of inventory on account and (2) the purchase return, assuming the company uses a periodic inventory system.

BE 8–10 Purchase discounts; gross method  **LO8–3**

On December 28, 2024, Videotech Corporation (VTC) purchased 10 units of a new satellite uplink system from Tristar Communications for \$25,000 each. The terms of each sale were 1/10, n/30. VTC uses the gross method to account for purchase discounts and a perpetual inventory system. VTC paid the net-of-discount amount on January 6, 2025. Prepare the journal entries on December 28 and January 6 to record the purchase and payment.

BE 8–11 Purchase discounts; net method  **LO8–3**

Refer to the situation described in  **BE 8-10**. Prepare the necessary journal entries assuming that VTC uses the net method to account for purchase discounts.

BE 8-12 Inventory cost flow methods; perpetual system

LO8-4

Salt and Mineral (SAM) began 2024 with 200 units of its one product. These units were purchased near the end of 2023 for \$25 each. During the month of January, 100 units were purchased on January 8 for \$28 each and another 200 units were purchased on January 19 for \$30 each. Sales of 125 units and 100 units were made on January 10 and January 25, respectively. There were 275 units on hand at the end of the month. SAM uses a *perpetual* inventory system. Calculate ending inventory and cost of goods sold for January using (1) FIFO and (2) average cost.

BE 8-13 Inventory cost flow methods; periodic system

LO8-4

Refer to the situation described in  **BE 8-12**. SAM uses a *periodic* inventory system. Calculate ending inventory and cost of goods sold for January using (1) FIFO and (2) average cost.

BE 8-14 LIFO method **LO8-4**

Esquire Inc. uses the LIFO method to report its inventory. Inventory at the beginning of the year was \$500,000 (20,000 units at \$25 each). During the year, 80,000 units were purchased, all at the same price of \$30 per unit. 85,000 units were sold during the year. Calculate ending inventory and cost of goods sold at the end of the year based on a periodic inventory system.

BE 8-15 LIFO method **LO8-4**

AAA Hardware uses the LIFO method to report its inventory. Inventory at the beginning of the year consisted of 10,000 units of the company's one product. These units cost \$15 each. During the year, 60,000 units were purchased at a cost of \$18 each, and 64,000 units were sold. Near the end of the fiscal year, management is considering the purchase of an additional 5,000 units at \$18. What would be the effect of this purchase on income before income taxes? Would your answer be the same if the company used FIFO instead of LIFO?

BE 8–16 LIFO liquidation LO8–6

Refer to the situation described in  BE 8–14. Assuming an income tax rate of 25%, what is LIFO liquidation profit or loss that the company would report in a disclosure note accompanying its financial statements?

BE 8–17 LIFO reserve increasing LO8–6

King Supply maintains its internal inventory records using perpetual FIFO, but for financial reporting purposes, reports ending inventory and cost of goods sold using periodic LIFO. At the beginning of the year, the company had a balance of \$60,000 in its LIFO reserve account. By the end of the year, internal records reveal that FIFO ending inventory is \$75,000 greater than LIFO ending inventory. Record the year-end adjusting entry for the LIFO reserve.

BE 8–18 LIFO reserve decreasing LO8–6

Refer to the situation described in  BE 8–17. Now assume the FIFO ending inventory is only \$45,000 greater than LIFO ending inventory. Record the year-end adjusting entry for the LIFO reserve.

BE 8–19 LIFO reserve disclosures; Walgreens LO8–6

Real World Financials

Walgreens Boots Alliance, Inc., reported inventories of \$9,451 million and \$9,333 million in its August 31, 2020, and August 31, 2019, balance sheets, respectively. Cost of goods sold for the year ended August 31, 2020, was \$111,520 million. The company uses primarily the LIFO inventory method. A disclosure note reported that if FIFO had been used instead of LIFO, inventory would have been higher by \$3,300 million and \$3,200 million at the end of the August 31, 2020, and August 31, 2019, periods, respectively. Calculate cost of goods sold for the year ended August 31, 2020, assuming Walgreens used FIFO instead of LIFO.

BE 8–20 Ratio analysis LO8–7

Selected financial statement data for Schmitzer Inc. is shown below:

| | 2024 | 2023 |
|--------------------|-----------|-----------|
| Balance sheet: | | |
| Inventories | \$ 60,000 | \$ 48,000 |
| Income statement: | | |
| Sales revenue | \$560,000 | \$490,000 |
| Cost of goods sold | \$320,000 | \$240,000 |

Calculate the gross profit ratio and inventory turnover ratio in 2024.

BE 8-21 Dollar-value LIFO  **LO8-8**

At the beginning of 2024, a company adopts the dollar-value LIFO inventory method for its one inventory pool. The pool's value on that date was \$1,400,000. The 2024 ending inventory valued at year-end costs was \$1,664,000 and the year-end cost index was 1.04. Calculate the inventory value at the end of 2024 using the dollar-value LIFO method.

Exercises

E 8–1 Perpetual inventory system; journal entries **LO8–1**

Specialty Store uses a perpetual inventory system. The following are some inventory transactions for the month of May:

1. Specialty Store purchased inventory on account for \$5,000. Freight charges of \$300 were paid in cash.
2. Specialty Store returned some of the inventory purchased in (1). The cost of the inventory was \$600 and Specialty Store's account was credited by the supplier.
3. Inventory costing \$2,800 was sold for \$5,200 in cash.

Required:

Prepare the necessary journal entries to record these transactions.

E 8–2 Periodic inventory system; journal entries **LO8–1**

[This is a variation of  **E 8–1** modified to focus on the periodic inventory system.]

Specialty Store uses a periodic inventory system. The following are some inventory transactions for the month of May:

1. Specialty Store purchased inventory on account for \$5,000. Freight charges of \$300 were paid in cash.
2. Specialty Store returned some of the inventory purchased in (1). The cost of the inventory was \$600 and Specialty Store's account was credited by the supplier.
3. Inventory costing \$2,800 was sold for \$5,200 in cash.

Required:

Prepare the necessary journal entries to record these transactions.

E 8–3 Determining cost of goods sold **LO8–1**

The June 30, 2024, year-end trial balance for Askew Company contained the following information:

| Account | Debits | Credits |
|---------------------|----------|-----------|
| Inventory, 7/1/2023 | \$32,000 | |
| Sales revenue | | \$380,000 |
| Sales returns | 12,000 | |
| Purchases | 240,000 | |
| Purchase discounts | | 6,000 |
| Purchase returns | | 10,000 |
| Freight-in | 17,000 | |

In addition, you determine that the June 30, 2024, inventory balance is \$40,000.

Required:

Calculate the cost of goods sold for the Askew Company for the year ending June 30, 2024.

E 8-4 Perpetual and periodic inventory systems compared

 **LO8-1**

The following information is available for a company:

| | |
|--|-----------|
| Beginning inventory | \$ 25,000 |
| Inventory purchases (on account) | 155,000 |
| Freight charges on purchases (paid in cash) | 10,000 |
| Inventory returned to suppliers (for credit) | 12,000 |
| Ending inventory | 30,000 |
| Sales (on account) | 250,000 |
| Cost of inventory sold | 148,000 |

Required:

Applying both a perpetual and a periodic inventory system, prepare the journal entries that summarize the transactions that created these balances. Include all end-of-period adjusting entries indicated.

E 8–5 Inventory transactions; missing data LO8–1

A company has the following information in its records. Certain data have been intentionally omitted (\$ in thousands).

| | 2024 | 2025 | 2026 |
|---|------|------|-------|
| Beginning inventory | \$? | \$? | \$225 |
| Cost of goods sold | 627 | 621 | ? |
| Ending inventory | ? | 225 | 216 |
| Cost of goods available for sale | 876 | ? | 800 |
| Purchases (gross) | 630 | ? | 585 |
| Purchase discounts | 18 | 15 | ? |
| Purchase returns | 24 | 30 | 14 |
| Freight-in | 13 | 32 | 16 |

Required:

Determine the missing numbers. Show computations where appropriate.

E 8–6 Goods in transit LO8–2

The Kwik Company's inventory balance on December 31, 2024, was \$165,000 (based on a 12/31/2024 physical count) *before* considering the following transactions:

1. Goods shipped to Kwik f.o.b. destination on December 20, 2024, were received on January 4, 2025. The invoice cost was \$30,000.
2. Goods shipped to Kwik f.o.b. shipping point on December 28, 2024, were received on January 5, 2025. The invoice cost was \$17,000.
3. Goods shipped from Kwik to a customer f.o.b. destination on December 27, 2024, were received by the customer on January 3, 2025. The sales price was \$40,000 and the inventory cost \$22,000.
4. Goods shipped from Kwik to a customer f.o.b. destination on December 26, 2024, were received by the customer on December 30, 2024. The sales price was \$20,000 and the inventory cost \$13,000.
5. Goods shipped from Kwik to a customer f.o.b. shipping point on December 28, 2024, were received by the customer on January 4, 2025. The sales price was \$25,000 and the

inventory cost \$12,000.

Required:

Determine the correct inventory amount to be reported in Kwik's 2024 balance sheet.

E 8-7 Goods in transit; consignment  **LO8-2**

The December 31, 2024, year-end inventory balance of the Almond Corporation is \$210,000. You have been asked to review the following transactions to determine if they have been correctly recorded.

1. Goods shipped to Almond f.o.b. destination on December 26, 2024, were received on January 2, 2025. The invoice cost of \$30,000 *is* included in the preliminary inventory balance.
2. At year-end, Almond held \$14,000 of inventory on consignment from the Hardgrove Company. This inventory *is* included in the preliminary inventory balance.
3. On December 29, inventory costing \$6,000 was shipped to a customer f.o.b. shipping point and arrived at the customer's location on January 3, 2025. The inventory is *not* included in the preliminary inventory balance.
4. At year-end, Almond had inventory costing \$15,000 on consignment with the Juniper Corporation. The inventory is *not* included in the preliminary inventory balance.

Required:

Determine the correct inventory amount to be reported in Almond's 2024 balance sheet.

E 8-8 Physical quantities and costs included in inventory

 **LO8-2**

The Phoenix Corporation's fiscal year ends on December 31. Phoenix determines inventory quantity by a physical count of inventory on hand at the close of business on December 31. The company's controller has asked for your help in deciding if the following items should be included in the year-end inventory count.

1. Inventory held on consignment for Trout Creek Clothing.
2. Goods shipped f.o.b. destination on December 28 that arrived at the customer's location on January 4.

3. Goods purchased from a vendor shipped f.o.b. shipping point on December 26 that arrived on January 3.
4. Goods shipped f.o.b. shipping point on December 28 that arrived at the customer's location on January 5.
5. Phoenix had Inventory on consignment at Fashion Markets, Inc.
6. Goods purchased from a vendor shipped f.o.b. destination on December 27 that arrived on January 3.
7. Freight charges on goods purchased in 3.

Required:

Determine if each of the items above should be included or excluded from the company's year-end inventory in the balance sheet.

E 8-9 Purchase discounts; the gross method  **LO8-3**

On July 15, 2024, the Niche Car Company purchased 1,000 tires from the Treadwell Company for \$50 each. The terms of the sale were 2/10, n/30. Niche uses a perpetual inventory system and the *gross* method of accounting for purchase discounts.

Required:

1. Prepare the journal entries to record the (a) purchase on July 15 and (b) payment on July 23, 2024.
2. Prepare the journal entry for the payment, assuming instead that it was made on August 15, 2024.
3. If Niche instead uses a periodic inventory system, explain any changes to the journal entries created in requirements 1 and 2.

E 8-10 Purchase discounts; the net method  **LO8-3**

[This is a variation of  **E 8-9** modified to focus on the net method of accounting for purchase discounts.]

On July 15, 2024, the Niche Car Company purchased 1,000 tires from the Treadwell Company for \$50 each. The terms of the sale were 2/10, n/30. Nixon uses a perpetual inventory system and the *net* method of accounting for purchase discounts.

Required:

1. Prepare the journal entries to record the (a) purchase on July 15 and (b) payment on July 23, 2024.
2. Prepare the journal entry for the payment, assuming instead that it was made on August 15, 2024.
3. If Niche instead uses a periodic inventory system, explain any changes to the journal entries created in requirements 1 and 2.

E 8–11 Trade and purchase discounts; the gross method and the net method compared **LO8–3**

Comfort Company purchased 100 units of inventory on November 17, 2024. The units have a list price of \$500 each, but Comfort was given a 30% trade discount. The terms of the sale were 2/10, n/30. Comfort uses a perpetual inventory system.

Required:

1. Prepare the journal entries to record the (a) purchase by Comfort on November 17 and (b) payment on November 26, 2024. Comfort uses the gross method of accounting for purchase discounts.
2. Prepare the journal entry for the payment, assuming instead that it was made on December 15, 2024.
3. Repeat requirements 1 and 2 using the net method of accounting for purchase discounts.

E 8–12 FASB codification research **LO8–2**, **LO8–3**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine each of the following:

1. The specific eight-digit Codification citation (XXX-XX-XX-X) that describes the meaning of cost as it applies to the initial measurement of inventory.
2. The specific nine-digit Codification citation (XXX-XXX-XX-X) that describes the circumstances when it is appropriate to initially measure agricultural inventory at fair value.

3. The specific eight-digit Codification citation (XXX-XX-XX-X) that describes the major objective of accounting for inventory.
4. The specific eight-digit Codification citation (XXX-XX-XX-X) that describes the abnormal freight charges included in the cost of inventory.

E 8-13 Inventory cost flow methods; periodic system  **LO8-1**,
 **LO8-4**

Altira Corporation provides the following information related to its inventory during the month of August 2024:

| | |
|---------------|---|
| Aug. 1 | Inventory on hand—2,000 units; cost \$5.30 each. |
| 8 | Purchased 8,000 units for \$5.50 each. |
| 14 | Sold 6,000 units for \$12.00 each. |
| 18 | Purchased 6,000 units for \$5.60 each. |
| 25 | Sold 7,000 units for \$11.00 each. |
| 28 | Purchased 4,000 units for \$5.80 each. |
| 31 | Inventory on hand—7,000 units. |

Required:

Using calculations based on a periodic inventory system, determine the inventory balance Altira would report in its August 31, 2024, balance sheet and the cost of goods sold it would report in its August 2024 income statement using each of the following cost flow methods:

1. First-in, first-out (FIFO)
2. Last-in, first-out (LIFO)
3. Average cost

E 8-14 Inventory cost flow methods; perpetual system
 **LO8-1**,  **LO8-4**

[This is a variation of  **E 8-13** modified to focus on the perpetual inventory system and alternative cost flow methods.]

Altira Corporation provides the following information related to its inventory during the month of August 2024:

| | |
|---------------|---|
| Aug. 1 | Inventory on hand—2,000 units; cost \$5.30 each. |
| 8 | Purchased 8,000 units for \$5.50 each. |
| 14 | Sold 6,000 units for \$12.00 each. |
| 18 | Purchased 6,000 units for \$5.60 each. |
| 25 | Sold 7,000 units for \$11.00 each. |
| 28 | Purchased 4,000 units for \$5.80 each. |
| 31 | Inventory on hand—7,000 units. |

Required:

Using calculations based on a perpetual inventory system, determine the inventory balance Altira would report in its August 31, 2024, balance sheet and the cost of goods sold it would report in its August 2024 income statement using each of the following cost flow methods:

1. First-in, first-out (FIFO)
2. Average cost

E 8–15 LIFO; perpetual system  **LO8–1**,  **LO8–4**

[This is a variation of  **E 8–14** modified to focus on LIFO in a perpetual inventory system.]

Altira Corporation provides the following information related to its inventory during the month of August 2024:

| | |
|---------------|---|
| Aug. 1 | Inventory on hand—2,000 units; cost \$5.30 each. |
| 8 | Purchased 8,000 units for \$5.50 each. |
| 14 | Sold 6,000 units for \$12.00 each. |
| 18 | Purchased 6,000 units for \$5.60 each. |
| 25 | Sold 7,000 units for \$11.00 each. |
| 28 | Purchased 4,000 units for \$5.80 each. |
| 31 | Inventory on hand—7,000 units. |

Required:

Using calculations based on a perpetual inventory system, determine the inventory balance Altira would report in its August 31, 2024, balance sheet and the cost of goods sold it would report in its August 2024 income statement using last-in, first-out (LIFO).

E 8–16 Comparison of FIFO and LIFO; periodic system

 **LO8–1**,  **LO8–4**

Alta Ski Company’s inventory records contained the following information regarding its latest ski model. The company uses a periodic inventory system.

| | |
|---|--------------------------------|
| Beginning inventory, January 1, 2024 | 600 units @ \$80 each |
| Purchases: | |
| January 15 | 1,000 units @ \$95 each |
| January 21 | 800 units @ \$100 each |
| Sales: | |
| January 5 | 400 units @ \$120 each |
| January 22 | 800 units @ \$130 each |
| January 29 | 400 units @ \$135 each |
| Ending inventory, January 31, 2024 | 800 units |

Required:

1. Which method, FIFO or LIFO, will result in the highest cost of goods sold figure for January 2024? Why? Which method will result in the highest ending inventory balance? Why?
2. Compute cost of goods sold for January and the ending inventory using both the FIFO and LIFO methods.
3. Now assume that inventory costs were *declining* during January. The inventory purchased on January 15 had a unit cost of \$70, and the inventory purchased on January 21 had a unit cost of \$65. All other information is the same. Repeat requirements 1 and 2.

E 8–17 Average cost method; periodic and perpetual systems

 **LO8–1**,  **LO8–4**

The following information is taken from the inventory records of the CNB Company for the month of September:

| | |
|--|------------------------------|
| Beginning inventory, 9/1/2024 | 5,000 units @ \$10.00 |
| Purchases: | |
| 9/7 | 3,000 units @ \$10.40 |
| 9/25 | 8,000 units @ \$10.75 |
| Sales: | |
| 9/10 | 4,000 units |
| 9/29 | 5,000 units |
| 7,000 units were on hand at the end of September. | |

Required:

1. Assuming that CNB uses a periodic inventory system and employs the average cost method, determine cost of goods sold for September and September's ending inventory.
2. Repeat requirement 1 assuming that the company uses a perpetual inventory system.

E 8-18 FIFO, LIFO, and average cost methods  **LO8-1,**
 **LO8-4**

A company began 2024 with 10,000 units of inventory on hand. The cost of each unit was \$5.00. During 2024, an additional 30,000 units were purchased at a single unit cost, and 20,000 units remained on hand at the end of 2024 (20,000 units therefore were sold during 2024). The company uses a periodic inventory system. Cost of goods sold for 2024, applying the average cost method, is \$115,000. The company is interested in determining what cost of goods sold would have been if the FIFO or LIFO methods were used.

Required:

1. Determine the cost of goods sold for 2024 using the FIFO method. [(Hint: Determine the cost per unit of 2024 purchases.)]
2. Determine the cost of goods sold for 2024 using the LIFO method.

E 8-19 Perpetual FIFO adjusted to periodic LIFO; LIFO reserve  **LO8-1,**  **LO8-4,**  **LO8-6**

To more efficiently manage its inventory, Telnex Corporation maintains its internal inventory records using first-in, first-out (FIFO) under a perpetual inventory system. The following information relates to its inventory during the year:

- Jan. 1** Beginning inventory—20,000 units.
- Feb. 12** Purchased 70,000 units for \$12.50 each.
- Apr. 30** Sold 50,000 units for \$20.00 each.
- Jul. 22** Purchased 50,000 units for \$12.80 each.
- Sep. 9** Sold 70,000 units for \$20.00 each.
- Nov. 17** Purchased 40,000 units for \$13.20 each.
- Dec. 31** Ending inventory—60,000 units.

Required:

1. Determine the amount Telnex would calculate internally for ending inventory and cost of goods sold using first-in, first-out (FIFO) under a perpetual inventory system. Beginning inventory under FIFO was 20,000 units with a cost of \$12.20 each.
2. Determine the amount Telnex would report externally for ending inventory and cost of goods sold using last-in, first-out (LIFO) under a periodic inventory system. Beginning inventory under LIFO was 20,000 units with a cost of \$11.70 each.
3. Determine the amount Telnex would report for its LIFO reserve at the end of the year.
4. Record the year-end adjusting entry for the LIFO reserve. The balance of the LIFO reserve at the beginning of the year was \$10,000.

E 8–20 Perpetual average cost adjusted to periodic LIFO; LIFO reserve  **LO8–1**,  **LO8–4**,  **LO8–6**

Mogul Processing maintains its internal inventory records using average cost under a perpetual inventory system. The following information relates to its inventory during the year:

- Jan. 1** Beginning inventory—80,000 units.
- Feb. 14** Purchased 120,000 units for \$4.50 each.
- Mar. 5** Sold 150,000 units for \$14.00 each.
- Aug. 27** Purchased 50,000 units for \$4.80 each.

- Sep. 12 Sold 60,000 units for \$14.00 each.
 Nov. 15 Purchased 70,000 units for \$4.90 each.
 Dec. 31 Ending inventory 110,000 units.

Required:

1. Determine the amount Mogul would calculate internally for ending inventory and cost of goods sold using average cost under a perpetual inventory system. Beginning inventory under average cost was 80,000 units with a average cost of \$4.25 each.
2. Determine the amount Mogul would report externally for ending inventory and cost of goods sold using last-in, first-out (LIFO) under a periodic inventory system. Beginning inventory under LIFO was 80,000 units with a cost of \$4.00 each.
3. Determine the amount Mogul would report for its LIFO reserve at the end of the year.
4. Record the year-end adjusting entry for the LIFO reserve. The balance of the LIFO reserve at the beginning of the year was \$20,000.

E 8–21 Supplemental LIFO disclosures; LIFO reserve;
 AmerisourceBergen  **LO8–6**

Real World Financials

AmerisourceBergen is an American drug wholesale company. The company uses the LIFO inventory method for external reporting but maintains its internal records using FIFO. The following information was included in a recent annual report:

Inventories are comprised of the following (\$ in millions):

| | September 30, 2019 | September 30, 2018 |
|--------------------------|--------------------|--------------------|
| Inventories (under FIFO) | \$12,572 | \$13,453 |
| Less: LIFO reserve | (1,512) | (1,534) |
| Inventories (under LIFO) | <u>\$11,060</u> | <u>\$11,919</u> |

The company’s income statements reported cost of goods sold of \$174,451 million for the year ended September 30, 2019.

Required:

1. Prepare the September 30, 2019, adjusting entry to record the cost of goods sold adjustment.
2. If AmerisourceBergen had used FIFO to report its inventories, what would cost of goods sold have been for the quarter ended September 30, 2019?

E 8-22 LIFO liquidation **LO8-1**, **LO8-4**, **LO8-6**

The MegaMart Company began 2024 with inventory of 10,000 units at a cost of \$7 per unit. During 2024, 50,000 units were purchased for \$8.50 each. Sales for the year totaled 54,000 units leaving 6,000 units on hand at the end of 2024. MegaMart uses a periodic inventory system and the LIFO inventory cost method.

Required:

1. Calculate cost of goods sold for 2024.
2. From a financial reporting perspective, what problem is created by the use of LIFO in this situation? Describe the disclosure required to report the effects of this problem.

E 8-23 LIFO liquidation **LO8-4**, **LO8-6**

The Churchill Corporation uses a periodic inventory system and the LIFO inventory cost method for its one product. Beginning inventory of 20,000 units consisted of the following, listed in chronological order of acquisition:

| | | |
|---|---|----------|
| 12,000 units at a cost of \$8.00 per unit | = | \$96,000 |
| 8,000 units at a cost of \$9.00 per unit | = | 72,000 |

During 2024, inventory quantity declined by 10,000 units. All units purchased during 2024 cost \$12.00 per unit.

Required:

Calculate the before-tax LIFO liquidation profit or loss that the company would report in a disclosure note, assuming the amount determined is material.

E 8-24 FASB codification research **LO8-6**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine each of the following:

1. The specific nine-digit Codification citation (XXX-XX-XXX-X) that describes the disclosure requirements that must be made by publicly traded companies for a LIFO liquidation. (*Hint:* Look in the SEC Materials section.)
2. Describe the disclosure requirements.

E 8–25 Ratio analysis; Home Depot and Lowe's LO8–7

Real World Financials

The table below contains selected information from recent financial statements of **The Home Depot, Inc.**, and **Lowe's Companies, Inc.**, two companies in the home improvement retail industry (\$ in millions):

| | Home Depot | | Lowe's | |
|---------------------------|------------|-----------|-----------|----------|
| | 2/2/2020 | 2/3/2019 | 1/31/2020 | 2/1/2019 |
| Net sales | \$110,225 | \$108,203 | \$72,148 | \$71,309 |
| Cost of goods sold | 72,653 | 71,043 | 49,205 | 48,401 |
| Year-end inventory | 14,531 | 13,925 | 13,179 | 12,561 |
| Industry averages: | | | | |
| Gross profit ratio | 27.25% | | | |
| Inventory turnover ratio | 3.63 times | | | |
| Average days in inventory | 101 days | | | |

Required:

Calculate the gross profit ratio, the inventory turnover ratio, and the average days in inventory for the two companies for their fiscal years ending in 2020. Compare your calculations for the two companies, taking into account the industry averages.

E 8–26 Dollar-value LIFO  **LO8–8**

On January 1, 2024, a company adopted the dollar-value LIFO method for its one inventory pool. The pool's value on this date was \$660,000. The 2024 and 2025 ending inventory valued at year-end costs were \$690,000 and \$760,000, respectively. The appropriate cost indexes are 1.04 for 2024 and 1.08 for 2025.

Required:

Calculate the inventory value at the end of 2024 and 2025 using the dollar-value LIFO method.

E 8–27 Dollar-value LIFO  **LO8–8**

Mercury Company has only one inventory pool. On December 31, 2024, Mercury adopted the dollar-value LIFO inventory method. The inventory on that date using the dollar-value LIFO method was \$200,000. Inventory data are as follows:

| Year | Ending Inventory at Year-End Costs | Ending Inventory at Base Year Costs |
|------|---------------------------------------|--|
| 2025 | \$231,000 | \$220,000 |
| 2026 | 299,000 | 260,000 |
| 2027 | 300,000 | 250,000 |

Required:

Compute the inventory at December 31, 2025, 2026, and 2027, using the dollar-value LIFO method.

(AICPA adapted)

E 8–28 Dollar-value LIFO  **LO8–8**

Cars Electronics adopted the dollar-value LIFO method on January 1, 2024, when the inventory value of its one inventory pool was \$720,000. The company decided to use an external index, the Consumer Price Index (CPI), to adjust for changes in the cost level. On January 1, 2024, the CPI was 240. On December 31, 2024, inventory valued at year-end cost was \$880,000 and the CPI was 264.

Required:

Calculate the inventory value at the end of 2024 using the dollar-value LIFO method.

E 8–29 Concepts; terminology  **LO8–1** through  **LO8–5**

Listed below are several terms and phrases associated with inventory measurement. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| List A | | List B |
|--------|-------------------------------|---|
| _____ | 1. Perpetual inventory system | a. Legal title passes when goods are delivered to common carrier. |
| _____ | 2. Periodic inventory system | b. Goods are transferred to another company but title remains with transferor. |
| _____ | 3. F.o.b. shipping point | c. Purchases are recorded for the full cost of inventory. |
| _____ | 4. Gross method | d. If LIFO is used for taxes, it must be used for financial reporting. |
| _____ | 5. Net method | e. Assumes items sold are those acquired first. |
| _____ | 6. Cost index | f. Assumes items sold are those acquired last. |
| _____ | 7. F.o.b. destination | g. Purchases are recorded for the full cost of inventory less any possible discounts. |
| _____ | 8. FIFO | h. Used to convert ending inventory at year-end cost to base year cost. |
| _____ | 9. LIFO | i. Continuously records changes in inventory. |
| _____ | 10. Consignment | |

| List A | | List B | |
|-----------|----------------------------|--------|--|
| _____ 11. | Average cost | j. | Assumes items sold come from a mixture of goods acquired during the period. |
| _____ 12. | IRS conformity rule | k. | Legal title passes when goods arrive at location. |
| | | l. | Adjusts inventory at the end of the period. |

E 8–30 General ledger exercise; inventory transactions
 **LO8–1** through  **LO8–8**

On January 1, 2024, Displays Incorporated had the following account balances:

| Account Title | Debits | Credits |
|-----------------------------------|-------------------------|-------------------------|
| Cash | \$ 22,000 | |
| Accounts receivable | 19,000 | |
| Supplies | 25,000 | |
| Inventory | 60,000 | |
| Land | 227,000 | |
| Accounts payable | | \$ 18,000 |
| Notes payable (5%, due next year) | | 20,000 |
| Common stock | | 186,000 |
| Retained earnings | | 129,000 |
| Totals | <u>\$353,000</u> | <u>\$353,000</u> |

From January 1 to December 31, the following summary transactions occurred:

- Purchased inventory on account for \$330,000.
- Sold inventory on account for \$570,000. The cost of the inventory sold was \$310,000.
- Received \$540,000 from customers on accounts receivable.
- Paid freight on inventory received, \$24,000.

- e. Paid \$320,000 to inventory suppliers on accounts payable of \$325,000. The difference reflects purchase discounts of \$5,000.
- f. Paid rent for the current year, \$42,000. The payment was recorded to Rent Expense.
- g. Paid salaries for the current year, \$150,000. The payment was recorded to Salaries Expense.

Required:

1. Record each of the transactions listed above in the “General Journal” tab (these are shown as items 1–8), assuming a perpetual inventory system. Review the “General Ledger” and the “Trial Balance” tabs to see the effect of the transactions on the account balances.
2. Record adjusting entries on December 31 in the “General Journal” tab (these are shown as items 9–11).
 - a. Supplies on hand at the end of the year are \$8,000.
 - b. Accrued interest expense on notes payable for the year.
 - c. Accrued income taxes at the end of December are \$18,000.
3. Review the adjusted “Trial Balance” as of December 31, 2024, in the “Trial Balance” tab.
4. Prepare a multiple-step income statement for the period ended December 31, 2024, in the “Income Statement” tab.
5. Prepare a classified balance sheet as of December 31, 2024, in the “Balance Sheet” tab.
6. Record the closing entries in the “General Journal” tab (these are shown as items 12–13).
7. Using the information from the requirements above, complete the “Analysis” tab.
 - a. Suppose Displays Incorporated decided to maintain its internal records using FIFO but to use LIFO for external reporting. Assuming the ending balance of inventory under LIFO would have been \$85,000, calculate the LIFO reserve.
 - b. Assume the \$60,000 beginning balance of inventory comes from the base year with a cost index of 1.00. The cost index at the end of 2024 of 1.10. Calculate the amount the company would report for inventory using dollar-value LIFO.
 - c. Indicate whether each of the following amounts below would be *higher* or *lower* when reporting inventory using LIFO (or dollar-value LIFO) instead of FIFO in periods of rising inventory costs and stable inventory quantities: Inventory turnover ratio, average days in inventory, gross profit ratio.

E 8–31 General ledger exercise; receivable and inventory transactions  **LO8–1**,  **LO8–3**,  **LO8–5**

On January 1, 2024, the general ledger of Tripley Company included the following account balances:

| Account Title | Debits | Credits |
|--------------------------------------|------------------|------------------|
| Cash | \$ 70,000 | |
| Accounts receivable | 40,000 | |
| Allowance for uncollectible accounts | | \$ 5,000 |
| Inventory | 30,000 | |
| Building | 70,000 | |
| Accumulated depreciation | | 10,000 |
| Land | 200,000 | |
| Accounts payable | | 20,000 |
| Notes payable (8%, due in 3 years) | | 36,000 |
| Common stock | | 100,000 |
| Retained earnings | | 239,000 |
| Totals | \$410,000 | \$410,000 |

The \$30,000 beginning balance of inventory consists of 300 units, each costing \$100. During January 2024, the company had the following transactions:

- Jan. 2** Lent \$20,000 to an employee by accepting a 6% note due in six months.
- 5** Purchased 3,500 units of inventory on account for \$385,000 (\$110 each) with terms 1/10, n/30.
- 8** Returned 100 defective units of inventory purchased on January 5.
- 15** Sold 3,300 units of inventory on account for \$429,000 (\$130 each) with terms 2/10, n/30.
- 17** Customers returned 200 units sold on January 15. These units were initially purchased by the company on January 5. The units are placed in inventory to be sold in the future.

- 20 Received cash from customers on accounts receivable. This amount includes \$36,000 from 2023 plus amount receivable on sale of 2,700 units sold on January 15.**
- 21 Wrote off remaining accounts receivable from 2023.**
- 24 Paid on accounts payable. The amount includes the amount owed at the beginning of the period plus the amount owed from purchase of 3,100 units on January 5.**
- 28 Paid cash for salaries during January, \$28,000.**
- 29 Paid cash for utilities during January, \$10,000.**
- 30 Paid dividends, \$3,000.**

Required:

1. Record each of the transactions listed above in the “General Journal” tab (these are shown as items 1–10), assuming a perpetual FIFO inventory system. Purchases and sales of inventory are recorded using the gross method for cash discounts. Review the “General Ledger” and the “Trial Balance” tabs to see the effect of the transactions on the account balances.
2. Record adjusting entries on January 31 in the “General Journal” tab (these are shown as items 11–14):
 - a. Of the remaining accounts receivable, the company estimates that 10% will not be collected.
 - b. Accrued interest revenue on notes receivable for January.
 - c. Accrued interest expense on notes payable for January.
 - d. Accrued income taxes at the end of January for \$5,000.
 - e. Depreciation on the building, \$2,000
3. Review the adjusted “Trial Balance” as of January 31, 2024, in the “Trial Balance” tab.
4. Prepare a multiple-step income statement for the period ended January 31, 2024, in the “Income Statement” tab.
5. Prepare a classified balance sheet as of January 31, 2024, in the “Balance Sheet” tab.
6. Record closing entries in the “General Journal” tab (these are shown as items 15–16).
7. Using the information from the requirements above, complete the “Analysis” tab.
 - a. Calculate the inventory turnover ratio for the month of January. If the industry average of the inventory turnover ratio for the month of January is 4.5 times, is the company

- selling its inventory *more* or *less* quickly than other companies in the same industry?
- b. Calculate the gross profit ratio for the month of January. If the industry average gross profit ratio is 33%, is the company *more* or *less* profitable per dollar of sales than other companies in the same industry?
- c. Used together, what might the inventory turnover ratio and gross profit ratio suggest about the company's business strategy? Is the company's strategy to sell a *higher volume of less expensive* items or does the company appear to be selling a *lower volume of more expensive* items?

Problems

P 8–1 Various inventory transactions; journal entries LO8–1 through LO8–3

Autumn Company began the month of October with inventory of \$15,000. The following inventory transactions occurred during the month:

- The company purchased inventory on account for \$22,000 on October 12. Terms of the purchase were 2/10, n/30. Autumn uses the net method to record purchases. The inventory was shipped f.o.b. shipping point and freight charges of \$500 were paid in cash.
- On October 31, Autumn paid for the inventory purchased on October 12.
- During October inventory costing \$18,000 was sold on account for \$28,000.
- It was determined that inventory on hand at the end of October cost \$19,060.

Required:

- Assuming Autumn Company uses a perpetual inventory system, prepare journal entries for the above transactions.
- Assuming Autumn Company uses a periodic inventory system, prepare journal entries for the above transactions including the adjusting entry at the end of October to record cost of goods sold. Autumn considers purchase discounts lost as part of interest expense.

P 8–2 Items to be included in inventory LO8–2

The following inventory transactions took place near December 31, 2024, the end of the Rasul Company's fiscal year-end:

- On December 27, 2024, inventory costing \$2,000 was shipped to the Milat Company on consignment. The shipment arrived at Milat's location on December 29, but none of the inventory was sold by the end of the year. The inventory was *not* included in the 2024 ending inventory.
- On January 5, 2025, inventory costing \$8,000 was received from a supplier and recorded as a purchase on that date and *not* included in the 2024 ending inventory. The invoice

revealed that the shipment was made f.o.b. shipping point on December 28, 2024.

3. On December 29, 2024, the company shipped inventory costing \$12,000 to a customer f.o.b. destination. The goods, which arrived at the customer's location on January 4, 2025, were *not* included in Rasul's 2024 ending inventory. The sale was recorded in 2024.
4. Inventory costing \$4,000 was received on December 28, 2024, on consignment from the Aborn Company. A purchase was *not* recorded and the inventory was *not* included in 2024 ending inventory.
5. Inventory costing \$6,000 was received and recorded as a purchase on January 8, 2025. The invoice revealed that the inventory was shipped from the supplier on December 28, 2024, f.o.b. destination. The inventory was *not* included in 2024 ending inventory.

Required:

State whether Rasul correctly accounted for each of the above transactions. Give the reason for your answer.

P 8–3 Costs included in inventory  **LO8–2**,  **LO8–3**

Rachet Corporation is a wholesale distributor of truck replacement parts. Initial amounts taken from Rachet's records are as follows:

Inventory at December 31 (based on a physical count of goods in Rachet's warehouse on December 31) \$1,250,000

Accounts payable at December 31:

| Vendor | Terms | Amount |
|--|--------------------------------|----------------------------------|
| Boxes Company | 2%, 10 days, net 30 | \$ 265,000 |
| Crates Company | Net 30 | 210,000 |
| Driver Company | Net 30 | 300,000 |
| Express Company | Net 30 | 225,000 |
| Freight Company | Net 30 | — |
| Gears Company | Net 30 | — |
| Accounts payable, December 31 | | <u><u>\$1,000,000</u></u> |

| Vendor | Terms | Amount |
|--------------------|-------|--------------------|
| Sales for the year | | <u>\$9,000,000</u> |

Additional Information:

1. Parts held by Rachet on consignment from Crates, amounting to \$155,000, were included in the physical count of goods in Rachet's warehouse and in accounts payable at December 31.
2. Parts totaling \$22,000, which were purchased from Freight and paid for in December, were sold in the last week of the year and *appropriately* recorded as sales of \$28,000. The parts were included in the physical count of goods in Rachet's warehouse on December 31 because the parts were on the loading dock waiting to be picked up by customers.
3. Parts in transit on December 31 to customers, shipped f.o.b. shipping point on Page 446 December 28, amounted to \$34,000. The customers received the parts on January 6 of the following year. Sales of \$40,000 to the customers for the parts were recorded by Rachet on January 2.
4. Retailers were holding goods on consignment from Rachet, which had a cost of \$210,000 and a retail value of \$250,000.
5. Goods were in transit from Gears to Rachet on December 31. The cost of the goods was \$25,000, and they were shipped f.o.b. shipping point on December 29.
6. A freight bill in the amount of \$2,000 specifically relating to inventory purchased in December, all of which was still in the inventory at December 31, was received on January 3. The freight bill was not included in either the inventory or in accounts payable at December 31.
7. All the purchases from Boxes occurred during the last seven days of the year. These items have been recorded in accounts payable and accounted for in the physical inventory at cost before discount. Rachet's policy is to pay invoices in time to take advantage of all discounts, adjust inventory accordingly, and record accounts payable net of discounts.

Required:

Prepare a schedule of adjustments to the initial amounts using the format shown below. Show the effect, if any, of each of the transactions separately and if the transactions would have no effect on the amount shown, state *none*.

| | Inventory | Accounts Payable | Sales |
|---|--------------------|---------------------|--------------------|
| Initial amounts | \$1,250,000 | \$ 1,000,000 | \$9,000,000 |
| Adjustments—increase (decrease): | | | |
| 1. | | | |
| 2. | | | |
| 3. | | | |
| 4. | | | |
| 5. | | | |
| 6. | | | |
| 7. | _____ | _____ | _____ |
| Total adjustments | _____ | _____ | _____ |
| Adjusted amounts | \$ _____ | \$ _____ | \$ _____ |

(AICPA adapted)

P 8–4 Various inventory transactions; determining inventory and cost of goods; LIFO reserve  **LO8–1, through**  **LO8–4,**  **LO8–6**

Jillet Corporation began the year with inventory of 10,000 units of its only product. The units cost \$8 each. The company uses a perpetual inventory system and the FIFO cost method. The following transactions occurred during the year:

- a. Purchased 50,000 additional units at a cost of \$10 per unit. Terms of the purchases were 2/10, n/30. The company uses the gross method to record purchase discounts. The inventory was purchased f.o.b. shipping point and additional freight costs of \$0.50 per unit were charged to Jillet.
- b. 1,000 units purchased during the year were returned to suppliers for credit. Jillet was also given credit for the freight charges of \$0.50 per unit on the original purchase. The units were defective and were returned two days after they were received. The remaining inventory was paid within the discount period. (*Hint: The discount applies only to inventory and not the freight.*)

- c. Sales for the year totaled 45,000 units at \$18 per unit. (*Hint:* The cost of the inventory sold includes the purchase cost of those units plus freight less purchase discount.)
- d. On December 28, Jillet purchased 5,000 additional units at \$10 each. The goods were shipped f.o.b. destination and arrived at Jillet’s warehouse on January 4 of the following year.
- e. 14,000 units were on hand at the end of the year.

Required:

1. Determine ending inventory and cost of goods sold at the end of the year.
2. Assuming that operating expenses other than those indicated in the above transactions amounted to \$150,000, determine income before income taxes for the year.
3. For financial reporting purposes, the company uses LIFO (amounts based on a periodic inventory system). Record the year-end adjusting entry for the LIFO reserve, assuming the balance in the LIFO reserve at the beginning of the year is \$15,000.
4. Determine the amount the company would report as income before taxes for the year under LIFO. Operating expenses other than those indicated in the above transactions amounted to \$150,000.

P 8–5 Various inventory costing methods  **LO8–1**,  **LO8–4**

A company began January with 6,000 units of its principal product. The cost of each unit is \$8. Inventory transactions for the month of January are as follows:

| Date of Purchase | Purchases | | |
|------------------------|---------------|------------|------------------|
| | Units | Unit Cost* | Total Cost |
| Jan. 10 | 5,000 | \$ 9 | \$ 45,000 |
| Jan. 18 | 6,000 | 10 | 60,000 |
| Total purchases | 11,000 | | \$105,000 |

*Includes purchase price and cost of freight.

| Sales | |
|--------------|-------|
| Date of Sale | Units |
| Jan. 5 | 3,000 |

| Sales | |
|--------------------|---------------------|
| Date of Sale | Units |
| Jan. 12 | 2,000 |
| Jan. 20 | <u>4,000</u> |
| Total sales | <u>9,000</u> |

8,000 units were on hand at the end of the month.

Required:

Calculate January's ending inventory and cost of goods sold for the month using each of the following alternatives:

1. FIFO, periodic system
2. LIFO, periodic system
3. FIFO, perpetual system
4. Average cost, periodic system
5. Average cost, perpetual system

P 8-6 Various inventory costing methods; gross profit ratio

 **LO8-1**,  **LO8-4**,  **LO8-7**

Topanga Group began operations early in 2024. Inventory purchase information for the quarter ended March 31, 2024, for Topanga's only product is provided below. The unit costs include the cost of freight. The company uses a periodic inventory system to report inventory and cost of goods sold.

| Date of Purchase | Units | Unit Cost | Total Cost |
|------------------------|----------------------|-----------|-------------------------|
| Jan. 7 | 5,000 | \$4.00 | \$ 20,000 |
| Feb. 16 | 12,000 | 4.50 | 54,000 |
| March 22 | <u>17,000</u> | 5.00 | <u>85,000</u> |
| Total purchases | <u>34,000</u> | | <u>\$159,000</u> |

Sales for the quarter, all at \$7.00 per unit, totaled 20,000 units leaving 14,000 units on hand at the end of the quarter.

Required:

1. Calculate Topanga's gross profit ratio for the first quarter using:
 - a. FIFO
 - b. LIFO
 - c. Average cost
2. Comment on the relative effect of each of the three inventory methods on the gross profit ratio.

P 8–7 Various inventory costing methods  **LO8–1**,  **LO8–4**

Auto Dealers Inc. sells a handmade automobile as its only product. Each automobile is identical; however, they can be distinguished by their unique ID number. At the beginning of 2024, Auto Dealers had three cars in inventory, as follows:

| Car ID | Cost |
|--------|----------|
| 203 | \$60,000 |
| 207 | 60,000 |
| 207 | 63,000 |

During 2024, each of the three autos sold for \$90,000. Additional purchases (listed in chronological order) and sales for the year were as follows:

| Car ID | Cost | Selling price |
|--------|----------|---------------|
| 211 | \$63,000 | \$ 90,000 |
| 212 | 63,000 | 93,000 |
| 213 | 64,500 | not sold |
| 214 | 66,000 | 96,000 |
| 215 | 69,000 | 100,500 |
| 216 | 70,500 | not sold |
| 217 | 72,000 | 105,000 |
| 218 | 72,300 | 106,500 |
| 219 | 75,000 | not sold |

Required:

1. Calculate 2024 ending inventory and cost of goods sold assuming the company uses the specific identification inventory method.
2. Calculate ending inventory and cost of goods sold assuming FIFO and a periodic inventory system.
3. Calculate ending inventory and cost of goods sold assuming LIFO and a periodic inventory system.
4. Calculate ending inventory and cost of goods sold assuming the average cost method and a periodic inventory system.

P 8–8 Supplemental LIFO disclosures; Caterpillar  **LO8–4**,
 **LO8–6**

Real World Financials

Caterpillar, Inc., is one of the world's largest manufacturers of construction, mining, and forestry machinery. The following disclosure note is included in the company's 2019 financial statements:

C. Inventories (\$ in millions)

Inventories are stated at the lower of cost or net realizable value. Cost is principally determined using the last-in, first-out (LIFO) method. The value of inventories on the LIFO basis represented about 60 percent and 65 percent of total inventories at December 31, 2019 and 2018, respectively. If the FIFO (first-in, first-out) method had been in use, inventories would have been \$2,086 million and \$2,009 million higher than reported at December 31, 2019 and 2018, respectively.

Required:

1. The company reported LIFO cost of goods sold of \$36,630 million. Calculate the amount that would be reported for cost of goods sold had Caterpillar used the FIFO inventory method for all of its inventory during 2019.
2. How does the amount in requirement 1 affect income before taxes?

3. Why might the information contained in the disclosure note be useful to a financial analyst?

P 8–9 LIFO liquidation **LO8–4**, **LO8–6**

A company reports inventory and cost of goods sold based on calculations from a LIFO periodic inventory system. The company's records under this system reveal the following inventory layers at the beginning of 2024 (listed in chronological order of acquisition):

| | |
|----------------------------|-------------------------|
| 10,000 units @ \$15 | \$150,000 |
| 15,000 units @ \$20 | <u>300,000</u> |
| Beginning inventory | <u>\$450,000</u> |

During 2024, 30,000 units were purchased for \$25 per unit. Due to unexpected demand for the company's product, 2024 sales totaled 40,000 units at various prices, leaving 15,000 units in ending inventory.

Required:

1. Calculate the amount to report for cost of goods sold for 2024.
2. Determine the amount of LIFO liquidation profit that the company must report in a disclosure note to its 2024 financial statements. Assume an income tax rate of 25%.
3. If the company decided to purchase an additional 10,000 units at \$25 per unit at the end of the year, how much income tax currently payable would be saved?

P 8–10 LIFO liquidation **LO8–4**, **LO8–6**

Cansela Corporation reports inventory and cost of goods sold based on calculations from a LIFO periodic inventory system. The company began 2024 with inventory of 4,500 units of its only product. The beginning inventory balance of \$64,000 consisted of the following layers:

| | | |
|-------------------------------------|----------|------------------------|
| 2,000 units at \$12 per unit | = | \$24,000 |
| 2,500 units at \$16 per unit | = | <u>40,000</u> |
| Beginning inventory | | <u>\$64,000</u> |

During the three years 2024–2026, the cost of inventory remained constant at \$18 per unit. Unit purchases and sales during these years were as follows:

| | Purchases | Sales |
|-------------|---------------|---------------|
| 2024 | 10,000 | 11,000 |
| 2025 | 13,000 | 14,500 |
| 2026 | 12,000 | 13,000 |

Required:

1. Calculate cost of goods sold for 2024, 2025, and 2026.
2. Disregarding income tax, determine the LIFO liquidation profit or loss, if any, for each of the three years.
3. Prepare the company’s LIFO liquidation disclosure note that would be included in the 2026 financial statements to report the effects of any liquidation on cost of goods sold and net income. Assume any liquidation effects are material and that Cansela’s effective income tax rate is 25%. Cansela’s 2026 financial statements include income statements for two prior years for comparative purposes.

P 8–11 Inventory cost flow methods: LIFO liquidation; ratios

 **LO8–4**,  **LO8–6**,  **LO8–7**

Cast Iron Grills, Inc., manufactures premium gas barbecue grills. The company reports inventory and cost of goods sold based on calculations from a LIFO periodic inventory system. Cast Iron’s December 31, 2024, fiscal year-end inventory consisted of the following (listed in chronological order of acquisition):

| Units | Unit Cost |
|--------------|--------------|
| 5,000 | \$700 |
| 4,000 | 800 |
| 6,000 | 900 |

The replacement cost of the grills throughout 2025 was \$1,000. Cast Iron sold 27,000 grills during 2025. The company’s selling price is set at 200% of the current replacement cost.

Required:

1. Compute the gross profit (sales minus cost of goods sold) and the gross profit ratio for 2025 assuming that Cast Iron purchased 28,000 units during the year.
2. Repeat requirement 1 assuming that Cast Iron purchased only 15,000 units.
3. Why does the number of units purchased affect your answers to the above requirements?
4. Repeat requirements 1 and 2 assuming that Cast Iron reports the FIFO inventory cost method rather than the LIFO method.
5. Why does the number of units purchased have no effect on your answers to requirements 1 and 2 when the FIFO method is used for reporting purposes?

P 8–12 Integrating problem; inventories and accounts receivable; Chapters 7 and 8  **LO8–4**,  **LO8–6**,  **LO8–7**

Inverness Steel Corporation is a producer of flat-rolled carbon, stainless and electrical steels, and tubular products. The company's income statement for the 2024 fiscal year reported the following information (\$ in millions):

| | |
|---------------------------|----------------|
| Sales | \$6,255 |
| Cost of goods sold | 5,190 |

The company's balance sheets for 2024 and 2023 included the following information (\$ in millions):

| | 2024 | 2023 |
|---------------------------------|--------------|--------------|
| Current assets: | | |
| Accounts receivable, net | \$703 | \$583 |
| Inventories | 880 | 808 |

The statement of cash flows reported bad debt expense for 2024 of \$8 million. The summary of significant accounting policies included the following notes (\$ in millions):

Accounts Receivable (in part)

The allowance for uncollectible accounts was \$10 and \$7 at December 31, 2024 and 2023, respectively. All sales are on credit.

Inventories

The cost of the majority of inventories is measured using the last-in, first-out (LIFO) method. Other inventories are measured principally at average cost and consist mostly of foreign inventories and certain raw materials. If the entire inventory had been valued on an average cost basis, inventory would have been higher by \$480 and \$350 at the end of 2024 and 2023, respectively.

During 2024, 2023, and 2022, liquidation of LIFO layers generated income of \$6, \$7, and \$25, respectively.

Required:

Using the information provided:

1. Determine the amount of accounts receivable Inverness wrote off during 2024.
2. Calculate the amount of cash collected from customers during 2024.
3. Calculate what cost of goods sold would have been for 2024 if the company had used average cost to value its entire inventory.
4. Calculate the following ratios for 2024:
 - a. Receivables turnover ratio
 - b. Inventory turnover ratio
 - c. Gross profit ratio
5. Explain briefly what caused the income generated by the liquidation of LIFO layers. Assuming an income tax rate of 25%, what was the effect of the liquidation of LIFO layers on cost of goods sold in 2024?

P 8–13 Dollar-value LIFO LO8–8

On January 1, 2024, a company adopted the dollar-value LIFO method. The inventory value for its one inventory pool on this date was \$400,000. Inventory data for 2024 through 2026 are as follows:

| Date | Ending Inventory at Year-End Costs | Cost Index |
|------------|------------------------------------|------------|
| 12/31/2024 | \$441,000 | 1.05 |
| 12/31/2025 | 487,200 | 1.12 |
| 12/31/2026 | 510,000 | 1.20 |

Required:

Calculate the company's ending inventory for 2024, 2025, and 2026.

P 8–14 Dollar-value LIFO  **LO8–8**

A company uses the dollar-value LIFO method of computing inventory. An external price index is used to convert ending inventory to base year. The company began operations on January 1, 2024, with an inventory of \$150,000. Year-end inventories at year-end costs and cost indexes for its one inventory pool were as follows:

| Year Ended December 31 | Ending Inventory at Year- End Costs | Cost Index (Relative to Base Year) |
|---------------------------|--|--|
| 2024 | \$200,000 | 1.08 |
| 2025 | 245,700 | 1.17 |
| 2026 | 235,980 | 1.14 |
| 2027 | 228,800 | 1.10 |

Required:

Calculate inventory amounts at the end of each year.

P 8–15 Dollar-value LIFO  **LO8–8**

On January 1, 2024, a company adopted the dollar-value LIFO inventory method. The inventory value for its one inventory pool on this date was \$260,000. An internally generated cost index is used to convert ending inventory to base year. Year-end inventories at year-end costs and cost indexes for its one inventory pool were as follows:

| Year Ended December 31 | Inventory Year-End Costs | Cost Index (Relative to Base Year) |
|------------------------|--------------------------|------------------------------------|
| 2024 | \$340,000 | 1.02 |
| 2025 | 350,000 | 1.06 |
| 2026 | 400,000 | 1.07 |
| 2027 | 430,000 | 1.10 |

Required:

Calculate inventory amounts at the end of each year.

P 8–16 Dollar-value LIFO; solving for unknowns  **LO8–8**

At the beginning of 2024, a company adopted the dollar-value LIFO (DVL) inventory method. On that date the value of its one inventory pool was \$84,000. The company uses an internally generated cost index to convert ending inventory to base year. Inventory data for 2024 through 2027 are as follows:

| Year Ended December 31 | Ending Inventory at Year-End Costs | Ending Inventory at Base Year Costs | Cost Index | Ending Inventory at DVL cost |
|------------------------|------------------------------------|-------------------------------------|------------|------------------------------|
| 2024 | \$100,800 | \$ 96,000 | 1.05 | \$? |
| 2025 | 136,800 | ? | 1.14 | ? |
| 2026 | 150,000 | 125,000 | ? | ? |
| 2027 | ? | ? | 1.25 | \$133,710 |

Required:

Determine the missing amounts.

Decision Makers' Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Judgment Case 8–1 Physical quantities and costs included in inventory **LO8–2**

Determining the physical quantity that should be included in inventory normally is a simple matter because that amount consists of items in the possession of the company. The cost of inventory includes all necessary expenditures to acquire the inventory and bring it to its desired *condition* and *location* for sale or for use in the manufacturing process.

Required:

1. Identify situations in which the physical quantity included in inventory is more difficult than simply determining items in the possession of the company.
2. In addition to the direct acquisition costs such as the price paid, what other expenditures might be necessary to bring the inventory to its desired condition and location?

Judgment Case 8–2 Profit manipulation **LO8–4**

In 2023, the Moncrief Company purchased from Jim Lester the right to be the sole distributor in the western states of a product called Zelenex. In payment, Moncrief agreed to pay Lester 20% of the gross profit recognized from the sale of Zelenex in 2024.

Moncrief reports inventory using the periodic LIFO assumption. Late in 2024, the following information is available concerning the inventory of Zelenex:

| | |
|--|-------------------|
| Beginning inventory, 1/1/2024 (10,000 units @ \$30) | \$ 300,000 |
| Purchases (40,000 units @ \$30) | 1,200,000 |
| Sales (35,000 units @ \$60) | 2,100,000 |

By the end of the year, the purchase price of Zelenex had risen to \$40 per unit. On December 28, 2024, three days before year-end, Moncrief is in a position to purchase 20,000 additional units of Zelenex at the \$40 per unit price. Due to the increase in purchase price, Moncrief will increase the selling price in 2025 to \$80 per unit. Inventory on hand before the purchase, 15,000 units, is sufficient to meet the next six months' sales and the company does not anticipate any significant changes in purchase price during 2025.

Required:

Determine the effect of the purchase of the additional 20,000 units on the 2024 gross profit from the sale of Zelenex and the payment due to Jim Lester.

Real World Case 8–3 Effects of inventory valuation methods; supplemental LIFO disclosures; Wolverine World Wide, Inc.

 **LO8–4**,  **LO8–6**

Real World Financials

Income statement and balance sheet information abstracted from a recent annual report of **Wolverine World Wide, Inc.**, appears below:

| Balance Sheets | | |
|-------------------------|--------------------------|--------------------------|
| (\$ in millions) | | |
| | December 28, 2019 | December 29, 2018 |
| Current assets: | | |
| Inventories | \$348.2 | \$317.6 |

| Income Statements (\$ in millions) | | |
|---------------------------------------|-----------------------|-----------------------|
| For the Year Ended | | |
| | December 28, 2019 | December 29, 2018 |
| Net sales | \$2,273.7 | \$2,239.2 |
| Cost of goods sold | <u>1,349.9</u> | <u>1,317.9</u> |
| Gross profit | \$ 923.8 | \$ 921.3 |

The significant accounting policies note disclosure contained the following:

Inventories

The Company used the LIFO method to value inventories of \$81.2 million and \$61.1 million at December 28, 2019, and December 29, 2018, respectively. During fiscal years 2019 and 2018, a reduction in inventory quantities resulted in a liquidation of applicable LIFO inventory quantities carried at lower costs in prior years. This LIFO liquidation decreased cost of goods sold by \$0.4 million and \$4.6 million, respectively. If the FIFO method had been used, inventories would have been \$11.4 million and \$11.8 million higher than reported at December 28, 2019, and December 29, 2018, respectively.

Required:

1. Is Wolverine disclosing the FIFO cost of its LIFO inventory?
2. Calculate what beginning inventory and ending inventory would have been for the year ended December 28, 2019, if Wolverine had used FIFO for all of its inventories.
3. Calculate what cost of goods sold and gross profit would have been for the year ended December 28, 2019, if Wolverine had used FIFO for all of its inventories.
4. In 2019, Wolverine reported a LIFO liquidation. Did this liquidation increase or decrease cost of goods sold in 2019? Does this indicate that inventory costs have been increasing or decreasing over time?

Analysis Case 8–4 Effects of inventory valuation methods

 **LO8–4**,  **LO8–5**,  **LO8–7**

Real World Financials

Using EDGAR (Electronic Data Gathering, Analysis, and Retrieval system), find the annual report (10-K) for **Coca-Cola and Pepsico** for the year ended December 2019. Locate the “Consolidated Statements of Income” (income statement) and “Consolidated Balance Sheets.” You may also find the annual reports at the companies’ websites.

Required:

1. For each company, calculate the gross profit ratio, inventory turnover ratio, and average days in inventory.
2. Compare the management of each company’s investment in inventory. Which company is more profitable and which company sells its inventory more quickly based on the ratios calculated in requirement 1?

Analysis Case 8–5 Compare inventory management using ratios; Kohl’s and Dillards  **LO8–7**

Real World Financials

The table below contains selected financial information included in the financial statements of **Kohl’s Corporation** and **Dillards, Inc.**, two companies in the department store industry.

| | (\$ in millions) | | | |
|-------------------------------|------------------|----------------|----------------|----------------|
| | Kohl’s Corp. | | Dillards, Inc. | |
| | 2019 | 2018 | 2019 | 2018 |
| Balance sheet: | | | | |
| Inventories | \$ 3,537 | \$3,475 | \$1,465 | \$1,528 |
| Income statement—2017: | | | | |
| Net sales | \$18,885 | | \$6,204 | |
| Cost of goods sold | 12,140 | | 4,236 | |

Required:

Calculate the 2019 gross profit ratio, inventory turnover ratio, and average days in inventory for both companies. Evaluate the management of each company’s investment in inventory.

Research Case 8–6 FASB codification; locate and extract relevant information and authoritative support for a financial

reporting issue; product financing arrangement  **LO8-2**,
 **LO8-3**

You were recently hired to work in the controller's office of the Balboa Lumber Company. Your boss, Alfred Eagleton, took you to lunch during your first week and asked a favor. "Things have been a little slow lately, and we need to borrow a little cash to tide us over. Our inventory has been building up, and the CFO wants to pledge the inventory as collateral for a short-term loan. But I have a better idea." Mr. Eagleton went on to describe his plan. "On July 1, 2024, the first day of the company's third quarter, we will sell \$100,000 of inventory to the Harbaugh Corporation for \$160,000. Harbaugh will pay us immediately, and then we will agree to repurchase the inventory in two months for \$164,000. The \$4,000 is Harbaugh's fee for holding the inventory and for providing financing. I already checked with Harbaugh's controller, and he has agreed to the arrangement. Not only will we obtain the financing we need, but the third quarter's before-tax profits will be increased by \$56,000, the gross profit on the sale less the \$4,000 fee. Go research the issue and make sure we would not be violating any specific accounting standards related to product financing arrangements."

Required:

1. Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) that provides guidance for determining whether an arrangement involving the sale of inventory is "in substance" a financing arrangement?
2. Determine the specific eight-digit Codification citation (XXX-XX-XX-X) that addresses the recognition of a product financing arrangement?
3. Determine the appropriate treatment of product financing arrangements like the one proposed by Mr. Eagleton.
4. Prepare the journal entry for Balboa Lumber to record the "sale" of the inventory and subsequent repurchase.

Communication Case 8-7 LIFO versus FIFO  **LO8-4**,
 **LO8-5**

You have just been hired as a consultant to Tangier Industries, a newly formed company. The company president, John Meeks, is seeking your advice as to the appropriate inventory method Tangier should use to value its inventory and cost of goods sold. Mr. Meeks has narrowed the choice to LIFO and FIFO. He has heard that LIFO might be better for tax purposes, but FIFO has certain advantages for financial reporting to investors and creditors. You have been told that the company will be profitable in its first year and for the foreseeable future.

Required:

Prepare a report for the president describing the factors that should be considered by Tangier in choosing between LIFO and FIFO.

Communication Case 8–8 LIFO versus FIFO  **LO8–4,**
 **LO8–5**

An accounting intern for a local CPA firm was reviewing the financial statements of a client in the electronics industry. The intern noticed that the client used the FIFO method of determining ending inventory and cost of goods sold. When she asked a colleague why the firm used FIFO instead of LIFO, she was told that the client used FIFO to minimize its income tax liability. This response puzzled the intern because she thought that LIFO would minimize income tax liability.

Required:

What would you tell the intern to resolve the confusion?

Communication Case 8–9 Dollar-value LIFO method  **LO8–8**

Maxi Corporation uses the unit LIFO inventory method. The costs of the company's products have been steadily rising since the company began operations in 2008, and cost increases are expected to continue. The chief financial officer of the company would like to continue using LIFO because of its tax advantages. However, the controller, Sally Hamel, would like to reduce the record-keeping costs of LIFO that have steadily increased over the years as new products have been added to the company's product line. Sally suggested the use of the dollar-value LIFO method. The chief financial officer has asked Sally to describe the dollar-value LIFO procedure.

Required:

Describe the dollar-value LIFO procedure.

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO8-1, LO8-4, LO8-7

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website ( www.target.com).

Required:

1. Does Target use average cost, FIFO, or LIFO as its inventory cost flow assumption?
2. In addition to the purchase price, what additional expenditures does the company include in the initial cost of inventory?
3. Calculate the gross profit ratio and the inventory turnover ratio for the fiscal year ended February 1, 2020. Compare Target's ratios with the industry averages of 24.5% and 7.1 times. Determine whether Target's ratios indicate the company is more/less profitable and sells its inventory more/less frequently compared to the industry average.

Air France–KLM Case LO8-9

IFRS

Air France–KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

What method does the company use to value its inventory? What other alternatives are available under IFRS? Under U.S. GAAP?

CHAPTER 9

Inventories: Additional Issues

OVERVIEW

We covered most of the principal measurement and reporting issues involving the asset inventory and the corresponding expense cost of goods sold in the previous chapter. In this chapter, we complete our discussion of inventory measurement by explaining how inventories are measured at the end of the period. In addition, we investigate inventory estimation techniques, methods of simplifying LIFO, changes in inventory method, and inventory errors.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO9-1** Understand and apply rules for measurement of inventory at the end of the reporting period. (p. 457)
-  **LO9-2** Estimate ending inventory and cost of goods sold using the gross profit method. (p. 465)
-  **LO9-3** Estimate ending inventory and cost of goods sold using the retail inventory method, applying the various cost flow methods. (p. 467)
-  **LO9-4** Explain how the retail inventory method can be made to approximate the lower of cost or market rule. (p. 470)
-  **LO9-5** Determine ending inventory using the dollar-value LIFO retail inventory method. (p. 475)
-  **LO9-6** Explain the appropriate accounting treatment required when a change in inventory method is made. (p. 478)
-  **LO9-7** Explain the appropriate accounting treatment required when an inventory error is discovered. (p. 480)

 **LO9-8** Discuss the primary differences between U.S. GAAP and IFRS with respect to the lower of cost or net realizable value rule for valuing inventory. (p. 461)

FINANCIAL REPORTING CASE

QualityHD/Shutterstock

Does It Count?

Today you drove over to **Dollar General** to pick up a few items. You recall from class yesterday that your accounting professor had discussed inventory measurement issues and the different methods (FIFO, LIFO, and average) used by companies to determine ending inventory and cost of goods sold. As of January 3, 2020, Dollar General had 16,278 store locations. You can't imagine actually counting the inventory in all of the stores around the country. You consider that there must be some way Dollar General can avoid counting all of that inventory every time they want to produce financial statements. When you get home, you check their financial statements on the Internet to see what kind of inventory method they use. You find the following in the summary of significant accounting policies included in Dollar General's most recent financial statements:

Merchandise Inventories:

Inventories are stated at the lower of cost or market (LCM) with cost determined using the retail last-in, first-out (LIFO) method, as this method results in a better matching of costs and revenues. Under the Company's retail inventory method (RIM), the calculation of gross profit and the resulting valuation of inventories at cost are computed by applying a calculated cost-to-retail inventory ratio to the retail value of sales at a department level. The use of the RIM will result in valuing inventories at LCM if markdowns are currently taken as a reduction of the retail value of inventories. Costs directly associated with warehousing and distribution are capitalized into inventory.

The excess of current cost over LIFO cost was approximately \$110.7 million and \$103.7 million at January 31, 2020, and February 1, 2019, respectively. Current cost is determined

using the RIM on a first-in, first-out basis. Under the LIFO inventory method, the impacts of rising or falling market price changes increase or decrease cost of sales (the LIFO provision or benefit). The Company recorded a LIFO provision (benefit) of \$7.0 million in 2019, \$25.2 million in 2018, and \$(2.2) million in 2017, which is included in cost of goods sold in the consolidated statements of income.

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. How does Dollar General avoid counting all its inventory every time it produces financial statements?
2. What is the index formulation used for?

PART A

Subsequent Measurement of Inventory

LO9-1 Understand and apply rules for measurement of inventory at the end of the reporting period.

As you would expect, companies hope to sell their inventory for more than its cost. Yet, this doesn't always happen. Sometimes circumstances arise after (or *subsequent* to) the purchase or production of inventory that indicate the company will have to sell its inventory for less than its cost. This might happen because of inventory damage, physical deterioration, obsolescence, changes in price levels, or any situation that lessens demand for the inventory. Consider, for example, the value of unsold electronics inventory when the next generation comes out, or the leftover clothing inventory at the end of the selling season. Usually, the only way these items can be sold is at deeply discounted prices (well-below their purchase cost).

GAAP requires that companies evaluate their unsold inventory at the end of each reporting period (for reasons mentioned above). When the expected benefit of unsold inventory is estimated to have fallen below its cost, companies must depart from the cost basis of reporting ending inventory; an adjusting entry is needed to reduce the reported amount of inventory and to reduce net income for the period. This end-of-period adjusting entry is known as an *inventory write-down*.

An inventory write-down has the effect of reducing inventory and reducing net income.

The two measurement approaches for recording an inventory write-down are listed in [Illustration 9-1](#). The approach chosen by a company depends on which inventory costing method the company uses.¹ For companies that use a cost method other than LIFO or the retail inventory method, we report inventory at the *lower of cost or net realizable value*. For companies that use LIFO or the retail inventory method (discussed later in this chapter), we report inventory at the *lower of cost or market*.

ILLUSTRATION 9-1 Subsequent Inventory Measurement

| Measurement Approach | For Companies That Use | Financial Statement Effects of Inventory Write-Downs |
|--|---|---|
| 1. Lower of cost or net realizable values (LCNRV) | FIFO, average cost, or any other method besides LIFO or the retail inventory method | a. Reduce reported inventory b. Reduce net income |
| 2. Lower of cost or market (LCM) | LIFO or retail inventory method | a. Reduce reported inventory b. Reduce net income |

For both measurement approaches, the financial statement effects of an inventory write-down are the same: (a) reduce reported inventory and (b) reduce net income. Both approaches have the same conceptual purpose of reporting inventory conservatively at the lower of two amounts. The difference between the two approaches is the measurement of the *amount* of the inventory write-down. We discuss those measurements next.²

Lower of Cost or Net Realizable Value (LCNRV)

Companies that use FIFO, average cost, or any other method besides LIFO or the retail inventory method report inventory using the **lower of cost or net realizable value** (LCNRV) approach. To do this, a company compares the inventory's cost to the inventory's **net realizable value** (NRV). NRV is the estimated selling price of the inventory in the ordinary course of business reduced by reasonably predictable costs of completion, disposal, and transportation (such as sales commissions and shipping costs).

Net realizable value (NRV) is the estimated selling price reduced by any costs of completion, disposal, and transportation.

Another way to think about NRV is that it's the *net* amount a company expects to *realize* (or collect in cash) from the sale of the inventory. Companies often estimate the "costs to sell" by applying a predetermined percentage to the selling price. For example, if the selling price of Product A is \$10 per unit, and the company estimates that sales commissions and shipping costs average approximately 10% of selling price, NRV would be \$9 [= \$10 - (\$10 × 10%)].

After comparing cost and NRV, a company reports inventory at the lower of the two amounts.

1. If NRV is lower than cost, we need an adjusting entry to reduce inventory from its already recorded purchase cost to the lower NRV. NRV then becomes the new carrying value of inventory reported in the balance sheet.
2. If cost is lower than NRV, no adjusting entry is needed. Inventory already is recorded at cost at the time it was purchased, and this cost is lower than total NRV at the end of the period.

When NRV is lower than cost, an inventory write-down is recorded.

The LCNRV approach avoids reporting inventory at an amount greater than the cash it can provide to the company. Reporting inventories this way causes income to be reduced in the period the value of inventory declines below its cost rather than in the period in which the goods ultimately are sold.³

Applying Lower of Cost or Net Realizable Value

For financial reporting purposes, LCNRV can be applied (a) to individual inventory items, (b) to major categories of inventory, or (c) to the entire inventory.⁴

The LCNRV rule can be applied to individual inventory items, major inventory categories, or the entire inventory.

Illustration 9-2 demonstrates the LCNRV approach with each of the three possible applications.

ILLUSTRATION 9-2 Lower of Cost or Net Realizable Value—Application at Different Levels of Aggregation

The General Supply Company has five inventory items on hand at the end of the year. The year-end cost (determined by applying the FIFO cost method) and net realizable value (current selling prices less costs of completion, disposal, and transportation) for each of the items are presented below.

Items A and B are a collection of similar items, and items C, D, and E are another collection of similar items. Each collection can be considered a category of inventory.

| Item | Cost | NRV | Lower of Cost or NRV | | |
|-------------------|-------------------------|-------------------------|-------------------------|-------------------------|-------------------------|
| | | | By Individual Items | By Category | By Total Inventory |
| A | \$ 50,000 | \$ 85,000 | \$ 50,000 | | |
| B | <u>100,000</u> | <u>90,000</u> | 90,000 | | |
| Total A and B | <u>\$150,000</u> | <u>\$175,000</u> | | \$ 150,000 | |
| C | \$ 80,000 | \$ 75,000 | 75,000 | | |
| D | 90,000 | 85,000 | 85,000 | | |
| E | <u>95,000</u> | <u>96,000</u> | <u>95,000</u> | | |
| Total C, D, and E | <u>\$265,000</u> | <u>\$256,000</u> | | 256,000 | |
| Total | <u><u>\$415,000</u></u> | <u><u>\$431,000</u></u> | <u><u>\$395,000</u></u> | <u><u>\$406,000</u></u> | <u><u>\$415,000</u></u> |

If we first consider LCNRV *by individual items*, we see that cost is lower than NRV for items A and E (see “By Individual Items” column). These inventory items were initially recorded at cost at the time of purchase. So, under the LCNRV approach, they are currently recorded at their proper amounts. No adjustment is needed. However, for items B, C, and D, we see

that NRV is below cost. Therefore, we need to adjust the carrying value of these items downward from cost to NRV to report them at NRV in the balance sheet. After determining the lower of cost or NRV for each individual item, the total amount to report for inventory is **\$395,000**.

Now let's see what happens if we apply the LCNRV approach *by inventory category* (see "By Category" column). The first category of inventory (items A and B) has a combined cost of \$150,000 and a combined NRV of \$175,000, so we report this inventory group at its cost of \$150,000. For the second category (items C, D, and E), the combined NRV (\$256,000) is lower than the combined cost (\$265,000), so we report this inventory group at its NRV of \$256,000. We report inventory at **\$406,000** (= \$150,000 + \$256,000).

Finally, if we apply the LCNRV approach *by total inventory*, we see that inventory's total cost (\$415,000) is lower than its total NRV (\$431,000). Inventory would be reported at its cost of **\$415,000**.

As shown in this illustration, applying the LCNRV rule to groups of inventory items will cause a higher inventory valuation than if applied on an item-by-item basis. The reason is that group application permits increases in the net realizable value of some items to offset decreases in others. Each approach is acceptable but should be applied consistently from one period to another.

Ethical Dilemma

The Hartoz Company, owned and operated by Maryam Hartoz, manufactures and sells high-end ergonomic office chairs and custom bookshelves. The company has reported profits in the majority of years since the company's inception in 1975 and is projecting a profit in 2024 of \$65,000, down from \$96,000 in 2023.

Near the end of 2024, the company is in the process of applying for a bank loan. The loan proceeds will be used to replace manufacturing equipment to modernize the manufacturing operation. In preparing the financial statements for the year, the chief accountant, Don Davis, mentioned to Maryam Hartoz that net realizable value (NRV) of the bookshelf inventory is below its cost by \$40,000 and should be written down in 2024. However, no write-down is necessary for office chairs because their NRV is \$50,000 above cost.

Maryam is worried that the write-down would lower 2024 net income to a level that might cause the bank to refuse the loan. Without the loan, it would be difficult for the company to compete. This could decrease future business, and employees might have to be laid off. Maryam suggests to Don that the company combine the office chairs and bookshelves into a single inventory category (office furniture) for reporting purposes, so that the combined NRV is above the combined cost. In this case, no inventory write-down would be needed. The company has not previously combined these inventory items and has no stated policy on the matter. Don is contemplating his responsibilities in this situation.

Adjusting Cost to Net Realizable Value

When NRV is below cost, companies are required to write down inventory to the lower NRV. These write-downs usually are included as part of cost of goods sold because they are a natural consequence of holding inventory and therefore part of the inventory's normal cost. However, when a write-down is substantial and unusual, the write-down should be recorded in a separate loss account instead. That loss must be expressly disclosed. This could be accomplished with a disclosure note alone or also by reporting the loss as a separate line in the income statement, usually among operating expenses.

Referring back to [Illustration 9-2](#), assume we report inventory using the LCNRV approach by individual items. The recorded cost of inventory (\$415,000) needs to be written down to its NRV (**\$395,000**) at the end of the period. The amount of the reduction is \$20,000. The period-end adjusting entry for the typical occurrence of decline to net realizable value would be the following:

| | |
|---------------------|--------|
| Cost of goods sold* | 20,000 |
| Inventory | 20,000 |

*In situations when a write-down is substantial and unusual, the write-down should be recorded in a loss on inventory write-down account.

| Inventory | |
|----------------|--------|
| 415,000 | |
| | 20,000 |
| 395,000 | |

After the adjustment from original cost to net realizable value, the reduced inventory amount becomes the new cost basis for subsequent reporting. If the inventory value later increases prior to its sale, we do not write it back up.⁵

LO9–8 Discuss the primary differences between U.S. GAAP and IFRS with respect to the lower of cost or net realizable value rule for valuing inventory.

International Financial Reporting Standards

Lower of cost or net realizable value. You just learned that in the United States some companies report inventory at the *lower of cost or net realizable value*. This is the same approach used under IFRS. However, there are some differences between U.S. GAAP and IFRS in the application of lower of cost or net realizable value.

First, *IAS No. 2* specifies that if circumstances indicate that an inventory write-down is no longer appropriate, it must be reversed.⁶ Reversals are not permitted under U.S. GAAP.

Second, under U.S. GAAP, the lower of cost or net realizable value rule can be applied to individual items, inventory categories, or the entire inventory. Under the international standard, the assessment usually is applied to individual items, although using inventory categories is allowed under certain circumstances.

Siemens AG, a German electronics and electrical engineering company, prepares its financial statements according to IFRS. The following disclosure note illustrates the valuation of inventory at the lower of cost or net realizable value.

Inventories (in part)

Inventory is valued at the lower of acquisition or production cost and net realizable value, cost being generally determined on the basis of an average or first-in, first-out method.

Concept Review Exercise

LOWER OF COST OR NET REALIZABLE VALUE

The Strand Company sells four products that can be grouped into two major categories and employs the FIFO cost method. Information needed to apply the lower of cost or NRV (LCNRV) rule on December 31, 2024 (end of the period), for each of the four products is presented below. Sales commissions and transportation costs average 10% of selling price. Inventory write-downs are a normal occurrence for Strand.

| Product | Quantity | Unit Cost | Unit Selling Price | Total Cost | Total Selling Price |
|---------|----------|-----------|--------------------|------------|---------------------|
| 101 | 4,000 | \$30 | \$40 | \$120,000 | \$160,000 |
| 102 | 5,000 | 35 | 36 | 175,000 | 180,000 |
| 201 | 3,200 | 50 | 50 | 160,000 | 160,000 |
| 202 | 15,000 | 3 | 4 | 45,000 | 60,000 |

Products 101 and 102 are in category A, and products 201 and 202 are in category B.

Required:

Determine the reported amount of ending inventory and record any necessary year-end adjusting entry to write down inventory, applying the LCNRV approach to the following:

1. Individual items
2. Major categories
3. Total inventory

Solution:

Determine the reported amount of ending inventory and record any necessary year-end adjusting entry to write down inventory, applying the LCNRV approach.

| Product | Cost | NRV* | Lower of Cost or NRV | | |
|-----------------|-----------|-----------|------------------------|-------------|--------------------|
| | | | By Individual Products | By Category | By Total Inventory |
| 101 | \$120,000 | \$144,000 | \$120,000 | | |
| 102 | 175,000 | 162,000 | 162,000 | | |
| Total 101 + 102 | \$295,000 | \$306,000 | | \$295,000 | |
| 201 | \$160,000 | \$144,000 | 144,000 | | |
| 202 | 45,000 | 54,000 | 45,000 | | |
| Total 201 + 202 | \$205,000 | \$198,000 | | 198,000 | |
| Total | \$500,000 | \$504,000 | \$471,000 | \$493,000 | \$50,000 |

*NRV = Selling price less costs to sell. For product 101, \$160,000 - (\$160,000 × 10%) = \$ 144, 000.

The NRV for both the individual product and category applications are lower than cost so inventory write-downs are needed. On the other hand, cost is lower than NRV at the total inventory level, so no adjustment would be needed.

1. Individual items

Reported ending inventory = \$471,000 (LCNRV)

December 31, 2024

| | |
|--|---------|
| Cost of goods sold [†] | 29,000* |
| Inventory | 29,000 |
| *\$500,000 (recorded cost) - \$471,000 (LCNRV) | |

2. Major categories

Reported ending inventory = \$493,000 (LCNRV)

December 31, 2024

| | |
|---------------------------------|--------|
| Cost of goods sold [†] | 7,000* |
|---------------------------------|--------|

December 31, 2024

| | |
|--|-------|
| Inventory | 7,000 |
| †\$500,000 (recorded cost) - \$493,000 (LCNRV) | |

†For the two entries above, we record the adjustment to the cost of goods sold account because the inventory write-down is considered usual. If the write-down had been substantial and unusual, we record the adjustment to a loss on inventory write-down account.

3. Total inventory

Reported ending inventory = \$500,000 (Cost)

Because inventory already is recorded at cost as of December 31, 2024, and because total cost is lower than total NRV (\$504,000), no year-end adjustment is needed.

Additional Consideration

Critics of reporting inventory lower than its cost contend that this causes losses to be recognized that haven't actually occurred. Others maintain that it introduces needless inconsistency in order to be conservative, because decreases in value are recognized as they occur, but not increases. As you learned in  **Chapter 1**, conservatism is not part of the conceptual framework. So, why not record increases as well? Recall the revenue recognition guidance we discussed in  **Chapter 6**. Recognizing increases in the value of inventory prior to sale would, in most cases, result in premature revenue recognition, because the seller would be acting as if it had satisfied a performance obligation (selling inventory) before that actually occurred. For example, let's say that merchandise costing \$100 now has a net realizable value of \$150. Recognizing a gain for the increase in value would increase pretax income by \$50. This is equivalent to recognizing revenue of \$150, cost of goods sold of \$100, and gross profit of \$50. The effect is to increase pretax income in a period prior to sale of the product. That's not allowed.

Lower of Cost or Market (LCM)

Companies that use LIFO or the retail inventory method report inventory using the **lower of cost or market** (LCM) approach. You might interpret the term *market* to mean the amount that could be realized if the inventory were sold. This would be similar to the concept of *net realizable value* discussed above. However, market is defined differently.

Market is current replacement cost, but not above the ceiling or below the floor.

Market is the inventory's current replacement cost (by purchase or reproduction) except that:

1. Market should not be greater than the net realizable value (this forms a "ceiling" on market), and
2. Market should not be less than net realizable value reduced by an allowance for an approximately normal profit margin (this forms a "floor" on market).

In effect, we have a ceiling and a floor between which market (that is, replacement cost) must fall. If replacement cost is between the ceiling and the floor, it represents market; if replacement cost is above the ceiling or below the floor, the ceiling or the floor becomes market. The designated market amount is compared with cost, and the lower of the two is used to value inventory.

To see an example, let's look at  **Illustration 9-3**. In the top part of the illustration, we calculate the ceiling and the floor. In the bottom part, we calculate LCM.

Illustration 9-3 Lower of Cost or Market (LCM)

The General Supply Company has five inventory items on hand at the end of the year. Prices, and estimated costs of completion, disposal, and transportation (selling costs) are given below. The normal profit for each of the products is 20% of selling price. To calculate the ceiling and floor as follows:

| Item | Selling Price | Estimated Selling Costs | NRV [Ceiling]* | Normal Profit Margin (20% of Selling Price) |
|------|---------------|-------------------------|----------------|---|
| | | | | |

| | | | | |
|---|-----------|----------|----------|----------|
| A | \$100,000 | \$15,000 | \$85,000 | \$20,000 |
| B | 120,000 | 30,000 | 90,000 | 24,000 |
| C | 90,000 | 15,000 | 75,000 | 18,000 |
| D | 100,000 | 15,000 | 85,000 | 20,000 |
| E | 110,000 | 14,000 | 96,000 | 22,000 |

Additional information related to year-end inventory cost (determined by applying the LCM rule) and replacement cost are given in the first two columns. Determination of LCM is a two-step process. First, we calculate the market amount using replacement cost, subject to a ceiling and floor and then we compare the market amount to the cost or market.

| Item | (1) Cost | Market | | | (5) Market [Middle of (2), (3), (4)] |
|-------|-------------------------|----------------------------|-------------------------|--------------------------------|---|
| | | (2) Replacement Cost | (3) NRV [Ceiling] | (4) NRV - NPM [Floor] | |
| A | \$ 50,000 | \$55,000 | \$85,000 | \$65,000 | \$65,000 |
| B | 100,000 | 97,000 | 90,000 | 66,000 | 90,000 |
| C | 80,000 | 70,000 | 75,000 | 57,000 | 70,000 |
| D | 90,000 | 95,000 | 85,000 | 65,000 | 85,000 |
| E | 95,000 | 92,000 | 96,000 | 74,000 | 92,000 |
| Total | <u>\$415,000</u> | | | | |

*NRV = Estimated selling price less estimated selling costs. For item A, \$100,000 - \$15,000 = \$85,000.

†NRV - NPM = NRV less a normal profit margin. For item A, \$85,000 - (\$100,000 selling price × 20%) = \$65,000.

Notice the market amount for each inventory item is simply the middle value among replacement cost, NRV (ceiling), and NRV - NPM (floor). When replacement cost is

- Below the floor* (item A), we select the floor as the market.
- Above the ceiling* (items B and D), we select the ceiling as the market.

c. *Between the ceiling and the floor* (items C and E), we select replacement cost as the market.

We then compare each item's designated market amount to its cost and choose the lower of the two. After doing this, ending inventory under LCM is **\$387,000**. This means that the recorded cost of \$415,000 needs to be reduced by \$28,000 (= \$415,000 - \$387,000). We record that adjustment to cost of goods sold if the decrease to market is considered normal for this company.

| | |
|---------------------|--------|
| Cost of goods sold* | 28,000 |
| Inventory | 28,000 |

*In situations when a write-down is substantial and unusual, the write-down should be recorded in a loss on inventory write-down account.

| Inventory | |
|----------------|--------|
| 415,000 | |
| | 28,000 |
| 387,000 | |

The example in [Illustration 9-3](#) calculates LCM on an individual items basis. The LCM method also can be applied to major categories of inventory or to the entire inventory, just like we saw in [Illustration 9-2](#) under the LCNRV approach. As shown in [Illustration 9-4](#), inventory using the LCM approach applied *by category* would be reported as **\$397,000**. If we calculate LCM *by total inventory*, the amount to report for ending inventory would be **\$402,000**.

Illustration 9-4 Lower of Cost or Market—Application at Different Levels of Aggregation

From the information in [Illustration 9-3](#), also assume items A and B are a collection of items, and items C, D, and E are another collection of similar items. Each collection is considered a category of inventory.

| Item | Cost | Market | Lower of Cost or Market | |
|------|-----------|-----------|-------------------------|-------------|
| | | | By Individual Items | By Category |
| A | \$ 50,000 | \$ 65,000 | \$ 50,000 | |

| | | | | |
|-------------------|-------------------------|-------------------------|-------------------------|-------------------------|
| B | <u>100,000</u> | <u>90,000</u> | 90,000 | |
| Total A and B | <u>\$150,000</u> | <u>\$155,000</u> | | \$ 150,000 |
| C | \$ 80,000 | \$ 70,000 | 70,000 | |
| D | 90,000 | 85,000 | 85,000 | |
| E | <u>95,000</u> | <u>92,000</u> | <u>92,000</u> | |
| Total C, D, and E | <u>\$265,000</u> | <u>\$247,000</u> | | 247,000 |
| Total | <u><u>\$415,000</u></u> | <u><u>\$402,000</u></u> | <u><u>\$387,000</u></u> | <u><u>\$397,000</u></u> |

PART B

Inventory Estimation Techniques

For some companies or in certain situations, it becomes difficult or impossible to physically count each unit of inventory. For example, consider a large retail company that has locations over the entire nation and sells many different items. Trying to track the cost of each item would be nearly impossible. In these situations, companies have developed methods for estimating inventory. We'll study those methods next.

The Gross Profit Method

LO9–2 Estimate ending inventory and cost of goods sold using the gross profit method.

The **gross profit method**, also known as the **gross margin method**, is useful in situations where estimates of inventory are desirable. The technique is valuable in a variety of situations, including the following:

1. In determining the cost of inventory that has been lost, destroyed, or stolen.
2. In estimating inventory and cost of goods sold for interim reports, avoiding the expense of a physical inventory count.
3. In auditors' testing of the overall reasonableness of inventory amounts reported by clients.
4. In budgeting and forecasting.

The technique relies on a relationship you learned in the previous chapter—ending inventory and cost of goods sold always equal the cost of goods available for sale. Even when inventory is unknown, we can estimate it because accounting records usually indicate the cost of goods available for sale (beginning inventory plus net purchases), and the cost of goods sold can be estimated from available information. So by subtracting the cost of goods sold estimate from the cost of goods available for sale, we obtain an estimate of ending inventory. Let's compare that with the way inventory and cost of goods sold normally are determined.

Usually, in a periodic inventory system, ending inventory is known from a physical count and cost of goods sold is *derived* as follows:

| | |
|--------------------------|-------------------------------|
| Beginning inventory | (from the accounting records) |
| Plus: Net purchases | (from the accounting records) |
| Goods available for sale | |
| Less: Ending inventory | (from a physical count) |
| Cost of goods sold | |

However, when using the gross profit method, the ending inventory is *not* known. Instead, the amount of sales is known—from which we can estimate the cost of goods sold—and ending inventory is the amount calculated.

| | |
|--------------------------|-------------------------------|
| Beginning inventory | (from the accounting records) |
| Plus: Net purchases | (from the accounting records) |
| <hr/> | |
| Goods available for sale | |
| Less: Cost of goods sold | (estimated) |
| <hr/> | |
| Ending inventory | (estimated) |

So, a first step in estimating inventory is to estimate cost of goods sold. This estimate relies on the historical relationship among (a) net sales, (b) cost of goods sold, and (c) gross profit. Gross profit, you will recall, is simply net sales minus cost of goods sold. So, if we know what net sales are, and if we know what percentage of net sales the gross profit is, we can fairly accurately estimate cost of goods sold. Companies often sell products that have similar gross profit ratios. As a result, accounting records usually provide the information necessary to estimate the cost of ending inventory, even when a physical count is impractical.

Suppose a company began the year with inventory of \$600,000, and on March 17, a warehouse fire destroyed the entire inventory. Company records indicate net purchases of \$1,500,000 and net sales of \$2,000,000 prior to the fire. The gross profit ratio in each of the previous three years has been very close to 40%.  **Illustration 9-5** shows how the company can estimate the cost of the inventory destroyed for its insurance claim.

ILLUSTRATION 9-5 Gross Profit Method

| | | |
|-------------------------------------|------------------|------------------|
| Beginning inventory (from records) | | \$ 600,000 |
| Plus: Net purchases (from records) | | <u>1,500,000</u> |
| Goods available for sale | | 2,100,000 |
| Less: Cost of goods sold: | | |
| Net sales | \$2,000,000 | |
| Less: Estimated gross profit of 40% | <u>(800,000)</u> | |
| Estimated cost of goods sold* | | (1,200,000) |

Estimated ending inventory

\$ 900,000

*Alternatively, cost of goods sold can be calculated as $\$2,000,000 \times (1 - 0.40) = \$1,200,000$.

A Word of Caution

The gross profit method provides only an estimate.

The key to obtaining good estimates is the reliability of the gross profit ratio. The ratio usually is estimated

from relationships between sales and cost of goods

sold. However, the current relationship may differ from the past. In that case, all available information should be used to make necessary adjustments. For example, the company may have made changes in the markup percentage of some of its products. Very often different products have different markups. In these situations, a blanket ratio should not be applied across the board. The accuracy of the estimate can be improved by grouping inventory into pools of products that have similar gross profit relationships rather than using one gross profit ratio for the entire inventory.

The key to obtaining good estimates is the reliability of the gross profit ratio.

The company's cost flow assumption should be implicitly considered when

Page 467

estimating the gross profit ratio. For example, if LIFO is used and the relationship between cost and selling price has changed for recent acquisitions, this would suggest a ratio different from one where the average cost method was used.

Another difficulty with the gross profit method is that it does not explicitly consider possible theft or spoilage of inventory. The method assumes that if the inventory was not sold, then it must be on hand at the end of the period. Suspected theft or spoilage would require an adjustment to estimates obtained using the gross profit method.

Because of these deficiencies, the gross profit method is not allowed under generally accepted accounting principles for annual financial statements. The method can be used for interim reports.

The gross profit method is not acceptable for the preparation of annual financial statements.

Additional Consideration

The gross profit ratio is, by definition, a percentage of sales. Sometimes, though, the gross profit is stated as a percentage of cost instead. In that case, it is referred to as the **markup on cost**. For instance, a 66% markup on cost is equivalent to a gross profit ratio of 40%. Here's why:

A gross profit ratio of 40% can be formulated as follows:

$$\begin{aligned} \text{Sales} &= \text{Cost} + \text{Gross profit} \\ 100\% &= 60\% + 40\% \end{aligned}$$

Now, expressing gross profit as a percentage of cost we get the following:

$$\begin{aligned} \text{Gross profit \%} \div \text{Cost\%} &= \text{Gross profit as a \% of cost} \\ 40\% \div 60\% &= 66\frac{2}{3}\% \end{aligned}$$

Conversely, gross profit as a percentage of cost can be converted to gross profit as a percentage of sales (the gross profit ratio) as follows:

$$\begin{aligned} \text{Gross profit as a \% of sales} &= \frac{\text{Gross profit as a \% of cost}}{1 + \text{Gross profit as a \% of cost}} \\ \frac{66\frac{2}{3}\%}{1 + 66\frac{2}{3}\%} &= 40\% \end{aligned}$$

Be careful to note which way the percentage is being stated. If stated as a markup on cost, it can be converted to the gross profit ratio, and the gross profit method can be applied the usual way.

The Retail Inventory Method

LO9–3 Estimate ending inventory and cost of goods sold using the retail inventory method, applying the various cost flow methods.

As the name implies, the retail inventory method is used by many retail companies such as **Target**, **Walmart**, **Dollar General**, **Kohl's**, and **Macy's**. High-volume retailers selling many different items at low unit prices find the retail inventory method ideal. Its principal benefit is that a physical count of inventory is not required to estimate ending inventory and cost of goods sold.⁷ Instead, companies only need to track purchases during the year at their cost and retail prices. *Cost* refers to purchase cost, while *retail* refers to current selling prices.

The retail inventory method is used to estimate ending inventory and cost of goods sold.

The various techniques used to make this estimation are discussed in the examples to follow. For now, it's good to have in mind the following general concept.

| | |
|--|---|
| Beginning inventory (at retail) | (from last year) |
| <u>Plus: Net purchases (at retail)</u> | (from current retail prices) |
| Goods available for sale (at retail) | |
| <u>Less: Net sales</u> | (from the accounting records) |
| Ending inventory (at retail) | |
| ↓ | |
| Estimated ending inventory (at cost) | (converted using cost-to-retail percentage) |

Without a physical count of ending inventory, we can estimate its cost by subtracting net sales from the goods available for sale (at retail) and then converting by the cost-to-retail percentage.

 **Illustration 9–6** provides an example of the retail inventory method.

ILLUSTRATION 9–6 Retail Inventory Method—Estimating ending Inventory and cost of Goods Sold

Home Improvement Stores, Inc., uses a periodic inventory system and the retail inventory method to estimate ending inventory and cost of goods sold. The following data are available for the month of June:

| | Cost | Retail |
|--|--------------------------|------------------|
| Beginning inventory | \$ 60,000 | \$ 100,000 |
| Plus: Net purchases | <u>287,200</u> | <u>460,000</u> |
| Goods available for sale | 347,200 | 560,000 |
| Cost-to-retail percentage : $\frac{\$347,200}{\$560,000} = 62\%$ | | |
| Less: Net sales | | (400,000) |
| Estimated ending inventory at retail | | <u>\$160,000</u> |
| Estimated ending inventory at cost (\$160,000 × 62%) | <u>(99,200)</u> | |
| Estimated cost of goods sold | <u><u>\$248,000*</u></u> | |

*Goods available for sale (at cost) minus ending inventory (at cost).

Beginning inventory at cost and retail are known from ending amounts last year. Home Improvement Stores then follows these procedures:

- Track purchases during the year at their cost and retail amounts.
- Calculate goods available for sale as beginning inventory plus purchases.
- Calculate the **cost-to-retail percentage** as goods available for sale (at cost) divided by goods available for sale (at retail), which equals **62%** in this example.
- Subtract net sales of \$400,000 to determine ending inventory (at retail) of **\$160,000**.
- Multiply ending inventory (at retail) by the cost-to-retail percentage to estimate ending inventory (at cost) of **\$99,200**.
- Subtract estimated ending inventory (at cost) from goods available for sale (at cost) to estimate cost of goods sold of **\$248,000** (= \$347,200 – \$99,200).

ADVANTAGES OF THE RETAIL INVENTORY METHOD

The retail inventory method tends to provide a more accurate estimate than the gross profit method because it's based on the current relation between cost and selling prices rather than

the historical gross profit ratio. This is one reason the retail inventory method is allowed for financial reporting purposes.

Another advantage of the retail inventory method is that different cost flow methods can be explicitly incorporated into the estimation technique. In other words, we can modify the application of the method to estimate ending inventory and cost of goods sold using FIFO, LIFO, or average cost. Later in the chapter, we illustrate average cost and LIFO with the retail inventory method. We do not illustrate the FIFO method with the retail inventory method because it is used infrequently in practice.

Like the gross profit method, the retail inventory method also can be used to estimate the cost of inventory lost, stolen, or destroyed; for testing the overall reasonableness of physical counts; in budgeting and forecasting as well as in generating information for interim financial statements. Even though the retail method provides fairly accurate estimates, a physical count of inventory usually is performed at least once a year to verify accuracy and detect spoilage, theft, and other irregularities.⁸

Retail Terminology

Our example above is simplified in that we implicitly assumed that the selling prices of beginning inventory and of merchandise purchased did not change from date of acquisition to the end of the period. This

frequently is an unrealistic assumption. After the initial markup of inventory but before it has been sold, companies sometimes increase the selling price further (additional markup) or reduce the selling price (markdown). For applying the retail inventory method, we need to track the movement in the selling price until it is sold. The terms in  **Illustration 9-7** are associated with changing retail prices of merchandise inventory.

Changes in the selling prices must be included in the determination of ending inventory at retail.

ILLUSTRATION 9-7 Terminology Used in Applying the Retail Method

| | |
|----------------------------|---|
| Initial markup | Original amount of markup from cost to selling price. |
| Additional markup | Increase in selling price subsequent to initial markup. |
| Markup cancellation | Elimination of an additional markup. |
| Markdown | Decrease in selling price subsequent to initial markup. |

Markdown cancellation Elimination of a markdown.

To illustrate, assume that a product purchased for \$6 is initially listed with a selling price of \$10 (that is, there is a \$4 initial markup). If the selling price is subsequently increased to \$13, the additional markup is \$3. If the selling price is then subsequently decreased to \$12, the markup cancellation is \$1. A markup cancellation reduces an additional markup but not below the original selling price. We refer to the net effect of additional markups and markup cancellations ($\$3 - \$1 = \$2$) as the **net markup**. The left side of  **Illustration 9-8** depicts these events.

ILLUSTRATION 9-8 Retail Inventory Method Terminology

Now, let's say the selling price of the product, purchased for \$6 and initially marked up to \$10, is reduced to \$7. The markdown is \$3. If the selling price is later increased to \$8, the markdown cancellation is \$1. A markdown cancellation reduces a markdown but not above the original selling price. We refer to the net effect of markdowns and markdown cancellations ($\$3 - \$1 = \$2$) as the **net markdown**. The right side of  **Illustration 9-8** depicts this possibility.

Net markups and net markdowns are included in the retail column to determine ending inventory at retail.

When applying the retail inventory method, *net markups and net markdowns must be included in the determination of ending inventory at retail.* We now continue our illustration of the retail inventory method, but expand it to incorporate markups and markdowns as well as to approximate cost by each of the alternative inventory cost flow methods.

Cost Flow Methods

Let's continue our example of Home Improvement Stores, Inc., from [Illustration 9-6](#).

We'll use the data in [Illustration 9-9](#) to see how the retail inventory method can be used to approximate different cost flow assumptions.

ILLUSTRATION 9-9 The Retail Inventory Method—Various Cost Flow Methods

Home Improvement Stores, Inc., uses a periodic inventory system and the retail inventory method to estimate ending inventory and cost of goods sold. The following data are available from the company's records for the month of July:

| | Cost | Retail |
|---------------------|-----------|----------------------|
| Beginning inventory | \$ 99,200 | \$ 160,000 |
| Net purchases | 305,280* | 470,000** |
| Net markups | | 10,000 |
| Net markdowns | | 8,000 |
| Net sales | | 434,000 [†] |

*Purchases at cost less returns, plus freight-in.

**Original selling price of purchased inventory less returns at retail.

[†]Gross sales less returns.

APPROXIMATING AVERAGE COST

Recall that the average cost method assumes that cost of goods sold and ending inventory each consist of a *mixture* of all the goods available for sale. So when we use the retail method to approximate average cost, the cost-to-retail percentage should be based on the

weighted averages of the costs and retail amounts for *all* goods available for sale. This is achieved by calculating the cost-to-retail percentage by dividing the total cost of goods available for sale by total goods available for sale at retail. When this average percentage is applied to ending inventory at retail, we get an estimate of ending inventory at average cost.

To approximate average cost, the cost-to-retail percentage is determined for *all* goods available for sale.

We demonstrate the retail inventory method approximating average costs for July in **Illustration 9-10**. Notice that both net markups and net markdowns are included in the determination of goods available for sale at retail.

ILLUSTRATION 9-10 Retail Inventory Method—Average Cost

| | Cost | Retail |
|--|--------------------------|------------------|
| Beginning inventory | \$ 99,200 | \$ 160,000 |
| Plus: Net purchases | 305,280 | 470,000 |
| Net markups | | 10,000 |
| Less: Net markdowns | | (8,000) |
| Goods available for sale | 404,480 | 632,000 |
| Cost-to-retail percentage : $\frac{\$404,480}{\$632,000} = 64\%$ | | |
| Less: Net sales | | (434,000) |
| Estimated ending inventory at retail | | <u>\$198,000</u> |
| Estimated ending inventory at cost (\$198,000 × 64%) | (126,720) | |
| Estimated cost of goods sold | <u>\$ 277,760</u> | |

If you look back to our simplified example for the month of June in **Illustration 9-6**, you'll notice that we used this approach there. So, our ending inventory and cost-of-goods-sold estimates for June were estimates of average cost.⁹

APPROXIMATING AVERAGE LOWER OF COST OR MARKET—THE CONVENTIONAL RETAIL METHOD

LO9-4 Explain how the retail inventory method can be made to approximate the lower of cost or market rule.

Recall from our discussion earlier in the chapter that companies using the retail inventory method report inventory in the balance sheet at the lower of cost or

To approximate the lower of average cost or market, markdowns are not included in

market. Fortunately, we can apply the retail inventory method in such a way that the lower of average cost or market is approximated. This method often is referred

to as the **conventional retail method**. *We apply the conventional retail method by excluding net markdowns from the calculation of the cost-to-retail percentage.* Markdowns still are subtracted in the retail column but only after the percentage is calculated. To approximate lower of average cost or market, the retail method is modified as shown in **Illustration 9-11**.

the calculation of the cost-to-retail percentage.

ILLUSTRATION 9-11 Retail Inventory Method—Conventional

| | Cost | Retail |
|---|--------------------------|-------------------------|
| Beginning inventory | \$ 99,200 | \$ 160,000 |
| Plus: Net purchases | 305,280 | 470,000 |
| Net markups | | <u>10,000</u> |
| Goods available for sale (excluding net markdowns) | 404,480 | 640,000 |
| Cost-to-retail percentage : $\frac{\$404,480}{\$640,000} =$ | 63.2% | |
| Less: Net markdowns | | <u>(8,000)</u> |
| Goods available for sale (including net markdowns) | | 632,000 |
| Less: Net sales | | <u>(434,000)</u> |
| Estimated ending inventory at retail | | <u>\$198,000</u> |
| Estimated ending inventory at cost (\$198,000 × 63.2%) | (125,136) | |
| Estimated cost of goods sold | <u>\$ 279,344</u> | |

Notice that by not subtracting net markdowns from the denominator, the cost-to-retail percentage is lower than it was previously (**63.2%** versus 64%). This always will be the case when markdowns exist. As a result, the cost approximation of ending inventory always will be less when markdowns exist.

To understand why this lower amount approximates the lower of average cost or market, we need to realize that markdowns usually occur when obsolescence, spoilage, overstocking, price declines, or competition has lessened the utility of the merchandise. To

The logic for using this approximation is that a markdown is evidence of a reduction in the utility of inventory.

recognize this decline in utility in the period it occurs, we exclude net markdowns from the calculation of the cost-to-retail percentage. It should be emphasized that this approach provides only an *approximation* of what ending inventory might be as opposed to applying the lower of cost or market rule in the more exact way described earlier in the chapter.

Also notice that the ending inventory at retail is the same using both approaches (**\$198,000**). This will be the case regardless of the cost flow method used because in all approaches this amount reflects the ending inventory at current retail prices.

The conventional retail variation generally is not used in combination with LIFO. This does not mean that a company using LIFO ignores the lower of cost or market rule. Any obsolete or slow-moving inventory that has not been marked down by year-end can be written down to market after the estimation of inventory using the retail method. This usually is not a significant problem. If prices are rising, LIFO ending inventory includes old lower-priced items whose costs are likely to be lower than current market. The conventional retail variation could be applied to the FIFO method.

THE LIFO RETAIL METHOD

The last-in, first-out (LIFO) method assumes that units sold are those most recently acquired. When there's a net increase in inventory quantity during a period, the use of LIFO results in ending inventory that includes the beginning inventory as well as one or more additional layers added during the period. When there's a net decrease in inventory quantity, LIFO layer(s) are liquidated. In applying LIFO to the retail method in the simplest way, we assume that the retail prices of goods remained stable during the period. This assumption, which is relaxed later in the chapter, allows us to look at the beginning and ending inventory in dollars to determine if inventory quantity has increased or decreased.

We'll use the numbers from our previous example to illustrate using the retail method to approximate LIFO so we can compare the results with those of the conventional retail method. Recall that beginning

If inventory at retail increases during the year, a new layer is added.

inventory at retail is \$160,000 and ending inventory at retail is \$198,000. If we assume stable retail prices, inventory quantity must have increased during the year. This means ending inventory includes the beginning inventory layer of \$160,000 (\$99,200 at cost) as well as some additional merchandise purchased during the period. To estimate total ending inventory at LIFO cost, we also need to determine the inventory layer added during the period. When using the LIFO retail method, we assume no more than one inventory layer is

added per period if inventory increases.¹⁰ Each layer will carry its own cost-to-retail percentage.

Illustration 9-12 shows how Home Improvement Stores would estimate total ending inventory and cost of goods sold for the period using the LIFO retail method. The beginning inventory layer carries a cost-to-retail percentage of **62%** ($= \$99,200 \div \$160,000$). The layer of inventory added during the period is \$38,000 at retail, which is determined by subtracting beginning inventory at retail from ending inventory at retail ($\$198,000 - \$160,000$). This layer will be converted to cost by multiplying it by its own cost-to-retail percentage, reflecting the *current* period's ratio of cost to retail amounts, in this case, **64.68%**.

ILLUSTRATION 9-12 LIFO Retail Method

Each layer has its own cost-to-retail percentage.

| | Cost |
|--|--|
| Beginning inventory | \$ 99,200 |
| Plus: Net purchases | 305,280 |
| Net markups | |
| Less: Net markdowns | _____ |
| Goods available for sale (excluding beginning inventory) | 305,280 |
| Goods available for sale (including beginning inventory) | 404,480 |
| Beginning inventory cost-to-retail percentage: | $\frac{\$99,200}{\$160,000} = \mathbf{62.00\%}$ |
| July cost-to-retail percentage: | $\frac{\$305,280}{\$472,000} = \mathbf{64.68\%}$ |
| Less: Net sales | |
| Estimated ending inventory at retail | |
| Estimated ending inventory at cost (calculated below) | (123,000) |
| Estimated cost of goods sold | \$280,000 |

Calculation of ending inventory at cost:

| | Retail |
|------------------------|---------------------------------------|
| Beginning inventory | $\$160,000 \times \mathbf{62.00\%} =$ |
| Current period's layer | $38,000 \times \mathbf{64.68\%} =$ |

Estimated ending Inventory

\$198,000

The next period's (August's) beginning inventory will include the two distinct layers (June and July), each of which carries its own unique cost-to-retail percentage. Notice in the illustration that both net markups and net markdowns are included in the calculation of the current period's cost-to-retail percentage.

Other Issues Pertaining to the Retail Method

To focus on the key elements of the retail method, we've so far ignored some of the details of the retail process. Fundamental elements such as returns and allowances, discounts, freight, spoilage, and shortages can complicate the retail method.

For calculating the cost-to-retail percentage, we use the cost of net purchases in the cost amount (numerator). Recall that net purchases is found by adding freight-in to purchases and subtracting both purchase returns and purchase discounts. This means that freight-in adds to the cost amount, while purchase returns and purchase discounts reduce the cost amount. For the retail amount (denominator), we calculate net purchases as total purchases (at retail) minus purchase returns (at retail). We subtract purchase returns for the simple reason that these items are no longer available for sale. We do not include freight-in and purchase discounts in the calculation of net purchases for the retail amount because these are not items to be sold and therefore have no corresponding retail amounts.

After calculating the cost-to-retail percentage, we deduct net sales from goods available for sale (at retail). Net sales, for purposes of applying the retail inventory method, include *sales returns* but exclude *sales discounts* and *employee discounts*.

- Sales returns are subtracted from total sales because they represent inventory that has not been sold and therefore should not be included in the sales (or retail) amount.
- Sales discounts are not subtracted in calculating net sales because they do not represent an adjustment in selling prices but instead represent a financial incentive for customers to

Net sales, for purposes of applying the retail inventory method, include *sales returns* but exclude *sales discounts* and *employee discounts*.

pay early. If sales initially were recorded net of sales discounts, those discounts are added back in calculating net sales.

- Employee discounts are not included in calculating net sales. The reason is that the cost-to-retail percentage did not include employee discounts, so the retail amount of ending inventory also should not be affected by employee discounts in estimating its cost. If sales to employees initially were recorded net of the employee-discounts, those discounts are added back in calculating net sales.

We also need to consider spoilage, breakage, and theft. So far we've assumed that by subtracting goods sold from goods available for sale, we find ending inventory. It's possible, though, that some of the goods available for sale were lost to such shortages and therefore do not remain in ending inventory.

To take these shortages into account when using the retail method, we deduct the retail value of inventory lost due to spoilage, breakage, or theft in the retail column. These losses are expected for most retail ventures so they are referred to as *normal shortages* (spoilage, breakage, etc.) and are deducted from goods available for sale (at retail). Because these losses are anticipated, they are included implicitly in the determination of selling prices. Including normal spoilage in the calculation of the percentage would distort the normal relationship between cost and retail. In contrast, *abnormal shortages* are deducted from both the cost and retail amounts used to calculate the cost-to-retail percentage. These losses are not anticipated and are not included in the determination of selling prices.

Normal shortages are deducted in the retail column *after* the calculation of the cost-to-retail percentage.

Abnormal shortages are deducted in both the cost and retail columns *before* the calculation of the cost-to-retail percentage.

We recap the treatment of special elements in the application of the retail method in [Illustration 9-13](#) and illustrate the use of some of them in the concept review exercise that follows.

Illustration 9-13 Recap of Other Retail Method Elements

| Element | Treatment |
|---|----------------------------------|
| For calculating the cost-to-retail percentage: | |
| Freight-in | <i>Added</i> to the cost amount. |

| Element | Treatment |
|---|--|
| Purchase returns | <i>Deducted</i> from both the cost and retail amounts. |
| Purchase discounts taken (if gross method used to record purchases) | <i>Deducted</i> from the cost amount. |
| Abnormal shortages (spoilage, breakage, theft) | <i>Deducted</i> from both the cost and retail amounts. |
| After calculating the cost-to-retail percentage: | |
| Net sales (Total sales less sales returns)* | <i>Deducted</i> from goods available for sale (at retail). |
| Normal shortages (spoilage, breakage, theft) | <i>Deducted</i> from goods available for sale (at retail). |
| *The calculation of net sales for the retail inventory method does not include sales discounts or employee discounts. | |

Concept Review Exercise

RETAIL INVENTORY METHOD

The Henderson Company uses the retail inventory method to estimate ending inventory and cost of goods sold. The following data are available in Henderson's accounting records:

| | Cost | Retail |
|---------------------|-------------|---------------|
| Beginning inventory | \$ 8,000 | \$12,000 |
| Purchases | 68,000 | 98,000 |
| Freight-in | 3,200 | |
| Purchase returns | 3,000 | 4,200 |
| Net markups | | 6,000 |
| Net markdowns | | 2,400 |
| Normal spoilage | | 1,800 |
| Sales | | 97,000 |
| Sales returns | | 5,000 |

| | Cost | Retail |
|--------------------|------|--------|
| Employee discounts | | 2,300 |

Sales of \$97,000 include a reduction for employee discounts of \$2,300.

Required:

1. Estimate Henderson's ending inventory and cost of goods sold for the year using the average cost retail method.
2. Estimate Henderson's ending inventory and cost of goods sold for the year using the conventional retail method.
3. Estimate Henderson's ending inventory and cost of goods sold for the year using the LIFO retail method.

Solution:

1. Estimate Henderson's ending inventory and cost of goods sold for the year using the average cost retail method.

| | Cost | Re |
|---|----------------|----------------------|
| Beginning inventory | \$ 8,000 | \$ 12, |
| Plus: Purchases | 68,000 | 98, |

| Estimated Ending Inventory | <u><u>$\\$13,300$</u></u> | <u><u>$\\$8,910$</u></u> |

* $\$8,000 \div \$12,000 = 66.67\%$

PART C

Dollar-Value LIFO Retail

LO9–5 Determine ending inventory using the dollar-value LIFO retail inventory method.

In our earlier discussion of the LIFO retail method, we assumed that the retail prices of the inventory remained stable during the period. If you recall from

 **Illustration 9-12**, we compared the ending inventory (at retail) with the beginning inventory (at retail) to see if inventory had increased. If the dollar amount of ending inventory exceeded the beginning amount, we assumed a new LIFO layer had been added. But this isn't necessarily true. It may be that the dollar amount of ending inventory exceeded the beginning amount simply because retail prices increased, without an actual change in the quantity of goods. So, to see if there's been a "real" increase in quantity, we need a way to eliminate the effect of any price changes before we compare the ending inventory with the beginning inventory. Fortunately, we can accomplish this by combining two methods we've already discussed—the LIFO retail method (Part B of this chapter) and dollar-value LIFO (previous chapter). The combination is called the **dollar-value LIFO retail method**.

Allow for retail prices to change during the period.

To illustrate, we return to the Home Improvement Stores situation ( **Illustration 9-12**) in which we applied LIFO retail. We keep the same inventory data, but change the illustration from the month of July to the fiscal year 2024. This allows us to build into

 **Illustration 9-14** a significant change in retail prices over the year of 10% (an increase in the retail price index from 1.00 to 1.10). We follow the LIFO retail procedure up to the point of comparing the ending inventory with the beginning inventory. However, because prices have risen, the apparent increase in inventory is only partly due to an additional layer of inventory and partly due to the increase in retail prices. The real increase is found by

Using the retail method to approximate LIFO is referred to as the *dollar-value LIFO retail method*.

deflating the ending inventory amount to beginning of the year prices before comparing beginning and ending amounts. We did this with the dollar-value LIFO technique discussed in the previous chapter.¹¹

ILLUSTRATION 9-14 The Dollar-Value LIFO Retail Method

| | Cost | Retail |
|---|--------------------------|------------------------|
| Beginning inventory | \$ 99,200 | \$160,00 |
| Plus: Net purchases | 305,280 | 470,00 |
| Net markups | | 10,00 |
| Less: Net markdowns | | <u>(8,00)</u> |
| Goods available for sale (excluding beginning inventory) | <u>305,280</u> | <u>472,00</u> |
| Goods available for sale (including beginning inventory) | 404,480 | 632,00 |
| Base layer cost-to-retail percentage: $\frac{\$99,200}{\$160,000} = 62\%$ | | |
| 2024 layer cost-to-retail percentage: $\frac{\$305,280}{\$472,000} = 64.68\%$ | | |
| Less: Net sales | | (434,00) |
| Ending inventory at current year retail prices | | <u>\$198,00</u> |
| Estimated ending inventory at cost (calculated below) | (113,430) | |
| Estimated cost of goods sold | <u>\$ 291,050</u> | |

Calculation of ending inventory at cost:

| Ending Inventory at Year-End Retail Prices | Step 1 Ending Inventory at Base Year Retail Prices | Step 2 Inventory Layers at Base Year Retail Prices | Step 3 Inventory Layers Converted to LIFO Cost |
|---|---|---|---|
| \$198,000 (assumed) | $\frac{\$198,000}{1.10} = \$180,000$ | \$180,000 | |
| | | 160,000 (base) $\times 1.00 \times 0.62 = \$ 99,200$ | |
| | | 20,000 (2024) $\times 1.10 \times 0.6468 = 14,230$ | |
| | | | <u><u>\$ 113,430</u></u> |
| Total ending inventory at dollar-value LIFO retail cost | | | |

In this illustration, the ending inventory (at retail) of **\$198,000** is restated to base year prices (\$180,000). Comparing this restated amount to beginning inventory layer of **\$160,000** reveals that a layer of **\$20,000** has been added in 2024. Multiplying each layer by its retail price index and by its cost-to-retail percentage converts it from retail to cost. The two layers are added to derive ending inventory at dollar-value LIFO retail cost.

Each layer year carries its unique retail price index and its unique cost-to-retail percentage.

When additional layers are added in subsequent years, their LIFO amounts are determined the same way. For illustration, let's assume ending inventory in 2025 is **\$226,200** at current retail prices, and the price level has risen to **1.16**. Also, assume that the cost-to-retail percentage for 2025 net purchases is 63%. In [Illustration 9-14A](#), the ending inventory converted to base year retail prices equals \$195,000 (step 1). This amount represents the base year layer of \$160,000 plus the layer of \$20,000 added in 2024 plus a new layer of \$15,000 added in 2025 (step 2). Each of these layers is multiplied by its retail price index and by its cost-to-retail percentage to calculate ending inventory of **\$124,392** (step 3).

Illustration 9-14A The Dollar-Value LIFO Retail Inventory Method—Layer Added in Subsequent Year

| Ending Inventory at Year-End Retail Prices | Step 1 Ending Inventory at Base Year Retail Prices | Step 2 Inventory Layers at Base Year Retail Prices | Step 3 Inventory Layers Converted to LIFO Cost |
|--|--|---|--|
| \$226,200 (assumed) | $\frac{\$226,200}{1.16} = \$195,000$ | \$195,000 | |
| | | 160,000 (base) × 1.00 × 0.62 = \$ 99,200 | |
| | | 20,000 (2024) × 1.10 × 0.6468 = 14,230 | |
| | | 15,000 (2025) × 1.16 × 0.63 = 10,962 | |
| | | | \$124,392 |
| | | Total ending inventory at dollar-value LIFO retail cost | |

Now, let's assume that ending inventory in 2025 is **\$204,160** at current retail prices (instead of \$226,200 as in the previous example) and the price level has risen to **1.16**. Also, assume that the cost-to-retail percentage for 2025 net purchases is 63%. As shown in step 1 of

Illustration 9-14B, we convert ending inventory to a base year price of \$176,000 (= \$204,160 ÷ 1.16).

Illustration 9-14B The Dollar-Value LIFO Retail Inventory Method—No Layer Added in Subsequent Year

| Ending Inventory at Year-End Retail Prices | Step 1 Ending Inventory at Base Year Retail Prices | Step 2 Inventory Layers at Base Year Retail Prices | Step 3 Inventory Layers Converted to LIFO Cost |
|---|---|---|---|
| \$204,160 (assumed) | $\frac{\$204,160}{1.16} = \$176,000$ | \$176,000 | |
| | | 160,000 (base) × 1.00 × 0.62 = \$ 99,200 | |
| | | 16,000 (2024) × 1.10 × 0.6468 = 11,384 | |
| | | 0 (no layer in 2025) × 1.16 = 0 | |
| | | | \$110,584 |
| Total ending inventory at dollar-value LIFO retail cost | | | |

Next, we determine the layers of inventory (step 2). To do that, let's first recall from [Illustration 9-14](#) that inventory layers at the end of 2024 consist of \$160,000 from the base year and \$20,000 added in 2024. Those layers totaled \$180,000. In 2025, total inventory at base year prices has *declined* to \$176,000. The decline means that no layer was added in 2025, and \$4,000 of the \$20,000 layer in 2024 has been sold, reducing the previous 2024 layer to a remainder of \$16,000. Each layer is multiplied by its retail price index and by its cost-to-retail percentage to calculate ending inventory of **\$110,584** (step 3).

When inventory decreases, no new layer is added and a previous layer is (partially) removed.

As we mentioned earlier in this section, many high-volume retailers selling many different items use the retail method. **Costco Wholesale Corporation**, for example, uses the dollar-value LIFO variation of the retail method. [Illustration 9-15](#) shows the inventory disclosure note included in the company's recent financial statements.

ILLUSTRATION 9-15 Disclosure of Inventory Method—Costco Wholesale Corporation

Real World Financials

Merchandise Inventories (in part)

Merchandise inventories are stated at the lower of cost or market. U.S. merchandise inventories are valued by the cost method of accounting, using the last-in, first-out (LIFO) basis. The Company believes the LIFO method more fairly presents the results of operations by more closely matching current costs with current revenues. The Company records an adjustment each quarter, if necessary, for the projected annual effect of inflation or deflation, and these estimates are adjusted to actual results determined at year-end, after actual inflation or deflation rates and inventory levels for the year have been determined.

Concept Review Exercise

DOLLAR-VALUE LIFO RETAIL METHOD

On January 1, 2024, the Nicholson Department Store adopted the dollar-value LIFO retail inventory method. Inventory transactions at both cost and retail and cost indexes for 2024 and 2025 are as follows:

| | 2024 | | 2025 | |
|---------------------|----------|----------|----------|----|
| | Cost | Retail | Cost | |
| Beginning inventory | \$16,000 | \$24,000 | | |
| Net purchases | 42,000 | 58,500 | \$45,000 | \$ |
| Net markups | | 3,000 | | |
| Net markdowns | | 1,500 | | |
| Net sales | | 56,000 | | |
| Price index: | | | | |
| January 1, 2024 | | 1.00 | | |
| December 31, 2024 | | 1.08 | | |
| December 31, 2025 | | 1.15 | | |

Required:

Estimate the 2024 and 2025 ending inventory and cost of goods sold using the dollar-value LIFO retail inventory method.

Solution:

| | 2024 | | |
|--|-------------------------|-------------------------|-------------------------|
| | Cost | Retail | C |
| Beginning inventory | <u>\$ 16,000</u> | <u>\$ 24,000</u> | <u>\$ 17,400</u> |
| Plus: Net purchases | 42,000 | 58,500 | 45,000 |
| Net markups | | 3,000 | |
| Less: Net markdowns | | <u>(1,500)</u> | |
| Goods available for sale (excluding beg. inv.) | <u>42,000</u> | <u>60,000</u> | <u>45,000</u> |
| Goods available for sale (including beg. inv.) | 58,000 | 84,000 | 62,400 |
| Base layer | | | |
| Cost-to-retail percentage: $\frac{\$16,000}{\$24,000} = 66.67\%$ | | | |
| 2024 | | | |
| Cost-to-retail percentage: $\frac{\$42,000}{\$60,000} = 70.00\%$ | | | |
| 2025 | | | |
| Cost-to-retail percentage: $\frac{\$45,000}{\$60,000} = 75.00\%$ | | | |
| Less: Net sales | | (56,000) | |
| Estimated ending inv. at current year retail prices | | <u>\$ 28,000</u> | |

PART D

Change in Inventory Method and Inventory Errors

Change in Inventory Method

LO9–6 Explain the appropriate accounting treatment required when a change in inventory method is made.

Accounting principles should be applied consistently from period to period to allow for comparability of operating results. However, changes within a company, as well as changes in the external economic environment, may require a company to change an accounting method. As we mentioned in [Chapter 8](#), in the past, high inflation periods motivated many companies to switch to LIFO for the tax benefit.

Specific accounting treatment and disclosures are prescribed for companies that change accounting principles. [Chapter 4](#) introduced the subject of accounting changes, and [Chapter 20](#) provides in-depth coverage of the topic. Here we provide an overview of how changes in inventory methods are reported.

Most Inventory Changes

Recall from our brief discussion in [Chapter 4](#) that most voluntary changes in accounting principles are reported retrospectively. This means reporting all previous periods' financial statements as if the new method had been used in all prior periods. Changes in inventory methods, other than a change to LIFO, are treated this way. We discuss the *change to LIFO* exception in the next section. In [Chapter 4](#), we briefly discussed the steps a company undertakes to account for a change in accounting principle. We demonstrate those steps in [Illustration 9-16](#).

Changes in inventory methods, other than a change to LIFO, are accounted for retrospectively.

ILLUSTRATION 9-16 Change in Inventory Method

Autogeek, Inc., a wholesale distributor of auto parts, began business in 2021. Inventory reported in the 2023 year-end balance sheet, determined using the average cost method, was **\$123,000**. In 2024, the company decided to change its inventory method to FIFO. If the company had used the FIFO method in 2023,

ending inventory would have been **\$146,000**. What steps should Autogeek take to report this change?

The first step is to revise prior years' financial statements. That is, for each year reported in the comparative statements, Autogeek makes those statements appear as if the newly adopted inventory method, FIFO, had been applied all along. In its balance sheets, assuming that the company presents balance sheets for two years for comparative purposes, the company would report 2024 inventory by its newly adopted method, FIFO, and also would revise the amounts it reported last year for its 2023 inventory. In its 2024 and prior year income statements, cost of goods sold would also reflect the new method.

Step 1: Revise comparative financial statements.

In its statements of shareholders' equity, Autogeek would report retained earnings each year as if it had used FIFO all along. And, for the earliest year reported, the company would revise beginning retained earnings that year to reflect the cumulative income effect of the difference in inventory methods for all prior years. You will see this step illustrated in  **Chapter 20** after you have studied the statement of shareholders' equity in more depth.

Page 478

Autogeek also would record a journal entry to adjust the book balances from their current amounts to what those balances would have been using FIFO. Because differences in cost of goods sold and income are reflected in retained earnings, as are the income tax effects, the journal entry updates inventory, retained earnings, and the appropriate income tax account. We ignore the income tax effects here but include those effects in an illustration in  **Chapter 20**. The journal entry below, *ignoring income taxes*, increases the 2024 beginning inventory to the FIFO basis amount of \$146,000 and increases retained earnings by the same amount, because that's what the increase in prior years' income would have been had FIFO been used.

Step 2: The affected accounts are adjusted.

| | | |
|---|--------|--------|
| Inventory (\$146,000 – \$123,000) | 23,000 | |
| Retained earnings | | 23,000 |

Autogeek must provide in a disclosure note a clear explanation of why the change to FIFO is preferable. The note also would indicate the effects of the change

Step 3: A disclosure note provides additional information.

on (a) income from continuing operations, (b) net income, (c) each line-item affected, (d) earnings per share, and (e) the cumulative effect of the change on retained earnings or other components of equity as of the beginning of the earliest period presented.

We see in [Illustration 9-17](#) an example of such a note in the annual report of **CVS Health Corporation** when it changed its inventory method for retail/LTC inventories to the average cost method.

ILLUSTRATION 9-17 Disclosure of Change in Inventory Method—CVS Health Corporation

Real World Financials

Inventory (in part)

Effective January 1, 2015, the Company changed its methods of accounting for “front store” inventories in the Retail/LTC Segment. Prior to 2015, the Company valued front store inventories at the lower of cost or market on a first-in, first-out (“FIFO”) basis in retail stores using the retail inventory method and in distribution centers using the FIFO cost method. Effective January 1, 2015, all front store inventories in the Retail/LTC Segment have been valued at the lower of cost or market using the weighted average cost method.

These changes were made primarily to provide the Company with better information to manage its retail front store operations and to bring all of the Company’s inventories to a common inventory valuation methodology. The Company believes the weighted average cost method is preferable to the retail inventory method and the FIFO cost method because it results in greater precision in the determination of cost of revenues and inventories at the stock keeping unit (“SKU”) level and results in a consistent inventory valuation method for all of the Company’s inventories as all of the Company’s remaining inventories, which consist of prescription drugs, were already being valued using the weighted average cost method.

The Company recorded the cumulative effect of these changes in accounting principle as of January 1, 2015. The effect of these changes in accounting principle as of January 1, 2015, was a decrease in inventories of \$7 million, an increase in current deferred income tax assets of \$3 million and a decrease in retained earnings of \$4 million.

Change to the LIFO Method

When a company changes *to the LIFO inventory method* from any other method, it usually is impossible to calculate the income effect on prior years. To do so would require assumptions as to when specific LIFO inventory layers were created in years prior to the change. As a result, a company changing to LIFO usually does not report the change retrospectively. Instead, the LIFO method simply is used from that point on. The base year inventory for all future LIFO determinations is the beginning inventory in the year the LIFO method is adopted.¹²

Accounting records usually are inadequate for a company changing to *LIFO* to report the change retrospectively.

A disclosure note is needed to explain (a) the nature of and justification for the change, (b) the effect of the change on current year's income and earnings per share, and (c) why retrospective application was impracticable. When **Seneca Foods Corporation** adopted the LIFO inventory method, it reported the change in the note shown in **Illustration 9-18**.

ILLUSTRATION 9-18 Change in Inventory Method Disclosure—Seneca Foods Corporation

Real World Financials

10. Inventories (in part)

The Company decided to change its inventory valuation method from the FIFO method to the LIFO method. In the high inflation environment that the Company is experiencing, the Company believes that the LIFO inventory method is preferable over the FIFO method because it better compares the cost of current production to current revenue. Selling prices are established to reflect current market activity, which recognizes the increasing costs. Under FIFO, revenue and costs are not aligned. Under LIFO, the current cost of sales is matched to the current revenue. The Company determined that retrospective application of LIFO for periods prior to the current fiscal year was impracticable because the period-specific information

necessary to analyze inventories, including inventories acquired as part of the prior fiscal year's Signature acquisition, were not readily available and could not be precisely determined at the appropriate level of detail, including the commodity, size and item code information necessary to perform the detailed calculations required to retrospectively compute the internal LIFO indices applicable to prior fiscal years. The effect of this change was to reduce net earnings by \$37,917,000 and \$18,307,000 in the current and prior fiscal year, respectively, below that which would have been reported using the Company's previous inventory method. The reduction in earnings per share was \$3.12 (\$3.09 diluted) and \$1.50 per share (\$1.49 diluted) in the current and prior fiscal year, respectively.

Source: Seneca Foods Corporation

As we discussed in [Chapter 8](#), an important motivation for using LIFO in periods of rising costs is that it produces higher cost of goods sold and lowers net income and income taxes. Notice in the Seneca Foods disclosure note that the switch to LIFO did cause a decrease in net income and therefore income taxes in the year of the switch indicating an environment of increasing costs.

Additional Consideration

When changing from one generally accepted accounting principle to another, a company must justify that the change results in financial information that more properly portrays operating results and financial position. For income tax purposes, a company generally must obtain consent from the Internal Revenue Service before changing an accounting method. A special form also must be filed with the IRS when a company intends to adopt the LIFO inventory method. When a company changes from LIFO for tax purposes, it can't change back to LIFO until five tax returns have been filed using the non-LIFO method.

Inventory Errors

LO9–7 Explain the appropriate accounting treatment required when an inventory error is discovered.

Accounting errors must be corrected when they are discovered. In [Chapter 4](#), we briefly discussed the correction of accounting errors, and [Chapter 20](#) provides in-depth coverage. Here we provide an overview of the accounting treatment and disclosures in the context of inventory errors. Inventory errors include the over- or understatement of ending inventory due to a mistake in physical count or a mistake in pricing inventory quantities. Also, errors include the over- or understatement of purchases, which could be caused by the cutoff errors described in [Chapter 8](#).

If an inventory error is discovered in the same accounting period it occurred, the original erroneous entry should simply be reversed and the appropriate entry recorded. This situation presents no particular reporting problem.

Page 480

If a *material* inventory error is discovered in an accounting period subsequent to the period in which the error was made, any previous years' financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction.¹³

For material errors, previous years' financial statements are retrospectively restated.

And, of course, any account balances that are incorrect as a result of the error are corrected by journal entry. If, due to an error affecting net income, retained earnings is one of the incorrect accounts, the correction is reported as a prior period adjustment to the beginning balance on the statement of shareholders' equity.¹⁴ In addition, a disclosure note is needed to describe the nature of the error and the impact of its correction on net income, each line-item affected, and earnings per share.

Incorrect balances are corrected.

When analyzing inventory errors, it's helpful to visualize the way cost of goods sold, net income, and retained earnings are determined (see

A correction of retained earnings is reported as a prior period adjustment.

[Illustration 9-19](#)). Beginning inventory and net purchases are *added* in the calculation of cost of goods sold. If either of these is overstated

(understated), then cost of goods sold would be overstated (understated). On the other hand, ending inventory is *deducted* in the calculation of cost of goods sold, so if ending inventory is overstated (understated), then cost of goods sold is understated (overstated). Of course, errors that affect income also will affect income taxes. In the illustration that follows, we ignore the tax effects of the errors and focus on the errors themselves rather than their tax aspects.

A disclosure note describes the nature and the impact of the error.

ILLUSTRATION 9-19 Visualizing the Effect of Inventory Errors

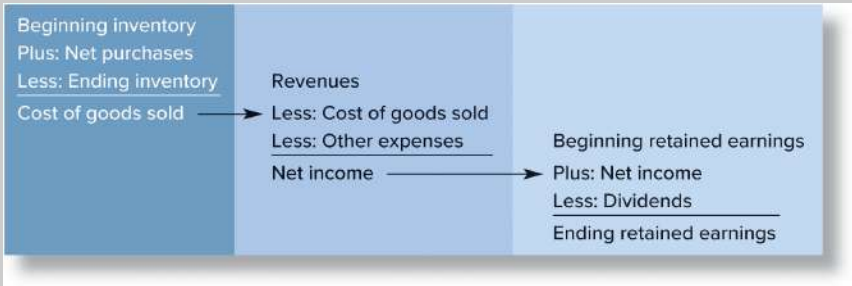

Illustration 9-20 provides a numerical example of how an inventory error affects reported amounts in both the current year and the following year.

ILLUSTRATION 9-20 Inventory Error Correction

The Barton Company uses a periodic inventory system. At the end of 2023, a mathematical error caused an \$800,000 overstatement of ending inventory. Ending inventories for 2024 and 2025 are correctly determined.

The way we correct this error depends on when the error is discovered. Assuming that the error is not discovered until after 2024, the 2023 and 2024 effects of the error, ignoring income tax effects, are shown below. The overstated and understated amounts are \$800,000 in each instance.

Analysis: U = Understated O = Overstated

| 2023 | | 2024 | |
|--------------------------|-------------|--------------------------|------------------|
| Beginning inventory | | Beginning inventory | O – 800,000 |
| Plus: Net purchases | | Plus: Net purchases | |
| Less: Ending inventory | O – 800,000 | Less: Ending inventory | |
| Cost of goods sold | U – 800,000 | Cost of goods sold | O – 800,000 |
| Revenues | | Revenues | |
| Less: Cost of goods sold | U – 800,000 | Less: Cost of goods sold | O – 800,000 |
| Less: Other expenses | | Less: Other expenses | |
| Net income | O – 800,000 | Net income | U – 800,000 |
| ↓ | | ↓ | |
| Retained earnings | O – 800,000 | Retained earnings | <u>corrected</u> |

When the Inventory Error Is Discovered the Following Year

Now, let's assume the error in  **Illustration 9-20** is discovered in 2024. The 2023 financial statements that were incorrect as a result of the error are

retrospectively restated to reflect the correct inventory

amount, cost of goods sold, net income, and retained earnings when those statements are

reported again for comparative purposes in the 2024 annual report. The following journal

entry, *ignoring income taxes*, is needed in 2024 to correct the error in the company's records.

Previous years' financial statements are retrospectively restated.

A journal entry corrects any incorrect account balance.

| | | |
|-------------------|---------|---------|
| Retained earnings | 800,000 | |
| Inventory | | 800,000 |

We debit retained earnings in 2024 to correct its balance. Net income in 2023 was overstated by the amount of the inventory error, and this caused retained earnings to be overstated. The correction to retained earnings is reported as a *prior period adjustment* to the 2024 beginning retained

When retained earnings requires correction, a *prior period adjustment* is made on the statement of shareholders' equity.

earnings balance in Barton's statement of shareholders' equity. Prior period adjustments do not flow through the income statement but directly adjust retained earnings. This adjustment is illustrated in  [Chapter 20](#).

When the Inventory Error Is Discovered Two Years Later

If the error in 2023 isn't discovered until 2025, the 2024 financial statements also are retrospectively restated to reflect the correct cost of goods sold and net income even though no correcting entry would be needed at that point. Inventory and retained earnings in 2025 would not require adjustment. The error has self-corrected and no prior period adjustment is needed.

Also, a disclosure note in Barton's annual report should describe the nature of the error and the impact of its correction on each year's net income (overstated by \$800,000 in 2023; understated by \$800,000 in 2024), the line items affected, and earnings per share.

A disclosure note describes the nature of the error and the impact of the correction on income.

Concept Review Exercise

INVENTORY ERRORS

In 2024, the controller of the Fleischman Wholesale Beverage Company discovered the following material errors related to the 2022 and 2023 financial statements:

- a. Inventory at the end of 2022 was understated by \$50,000.
- b. Late in 2023, a \$3,000 purchase was incorrectly recorded as a \$33,000 purchase. The invoice has not yet been paid.
- c. Inventory at the end of 2023 was overstated by \$20,000.

The company uses a periodic inventory system.

Page 482

Required:

1. Assuming that the errors were discovered after the 2023 financial statements were issued, analyze the effect of the errors on 2022 and 2023 cost of goods sold, net income, and retained earnings. Ignore income taxes.

2. Prepare a journal entry in 2024 to correct the errors.

Solution:

1.

| Analysis: U = Understated | | O = Overstated | |
|---------------------------|------------|--------------------------|-------------------|
| 2022 | | 2023 | |
| Beginning inventory | | Beginning inventory | U – 50,000 |
| Plus: Net purchases | | Plus: Net purchases | O – 30,000 |
| Less: Ending inventory | U – 50,000 | Less: Ending inventory | O – 20,000 |
| Cost of goods sold | O – 50,000 | Cost of goods sold | U – 40,000 |
| Revenues | | Revenues | |
| Less: Cost of goods sold | O – 50,000 | Less: Cost of goods sold | U – 40,000 |
| Less: Other expenses | | Less: Other expenses | |
| Net income | U – 50,000 | Net income | O – 40,000 |
| ↓ | | ↓ | |
| Retained earnings | U – 50,000 | Retained earnings | U – 10,000 |

2. Prepare a journal entry in 2024 to correct the errors.

| | |
|-------------------|---------------|
| Accounts payable | 30,000 |
| Inventory | 20,000 |
| Retained earnings | 10,000 |

Earnings Quality

A change in the accounting method a company uses to value inventory is one way managers can artificially manipulate income. However, this method of income manipulation is transparent. As we learned in a previous section, the effect on income of switching from one inventory method to another must be disclosed. That disclosure restores comparability between periods and enhances earnings quality.

On the other hand, inventory write-downs are included in the broader category of “big bath” accounting techniques some companies use to manipulate

Inventory write-downs often are cited as a method used to shift income between periods.

earnings. By overstating the write-down, profits are increased in future periods as the inventory is used or sold. When the demand for many high-technology products decreased significantly in late 2000 and early 2001, several companies, including **Sycamore Networks**, **Cisco Systems**, **Lucent Technologies**, and **JDS Uniphase**, recorded large inventory write-offs, some in the billions of dollars. Certainly, these write-offs reflected the existing economic environment. However, some analysts questioned the size of some of the write-offs. For example, William Schaff, an investment officer at Bay Isle Financial, noted that Cisco’s \$2 billion write-off was approximately equal to the balance of inventory on hand at the end of the previous quarter and about equal to the cost of goods actually sold during the quarter.

A financial analyst must carefully consider the effect of any significant asset write-down on the assessment of a company’s permanent earnings.

Financial Reporting Case Solution

- 1. How does Dollar General avoid counting all its inventory every time it produces financial statements?** Dollar General uses the dollar-value LIFO retail inventory method. The retail inventory estimation technique avoids the counting of ending inventory by keeping track of goods available for sale not only at cost but also at retail prices. Each period's sales, at sales prices, are deducted from the retail amount of goods available for sale to arrive at ending inventory at retail. This amount is then converted to cost using a cost-to-retail percentage.
- 2. What is the index formulation used for?** The dollar-value LIFO retail method uses a price index to first convert ending inventory at retail to base year prices. Yearly LIFO layers are then determined, and each layer is converted to that year's current year retail prices using the year's price index and then to cost using the layer's cost-to-retail percentage. ●

The Bottom Line

-  **LO9-1** Companies that use FIFO, average cost, or any other method besides LIFO or the retail inventory method report inventory at the lower of cost or net realizable value (NRV). Net realizable value is selling price less costs to sell. Companies that use LIFO or the retail inventory method report inventory at the lower of cost or market. Market equals replacement cost, except that market should not (a) be greater than NRV (ceiling) or (b) be less than NRV minus an approximately normal profit margin (floor). (*p. 457*)
-  **LO9-2** The gross profit method estimates cost of goods sold which is then subtracted from cost of goods available for sale to estimate ending inventory. The estimate of cost of goods sold is determined by subtracting an estimate of gross profit from net sales. The estimate of gross profit is determined by multiplying the historical gross profit ratio times net sales. (*p. 465*)
-  **LO9-3** The retail inventory method determines the amount of ending inventory at retail by subtracting sales for the period from goods available for sale at retail. Ending inventory at retail is then converted to *cost* by multiplying it by the cost-to-retail percentage, which is based on a current relationship between cost and selling price. (*p. 467*)
-  **LO9-4** By the conventional retail method, we estimate average cost at lower of cost or market. Average cost is estimated by including beginning inventory in the calculation of the cost-to-retail percentage. The lower of average cost or market is estimated by excluding markdowns from the calculation. Markdowns are subtracted in the retail column after the percentage is calculated. (*p. 470*)
-  **LO9-5** By the LIFO retail method, ending inventory includes the beginning inventory plus the current year's layer. To determine layers, we compare ending inventory at retail to beginning inventory at retail and assume that no more than one inventory layer is added if inventory increases. Each layer carries its own cost-to-retail percentage, which is used to convert each layer from retail to cost. The dollar-value LIFO retail inventory method combines the LIFO retail method and the dollar-value LIFO method (Chapter 8) to estimate LIFO from retail prices when the price level has changed. (*p. 475*)
-  **LO9-6** Most changes in inventory methods are reported retrospectively. This means revising all previous periods' financial statements to appear as if the newly

adopted inventory method had been applied all along. An exception is a change to the LIFO method. In this case, it usually is impossible to calculate the income effect on prior years. To do so would require assumptions as to when specific LIFO inventory layers were created in years prior to the change. As a result, a company changing to LIFO usually does not report the change retrospectively. Instead, the LIFO method simply is used from that point on. (p. 478)

LO9-7 If a material inventory error is discovered in an accounting period subsequent to the period in which the error is made, previous years' financial statements that were incorrect as a result of the error are retrospectively restated to reflect the correction. Account balances are corrected by journal entry. A correction of retained earnings is reported as a prior period adjustment to the beginning balance in the statement of shareholders' equity. In addition, a disclosure note is needed to describe the nature of the error and the impact of its correction on continuing operations, net income, and earnings per share. (p. 480)

LO9-8 *IAS No. 2* specifies that if circumstances reveal that an inventory write-down is no longer appropriate, it must be reversed. Reversals are not permitted under U.S. GAAP. Under U.S. GAAP, the lower of cost or net realizable value rule can be applied to individual items, inventory categories, or the entire inventory. Using the international standard, the assessment usually is applied to individual items, although using inventory categories is allowed under certain circumstances. (p. 461) ●

APPENDIX 9 Purchase Commitments

Purchase commitments are contracts that obligate a company to purchase a specified amount of merchandise or raw materials at specified prices on or before specified dates. Companies enter into these agreements to make sure they will be able to obtain important inventory as well as to protect against increases in purchase price. However, if the purchase price decreases before the agreement is exercised, the commitment has the disadvantage of requiring the company to purchase inventory at a higher than market price. If this happens, a loss on the purchase commitment is recorded.

Purchase commitments protect the buyer against price increases and provide a supply of product.

Because purchase commitments create the possibility of this kind of loss, the loss occurs when the market price falls below the commitment price rather than when the inventory eventually is sold. This means recording the loss when the product is purchased or, if

Purchases made pursuant to a purchase commitment are recorded at the lower of contract price or market price on the date the contract is executed.

the commitment is still outstanding, at the end of the reporting period. In other words, purchases are recorded at market price when that price is lower than the contract price, and a loss is recognized for the difference. Also, losses are recognized for any purchase commitments outstanding at the end of a reporting period when market price is less than contract price. This is best understood by the example in [Illustration 9A-1](#).

Illustration 9A-1 Purchase Commitments

In July 2024, the Lassiter Company signed two purchase commitments. The first requires Lassiter to purchase inventory for \$500,000 by November 15, 2024. The second requires Lassiter to purchase inventory for \$600,000 by February 15, 2025. Lassiter's fiscal year-end is December 31. The company uses a perpetual inventory system.

Contract Period within Fiscal Year

The contract period for the first commitment is contained within a single fiscal year. Lassiter would record the purchase at the contract price if the market price of inventory at date of acquisition is *equal to or greater than* the contract price of \$500,000.¹⁵

Purchase inventory at the contract price.

| | | |
|----------------------------|---------|---------|
| Inventory (contract price) | 500,000 | |
| Cash (or accounts payable) | | 500,000 |

If the market price of inventory at acquisition is *less* than the contract price, inventory is recorded at the market price and a loss is recognized.¹⁶ For example, if the market price is \$425,000 at the time of acquisition, Lassiter must still pay \$500,000 (contract price) and would record the following entry:

If market price is less than the contract price at acquisition, a loss is recorded.

| | | |
|-----------------------------|---------|---------|
| Inventory (market price) | 425,000 | |
| Loss on purchase commitment | 75,000 | |
| Cash (or accounts payable) | | 500,000 |

The objective of this treatment is to associate the loss with the period in which the price declines rather than with the period in which the company eventually sells the inventory. This is consistent with recording inventory at the lower of cost or market, as you studied in the chapter.

Contract Period Extends beyond Fiscal Year

Now let's consider Lassiter's second purchase commitment that is outstanding at the end of the fiscal year 2024 (that is, the purchases have not yet been made). If the market price of inventory at the end of the year is *equal to or greater than* the contract price of \$600,000, no entry is recorded. However, if the market price at year-end is *less* than the contract price, a loss must be recognized. The objective is to associate the loss with the period in which the price declines rather than with the period in which the company eventually sells the inventory. Let's say the year-end market price of the inventory for Lassiter's second purchase commitment is \$540,000. The following adjusting entry is recorded:

If the market price at year-end is less than the contract price, a loss is recorded for the difference.

| December 31, 2024 | |
|--|--------|
| Estimated loss on purchase commitment (\$600,000 – \$540,000) | 60,000 |
| Estimated liability on purchase commitment | 60,000 |

At this point, the loss is an *estimated* loss. The actual loss, if any, will not be known until the inventory actually is purchased. The best estimate of the market price on date of purchase is the current market price, in this case, \$540,000. Because no inventory has been acquired, we can't credit inventory for the loss. Instead, a liability is credited because, in a sense, the loss represents an obligation to purchase inventory above market price.

A liability is credited for estimated losses on purchase commitments.

The entry to record the actual purchase on or before February 15, 2025, will vary depending on the market price of the inventory at date of purchase. If the market price is unchanged or has increased from the year-end price, the following entry is made:

If market price on purchase date has not declined from year-end price, the purchase is recorded at the year-end market price.

| | | |
|--|---------|---------|
| Inventory (accounting cost) | 540,000 | |
| Estimated liability on purchase commitment | 60,000 | |
| Cash (or accounts payable) | | 600,000 |

Even if the market price of the inventory increases, there is no recovery of the \$60,000 loss recognized in 2024. Similar to the method of recording inventory at the lower of cost or market, the reduced inventory value, in this case, the reduced value of purchases, is considered to be the new cost and any recovery of value is ignored.

If the market price declines even further from year-end levels, an additional loss is recognized. For example, if the market price of the inventory covered by the commitment declines to \$510,000, the following entry is recorded:

If market price declines further from year-end, an additional loss is recorded at acquisition.

| | |
|--------------------------|---------|
| Inventory (market price) | 510,000 |
|--------------------------|---------|

| | | |
|---|--------|---------|
| Loss on purchase commitment (\$540,000 – \$510,000) | 30,000 | |
| Estimated liability on purchase commitment | 60,000 | |
| Cash (or accounts payable) | | 600,000 |

The total loss on this purchase commitment of \$90,000 is thus allocated between 2024 and 2025 according to when the decline in value of the inventory covered by the commitment occurred.

If there are material amounts of purchase commitments outstanding at the end of a reporting period, the contract details are disclosed in a note. This disclosure is required even if no loss estimate has been recorded.

Questions For Review of Key Topics

- Q 9-1** Explain the (a) lower of cost or net realizable value (LCNRV) approach and the (b) lower of cost or market (LCM) approach to valuing inventory.
- Q 9-2** What are the various levels of aggregation to which the LCNRV and LCM approaches can be applied?
- Q 9-3** Describe the typical approach for recording inventory write-downs.
- Q 9-4** Explain the gross profit method of estimating ending inventory.
- Q 9-5** The Rider Company uses the gross profit method to estimate ending inventory and cost of goods sold. The cost percentage is determined based on historical data. What factors could cause the estimate of ending inventory to be overstated?
- Q 9-6** Explain the retail inventory method of estimating ending inventory.
- Q 9-7** Both the gross profit method and the retail inventory method provide a way to estimate ending inventory. What is the main difference between the two estimation techniques?
- Q 9-8** Define each of the following retail terms: initial markup, additional markup, markup cancellation, markdown, markdown cancellation.
- Q 9-9** Explain how to estimate the average cost of inventory when using the retail inventory method.
- Q 9-10** What is the conventional retail method?
- Q 9-11** Explain the LIFO retail inventory method.
- Q 9-12** Discuss the treatment of freight-in, purchase returns, purchase discounts, normal spoilage, sales returns, sales discounts, and employee discounts in the application of the retail inventory method.
- Q 9-13** Explain the difference between the retail inventory method using LIFO and the dollar-value LIFO retail method.
- Q 9-14** Describe the accounting treatment for a change in inventory method other than to LIFO.
- Q 9-15** When a company changes its inventory method to LIFO, an exception is made for the way accounting changes usually are reported. Explain the difference in the accounting treatment of a change *to* the LIFO inventory method from other inventory method changes.
- Q 9-16** Explain the accounting treatment of material inventory errors discovered in an accounting period subsequent to the period in which the error is made.

Q 9-17 It is discovered in 2024 that ending inventory in 2022 was understated. What is the effect of the understatement on the following:

2022: Cost of goods sold
 Net income
 Ending retained earnings

2023: Net purchases
 Cost of goods sold
 Net income
 Ending retained earnings

IFRS

Q 9-18 Identify any differences between U.S. GAAP and IFRS when applying the lower of cost or net realizable value rule to inventory valuation.

Q 9-19 (Based on [Appendix 9](#)) Define purchase commitments. What is the advantage(s) of these agreements to buyers?

Q 9-20 (Based on [Appendix 9](#)) Explain how purchase commitments are recorded for the lower of contract price or market price.

Brief Exercises

BE 9–1 Lower of cost or net realizable value LO9–1

A1 Electronics has one product in its ending inventory. Per unit data consist of the following: cost, \$20; selling price, \$30; selling costs, \$4. What unit value should A1 use when applying the lower of cost or net realizable value rule to ending inventory?

BE 9–2 Lower of cost or net realizable value LO9–1

SLR Corporation has 1,000 units of each of its two products in its year-end inventory. Per unit data for each of the products are as follows:

| | Product 1 | Product 2 |
|---------------|-----------|-----------|
| Cost | \$50 | \$34 |
| Selling price | 70 | 36 |
| Costs to sell | 6 | 4 |

Determine the carrying value of SLR's inventory assuming that the lower of cost or net realizable value (LCNRV) rule is applied to individual products. What is the before-tax income effect of the LCNRV adjustment?

Page 488

BE 9–3 Lower of cost or market LO9–1

[This is a variation of  BE 9-1, modified to focus on the lower of cost or market.]

A1 Electronics has one product in its ending inventory. Per unit data consist of the following: cost, \$20; replacement cost, \$18; selling price, \$30; selling costs, \$4. The normal profit is 30% of selling price. What unit value should A1 use when applying the lower of cost or market (LCM) rule to ending inventory?

BE 9–4 Lower of cost or market LO9–1

[This is a variation of  **BE 9-2**, modified to focus on the lower of cost or market.]

SLR Corporation has 1,000 units of each of its two products in its year-end inventory. Per unit data for each of the products are as follows:

| | Product 1 | Product 2 |
|------------------|-----------|-----------|
| Cost | \$50 | \$34 |
| Replacement cost | 48 | 26 |
| Selling price | 70 | 36 |
| Selling costs | 6 | 4 |
| Normal profit | 10 | 8 |

Determine the carrying value of SLR's inventory assuming that the lower of cost or market (LCM) rule is applied to individual products. What is the before-tax income effect of the LCM adjustment?

BE 9-5 Gross profit method **LO9-2**

On February 26, a hurricane destroyed the entire inventory stored in a warehouse owned by the Rockport Corporation. The following information is available from the records of the company's periodic inventory system: beginning inventory, \$220,000; purchases and net sales from the beginning of the year through February 26, \$400,000 and \$600,000, respectively; gross profit ratio, 30%. Estimate the cost of the inventory destroyed by the hurricane using the gross profit method.

BE 9-6 Gross profit method; solving for unknown **LO9-2**

Amax Corporation estimates that it lost \$75,000 in inventory from a recent flood. The following information is available from the records of the company's periodic inventory system: beginning inventory, \$150,000; purchases and net sales from the beginning of the year through the date of the flood, \$450,000 and \$700,000, respectively. What is the company's gross profit ratio?

BE 9-7 Retail inventory method; average cost **LO9-3**

Kiddie World uses a periodic inventory system and the retail inventory method to estimate ending inventory and cost of goods sold. The following data are available at the end of the

year:

| | Cost | Retail |
|---------------------|-----------|------------|
| Beginning inventory | \$300,000 | \$ 450,000 |
| Net purchases | 861,000 | 1,210,000 |
| Freight-in | 22,000 | |
| Net markups | | 48,000 |
| Net markdowns | | 18,000 |
| Net sales | | 1,200,000 |

Estimate ending inventory and cost of goods sold (average cost) using the information provided.

BE 9-8 Retail inventory method; LIFO LO9-3

Refer to the situation described in  BE 9-7. Estimate ending inventory and cost of goods sold (LIFO) using the information provided.

BE 9-9 Conventional retail method LO9-4

Refer to the situation described in  BE 9-7. Estimate ending inventory and cost of goods sold using the conventional method and the information provided.

BE 9-10 Conventional retail method LO9-4

Robotics Corporation uses a periodic inventory system and the retail inventory method. Accounting records provided the following information for the 2024 fiscal year:

| | Cost | Retail |
|---------------------|-----------|------------|
| Beginning inventory | \$220,000 | \$ 400,000 |
| Net purchases | 640,000 | 1,180,000 |
| Freight-in | 17,800 | |
| Net markups | | 16,000 |
| Net markdowns | | 6,000 |
| Normal spoilage | | 3,000 |
| Sales | | 1,300,000 |

The company records sales to employees net of discounts. These discounts totaled \$15,000 for the year. Estimate ending inventory and cost of goods sold using the conventional method and the information provided.

BE 9–11 Dollar-value LIFO retail LO9–5

On January 1, 2024, Select Variety Store adopted the dollar-value LIFO retail inventory method. Accounting records provided the following information:

| | Cost | Retail |
|---------------------------------|-----------|-----------|
| Beginning inventory | \$ 40,800 | \$ 68,000 |
| Net purchases | 155,440 | 270,000 |
| Net markups | | 6,000 |
| Net markdowns | | 8,000 |
| Net sales | | 250,000 |
| Retail price index, end of year | | 1.02 |

Estimate ending inventory using the dollar-value LIFO retail method and the information provided.

BE 9–12 Dollar-value LIFO retail LO9–5

This exercise is a continuation of  BE 9–11. During 2025 (the following year), purchases at cost and retail were \$168,000 and \$301,000, respectively. Net markups, net markdowns, and net sales for the year were \$3,000, \$4,000, and \$280,000, respectively. The retail price index at the end of 2025 was 1.06. Estimate ending inventory in 2025 using the dollar-value LIFO retail method and the information provided.

BE 9–13 Change in inventory costing methods LO9–6

In 2024, Hopyard Lumber changed its inventory method from LIFO to FIFO. Inventory at the end of 2023 of \$127,000 would have been \$145,000 if FIFO had been used. Inventory at the end of 2024 is \$162,000 using the new FIFO method but would have been \$151,000 if the company had continued to use LIFO. Describe the steps Hopyard should take to report this change. What is the effect of the change on 2024 cost of goods sold?

BE 9–14 Change in inventory costing methods  **LO9–6**

In 2024, Clear Window and Glass changed its inventory method from FIFO to LIFO. Inventory at the end of 2023 is \$150,000. Describe the steps Clear Window and Glass should take to report this change.

BE 9–15 Inventory error  **LO9–7**

In 2024, Waterway International, Inc.'s controller discovered that ending inventories for 2022 and 2023 were overstated by \$200,000 and \$500,000, respectively. Determine the effect of the errors on retained earnings at January 1, 2024. (Ignore income taxes.)

BE 9–16 Inventory error  **LO9–7**

Refer to the situation described in  **BE 9–15**. What steps would be taken to report the error in the 2024 financial statements?

Exercises

E 9–1 Lower of cost or net realizable value LO9–1

Han Company has three products in its ending inventory. Specific per unit data at the end of the year for each of the products are as follows:

| | Product 1 | Product 2 | Product 3 |
|---------------|-----------|-----------|-----------|
| Cost | \$20 | \$ 90 | \$50 |
| Selling price | 40 | 120 | 70 |
| Costs to sell | 6 | 40 | 10 |

Required:

What unit values should Han use for each of its products when applying the lower of cost or net realizable value (LCNRV) rule to ending inventory?

E 9–2 Lower of cost or net realizable value LO9–1

The inventory of Royal Decking consisted of five products. Information about ending inventory is as follows:

| Product | Per Unit | |
|---------|----------|---------------|
| | Cost | Selling Price |
| A | \$ 40 | \$ 60 |
| B | 80 | 100 |
| C | 40 | 80 |
| D | 100 | 130 |
| E | 20 | 30 |

Costs to sell consist of a sales commission equal to 10% of selling price and shipping costs equal to 5% of cost.

Required:

What unit value should Royal Decking use for each of its products when applying the lower of cost or net realizable value (LCNRV) rule to units of ending inventory?

E 9–3 Lower of cost or net realizable value  **LO9–1**

Tatum Company has four products in its inventory. Information about ending inventory is as follows:

| Product | Total Cost | Total Net Realizable Value |
|---------|------------|----------------------------|
| 101 | \$120,000 | \$100,000 |
| 102 | 90,000 | 110,000 |
| 103 | 60,000 | 50,000 |
| 104 | 30,000 | 50,000 |

Required:

1. Determine the carrying value of ending inventory assuming the lower of cost or net realizable value (LCNRV) rule is applied to individual products.
2. Assuming that inventory write-downs are common for Tatum Company, record any necessary year-end adjusting entry.

E 9–4 Lower of cost or market  **LO9–1**

[This is a variation of  **E 9–1**, modified to focus on the lower of cost or market.]

Han Company has three products in its ending inventory. Specific per unit data at the end of the year for each of the products are as follows:

| | Product 1 | Product 2 | Product 3 |
|------------------|-----------|-----------|-----------|
| Cost | \$20 | \$ 90 | \$50 |
| Replacement cost | 18 | 85 | 40 |
| Selling price | 40 | 120 | 70 |
| Selling costs | 6 | 40 | 10 |
| Normal profit | 5 | 30 | 12 |

Required:

What unit values should Han use for each of its products when applying the lower of cost or market (LCM) rule to ending inventory?

E 9–5 Lower of cost or market  **LO9–1**

[This is a variation of  E 9–2, modified to focus on the lower of cost or market.]

The inventory of Royal Decking consisted of five products. Information about ending inventory is as follows:

| Product | Per Unit | | |
|---------|----------|------------------|---------------|
| | Cost | Replacement Cost | Selling Price |
| A | \$ 40 | \$35 | \$ 60 |
| B | 80 | 70 | 100 |
| C | 40 | 55 | 80 |
| D | 100 | 70 | 130 |
| E | 20 | 28 | 30 |

Selling costs consist of a sales commission equal to 10% of selling price and shipping costs equal to 5% of cost. The normal profit is 30% of selling price.

Required:

What unit value should Royal Decking use for each of its products when applying the lower of cost or market (LCM) rule to units of ending inventory?

E 9–6 Lower of cost or market  **LO9–1**

[This is a variation of  E 9–3, modified to focus on the lower of cost or market.]

Tatum Company has four products in its inventory. Information about ending inventory is as follows:

| Product | Total Cost | Total Replacement Cost | Total Net Realizable Value |
|---------|------------|------------------------|----------------------------|
| 101 | \$120,000 | \$100,000 | \$100,000 |
| 102 | 90,000 | 85,000 | 110,000 |
| 103 | 60,000 | 40,000 | 50,000 |

| Product | Total Cost | Total Replacement Cost | Total Net Realizable Value |
|---------|------------|------------------------|----------------------------|
| 104 | 30,000 | 28,000 | 50,000 |

The normal profit is 25% of *total cost*.

Required:

1. Determine the carrying value of inventory assuming the lower of cost or market (LCM) rule is applied to individual products.
2. Assuming that inventory write-downs are common for Tatum Company, record any necessary year-end adjusting entry.

E 9–7 FASB codification research  **LO9–1**

Access the *FASB Accounting Standards Codification* at the FASB website (www.fasb.org) and select Basic View for free access. Determine each of the following:

1. The specific seven-digit Codification citation (XXX-XX-XX) that contains discussion of the measurement of ending inventory using the lower of cost or net realizable value (LCNRV) rule and the lower of cost or market (LCM) rule.
2. The specific eight-digit Codification citation (XXX-XX-XX-X) that describes the measurement of the ceiling using the lower of cost or market (LCM) rule.
3. The specific eight-digit Codification citation (XXX-XX-XX-X) that describes the measurement of the floor using the lower of cost or market (LCM) rule.

E 9–8 Gross profit method  **LO9–2**

On September 22, 2024, a flood destroyed the entire merchandise inventory on hand in a warehouse owned by the Rocklin Sporting Goods Company. The following information is available from the records of the company's periodic inventory system:

| | |
|---|-----------|
| Inventory, January 1, 2024 | \$140,000 |
| Net purchases, January 1 through September 22 | 370,000 |
| Net sales, January 1 through September 22 | 550,000 |

Gross profit ratio

25%

Required:

Estimate the cost of inventory destroyed in the flood using the gross profit method.

E 9–9 Gross profit method  **LO9–2**

On November 21, 2024, a fire at Hodge Company’s warehouse caused severe damage to its entire inventory of Product Tex. Hodge estimates that all usable damaged goods can be sold for \$12,000. The following information was available from the records of Hodge’s periodic inventory system:

| | |
|--|-----------|
| Inventory, November 1, 2024 | \$100,000 |
| Net purchases from November 1, to the date of the fire | 140,000 |
| Net sales from November 1, to the date of the fire | 220,000 |

Based on recent history, Hodge’s gross profit ratio on Product Tex is 35% of net sales.

Required:

Calculate the estimated loss on the inventory from the fire, using the gross profit method.

(AICPA adapted)

E 9–10 Gross profit method  **LO9–2**

A fire destroyed a warehouse of the Goren Group, Inc., on May 4, 2024. Accounting records on that date indicated the following:

| | |
|--|-------------|
| Merchandise inventory, January 1, 2024 | \$1,900,000 |
| Purchases to date | 5,800,000 |
| Freight-in | 400,000 |
| Sales to date | 8,200,000 |

The gross profit ratio has averaged 20% of sales for the past four years.

Required:

Use the gross profit method to estimate the cost of the inventory destroyed in the fire.

E 9–11 Gross profit method LO9–2

Royal Gorge Company uses the gross profit method to estimate ending inventory and cost of goods sold when preparing monthly financial statements required by its bank. Inventory on hand at the end of October was \$58,500. The following information for the month of November was available from company records:

| | |
|-------------------|-----------|
| Purchases | \$110,000 |
| Freight-in | 3,000 |
| Sales | 180,000 |
| Sales returns | 5,000 |
| Purchases returns | 4,000 |

In addition, the controller is aware of \$8,000 of inventory that was stolen during November from one of the company's warehouses.

Required:

1. Calculate the estimated inventory at the end of November, assuming a gross profit ratio of 40%.
2. Calculate the estimated inventory at the end of November, assuming a markup on cost of 60%.

E 9–12 Gross profit method; solving for unknown cost percentage LO9–2

National Distributing Company uses a periodic inventory system to track its merchandise inventory and the gross profit method to estimate ending inventory and cost of goods sold for interim periods. Net purchases for the month of August were \$31,000. The July 31 and August 31, 2024, financial statements contained the following information:

| Income Statements | | |
|------------------------------|------------------------|----------------------|
| For the Months Ending | | |
| | August 31, 2024 | July 31, 2024 |
| Net sales | <u>\$50,000</u> | <u>\$40,000</u> |

Balance Sheets at

August 31, 2024

July 31, 2024

Assets:

| | | |
|-----------------------|-----------------|-----------------|
| Merchandise inventory | <u>\$28,000</u> | <u>\$27,000</u> |
|-----------------------|-----------------|-----------------|

Required:

Determine the company's cost percentage.

E 9–13 Retail inventory method; average cost  **LO9–3**

San Lorenzo General Store uses a periodic inventory system and the retail inventory method to estimate ending inventory and cost of goods sold. The following data are available for the month of October:

| | Cost | Retail |
|---------------------|----------|----------|
| Beginning inventory | \$35,000 | \$50,000 |
| Net purchases | 19,120 | 31,600 |
| Net markups | | 1,200 |
| Net markdowns | | 800 |
| Net sales | | 32,000 |

Required:

Estimate the average cost of ending inventory and cost of goods sold for October using the information provided.

E 9–14 Conventional retail method  **LO9–3**

Colonial Corporation uses the retail method to value its inventory. The following information is available for the year:

| | Cost | Retail |
|---------------------|-----------|-----------|
| Beginning inventory | \$190,000 | \$280,000 |
| Purchases | 600,000 | 840,000 |
| Freight-in | 8,000 | |
| Net markups | | 20,000 |

| | Cost | Retail |
|---------------|------|---------|
| Net markdowns | | 4,000 |
| Net sales | | 800,000 |

Required:

Determine ending inventory and cost of goods sold by applying the conventional retail method using the information provided.

E 9–15 Retail inventory method; LIFO  **LO9–3**

Crosby Company owns a chain of hardware stores throughout the state. The company uses a periodic inventory system and the retail inventory method to estimate ending inventory and cost of goods sold. The following data are available:

| | Cost | Retail |
|---------------------|-----------|-----------|
| Beginning inventory | \$160,000 | \$280,000 |
| Net purchases | 607,760 | 840,000 |
| Net markups | | 20,000 |
| Net markdowns | | 4,000 |
| Net sales | | 800,000 |

Required:

Estimate the LIFO cost of ending inventory and cost of goods sold using the information provided. Assume stable retail prices during the period.

E 9–16 Conventional retail method; normal spoilage  **LO9–3,**
 **LO9–4**

Almaden Valley Variety Store uses the retail inventory method to estimate ending inventory and cost of goods sold. The following data are available:

| | Cost | Retail |
|---------------------|-----------|-----------|
| Beginning inventory | \$ 12,000 | \$ 20,000 |
| Purchases | 102,600 | 165,000 |

| | Cost | Retail |
|------------------|-------|---------|
| Freight-in | 3,480 | |
| Purchase returns | 4,000 | 7,000 |
| Net markups | | 6,000 |
| Net markdowns | | 3,000 |
| Normal spoilage | | 4,200 |
| Net sales | | 152,000 |

Required:

Estimate the ending inventory and cost of goods sold, applying the conventional retail method using the information provided.

E 9-17 Conventional and average cost retail methods; employee discounts  **LO9-3**,  **LO9-4**

LeMay Department Store uses the retail inventory method to estimate ending inventory for its monthly financial statements. The following data pertain to one of its largest departments for the month of March:

| | Cost | Retail |
|---------------------|-----------|-----------|
| Beginning inventory | \$ 40,000 | \$ 60,000 |
| Purchases | 207,000 | 400,000 |
| Freight-in | 14,488 | |
| Purchase returns | 4,000 | 6,000 |
| Net markups | | 5,800 |
| Net markdowns | | 3,500 |
| Normal breakage | | 6,000 |
| Net sales | | 280,000 |
| Employee discounts | | 1,800 |

Sales are recorded net of employee discounts.

Required:

1. Compute estimated ending inventory and cost of goods sold for March applying the conventional retail method.
2. Recompute the cost-to-retail percentage using the average cost method.

E 9–18 Retail inventory method; solving for unknowns

LO9–3

Aztec Corporation uses a periodic inventory system and the retail inventory method to estimate ending inventory and cost of goods sold. The following data are available for the month of September:

| | Cost | Retail |
|---------------------|----------|----------|
| Beginning inventory | \$21,000 | \$35,000 |
| Net purchases | 10,500 | ? |
| Net markups | | 4,000 |
| Net markdowns | | 1,000 |
| Net sales | | ? |

The company used the average cost flow method and estimated inventory at the end of September to be \$17,437.50. If the company had used the LIFO cost flow method, the cost-to-retail percentage would have been 50%.

Required:

Compute net purchases at retail and net sales for the month of September using the information provided.

E 9–19 Dollar-value LIFO retail LO9–5

On January 1, 2024, the Brunswick Hat Company adopted the dollar-value LIFO retail method. The following data are available for 2024:

| | Cost | Retail |
|---------------------|-----------|------------|
| Beginning inventory | \$ 71,280 | \$ 132,000 |
| Net purchases | 112,500 | 255,000 |
| Net markups | | 6,000 |

| | Cost | Retail |
|--------------------------------|------|---------|
| Net markdowns | | 11,000 |
| Net sales | | 232,000 |
| Retail price index, 12/31/2024 | | 1.04 |

Required:

Calculate the estimated ending inventory and cost of goods sold for 2024 using the information provided.

E 9–20 Dollar-value LIFO retail  **LO9–5**

Canova Corporation adopted the dollar-value LIFO retail method on January 1, 2024. On that date, the cost of the inventory on hand was \$15,000 and its retail value was \$18,750. Information for 2024 and 2025 is as follows:

| Date | Ending Inventory | Retail Price | |
|------------|------------------|--------------|---------------------------|
| | at Retail | Index | Cost-to-Retail Percentage |
| 12/31/2024 | \$25,000 | 1.25 | 82% |
| 12/31/2025 | 28,600 | 1.30 | 85 |

Required:

1. What is the cost-to-retail percentage for the inventory on hand at 1/1/2024?
2. Calculate the inventory value at the end of 2024 and 2025 using the dollar-value LIFO retail method.

E 9–21 Dollar-value LIFO retail  **LO9–5**

Lance-Hefner Specialty Shoppes decided to use the dollar-value LIFO retail method to value its inventory. Accounting records provide the following information:

| | Cost | Retail |
|--|-----------|-----------|
| Merchandise inventory, January 1, 2024 | \$160,000 | \$250,000 |
| Net purchases | 350,200 | 510,000 |
| Net markups | | 7,000 |
| Net markdowns | | 2,000 |

| | Cost | Retail |
|-----------|------|---------|
| Net sales | | 380,000 |

Related retail price indexes are as follows:

| | |
|-------------------|------|
| January 1, 2024 | 1.00 |
| December 31, 2024 | 1.10 |

Required:

Determine ending inventory and cost of goods sold using the information provided.

E 9–22 Dollar-value LIFO retail; solving for unknowns  **LO9–5**

Bosco Company adopted the dollar-value LIFO retail method at the beginning of 2024. Information for 2024 and 2025 is as follows, with certain data intentionally omitted:

| Date | Inventory | | Retail Price | |
|-----------------------|-----------|----------|--------------|---------------------------|
| | Cost | Retail | Index | Cost-to-Retail Percentage |
| Inventory, 1/1/2024 | \$21,000 | \$28,000 | 1.00 | ? |
| Inventory, 12/31/2024 | 22,792 | 33,600 | 1.12 | ? |
| 2025 net purchases | 60,000 | 88,400 | | |
| 2025 net sales | | 80,000 | | |
| Inventory, 12/31/2025 | ? | ? | 1.20 | |

Required:

Determine the missing data.

E 9–23 Change in inventory costing methods  **LO9–6**

In 2024, CPS Company changed its method of valuing inventory from the FIFO method to the average cost method. At December 31, 2023, CPS's inventories were \$32 million (FIFO). CPS's records indicated that the inventories would have totaled \$23.8 million at December 31, 2023, if determined on an average cost basis.

Required:

1. Prepare the journal entry to record the adjustment. (Ignore income taxes.)
2. Briefly describe other steps CPS should take to report the change.

E 9–24 Change in inventory costing methods **LO9–6**

Goldmeyer Company has used the FIFO method of inventory valuation since it began operations in 2021. Goldmeyer decided to change to the average cost method for determining inventory costs at the beginning of 2024. The following schedule shows year-end inventory balances under the FIFO and average cost methods:

| Year | FIFO | Average Cost |
|------|----------|--------------|
| 2021 | \$45,000 | \$54,000 |
| 2022 | 78,000 | 71,000 |
| 2023 | 83,000 | 78,000 |

Required:

1. Ignoring income taxes, prepare the 2024 journal entry to adjust the accounts to reflect the average cost method.
2. How much higher or lower would cost of goods sold be in the 2023 revised income statement?

E 9–25 Error correction; inventory error **LO9–7**

During 2024, WMC Corporation discovered that its ending inventories reported in its financial statements were misstated by the following material amounts:

| | | |
|------|----------------|-----------|
| 2022 | understated by | \$120,000 |
| 2023 | overstated by | 150,000 |

WMC uses a periodic inventory system and the FIFO cost method.

Required:

1. Determine the effect of these errors on retained earnings at January 1, 2024, before any adjustments. Explain your answer. (Ignore income taxes.)
2. Prepare a journal entry to correct the errors.

3. What other step(s) would be taken in connection with the correction of the errors?

E 9–26 Inventory errors LO9–7

For each of the following inventory errors occurring in 2024, determine the effect of the error on 2024’s cost of goods sold, net income, and retained earnings. Assume that the error is not discovered until 2025 and that a periodic inventory system is used. Ignore income taxes.

U = understated O = overstated NE = no effect

| | Cost of Goods Sold | Net Income | Retained Earnings |
|---|-----------------------|---------------|----------------------|
| 1. Overstatement of ending inventory | U | O | O |
| 2. Overstatement of purchases | | | |
| 3. Understatement of beginning inventory | | | |
| 4. Freight-in charges are understated | | | |
| 5. Understatement of ending inventory | | | |
| 6. Understatement of purchases | | | |
| 7. Overstatement of beginning inventory | | | |
| 8. Understatement of purchases plus understatement of ending inventory by the same amount | | | |

E 9–27 Inventory error LO9–7

In 2024, the internal auditors of Development Technologies, Inc., discovered that a \$4 million purchase of merchandise in 2024 was recorded in 2023 instead. The physical inventory count at the end of 2023 was correct.

Required:

Prepare the journal entry needed in 2024 to correct the error. Also, briefly describe any other measures Development Technologies would take in connection with correcting the error. (Ignore income taxes.)

E 9–28 Inventory errors LO9–7

In 2024, the controller of Sytec Corporation discovered that \$42,000 of inventory purchases were incorrectly charged to advertising expense in 2023. In addition, the 2023 year-end inventory count failed to include \$30,000 of company merchandise held on consignment by Erin Brothers. Sytec uses a periodic inventory system. Other than the omission of the merchandise on consignment, the year-end inventory count was correct. The amounts of the errors are deemed to be material.

Required:

1. Determine the effect of the errors on retained earnings at January 1, 2024. Explain your answer. (Ignore income taxes.)
2. Prepare a journal entry to correct the errors.
3. What other step(s) would be taken in connection with the correction of the errors?

E 9–29 Concepts; terminology LO9–1 through LO9–7

Listed below are several terms and phrases associated with inventory measurement. Pair each item from List A with the item from List B (by letter) that is most appropriately associated with it.

| | List A | List B |
|-------|---------------------------------|--|
| _____ | 1. Gross profit ratio | a. Reduction in selling price below the original selling price |
| _____ | 2. Cost-to-retail percentage | b. Beginning inventory is not included in the calculation of the cost-to-retail percentage |
| _____ | 3. Additional markup | c. Deducted in the retail column after the calculation of the cost-to-retail percentage |
| _____ | 4. Markdown | d. Requires base year retail to be converted to layer year retail and then to cost |
| _____ | 5. Net markup | e. Gross profit divided by net sales |
| _____ | 6. Retail method, FIFO and LIFO | f. Material inventory error discovered in a subsequent year |
| _____ | 7. Conventional retail method | g. Must be added to sales if sales are recorded net of discounts |
| _____ | 8. Change from LIFO | |

| List A | | List B |
|-----------|------------------------------------|---|
| _____ 9. | Dollar-value LIFO retail | h. Deducted in the retail column to arrive at goods available for sale at retail |
| _____ 10. | Normal spoilage | i. Divide cost of goods available for sale by goods available at retail |
| _____ 11. | Requires retrospective restatement | j. Average cost, lower of cost or market |
| _____ 12. | Employee discounts | k. Added to the retail column to arrive at goods available for sale |
| _____ 13. | Net markdowns | l. Increase in selling price subsequent to initial markup |
| _____ 14. | Net realizable value | m. Selling price less estimated selling costs n. Accounting change requiring retrospective treatment |

E 9–30 Purchase commitments **Appendix**

On October 6, 2024, the Elgin Corporation signed a purchase commitment to purchase inventory for \$60,000 on or before March 31, 2025. The company's fiscal year-end is December 31. The contract was exercised on March 21, 2025, and the inventory was purchased for cash at the contract price. On the purchase date of March 21, the market price of the inventory was \$54,000. The market price of the inventory on December 31, 2024, was \$56,000. The company uses a perpetual inventory system.

Required:

1. Prepare the necessary adjusting journal entry (if any is required) on December 31, 2024.
2. Prepare the journal entry to record the purchase on March 21, 2025.

E 9–31 Purchase commitments **Appendix**

In March 2024, the Metal Tool Company signed two purchase commitments. The first commitment requires Metal to purchase inventory for \$100,000 by June 15, 2024. The second commitment requires the company to purchase inventory for \$150,000 by August 20, 2024. The company's fiscal year-end is June 30. Metal uses a periodic inventory system.

The first commitment is exercised on June 15, 2024, when the market price of the inventory purchased was \$85,000. The second commitment was exercised on August 20, 2024, when

the market price of the inventory purchased was \$120,000.

Required:

Prepare the journal entries required on June 15, June 30, and August 20, 2024, to account for the two purchase commitments. Assume that the market price of the inventory related to the outstanding purchase commitment was \$140,000 at June 30.

E 9–32 General ledger exercise; inventory transactions

 **Chapter 8** and  **LO9–1**

On January 1, 2024, the general ledger of Big Blast Fireworks included the following account balances:

| Account Title | Debits | Credits |
|--------------------------------------|------------------|------------------|
| Cash | \$ 21,900 | |
| Accounts receivable | 36,500 | |
| Allowance for uncollectible accounts | | \$ 3,100 |
| Inventory | 30,000 | |
| Land | 61,600 | |
| Accounts payable | | 32,400 |
| Notes payable (8%, due in 3 years) | | 30,000 |
| Common stock | | 56,000 |
| Retained earnings | | 28,500 |
| Totals | <u>\$150,000</u> | <u>\$150,000</u> |

The \$30,000 beginning balance of inventory consists of 300 units, each costing \$100. During January 2024, Big Blast Fireworks had the following inventory transactions:

- Jan. 3 Purchased 1,200 units for \$126,000 on account (\$105 each).
- 8 Purchased 1,300 units for \$143,000 on account (\$110 each).
- 12 Purchased 1,400 units for \$161,000 on account (\$115 each).
- 15 Returned 100 of the units purchased on January 12 because of defects.

- 19 Sold 4,000 units on account for \$600,000. The cost of the units sold is determined using a FIFO perpetual inventory system.
- 22 Received \$580,000 from customers on accounts receivable.
- 24 Paid \$410,000 to inventory suppliers on accounts payable.
- 27 Wrote off accounts receivable as uncollectible, \$2,500.
- 31 Paid cash for salaries during January, \$128,000.

Required:

1. Record each of the transactions listed above in the “General Journal” tab (these are shown as items 1-13), assuming a perpetual FIFO inventory system. Review the “General Ledger” and the “Trial Balance” tabs to see the effect of the transactions on the account balances.
2. Record adjusting entries on January 31 in the “General Journal” tab (these are shown as items 14-18):
 - a. At the end of January, the company estimates that the remaining units of inventory are expected to sell in February for only \$100 each.
 - b. At the end of January, \$4,000 of accounts receivable are past due, and the company estimates that 40% of these accounts will not be collected. Of the remaining accounts receivable, the company estimates that 4% will not be collected.
 - c. Accrued interest expense on notes payable for January. Interest is expected to be paid each December 31.
 - d. Accrued income taxes at the end of January are \$12,300.
3. Review the adjusted “Trial Balance” as of January 31, 2024, in the “Trial Balance” tab.
4. Prepare a multiple-step income statement for the period ended January 31, 2024, in the “Income Statement” tab.
5. Prepare a classified balance sheet as of January 31, 2024, in the “Balance Sheet” tab.
6. Record closing entries in the “General Journal” tab (these are shown as items 19-21).
7. Using the information from the requirements above, complete the “Analysis” tab.
 - a. Calculate the inventory turnover ratio for the month of January. If the industry average of the inventory turnover ratio for the month of January is 18.5 times, is the company managing its inventory *more* or *less* efficiently than other companies in the same industry?

- b. Calculate the gross profit ratio for the month of January. If the industry average gross profit ratio is 33%, is the company *more* or *less* profitable per dollar of sales than other companies in the same industry?
- c. Used together, what might the inventory turnover ratio and gross profit ratio suggest about Big Blast Fireworks' business strategy? Is the company's strategy to sell a *higher volume of less expensive* items or does the company appear to be selling a *lower volume of more expensive* items?

Problems

P 9–1 Lower of cost or net realizable value; by product and by total inventory LO9–1

Decker Company has five products in its inventory. Information about ending inventory follows.

| Product | Quantity | Unit Cost | Unit Selling Price |
|---------|----------|-----------|--------------------|
| A | 1,000 | \$10 | \$16 |
| B | 800 | 15 | 18 |
| C | 600 | 3 | 8 |
| D | 200 | 7 | 6 |
| E | 600 | 14 | 13 |

The cost to sell for each product consists of a 15 percent sales commission.

Required:

1. Determine the carrying value of ending inventory, assuming the lower of cost or net realizable value (LCNRV) rule is applied to individual products. Page 498
2. Determine the carrying value of ending inventory, assuming the LCNRV rule is applied to the entire inventory.
3. Assuming inventory write-downs are common for Decker, record any necessary year-end adjusting entry based on the amount calculated in requirement 2.

P 9–2 Lower of cost or net realizable value; by product, category, and total inventory LO9–1

Ace Hardware Store sells two product categories, tools and paint products. Information pertaining to its year-end inventory is as follows:

| Inventory, by Product Category | Quantity | Per Unit Cost | Net Realizable Value |
|-----------------------------------|----------|------------------|----------------------------|
| Tools: | | | |
| Hammers | 100 | \$ 5.00 | \$5.50 |
| Saws | 200 | 10.00 | 9.00 |
| Screwdrivers | 300 | 2.00 | 2.60 |
| Paint products: | | | |
| 1-gallon cans | 500 | 6.00 | 5.00 |
| Paint brushes | 100 | 4.00 | 4.50 |

Required:

1. Determine the carrying value of inventory at year-end, assuming the lower of cost or net realizable value (LCNRV) rule is applied to (a) individual products, (b) product categories, and (c) total inventory.
2. Assuming inventory write-downs are common for Ace, record any necessary year-end adjusting entry for each of the LCNRV applications in requirement 1.

P 9–3 Lower of cost or market; by product and by total inventory  **LO9–1**

Forest Company has five products in its inventory. Information about ending inventory follows.

| Product | Quantity | Unit Cost | Unit Replacement Cost | Unit Selling Price |
|---------|----------|--------------|-----------------------------|--------------------------|
| A | 1,000 | \$10 | \$12 | \$16 |
| B | 800 | 15 | 11 | 18 |
| C | 600 | 3 | 2 | 8 |
| D | 200 | 7 | 4 | 6 |
| E | 600 | 14 | 12 | 13 |

The cost to sell for each product consists of a 15 percent sales commission. The normal profit for each product is 40 percent of the selling price.

Required:

1. Determine the carrying value of ending inventory, assuming the lower of cost or market (LCM) rule is applied to individual products.
2. Determine the carrying value of inventory, assuming the LCM rule is applied to the entire inventory.
3. Assuming inventory write-downs are common for Forest, record any necessary year-end adjusting entry based on the amount calculated in requirement 2.

P 9–4 Lower of cost or market; by product, category, and total inventory  **LO9–1**

Home Stop sells two product categories, furniture and accessories. Information pertaining to its year-end inventory is as follows:

| Inventory, by Product Category | Quantity | Per Unit | |
|-----------------------------------|----------|----------|--------|
| | | Cost | Market |
| Furniture: | | | |
| Chairs | 50 | \$25 | \$31 |
| Desks | 10 | 73 | 58 |
| Tables | 20 | 84 | 92 |
| Accessories: | | | |
| Rugs | 40 | 60 | 48 |
| Lamps | 30 | 22 | 18 |

Required:

1. Determine the carrying value of inventory at year-end, assuming the lower of cost or market (LCM) rule is applied to (a) individual products, (b) product categories, and (c) total inventory.
2. Assuming inventory write-downs are common for Home Stop, record any necessary year-end adjusting entry for each of the LCM applications in requirement 1.

P 9–5 Gross profit method LO9–2

Southern Distributors, Inc., supplies ice cream shops with various toppings for making sundaes. On November 17, 2024, a fire resulted in the loss of all of the toppings stored in one section of the warehouse. The company must provide its insurance company with an estimate of the amount of inventory lost. The following information is available from the company's accounting records:

| | Fruit Toppings | Marshmallow Toppings | Chocolate Toppings |
|-------------------------------|---------------------------|---------------------------------|-------------------------------|
| Inventory, January 1, 2024 | \$ 20,000 | \$ 7,000 | \$ 3,000 |
| Net purchases through Nov. 17 | 150,000 | 36,000 | 12,000 |
| Net sales through Nov. 17 | 200,000 | 55,000 | 20,000 |
| Historical gross profit ratio | 20% | 30% | 35% |

Required:

1. Calculate the estimated cost of each of the toppings lost in the fire.
2. What factors could cause the estimates to be over- or understated?

P 9–6 Retail inventory method; average cost and conventional LO9–3, LO9–4

Sparrow Company uses the retail inventory method to estimate ending inventory and cost of goods sold. Data for 2024 are as follows:

| | Cost | Retail |
|---------------------|-------------|---------------|
| Beginning inventory | \$ 90,000 | \$180,000 |
| Purchases | 355,000 | 580,000 |
| Freight-in | 9,000 | |
| Purchase returns | 7,000 | 11,000 |
| Net markups | | 16,000 |
| Net markdowns | | 12,000 |
| Normal spoilage | | 3,000 |
| Abnormal spoilage | 4,800 | 8,000 |

| | Cost | Retail |
|---------------|------|---------|
| Sales | | 540,000 |
| Sales returns | | 10,000 |

The company records sales net of employee discounts. Employee discounts for 2024 totaled \$4,000.

Required:

Estimate Sparrow's ending inventory and cost of goods sold for the year using the retail inventory method and the following applications:

1. Average cost
2. Conventional

P 9–7 Retail inventory method; conventional and LIFO

 **LO9–3**,  **LO9–4**

Alquist Company uses the retail method to estimate its ending inventory. Selected information about its year 2024 operations is as follows:

- a. January 1, 2024, beginning inventory had a cost of \$100,000 and a retail value of \$150,000.
- b. Purchases during 2024 cost \$1,387,500 with an original retail value of \$2,000,000.
- c. Freight costs were \$10,000 for incoming merchandise.
- d. Net additional markups were \$300,000 and net markdowns were \$150,000.
- e. Based on prior experience, shrinkage due to shoplifting was estimated to be \$15,000 of retail value.
- f. Merchandise is sold to employees at a 20% of selling price discount. Employee sales are recorded in a separate account at the net selling price. The balance in this account at the end of 2024 is \$250,000.
- g. Sales to customers totaled \$1,750,000 for the year.

Required:

1. Estimate ending inventory and cost of goods sold using the conventional retail method.
2. Estimate ending inventory and cost of goods sold using the LIFO retail method. (Assume stable prices.)

P 9–8 Retail inventory method; conventional LO9–4

Grand Department Store, Inc., uses the retail inventory method to estimate ending inventory for its monthly financial statements. The following data pertain to a single department for the month of October:

Beginning inventory:

| | |
|-----------|-----------|
| At cost | \$ 20,000 |
| At retail | 30,000 |

Purchases (exclusive of freight and returns):

| | |
|-----------|---------|
| At cost | 100,151 |
| At retail | 146,495 |

Freight-in 5,100

Purchase returns:

| | |
|-----------|-------|
| At cost | 2,100 |
| At retail | 2,800 |

Additional markups 2,500

Markup cancellations 265

Markdowns (net) 800

Normal spoilage and breakage 4,500

Sales 140,000

Sales returns 4,270

Required:

Page 500

1. Using the conventional retail ending inventory method, prepare a schedule computing estimated lower of cost or market (LCM) inventory and cost of goods sold for October.
2. A department store using the conventional retail inventory method estimates the cost of its ending inventory as \$29,000. An accurate physical count reveals only \$22,000 of inventory at lower of cost or market. List the factors that may have caused the difference between computed inventory and the physical count.

(AICPA adapted)

P 9–9 Retail method—average cost and conventional

 LO9–3,  LO9–4

Smith-Kline Company maintains inventory records at selling prices as well as at cost. For 2024, the records indicate the following data:

| | (\$ in thousands) | |
|-------------------------|-------------------|--------|
| | Cost | Retail |
| Beginning inventory | \$ 80 | \$ 125 |
| Purchases | 671 | 1,006 |
| Freight-in on purchases | 30 | |
| Purchase returns | 1 | 2 |
| Net markups | | 4 |
| Net markdowns | | 8 |
| Net sales | | 916 |

Required:

Use the retail method to approximate cost of ending inventory in each of the following ways:

1. Average cost
2. Conventional

P 9–10 Dollar-value LIFO retail method LO9–5

[This is a variation of  P 9–9, modified to focus on the dollar-value LIFO retail method.]

Smith-Kline Company maintains inventory records at selling prices as well as at cost. For 2024, the records indicate the following data:

| | (\$ in thousands) | |
|-------------------------|-------------------|--------|
| | Cost | Retail |
| Beginning inventory | \$ 80 | \$ 125 |
| Purchases | 671 | 1,006 |
| Freight-in on purchases | 30 | |
| Purchase returns | 1 | 2 |

| (\$ in thousands) | | |
|-------------------|------|--------|
| | Cost | Retail |
| Net markups | | 4 |
| Net markdowns | | 8 |
| Net sales | | 916 |

Required:

Assuming the price level increased from 1.00 at January 1 to 1.10 at December 31, 2024, use the dollar-value LIFO retail method to approximate cost of ending inventory and cost of goods sold.

P 9–11 Dollar-value LIFO retail  **LO9–5**

On January 1, 2024, HGC Camera Store adopted the dollar-value LIFO retail inventory method. Inventory transactions at both cost and retail, and cost indexes for 2024 and 2025 are as follows:

| | 2024 | | 2025 | |
|--|----------|-----------|----------|-----------|
| | Cost | Retail | Cost | Retail |
| Beginning inventory | \$28,000 | \$ 40,000 | | |
| Net purchases | 85,000 | 108,000 | \$90,000 | \$114,000 |
| Freight-in | 2,000 | | | |
| | | | 2,500 | |
| Net markups | | 10,000 | | 8,000 |
| Net markdowns | | 2,000 | | 2,200 |
| Net sales to customers | | 100,000 | | 104,000 |
| Sales to employees (net of 20% discount) | | 2,400 | | 4,000 |
| Price Index: | | | | |
| January 1, 2024 | | | | 1.00 |
| December 31, 2024 | | | | 1.06 |
| December 31, 2025 | | | | 1.10 |

Required:

Estimate the 2024 and 2025 ending inventory and cost of goods sold using the dollar-value LIFO retail inventory method.

P 9–12 Retail inventory method; various applications  **LO9–3**
through  **LO9–5**

Raleigh Department Store uses the conventional retail method for the year ended December 31, 2022. Available information follows:

- a. The inventory at January 1, 2022, had a retail value of \$45,000 and a cost of \$27,500 based on the conventional retail method.
- b. Transactions during 2022 were as follows:

| | Cost | Retail |
|--------------------|-----------|-----------|
| Gross purchases | \$282,000 | \$490,000 |
| Purchase returns | 6,500 | 10,000 |
| Purchase discounts | 5,000 | |
| Sales | | 492,000 |
| Sales returns | | 5,000 |
| Employee discounts | | 3,000 |
| Freight-in | 26,500 | |
| Net markups | | 25,000 |
| Net markdowns | | 10,000 |

Sales to employees are recorded net of discounts.

- c. The retail value of the December 31, 2023, inventory was \$56,100, the cost-to-retail percentage for 2023 under the LIFO retail method was 62%, and the appropriate price index was 102% of the January 1, 2023, price level.
- d. The retail value of the December 31, 2024, inventory was \$48,300, the cost-to-retail percentage for 2024 under the LIFO retail method was 61%, and the appropriate price index was 105% of the January 1, 2023, price level.

Required:

1. Estimate ending inventory for 2022 using the conventional retail method.

2. Estimate ending inventory for 2022 assuming Raleigh Department Store used the LIFO retail method.
3. Assume Raleigh Department Store adopts the dollar-value LIFO retail method on January 1, 2023. Estimate ending inventory for 2023 and 2024.

(AICPA adapted)

P 9–13 Retail inventory method; various applications  **LO9–3**
through  **LO9–5**

On January 1, 2024, Pet Friendly Stores adopted the retail inventory method. Inventory transactions at both cost and retail, and cost indexes for 2024 and 2025 are as follows:

| | 2024 | | 2025 | |
|--|-----------|-----------|-----------|-----------|
| | Cost | Retail | Cost | Retail |
| Beginning inventory | \$ 90,000 | \$150,000 | | |
| Purchases | 478,000 | 730,000 | \$511,000 | \$760,000 |
| Purchase returns | 2,500 | 3,500 | 2,200 | 4,000 |
| Freight-in | 6,960 | | 8,000 | |
| Net markups | | 8,500 | | 10,000 |
| Net markdowns | | 4,000 | | 6,000 |
| Net sales to customers | | 650,000 | | 680,000 |
| Sales to employees (net of 30% discount) | | 14,000 | | 17,500 |
| Normal spoilage | | 5,000 | | 6,600 |
| Price Index: | | | | |
| January 1, 2024 | | 1.00 | | |
| December 31, 2024 | | 1.03 | | |
| December 31, 2025 | | 1.06 | | |

Required:

1. Estimate the 2024 and 2025 ending inventory and cost of goods sold using the dollar-value LIFO retail method.
2. Estimate the 2024 ending inventory and cost of goods sold using the average cost retail method.
3. Estimate the 2024 ending inventory and cost of goods sold using the conventional retail method.

P 9–14 Change in methods LO9–6

Rockwell Corporation uses a periodic inventory system and has used the FIFO cost method since inception of the company in 1979. In 2024, the company decided to switch to the average cost method. Data for 2024 are as follows:

| | | |
|--|----------------|-------------------------|
| Beginning inventory, FIFO (5,000 units @ \$30) | | \$150,000 |
| Purchases: | | |
| 5,000 units @ \$36 | \$180,000 | |
| 5,000 units @ \$40 | <u>200,000</u> | 380,000 |
| Cost of goods available for sale | | <u>\$530,000</u> |
| Sales for 2024 (8,000 units @ \$70) | | <u><u>\$560,000</u></u> |

Additional Information:

- a. The company's effective income tax rate is 25% for all years.
- b. If the company had used the average cost method prior to 2024, ending inventory for 2023 would have been \$130,000.
- c. 7,000 units remained in inventory at the end of 2024.

Required:

1. Ignoring income taxes, prepare the 2024 journal entry to adjust the accounts to reflect the average cost method.
2. What is the effect of the change in methods on 2024 net income?

P 9–15 Inventory errors LO9–7

You have been hired as the new controller for the Radiance Company. Shortly after joining the company in 2024, you discover the following errors related to the 2022 and 2023 financial statements:

- a. Inventory at December 31, 2022, was understated by \$6,000.
- b. Inventory at December 31, 2023, was overstated by \$9,000.
- c. On December 31, 2023, inventory was purchased for \$3,000. The company did not record the purchase until the inventory was paid for early in 2024. At that time, the purchase was recorded by a debit to purchases and a credit to cash.

The company uses a periodic inventory system.

Required:

1. Assuming that the errors were discovered after the 2023 financial statements were issued, analyze the effect of the errors on 2023 and 2022 cost of goods sold, net income, and retained earnings. (Ignore income taxes.)
2. Prepare a journal entry to correct the errors.
3. What other step(s) would be taken in connection with the errors?

P 9–16 Inventory errors  **LO9–7**

The December 31, 2024, inventory of Tog Company, based on a physical count, was determined to be \$450,000. Included in that count was a shipment of goods received from a supplier at the end of the month that cost \$50,000. The purchase was recorded and paid for in 2025. Another supplier shipment costing \$20,000 was correctly recorded as a purchase in 2024. However, the merchandise, shipped FOB shipping point, was not received until 2025 and was incorrectly omitted from the physical count. A third purchase, shipped from a supplier FOB shipping point on December 28, 2024, did not arrive until January 3, 2025. The merchandise, which cost \$80,000, was not included in the physical count and the purchase has not yet been recorded.

The company uses a periodic inventory system.

Required:

1. Determine the correct December 31, 2024, inventory balance and, assuming that the errors were discovered after the 2024 financial statements were issued, analyze the effect

of the errors on 2024 cost of goods sold, net income, and retained earnings. (Ignore income taxes.)

2. Prepare a journal entry to correct the errors at the time they were discovered during 2025.

P 9–17 Integrating problem; Chapters 8 and 9; inventory errors

LO9–7

Capwell Corporation uses a periodic inventory system. The company's ending inventory on December 31, 2024, its fiscal-year end, based on a physical count, was determined to be \$326,000. Capwell's unadjusted trial balance also showed the following account balances: Purchases, \$620,000; Accounts payable, \$210,000; Accounts receivable, \$225,000; Sales revenue, \$840,000.

The internal audit department discovered the following items:

1. Goods valued at \$32,000 held on consignment from Dix Company were included Page 503 in the physical count but not recorded as a purchase.
2. Purchases from Xavier Corporation were incorrectly recorded at \$41,000 instead of the correct amount of \$14,000. The correct amount was included in the ending inventory.
3. Goods that cost \$25,000 were shipped from a vendor on December 28, 2024, terms FOB destination. The merchandise arrived on January 3, 2025. The purchase and related accounts payable were recorded in 2024.
4. One inventory item was incorrectly included in ending inventory as 100 units, instead of the correct amount of 1,000 units. This item cost \$40 per unit.
5. The 2023 balance sheet reported inventory of \$352,000. The internal auditors discovered that a mathematical error caused this inventory to be understated by \$62,000. This amount is considered to be material. Comparative financial statements will be issued.
6. Goods shipped to a customer FOB destination on December 25, 2024, were received by the customer on January 4, 2025. The sales price was \$40,000, and the merchandise cost \$22,000. The sale and corresponding accounts receivable were recorded in 2024.
7. Goods shipped from a vendor FOB shipping point on December 27, 2024, were received on January 3, 2025. The merchandise cost \$18,000. The purchase was not recorded until 2025.

Required:

1. Determine the correct amounts for 2024 purchases, accounts payable, sales revenue, and accounts receivable.
2. Calculate ending inventory and cost of goods sold for 2024.
3. Describe the steps Capwell would undertake to correct the error in the 2023 ending inventory. What was the effect of the error on 2023 before-tax income?

P 9–18 Purchase commitments **Appendix**

In November 2024, the Brunswick Company signed two purchase commitments. The first commitment requires Brunswick to purchase 10,000 units of inventory at \$10 per unit by December 15, 2024. The second commitment requires the company to purchase 20,000 units of inventory at \$11 per unit by March 15, 2025. Brunswick's fiscal year-end is December 31. The company uses a periodic inventory system. Both contracts were exercised on their expiration date.

Required:

1. Prepare the journal entry to record the December 15 purchase for cash assuming the following alternative unit market prices on that date:
 - a. \$10.50
 - b. \$ 9.50
2. Prepare any necessary adjusting entry at December 31, 2024, for the second purchase commitment assuming the following alternative unit market prices on that date:
 - a. \$12.50
 - b. \$10.30
3. Assuming that the unit market price on December 31, 2024, was \$10.30, prepare the journal entry to record the purchase on March 15, 2022, assuming the following alternative unit market prices on that date:
 - a. \$11.50
 - b. \$10.00

Decision Maker's Perspective

Ed Telling/Getty Images

Apply your critical-thinking ability to the knowledge you've gained. These cases will provide you an opportunity to develop your research, analysis, judgment, and communication skills. You also will work with other students, integrate what you've learned, apply it in real-world situations, and consider its global and ethical ramifications. This practice will broaden your knowledge and further develop your decision-making abilities.

Judgment Case 9–1 Inventoriable costs; lower of cost or market; retail inventory method  **LO9–1**,  **LO9–3**,  **LO9–4**

Hudson Company, which is both a wholesaler and a retailer, purchases its inventories from various suppliers. Additional facts for Hudson's wholesale operations are as follows:

- a. Hudson incurs substantial warehousing costs.
- b. Hudson values inventory at the lower of cost or market. Market is below cost of the inventories.

Additional facts for Hudson's retail operations are as follows:

- a. Hudson determines the estimated cost of its ending inventories held for sale at retail using the conventional retail inventory method, which approximates lower of average cost or market.
- b. Hudson incurs substantial freight-in costs.
- c. Hudson has net markups and net markdowns.

Required:

1. Conceptually, in which account should Hudson report the warehousing costs related to its wholesale inventories? Why?

2. a. Inventory valued at the lower of cost or market is an example of which principle in accounting?
 - b. At which amount should Hudson's wholesale inventories be reported in the balance sheet?
3. In the calculation of the cost-to-retail percentage used to determine the estimated cost of its ending retail inventories, how should Hudson treat:
 - a. Freight-in costs?
 - b. Net markups?
 - c. Net markdowns?
4. How does Hudson's treatment of net markdowns affect the cost-to-retail percentage?

(AICPA adapted)

Integrating Case 9–2

FIFO and lower of cost or net realizable value LO9–1

York Co. sells one product, which it purchases from various suppliers. York's trial balance at December 31, 2024, included the following accounts:

| | |
|-----------------------------|-----------|
| Sales (33,000 units @ \$16) | \$528,000 |
| Sales discounts | 7,500 |
| Purchases | 368,900 |
| Purchase discounts | 18,000 |
| Freight-in | 5,000 |
| Freight-out | 11,000 |

York Co.'s inventory purchases during 2024 were as follows:

| | Units | Cost per Unit | Total Cost |
|---------------------------------------|--------|---------------|------------|
| Beginning inventory | 7,000 | \$7.70 | \$ 53,900 |
| Purchases, quarter ended March 31 | 13,000 | 7.50 | 97,500 |
| Purchases, quarter ended June 30 | 15,000 | 7.90 | 118,500 |
| Purchases, quarter ended September 30 | 12,000 | 8.25 | 99,000 |
| Purchases, quarter ended December 31 | 8,000 | 8.20 | 65,600 |

| | Units | Cost per Unit | Total Cost |
|--|--------|---------------|------------|
| | 55,000 | | \$434,500 |

Additional Information:

- a. York's accounting policy is to report inventory in its financial statements at the lower of cost or net realizable value, applied to total inventory. Cost is determined under the first-in, first-out (FIFO) method.
- b. York has determined that, at December 31, 2024, the net realizable value was \$8.00 per unit.

Required:

1. Prepare York's schedule of cost of goods sold, with a supporting schedule of ending inventory. York includes inventory write-down losses in cost of goods sold.
2. Determine whether inventory should be reported at cost or net realizable value.

(AICPA adapted)

Analysis Case 9–3

Change in inventory method LO9–6

Action and Fashion (A&F) Company is a specialty retail company operating over 1,000 stores globally. The following disclosure note was included in the financial statements:

4. Change in Accounting Principle

The Company elected to change its method of accounting for inventory from the retail method to the weighted average cost method effective January 1, 2024. In accordance with generally accepted accounting principles, all periods have been retroactively adjusted to reflect the period-specific effects of the change to the weighted average cost method. The Company believes that accounting under the weighted average cost method is preferable as it better aligns with the Company's focus on realized selling margin and improves the comparability of the Company's financial results with those of its competitors. Additionally, it will improve the matching of cost of goods sold with the related net sales and reflect the acquisition cost of inventory outstanding at each balance sheet date. The cumulative adjustment was an increase in its inventory of \$73.6 million and an increase in retained earnings of \$47.3 million.

Required:

1. What approach should A&F take to account for its change in inventory accounting (retrospective, modified retrospective, or prospective)?
2. Will A&F need to restate financial statements prior to the year of the accounting change (yes/no)?
3. Which enhancing qualitative characteristic of accounting best describes the reason for A&F's approach to accounting for its change in inventory method?

Real World Case 9–4 Various inventory issues; Chapters 8 and 9; Fred's Inc. LO9–1, LO9–5, LO9–6

Real World Financials

Fred's Inc. operates general merchandise retail discount stores and full-service pharmacies in the Southeastern United States. Access the company's 10-K for the fiscal year ended January 28, 2017. You can find the 10-K by using EDGAR at www.sec.gov (*Hint: Do not use the apostrophe in the company name when doing an Edgar search.*) Answer the following questions.

Required:

1. What inventory methods does Fred's use to value its inventory?
2. Which price index does the company use in applying the retail inventory method?
3. A company that uses LIFO is allowed to provide supplemental disclosures reporting the effect of using another inventory method rather than LIFO. Using the supplemental LIFO disclosures provided by Fred's, determine the pretax income effect of using LIFO versus another method for the current fiscal year.
4. Calculate the company's inventory turnover ratio for the fiscal year ended January 28, 2017.
5. Assume that in the next fiscal year the company decides to switch to the average cost method. What approach would Fred's take to account for this change (retrospective, modified retrospective, or prospective)?

Analysis Case 9–5 Overstatement of ending inventory

LO9–7

Danville Bottlers is a wholesale beverage company. Danville uses the FIFO inventory method to determine the cost of its ending inventory. Ending inventory quantities are determined by a physical count. For the accounting year-end December 31, 2024, ending inventory was originally determined to be \$3,265,000. However, on January 17, 2025, company's controller discovered an error in the ending inventory count. The controller determined that the correct ending inventory amount should be \$2,600,000.

Danville is a privately owned corporation with significant financing provided by a local bank. The bank requires annual audited financial statements as a condition of the loan. By January 17, the auditors had completed their review of the financial statements which are scheduled to be issued on January 25. They did not discover the inventory error.

The controller's first reaction was to communicate the finding to the auditors and to revise the financial statements before they are issued. However, the controller knows that fellow workers' profit-sharing plans are based on annual pretax earnings and is uncertain what effect the error correction would have on pretax earnings.

Required:

1. What is the effect of the inventory error on pretax earnings?
2. How would correcting the error affect employee bonuses?
3. If the error is not corrected in the current year and is discovered by the auditors during the following year's audit, how will it be reported in the company's financial statements?

Analysis Case 9–6 Inventory errors  **LO9–7**

Eddie's Galleria sells billiard tables. The company has the following purchases and sales for 2024.

| Date | Transactions | Units | Unit Cost | Total Cost |
|----------------|---------------------|------------|-----------|------------------|
| January 1 | Beginning inventory | 150 | \$540 | \$ 81,000 |
| March 8 | Purchase | 120 | 570 | 68,400 |
| August 22 | Purchase | 100 | 600 | 60,000 |
| October 29 | Purchase | 80 | 640 | 51,200 |
| | | <u>450</u> | | <u>\$260,600</u> |
| Jan. 1–Dec. 31 | Sales (\$700 each) | 400 | | |

Eddie is worried about the company's financial performance. He has noticed an increase in the purchase cost of billiard tables, but at the same time, competition from other billiard table stores and other entertainment choices have prevented him from increasing the sales price. Eddie is worried that if the company's profitability is too low, stockholders will demand he be replaced. Eddie does not want to lose his job. Since 60 of the 400 billiard tables sold have not yet been picked up by the customers as of December 31, 2024, Eddie decides incorrectly to include these tables in ending inventory. He appropriately includes the sale of these 60 tables as part of total revenues in 2024.

Required:

1. What amount will Eddie calculate for ending inventory and cost of goods sold using FIFO, assuming he erroneously reports that 110 tables remain in ending inventory?
2. What amount would Eddie calculate for cost of goods sold using FIFO if he correctly reports that only 50 tables remain in ending inventory?
3. What effect will the inventory error have on reported amounts for (a) ending inventory, (b) retained earnings, (c) cost of goods sold, and (d) net income (ignoring tax effects) in 2024?
4. Assuming that ending inventory is correctly counted at the end of 2025, what effect will the inventory error in 2024 have on reported amounts for (a) ending inventory, (b) retained earnings, (c) cost of goods sold, and (d) net income (ignoring tax effects) in 2025?

Communication Case 9–7 Lower of cost or net realizable value

LO9–1

The lower of cost or net realizable value (LCNRV) approach to valuing inventory is a departure from the accounting principle of reporting assets at their historical costs. There are those who believe that inventory, as well as other assets, should be valued at NRV, regardless of whether NRV is above or below cost.

The focus of this case is the justification for the LCNRV rule for valuing inventories. Your instructor will divide the class into two to six groups depending on the size of the class. The mission of your group is to defend the LCNRV approach against the alternatives of valuing inventory at either historical cost or NRV.

Required:

1. Each group member should consider the situation independently and draft a tentative argument prior to the class session for which the case is assigned.
2. In class, each group will meet for 10 to 15 minutes in different areas of the classroom. During that meeting, group members will take turns sharing their suggestions for the purpose of arriving at a single group argument.
3. After the allotted time, a spokesperson for each group (selected during the group meetings) will share the group's solution with the class. The goal of the class is to incorporate the views of each group into a consensus approach to the situation.

Communication Case 9–8 Retail inventory method LO9–3, LO9–4

The Brenly Paint Company, your client, manufactures paint. The company's president, Mr. Brenly, decided to open a retail store to sell paint as well as wallpaper and other items that would be purchased from other suppliers. He has asked you for information about the retail method of estimating inventories at the retail store.

Required:

Prepare a report to the president explaining the retail method of estimating inventories.

Communication Case 9–9 Change in inventory method; disclosure note LO9–6

Mayfair Department Stores, Inc., operates over 30 retail stores in the Pacific Northwest. Prior to 2024, the company used the FIFO method to value its inventory. In 2024, Mayfair decided to switch to the dollar-value LIFO retail inventory method. One of your responsibilities as assistant controller is to prepare the disclosure note describing the change in method that will be included in the company's 2024 financial statements. Kenneth Meier, the controller, provided the following information:

- a. Internally developed retail price indexes are used to adjust for the effects of changing prices.
- b. If the change had not been made, cost of goods sold for the year would have been \$22 million lower. The company's income tax rate is 40% and there were 100 million shares of common stock outstanding during 2024.
- c. The cumulative effect of the change on prior years' income is not determinable.

- d. The reasons for the change were (a) to provide a more consistent matching of merchandise costs with sales revenue, and (b) the new method provides a more comparable basis of accounting with competitors that also use the LIFO method.

Required:

1. Prepare for Kenneth Meier the disclosure note that will be included in the 2024 financial statements.
2. Explain why the “cumulative effect of the change on prior years’ income is not determinable.”

Data Analytics & Excel

Visit Connect to find a variety of Data Analytics activities that help build Excel, Tableau, and data visualization skills. Assignable materials include [Integrated Excel](#), [Data Visualizations](#), [Tableau Dashboard Activities](#), and [Applying Tableau Cases](#).

Continuing Cases

Target Case LO9-3, LO9-4, LO9-5

Target Corporation prepares its financial statements according to U.S. GAAP. Target's financial statements and disclosure notes for the year ended February 1, 2020, are available in Connect. This material is also available under the Investor Relations link at the company's website (www.target.com).

Required:

1. What retail indices (internally measured or externally measured) does Target use to measure the LIFO provision?
2. Does Target adjust the retail value of inventory for permanent markups or permanent markdowns to effectively report inventory at the lower of cost or market?
3. Target has agreements with certain vendors whereby Target does not purchase or pay for merchandise until the merchandise is ultimately sold to a customer. See revenue note #2. Are sales and cost of sales of this inventory included in Target's income statement? Is unsold inventory at the end of the year included as part of ending inventory in the balance sheet?

Air France-KLM Case LO9-8

IFRS

Air France-KLM (AF), a Franco-Dutch company, prepares its financial statements according to International Financial Reporting Standards. AF's financial statements and disclosure notes for the year ended December 31, 2019, are available in Connect. This material is also available under the Finance link at the company's website (www.airfranceklm.com).

Required:

AF's inventories are valued at the lower of cost or net realizable value. Does this approach differ from U.S. GAAP?

CHAPTER 10

Property, Plant, and Equipment and Intangible Assets: Acquisition

OVERVIEW

This chapter and the one that follows address the measurement and reporting issues involving property, plant, and equipment and intangible assets. These are the long-lived assets used in the production of goods and services. This chapter covers the valuation at date of acquisition. In [Chapter 11](#), we discuss the allocation of the cost of property, plant, and equipment and intangible assets to the periods benefited by their use, the treatment of expenditures made over the life of these assets to maintain and improve them, impairment, and disposition.

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

-  **LO10-1** Identify the various costs included in the initial cost of property, plant, and equipment, natural resources, and intangible assets. (p. 512)
-  **LO10-2** Determine the initial cost of individual property, plant, and equipment and intangible assets acquired as a group for a lump-sum purchase price. (p. 521)
-  **LO10-3** Determine the initial cost of property, plant, and equipment and intangible assets acquired in exchange for a deferred payment contract. (p. 522)
-  **LO10-4** Determine the initial cost of property, plant, and equipment and intangible assets acquired in exchange for equity securities or through donation. (p. 524)
-  **LO10-5** Calculate the fixed-asset turnover ratio used by analysts to measure how effectively managers use property, plant, and equipment. (p.

526)

-  **LO10-6** Determine the initial cost of property, plant, and equipment and intangible assets acquired in exchange for other nonmonetary assets. (p. 527)
-  **LO10-7** Identify the items included in the cost of a self-constructed asset and determine the amount of capitalized interest. (p. 531)
-  **LO10-8** Explain the difference in the accounting treatment of costs incurred to purchase intangible assets versus the costs incurred to internally develop intangible assets. (p. 537)
-  **LO10-9** Discuss the primary differences between U.S. GAAP and IFRS with respect to the acquisition of property, plant, and equipment and intangible assets. (p. 525 and 539)

FINANCIAL REPORTING CASE

VDB Photos/Shutterstock

A Close Look at the Invisible

Two of your friends ask what you think of investing in a stock like **Microsoft**. They know you're in an accounting class, so they think you might be able to help them understand the financial statements. In particular, they want your help understanding the company's long-term assets to determine the company's long-term ability to generate revenues. The company's balance sheet dated June 30, 2020, shows total long-term assets of \$119.4 billion. The largest category listed is *property and equipment* (\$44.2 billion). That category

seems straightforward, but they aren't sure what's included in *intangible assets* (\$7 billion) and *goodwill* (\$43.4 billion). In addition, upon even deeper inspection, they noticed that the company reports *research and development* of \$19.3 billion as an expense in the income statement rather than as a long-term asset in the balance sheet. They ask, "Does that mean those expenditures aren't expected to help the company generate future revenues?"

QUESTIONS

By the time you finish this chapter, you should be able to respond appropriately to the questions posed in this case. Compare your response to the solution provided at the end of the chapter.

1. Describe to your friends the various costs to include in the initial cost of property and equipment.
2. What are some common types of intangible assets, and what is the accounting treatment for purchased versus internally developed intangible assets?
3. What is goodwill and how is it measured?
4. Why are expenditures for research and development reported in the income statement instead of the balance sheet?

General Motors Corporation has significant investments in the production facilities it uses to manufacture the automobiles it sells. On the other hand, the principal revenue-producing assets of **Microsoft Corporation** are the copyrights on its computer software that permit it the exclusive rights to earn profits from those products. Timber reserves provide major revenues to **International Paper Company**. From a reporting perspective, we classify GM's production facilities as property, plant, and equipment; Microsoft's copyrights as intangible assets; and International Paper's timber reserves as natural resources.¹ Together, these three noncurrent assets constitute the *long-lived, revenue-producing assets* of a company. Unlike manufacturers, many service firms and merchandising companies rely primarily on people or investments in inventories rather than on property, plant, and equipment and intangible assets to generate revenues. Even nonmanufacturing firms, though, typically have at least modest investments in buildings and equipment.

The measurement and reporting issues pertaining to this group of assets include valuation at date of acquisition, disposition, the treatment of expenditures made over the life of these assets to maintain and improve them, the allocation of cost to reporting periods that benefit from their use, and impairment. We focus on initial valuation in this chapter. In [Chapter 11](#), we examine subsequent expenditures, cost allocation, impairment, and disposition.

PART A

Valuation at Acquisition

Types of Assets

In this chapter, we focus on two types of long-lived, revenue-producing assets:

1. **Property, plant, and equipment.** Assets in this category include land, land improvements, buildings, machinery used in manufacturing, computers and other office equipment, vehicles, furniture, and fixtures. **Natural resources** such as oil and gas deposits, timber tracts, and mineral deposits also are included.
2. **Intangible assets.** Unlike property, plant, and equipment and natural resources, intangible assets lack physical substance, and the extent and timing of their future benefits typically are uncertain. They include items such as patents, copyrights, trademarks, franchises, and goodwill.

Right-of-use leases assets are another type of long-lived, revenue-producing assets. They are discussed in  **Chapter 15**.

Microsoft reported net property, plant, and equipment of \$44,151 million and \$36,477 million for its fiscal years ending June 30, 2020 and 2019, respectively. Notice that the disclosure note includes information on the historical costs of these assets and then subtracts (or *nets*) their accumulated depreciation. A disclosure note, shown in  **Illustration 10-1**, provides the details.

ILLUSTRATION 10-1 Property, Plant, and Equipment—Microsoft Corporation Corporation

Real World Financials

NOTE 7 – PROPERTY AND EQUIPMENT (in part)

The components of property and equipment were as follows:

(In millions)

| June 30, | 2020 | 2019 |
|---------------------------------|--------------|--------------|
| Land | \$ 1,823 | \$ 1,540 |
| Buildings and improvements | 33,995 | 26,288 |
| Leasehold improvements | 5,487 | 5,316 |
| Computer equipment and software | 41,261 | 33,823 |
| Furniture and equipment | <u>4,782</u> | <u>4,840</u> |

| | | |
|--------------------------|-----------------|-----------------|
| Total, at cost | 87,348 | 71,807 |
| Accumulated depreciation | (43,197) | (35,330) |
| Total, net | <u>\$44,151</u> | <u>\$36,477</u> |

Companies typically report intangibles separately from property, plant, and equipment. **Microsoft Corporation** reported goodwill of \$43,351 million as a separate item in its 2020 balance sheet. As an additional separate item reported in the balance sheet, the company groups all other intangible assets into a single amount of \$7,038 million. Details of these other intangible assets were reported in a disclosure note, as shown in [Illustration 10-2](#).

ILLUSTRATION 10-2 Other Intangible Assets—Microsoft Corporation

Real World Financials

NOTE 10 – INTANGIBLE ASSETS (in part)

The components of intangible assets, all of which are finite-lived, were as follows:

(In millions)

| June 30, | 2020 | 2019 |
|-------------------|----------------|----------------|
| Technology-based | \$1,779 | \$1,920 |
| Customer-related | 2,647 | 2,924 |
| Marketing-related | 2,570 | 2,838 |
| Contract-based | 42 | 68 |
| Total | <u>\$7,038</u> | <u>\$7,750</u> |

There are many types of intangible assets other than goodwill, and there is a large variety of ways companies list these assets for reporting purposes. Some of the more common types of intangible assets include:

- *Technology-based* intangible assets such as patents, computer software, and purchased research and development.
- *Customer-related* intangible assets such as customer lists, customer contracts, and customer relationships.

- *Marketing-related* intangible assets such as trademarks, trade names, and internet domain names.
- *Contract-based* intangible assets such as licenses, royalty agreements, and franchises.
- *Artistic-based* intangible assets such as copyrights to books, songs, advertising jingles, pictures, and movies.

In this chapter, we'll first discuss how to record the acquisition cost of several types of property, plant, and equipment, and then we'll discuss the acquisition cost of intangible assets.  **Illustration 10-3** provides a list of the more common types of these assets and their acquisition costs.

ILLUSTRATION 10-3 Property, Plant, and Equipment and Intangible Assets and Their Acquisition Costs

| Asset | Description | Typical Acquisition Costs |
|---------------------------------------|---|---|
| Property, plant, and equipment | Productive assets that derive their value from long-term use in operations rather than from resale. | All expenditures necessary to get the asset in condition and location for its intended use. |
| Equipment | Broad term that includes machinery, computers and other office equipment, vehicles, furniture, and fixtures. | Purchase price (less discounts), taxes, transportation, installation, testing, trial runs, and reconditioning. |
| Land | Real property used in operations (land held for speculative investment or future use is reported as investments or other assets). | Purchase price, attorney's fees, title, recording fees, commissions, back taxes, mortgages, liens, clearing, filling, draining, and removing old buildings. |
| Land improvements | Enhancements to property such as parking lots, driveways, private roads, fences, landscaping, and sprinkler systems. | Separately identifiable costs. |

| Asset | Description | Typical Acquisition Costs |
|----------------------------|---|---|
| Buildings | Structures that include warehouses, plant facilities, and office buildings. | Purchase price, attorney's fees, commissions, and reconditioning. |
| Natural resources | Productive assets that are physically consumed in operations such as timber, mineral deposits, and oil and gas reserves. | Acquisition, exploration, development, and restoration costs. |
| Intangible Assets | Productive assets that lack physical substance and have long-term but typically uncertain benefits. | All expenditures necessary to get the asset in condition and location for its intended use. |
| Patents | Exclusive 20-year right to manufacture a product or use a process. | Purchase price, legal fees, filing fees, not including internal R&D. |
| Copyrights | Exclusive right to benefit from a creative work such as a song, film, painting, photograph, or book. | Purchase price, legal fees, filing fees, not including internal R&D. |
| Trademarks (tradenames) | Exclusive right to display a word, a slogan, a symbol, or an emblem that distinctively identifies a company, product, or a service. | Purchase price, legal fees, filing fees, not including internal R&D. |
| Franchises | A contractual arrangement under which a franchisor grants the franchisee the exclusive right to use the franchisor's trademark or tradename and certain product rights. | Franchise fee plus any legal fees. |
| Software development costs | Costs incurred to develop or purchase computer software to be sold, leased, or otherwise | Costs incurred after technological feasibility but before product release (or |

| Asset | Description | Typical Acquisition Costs |
|-----------------------------------|--|--|
| | marketed (or to develop computer software to be used internally). | costs incurred after application development stage is reached for internal software) |
| Acquired research and development | Developed technologies or in-process R&D purchased in a business acquisition. | Fair value of the R&D on the date of acquisition. |
| Goodwill | The unique value of the company as a whole over and above all identifiable assets. | Excess of the fair value of the consideration given for a company over the fair value of the identifiable net assets acquired. |

There are many other types of intangible assets, such as the acquisition of customer lists, brand names, internet domain names, licenses, servicing contracts, trade secrets, etc. Each of these intangible assets is recorded at its purchase price on the date of acquisition plus any additional costs necessary to get the asset ready for use.

Costs to Be Capitalized

LO10–1 Identify the various costs included in the initial cost of property, plant, and equipment, natural resources, and intangible assets.

Property, plant, and equipment and intangible assets can be acquired through purchase, exchange, lease, donation, self-construction, or a business combination. We address acquisitions through leasing in [Chapter 15](#).

The initial valuation of property, plant, and equipment and intangible assets usually is quite simple. We record these assets for the purchase price and all expenditures necessary to bring the asset to its desired condition and location for use. This same concept was covered in Chapter 8 for inventory. For example, if Tristar Company purchased inventory for \$40,000 and incurred \$1,000 in freight costs to have the inventory shipped to its location, the initial cost of the inventory would be recorded for \$41,000. We'll use this same concept to record the purchase of property, plant, and equipment and intangible assets.

The initial cost of property, plant, and equipment and intangible assets includes the purchase price and all expenditures necessary to bring the asset to its desired condition and location for use.

Our objective in identifying all necessary costs to acquire an asset is to distinguish the expenditures that produce future benefits from those that produce benefits only in the current period. The costs in the second group are recorded as expenses, but those in the first group are *capitalized*; that is, they are recorded initially as an asset and then expensed in future periods.²

Property, Plant, and Equipment

COST OF EQUIPMENT

Equipment is a broad term that encompasses machinery used in manufacturing, computers and other office equipment, vehicles, furniture, and fixtures. The cost of equipment includes the purchase price plus any sales tax (less any discounts received from the seller), transportation costs paid by the buyer to transport the asset to the location in which it will

be used, expenditures for installation, testing, legal fees to establish title, and any other costs of bringing the asset to its condition and location for use. To the extent that these costs can be identified and measured, they should be included in the asset's initial valuation rather than expensed currently.

Although most costs can be identified easily, others are more difficult. For example, the costs of training personnel to operate machinery could be considered a cost necessary to make the asset ready for use. However, because it is difficult to measure the amount of training costs associated with specific assets, these costs usually are expensed. Consider

 **Illustration 10-4.**

ILLUSTRATION 10-4 Capitalized Cost of Equipment

Central Machine Tools purchased industrial equipment to be used in its manufacturing process. The purchase price was \$62,000. Central paid a freight company \$1,000 to transport the equipment to its plant location plus \$300 shipping insurance. In addition, the equipment had to be installed and mounted on a special platform built specifically for the equipment at a cost of \$1,200. After installation, several trial runs were made to ensure proper operation. The cost of these trials, including wasted materials, was \$600. At what amount should Central capitalize the equipment?

| | |
|-------------------------------|-----------------|
| Purchase price | \$62,000 |
| Freight and handling | 1,000 |
| Insurance during shipping | 300 |
| Special platform | 1,200 |
| Trial runs | 600 |
| Capitalized cost of equipment | <u>\$65,100</u> |

Each of the expenditures described was necessary to bring the equipment to its condition and location for use and should be capitalized. These costs will be expensed in the future periods in which the equipment is used.

COST OF LAND

The cost of land also should include expenditures needed to get the land ready for its intended use. These include the purchase price plus closing costs such as fees for the attorney, real estate agent commissions, title and title search, and recording. If the property is subject to back taxes, liens, mortgages, or other obligations, these amounts are included also. In addition, any expenditures such as clearing, filling, draining, and even removing (razing) old buildings that are needed to prepare the land for its intended use are part of the land's cost. Proceeds from the sale of salvaged materials from old buildings torn down after purchase reduce the cost of land. [Illustration 10-5](#) provides an example.

ILLUSTRATION 10-5 Capitalized Cost of Land

The Buffalo Metal Company purchased a six-acre tract of land and an existing building for \$500,000. The company plans to remove the old building and construct a new office building on the site. In addition to the purchase price, the company made the following expenditures at closing of the purchase:

| | |
|------------------------------|----------|
| Title insurance | \$ 3,000 |
| Commissions | 16,000 |
| Delinquent property taxes* | 4,000 |
| Current-year property taxes* | 2,000 |

*The property taxes included \$4,000 of delinquent taxes paid by Buffalo on behalf of the seller as well as \$2,000 attributable to the portion of the current fiscal year that remains *after the purchase date*.

In addition, shortly after closing, Buffalo paid a contractor \$10,000 to tear down the old building and remove it from the site. An additional \$5,000 was paid to grade the land. What should be the capitalized cost of the land?

| | |
|---|-------------------------|
| Purchase price of land (and old building) | \$500,000 |
| Title insurance | 3,000 |
| Commissions | 16,000 |
| Delinquent property taxes | 4,000 |
| Cost of removing old building | 10,000 |
| Cost of grading | 5,000 |
| Capitalized cost of land | <u><u>\$538,000</u></u> |

Property taxes of \$2,000 were not included. These relate only to the current operating period and should be expensed separately as property tax expense. Other costs were necessary to acquire the land and are capitalized.

LAND IMPROVEMENTS

It's important to distinguish between the cost of land and the cost of **land improvements** because land has an indefinite life, and land improvements usually have useful lives that are estimable. Examples of land improvements include the costs of establishing parking lots, driveways, and private roads and the costs of fences and lawn and garden sprinkler systems. Costs of these assets are separately identified and capitalized. We depreciate their cost over periods benefited by their use.

COST OF BUILDINGS

The cost of acquiring a building usually includes realtor commissions and legal fees in addition to the purchase price. Quite often, a building must be refurbished, remodeled, or otherwise modified to suit the needs of the new owner. These reconditioning costs are part of the building's acquisition cost. When a building is constructed rather than purchased, unique accounting issues are raised. We discuss these in Part C in the "Self-Constructed Assets" section.

COST OF NATURAL RESOURCES

Natural resources that provide long-term benefits are reported as property, plant, and equipment. These include timber tracts, mineral deposits, and oil and gas deposits. They can be distinguished from other assets by the fact that their benefits are derived from their physical consumption. For example, mineral deposits are physically diminishing as the minerals are extracted from the ground and either sold or used in the production process.³ On the contrary, equipment, land, and buildings produce benefits for a company through their *use* in the production of goods and services. Unlike those of natural resources, their physical characteristics usually remain unchanged during their useful lives.

Sometimes a company buys natural resources from another company. In that case, initial valuation is simply the purchase price plus any other costs necessary to bring the asset to condition and location for use. More frequently, though, the company will develop these

assets. In this situation, the initial valuation can include (a) acquisition costs, (b) exploration costs, (c) development costs, and (d) restoration costs.

Acquisition costs are the amounts paid to acquire the rights to explore for undiscovered natural resources or to extract proven natural resources. **Exploration costs** are expenditures such as drilling a well, or excavating a mine, or any other costs of searching for natural resources. **Development costs** are incurred after the resource has been discovered but before production

begins. They include a variety of costs, such as expenditures for tunnels, wells, and shafts. **Restoration costs** include costs to restore land or other property to its original condition after extraction of the natural resource ends. Because restoration expenditures occur later—after production begins—they initially represent an obligation incurred in conjunction with an asset retirement. Restoration costs are one example of *asset retirement obligations*, the topic of the next subsection.

On the other hand, the costs of heavy equipment and other assets a company uses during drilling or excavation usually are not considered part of the cost of the natural resource itself. Instead, they are considered depreciable plant and equipment. However, if an asset used in the development of a natural resource cannot be moved and has no alternative use, its depreciable life is limited by the useful life of the natural resource.

The cost of a natural resource includes the *acquisition costs* for the use of land, the *exploration and development costs* incurred before production begins, and *restoration costs* incurred during or at the end of extraction.

ASSET RETIREMENT OBLIGATIONS

Sometimes a company incurs obligations associated with the disposition of property, plant, and equipment and natural resources, often as a result of acquiring those assets. For example, an oil and gas exploration company might be required to restore land to its

original condition after extraction is completed. Accounting guidelines were needed because there was considerable diversity in the ways companies accounted for these obligations.

Some companies recognized these **asset retirement obligations (AROs)** gradually over the life of the asset, while others did not recognize the obligations until the asset was retired or sold.

Generally accepted accounting principles require that an existing legal obligation associated with the retirement of a tangible, long-lived asset be recognized as a liability and measured at fair value, if value can be reasonably estimated. When the liability is credited, the offsetting

An asset retirement obligation (ARO) is measured at fair value and is recognized as a liability and corresponding increase in asset valuation.

debit is to the related asset.⁴ These retirement obligations could arise in connection with several types of assets. We introduce the topic here because it often arises with natural resources. Let's consider some of the provisions of the standard that addresses these obligations.

Scope. AROs arise only from *legal* obligations associated with the retirement of a tangible long-lived asset that result from the acquisition, construction, or development and (or) normal operation of a long-lived asset.

Page 515

Recognition. A retirement obligation might arise at the inception of an asset's life or during its operating life. For instance, an offshore oil-and-gas production facility typically incurs its removal obligation when it begins operating. On the other hand, a landfill or a mining operation might incur a reclamation obligation gradually over the life of the asset as space is consumed with waste or as the mine is excavated.

Measurement. A company recognizes the fair value of an ARO in the period it's incurred. The amount of the liability increases the valuation of the related asset. Usually, the fair value is estimated by calculating the present value of estimated future cash outflows.

Present Value Calculations. Traditionally, the way uncertainty has been considered in present value calculations has been by discounting the "best estimate" of future cash flows applying a discount rate that has been adjusted to reflect the uncertainty or risk of those cash flows. That's not the approach we take here. Instead, we follow the approach described in the FASB's *Concept Statement No. 7*, which is to adjust the cash flows, not the discount rate, for the uncertainty or risk of those cash flows.⁵ This **expected cash flow approach** incorporates specific probabilities of cash flows into the analysis. We use a discount rate equal to the *credit-adjusted risk-free rate*. The higher a company's credit risk, the higher will be the discount rate. All other uncertainties or risks are incorporated into the cash flow probabilities.  **Illustration 10-6** demonstrates the approach in connection with the acquisition of a natural resource.

ILLUSTRATION 10-6 Capitalized Cost of Natural Resources

The Canyon Mining Company paid \$1,000,000 for the right to explore for a copper deposit on 500 acres of land in Pennsylvania. Costs of exploring for the copper deposit totaled \$800,000 and intangible development costs incurred in digging and erecting the mine shaft were \$500,000. In addition, Canyon purchased new

excavation equipment for the project at a cost of \$600,000. After the copper is removed from the site, the equipment will be sold.

Canyon is required by its contract to restore the land to a condition suitable for recreational use after it extracts the copper. The company has provided the following three cash flow possibilities (A, B, and C) for the restoration costs to be paid in three years, after extraction is completed:

| | Cash Outflow | Probability |
|---|--------------|-------------|
| A | \$500,000 | 30% |
| B | 600,000 | 50% |
| C | 700,000 | 20% |

The company's credit-adjusted risk free interest rate is 8%. What should be the capitalized cost of the copper deposit?

| | |
|--|---------------------------|
| Purchase of rights to explore | \$1,000,000 |
| Exploration costs | 800,000 |
| Development costs | 500,000 |
| Restoration costs | 468,360* |
| Capitalized cost of the copper deposit | <u>\$2,768,360</u> |

*Present value of expected cash outflow for restoration costs (asset retirement obligation):

$$\$500,000 \times 30\% = \$150,000$$

$$600,000 \times 50\% = 300,000$$

$$700,000 \times 20\% = 140,000$$

$$\mathbf{\$590,000} \times 0.79383 = \mathbf{\$468,360}$$

(0.79383 is the present value of \$1, $n = 3$, $i = 8\%$)

Journal Entries

| | | |
|--|------------------|----------------|
| Copper mine (determined above) | 2,768,360 | |
| Cash (\$1,000,000 + \$800,000 + \$500,000) | | 2,300,000 |
| Asset retirement liability (determined above) | | 468,360 |
| Excavation equipment | 600,000 | |
| Cash (cost) | | 600,000 |

As we discuss in [Chapter 11](#), the cost of the copper mine is allocated to future periods as *depletion* using a depletion rate based on the estimated amount of copper discovered. The \$600,000 cost of the excavation equipment, less any anticipated residual value, is allocated to future periods as *depreciation*.

Additionally, the difference between the asset retirement liability of **\$468,360** and the probability-weighted expected cash outflow of **\$590,000** is recognized as **accretion expense**, an additional expense that accrues as an operating expense, over the three-year excavation period. This process increases the liability to \$590,000 by the end of the excavation period.

| Year | Accretion Expense | Increase in Balance | Asset Retirement Obligation |
|------|---------------------------|---------------------|-----------------------------|
| | | | 468,360 |
| 1 | 8% (468,360) = 37,469 | 37,469 | 505,829 |
| 2 | 8% (505,829) = 40,466 | 40,466 | 546,295 |
| 3 | 8% (546,295) = 43,705* | 43,705 | 590,000 |

*Rounded

The journal entry to record accretion expense for the first year is as follows:

| | | |
|----------------------------|--------|--------|
| Accretion expense | 37,469 | |
| Asset retirement liability | | 37,469 |

If the actual restoration costs are more (less) than the \$590,000, we recognize a loss (gain) on retirement of the obligation for the difference. For example, if the actual restoration costs were \$625,000, we would record the transaction as follows:

Asset retirement obligations could result from the acquisition of many different types of tangible assets, not just natural resources.

| | | |
|------------------------------|---------|---------|
| Asset retirement liability | 590,000 | |
| Loss (\$625,000 - \$590,000) | 35,000 | |
| Cash | | 625,000 |

SM Energy Company is engaged in the exploration, development, acquisition, and production of natural gas and crude oil. For the year ended December 31, 2020, SM reported \$85.3 million in asset retirement obligations in its balance sheet. A disclosure note included in a recent annual report shown in  **Illustration 10-7** describes the company's policy and provides a summary of disclosure requirements.

ILLUSTRATION 10-7 Disclosure of Asset Retirement Obligations—SM Energy Company

Real World Financials

Note 1—Asset Retirement Obligations

The Company recognizes an estimated liability for future costs associated with the abandonment of its oil and gas properties, including facilities requiring decommissioning. A liability for the fair value of an asset retirement obligation and corresponding increase to the carrying value of the related long-lived asset are recorded at the time a well is drilled or acquired, or a facility is constructed. The increase in carrying value is included in the proved oil and gas properties line item in the accompanying balance sheets. The Company depletes the amount added to proved oil and gas property costs and recognizes expense in connection with the accretion of the discounted liability over the remaining estimated economic lives of the respective long-lived assets. Cash paid to settle asset retirement obligations is included in the cash flows from operating activities section of the accompanying statements of cash flows.

The Company's estimated asset retirement obligation liability is based on historical experience in plugging and abandoning wells, estimated economic lives, estimated plugging and abandonment cost, and federal and state regulatory requirements. The liability is discounted using the credit-adjusted risk-free rate estimated at the time the liability is incurred or revised. The credit-adjusted risk-free rates used to discount the Company's plugging and abandonment liabilities range from 5.5 percent to 12 percent. In periods subsequent to initial measurement of the liability, the Company must recognize period-to-period changes in the liability resulting from the passage of time, revisions to either the amount of the original estimate of undiscounted cash flows or economic life, or changes in inflation factors or the Company's credit-adjusted risk-free rate as market conditions warrant. Please refer

to Note 14—Asset Retirement Obligations for a reconciliation of the Company’s total asset retirement obligation liability as of December 31, 2020, and 2019.

Source: SM Energy Company

It is important to understand that asset retirement obligations could result from the acquisition of many different types of tangible assets, not just natural resources. For example, **Dow Chemical Company** reported a \$112 million asset retirement liability in its 2020 balance sheet related to anticipated demolition and remediation activities at its manufacturing sites in Europe, the United States, Japan, the United Arab Emirates, Canada and Argentina; and capping activities at landfill sites in the United States, Brazil and Canada.

Sometimes, after exploration or development, it becomes apparent that continuing the project is economically infeasible. If that happens, any costs incurred are expensed rather than capitalized. An exception is in the oil and gas industry, where we have two generally accepted accounting alternatives for accounting for projects that prove unsuccessful. We discuss these alternatives in [Appendix 10](#).

Intangible Assets

Intangible assets are assets, other than financial assets, that lack physical substance. They include such items as patents, copyrights, trademarks, franchises, and goodwill. Despite their lack of physical substance, these assets can be extremely valuable resources for a company. In general, intangible assets refer to the ownership of exclusive rights that provide benefits to the owner in the production of goods and services.

Intangible assets generally represent exclusive rights that provide benefits to the owner.

The issues involved in accounting for intangible assets are similar to those of property, plant, and equipment. One key difference, though, is that the future benefits that we attribute to intangible assets usually are much less certain than those attributed to tangible assets. For example, the productive capacity and service life of a delivery truck is fairly easy to determine in most situations. However, will expenditures for the exclusive right to sell a product (patent) provide future benefits? If so, for how long? Will expenditures to acquire a franchise or customer list provide future benefits? If so, for how long? This uncertainty is a

discriminating characteristic of intangible assets that perhaps better distinguishes them from tangible assets than their lack of physical substance. After all, other assets, too, do not exist physically but are not considered intangible assets. Accounts receivable and prepaid expenses, for example, have no physical substance and yet are reported among tangible assets.

Companies acquire intangible assets in two ways:

1. They *purchase* intangible assets like patents, copyrights, trademarks, or franchise rights from other companies.
2. They *develop* intangible assets internally, for instance, by developing a new product or process and obtaining a protective patent.

The reporting rules for intangible assets vary depending on whether the company purchased the asset or developed it internally. Reporting purchased intangibles is similar to reporting purchased property, plant, and equipment. We record purchased intangible assets at their original cost plus all other costs, such as legal fees, necessary to get the asset ready for use. For example, if a company purchases a patent from another entity, it might pay legal fees and filing fees in addition to the purchase price. We value intangible assets acquired in exchange for stock, or for other nonmonetary assets, or with deferred payment contracts exactly as we do property, plant, and equipment.

Purchased intangible assets are valued at their original cost plus other necessary costs.

The cost of an intangible asset is amortized over its useful life unless it has an indefinite useful life.⁶ Also, just like property, plant, and equipment, intangibles are subject to asset impairment rules. We discuss amortization and impairment in [Chapter 11](#).

Reporting intangible assets that are developed internally is quite different. Rather than reporting these in the balance sheet as assets, we typically expense them in the income statement in the period we incur those internal development costs. For example, the research and development (R&D) costs incurred in developing a new product or process are not recorded as an intangible asset in the balance sheet. Instead, they are expensed directly in the income statement as incurred. The reason we expense all R&D costs is the difficulty in determining the portion of R&D that benefits future periods. Conceptually, we should record as an intangible asset the portion that benefits future

Internally developed intangible assets typically are expensed.

periods. Due to the difficulties in arriving at this estimate, current U.S. accounting rules require firms to expense all R&D costs as incurred.

Let's look in detail at some specific types of intangible assets. Later in the chapter, we'll cover additional intangible assets related to software development costs and acquired research and development.

PATENTS

A **patent** is an exclusive right to manufacture a product or to use a process. The U.S. Patent and Trademark Office grants this right for a period of 20 years. In essence, the holder of a patent has a monopoly on the use, manufacture, or sale of the product or process. If a patent is purchased from an inventor or another individual or company, the amount paid is its initial valuation. The cost might also include such other costs as legal and filing fees to secure the patent. Holders of patents often need to defend a patent in court against infringement. Any attorney fees and other costs of successfully defending a patent are added to the patent account.

In contrast, when a firm engages in its own research activities to develop a new product or process, it expenses those costs as it incurs them. For example, major pharmaceutical companies like **Amgen** and **Gilead Sciences** spend over a billion dollars each year developing new drugs. Most of these research and development costs are recorded as operating expenses in the income statement. An exception to this rule is legal fees. The firm will record in the Patent asset account the legal and filing fees to secure a patent, even if it developed the patented item or process internally. We discuss research and development in more detail in a later section.

COPYRIGHTS

A **copyright** is an exclusive right of protection given by the U.S. Copyright Office to the creator of a published work such as a song, film, painting, photograph, book, or computer software. Copyrights give the creator/owner the exclusive right to reproduce and sell the artistic or published work for the life of the creator plus 70 years. A copyright also allows the holder to pursue legal action against anyone who attempts to infringe the copyright. Accounting for the costs of copyrights is virtually identical to that of patents.

TRADEMARKS

A **trademark**, also called **tradenname**, is a word, slogan, or symbol that distinctively identifies a company, product, or service. The firm can register its trademark with the U.S. Patent and Trademark Office to protect it from use by others for a period of 10 years. The registration can be renewed for an indefinite number of 10-year periods, so a trademark is an example of an intangible asset whose useful life can be indefinite. Trademarks or tradenames often are acquired through a business combination.

Trademarks or tradenames often are considered to have indefinite useful lives.

FRANCHISES

A **franchise** is a contractual arrangement under which the franchisor grants the franchisee the exclusive right to use the franchisor's trademark or tradename, as well as possibly product and formula rights, to operate a business within a geographical area and usually for a specified period of time. Many popular retail businesses such as fast-food outlets, automobile dealerships, and motels are franchises. For example, the last time you ordered a hamburger at McDonald's, you were probably dealing with a franchise. The owner of that McDonald's outlet paid **McDonald's Corporation** a fee in exchange for the exclusive right to use the McDonald's name and to sell its products within a specified geographical area.

Franchise operations are among the most common ways of doing business.

Payments to the franchisor usually include an initial payment plus periodic payments over the life of the franchise agreement. The franchisee capitalizes as an intangible asset the initial franchise fee plus any legal costs associated with the contract agreement. The franchise asset is then amortized over the life of the franchise agreement. The periodic payments usually relate to services provided by the franchisor on a continuing basis and are expensed as incurred. A company might incur other costs at the time of purchasing a franchise, such as advertising and employee training, but those costs are not included in the capitalized amount.

GOODWILL

Goodwill is a unique intangible asset in that its cost can't be directly associated with any specific identifiable right and it is not separable from the company itself. Goodwill will appear as an asset in a

Goodwill can only be purchased through the acquisition of another company.

balance sheet only when it is purchased in connection with the acquisition of control over another company. In that case, the capitalized cost of goodwill equals *the fair value of the consideration given to acquire the company (the acquisition price) minus the fair value of the acquired company's identifiable net assets*. The fair value of the identifiable net assets equals the fair value of all identifiable tangible and intangible assets minus the fair value of any liabilities of the acquired company assumed by the acquirer. This makes goodwill a residual asset; it's the amount left after other assets are identified and valued. Goodwill can emerge from a company's clientele and reputation, its trained employees and management team, its favorable business location, and many other unique features of an acquired company that can't be associated with a specific asset. Consider the example in

Goodwill is the excess of the fair value of the consideration given over the fair value of the identifiable net assets acquired.

 **Illustration 10-8.**

ILLUSTRATION 10-8 Goodwill

The Knight Corporation acquired all of the outstanding common stock of the Rider Corporation in exchange for \$180 million cash.* Knight assumed all of Rider's long-term liabilities, which have a fair value of \$120 million at the date of acquisition. The fair values of all identifiable assets of Rider are as follows (\$ in millions):

| | |
|--|--------------|
| Receivables | \$ 50 |
| Inventory | 70 |
| Property, plant, and equipment | 90 |
| Patent | 40 |
| Fair value of identifiable assets acquired | <u>\$250</u> |

The cost of the goodwill resulting from the acquisition is \$50 million:

| | |
|--|---------------------|
| Fair value of consideration given (cash) | \$180 |
| Less: Fair value of identifiable net assets acquired | |
| Fair value of identifiable assets acquired | \$250 |
| Less: Fair value of liabilities assumed | <u>(120)</u> (130) |
| Goodwill | <u><u>\$ 50</u></u> |

The following journal entry captures the effect of the acquisition on Knight's assets and liabilities:

| | |
|---|-----------|
| Receivables (fair value) | 50 |
| Inventory (fair value) | 70 |
| Property, plant, and equipment (fair value) | 90 |
| Patent (fair value) | 40 |
| Goodwill (difference) | 50 |
| Liabilities (fair value) | 120 |
| Cash (acquisition price) | 180 |

*Determining the amount an acquirer is willing to pay for a company in excess of the identifiable net assets is a question of determining the value of a company as a whole. This question is addressed in most introductory and advanced finance textbooks.

Of course, a company can develop its own goodwill through advertising, training employees, and other efforts. In fact, most do. However, a company must expense all such costs incurred in the internal generation of goodwill. By not capitalizing these items, accountants realize that this results in an understatement of real assets because many of these expenditures do result in significant future benefits. Also, it's difficult to compare two companies when one has acquired goodwill, and the other has developed it internally. But imagine how difficult it would be to associate these expenditures with any objective measure of goodwill. In essence, we have a situation where the characteristic of faithful representation overshadows relevance.

Just like for other intangible assets that have indefinite useful lives, *we do not amortize goodwill*. This makes it imperative that companies make every effort to identify specific intangibles other than goodwill that they acquire in a business combination since goodwill is the amount left after other assets are identified.

In keeping with that goal, GAAP provides guidelines for determining which intangibles should be separately recognized and valued. Specifically, an intangible should be recognized as an asset apart from goodwill if

Goodwill, along with other intangible assets with indefinite useful lives, is not amortized.

In a business combination, an intangible asset must be recognized as an asset apart from goodwill if it arises from

it arises from contractual or other legal rights or is capable of being separated from the acquired entity.

contractual or other legal rights or is separable.

Possibilities are patents, trademarks, copyrights, and franchise agreements, and such items as customer lists, license agreements, order backlogs, employment contracts, and noncompetition agreements.⁷ In past years, some of these intangibles, if present in a business combination, often were included in the cost of goodwill.⁸

Additional Consideration

It's possible for the consideration given to be *less than* the fair value of the identifiable net assets. This "bargain purchase" situation could result from an acquisition involving a "forced sale" in which the seller is acting under duress. The FASB previously required this bargain purchase to be allocated as a pro rata reduction of the amounts that otherwise would have been assigned to particular assets acquired. The allocation of a negative amount to assets then resulted in recording assets acquired at less than their fair values. However, current GAAP makes it mandatory that assets and liabilities acquired in a business combination be valued at their fair values.⁹ Any bargain purchase is reported as a gain in the year of the acquisition.

Lump-Sum Purchases

LO10–2 Determine the initial cost of individual property, plant, and equipment and intangible assets acquired as a group for a lump-sum purchase price.

It's not unusual for a group of assets to be acquired for a single sum. If these assets are indistinguishable, for example 10 identical delivery trucks purchased for a lump-sum price of \$150,000, valuation is obvious. Each of the trucks would be valued at \$15,000 ($\$150,000 \div 10$). However, if the lump-sum purchase involves different assets, it's necessary to allocate the lump-sum acquisition price among the separate items. The assets acquired may have different characteristics and different useful lives. For example, the acquisition of a factory may include assets that are significantly different such as land, building, and equipment.

The allocation is made in proportion to the individual assets' relative fair values. This process is best explained by an example in  **Illustration 10–9**.

ILLUSTRATION 10–9 Lump-Sum Purchase

The total purchase price is allocated in proportion to the relative fair values of the assets acquired.

The Smyrna Hand & Edge Tools Company purchased an existing factory for a single sum of **\$2,000,000**. The price included title to the land, the factory building, the manufacturing equipment in the building, a patent on a process the equipment uses, and inventories of raw materials. An independent appraisal estimated the fair values of the assets (if purchased separately) as follows:

| | Fair Values | |
|-------------|--------------------|-----|
| Land | \$ 330,000 | 15% |
| Building | 550,000 | 25% |
| Equipment | 660,000 | 30% |
| Patent | 440,000 | 20% |
| Inventories | 220,000 | 10% |

| | | | |
|---|------------------------|--------------------|------------------|
| Total | | <u>\$2,200,000</u> | <u>100%</u> |
| Because the \$2,200,000 fair value of the assets is greater than the \$2,000,000 purchase price, the purchase price is allocated to the separate assets as follows: | | | |
| Land | (15% × \$2,000,000) | 300,000 | |
| Building | (25% × \$2,000,000) | 500,000 | |
| Equipment | (30% × \$2,000,000) | 600,000 | |
| Patent | (20% × \$2,000,000) | 400,000 | |
| Inventories | (10% × \$2,000,000) | 200,000 | |
| Cash | | | 2,000,000 |

The relative fair value percentages are multiplied by the lump-sum purchase price to determine the initial valuation of each of the separate assets. Notice that the lump-sum purchase includes inventories. The procedure used here to allocate the purchase price in a lump-sum acquisition pertains to any type of asset mix, not just to property, plant, and equipment and intangible assets.

Ethical Dilemma

Grandma’s Cookie Company purchased a factory building. The company controller, Don Nelson, is in the process of allocating the lump-sum purchase price between land and building. Don suggests to the company’s chief financial officer, Judith Prince, that they fudge a little by allocating a disproportionately higher share of the price to land. Don reasons that this will reduce depreciation expense, boost income, increase their profit-sharing bonus, and hopefully, increase the price of the company’s stock. Judith has some reservations about this because the higher reported income will also cause income taxes to be higher than they would be if a correct allocation of the purchase price is made.

What are the ethical issues? What stakeholders' interests are in conflict?

PART B

Noncash Acquisitions

Companies sometimes acquire assets without paying cash at the time of the purchase. In Part B, we examine four situations where this occurs.

1. Deferred payments (notes payable)
2. Issuance of equity securities
3. Donated assets
4. Exchanges of nonmonetary assets for other assets

The controlling principle in each of these situations is that in any noncash transaction, the asset acquired is recorded at its fair value. The first indicator of fair value is the fair value of the assets, debt, or equity securities given. Sometimes the fair value of the assets received is used when their fair value is more clearly evident than the fair value of the assets given.

Assets acquired in noncash transactions are valued at the fair value of the assets given or the fair value of the assets received, whichever is more clearly evident.

Deferred Payments

LO10–3 Determine the initial cost of property, plant, and equipment and intangible assets acquired in exchange for a deferred payment contract.

A company can acquire an asset by giving the seller a promise to pay cash in the future and thus creating a liability, usually a note payable. The initial valuation of the asset is, again, quite simple as long as the note payable explicitly requires the payment of interest at a realistic interest rate. For example, suppose equipment is selling for \$41,323. Instead of paying cash immediately, the buyer signs a note on January 2, 2024, requiring payment in two years *plus* annual interest of 10% (a realistic rate). The equipment would be recorded for \$41,323, and interest would be recognized over time. After two years, the company would pay \$50,000 for the equipment and interest.

| | | |
|---|--------|--------|
| January 2, 2024 | | |
| Equipment | 41,323 | |
| Notes payable (face amount) | | 41,323 |
| December 31, 2024 | | |
| Interest expense ($\$41,323 \times 10\%$) | 4,132 | |
| Interest payable | | 4,132 |
| December 31, 2025 | | |
| Interest expense [$(\$41,323 + \$4,132) \times 10\%$] | 4,545 | |
| Interest payable (from 2024) | 4,132 | |
| Notes payable (face amount) | 41,323 | |
| Cash | | 50,000 |

We know from our discussion of the time value of money in [Chapter 5](#) that most liabilities are valued at the present value of future cash payments, reflecting an appropriate time value of money. As long as the note payable explicitly contains a realistic interest rate, the present value will equal the face value of the note, \$41,323 in our previous example. This also should be equal to the fair value of the equipment purchased.

When an interest rate is not specified or is unrealistic, determining the cost of the asset is less straightforward. In that case, the accountant should look beyond the form of the transaction and record its substance. Consider  **Illustration 10-10**.

ILLUSTRATION 10-10 Asset Acquired with Noninterest-Bearing Note—Present Value of Note Indicative of Fair Value

On January 2, 2024, the Midwestern Steam Gas Corporation purchased industrial equipment. In payment, Midwestern signed a noninterest-bearing note requiring \$50,000 to be paid on December 31, 2025 (two years later). If Midwestern had borrowed cash to buy the equipment, the bank would have required an interest rate of 10%. The equipment is custom-built, so its fair value (cash price) is unavailable.

On the surface, it might appear that Midwestern is paying \$50,000 for the equipment, the eventual cash payment. However, when you recognize that the agreement specifies no interest even though the payment won't be made for two years, it becomes obvious that a portion of the \$50,000 payment is not actually payment for the equipment, but instead is interest on the note. At what amount should Midwestern value the equipment and the related note payable?

Some portion of the payment(s) required by a noninterest-bearing note in reality is interest.

The answer is fair value, as it is for any noncash transaction. This might be the fair value of the equipment or the fair value of the note. In this example, the fair value of the equipment is not known. But Midwestern can determine the fair value of the note payable by computing the present value of the cash payments at the appropriate interest rate of 10%. The amount actually paid for the equipment, then, is the present value of the cash flows called for by the loan agreement, discounted at the market rate—10% in this case.

Page 523

Noncash transactions are recorded at the fair value of the items exchanged.

$$PV = \$50,000 (0.82645^*) = \$41,323$$

*Present value of \$1: $n=2, i=10\%$ (from table 2).

So the equipment should be recorded at its *real* cost, \$41,323, as follows: **10**

The economic essence of a transaction should prevail over its outward appearance.

| January 2, 2024 | | |
|--|--------|--------|
| Equipment (determined above) | 41,323 | |
| Discount on notes payable (difference) | 8,677 | |
| Notes payable (face amount) | | 50,000 |

Notice that the note also is recorded at \$41,323, its present value, but this is accomplished by using a contra account, called *discount on notes payable*, for the difference between the face amount of the note (\$50,000) and its present value (\$41,323). The difference of \$8,677 is the portion of the eventual \$50,000 payment that represents interest and is recognized as interest expense over the life of the note.

Assuming that Midwestern's fiscal year-end is December 31 and that adjusting entries are recorded only at the end of each year, the company would record the following entries at the end of 2024 and 2025 to accrue interest and the payment of the note:

| December 31, 2024 | | |
|---|--------|--------|
| Interest expense ($\$41,323 \times 10\%$) | 4,132 | |
| Discount on notes payable | | 4,132 |
| December 31, 2025 | | |
| Interest expense [$(\$41,323 + \$4,132)^* \times 10\%$] | 4,545 | |
| Discount on notes payable | | 4,545 |
| Notes payable (face amount) | 50,000 | |
| Cash | | 50,000 |

*The 2024 unpaid interest increases the amount owed by \$4,132.

| Discount on notes payable | |
|----------------------------------|---------------|
| 8,677 | Jan. 1, 2024 |
| Dec. 31, 2024 | 4,132 |
| Dec. 31, 2025 | 4,545 |
| 0 | Dec. 31, 2025 |

| Interest expense | |
|------------------|---------------|
| 4,132 | Dec. 31, 2024 |
| 4,545 | Dec. 31, 2025 |

Sometimes, the fair value of an asset acquired in a noncash transaction is readily available from price lists, previous purchases, or otherwise. In that case, this fair value may be more clearly evident than the fair value of the note, and the fair value of the asset would serve as the best evidence of the exchange value of the transaction. As an example, let's consider

 **Illustration 10-11.**

ILLUSTRATION 10-11 Asset Acquired with Noninterest-Bearing Note—Fair Value of Asset Is Known

On January 2, 2024, Dennison Inc., purchased equipment and signed a noninterest-bearing note in payment. The note requires the company to pay \$100,000 on December 31, 2026 (three years later). Dennison is not sure what interest rate appropriately reflects the time value of money. However, price lists indicate the equipment could have been purchased for cash at a price of \$79,383.

Dennison records both the asset and liability at \$79,383 on January 2 as shown:

| | | |
|--|--------|---------|
| Equipment (cash price) | 79,383 | |
| Discount on notes payable (difference) | 20,617 | |
| Notes payable (face amount) | | 100,000 |

In this situation, we infer the present value of the note from the fair value of the asset. Again, the difference between the note's \$79,383 present value and the cash payment of \$100,000 represents interest. We can determine the interest rate that is implicit in the agreement as follows:

$$\begin{aligned}
 \$79,383 \text{ (present value)} &= \$100,000 \text{ (face amount)} \times \text{PV factor} \\
 \$79,383 \div \$100,000 &= 0.79383
 \end{aligned}$$

*Present value of \$1: $n=3, i=?$ (from Table 2, $i=8\%$).

We refer to the **8%** rate as the *implicit rate of interest*. Dennison records interest each year at 8% in the same manner as demonstrated in  **Illustration 10-10** and discussed in greater

depth in  **Chapter 14.**

We now turn our attention to the acquisition of assets acquired in exchange for equity securities and through donation.

Issuance of Equity Securities

LO10–4 Determine the initial cost of property, plant, and equipment and intangible assets acquired in exchange for equity securities or through donation.

The most common situation in which equity securities are issued for property, plant, and equipment and intangible assets occurs when small companies incorporate and the owner or owners contribute assets to the new corporation in exchange for ownership securities, usually common stock. Because the common shares are not publicly traded, it's difficult to determine their fair value. In that case, the fair value of the assets received by the corporation is probably the better indicator of the transaction's exchange value. In other situations, particularly those involving corporations whose stock is actively traded, the market value of the shares is the best indication of fair value. Consider  **Illustration 10–12**.

ILLUSTRATION 10–12 Asset Acquired by Issuing Equity Securities

Assets acquired by issuing common stock are valued at the fair value of the securities or the fair value of the assets, whichever is more clearly evident.

On March 31, 2024, the Elcorn Company issued 10,000 shares of its no-par common stock in exchange for land. On the date of the transaction, the fair value of the common stock, evidenced by its market price, was \$20 per share. The journal entry to record this transaction is shown below:

| | | |
|-------------------------------------|---------|---------|
| Land | 200,000 | |
| Common stock (10,000 shares × \$20) | | 200,000 |

If the fair value of the common stock had not been reliably determinable, the value of the land as determined through an independent appraisal would be used as the cost of the land and the value of the common stock.

Donated Assets

On occasion, companies acquire assets through donation. The donation usually is an enticement to do something that benefits the donor. For example, the developer of an industrial park might pay some of the costs of building a manufacturing facility to entice a company to locate in its park. Companies record assets donated by unrelated parties at their fair values based on either an available market price or an appraisal value. This should not be considered a departure from historical cost valuation. Instead, it is equivalent to the donor contributing cash to the company and the company using the cash to acquire the asset.

Donated assets are recorded at their fair values.

As the recipient records the asset at its fair value, what account receives the offsetting credit? U.S. GAAP provides no specific guidance for business entities. As a result, in practice, companies often rely on guidance provided to not-for-profit entities, which specifies that contributions should be recognized as revenues in the period received.¹¹ Recall that revenues generally are inflows of assets from delivering or producing goods, rendering services, or from other activities that constitute the entity's ongoing major or central operations. The rationale is that the company receiving the donation is performing a service for the donor in exchange for the asset donated.

Corporations occasionally receive incentives from governmental units. A local governmental unit might provide land or pay all or some of the cost of a new office building or manufacturing plant to entice a company to locate within its geographical boundaries. For example, the city of San Jose, California, paid a significant portion of the cost of a new office building for **IBM Corporation**. The new office building, located in downtown San Jose, brought jobs to a revitalized downtown area and increased revenues to the city. The City of San Jose did not receive an equity interest in IBM through its donation, but significantly benefited nevertheless.  **Illustration 10-13** provides an example.

ILLUSTRATION 10-13 Asset Donation

Elcorn Enterprises decided to relocate its office headquarters to the city of Westmont. The city agreed to pay 20% of the \$20 million cost of building the headquarters in order to entice Elcorn to relocate. The building was completed on

May 3, 2024. Elcorn paid its portion of the cost of the building in cash. Elcorn records the transaction as follows:

| | | |
|--|------------|------------|
| Building | 20,000,000 | |
| Cash | | 16,000,000 |
| Revenue—donation of asset (20% × \$20 million) | | 4,000,000 |

LO10–9 Discuss the primary differences between U.S. GAAP and IFRS with respect to the acquisition of property, plant, and equipment and intangible assets.

International Financial Reporting Standards

IFRS requires government grants to be recognized in income over the periods necessary to match them on a systematic basis with the related costs that they are intended to compensate.

Government Grants. Both U.S. GAAP and IFRS require that companies value donated assets at their fair values. For government grants, though, the way that value is recorded potentially differs under the two sets of standards. Under U.S. GAAP, some companies record government grants as revenue in the period received, consistent with accounting guidance for contributions received by not-for-profit entities. *IAS No. 20* requires that government grants be recognized in income over the periods necessary to match them on a systematic basis with the related costs that they are intended to compensate. So, for example, *IAS No. 20* allows two alternatives for grants related to assets.¹²

1. Deduct the amount of the grant in determining the initial cost of the asset.
2. Record the grant as a liability, deferred income, in the balance sheet and recognize it in the income statement systematically over the asset's useful life.

In [Illustration 10-13](#), if a company chose the first option, the building would be recorded at \$16 million. If instead the company chose the second option, the building would be recorded at \$20 million, but rather than recognizing \$4 million in revenue as with U.S. GAAP, a \$4 million credit to deferred income would be recorded and recognized as income over the life of the building.

Siemens, a global electronics and electrical engineering company based in Germany, prepares its financial statements according to IFRS, and sometimes receives government grants for the purchase or production of fixed assets. The following disclosure note included with recent financial statements indicates that Siemens uses the first option, deducting the amount of the grant from the initial cost of the asset.

Government Grants (in part)

Grants awarded for the purchase or the production of fixed assets (grants related to assets) are generally offset against the acquisition or production costs of the respective assets and reduce future depreciations accordingly.

Property, plant, and equipment and intangible assets also can be acquired in an exchange. Because an exchange transaction inherently involves a disposition of one asset as it is given up in exchange for another, we cover these transactions next under Exchanges.

Decision Makers' Perspective

The property, plant, and equipment and intangible asset acquisition decision is among the most significant decisions that management must make. A decision to acquire a new fleet of airplanes or to build or purchase a new office building or manufacturing plant could influence a company's performance for many years.

These decisions, often referred to as **capital budgeting** decisions, require management to forecast all future net cash flows (cash inflows minus cash outflows) generated by the asset(s). These cash flows are then used in a model to determine if the future cash flows are sufficient to warrant the capital expenditure. One such model, the net present value model, compares the present value of future net cash flows with the required initial acquisition cost of the asset(s). If the present value is higher than the acquisition cost, the asset is acquired. You have studied or will study capital budgeting in considerable depth in a financial management course. The introduction to the time value of money concept in [Chapter 5](#) provided you with important tools necessary to evaluate capital budgeting decisions.

LO10–5 Calculate the fixed-asset turnover ratio used by analysts to measure how effectively managers use property, plant, and equipment.

A key to profitability is how well a company manages and utilizes its assets. Financial analysts often use activity, or turnover, ratios to evaluate a company's effectiveness in managing assets. This concept was illustrated with receivables and inventory in previous chapters. Property, plant, and equipment (PP&E) usually are a company's primary revenue-generating assets. Their efficient use is critical to generating a satisfactory return to owners. One ratio analysts often use to measure how effectively managers use PP&E is the **fixed-asset turnover ratio**. This ratio is calculated as follows:

The fixed-asset turnover ratio measures a company's effectiveness in managing property, plant, and equipment.

$$\text{Fixed-asset turnover ratio} = \frac{\text{Net sales}}{\text{Average fixed assets}}$$

The ratio indicates the level of sales generated by the company's investment in fixed assets. The denominator usually is the book value, sometimes called carrying value or carrying amount (cost less accumulated depreciation and depletion) of property, plant, and equipment.¹³

As with other turnover ratios, we can compare a company's fixed-asset turnover with that of its competitors, with an industry average, or with the same company's ratio over time. Let's compare the fixed-asset turnover ratios for **The Gap, Inc.**, and **Ross Stores, Inc.**, two companies in the retail apparel industry.

| | (\$ in millions) | | | |
|--------------------------------------|------------------|---------|-------------|---------|
| | Gap | | Ross Stores | |
| | 2020 | 2019 | 2020 | 2019 |
| Property, plant, and equipment (net) | \$3,122 | \$2,912 | \$2,653 | \$2,475 |
| Net sales—2020 | \$16,383 | | \$16,039 | |

The 2020 fixed-asset turnover for Gap is 5.43 ($\$16,383 \div [(\$2,912 + \$3,122) \div 2]$) compared to the turnover for Ross Stores of 6.26 ($\$16,039 \div [(\$2,475 + \$2,653) \div 2]$). Ross Stores is able to generate \$0.83 more in sales dollars than Gap for each dollar invested in fixed assets. ●

Exchanges

LO10–6 Determine the initial cost of property, plant, and equipment and intangible assets acquired in exchange for other nonmonetary assets.

Sometimes a company will acquire a new asset by giving up an existing asset. For example, a company might purchase a new delivery truck by trading-in its old delivery truck. This is referred to as a *nonmonetary asset exchange*.¹⁴

An asset received in an exchange of nonmonetary assets generally is valued at fair value.

If the values of those nonmonetary assets are not equal to one another, cash will be received or paid to equalize those values. When a company trades its old delivery truck for a new one, it's likely that the fair value of the new delivery truck is higher, so the company trading-in the old delivery truck will pay cash to make up the difference.

The basic steps in recording nonmonetary asset exchanges follow:

- Step 1:** **Record the new asset at fair value.** Fair value is determined based on the fair value of the asset(s) given up or the fair value of the asset received. In a normal exchange, we expect those two fair values to equal.
- Step 2:** **Remove the book value of the nonmonetary asset given.** Book value equals the recorded cost of the old asset minus its accumulated depreciation.
- Step 3:** **Record any cash received or paid.** Cash is used to equalize the fair values of the nonmonetary assets in the exchange.
- Step 4:** **Record any gain or loss.** The gain or loss on the exchange equals the difference between fair value and book value of the asset given up in step 2. If fair value is greater, then a gain is recorded. If book value is greater, then a loss is recorded. The gain or loss also can be viewed as the net increase or decrease in total assets from the exchange.¹⁵

To see an example, look at  **Illustration 10-14A**.

Illustration 10-14A Nonmonetary Asset Exchange—Gain

A gain is recognized when the fair value of an asset given is more than its book value.

The Elcorn Company traded its old laser equipment for the newer air-cooled ion laser equipment manufactured by American Laser Corporation. The old equipment had a book value of \$100,000 (cost of \$500,000 less accumulated depreciation of \$400,000) and a **fair value** of **\$150,000**. Elcorn also paid American Laser **\$430,000 in cash** as part of the exchange. The following journal entry records the transaction:

| | | |
|--|----------------|---------|
| Equipment—new (fair value, determined below) | 580,000 | |
| Accumulated depreciation—old (account balance) | 400,000 | |
| Equipment—old (account balance) | | 500,000 |
| Cash (amount paid) | | 430,000 |
| Gain on exchange of assets (fair value – book value) | | 50,000 |

| Assets Given: | Fair Value | Book Value |
|---------------|--------------------------------|--------------------------------|
| Old equipment | \$150,000 | \$100,000 |
| Cash paid | 430,000 | 430,000 |
| Total | <u><u>\$580,000</u></u> | <u><u>\$530,000</u></u> |

- Step 1: Record the new equipment for **\$580,000**. This is the fair value of the assets given.
- Step 2: Remove the book value of the old equipment with a credit to Equipment for \$500,000 and a debit to Accumulated Depreciation for \$400,000.
- Step 3: Record the amount paid with a credit to Cash for \$430,000.
- Step 4: Record a gain of \$50,000. The gain is computed as the fair value of the old equipment minus the book value of the old equipment (\$150,000 – \$100,000). Alternatively, the gain can be computed as the net change in assets—recorded amount of assets received (\$580,000) minus the book value of assets given (\$530,000).

In  **Illustration 10-14A**, the \$150,000 fair value of the old asset was known.

However, in a trade-in, quite often the fair value of the new asset is more clearly evident than the second-hand value of the asset traded in. For example, if it was known that

the fair value of the new asset was \$580,000, then the \$150,000 fair value of the old asset could have been determined by subtracting the cash paid (\$580,000 – \$430,000).

Let's modify the illustration slightly by assuming that the fair value of the old equipment is \$75,000 instead of \$150,000.  **Illustration 10-14B** shows the journal entry to record the transaction.

Illustration 10-14B Nonmonetary Asset Exchange—Loss

A loss is recognized when the fair value of an asset given is less than its book value.

The Elcorn Company traded its old laser equipment for the newer air-cooled ion laser equipment manufactured by American Laser Corporation. The old equipment had a book value of \$100,000 (cost of \$500,000 less accumulated depreciation of \$400,000) and a **fair value of \$75,000**. Elcorn also paid American Laser **\$430,000 in cash** as part of the exchange. The following journal entry records the transaction:

| | | |
|--|----------------|---------|
| Equipment—new (fair value determined below) | 505,000 | |
| Accumulated depreciation—old (account balance) | 400,000 | |
| Loss on exchange of assets (fair value – book value) | 25,000 | |
| Equipment—old (account balance) | | 500,000 |
| Cash (amount paid) | | 430,000 |

| Assets Given: | Fair Value | Book Value |
|---------------|-------------------------|-------------------------|
| Old equipment | \$ 75,000 | \$100,000 |
| Cash paid | 430,000 | 430,000 |
| Total | <u>\$505,000</u> | <u>\$530,000</u> |

The new equipment is recorded at **\$505,000**, which is the fair value of the old equipment plus the cash paid (\$75,000 + \$430,000). Elcorn recognizes a loss of \$25,000, the amount by which the fair value of the asset given (\$75,000) is less than its book value (\$100,000). Alternatively, the loss can be determined as the net change in assets—recorded amount of the assets received (\$505,000) minus the book value of the assets given (\$530,000).

In rare situations, fair values can't be determine or the exchange lacks commercial substance. Let's discuss these two rare situations.¹⁶

Fair Value Not Determinable

It would be unusual for a company to be unable to reasonably determine fair value of either asset in an exchange. Nevertheless, if the situation does occur, we modify step 1 above and use the *book value* of the assets given up to record the asset acquired. For example, if fair value had not been determinable in [Illustration 10-14A](#), Elcorn would have recorded the exchange as follows:

If we can't determine the fair value of either asset in the exchange, the asset received is valued at the book value of the asset given.

| | |
|---|---------|
| Equipment—new (book value + cash: \$100,000 + \$430,000) | 530,000 |
| Accumulated depreciation—old (account balance) | 400,000 |
| Equipment—old (account balance) | 500,000 |
| Cash (amount paid) | 430,000 |

The new equipment is recorded at the book value of the old equipment (\$100,000) plus the cash given (\$430,000). No gain or loss is recognized on an exchange when fair value is not determinable and the change in total assets equals zero.

Lack of Commercial Substance

If we record an exchange at fair value, we recognize a gain or loss for the difference between the fair value and book value of the asset given up. To prevent a company from exchanging an asset whose fair value is greater than book value for the sole purpose of recognizing a gain, fair value can be used only in gain situations that have *commercial substance*.

A nonmonetary exchange is considered to have commercial substance if future cash flows will change as a result of the exchange. Most exchanges are for business reasons and would not be transacted if there were no anticipated change in future cash flows. For example, newer models of equipment can increase production or improve manufacturing efficiency, causing an increase in revenue or a decrease in operating costs with a corresponding increase in future cash flows. The exchange of old laser equipment for the newer model in  **Illustration 10-14A** is an example of an exchange transacted for business reasons.

Commercial substance occurs when future cash flows change as a result of the exchange.

GAIN SITUATION

Suppose a company owned a tract of land that had a book value of \$1 million and a fair value of \$5 million. The only ways to recognize the \$4 million difference as a gain are to either sell the land or to exchange the land for another nonmonetary asset for a legitimate business purpose. For example, if the land were exchanged for a different type of asset, say an office building, then future cash flows most likely will change. This exchange has commercial substance, and the \$4 million gain can be recognized. On the other hand, if the land were exchanged for a tract of land that has the identical characteristics as the land given, then it is unlikely that future cash flows would change. This exchange lacks commercial substance, and the gain of \$4 million cannot be recognized on the exchange. The new land is recorded at the book value of the old land plus any cash paid.

 **Illustration 10-15** provides an example.

ILLUSTRATION 10-15 Nonmonetary Asset Exchange—Exchange Lacks Commercial Substance

The Elcorn Company traded a tract of land to Sanchez Development for a similar tract of land. The old land had a book value of \$2,500,000 and a fair value of \$4,500,000. Elcorn also paid Sanchez \$500,000 in cash. The following journal

entry records the transaction, *assuming that the exchange lacks commercial substance*:

| | | |
|--|------------------|-----------|
| Land—new (book value + cash: \$2,500,000 + \$500,000) | 3,000,000 | |
| Land—old (account balance) | | 2,500,000 |
| Cash (amount paid) | | 500,000 |

The new land is recorded at **\$3,000,000**, the book value of the old land plus the cash given (\$2,500,000 + \$500,000). No gain is recognized because the exchange does not have commercial substance.

The FASB's intent in including the commercial substance requirement for the use of fair value was to avoid companies' trading property for no business reason other than to recognize the gain.

Additional Consideration

In  **Illustration 10–15**, cash was *given*. What if cash was *received*? Suppose that \$450,000 cash was received instead of the \$500,000 given. The fair value of the old land was \$4,500,000, which means that the fair value of the land received is \$4,050,000 (\$4,500,000 – \$450,000). In that case, a portion of the transaction is considered monetary, and we would recognize that portion of the \$2,000,000 gain (\$4,500,000 fair value – \$2,500,000 book value). The amount of gain recognized is equal to the portion of cash received relative to the total received.

$$\frac{\$450,000}{\$450,000 + 4,050,000} = 10\%$$

Elcorn would recognize a \$200,000 gain (\$2,000,000 × 10%) and would record the land received at **\$2,250,000**, the book value of the land given

plus the gain recognized less the cash received (\$2,500,000 + \$200,000 – \$450,000). The following journal entry records the transaction:

| | | |
|--|------------------|-----------|
| Land—new (\$2,500,000 + \$200,000 – \$450,000) | 2,250,000 | |
| Cash | 450,000 | |
| Land—old | | 2,500,000 |
| Gain on exchange of assets | | 200,000 |

LOSS SITUATION

In  **Illustration 10-15**, what if the fair value of the land given was less than its book value? It's unlikely that a company would enter into this type of transaction unless there was a good reason. When a loss is indicated in a nonmonetary exchange, it's okay to record the loss, and we use fair value to record the asset acquired.

When the fair value of the asset given is less than its book value, we always use fair value to record the exchange.

 **Illustration 10-16** summarizes the treatment of gains and losses, as well as the amount to record for the asset received, for each type of exchange discussed above.

ILLUSTRATION 10-16 Exchanges

| | Type of Exchange | | |
|------------------------------------|---|--|--|
| | Fair value Determinable and Commercial Substance | Fair Value Not Determinable | Lack of Commercial Substance |
| Step 1: Record new asset | FV given + cash paid (or – cash received). [†] | BV given + cash paid (or – cash received). | If gain, BV given + cash paid (or – cash received) + gain recognized.* If loss, FV given + cash paid (or – cash received). |

| | Type of Exchange | | |
|---|---|--|--|
| | Fair value Determinable and Commercial Substance | Fair Value Not Determinable | Lack of Commercial Substance |
| Step 2: Remove old asset | BV of cost minus accumulated depreciation. | Same | Same |
| Step 3: Record cash | Amount paid or received. | Same | Same |
| Step 4: Record gain or loss | FV given – BV given (Gain if FV > BV; Loss if FV < BV). | No gain or loss recognized. | Calculate gain to be recognized.* Recognize entire loss. |

[†]FV = fair value; BV = book value. All references to FV and BV relate to the asset being given in the exchange.

*A gain situation occurs when FV of the assets given is greater than the BV of those assets. If no cash is received, no gain is recognized. If some cash is received, the amount of the gain recognized = (FV given – BV given) × (cash received ÷ total FV received). If cash constitutes at least 25% of the fair value received, the entire gain is recognized = FV given – BV given.

When fair value is determinable and commercial substance exists, we record the asset received at total fair value. Gains and losses are recorded for the difference between the fair value and book value of the asset given, depending on which is higher.

When fair value is not determinable, fair value cannot be used to record the asset being received, and therefore we don't record a gain or loss on the asset being given. The asset received is simply recorded for the book value of the asset given, adjusted for the effects of any cash exchanged.

The rules for exchanges that lack commercial substance reflect a bias toward preventing gains from being recognized unless some cash is received so that a portion of the transaction represents a monetary exchange. Losses in exchanges that lack commercial

substance are fully recognized regardless of cash received or paid, just like losses when fair value is determinable.

Concept Review Exercise

EXCHANGES

The MD Corporation recently acquired new equipment to be used in its production process. In exchange, the company traded in an existing asset that had an original cost of \$60,000 and accumulated depreciation on the date of the exchange of \$45,000. The fair value of the old equipment is \$17,000. In addition, MD paid \$40,000 cash to the equipment manufacturer.

Required:

1. Prepare the journal entry MD would use to record the exchange transaction assuming that the transaction has commercial substance.
2. Prepare the journal entry MD would use to record the exchange transaction assuming that the transaction does *not* have commercial substance.
3. Prepare the journal entry MD would use to record the exchange transaction assuming that the fair value of the old equipment is only \$10,000.

Page 531

Solution:

1. Prepare the journal entry MD would use to record the exchange transaction assuming that the transaction has commercial substance.

| | |
|-------------------------------------|--------|
| Equipment—new (\$17,000 + \$40,000) | 57,000 |
|-------------------------------------|--------|

| | | |
|---|--------|--------|
| Accumulated depreciation—old (account balance) | 45,000 | |
| Equipment—old (account balance) | | 60,000 |
| Cash (amount paid) | | 40,000 |
| Gain on exchange of assets (\$17,000 FV - \$15,000 BV) | | 2,000 |

2. Prepare the journal entry MD would use to record the exchange transaction assuming that the transaction does not have commercial substance.

| | | |
|---|--------|--------|
| Equipment—new (\$15,000 + \$40,000) | 55,000 | |
| Accumulated depreciation—old (account balance) | 45,000 | |
| Equipment—old (account balance) | | 60,000 |
| Cash (amount paid) | | 40,000 |

3. Prepare the journal entry MD would use to record the exchange transaction assuming that the fair value of the old equipment is only \$10,000.

| | | |
|---|--------|--------|
| Equipment—new (\$10,000 + \$40,000) | 50,000 | |
| Accumulated depreciation—old (account balance) | 45,000 | |
| Loss on exchange of assets (\$10,000 FV - \$15,000 BV) | 5,000 | |
| Equipment—old (account balance) | | 60,000 |
| Cash (amount paid) | | 40,000 |

PART C

Self-Constructed Assets and Research and Development

Two types of expenditures relating to property, plant, and equipment and intangible assets whose accounting treatment has generated considerable controversy are interest costs pertaining to self-constructed assets and amounts spent for research and development. We now consider those expenditures and why those controversies have developed.

Self-Constructed Assets

LO10–7 Identify the items included in the cost of a self-constructed asset and determine the amount of capitalized interest.

A company might decide to construct an asset for its own use rather than buy an existing one. For example, a retailer like **Nordstrom** might decide to build its own store rather than purchase an existing building. A manufacturing company like **Intel** could construct its own manufacturing facility. In fact, Nordstrom and Intel are just two of the many companies that self-construct assets. Other recognizable examples include **Walt Disney, Johnson & Johnson,** and **Caterpillar**. Quite often, these companies act as the main contractor and then subcontract most of the actual construction work.

The critical accounting issue in these instances is identifying the cost of the self-constructed asset. The task is more difficult than for purchased assets because there is no external transaction to establish an exchange price. Actually, two difficulties arise in connection with assigning costs to self-constructed assets: (1) determining the amount of the company's indirect manufacturing costs (overhead) to be allocated to the construction and (2) deciding on the proper treatment of interest (actual or implicit) incurred during construction.

Overhead Allocation

One difficulty of associating costs with self-constructed assets is the same difficulty encountered when determining cost of goods manufactured for sale. The costs of material and direct labor usually are easily identified with a particular construction project and are included in cost. However, the treatment of manufacturing overhead cost and its allocation between construction projects and normal production is a controversial issue.

The cost of a self-constructed asset includes identifiable materials and labor and a portion of the company's manufacturing overhead costs.

Some accountants advocate the inclusion of only the *incremental* overhead costs in the total cost of construction. That is, the asset's cost would include only those additional costs that are incurred because of the decision to construct the asset. This would exclude such indirect costs as depreciation and the salaries of supervisors that would be incurred

whether or not the construction project is undertaken. If, however, a new construction supervisor was hired specifically to work on the project, then that salary would be included in asset cost.

Others advocate assigning overhead on the same basis that is used for a regular manufacturing process. That is, all overhead costs are allocated both to production and to self-constructed assets based on the relative amount of a chosen cost driver (for example, labor hours) incurred. This is known as the *full-cost approach* and is the generally accepted method used to determine the cost of a self-constructed asset.

Interest Capitalization

To reiterate, the cost of an asset includes all costs necessary to get the asset ready for its intended use. Unlike one purchased from another company, a self-constructed asset requires time to create it. During this construction period, the project must be financed in some way. This suggests the question as to whether interest costs during the construction period are one of the costs of acquiring the asset itself or simply costs of financing the asset.
