Consolidated inventory increased by \$16,000 during 20X4.

There were no intercompany transfers between Becon and Handy in 20X4 or prior years except for Handy's payment of dividends. Becon uses the indirect method in preparing its cash flow statement.

#### Required

- a. What amount of dividends was paid to the noncontrolling interest during 20X4?
- b. What amount will be reported as net cash provided by operating activities for 20X4?
- c. What amount will be reported as net cash used in investing activities for 20X4?
- d. What amount will be reported as net cash used in financing activities for 20X4?
- e. What was the change in cash balance for the consolidated entity for 20X4?

#### LO 10-1 **Computation of Operating Cash Flows** E10-3

Toggle Company reported sales of \$310,000 and cost of goods sold of \$180,000 for 20X2. During 20X2, Toggle's accounts receivable increased by \$17,000, inventory decreased by \$8,000, and accounts payable decreased by \$21,000.

#### Required

Compute the amounts to be reported by Toggle as cash received from customers, cash payments to suppliers, and cash flows from operating activities for 20X2, assuming there were no other cash flows from operations.

#### LO 10-1 E10-4 **Consolidated Operating Cash Flows**

Power Corporation owns 75 percent of Turk Company's stock; no intercompany purchases or sales were made in 20X4. For the year, Power and Turk reported sales of \$300,000 and \$200,000 and cost of goods sold of \$160,000 and \$95,000, respectively. Power's inventory increased by \$35,000, but Turk's decreased by \$15,000. Power's accounts receivable increased by \$28,000 and its accounts payable decreased by \$17,000 during 20X4. Turk's accounts receivable decreased by \$10,000 and its accounts payable increased by \$4,000.

#### Required

Using the direct method of computing cash flows from operating activities, compute the following:

- a. Cash received from customers.
- b. Cash payments to suppliers.
- c. Cash flows from operating activities, assuming there were no other cash flows from operations.

#### LO 10-1 E10-5 **Preparation of Statement of Cash Flows**

The accountant for Consolidated Enterprises Inc. has just finished preparing a consolidated balance sheet, income statement, and statement of changes in retained earnings for 20X3. The accountant has asked for assistance in preparing a statement of cash flows for the consolidated entity. Consolidated Enterprises holds 80 percent of the stock of Separate Way Manufacturing. The following items are proposed for inclusion in the consolidated cash flow statement:

| Decrease in accounts receivable                | \$ 23,000 |
|--|-----------|
| Increase in accounts payable                   | 5,000     |
| Increase in inventory                          | 15,000    |
| Increase in bonds payable                      | 120,000   |
| Equipment purchased                            | 380,000   |
| Common stock repurchased                       | 35,000    |
| Depreciation reported for current period       | 73,000    |
| Gain recorded on sale of equipment             | 8,000     |
| Book value of equipment sold                   | 37,000    |
| Goodwill impairment loss                       | 3,000     |
| Sales  | 900,000   |
| Cost of goods sold                             | 368,000   |
| Dividends paid by parent                       | 60,000    |
| Dividends paid by subsidiary                   | 30,000    |
| Consolidated net income for the year           | 464,000   |
| Income assigned to the noncontrolling interest | 14,000    |

#### Required

Prepare in good form a statement of cash flows for Consolidated Enterprises Inc. using the indirect method of computing cash flows from operations.

#### E10-6 **Direct Method Cash Flow Statement**

Using the data presented in E10-5, prepare a statement of cash flows for Consolidated Enterprises Inc. using the direct method of computing cash flows from operating activities.

LO 10-1

#### **Analysis of Consolidated Cash Flow Statement**

The following 20X2 consolidated statement of cash flows is presented for Acme Printing Company and its subsidiary, Jones Delivery:

#### ACME PRINTING COMPANY AND SUBSIDIARY **Consolidated Statement of Cash Flows** For the Year Ended December 31, 20X2

| Cash Flows from Operating Activities:   |             |           |
|---|-------------|-----------|
| Consolidated Net Income   | \$ 130,000  |           |
| Noncash Items Included in Income:   | 45.000      |           |
| Depreciation Expense  | 45,000      |           |
| Amortization of Patents   | 1,000       |           |
| Amortization of Bond Premium  | (2,000)     |           |
| Loss on Sale of Equipment   | 23,000      |           |
| Decrease in Inventory   | 20,000      |           |
| Increase in Accounts Receivable   | (12,000)    |           |
| Net Cash Provided by Operating Activities Cash Flows from Investing Activities:                   |             | \$205,000 |
| Purchase of Buildings   | \$(150,000) |           |
| Sale of Equipment   | 60,000      |           |
| Net Cash Used in Investing Activities<br>Cash Flows from Financing Activities:<br>Dividends Paid: |             | (90,000)  |
| To Acme Printing Shareholders   | \$ (50,000) |           |
| To Noncontrolling Shareholders  | (6,000)     |           |
| Sale of Bonds   | 100,000     |           |
| Repurchase of Acme Printing Stock   | (120,000)   |           |
| Net Cash Used in Financing Activities   |             | (76,000)  |
| Net Increase in Cash  |             | \$ 39,000 |

Acme Printing acquired 60 percent of the voting shares of Jones in 20X1 at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 40 percent of the book value of Jones Delivery.

### Required

- a. Determine the amount of dividends paid by Jones in 20X2.
- b. Explain why the amortization of bond premium is treated as a deduction from net income in arriving at net cash flows from operating activities.
- c. Explain why an increase in accounts receivable is treated as a deduction from net income in arriving at net cash flows from operating activities.
- d. Explain why dividends to noncontrolling stockholders are not shown as a dividend payment in the retained earnings statement but are shown as a distribution of cash in the consolidated cash flow statement.
- e. Did the loss on the sale of equipment included in the consolidated statement of cash flows result from a sale to an affiliate or a nonaffiliate? How do you know?

LO 10-2

#### E10-8 **Midvear Acquisition**

Yarn Manufacturing Corporation issued stock with a par value of \$67,000 and a market value of \$503,500 to acquire 95 percent of Spencer Corporation's common stock on August 30, 20X1.

At that date, the fair value of the noncontrolling interest was \$26,500. On January 1, 20X1, Spencer reported the following stockholders' equity balances:

| \$150,000 |
|-----------|
| 50,000    |
| 300,000   |
| \$500,000 |
|           |

Spencer reported net income of \$60,000 in 20X1, earned uniformly throughout the year, and declared and paid dividends of \$10,000 on June 30 and \$25,000 on December 31, 20X1. Yarn accounts for its investment in Spencer Corporation using the equity method.

Yarn reported retained earnings of \$400,000 on January 1, 20X1, and had 20X1 income of \$140,000 from its separate operations. Yarn paid dividends of \$80,000 on December 31, 20X1.

# Required

- a. Compute consolidated retained earnings as of January 1, 20X1, as it would appear in comparative consolidated financial statements presented at the end of 20X1.
- b. Compute consolidated net income and income to the controlling interest for 20X1.
- c. Compute consolidated retained earnings as of December 31, 20X1.
- d. Give the December 31, 20X1, balance of Yarn Manufacturing's investment in Spencer Corporation.

#### LO 10-2

#### E10-9 **Purchase of Shares at Midyear**

Highbeam Corporation paid \$319,500 to acquire 90 percent ownership of Copper Company on April 1, 20X2. At that date, the fair value of the noncontrolling interest was \$35,500. On January 1, 20X2, Copper reported these stockholders' equity balances:

| \$160,000 |
|-----------|
| 40,000    |
| 150,000   |
| \$350,000 |
|           |

Copper's operating results and dividend payments for 20X2 were as follows:

|                         | January 1 to<br>March 31 | April 1 to<br>December 31 |
|-------------------------|--------------------------|---------------------------|
| Sales<br>Total expenses | \$90,000<br>(80,000)     | \$250,000<br>(220,000)    |
| Net income              | \$10,000                 | \$ 30,000                 |
| Dividends paid          | \$ 5,000                 | \$ 15,000                 |

Highbeam uses the equity method in recording its investment in Copper.

#### Required

- a. Prepare the journal entries that Highbeam recorded in 20X2 for its investment in Copper.
- b. Give the worksheet elimination entries needed at December 31, 20X2, to prepare consolidated financial statements.

LO 10-3

#### E10-10 Tax Deferral on Gains and Losses

Springdale Corporation holds 75 percent of the voting shares of Holiday Services Company. Assume Springdale accounts for this investment using the equity method. During 20X7, Springdale sold inventory costing \$60,000 to Holiday Services for \$90,000, and Holiday Services resold one-third of the inventory in 20X7. Also in 20X7, Holiday Services sold land with a book value of \$140,000 to Springdale for \$240,000, and Springdale continues to hold the land. The companies file separate tax returns and are subject to a 40 percent tax rate.

#### Reauired

Give the elimination entries relating to the intercorporate sale of inventories and land to be entered in the consolidation worksheet prepared at the end of 20X7.

#### LO 10-3 E10-11 **Unrealized Profits in Prior Year**

Springdale Corporation holds 75 percent of the voting shares of Holiday Services Company. During 20X7, Springdale sold inventory costing \$60,000 to Holiday Services for \$90,000, and Holiday Services resold one-third of the inventory in 20X7. The remaining inventory was resold in 20X8. Also in 20X7, Holiday Services sold land with a book value of \$140,000 to Springdale for \$240,000. Springdale continues to hold the land at the end of 20X8. The companies file separate tax returns and are subject to a 40 percent tax rate.

#### Reauired

Give the elimination entries relating to the intercorporate sale of inventories and land needed in the consolidation worksheet at the end of 20X8. Assume that Springdale uses the equity method in accounting for its investment in Holiday Services.

#### E10-12 Allocation of Income Tax Expense

Winter Corporation owns 80 percent of Ray Guard Corporation's stock and 90 percent of Block Company's stock. The companies file a consolidated tax return each year and in 20X5 paid a total tax of \$80,000. Each company is involved in a number of intercompany inventory transfers each period. Information on the companies' activities for 20X5 is as follows:

| Company  | 20X5                          | 20X4               | 20X5                         |
|--|-------------------------------|--------------------|------------------------------|
|  | Reported                      | Intercompany       | Intercompany                 |
|  | Operating                     | Profit Realized    | Profit Not                   |
|  | Income                        | in 20X5            | Realized in 20X5             |
| Winter Corporation<br>Ray Guard Corporation<br>Block Company | \$100,000<br>50,000<br>30,000 | \$40,000<br>20,000 | \$10,000<br>20,000<br>10,000 |

#### Required

- a. Determine the amount of income tax expense that should be assigned to each company.
- b. Compute consolidated net income and income to the controlling interest for 20X5. (Note: Winter Corporation does not record income tax expense on income from subsidiaries because a consolidated tax return is filed.)

#### E10-13 **Effect of Preferred Stock on Earnings per Share**

Amber Corporation holds 70 percent of Newtop Company's voting common shares but none of its preferred shares. Summary balance sheets for the companies on December 31, 20X1, are as follows:

|                                    | Amber<br>Corporation | Newtop<br>Company |
|------------------------------------|----------------------|-------------------|
| Cash                               | \$ 14,000            | \$ 30,000         |
| Accounts Receivable                | 40,000               | 50,000            |
| Inventory                          | 110,000              | 80,000            |
| Buildings & Equipment              | 280,000              | 200,000           |
| Less: Accumulated Depreciation     | (130,000)            | (60,000)          |
| Investment in Newtop Company       | _126,000             |                   |
| Total Assets                       | \$440,000            | \$300,000         |
| Accounts Payable                   | \$ 70,000            | \$ 70,000         |
| Wages Payable                      | 40,000               |                   |
| Preferred Stock                    | 100,000              | 50,000            |
| Common Stock (\$10 par value)      | 120,000              | 100,000           |
| Retained Earnings                  | 110,000              | 80,000            |
| Total Liabilities & Owners' Equity | <u>\$440,000</u>     | \$300,000         |

Neither of the preferred issues is convertible. Amber's preferred pays a 9 percent annual dividend and Newtop's preferred pays a 10 percent dividend. Newtop reported net income of \$45,000 and paid a total of \$20,000 of dividends in 20X1. Amber reported \$59,000 of income from its separate operations and paid total dividends of \$45,000 in 20X1.

#### Required

Compute 20X1 consolidated EPS. Ignore any tax consequences.

### LO 10-4

#### E10-14 **Effect of Convertible Bonds on Earnings per Share**

Crystal Corporation owns 60 percent of Evans Company's common shares. Balance sheet data for the companies on December 31, 20X2, are as follows:

|                                    | Crystal<br>Corporation | Evans<br>Company |
|------------------------------------|------------------------|------------------|
| Cash                               | \$ 85,000              | \$ 30,000        |
| Accounts Receivable                | 80,000                 | 50,000           |
| Inventory                          | 120,000                | 100,000          |
| Buildings & Equipment              | 700,000                | 400,000          |
| Less: Accumulated Depreciation     | (240,000)              | (80,000)         |
| Investment in Evans Company Stock  | 150,000                |                  |
| Total Assets                       | \$895,000              | \$500,000        |
| Accounts Payable                   | \$145,000              | \$ 50,000        |
| Bonds Payable                      | 250,000                | 200,000          |
| Common Stock (\$10 par value)      | 300,000                | 100,000          |
| Retained Earnings                  | 200,000                | 150,000          |
| Total Liabilities & Owners' Equity | <u>\$895,000</u>       | \$500,000        |

The bonds of Crystal Corporation and Evans Company pay annual interest of 8 percent and 10 percent, respectively. Crystal's bonds are not convertible. Evans' bonds can be converted into 10,000 shares of its company stock any time after January 1, 20X1. An income tax rate of 40 percent is applicable to both companies. Evans reports net income of \$30,000 for 20X2 and pays dividends of \$15,000. Crystal reports income from its separate operations of \$45,000 and pays dividends of \$25,000.

#### Required

Compute basic and diluted EPS for the consolidated entity for 20X2.

#### LO 10-4

#### E10-15 **Effect of Convertible Preferred Stock on Earnings per Share**

Eagle Corporation holds 80 percent of Standard Company's common shares. The companies report the following balance sheet data for December 31, 20X1:

|                                      | Eagle<br>Corporation | Standard<br>Company |
|--------------------------------------|----------------------|---------------------|
| Cash                                 | \$ 50,000            | \$ 40,000           |
| Accounts Receivable                  | 80,000               | 60,000              |
| Inventory                            | 140,000              | 90,000              |
| Buildings & Equipment                | 700,000              | 300,000             |
| Less: Accumulated Depreciation       | (280,000)            | (140,000)           |
| Investment in Standard Company Stock | 160,000              |                     |
| Total Assets                         | <u>\$850,000</u>     | \$350,000           |
| Accounts Payable                     | \$120,000            | \$ 50,000           |
| Taxes Payable                        | 80,000               |                     |
| Preferred Stock (\$10 par value)     | 200,000              | 100,000             |
| Common Stock:                        |                      |                     |
| \$10 par value                       | 100,000              |                     |
| \$5 par value                        |                      | 50,000              |
| Retained Earnings                    | 350,000              | _150,000            |
| Total Liabilities & Owners' Equity   | \$850,000            | \$350,000           |

An 8 percent annual dividend is paid on the Eagle preferred stock and a 12 percent dividend is paid on the Standard preferred stock. Eagle's preferred shares are not convertible. Standard's preferred shares can be converted into 15,000 shares of common stock at any time. For 20X1, Standard reports \$45,000 of net income and pays total dividends of \$20,000, and Eagle reports \$60,000 of income from its separate operations and pays total dividends of \$35,000.

# Required

Compute basic and diluted EPS for the consolidated entity for 20X1.

| Accounts receivable          | 9,000              | (2,000)        |
| Accounts payable             | (31,000)           | 15,000         |

During 20X1, Bus sold inventory costing \$70,000 to Car for \$100,000, and Car resold 40 percent of the inventory prior to December 31, 20X1. No intercompany inventory transactions occurred prior to 20X1, nor did intercompany receivables and payables exist at December 31, 20X1.

#### Required

Using the direct method, prepare the cash flows from the operating activities section of the consolidated statement of cash flows for 20X1 in good form.

LO 10-1

#### P10-17 **Preparing a Statement of Cash Flows**

Metal Corporation acquired 75 percent ownership of Ocean Company on January 1, 20X1, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 25 percent of the book value of Ocean Company. Consolidated balance sheets at January 1, 20X3, and December 31, 20X3, are as follows:

| Item                               | Jan. 1, 20X3     | Dec. 31, 20X3    |
|------------------------------------|------------------|------------------|
| Cash                               | \$ 68,500        | \$100,500        |
| Accounts Receivable                | 82,000           | 97,000           |

| Total Liabilities & Owners' Equity | <u>\$1,413,000</u> | <u>\$1,569,000</u> |

The 20X4 consolidated income statement contained the following amounts:

| Sales                             |           | \$600,000 |
|-----------------------------------|-----------|-----------|
| Cost of Goods Sold                | \$375,000 |           |
| Depreciation Expense              | 45,000    |           |
| Interest Expense                  | 69,000    |           |
| Loss on Sale of Land              | 20,000    |           |
| Goodwill Impairment Loss          | 12,000    | (521,000) |
| Consolidated Net Income           |           | \$ 79,000 |
| Income to Noncontrolling Interest |           | (7,000)   |
| Income to Controlling Interest    |           | \$ 72,000 |
|                                   |           |           |

Traper acquired its investment in Arrow on January 1, 20X2, for \$176,000. At that date, the fair value of the noncontrolling interest was \$44,000, and Arrow reported net assets of \$150,000. A total of \$40,000 of the differential was assigned to goodwill. The remainder of the differential was assigned to equipment with a remaining life of 20 years from the date of combination.

Traper sold \$100,000 of bonds on December 31, 20X4, to assist in generating additional funds. Arrow reported net income of \$35,000 for 20X4 and paid dividends of \$15,000. Traper reported 20X4 equity-method net income of \$80,000 and paid dividends of \$25,000.

#### Required

- a. Prepare a worksheet to develop a consolidated statement of cash flows for 20X4 using the indirect method of computing cash flows from operations.
- b. Prepare a consolidated statement of cash flows for 20X4.

#### Consolidated Statement of Cash Flows—Direct Method P10-20

#### Required

Using the data presented in P10-19:

- a. Prepare a worksheet to develop a consolidated statement of cash flows for 20X4 using the direct method of computing cash flows from operations.
- b. Prepare a consolidated statement of cash flows for 20X4.

#### **Consolidated Statement of Cash Flows** P10-21

Sun Corporation was created on January 1, 20X2, and quickly became successful. On January 1, 20X6, its owner sold 80 percent of the stock to Weatherbee Company at underlying book value. At the date of that sale, the fair value of the remaining shares was equal to 20 percent of the book value of Weatherbee. Weatherbee continued to operate the subsidiary as a separate legal entity and used the equity method in accounting for its investment in Sun. The following consolidated financial statements have been prepared:

# WEATHERBEE COMPANY AND SUBSIDIARY **Consolidated Balance Sheets** January 1, 20X6 December 31, 20X6

#### Additional Information

- 1. On January 20, 20X6, Brimer issued 10,000 shares of its common stock for land having a fair value of \$215,000.
- 2. On February 5, 20X6, Brimer reissued all of its treasury stock for \$44,000.

- 3. On May 15, 20X6, Brimer paid a \$58,000 cash dividend on its common stock.
- 4. On August 8, 20X6, Brimer purchased equipment for \$127,000.
- 5. On September 30, 20X6, Brimer sold equipment for \$40,000. The equipment cost \$62,000 and had a carrying amount of \$34,000 on the date of sale.
- 6. On December 15, 20X6, Dore paid a cash dividend of \$50,000 on its common stock.
- 7. A Dore recognized goodwill impairment loss of \$3,000 in 20X6.
- 8. Deferred income taxes represent temporary differences relating to the use of accelerated depreciation methods for income tax reporting and the straight-line method for financial reporting.
- 9. Net income for 20X6 was as follows:

| Consolidated net income | \$231,000 |
|-------------------------|-----------|
| Dore Corporation        | 110,000   |

10. Brimer owns 70 percent of its subsidiary, Dore. No change in the ownership interest in Dore occurred during 20X5 and 20X6. No intercompany transactions occurred other than the dividend paid to Brimer Inc. by its subsidiary.

#### Required

Prepare a consolidated statement of cash flows for Brimer Inc. and its subsidiary for the year ended December 31, 20X6, using the indirect method.

#### LO 10-1

#### P10-24 **Statement of Cash Flows Prepared from Consolidation Worksheet**

Detecto Corporation purchased 60 percent of Strand Company's outstanding shares on January 1, 20X1, for \$24,000 more than book value. At that date, the fair value of the noncontrolling interest was \$16,000 more than 40 percent of Strand's book value. The full amount of the differential is considered related to patents and is being amortized over an eight-year period. In 20X1, Strand purchased a piece of land for \$35,000 and later in the year sold it to Detecto for \$45,000. Detecto is still holding the land as an investment. During 20X3, Detecto bonds with a value of \$100,000 were exchanged for equipment valued at \$100,000.

On January 1, 20X3, Detecto held inventory purchased previously from Strand for \$48,000. During 20X3, Detecto purchased an additional \$90,000 of goods from Strand and held \$54,000 of this inventory on December 31, 20X3. Strand sells merchandise to the parent at cost plus a 20 percent markup.

Strand also purchases inventory items from Detecto. On January 1, 20X3, Strand held inventory it had previously purchased from Detecto for \$14,000, and on December 31, 20X3, it held goods it had purchased from Detecto for \$7,000 during 20X3. Strand's total purchases from Detecto in 20X3 were \$22,000. Detecto sells inventory to Strand at cost plus a 40 percent markup.

The consolidated balance sheet at December 31, 20X2, contained the following amounts:

|                          | Debit     | Credit    |
|--------------------------|-----------|-----------|
| Cash                     | \$ 92,000 |           |
| Accounts Receivable      | 135,000   |           |
| Inventory                | 140,000   |           |
| Land                     | 75,000    |           |
| Buildings & Equipment    | 400,000   |           |
| Patents                  | 30,000    |           |
| Accumulated Depreciation |           | \$210,000 |
| Accounts Payable         |           | 114,200   |
| Bonds Payable            |           | 90,000    |
| Noncontrolling Interest  |           | 84,800    |
| Common Stock             |           | 100,000   |
| Retained Earnings        |           | 273,000   |
| Totals                   | \$872,000 | \$872,000 |
|                          |           |           |

The following consolidation worksheet was prepared on December 31, 20X3. All elimination entries and adjustments have been entered properly in the worksheet. Detecto accounts for its investment in Strand using the fully adjusted equity method.

# Required

- a. Prepare a worksheet for a consolidated statement of cash flows for 20X3 using the indirect
- b. Prepare a consolidated statement of cash flows for 20X3.

#### P10-25 **Midyear Purchase of Controlling Interest**

Blase Company operates on a calendar-year basis, reporting its results of operations quarterly. For the first quarter of 20X1, Blase reported sales of \$240,000 and operating expenses of \$180,000 and paid dividends of \$10,000. On April 1, 20X1, Mega Theaters Inc. acquired 85 percent of Blase's common stock for \$765,000. At that date, the fair value of the noncontrolling interest was \$135,000, and Blase had 100,000 outstanding shares of \$1 par common stock, originally issued at \$6 per share. The differential is related to goodwill. On December 31, 20X1, the management of Mega Theaters reviewed the amount attributed to goodwill as a result of its purchase of Blase common stock and concluded that goodwill was not impaired.

Blase's retained earnings statement for the full year 20X1 appears as follows:

| Retained Earnings, January 1, 20X1 Net Income | \$150,000<br>175.000 |
|---|----------------------|
| Dividends                                     | (40,000)             |
| Retained Earnings, December 31, 20X1          | <u>\$285,000</u>     |

Mega Theaters accounts for its investment in Blase using the equity method.

#### Required

- a. Present all entries that Mega Theaters would have recorded in accounting for its investment in Blase during 20X1.
- b. Present all elimination entries needed in a worksheet to prepare a complete set of consolidated financial statements for the year 20X1.

#### P10-26 **Consolidation Involving a Midyear Purchase**

Famous Products Corporation acquired 90 percent ownership of Sanford Company on October 20, 20X2, through an exchange of voting shares. Famous Products issued 8,000 shares of its \$10 par stock to acquire 27,000 shares of Sanford's \$5 par stock. The market value of shares issued by Famous Products was \$247,500. At that date, the fair value of the noncontrolling interest was \$27,500. Trial balances of the two companies on December 31, 20X2, are as follows:

|                             | Famous Products Corporation |             | Sanford<br>Company |           |

| Sales                       |                             | 390,000     |                    | 250,000   |
| Income from Sanford Co.     |                             | 13,500      |                    |           |
| Totals                      | \$1,371,000                 | \$1,371,000 | \$770,000          | \$770,000 |

For 20X2, before acquisition, Sanford reported sales of \$205,000, cost of goods sold of \$126,000, depreciation of \$16,000, and other expenses of \$18,000. Sanford paid dividends of \$20,000 in April and \$10,000 in November 20X2. Famous Products, which paid dividends of \$40,000 in 20X2, uses the equity method in accounting for its investment in Sanford.

#### Required

- a. Give all journal entries recorded by Famous Products during 20X2 that relate to its investment in Sanford.
- b. Give the worksheet elimination entries needed on December 31, 20X2, to prepare consolidated financial statements.
- c. Prepare a three-part consolidation worksheet as of December 31, 20X2.

#### P10-27 **Tax Allocation in Consolidated Balance Sheet**

Acme Powder Corporation acquired 70 percent of Brown Company's stock on December 31, 20X7, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 30 percent of Brown Company's book value. The two companies' balance sheets on December 31, 20X9, are as follows:

#### ACME POWDER CORPORATION AND BROWN COMPANY **Balance Sheets** December 31, 20X9

| Total Liabilities & Equity        | <u>\$980,000</u>           | \$450,000        |

On December 31, 20X9, Acme Powder holds inventory purchased from Brown for \$70,000. Brown's cost of producing the merchandise was \$50,000. Brown also had purchased inventory from Acme. Brown's ending inventory contains \$85,000 of purchases that had cost Acme Powder \$60,000 to produce.

On December 30, 20X9, Brown sells equipment to Acme Powder for \$90,000. Brown had purchased the equipment for \$120,000 several years earlier. At the time of sale to Acme, the equipment had a book value of \$40,000. The two companies file separate tax returns and are subject to a 40 percent tax rate. Acme Powder does not record tax expense on its share of Brown's undistributed earnings.

# Required

- a. Complete a consolidated balance sheet worksheet as of December 31, 20X9.
- b. Prepare a consolidated balance sheet as of December 31, 20X9.

#### P10-28 **Computations Involving Tax Allocation**

Broom Manufacturing used cash to acquire 75 percent of the voting stock of Satellite Industries on January 1, 20X3, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 25 percent of Satellite's book value. Broom accounts for its investment in Satellite using the basic equity method.

LO 10-3

Broom had no inventory on hand on January 1, 20X5. During 20X5, Broom purchased \$300,000 of goods from Satellite and had \$100,000 remaining on hand at the end of 20X5. Satellite normally prices its items so that their cost is 70 percent of sale price. On January 1, 20X5, Satellite held inventory that it had purchased from Broom for \$50,000. Broom's cost of producing the items was \$30,000. Satellite sold all of the merchandise in 20X5 and made no inventory purchases from Broom during 20X5.

On July 15, 20X5, Satellite sold land that it had purchased for \$240,000 to Broom for \$360,000. The companies file separate tax returns and have a 40 percent income tax rate. Broom does not record tax expense on its portion of Satellite's undistributed earnings. Tax expense recorded by Broom in 20X5 with regard to its investment in Satellite is based on dividends received from Satellite in 20X5. In computing taxable income, 80 percent of intercorporate dividend payments are exempt from tax.

Satellite reported net income of \$190,000 for 20X5 and net assets of \$900,000 on December 31, 20X5. Broom's reported income before investment income from Satellite and income tax expense of \$700,000 for 20X5. Satellite and Broom paid dividends of \$150,000 and \$400,000, respectively, in 20X5.

#### Required

- a. Give the journal entries recorded on Broom's books during 20X5 to reflect its ownership of
- b. Compute the income assigned to the noncontrolling interests in the 20X5 consolidated income statement.
- c. Compute consolidated net income and income to the controlling interest for 20X5.
- d. Compute the amount assigned to the noncontrolling interest in the consolidated balance sheet prepared as of December 31, 20X5.

#### **Worksheet Involving Tax Allocation** P10-29

Hardtack Bread Company holds 70 percent of the common shares of Custom Pizza Corporation. Trial balances for the two companies on December 31, 20X7, are as follows:

| Hardtack Bread<br>Company     |             |             |           | n Pizza<br>ration |
|-------------------------------|-------------|-------------|-----------|-------------------|
| Item                          | Debit       | Credit      | Debit     | Credit            |
| Cash                          | \$ 35,800   |             | \$ 56,000 |                   |
| Accounts Receivable           | 130,000     |             | 40,000    |                   |
| Inventory                     | 220,000     |             | 60,000    |                   |

| Common Stock (\$10 par value) |             | 100,000     |           | 50,000            |
| Retained Earnings             |             | 370,000     |           | 150,000           |
| Sales                         |             | 580,000     |           | 300,000           |
| Income from Custom Pizza      |             | 9,900       |           |                   |
| Gain on Sale of Equipment     |             | 15,000      |           |                   |
| Total                         | \$1,654,900 | \$1,654,900 | \$850,000 | \$850,000         |

At the beginning of 20X7, Hardtack held inventory purchased from Custom Pizza containing unrealized profits of \$10,000. During 20X7, Hardtack purchased \$120,000 of inventory from Custom Pizza and on December 31, 20X7, had goods on hand containing \$25,000 of unrealized intercompany profit. On December 31, 20X7, Hardtack sold equipment to Custom Pizza for \$65,000. Hardtack had purchased the equipment for \$150,000 and had accumulated depreciation of \$100,000 on it at the time of sale. The companies file separate tax returns and are subject to a 40 percent income tax rate on all taxable income. Intercompany dividends are 80 percent exempt from taxation.

#### Required

- a. Prepare all elimination entries needed as of December 31, 20X7, to prepare consolidated financial statements for Hardtack Bread Company and its subsidiary.
- b. Prepare a three-part consolidation worksheet for 20X7.

#### P10-30 **Earnings per Share with Convertible Securities**

Branch Manufacturing Corporation owns 80 percent of the common shares of Short Retail Stores. The companies' balance sheets as of December 31, 20X4, were as follows:

|   | Branch Manufacturing<br>Corporation | Short<br>Retail Stores |
|---|-------------------------------------|------------------------|
| Cash                                    | \$ 50,000                           | \$ 30,000              |
| Accounts Receivable                     | 100,000                             | 80,000                 |
| Inventory                               | 260,000                             | 120,000                |
| Land                                    | 90,000                              | 60,000                 |

Partnerships

Governmental and Not-for-Profit Entities

Corporations in Financial Difficulty

Microsoft®

## MICROSOFT'S MULTINATIONAL BUSINESS

Microsoft was founded in 1975 by Bill Gates (a Harvard dropout) and Paul Allen (a Washington State University dropout). In 1980, Microsoft teamed up with IBM and in 1981, the company released the first version of MS DOS for IBM PCs. The year 1983 was another big year for Microsoft with the release of Multi-Tool Word (later Microsoft Word). The first version of Microsoft Windows (Windows 1.0) was released two years later in 1985. When Microsoft went public in 1986, its shares began trading at \$21.00 and closed that first day at \$28.00. Interestingly, each of those original shares issued in 1986 would be worth approximately \$8,900 today. At its peak, Microsoft was worth approximately \$600 billion and Bill Gates was personally worth close to \$90 billion.

Microsoft continued to update Windows and had a major breakthrough in 1995 with the release of Windows 95. Microsoft continued to improve the Windows operating system and Microsoft Office throughout the 1990s and into the first part of the 2000s. However, in 2001, Microsoft attempted to break into the gaming console market with the introduction of the Xbox. Finally, in 2006, the company introduced the Zune to compete with Apple's iPod. From its humble beginnings, Microsoft forged an empire that made its founder, Bill Gates, one of the wealthiest individuals in the world and made Microsoft Windows and Microsoft Office the standard operating system and day-to-day tools for most businesses as well as individuals around the world.

Right from the start, Microsoft saw the international market as an important part of its expansion. In fact, the company opened its first international office in Tokyo in 1978 and by 2012 more than 47 percent of Microsoft's total revenues came from international sales and services. Because such a large portion of Microsoft's business comes from foreign markets, the company necessarily engages in hedging activities to protect itself from the risks associated with fluctuations in foreign currency exchange rates. Microsoft's 2012 10-K report indicates that the principal currencies hedged include the euro, Japanese yen, British pound, and Canadian dollar. As of June 30, 2012, and June 30, 2011, the total notional amounts (face values) of these foreign exchange contracts were \$6.7 billion and \$10.6 billion, respectively. Thus, it is clear that managing foreign currency exchange risks is an integral part of Microsoft's business. This chapter explores

the accounting for foreign currencies and introduces the tools that companies such as Microsoft use to alleviate the risks associated with constantly changing foreign currency exchange rates.

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 11-1 Understand how to make calculations using foreign currency exchange rates.
- LO 11-2 Understand the accounting implications of and be able to make calculations related to foreign currency transactions.
- Understand how to hedge international currency risk using foreign currency LO 11-3 forward exchange financial instruments.
- Know how to measure hedge effectiveness, make interperiod tax allocations for foreign currency transactions, and hedge net investments in a foreign entity.

#### DOING BUSINESS IN A GLOBAL MARKET

Understand how to make calculations using foreign currency exchange rates.

Many companies, large and small, depend on international markets for acquiring goods and for selling their products and services. Every day, the business press carries stories about the effects of export and import activity on the U.S. economy and the large flows of capital among the world's major countries. These reports often mention changes in the exchange rates of the major currencies of the world, such as, "The dollar weakened today against the yen." This chapter and Chapter 12 discuss the accounting issues affecting companies with international operations.

A company operating in international markets is subject to normal business risks such as lack of demand for its products in the foreign marketplace, labor strikes, and transportation delays in getting its products to the foreign customer. In addition, the U.S. entity could incur foreign currency risks whenever it conducts transactions in other currencies. For example, if a U.S. company acquires a machine on credit from an Italian manufacturer, the Italian company could require payment in euros. This means the U.S. company must eventually use a foreign currency broker or a bank to exchange U.S. dollars for euros to pay for the machine. In the process, the U.S. company may experience foreign currency gains or losses from fluctuations in the value of the U.S. dollar relative to the euro.

Foreign exchange markets are among the most important and often misunderstood subjects in international business. Multinational enterprises (MNEs) entering into international transactions must agree with customers and suppliers on the currencies in which these transactions will be executed. Factors that affect this decision include familiarity with the foreign currency, the potential for gains and losses from changes in exchange rates, nationalistic pride, and practicality.

## **STOP & THINK**

How big is the foreign currency exchange market? It has grown into one of the largest financial markets in the world. The average daily volume in global foreign exchange transactions is estimated at \$3.98 trillion in 2012, a growth of approximately 20 percent over the \$3.21 trillion daily volume in April 2007. This has exposed companies to abundant risk and opportunity and will become a larger part of the global economy in the future.

MNEs transact in a variety of currencies as a result of their export and import activities. There are approximately 150 different currencies around the world, but most international trade has been settled in six major currencies that have shown stability and general acceptance over time: the U.S. dollar, the British pound, the Canadian dollar, the Japanese yen, the Swiss franc, and the European euro.

The European euro (symbol €) is a relatively new currency introduced in 1999 to members of the European Union (EU) that wished to participate in a common currency. By 2002, euro notes and coins were introduced to be used in everyday trade. The EU is an organization of democratic member states from the European continent. The Union has grown over time and as of 2012 comprises 27 member countries: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom. In addition, Croatia, Macedonia, and Turkey have applied for accession. The EU is a dominant economic force, rivaling the United States, and the euro is now as familiar to companies doing international business as the U.S. dollar. Currently, 17 of the 27 members of the EU use the euro.

The EU is one of several regional groupings, and these groupings are becoming increasingly important. The North American Free Trade Agreement (NAFTA) was approved by the U.S. Congress in 1993 and created a free-trade area of Canada, Mexico, and the United States, a market that exceeds 420 million people. Over time, the agreement will result in the elimination of tariffs (taxes) on goods shipped between these three countries. The agreement on the South Asian Free Trade Area, or SAFTA, was created on January 1, 2006, and will be operational following ratification of the agreement by seven governments. SAFTA creates a framework for the creation of a free-trade zone covering 1.4 billion people in Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan, and Sri Lanka. The Association of Southeast Asian Nations (ASEAN) created the ASEAN Free Trade Area (AFTA), which is a trade bloc agreement. The goal of AFTA is to increase ASEAN's competitive edge as a production base in the world market through the elimination, within ASEAN, of tariffs and nontariff barriers. AFTA currently is composed of Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand, and Vietnam. In January 2005, the Greater Arab Free Trade Area (also referred to as GAFTA) came into existence. It is a pact made by the Arab League to achieve a complete Arab economic bloc that can compete internationally. GAFTA is relatively similar to ASEAN.

Currency names and symbols often reflect a country's nationalistic pride and history. For example, the U.S. dollar receives its name from a variation of the German word *Taler*, the name of a silver piece that was first minted in 1518 and became the chief coin of Europe and the New World. Some historians suggest that the dollar symbol (\$) is derived from a capital letter U superimposed over a capital letter S. The "greenback" as we know it today was first printed in 1862 during the Civil War, and now is issued by the 12 Federal Reserve banks scattered across the United States. The U.S. dollar can be identified in virtually every corner of the world because it has become one of the most widely traded currencies.

## THE ACCOUNTING ISSUES

Accountants must be able to record and report transactions involving exchanges of U.S. dollars and foreign currencies. Foreign currency transactions of a U.S. company include sales, purchases, and other transactions giving rise to a transfer of foreign currency or the recording of receivables or payables that are *denominated*—that is, numerically specified to be settled—in a foreign currency. Because financial statements of virtually all U.S. companies are prepared using the U.S. dollar as the reporting currency, transactions denominated in other currencies must be restated to their U.S. dollar equivalents before they can be recorded in the U.S. company's books and included in its financial statements. This process of restating foreign currency transactions to their U.S. dollarequivalent values is termed translation.

In addition, many large U.S. corporations have multinational operations such as foreignbased subsidiaries or branches. For example, a U.S. auto manufacturer may have manufacturing subsidiaries in Canada, Mexico, Spain, and Great Britain. The foreign subsidiaries prepare their financial statements in their home currencies. For example, the Mexican subsidiary reports its operations in pesos. The foreign currency amounts in the financial statements of these subsidiaries have to be translated, that is, restated, into their U.S. dollar equivalents before they can be consolidated with the financial statements of the U.S. parent company that uses the U.S. dollar as its reporting currency unit.

This chapter presents the accounting procedures for recording and reporting foreign transactions. Chapter 12 presents the procedures for combining or consolidating a foreign entity with a U.S. parent company. ASC 830 serves as the primary guide for accounting for accounts receivable and accounts payable foreign currency-denominated transactions that require payment or receipt of foreign currency. ASC 815 guides the accounting for financial instruments specified as derivatives for the purpose of hedging certain items.

#### FOREIGN CURRENCY EXCHANGE RATES

Before 1972, most major currencies were valued on the basis of a gold standard whereby their international values were fixed per ounce of gold. However, in 1972, most countries signed an agreement to permit the values of their currencies to "float" based on the supply and demand for them. The resulting foreign currency exchange rates between currencies are established daily by foreign exchange brokers serve as agents for individuals or countries wishing to deal in foreign currencies. Some countries, such as China, maintain an official fixed rate of currency exchange and have established fixed exchange rates for dividends remitted outside the country. These official rates may be changed at any time, and companies doing business abroad should contact the foreign country's government to ensure that the companies are in compliance with any currency exchange restrictions.

## The Determination of Exchange Rates

A country's currency is much like any other commodity, and exchange rates change because of a number of economic factors affecting the supply of and demand for a nation's currency. For example, if a nation is experiencing high levels of inflation, the purchasing power of its currency decreases. This reduction in the value of a currency is reflected by a decrease in the positioning of that country's currency relative to other nations' currencies. Other factors causing exchange rate fluctuations are a nation's balance of payments, changes in a country's interest rate and investment levels, and the stability and process of governance. For example, if the United States had a higher average interest rate than that in Great Britain, the international investment community might seek to invest in the United States, thus increasing the demand for U.S. dollars relative to British pounds. The dollar would increase in value relative to the pound because of the increased demand. Exchange rates are determined daily and published in several sources, including The Wall Street Journal, most business publications, many metropolitan newspapers, and websites such as Yahoo! Finance. Figure 11-1 presents an example of a typical daily business press report for selected foreign exchange rates as of August 2012.

#### **Direct versus Indirect Exchange Rates**

As indicated in Figure 11-1, the relative value of one currency to another may be expressed in two different ways: either directly or indirectly.

#### Direct Exchange Rate

The direct exchange rate (DER) is the number of local currency units (LCUs) needed to acquire one foreign currency unit (FCU). From the viewpoint of a U.S. entity, the direct exchange rate can be viewed as the U.S. dollar cost of one foreign currency unit. The direct exchange rate ratio is expressed as follows, with the LCU, the U.S. dollar, in the numerator:

$$DER = \frac{U.S. \ dollar - equivalent \ value}{1 \, FCU}$$

The direct exchange rate is used most often in accounting for foreign operations and transactions because the foreign currency-denominated accounts must be translated to

FIGURE 11-1 Foreign Exchange Rates for Selected Major Currencies as of April 2010

| Country         | Currency       | Direct Exchange Rate (U.S. dollar equivalent) | Indirect Exchange Rate (currency per U.S. dollar) |
|-----------------|----------------|---|---|
| Argentina       | peso           | 0.2167  | 4.6138  |
| Australia       | dollar         | 1.0422  | 0.9595  |
| Bahrain         | dinar          | 2.6539  | 0.3768  |
| Brazil          | real           | 0.4963  | 2.0150  |
| Canada          | dollar         | 1.0110  | 0.9891  |
| Chile           | peso           | 0.0021  | 484.300   |
| China           | yuan renminbi  | 0.1579  | 6.3332  |
| Colombia        | peso           | 0.0006  | 1818.00   |
| Czech Republic  | koruna         | 0.0494  | 20.2305   |
| Denmark         | krone          | 0.1656  | 6.0378  |
| Egypt           | pound          | 0.1676  | 5.9663  |
| Hong Kong       | dollar         | 0.1289  | 7.7564  |
| India           | rupee          | 0.0180  | 55.4900   |
| Indonesia       | rupiah         | 0.0001  | 9485.00   |
| Israel          | new shekel     | 0.2488  | 4.0201  |
| Japan           | yen            | 0.0126  | 79.5500   |
| 1-month forward | ,              | 0.01260                                       | 79.45972  |
| 3-month forward |                | 0.01261                                       | 79.51923  |
| 6-month forward |                | 0.01263                                       | 79.60866  |
| Malaysia        | ringgit        | 0.3193  | 3.1320  |
| Mexico          | peso           | 0.0763  | 13.1155   |
| Philippines     | peso           | 0.0236  | 42.3400   |
| Russia          | ruble          | 0.0313  | 31.9946   |

| 3-month forward |                | 1.57277                                       | 0.63771   |
| 6-month forward |                | 1.57433                                       | 0.63874   |
| Venezuela       | bolivar fuerte | 0.2331  | 4.2892  |
| Euro            |                | 1.2337  | 0.8105  |
| 1-month forward |                | 1.23520                                       | 0.81001   |
| 3-month forward |                | 1.23601                                       | 0.81109   |
| 6-month forward |                | 1.23723                                       | 0.81209   |
| SDR             |                | 1.50703                                       | 0.66356   |

their U.S. dollar-equivalent values. For example, if \$1.20 can acquire €1 (1 European euro), the direct exchange rate of the dollar versus the European euro is \$1.20, as follows:

$$\frac{\$1.20}{\$1} = \$1.20$$

## Indirect Exchange Rate

The indirect exchange rate (IER) is the reciprocal of the direct exchange rate. From the viewpoint of a U.S. entity, the indirect exchange rate is

$$IER = \frac{1 \text{ FCU}}{\text{U.S. dollar - equivalent value}}$$

For the European euro example, the indirect exchange rate is

$$\frac{\notin 1}{\$1.20} = \notin 0.8333$$

Another way to express this is

IER = 
$$\frac{\text{Number of foreign currency units}}{\$1}$$
  
=  $\frac{€0.8333}{\$1}$ 

Thus, the indirect exchange rate of  $\leq 0.8333 = \$1$  shows the number of foreign currency units that may be obtained for 1 U.S. dollar. People who travel outside the United States often use the indirect exchange rate.

Note that the direct and indirect rates are inversely related and that both state the same economic relationships between two currencies. For example, if the indirect exchange rate is given, the direct exchange rate may be computed by simply inverting the indirect exchange rate. If the indirect exchange rate is  $\leq 0.8333 \ (\leq 0.8333/\$1)$ , the direct exchange rate can be computed as  $(1/ \in 0.8333) = 1.20$ . If the direct exchange rate is \$1.20, the indirect exchange rate can be computed as  $(\in 1/\$1.20) = \in 0.8333$ . Again, the currency in the numerator identifies the direction of the exchange rate. In practice, a slight difference might exist in the inverse relationship because of brokers' commissions or small differences in demand for the two currencies.

Some persons identify the direct exchange rate as American terms to indicate that it is U.S. dollar-based and represents an exchange rate quote from the perspective of a person in the United States. The indirect exchange rate is sometimes identified as European terms to indicate the direct exchange rate from the perspective of a person in Europe, which means the exchange rate shows the number of units of the European's local currency units per one U.S. dollar. A guide to help remember the difference in exchange rates is to note that the U.S. dollar is the numerator for the direct rate or American terms (the foreign currency unit is in the denominator), and the foreign currency unit is in the numerator for the indirect rate or European terms (with the U.S. dollar in the denominator). The terms currency is the numerator and the base currency is the denominator in the exchange rate ratio. The numerator is the key to the identification of the rate.

## Changes in Exchange Rates<sup>1</sup>

A change in an exchange rate is referred to as a strengthening or weakening of one currency against another. During the first decade of the new century, the relationship between the dollar and the euro was often volatile. For example, the exchange rate of the U.S. dollar versus the euro changed as follows during 2011 and 2012:

|   | January<br>2011 | July<br>2011 | January<br>2012 | July<br>2012 |
|---|-----------------|--------------|-----------------|--------------|
| Direct exchange rate (U.S. dollar equivalent of 1 euro) | ·               | •            | •               | \$1.26       |
| Indirect exchange rate (euro per 1 U.S. dollar)         | €0.75           | €0.69        | €0.78           | €0.79        |

## Weakening of the U.S. Dollar—Direct Exchange Rate Increases

Between January 1, 2011, and July 1, 2011, the direct exchange rate increased from \$1.33 = \$1 to \$1.45 = \$1, indicating that it took more U.S. currency (\$) to acquire 1 European euro (€). In other words, the cost of 1 euro was \$1.33 on January 1 but increased to \$1.45 on July 1. This means that the value of the U.S. currency declined relative to the euro. This is termed a weakening of the dollar versus the euro. Alternatively, looking at the indirect exchange rate, 1 U.S. dollar could acquire 0.75 European euro on

<sup>&</sup>lt;sup>1</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

January 1, but it could acquire fewer euros, 0.69, on July 1. Thus, the relative value of the dollar versus the euro was lower on July 1 than on January 1.

Think of the weakening of the U.S. dollar as

- Taking more U.S. currency to acquire one foreign currency unit.
- One U.S. dollar acquiring fewer foreign currency units.

Imports from Europe were more expensive for U.S. consumers on July 1 than on January 1 because of the weakening of the dollar. For example, assume that a European manufacturer is selling a German-made automobile for €25,000. To determine the U.S. dollar–equivalent value of the €25,000 on January 1, the following equation is used:

Between January 1 and July 1, the direct exchange rate increased as the dollar weakened relative to the euro. On July 1, the U.S. dollar–equivalent value of the €25,000 is

Although a weakening of the dollar is unfavorable for U.S. companies purchasing goods from another country, it favorably affects U.S. companies selling products in that country. Following a weakening of the dollar, U.S. exports to Europe are less expensive for European customers. For example, assume a U.S. manufacturer is selling a U.S.-made machine for \$10,000. To determine the foreign currency (euro) equivalent value of the \$10,000 on January 1, the following equation is used:

On July 1, after a weakening of the dollar, the machine would cost the European customer €6,900, as follows:

This substantial decrease in cost could lead the European customer to decide to acquire the machine from the U.S. company. Thus, a U.S. company's international sales can be significantly affected by changes in foreign currency exchange rates.

#### Strengthening of the U.S. Dollar—Direct Exchange Rate Decreases

Between July 1, 2011, and July 1, 2012, the direct exchange rate decreased from \$1.45 = €1 to \$1.26 = €1, indicating that it took less U.S. currency to acquire 1 euro. On July 1, 2011, a euro cost \$1.45, but on July 1, 2012, the relative cost for 1 euro decreased to \$1.26. This means that the value of the U.S. currency increased relative to the euro, termed a strengthening of the dollar against the euro. Another way to view this change is to note that the indirect exchange rate increased, indicating that on July 1, 2012, 1 dollar acquired more euros than it did on July 1, 2011. On July 1, 2011, 1 U.S. dollar could acquire 0.69 euro, but on July 1, 2012, 1 U.S. dollar could acquire more euros, 0.79, indicating that the relative value of the dollar increased between July 1, 2011, and July 1, 2012.

Think of the strengthening of the U.S. dollar as

- Taking less U.S. currency to acquire one foreign currency unit.
- One U.S. dollar acquiring more foreign currency units.

Figure 11–2 summarizes the relationships between currencies, imports, and exports.

During the latter part of the 1970s, the dollar consistently weakened against other major currencies because of several factors, including the high inflation the United States experienced. This weakening did help the U.S. balance of trade because it reduced the quantity of then more expensive imports while causing U.S.-made goods to be less expensive in other countries. In the first half of the 1980s, the dollar consistently strengthened relative to other currencies. Not only was the U.S. economy strong and producing goods more efficiently but also high interest rates attracted large foreign investment in the U.S. capital markets. A stronger dollar added to the foreign trade deficit by making imports less expensive and U.S.-made goods more expensive on the world market. Beginning in 1986 and continuing through the early 1990s, the dollar again weakened relative to the major international currencies. In the latter 1990s, the dollar generally strengthened because of the robustness of the U.S. economy, but in the early 2000s, the dollar again weakened because of the high trade deficit and the sluggish U.S. economy.

These changes in the international value of the dollar affect any consumer acquiring imported goods. A weakening dollar means that imports become more expensive whereas a strengthening dollar means that imports become less expensive. One reason the U.S. government may let the dollar weaken is to reduce the trade deficits. U.S. exporters can sell their goods more easily overseas, thus boosting their profitability. Imports should decrease because of the higher relative prices of the foreign-made goods, thus enhancing the demand for domestic-made goods within the United States. If the dollar weakens too far, overseas investors reduce their demand for dollar-dominated U.S. assets such as U.S. stocks and bonds. The reduced investment demand may require an increase in bond interest rates to offset overseas investors' reduction in bond returns caused by the weakening dollar. An increase in interest rates may reduce economic investment within the United States. Finally, a weakening dollar means that foreign travel becomes more expensive because of the reduction in the dollar's purchasing power. Thus, the U.S. government's management of the value of the dollar is a balancing act to achieve the needs of both U.S. businesses and U.S. consumers.

#### Spot Rates versus Current Rates

ASC 830 refers to the use of both spot rates and current rates for measuring the currency used in international transactions. The spot rate is the exchange rate for immediate delivery of currencies. The *current rate* is defined simply as the spot rate on the entity's balance sheet date.

## Forward Exchange Rates

A third exchange rate is the rate on future, or forward, exchanges of currencies. Figure 11–1 shows these exchange rates for the major international currencies for one month, three months, and six months forward. Active dealer markets in forward exchange contracts are maintained for companies wishing to either receive or deliver major international currencies. The forward rate on a given date is not the same as the spot rate on the same date. Expectations about the relative value of currencies are built into the forward rate. The difference between the forward rate and the spot rate on a given date is called the spread. The spread gives information about the perceived strengths or weaknesses of currencies. For instance, assume the spot rate for the Swiss franc is \$1.1574 and the 30-day forward rate is \$1.0576. The spread is the difference between these two numbers, or \$0.0998. Because the forward rate is less than the spot rate, the expectation is that the dollar will strengthen against the franc in the next 30 days. The actual spot rate when the contract is due in 30 days may be higher or lower than the forward rate. By entering into the forward contract, the U.S. company gives up the chance of receiving a better exchange rate but also avoids the possibility of an exchange rate loss. This reduces the risk for the U.S. company.

For example, a U.S. company may have a liability in British pounds due in 30 days. Rather than wait 30 days to buy the pounds and risk having the dollar weaken in value relative to the pound, the company can go to a foreign exchange dealer and enter into a onemonth forward exchange contract at the forward exchange rate in effect on the contract date. The United States has approximately 2,000 foreign exchange dealer institutions, of which about 200 are market-making, large banks such as Citibank, JP Morgan Chase, and Bank of America, which do the highest volume of foreign exchange activity. The contract enables the buyer to receive British pounds from an exchange broker 30 days from the contract date at a price fixed now by the contract.

The next section of the chapter presents the accounting for import and export transactions and for forward exchange contracts.

## FOREIGN CURRENCY TRANSACTIONS

LO 11-2

Understand the accounting implications of and be able to make calculations related to foreign currency transactions.

As defined earlier, foreign currency transactions are economic activities denominated in a currency other than the entity's recording currency. These transactions include the following:

- 1. Purchases or sales of goods or services (imports or exports), the prices of which are stated in a foreign currency.
- 2. Loans payable or receivable in a foreign currency.
- 3. Purchase or sale of foreign currency forward exchange contracts.
- 4. Purchase or sale of foreign currency units.

One party in a foreign exchange transaction must exchange its own currency for another country's currency. Some persons use a shorthand to refer to foreign exchange transactions by using just the letters FX. This book uses the longer, more generally used description, which is foreign exchange.

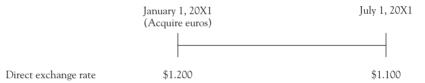

For financial statement purposes, transactions denominated in a foreign currency must be translated into the currency the reporting company uses. Additionally, at each balance sheet date-interim as well as annual-account balances denominated in a currency other than the entity's reporting currency must be adjusted to reflect changes in exchange rates during the period since the last balance sheet date or since the foreign currency transaction date if it occurred during the period. This adjustment restates the foreign currency-denominated accounts to their U.S. dollar-equivalent values as of the balance sheet date. The adjustment in equivalent U.S. dollar values is a foreign currency transaction gain or loss for the entity when exchange rates have changed. For example, assume that a U.S. company acquires €5,000 from its bank on January 1, 20X1, for use in future purchases from German companies. The direct exchange rate is \$1.20 = \$1; thus the company pays the bank \$6.000 for \$5.000. as follows:

#### U.S. dollar – Equivalent value = Foreign currency units × Direct exchange rate

The following entry records this exchange of currencies:

The parenthetical notation (€) is used here after the debit account to indicate that the asset is European euros, but for accounting purposes, it is recorded and reported at its U.S. dollar-equivalent value. This translation to the U.S. equivalent value is required in order to add the value of the foreign currency units to all of the company's other accounts that are reported in dollars.

On July 1, 20X1, the exchange rate is \$1.100 = €1 as represented in the following time line:

The direct exchange rate has decreased, reflecting that the U.S. dollar has strengthened. On July 1, it takes less U.S. currency to acquire 1 euro than it did on January 1. If the dollar has strengthened, the euro has weakened. By holding the euros during a weakening of the euro relative to the dollar, the company experiences a foreign currency transaction loss, as follows:

| Equivalent dollar value of € 5,000 on January 1: |         |
|--|---------|
| € 5,000 × \$1.200                                | \$6,000 |
| Equivalent dollar value of € 5,000 on July 1:    |         |
| € 5,000 × \$1.100                                | _5,500  |
| Foreign currency transaction loss                | \$ 500  |

If the U.S. company prepares financial statements on July 1, the following adjusting entry is required:

The foreign currency transaction loss is the result of a foreign currency transaction and is included in this period's income statement, usually as a separate item under "Other Income or Loss." Some accountants use the account title Exchange Loss instead of the longer title Foreign Currency Transaction Loss. In this book, the longer, more descriptive account title is used to communicate fully the source of the loss. The Foreign Currency Units account is reported on the balance sheet at a value of \$5,500, its equivalent U.S. dollar value on that date.

In the previous examples, the U.S. company used the U.S. dollar as its primary currency for performing its major financial and operating functions, that is, as its functional

Losses on foreign currency transactions can be substantial. For example, Nike reported a \$14 million loss on its fiscal 2012 fourth guarter financial statements related to foreign currency transactions.

currency. Also, the U.S. company prepared its financial statements in U.S. dollars, its reporting currency. Any transactions denominated in currencies other than the U.S. dollar require translation to their equivalent U.S. dollar values. Generally, the majority of a business's cash transactions take place in the *local currency* of the country in which the entity operates. The U.S. dollar is the functional currency for virtually all companies based in the United States. A company operating in Germany would probably use the euro as its functional currency. In this chapter, the local currency is assumed to be the entity's functional and reporting currency. The few exceptions to this general case are discussed in Chapter 12.

Illustrations of various types of foreign currency transactions are given in the sections that follow. Note that different exchange rates are used to value selected foreign currency transactions, depending on a number of factors such as management's reason for entering the foreign currency transaction, the nature of the transaction, and the timing of the transaction.

## Foreign Currency Import and Export Transactions

Payables and receivables that arise from transactions with foreign-based entities and that are denominated in a foreign currency must be measured and recorded by the U.S. entity in the currency used for its accounting records—the U.S. dollar. The relevant exchange rate for settlement of a transaction denominated in a foreign currency is the spot exchange rate on the date of settlement. At the time the transaction is settled, payables or receivables denominated in foreign currency units must be adjusted to their current U.S. dollar-equivalent value. If financial statements are prepared before the foreign currency payables or receivables are settled, their account balances must be adjusted to their U.S. dollar-equivalent values as of the balance sheet date, using the current rate on the balance sheet date.

An overview of the required accounting for an import or export transaction denominated in a foreign currency, assuming the company does not use forward contracts, is as follows:

- 1. Transaction date. Record the purchase or sale transaction at the U.S. dollar-equivalent value using the spot direct exchange rate on this date.
- 2. Balance sheet date. Adjust the payable or receivable to its U.S. dollar-equivalent, end-of-period value using the current direct exchange rate. Recognize any exchange gain or loss for the change in rates between the transaction and balance sheet dates.
- 3. Settlement date. First adjust the foreign currency payable or receivable for any changes in the exchange rate between the balance sheet date (or transaction date if transaction occurs after the balance sheet date) and the settlement date, recording any exchange gain or loss as required. Then record the settlement of the foreign currency payable or receivable.

This adjustment process is required because the FASB adopted what is called the twotransaction approach, which views the purchase or sale of an item as a separate transaction from the foreign currency commitment. By adopting the two-transaction approach to foreign currency transactions, the FASB established the general rule that foreign currency exchange gains or losses resulting from the revaluation of assets or liabilities denominated in a foreign currency must be recognized currently in the income statement of the period in which the exchange rate changes. A few exceptions to this general rule are allowed and are discussed later in this chapter.

#### Illustration of Foreign Purchase Transaction

Figure 11–3 illustrates the journal entries used to measure and record a purchase of goods from a foreign supplier denominated either in the entity's local currency or in a foreign currency. On the left side of Figure 11–3, the transaction is denominated in U.S. dollars, the recording and reporting currency of the U.S. company; on the right side, the transaction is denominated in Japanese yen (¥). The U.S. company is subject to a foreign currency transaction gain or loss only if the transaction is denominated in the foreign currency. If the foreign transaction is denominated in U.S. dollars, no special accounting problems exist and no currency rate adjustments are necessary.

The following information describes the case:

- 1. On October 1, 20X1, Peerless Products, a U.S. company, acquired goods on account from Tokyo Industries, a Japanese company, for \$14,000, or 2,000,000 yen.
- 2. Peerless Products prepared financial statements at its year-end of December 31, 20X1.
- 3. Settlement of the payable was made on April 1, 20X2.

FIGURE 11-3 Comparative U.S. Company Journal Entries for Foreign Purchase Transaction Denominated in Dollars versus Foreign Currency Units

| No entry                             |             | Foreign Currency Transaction Loss<br>Accounts Payable (¥)  | 2,000  | 2,00   |
|                                      |             | Adjust payable denominated in fore to current U.S. dollar equivalent and exchange loss: $$16,000 = $2,000,000 \times $0.0080 - 14,000 = $2,000,000 \times $0.0070$   | d recognize  ) Dec. 31 spot rate                         |        |
|                                      |             | $\frac{\$ 2,000}{\$} = \$2,000,000 \times (\$0.008)$   | 0 — \$0.0070).   |        |
|                                      | April 1, 2  | 20X2 (Settlement Date)   |  |        |
|                                      |             | Accounts Payable (¥) Foreign Currency Transaction Gai  | 800<br>n   | 80     |
|                                      |             | Adjust payable denominated in fore to current U.S. dollar equivalent and exchange gain: $\$15,200 = \$2,000,000 \times \$0.0076$ $-16,000 = \$2,000,000 \times \$0.0080$ $\underline{\$800} = \$2,000,000 \times (\$0.0076)$ | d recognize<br>5 Apr. 1 spot rate<br>) Dec. 31 spot rate |        |
|                                      |             | Foreign Currency Units (¥)<br>Cash   | 15,200   | 15,20  |
|                                      |             | Acquire FCU to settle debt: $\$15,200 = \$2,000,000 \times \$0.0076$   | April 1 spot rate.                                       |        |
| Accounts Payable 14,000<br>Cash      | 14,000      | Accounts Payable (¥) Foreign Currency Units (¥)  | 15,200   | 15,20  |

The direct spot exchange rates of the U.S. dollar-equivalent value of 1 yen were as follows:

| Date                                   | Direct<br>Exchange Rate |
|--|-------------------------|
| October 1, 20X1 (transaction date)     | \$0.0070                |
| December 31, 20X1 (balance sheet date) | 0.0080                  |
| April 1, 20X2 (settlement date)        | 0.0076                  |

The following timeline may help to clarify the relationships between the dates and the economic events:

Accounts relating to transactions denominated in yen are noted by the parenthetical symbol for the yen (¥) after the account title. As you proceed through the example, you should especially note the assets and liabilities denominated in the foreign currency and the adjustment needed to reflect their current values by use of the U.S. dollar-equivalent rate of exchange.

#### Key Observations from Illustration

If the purchase contract is denominated in dollars, the foreign entity (Tokyo Industries) bears the foreign currency exchange risk. If the transaction is denominated in yen, the U.S. company (Peerless Products Corporation) is exposed to exchange rate gains and losses. The accounts relating to liabilities denominated in foreign currency units must be valued at the spot rate with any foreign currency transaction gain or loss recognized in the period's income. The purchase contract includes specification of the denominated currency as the two parties agreed.

On October 1, 20X1, the purchase is recorded on the books of Peerless Products. The U.S. dollar-equivalent value of 2,000,000 year on this date is \$14,000 ( $\pm$ 2,000,000  $\times$  \$0.0070).

On December 31, 20X1, the balance sheet date, the payable denominated in foreign currency units must be adjusted to its current U.S. dollar-equivalent value. The direct exchange rate has increased since the date of purchase, indicating that the U.S. dollar has weakened relative to the yen. Therefore, on December 31, 20X1, \$16,000 is required to acquire 2,000,000 yen ( $\pm 2,000,000 \times \$0.0080$ ), whereas, on October 1, 20X1, only \$14,000 was required to obtain 2,000,000 yen ( $\$2,000,000 \times \$0.0070$ ). This increase in the exchange rate requires the recognition of a \$2,000 foreign currency transaction loss if the transaction is denominated in yen, the foreign currency unit. No entry is made if the transaction is denominated in U.S. dollars because Peerless has a liability for \$14,000 regardless of the changes in exchange rates.

The payable is settled on April 1, 20X2. If the payable is denominated in U.S. dollars, no adjustment is necessary and the liability is extinguished by payment of \$14,000. However, assets and liabilities denominated in foreign currency units must again be adjusted to their present U.S. dollar-equivalent values. The dollar has strengthened between December 31, 20X1, and April 1, 20X2, as shown by the decrease in the direct exchange rate. In other words, fewer dollars are needed to acquire 2,000,000 year on April 1, 20X2, than on December 31, 20X1. Accounts Payable is adjusted to its current dollar value, and an \$800 foreign currency transaction gain  $[\$2,000,000 \times (\$0.0076 - \$0.0080)]$  is recognized for the change in rates since the balance sheet date. Peerless acquires 2,000,000 yen, paying an exchange broker the spot exchange rate of \$15,200 ( $\pm$ 2,000,000  $\times$  \$0.0076). Finally, Peerless extinguishes its liability denominated in yen by paying Tokyo Industries 

Understanding the revaluations may be easier by viewing the process within the perspective of a T-account. The following T-account posts the entries in Figure 11–3:

| Accounts Payable (¥)                      |        |   |  |  |
|---|--------|---|--|--|
|   |        | 20X1  |  |  |
|   |        | Oct. 1 14,000 (¥2,000,000 × \$0.0070)             |  |  |
|   |        | Dec. 31 2,000 [¥2,000,000 × (\$0.0080 – \$0.0070) |  |  |
|   |        | Dec. 31 16,000 Balance (¥2,000,000 × \$0.0080)    |  |  |
| 20X2                                      |        |   |  |  |
| Apr. 1                                    |        |   |  |  |
| $[$2,000,000 \times ($0.0076 - $0.0080)]$ | 800    |   |  |  |
| Apr. 1 settlement                         |        |   |  |  |
| (¥2,000,000 × \$0.0076)                   | 15,200 |   |  |  |
|   |        | Apr. 2 0 Balance                                  |  |  |

Some accountants combine the revaluation and settlement entries into one entry. Under this alternative approach, the following entries would be made on April 1, 20X2, the settlement date, instead of the entries presented for that date in Figure 11–3:

|     | April 1, 20X2  |        |        |
|-----|--|--------|--------|
| (3) | Foreign Currency Units (¥)   | 15,200 |        |
|     | Cash   |        | 15,200 |
|     | Acquire foreign currency.  |        |        |
| (4) | Accounts Payable (¥)   | 16,000 |        |
|     | Foreign Currency Transaction Gain  |        | 800    |
|     | Foreign Currency Units (¥)   |        | 15,200 |
|     | Coult for the control of the column of the c |        |        |

Settle foreign currency payable and recognize gain from change in exchange rates since December 31, 20X1.

The final account balances resulting from the preceding one-entry approach and the two-entry approach used in Figure 11–3 are the same.

In summary, if the transaction is denominated in U.S. dollars, Peerless Products has no foreign currency exchange exposure; Tokyo Industries bears the risk of foreign currency exposure. If the transaction is denominated in yen, however, Peerless has a foreign currency exchange risk. The assets and liabilities denominated in foreign currency units must be valued at their U.S. dollar-equivalent values, and a foreign currency transaction gain or loss must be recognized on that period's income statement.

## MANAGING INTERNATIONAL CURRENCY RISK WITH FOREIGN CURRENCY FORWARD EXCHANGE FINANCIAL INSTRUMENTS

#### LO 11-3

Understand how to hedge international currency risk using foreign currency forward exchange financial Companies need to manage business risks. Derivative instruments are important tools in managing risk. Companies operating internationally are subject not only to normal business risks but also to additional risks from changes in currency exchange rates. Therefore, multinational enterprises (MNEs) often use derivative instruments, including foreign currency-denominated forward exchange contracts, foreign currency options, and foreign currency futures, to manage risk associated with foreign currency transactions.

The accounting for derivatives and hedging activities is guided by ASC 815. A financial *instrument* is cash, evidence of ownership, or a contract that both (1) imposes on one entity a contractual obligation to deliver cash or another instrument and (2) conveys to the second entity that contractual right to receive cash or another financial instrument. Examples include cash, stock, notes payable and receivable, and many financial contracts.

A *derivative* is a financial instrument or other contract whose value is "derived from" some other item that has a variable value over time. An example of a derivative is a foreign currency forward exchange contract whose value is derived from changes in the foreign currency exchange rate over the contract's term. Note that not all financial instruments are derivatives.

The specific definition of a *derivative* is a financial instrument or contract possessing all of the following characteristics:

- 1. The financial instrument must contain one or more underlyings and one or more notional amounts, which specify the terms of the financial instrument.
  - a. An underlying is any financial or physical variable that has observable or objectively verifiable changes. Currency exchange rates, commodity prices, index of prices or rates, days of winter warming, or other variables including the occurrence or nonoccurrence of a specified event such as the scheduled payment under a contract are examples of an underlying.

- b. A notional amount is the number of currency units, shares, bushels, pounds, or other units specified in the financial instrument. The notional amount is usually expressed in U.S. dollars.
- 2. The financial instrument or other contract requires no initial net investment or an initial net investment that is smaller than required for other types of contracts expected to have a similar response to changes in market factors. Many derivative instruments require no initial net investment or only a small investment for the time value of the contract (as discussed later in this chapter).
- 3. The contract terms: (a) require or permit net settlement, (b) provide for the delivery of an asset that puts the recipient in an economic position not substantially different from net settlement, or (c) allow for the contract to be readily settled net by a market or other mechanism outside the contract. For example, a forward contract requires the delivery of a specified number of shares of stock, but there is an option market mechanism that offers a ready opportunity to sell the contract or to enter into an offsetting contract.

Occasionally, a financial instrument may have an embedded derivative that must be separated, or bifurcated, from its host contract. An example of an embedded derivative is a company's issuing debt that includes regular interest as well as a potential premium payment based on the future price of a commodity such as crude oil. In this case, the contingent payment feature is a derivative. Another example is the debt agreement that specifies a principal, but whose interest rate is based on the U.S. LIBOR (London Interbank Offered Rate), which is a variable rate. In this case, the interest is the embedded derivative because its value, which is derived from the market, is variable.

.com

## **Derivatives Designated as Hedges**

Derivatives may be designated to hedge or reduce risks. Some companies obtain derivatives that are not designated as hedges but as speculative financial instruments. For example, a company may enter into a forward exchange contract that does not have any offsetting intent. In this case, the gain or loss on the derivative is recorded in periodic earnings.

ASC 815 provides specific requirements for classifying a derivative as a hedge. Hedge accounting offsets the gain (loss) on the hedged item with the loss (gain) on the hedging instrument. Hedges are applicable to (1) foreign currency exchange risk in which currency exchange rates change over time; (2) interest-rate risks, particularly for companies owing variable-rate debt instruments; and (3) commodity risks whose future commodity prices may be quite different from spot prices.

For a derivative instrument to qualify as a hedging instrument, it must meet the following two criteria:

- 1. Sufficient documentation must be provided at the beginning of the hedge term to identify the objective and strategy of the hedge, the hedging instrument and the hedged item, and how the hedge's effectiveness will be assessed on an ongoing basis.
- 2. The hedge must be highly effective throughout its term. Effectiveness is measured by evaluating the hedging instrument's ability to generate changes in fair value that offset the changes in value of the hedged item. This effectiveness must be tested at the time the hedge is entered into, every three months thereafter, and each time financial statements are prepared. Effectiveness is viewed as the derivative instrument's ability to offset changes in the fair value or cash flows of the hedged item within the range between 80 and 125 percent of the change in value of the hedged item.

Derivatives that meet the requirements for a hedge and are designated as such by the company's management are accounted for in accordance with ASC 815 and as follows:

1. Fair value hedges are designated to hedge the exposure to potential changes in the fair value of (a) a recognized asset or liability such as available-for-sale investments or

- (b) an unrecognized firm commitment for which a binding agreement exists, such as to buy or sell inventory. The net gains and losses on the hedged asset or liability and the hedging instrument are recognized in current earnings on the income statement. An example of a fair value hedge is presented in Appendix 11B using an option contract to hedge available-for-sale securities.
- 2. Cash flow hedges are designated to hedge the exposure to potential changes in the anticipated cash flows, either into or out of the company, for (a) a recognized asset or liability such as future interest payments on variable-interest debt or (b) a forecasted cash transaction such as a forecasted purchase or sale. A forecasted cash transaction is a transaction that is expected to occur but for which there is not yet a firm commitment. Thus, a forecasted transaction has no present rights to future benefits or a present liability for future obligations. ASC 815 specifies that a derivative must be valued at its current fair market value. For cash flow hedges, changes in the fair market value of a derivative are separated into an effective portion and an ineffective portion. The net gain or loss on the effective portion of the hedging instrument should be reported in other comprehensive income. The gain or loss on the ineffective portion is reported in current earnings on the income statement.

The effective portion is defined as the part of the gain (or loss) on the hedging instrument that offsets a loss (or gain) on the hedged item. This portion of the change in the derivative's fair market value is related to the intrinsic value from changes in the underlying. Any remaining gain (or loss) on the hedging instrument is defined as the ineffective portion. This portion of the change in the derivative's fair market value is related to the time value of the derivative and reduces to zero at the derivative's expiration date. An example of determining the effective versus the ineffective portion of a change in value of a derivative is presented in Appendix 11B with regard to a cash flow hedge using an option to hedge an anticipated purchase of inventory.

- 3. Foreign currency hedges are hedges in which the hedged item is denominated in a foreign currency. Note that the incremental risk being hedged in a foreign currency hedge is the change in fair value or the change in cash flows attributable to the changes in the foreign currency exchange rates. The following types of hedges of foreign currency risk may be designated by the entity:
  - a. A fair value hedge of a firm commitment to enter into a foreign currency transaction, such as a binding agreement to purchase equipment from a foreign manufacturer with the payable due in the foreign currency or a recognized foreign currency-denominated asset or liability (including an available-for-sale security). Just as with hedge accounting for firm commitments not involving foreign currency commitments in item (1) above, the gain or loss on the foreign currency hedging derivative and the offsetting loss or gain on the foreign currency-hedged item are recognized currently in earnings on the income statement.
  - b. A cash flow hedge of a forecasted foreign currency transaction, such as a probable future foreign currency sale, the forecasted functional currency-equivalent cash flows associated with a recognized asset or liability, or a forecasted intercompany transaction. Just as with accounting for hedges of forecasted transactions not involving foreign currency commitments in item (2) above, the effective portion of the gain or loss on the foreign currency hedging derivative instrument is recognized as a component of other comprehensive income. The ineffective portion of the gain or loss is recognized currently in earnings.

Cash flow hedges are used when all variability in the hedged item's functional currency-equivalent cash flows are eliminated by the effect of the hedge. Cash flow hedges with a derivative based only on changes in the exchange rates cannot be designated, for example, for a variable-rate foreign currency-denominated asset or liability because some of the cash flow variability is not covered with that specific hedge. However, foreign currency-denominated forward contracts can be used

- as cash flow hedges of foreign currency-denominated assets or liabilities that are fixed in terms of the number of foreign currency units.
- c. A hedge of a net investment in a foreign operation. A derivative designated as hedging this type of foreign currency exposure has its gain or loss reported in Other Comprehensive Income as part of the cumulative translation adjustment, as will be discussed in Chapter 12.

## **Forward Exchange Contracts**

For the reporting year ended October 2009, the Foreign Exchange Committee of the New York Federal Reserve Board reported that the average daily volume in foreign exchange instruments totaled \$675 billion, and the average daily volume in over-the-counter foreign exchange options totaled \$25 billion.<sup>2</sup> The Chicago Mercantile Exchange (CME) is the world's largest and most diverse regulated foreign exchange trading market. The CME is an international marketplace that brings together buyers and sellers on its CME Globex electronic trading platform and on its trading floors. With \$3.2 trillion traded daily, FX markets represent the largest class of assets in the world. In March 2010, CME foreign exchange products averaged a record 907,000 contracts per day, up 66 percent from the same period in 2009.<sup>3</sup>

Companies operating internationally often enter into forward exchange contracts with foreign currency brokers for the exchange of different currencies at specified future dates at specified rates. Forward exchange contracts are acquired from foreign currency brokers. Typically, these contracts are written for one of the major international currencies. They are available for virtually any time period up to 12 months forward, but most are for relatively shorter time periods, usually between 30 and 180 days. Forward exchange contracts can be entered into to receive foreign currency or to deliver foreign currency at a specified date in the future (the expiration date). The forward exchange rate differs from the spot rate because of the different economic factors involved in determining a future versus spot rate of exchange. For hedging transactions, if the forward rate is more than the spot rate, the difference between the forward and spot rate is termed premium on the forward exchange contract; that is, the foreign currency is selling at a premium in the forward market. If the forward rate is less than the spot rate, the difference is a discount on the forward exchange contract; that is, the foreign currency is selling at a discount in the forward market.

ASC 815 establishes a basic rule of fair value for accounting for forward exchange contracts. Changes in the fair value are recognized in the accounts, but the specific accounting for the change depends on the purpose of the hedge. For forward exchange contracts, the basic rule is to use the forward exchange rate to value the forward contract.

Multinational entities often use foreign currency forward contract derivatives. These contracts may be designated as hedging instruments or may not fulfill all the requirements for a hedge and would thus not be hedging instruments. The cases discussed in the next sections of this chapter illustrate the following:

Case 1: This case presents the most common use of foreign currency forward contracts, which is to manage a part of the foreign currency exposure from accounts payable or accounts receivable denominated in a foreign currency. Note that the company has entered into a foreign currency forward contract but that the contract does not qualify for or the company does not designate the forward contract as a hedging instrument. Thus, the forward contract is not a designated hedge but can offset most, if not all, foreign currency risks. The forward contract is valued using the forward rate, and changes in the market value of the forward contract are recognized

<sup>&</sup>lt;sup>2</sup> Foreign Exchange Committee, FX Volume Survey, http://www.newyorkfed.org/FXC/volumesurvey/ (accessed May 17, 2010).

currently in earnings on the income statement. The foreign currency account payable or account receivable is revalued using the spot rate in accordance with ASC 830.

Case 2: This case presents the accounting for an unrecognized firm commitment to enter into a foreign currency transaction, which is accounted for as a fair value hedge. A firm commitment exists because of a binding agreement for the future transaction that meets all requirements for a firm commitment. The hedge is against the possible changes in fair value of the firm commitment (e.g., the inventory to be purchased or the equipment to be acquired) from changes in the foreign currency exchange rates.

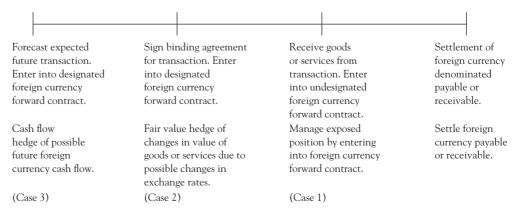

Case 3: This case presents the accounting for a forecasted foreign currency denominated transaction, which is accounted for as a cash flow hedge of the possible changes in future cash flows. The forecasted transaction is *probable* but not a *firm* commitment. Thus, the transaction has not yet occurred nor is it assured; the company is anticipating a possible future foreign currency transaction. Because the foreign currency hedge is against the impact of changes in the foreign currency exchange rates used to predict the possible future foreign currency-denominated cash flows, it is accounted for as a cash flow hedge. ASC 815 allows for the continuation of a cash flow hedge after the purchase or sale transaction occurs until settlement of the foreign currency-denominated account payable or receivable arising from the transaction. Alternatively, at the time the company enters into a binding agreement for the transaction that had been forecasted, the hedge can be changed to a fair value hedge, but any other comprehensive income recognized on the cash flow hedge to that date is not reclassified to the income statement until the earnings process is completed.

Case 4: This case presents the accounting for foreign currency forward contracts used to speculate in foreign currency markets. These transactions are not hedging transactions. The foreign currency forward contract is revalued periodically to its fair value using the forward exchange rate for the remainder of the contract term. The gain or loss on the revaluation is recognized currently in earnings on the income statement.

A time line of the possible points at which a company uses foreign currency contracts follows. Note that a company may use just one foreign currency forward contract during the time between each event and the final settlement of the foreign currency payable or receivable or may use more than one foreign currency forward contract during the time span presented. For example, a company could use one forward contract between the time of the forecast of the future transaction and the time it signs a binding agreement, or it could just continue with one forward contract the entire time between the date of the forecast and the final settlement.

Thus, the accounting for the hedge is based on the purpose for which the hedge, in this case a foreign currency forward contract, is entered into.

The following four cases illustrate the accounting for the major uses of forward exchange contracts.

## Case 1: Managing an Exposed Foreign Currency Net Asset or Liability Position: Not a Designated Hedging Instrument

A company that has more trade receivables or other assets denominated in a foreign currency than liabilities denominated in that currency incurs a foreign currency risk from its exposed net asset position. Alternatively, the company has an exposed net liability position if liabilities denominated in a foreign currency exceed receivables denominated in that currency.

The most common use of forward exchange contracts is for managing an exposed foreign currency position, either a net asset or a net liability position. Entering into a foreign currency forward contract balances a foreign exchange payable with a receivable in the same foreign currency, thus offsetting the risk of foreign exchange fluctuations. For example, a U.S. company acquiring goods from a Swiss company may be required to make payment in Swiss francs. If the transaction is denominated in Swiss francs, the U.S. company is exposed to the effects of changes in exchange rates between the dollar and the Swiss franc. To protect itself from fluctuations in the value of the Swiss franc, the U.S. company can enter into a forward exchange contract to receive francs at the future settlement date. The U.S. company then uses these francs to settle its foreign currency commitment arising from the foreign purchase transaction.

Alternatively, a U.S. company could have a receivable denominated in a foreign currency that it also could manage with a forward exchange contract. In this case, the U.S. company contracts to deliver foreign currency units to the forward exchange broker at a future date in exchange for U.S. dollars.

ASC 815 specifies the general rule that the relevant exchange rate for measuring the fair value of a forward exchange contract is the forward exchange rate at each valuation date. Note that ASC 830 specifies that the foreign currency-denominated account receivable or account payable from the exchange transaction is valued by using the spot rate at the valuation date. Forward contracts must be adjusted for changes in the fair value of the forward contract. Because of the two different currency exchange rates used—the spot and the forward—a difference normally exists between the amount of gain and loss. This difference should not be large but does create some volatility in the income stream.

## Time Value of Future Cash Flows from Forward Contracts

One other item of note is that ASC 815 requires the recognition of an interest factor if interest is significant. Thus, when interest is significant, companies should use the present value of the expected future net cash flows to value the forward contract. By using the present value, the company explicitly recognizes the time value of money. For the examples that follow and to focus on the main points of accounting for the hedges, interest was not considered to be significant. A comprehensive example using the time value of money to value a forward contract is presented in Appendix 11A.

#### Illustration of Managing an Exposed Net Liability Position

The following example shows the accounting for the management of an exposed foreign currency position with a forward exchange contract. For purposes of this example, assume the following:

- 1. On October 1, 20X1, Peerless Products purchases goods on account from Tokyo Industries in the amount of 2,000,000 yen.
- 2. This transaction is denominated in yen, and Peerless Products offsets its exposed foreign currency liability with a forward exchange contract for the receipt of 2,000,000 yen from a foreign exchange broker.
- 3. The term of the forward exchange contract equals the six-month credit period extended by Tokyo Industries.
- 4. December 31 is the year-end of Peerless Products, and the payable is settled on April 1, 20X2.

The relevant direct exchange rates are as follows:

|   | U.S. Dollar-Equivalent Value of 1 Yen |   |  |
|---|---------------------------------------|---|--|
| Date  | Spot Rate                             | Forward Exchange Rate                   |  |
| October 1, 20X1 (transaction date) December 31, 20X1 (balance sheet date) April 1, 20X2 (settlement date) | \$0.0070<br>0.0080<br>0.0076          | \$0.0075 (180 days)<br>0.0077 (90 days) |  |

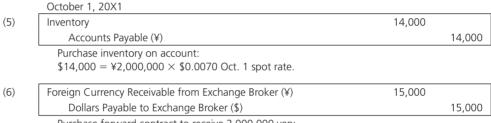

The following timeline summarizes these transactions:

- · Incur liability denominated in yen.
- · Sign 180-day forward exchange contract to receive yen.

- · Obtain yen by settling forward exchange contract.
- Pay yen to settle account payable.

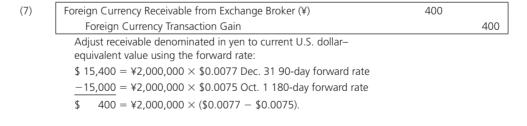

The following entries record the events for this illustration.

Purchase forward contract to receive 2,000,000 yen:  $15,000 = 2,000,000 \times 0.0075$  forward rate.

These entries record the purchase of inventory on credit, which is denominated in yen, and the signing of a six-month forward exchange contract to receive 2,000,000 yen in exchange for \$15,000 ( $\pm$ 2,000,000  $\times$  \$0.0075 forward rate). The amount payable to the exchange broker is denominated in U.S. dollars whereas the receivable from the broker is denominated in yen. The entries for the transaction, the adjusting journal entries for the balance sheet date valuations, and the settlements of the forward contract and the accounts payable are posted to T-accounts in Figure 11–4.

The required adjusting entries on December 31, 20X1, Peerless' fiscal year-end, are

Adjust payable denominated in yen to current U.S. dollarequivalent value using the spot rate:

 $16,000 = 42,000,000 \times 0.0080$  Dec. 31, spot rate

-14,000 =¥2,000,000  $\times$  \$0.0070 Oct. 1, spot rate

 $2,000 = 42,000,000 \times (0.0080 - 0.0070)$ 

FIGURE 11-4 T-Accounts for the Illustration of the Management of an **Exposed Net Liability**

| (6)<br>(7) | 15,000<br>400           |             |                 |              |               | (5)<br>(8)     | 14,000<br>2,000 |
| Bal. 12/31 | 15,400                  | (9)<br>(12) | 200<br>15,200   | (10)<br>(13) | 800<br>15,200 | Bal. 12/31     | 16,000          |
| Bal. 4/1   | 0<br>ign Currenc        | y Unite (   |                 | Dollar       | rs Pavable t  | Bal. 4/1       | 0               |
| Fore       | igii currenc            | y Offics (  | ( <del>†)</del> | Dolla        | is rayable    | (6)            | 15,000          |
| (12)       | 15,200                  | (13)        | 15,200          | (11)         | 15,000        | Bal. 12/31     | 15,000          |
| Bal. 4/1   | 0                       |             |                 |              |               | Bal 4/1        | 0               |

Note that the foreign currency-denominated account payable is valued by using the spot rate. This is the valuation requirement specified in ASC 830. The forward exchange contract is valued using the forward exchange rate for the remainder of the forward contract. This valuation basis is required by ASC 815. The direct exchange spot rate has increased between October 1, 20X1, the date of the foreign currency transaction, and December 31, 20X1, the balance sheet date. As previously illustrated, this means that the U.S. dollar has weakened relative to the yen because it takes more U.S. currency to acquire 1 year at year-end (Y1 = \$0.0080) than at the initial date of the purchase transaction (\$1 = \$0.0070), and a U.S. company with a liability in yen experiences an exchange loss. The U.S. dollar-equivalent values of the foreign currency-denominated accounts at October 1, 20X1, and December 31, 20X1, follow:

|                      | •                                     | ent Values of Foreign<br>minated Accounts | Foreign<br>Currency        |  |
|----------------------|---------------------------------------|---|----------------------------|--|
| Accounts             | October 1, 20X1<br>(transaction date) | December 31, 20X1<br>(balance sheet date) | Transaction<br>Gain (Loss) |  |
| Foreign Currency     |                                       |   |                            |  |
| Receivable from      | \$1E 000 (a)                          | ¢1E 400 (b)                               | ¢ 400                      |  |
| Exchange Broker (¥)  | \$15,000 (a)                          | \$15,400 (b)                              | \$ 400                     |  |
| Accounts Payable (¥) | 14,000 (c)                            | 16,000 ( <i>d</i> )                       | (2,000)                    |  |

On October 1, the U.S. dollar-equivalent value of the foreign currency receivable from the broker is \$15,000. Because of the increase in the forward exchange rate of the yen relative to the dollar (i.e., the weakening of the dollar versus the yen), the U.S. dollar-equivalent value of the foreign currency receivable on December 31, 20X1, increases to \$15,400, resulting in a foreign currency transaction gain of \$400. For the U.S. company, the U.S. dollar-equivalent value of the liability has increased to \$16,000, resulting in a \$2,000 foreign currency transaction loss. Because of the differing valuation requirements of the forward contract and the exposed liability, the exchange gain of the accounts payable (¥) is not necessarily an exact offset of the exchange loss on the foreign currency receivable (¥).

#### The required entries on April 1, 20X2, the settlement date, are

| (9)  | Foreign Currency Transaction Loss  | 200     |        |
|------|--|---------|--------|
|      | Foreign Currency Receivable from Exchange Broker (¥)   |         | 200    |
|      | Adjust receivable to spot rate on settlement date:   |         |        |
|      | $15,200 = 2,000,000 \times 0.0076 \text{ Apr. } 1,2002, \text{ spot rate}$   |         |        |
|      | $-15,400 = $ \$2,000,000 $\times$ \$0.0077 Dec. 31, 20X1, 90-day forward rate  | e       |        |
|      | $\frac{$200}{}$ = \text{\frac{\\$2,000,000}{0.0076}} - \\$0.0076 - \\$0.0077).   |         |        |
| (10) | Accounts Payable (¥)   | 800     |        |
|      | Foreign Currency Transaction Gain  |         | 800    |
|      | Adjust payable denominated in yen to spot rate on settlement date: $\pm 2,000,000 \times (\$0.0076 - \$0.0080)$ .  |         |        |
| (11) | Dollars Payable to Exchange Broker (\$)  | 15,000  |        |
|      | Cash   |         | 15,000 |
|      | Deliver U.S. dollars to currency broker as specified in forward contract.  |         |        |
| (12) | Foreign Currency Units (¥)   | 15,200  |        |
|      | Foreign Currency Receivable from Exchange Broker (¥)   |         | 15,200 |
|      | Receive $\frac{42,000,000}{20,000}$ from exchange broker; valued at Apr. 1, 20X2, spot $\frac{415,200}{20,000}$ \$15,200 = $\frac{42,000,000}{20,000}$ \$0.0076. | t rate: |        |
| (13) | Accounts Payable (¥)   | 15,200  |        |
|      | Foreign Currency Units (¥)   |         | 15,200 |
|      | Pay 2 000 000 ven to Tokyo Industries Inc. in settlement of liability  |         |        |

Pay 2,000,000 yen to Tokyo Industries, Inc., in settlement of liability denominated in yen.

The direct exchange spot rate has decreased from the \$0.0080 rate on the balance sheet date to \$0.0076 on April 1, 20X2, the settlement date, indicating that the U.S. dollar has strengthened relative to the yen. Fewer dollars are needed to acquire the same number of yen on the settlement date than were needed on the balance sheet date. The forward exchange contract becomes due on April 1, 20X2, and is now valued at the current spot rate. The difference between the 90-day forward rate on December 31, 20X1, and the spot rate at the date of the completion of the forward rate results in the loss of \$200. The U.S. dollar-equivalent values of the foreign currency-denominated accounts on December 31, 20X1, and April 1, 20X2, follow:

|  | U.S. Dollar–Equivalen<br>Currency–Denomi  |  | Foreign<br>Currency        |  |
|--|---|--|----------------------------|--|
| Accounts                                 | December 31, 20X1<br>(balance sheet date) | April 1, 20X2 (settlement date)              | Transaction<br>Gain (Loss) |  |
| Foreign Currency                         |   |  |                            |  |
| Receivable from                          | \$1E 400 (a)                              | ¢1E 200 /b\                                  | ¢/200\                     |  |
| Exchange Broker (¥) Accounts Payable (¥) | \$15,400(a)<br>16,000(c)                  | \$15,200 ( <i>b</i> )<br>15,200 ( <i>d</i> ) | \$(200)<br>800             |  |

On December 31, 20X1, the U.S. dollar-equivalent value of the foreign currency receivable from the broker is \$15,400. Because the yen weakened relative to the dollar, the foreign currency receivable on April 1, 20X2, is lower in U.S. dollar-equivalent value, and an exchange loss of \$200 is recognized. The U.S. dollar-equivalent value of the foreign currency account payable is \$16,000 on December 31, 20X1, but because the yen weakened (i.e., the dollar strengthened) during the period from December 31, 20X1, to April 1, 20X2, the U.S. dollar-equivalent value of the payable decreases to \$15,200 on April 1, 20X2. This results in an \$800 foreign currency transaction gain during this period.

Note that the total net foreign exchange transaction loss for the two years combined is \$1,000 [20X1: \$(2,000) plus \$400; 20X2: \$800 less \$(200)]. This is the effect of the forward contract premium on October 1, 20X1, being taken into the earnings stream. Note the premium was for the difference between the forward rate (\$0.0075) and the spot rate (\$0.0070) at the date the forward contract was signed. At the April 1, 20X2, completion date, both of the foreign currency-denominated accounts are valued at the spot rate. Thus, the  $\$2,000,000 \times (\$0.0070 - \$0.0075)$  premium is the net effect on earnings over the term of the forward contract. The two accounts denominated in foreign currency start at different valuations but end using the same spot rate at the end of the term of the forward contract.

The forward exchange contract offsets the foreign currency liability position. On April 1, 20X2, Peerless pays the \$15,000 forward contract price to the exchange broker and receives the 2,000,000 yen, which it then uses to extinguish its account payable to Tokyo Industries. Note that after settlement, all account balances in Figure 11–4 are reduced to zero.

If Peerless Products had a foreign currency receivable, it also could manage its exposed net asset position by acquiring a forward exchange contract to deliver foreign currency to the exchange broker. In this case, the forward currency payable to the exchange broker is denominated in the foreign currency. The forward exchange contract is settled when Peerless gives the broker the foreign currency units it has received from its customer. The foreign currency is then exchanged for U.S. dollars at the agreed-upon contractual rate from the forward exchange contract. The assets and liabilities denominated in foreign currency units must be revalued to their U.S. dollar-equivalent values in the same manner as for the import illustration. Recall that, for valuation purposes, ASC 815 requires the use of the forward exchange rate for forward contracts and ASC 830 requires the use of spot rates for exposed net asset or liability accounts arising from foreign currency transactions.

## Formal Balance Sheets Reporting Net Amounts for Forward **Exchange Contracts**

ASC 815 requires the recognition of all derivatives in the statement of financial position (the balance sheet) at net fair value. This means that the balance sheet presents the net of the forward contract receivable from the exchange broker against the dollars payable to the exchange broker. Some companies account for the forward exchange contract with only memorandum entries, using the philosophy that the contract is simply for the exchange of one currency for another. The underlying exposed accounts receivable or accounts payable denominated in foreign currency units are still presented. For example, a formal balance sheet prepared on October 1, 20X1, after the transactions recorded in entries (5) and (6) reports the following net amounts:

| Assets    |          | Liabilities          |          |
|-----------|----------|----------------------|----------|
| Inventory | \$14,000 | Accounts Payable (¥) | \$14,000 |

Under the net method of reporting the forward exchange contract, the gain or loss on the change in the value of the forward exchange contract must be recorded and reported in the balance sheet. The balance sheet prepared on December 31, 20X1, after posting entries (7) and (8) includes the following:

| Assets  |       | Liabilities and Equity                    |          |
|---|-------|---|----------|
| Forward Exchange Contract (¥) (at net fair value) | \$400 | Accounts Payable (¥)                      | \$16,000 |
| ·   |       | Retained Earnings (for net exchange loss) | (1,600)  |

Note that under the net approach to reporting, the forward exchange contract is valued at net fair value. The \$2,000 foreign currency transaction loss on the account payable denominated in yen is partially offset with the \$400 foreign currency transaction gain for the forward contract receivable in yen.

The net balance sheet presented on April 1, 20X2, immediately after entry (10) but before the settlement of the forward exchange contract and the accounts payable is

| Assets  |       | Liabilities and Equity                        |          |
|---|-------|---|----------|
| Forward Exchange Contract (¥) (at net fair value) | \$200 | Accounts Payable (¥)                          | \$15,200 |
|   |       | Retained Earnings (for amount of the premium) | (1,000)  |

The forward exchange contract is then settled by paying the exchange broker the \$15,000 in U.S. dollars as initially contracted for in the forward exchange contract, receiving the 2,000,000 yen now valued at \$15,200, and closing the net forward exchange contract for the difference of the \$200.

The net approach is required for reporting derivative forward exchange contracts on the balance sheet. Nevertheless, we believe that recording both sides of the forward exchange contracts in the account maintains a full record of each side of the transaction.

## Case 2: Hedging an Unrecognized Foreign Currency Firm Commitment: A Foreign Currency Fair Value Hedge

A company may expose itself to foreign currency risk before a purchase or sale transaction occurs. For example, a company may sign a noncancelable order to purchase goods from a foreign entity in the future to be paid for in the foreign currency. By agreeing to a purchase price in the present for a future purchase, the company has accepted an identifiable foreign currency commitment although the purchase has not yet occurred; that is, the purchase contract is still executory (unrecognized). The company will not have a liability obligation until after delivery of the goods, but it is exposed to changes in currency exchange rates before the transaction date (the date of delivery of the goods).

ASC 815 specified the accounting requirements for the use of forward exchange contracts hedging unrecognized foreign currency firm commitments. The company can separate the commitment into its financial instrument (the obligation to pay yen) and nonfinancial asset (the right to receive inventory) aspects. The forward contract taken out is then a hedge of the changes in the fair value of the firm commitment for the foreign currency risk being hedged. A hedge of a firm commitment comes under the accounting for fair value hedges, and the forward contract is to be valued at its fair value.

It is interesting to note the different accounting treatment of a hedge of a forecasted transaction (cash flow hedge) versus that for a hedge of an unrecognized foreign currency firm commitment (fair value hedge). A *forecasted* transaction is *anticipated* but not guaranteed. The forecasted transaction may actually occur as anticipated, but a hedge of a forecasted transaction is accounted for as a cash flow hedge with the effective portion of the change in the hedge's fair value recognized in Other Comprehensive Income. On the other hand, a firm commitment is an agreement with an unrelated party that is binding and usually legally enforceable. The agreement has the following characteristics:

- 1. The agreement specifies all significant terms such as the quantity, the fixed price, and the timing of the transaction. The price may be denominated in either the entity's functional currency or in a foreign currency.
- 2. The agreement must contain a penalty provision sufficiently large to make performance of the agreement probable.

A forecasted transaction may become a firm commitment if an agreement having these listed characteristics is made between the parties. Any cash flow hedge of the forecasted transaction may be changed to a fair value hedge when the firm commitment agreement is made. However, any amounts recorded in Other Comprehensive Income under the cash flow hedge are not reclassified into earnings until the initially forecasted transaction impacts earnings.

ASC 815 provides for management of an enterprise to select the basis by which the effectiveness of the hedge will be measured. Management may select the forward exchange rate, the spot rate, or the intrinsic value for measuring effectiveness. The examples used in this chapter use the forward rate, which is consistent with the general rule of valuing forward exchange contracts as specified in ASC 815. The measure of the change in fair value of the forward contract uses the forward exchange rate for the remainder of the term and then, if interest is significant, the change in the forward rates is discounted to reflect the time value of money. The entries for a hedge of an identifiable foreign currency commitment are presented in the following illustration.

#### Illustration of Hedging an Unrecognized Foreign Currency Firm Commitment

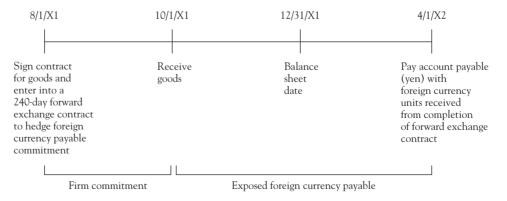

For illustration purposes, the import transaction between Peerless Products and Tokyo Industries used throughout this chapter is extended with the following information:

- 1. On August 1, 20X1, Peerless contracts to purchase special-order goods from Tokyo Industries. Their manufacture and delivery will take place in 60 days (on October 1, 20X1). The contract price is 2,000,000 yen, to be paid by April 1, 20X2, which is 180 days after delivery.
- 2. On August 1, Peerless hedges its foreign currency payable commitment with a forward exchange contract to receive 2,000,000 yen in 240 days (the 60 days until delivery plus 180 days of credit period). The future rate for a 240-day forward contract is \$0.0073 to 1 yen. The purpose of this 240-day forward exchange contract is twofold. First, for the 60 days from August 1, 20X1, until October 1, 20X1, the forward exchange contract is a hedge of an identifiable foreign currency commitment. For the 180-day period from October 1, 20X1, until April 1, 20X2, the forward exchange contract is a hedge of a foreign currency exposed net liability position.

The relevant exchange rates for this example are as follows:

|                                   | U.S. Dollar-Equivalent Value of 1 Yen |  |  |  |  |
|-----------------------------------|---------------------------------------|--|--|--|--|
| Date                              | Spot Rate                             | Forward Exchange Rate                    |  |  |  |
| August 1, 20X1<br>October 1, 20X1 | \$0.0065<br>0.0070                    | \$0.0073 (240 days)<br>0.0075 (180 days) |  |  |  |

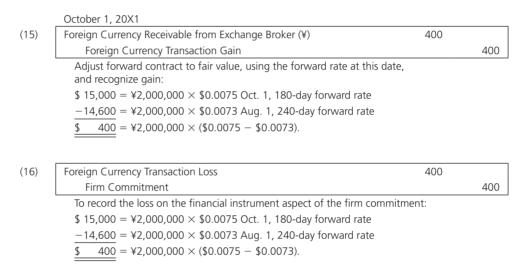

A time line for the transactions follows:

On August 1, 20X1, the company determines the value of its commitment to pay yen for the future accounts payable using the forward exchange rate. However, the payable is not recorded on August 1 because the exchange transaction has not yet occurred; the payable is maintained in memorandum form only. The forward exchange contract must be valued at its fair value. At the time the company enters into the forward exchange contract, the contract has no net fair value because the \$14,600 foreign currency receivable equals the \$14,600 dollars payable under the contract. The subsequent changes in the fair value of the forward contract are measured using the forward rate and then, if interest is significant, discounted to reflect the time value of money. For purposes of this illustration, we assume that interest is not significant and that hedge effectiveness is measured with reference to the change in the forward exchange rates.

```
August 1, 20X1
         Foreign Currency Receivable from Exchange Broker (¥)
(14)
                                                                                   14,600
              Dollars Payable to Exchange Broker ($)
                                                                                               14,600
           Sign forward exchange contract for receipt of 2,000,000 yen in 240 days:
           14,600 = 2,000,000 \times 0.0073 Aug. 1, 240-day forward rate.
```

On October 1, 20X1, the forward exchange contract is revalued to its fair value. The accounts payable in yen are recorded at the time the inventory is received.

The Firm Commitment account is a temporary account for the term of the unrecognized firm commitment. If it has a debit balance, it is shown in the assets section of the balance sheet; when it has a credit balance, as in this example, it is shown in the liability section of the balance sheet:

| Assets  |       | Liabilities and Equit | :y    |
|---|-------|-----------------------|-------|
| Forward Exchange Contract (¥) (at net fair value) | \$400 | Firm Commitment       | \$400 |

Note that the \$400 foreign currency transaction gain is offset against the \$400 foreign currency transaction loss, resulting in no net effect on earnings.

The next entry records the receipt of the inventory and the recognition of the accounts payable in yen. Note that the temporary account, Firm Commitment, is closed against the purchase price of the inventory. The accounts payable are valued at the spot exchange rate at the purchase date (ASC 830).

```
(17)
         Inventory
                                                                               13,600
                                                                                  400
         Firm Commitment
             Accounts Payable (¥)
                                                                                           14,000
```

Record accounts payable at spot rate and record inventory purchase:  $14,000 = 2,000,000 \times 0.0070$  Oct. 1, spot rate.

#### Key Observations from Illustration

The August 1, 20X1, entry records the signing of the forward exchange contract that is used to hedge the identifiable foreign currency commitment arising from the noncancelable purchase agreement. In entries (15) and (16), the forward contract and the underlying hedged foreign currency payable commitment are both revalued to their current value, and the \$400 gain on the forward contract offsets the \$400 loss on the foreign currency payable commitment. Entry (17) records the accounts payable in yen at the current spot rate and records the \$400 inventory net that resulted from the recognition of the \$400 loss on the financial instrument aspect of the firm commitment in entry (16).

At this point, the company has an exposed net liability position, which is hedged with a forward exchange contract, and the subsequent accounting follows the accounting for an exposed foreign currency liability position as presented previously in Case 1. Figure 11–5 presents a side-by-side comparison of the journal entries for the forward contract and the unrecognized firm commitment, which are valued at the forward exchange rates. The exposed foreign currency-denominated account payable is recognized at the time the company receives the inventory and is valued using the spot exchange rate at the purchase date.

## **Case 3: Hedging a Forecasted Foreign Currency Transaction:** A Foreign Currency Cash Flow Hedge

It is interesting to note the different accounting treatment of a hedge of a forecasted transaction as a cash flow hedge versus that of an identifiable foreign currency commitment as a fair value hedge. A forecasted transaction is anticipated but not guaranteed. The forecasted transaction may actually occur as anticipated, but a hedge of a forecasted transaction is accounted for as a cash flow hedge with the effective portion of the change in fair value of the hedging instrument recognized in Other Comprehensive Income. This type of hedge is against the changes in possible future cash flow that may result from changes in the foreign currency exchange rate. A forecasted transaction may become a firm commitment if the parties make a binding agreement. Prior to ASC 815, an entity could designate a forward foreign currency contract as a cash flow hedge if the contract's purpose was offsetting forecasted cash flows, including transactions such as forecasted purchases or sales. Changes in the fair value of the cash flow hedge would be recognized as part of other comprehensive income. When the forecasted transaction became a firm commitment, the forward contract would be redesignated as a fair value hedge, and changes in the fair value contract's would then be recognized in earnings. Any amount recorded in Other Comprehensive Income under the cash flow hedge would not be reclassified into earnings until the initially forecasted transaction impacted earnings. If the forecasted foreign currency transaction did not occur and was not expected to occur in the future, the amount recorded in Other Comprehensive Income would be reclassified into earnings. The forward rate was used to value the forward contract, and the spot rate was used to value the account receivable or payable resulting from the transaction.

ASC 815 allows management the additional option of designating the forward contract as a cash flow hedge from the time the contract is initially made until the final settlement of the payable or receivable rather than requiring that the contract be redesignated as a fair value hedge when the forecasted transaction becomes a firm commitment. Changes in the value of the forward contract are measured using the forward exchange rate whereas changes in the account payable or receivable are measured using the spot exchange rate. However, ASC 815 requires that other comprehensive income from the forward contract revaluation be offset for any foreign exchange gain or loss on the account receivable or payable. Any remaining component of other comprehensive income is taken into the earnings stream only on final completion of the earnings process. Note that the forward contract must meet the requirements of a hedging instrument under the provisions of **ASC 815,** including the designation and tests of effectiveness.

**ASC 815** allows management to (1) designate the forward contract as a cash flow hedge while it is a forecasted transaction and then redesignate it as a fair value hedge for the remainder of the contract or (2) designate the forward contract as a cash flow hedge for the entire period of time from the initial forecasting of the transaction through the eventual settlement of the receivable or payable. However, most companies regularly hedge their foreign currency receivables and payables and are likely to declare the forward contract as a continuing cash flow hedge in order to fully offset any gains or losses on changes in the fair value of the forward contract.

The following example is based on the data in Case 2 but adds the following assumption: The purchase of inventory is forecasted in August, but there is not a binding agreement for this purchase. Peerless Products Corporation enters into the 240-day forward exchange contract as a designated hedge against the future cash flows from the forecasted transaction, including the foreign currency-denominated accounts payable that would result from the purchase. Figure 11–6 presents the entries for this case, assuming that the hedge is designated as a cash flow hedge when the transaction is forecasted and then redesignated as a fair value hedge when the transaction occurs and the inventory is purchased. Figure 11–6 presents the entries for this case by bringing into the illustration Case 1 entries that would not change and noting the entries that would change with a C after the entry number. Note that the entry on October 1 records the effect of the change in value of the forward contract as a component of Other Comprehensive Income.

Figure 11–7 presents the entries for this case assuming the hedge is designated as a cash flow hedge and remains as such between inception in August and final settlement in April. Figure 11-7 presents the entries for this case by bringing into the illustration Case 1 entries that would not change and noting the entries that would change with a letter C after the entry number. Note the major differences in accounting for the forward contract as a cash flow hedge here versus as a fair value hedge in Case 2 are

(1) the effective portion of the revaluation of the forward exchange contract is recorded in Other Comprehensive Income, (2) no firm commitment account exists under a forecasted transaction, (3) no revaluation of the forward contract receivable is required on October 1 and the inventory is recorded at its equivalent U.S. dollar cost determined at the spot rate, (4) there is an offset against Other Comprehensive Income to fully match the foreign currency transaction gain or loss recognized on the exposed foreign currency account payable, and (5) the \$600 remaining balance in Other Comprehensive Income after the foreign currency payable is paid on April 1, 20X2, is finally reclassified into cost of goods sold at the time the inventory is sold, which is the culmination of the earnings process related to the cash flow hedge.

## **Case 4: Speculation in Foreign Currency Markets**

An entity also may decide to speculate in foreign currency as with any other commodity. For example, a U.S. company expects that the dollar will strengthen against the Swiss franc, that is, that the direct exchange rate will decrease. In this case, the U.S. company

might speculate with a forward exchange contract to sell francs for future delivery, expecting to be able to purchase them at a lower price at the time of delivery.

The economic substance of this foreign currency speculation is to expose the investor to foreign exchange risk for which the investor expects to earn a profit. The exchange rate for valuing accounts related to speculative foreign exchange contracts is the forward rate for the remaining term of the forward contract. The gain or loss on a speculative forward contract is computed by determining the difference between the forward exchange rate on the contract date of (or on the date of a previous valuation) and the forward exchange rate available for the remaining term of the contract. The forward exchange rate is used to value the forward contract.

#### Illustration of Speculation with Forward Contract

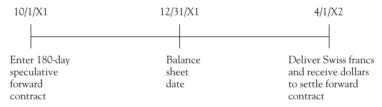

The following example illustrates the accounting for a U.S. company entering into a speculative forward exchange contract in Swiss francs (SFr), a currency in which the company has no receivables, payables, or commitments.

- 1. On October 1, 20X1, when the spot rate was \$0.73 = SFr 1, Peerless Products entered into a 180-day forward exchange contract to deliver SFr 4,000 at a forward rate of \$0.74 = SFr 1. Thus, the forward contract was to deliver SFr 4,000 and receive \$2,960 $(SFr 4.000 \times \$0.74)$ .
- 2. On December 31, 20X1, the balance sheet date, the forward rate for a 90-day forward contract was  $\$0.78 = SFr \ 1$ , and the spot rate for francs was  $\$0.75 = SFr \ 1$ .
- 3. On April 1, 20X2, the company acquired SFr 4,000 in the open market and delivered the francs to the broker, receiving the agreed-upon forward contract price of \$2,960. At this date, the spot rate was \$0.77 = SFr 1.

A summary of the direct exchange rates for this illustration follows.

|                   | U.S. Dollar-Equivalent of 1 Fran |                   |  |  |  |

Receive U.S. dollars from exchange broker as contracted.

## Key Observations from Illustration

The October 1 entry records the forward contract payable of 4,000 Swiss francs to the exchange broker. The payables are denominated in a foreign currency but must be translated into U.S. dollars (because dollars are Peerless Products' reporting currency.). For speculative contracts, the forward exchange contract accounts are valued to fair value by using the forward exchange rate for the remaining contract term.

The December 31 entry adjusts the payable denominated in foreign currency to its appropriate balance at the balance sheet date. The payable, Foreign Currency Payable to Exchange Broker, is adjusted for the increase in the forward exchange rate from October 1, 20X1. The foreign currency transaction loss is reported on the income statement, usually under Other Income (Loss).

Entry (20), the first April 1 entry, revalues the foreign currency payable to its current U.S. dollar-equivalent value using the spot rate of exchange and recognizes the speculation gain. Entry (21) shows the acquisition of the 4,000 francs in the open market at the spot rate of  $\$0.77 = SFr\ 1$ . These francs will be used to settle the foreign currency payable to the exchange broker. The next two entries on this date, (22) and (23), recognize the settlement of the forward contract with the delivery of the 4,000 francs to the exchange broker and the receipt of the \$2,960 agreed to when the contract was signed on October 1, 20X1. The \$40 foreign currency transaction gain is the difference between the value of the foreign currency contract on December 31 using the forward rate and the value of the foreign currency units on April 1 using the spot rate.

Note that the company has speculated and lost because the dollar actually weakened against the Swiss franc. The net loss on the speculative forward contract was \$120, which is the difference between the \$160 loss recognized in 20X1 and the \$40 gain recognized in 20X2.

Although this example shows a delivery of foreign currency units with a forward exchange contract, a company also may arrange a future contract for the receipt of foreign currency units. In this case, the October 1 entry is as follows:

The remainder of the accounting is similar to that of a delivery contract except that the company records an exchange gain on December 31 because it has a receivable denominated in a foreign currency that has now strengthened relative to the dollar.

#### Foreign Exchange Matrix

The relationships between changes in exchange rates and the resulting exchange gains and losses are summarized in Figure 11-8. For example, if a company has an account receivable denominated in a foreign currency, the exposed net monetary asset position results in the recognition of an exchange gain if the direct exchange rate increases but an exchange loss if the exchange rate decreases. If a company offsets an asset denominated in a foreign currency with a liability also denominated in that currency, the company has protected itself from any changes in the exchange rate because any gain is offset by an equal exchange loss.

## **FIGURE 11–8** Foreign Exchange Matrix

|  | Direct Exchange Rate Changes                        |   |  |

#### ADDITIONAL CONSIDERATIONS

LO 11-4

Know how to measure hedge effectiveness, make interperiod tax allocations for foreign currency transactions, and hedge net investments in a foreign entity.

## A Note on Measuring Hedge Effectiveness

ASC 815 states that, at the beginning of each hedging transaction, a company must define the method it will use to measure the effectiveness of the hedge. Effectiveness means that there will be an approximate offset, within the range of 80 to 125 percent, of the changes in the fair value of the cash flows or changes in fair value to the risk being hedged. Effectiveness must be assessed at least every three months and when the company reports financial statements or earnings. A company may elect to choose from several different measures for assessing hedge effectiveness. The examples to this point in the chapter use the change in forward rates, but a company may use the change in spot prices or change in intrinsic value. The intrinsic value of a derivative is the value related to the changes in value of the underlying item. The time value of a derivative is related to the value assigned to the opportunity to hold the derivative open for a period of time. The time value expires over the term of the derivative and is zero at the derivative's maturity date. If the company uses spot prices for measuring hedge effectiveness, any difference between the spot price and the forward price is excluded from the assessment of hedge effectiveness and is included currently in earnings.

## **Interperiod Tax Allocation for Foreign Currency Gains (Losses)**

Temporary differences in the recognition of foreign currency gains or losses between tax accounting and GAAP accounting require interperiod tax allocation. Generally, the accrual method of recognizing the effects of changes in exchange rates in the period of change differs from the general election for recognizing exchange gains for tax purposes in the period of actual conversion of the foreign currency-denominated item. The temporary difference is recognized in accordance with ASC 740 as a deferred tax asset or liability.

### Hedges of a Net Investment in a Foreign Entity

In the earlier discussions of the use of forward exchange contracts as a hedging instrument, the exchange risks from transactions denominated in a foreign currency could be offset. This same concept is applied by U.S. companies that view a net investment in a foreign entity as a long-term commitment that exposes them to foreign currency risk. A number of balance sheet management tools are available for a U.S. company to hedge its net investment in a foreign affiliate. Management may use forward exchange contracts, other foreign currency commitments, or certain intercompany financing arrangements, including intercompany transactions. For example, a U.S. parent company could borrow

10,000 British pounds to hedge against an equivalent net asset position of its British subsidiary. Any effects of exchange rate fluctuations between the pound and the dollar would be offset by the investment in the British subsidiary and the loan payable.

ASC 815 specifies that for derivative financial instruments designated as a hedge of the foreign currency exposure of a net investment in a foreign operation, the portion of the change in fair value equivalent to a foreign currency transaction gain or loss should be reported in Other Comprehensive Income. That part of other comprehensive income resulting from a hedge of a net investment in a foreign operation then becomes part of the cumulative translation adjustment in accumulated other comprehensive income. Chapter 12 presents both the translation adjustment portion of other comprehensive income and accumulated other comprehensive income.

## Summary of **Key Concepts**

Virtually all companies have foreign transactions. The general rule is that accounts resulting from transactions denominated in foreign currency units must be valued and reported at their equivalent U.S. dollar values. Forward exchange contracts typically use the forward rate for determining current fair value. These accounts must be adjusted to recognize the effects of changes in the exchange rates. For fair value hedges, the gain or loss is taken into current earnings. For cash flow hedges, the gain or loss is taken into other comprehensive income for the period.

## **Key Terms**

cash flow hedges, 557 current rate, 549 derivative, 555 fair value hedges, 556 financial instrument, 555 foreign currency exchange rate, 545 foreign currency hedges, 557 foreign currency transaction gain or loss, 550 foreign currency transactions, 544

foreign currency unit (FCU), 545 forward exchange contract, 550 functional currency, 551 hedging unrecognized foreign currency firm commitments, 565 intrinsic value of a derivative, 574 local currency, 552 local currency unit (LCU), 545 managing an exposed foreign currency position, either a net asset or a net liability position, 560 notional amount, 556 reporting currency, 551 speculate with a forward exchange contract, 571 spot rate, 549 spread, 550 time value of a derivative, 574 underlying, 555

## Appendix 11A Illustration of Valuing Forward Exchange Contracts with Recognition for the Time Value of Money

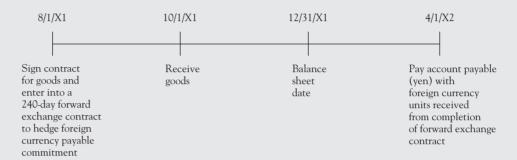

This illustration uses the example of a hedge of an identifiable, unrecognized foreign currency commitment from the chapter (Case 2) to illustrate the present value of the forward exchange contract and hedge.

- 1. On August 1, 20X1, Peerless Products Corporation contracts to purchase special-order goods from Tokyo Industries. The manufacture and delivery of the goods will take place in 60 days (on October 1, 20X1). The contract price is \(\frac{\text{\frac{4}}}{2},000,000\) to be paid by April 1, 20X2, which is 180 days after delivery.
- 2. On August 1, 20X1, Peerless Products hedges its foreign currency payable commitment with a forward exchange contract to receive \(\frac{\pma}{2}\),000,000 in 240 days (the 60 days until delivery plus 180 days of credit period). The future rate for a 240-day forward contract is \$0.0073 to \(\frac{1}{2}\)1. The purpose of this 240-day forward exchange contract is twofold. First, for the 60 days from August 1, 20X1, until October 1, 20X1, the forward exchange contract is a hedge of an identifiable foreign currency commitment. For the 180-day period from October 1, 20X1, until April 1, 20X2, the forward exchange contract is a hedge of a foreign currency-exposed net liability position.
- 3. Peerless uses a discount interest rate of 10 percent to present value of the expected future cash flows from forward exchange contracts.
- 4. Peerless measures the effectiveness of hedges of identifiable, unrecognized firm commitments based on changes in the forward exchange rate.

The relevant exchange rates for this example are as follows:

| U.S. Dollar–Equivalent Value of 1 Yen   |  |  |  |
|---|--|--|--|
| Date  | Spot Rate                              | Forward Exchange Rate  |  |
| August 1, 20X1 October 1, 20X1 December 31, 20X1 (balance sheet date) April 1, 20X2 (settlement date) | \$0.0065<br>0.0070<br>0.0080<br>0.0076 | \$0.0073 (240 days)<br>0.0075 (180 days)<br>0.0077 (90 days) |  |

The following timeline summarizes these transactions.

The computation of hedge effectiveness is performed using the changes in the forward exchange rate in accordance with the general requirements of ASC 815 and the company's specific policies regarding measurement of effectiveness of the hedge by using the forward exchange rates.

|                   | Change in the Fair Value of                                   |   |  |
|-------------------|---|---|--|
|                   | Forward Contract Based on Changes in Forward Rate Gain (Loss) | Firm Commitment<br>Based on Changes<br>in Forward Rate<br>Gain (Loss) | Effectiveness<br>Ratio for the<br>Period |
| October 1, 20X1   | \$380 (a)   | \$(380)   | 1.00                                     |
| December 31, 20X1 | 400 <i>(b)</i>  | No longer applic<br>commitment wa<br>October 1, 20X1                  | •  |
| April 1, 20X2     | (180) (c)   | ,   |  |

(a)  $\$380 = [(\$0.0075 - \$0.0073) \times \$2,000,000]$  for the \$400 cumulative, undiscounted gain from the change in the forward rates and then discounted at a 10 percent annual rate for the six-month period from October 1, 20X1, to April 1, 20X2, the completion date of the forward contract: NPV(0.05, 400) = \$380.95, rounded.

(b)  $\$400 = [(\$0.0077 - \$0.0073) \times \$2,000,000]$  for the \$800 cumulative, undiscounted gain from the change in the forward rates since entering the forward contract and then (1) discounted at a 10 percent annual rate for the three-month period from December 31, 20X1, to April 1, 20X2, NPV(0.025, 800) = \$780.49, rounded; and then (2) subtract prior recognition of \$380 reported for October 1, 20X1, in (a).

(c)  $\$(180) = [(\$0.0076 - \$0.0073) \times \$2,000,000]$  for the \$600 cumulative gain from the change in the forward rate since entering the forward contract on August 1,20X1, to the spot rate on April 1,20X2, the completion of the forward contract; then subtract the prior recognition of \$780 gain recognized previously in (a) and (b). This results in a loss of \$(180) in the current period.

The amounts in the following entry on August 1, 20X1, are not present valued because the entry is a memorandum-type entry and because the interest factor will be taken into earnings through the changes in the fair value of the forward contract. Note that at the date of signing the forward contract, the net fair value of the forward contract is zero because the receivable and payable are equal to each other.

August 1, 20X1 (25)Foreign Currency Receivable from Exchange Broker (¥) 14,600 Dollars Payable to Exchange Broker (\$) 14,600

Sign forward exchange contract for receipt of 2,000,000 yen in 240 days:

 $14,600 = 2,000,000 \times 0.0073$  Aug. 1, 240-day forward rate.

On October 1, 20X1, the forward exchange contract will be revalued to its net fair value, recognizing the time value of money by using the present value of the expected future net cash flow from the forward contract. The temporary liability account, Firm Commitment, is also recorded at this time. Net present values can easily be computed using an electronic spreadsheet such as Excel and the net present value (NPV) function.

| October | 1 20V1    |
|---------|-----------|
|         | 1 / U / I |

| (26) | Foreign Currency Receivable from Exchange Broker (¥) | 380 |     |
|------|--|-----|-----|
|      | Foreign Currency Transaction Gain                    |     | 380 |
|      |  |     |     |

Adjust forward contract to net fair value, using the present value of the change in the forward rates. [Item (a) in the hedge effectiveness illustration.]

(27)Foreign Currency Transaction Loss 380 Firm Commitment 380

> To record the loss on the financial instrument aspect of the firm commitment using the present value of the change in the forward exchange rates. [Same amount as item (a) for this example because the effectiveness of the hedge on the firm commitment is assessed using the change in the forward exchange rates.]

On October 1, 20X1, the discounted net fair value of the forward contract is \$380.

The next entry is to record the receipt of the inventory and the recognition of the accounts payable in yen. Note that the temporary account, Firm Commitment, is closed against the purchase price of the inventory.

Inventory 13,620 Firm Commitment 380 Accounts Payable (¥) 14,000

> Record accounts payable at spot rate and the inventory purchase, closing the temporary liability account:  $$14,000 = $2,000,000 \times $0.0070 \text{ Oct. 1 spot rate.}$

The required adjusting entries on December 31, 20X1, Peerless' fiscal year-end, are

(29)Foreign Currency Receivable from Exchange Broker (¥) 400 400 Foreign Currency Transaction Gain

Adjust forward contract to net fair value, using the present value of the change in the forward rates. [Item (b) in the hedge effectiveness illustration.]

(30)Foreign Currency Transaction Loss 2,000 Accounts Payable (¥) 2,000

> Adjust payable denominated in yen to current U.S. dollar-equivalent value:  $\$2,000 = \$2,000,000 \times (\$0.0080 - \$0.0070)$ . No interest factor is used for this revaluation; thus, no present value computation is made.

On December 31, 20X1, the discounted net fair value of the forward contract is \$780. The first required entry on April 1, 20X2, the settlement date, is

(31)Foreign Currency Transaction Loss 180 Foreign Currency Receivable from Exchange Broker (¥) 180

> Adjust forward contract for the change in the forward rate to the spot rate on settlement date: [Item (c) in the hedge effectiveness illustration.]

\$0.0076 spot rate on 4/1/X2, the end of the forward contract

– 0.0073 forward rate on 8/1/X1, the beginning of the forward contract

 $0.0003 \times 2,000,000 = 0.000$  cumulative change from 1.000

-780 gains previously recognized

\$(180) reduction (loss) this period.

Note that at this point, the net foreign currency transaction gain on just the forward contract is \$600. This is the difference between the time value of the forward contract (the \$1,600 premium on the forward contract—\$0.0073 forward rate less \$0.0065 spot rate—when the forward contract was signed on August 1, 20X1, which is taken into earnings over the term of the forward contract) and the intrinsic value of the forward contract (the \$2,200 difference between the spot rate of \$0.0065 on August 1, 20X1, and the spot rate of \$0.0076 on the forward contract completion date of April 1, 20X2). Another way to compute the net gain over the term of the forward contract is to compare the forward rate at the date the contract is signed (\$0.0073) and the spot rate at the date the contract is completed (\$0.0076). The net gain is  $\$600 \ [\$2,000,000 \times (\$0.0073 - \$0.0076)]$ .

The following April 1, 20X2, entries complete the forward contract and the payment of the accounts payable that was denominated as ¥2,000,000.

| (32) | Accounts Payable (¥)  | 800    |        |
|------|---|--------|--------|
|      | Foreign Currency Transaction Gain                                       |        | 800    |
|      | Adjust payable denominated in yen to spot rate on settlement date.      |        |        |
|      | No interest factor for this item.                                       |        |        |
|      | $\$800 = \$2,000,000 \times (\$0.0076 - \$0.0080).$                     |        |        |
|      |   |        |        |
| (33) | Dollars Payable to Exchange Broker (\$)                                 | 14,600 |        |
|      | Cash  |        | 14,600 |
|      | Deliver U.S. dollars to currency broker as specified in forward         |        |        |
|      | contract.   |        |        |
|      |   |        |        |
| (34) | Foreign Currency Units (¥)  | 15,200 |        |
|      | Foreign Currency Receivable from Exchange Broker (¥)                    |        | 15,200 |
|      | Receive ¥2,000,000 from exchange broker; valued at Apr. 1, 20X2,        |        |        |
|      | spot rate:  |        |        |
|      | $$15,200 = $2,000,000 \times $0.0076.$                                  |        |        |
|      |   |        |        |
| (35) | Accounts Payable (¥)  | 15,200 |        |
|      | Foreign Currency Units (¥)  |        | 15,200 |
|      | Pay 2,000,000 yen to Tokyo Industries, Inc., in settlement of liability |        |        |

denominated in yen.

# Appendix 11B Use of Other Financial Instruments by Multinational Companies

This chapter details the accounting for forward exchange contracts that are used to hedge exposed asset or liability positions or to hedge foreign currency commitments, or that are entered into for speculative purposes. Many multinational enterprises (MNEs) typically use financial instruments other than forward contracts to manage the risks associated with international transactions. A general definition of a *financial instrument* is that it is cash, stock, or a contract that imposes a contractual obligation to deliver or receive cash or another financial instrument to/from another entity. Examples of financial instruments are receivables/payables, bonds, shares of stock, foreign currency forward contracts, futures contracts, options, and financial swaps. A derivative financial instrument is the value of a financial instrument derived from some other item such as a contract valued on an index of stock values or futures contracts in which the value is determined by contemporary and predicted economic events. The other derivative financial instruments most often used by MNEs are futures, options, and swaps.

This appendix supplements the chapter by presenting a brief overview of futures, options, and swaps. It first gives brief definitions and descriptions. Next, it presents several examples of accounting for a hedge with a futures contract, a hedge with an option contract, and an interestrate swap. Finally, describes the disclosure requirements that currently apply. A discussion of the detailed mechanics and risk ramifications of transactions that utilize these instruments is beyond the coverage of an advanced financial accounting textbook.

## **DEFINITIONS AND DESCRIPTIONS**

A derivative financial instrument is an instrument whose value is based on or "derived from" the value of something else (an underlying). That underlying can be the value of another financial instrument, a commodity, an index, an asset, or a debt instrument. Because the derivative financial instrument has a value that is linked to the underlying, it makes the derivative a useful hedging instrument to offset the change in value of the hedged item. Examples of derivative financial instruments include futures, forward, swap, and option contracts.

## **Forward and Futures Contracts**

A forward contract is an agreement between a buyer and a seller that requires the delivery of some commodity at a specified future date at a price agreed to today (the exercise price). As presented in the chapter, foreign currency forward contracts are typically made with dealers of foreign exchange, and the contract is fulfilled at the end of the contract term by the exchanges of the currencies between the company and the dealer. Changes in the underlying market value of the foreign currency are recognized by the company holding the forward contract. The net fair value of a forward contract when it is written is zero because neither party pays anything and neither party receives anything. The contract is executory at this point. During the term of the forward contract, the net fair value changes based on the difference between a newly written forward contract for the remaining term and the original forward contract. At expiration, the forward contract's net fair value is the difference between the spot price and the original forward rate.

Futures are very similar to forward contracts except futures have standardized contract terms, they are traded on organized exchanges, and traders must realize any losses or gains on each and every trading day. Futures are contracts between two parties—a buyer and a seller—to buy or sell something at a specified future date, which is termed the expiration date. The contract trades on a futures exchange such as the Chicago Board of Trade (CBOT) or the Chicago Mercantile Exchange (CME). Futures contracts are actively traded in a number of commodities including grains and oilseeds, livestock and meat, food and fiber, and metals and energy. It is even possible to enter into futures contracts on foreign currencies. Companies trading in futures contracts are normally required to place cash in their margin accounts held by the brokerage exchange or a clearing house, and the gain (loss) on the futures contract is then added (subtracted) from the company's margin account. This margin account is settled daily for the changes in contract value. Margin accounts are maintained at some percentage (typically 2 to 5 percent) of the contract amount. Most investors do not expect to actually exchange the futures contract for the optioned item—the futures contract is simply an investment vehicle to ride the value curve of the optioned item—and they use a closing transaction to settle the futures contract. If a company is the purchaser of a futures contract, it is said to "go long" in a position. If a company contracts to sell with a futures contract, it is said to "go short." Futures contracts are sometimes referred to as liquid forward contracts because futures trade separately. The accounting for futures contracts is quite similar to accounting for foreign currency forward contracts.

Both futures and forward contracts are obligations to deliver a specified amount at a specified point in time. There is a potential for a gain under favorable circumstances and a potential for a loss under unfavorable circumstances. As presented in this Chapter, not only the losses but also the gains are minimized by using foreign currency forward contracts. Forward contracts are commonly used for hedging foreign currency transactions because the forward contracts can be customized as to duration and amounts. Futures contracts are standardized as to duration and amount but are more readily accessible because of their wide acceptance in a futures exchange arena.

### **Option Contracts**

An option contract between two parties—the buyer and the seller—gives the buyer (option holder) the right, but not the obligation, to purchase from or sell something to the option seller (option writer) at a date in the future at a price agreed to at the time the option contract is exchanged. Options can be written on a large variety of commodities such as grains, food and fibers, petroleum, livestock, metals, interest rates, and various foreign currencies. The option buyer pays the seller some amount of money, typically termed the "premium," for this right. An option to buy something is referred to as a "call"; an option to sell something is called a "put." Options trade on organized markets similar to the stock market. Exchanges on which options trade are the Chicago Board Options Exchange (CBOE), the Philadelphia Stock Exchange (PHLX), the American Stock Exchange (AMEX), and the Pacific Stock Exchange (PSE).

An option contract can give the buyer future control over a large number of shares or other items at the nominal cost of the option. This ability of the option for future control is the time value of the option. Over the option's term, the time value decreases to zero at the option's expiration date. Changes in the time value of the option are always taken to current earnings. The party selling the right is the writer; the party buying the right is the holder. The option holder has the right to exercise or not exercise the option. The holder of the option would not exercise the right embedded in the option if by doing so it would result in a loss. The option writer, however, is subject to risk because the option holder could exercise the option, forcing the writer to deliver under terms that are not favorable to the writer. An option's intrinsic value is directly related to the change in value of the underlying. If the option is designated as a hedge, the change in intrinsic value of a fair value hedge is taken to current earnings. The change in the effective portion of intrinsic value of a cash flow hedge is taken to other comprehensive income. An example of an option used as a hedge is presented later in this appendix.

The option is sold with a *strike price*, the price at which the holder has the option to buy or sell the item. If an investor holds a call option to purchase one share of Peerless Products stock for \$5 a share from the writer, the holder may exercise that option when the market share price exceeds the strike price. If the market price is \$6 a share, the holder will save \$1 by exercising the option and purchasing the stock for \$5. If the holder wishes to turn the savings into a cash profit, the investor would sell the share of stock, purchased for \$5, on the market for \$6. Alternatively, the holder of the option could directly sell the option for \$1, its intrinsic value. When the market price is more than the strike price, the option to buy is "in the money." When the market price is less than the strike price, the option to buy is "out of the money."

If an investor is the holder of a put option to sell one share of Peerless Products for \$5 a share to the writer, the holder will exercise that option when the share price is below the strike price. If the market price is \$4 a share, the holder will make \$1 by exercising the sell option at \$5 per share rather than selling the share on the open market at \$4 per share. When the market price is less than the option price, the option to sell is "in the money."

For the Peerless Products stock example, a summary of the relationship between the option type and the term used to describe the difference between the current market price of the underlying and the option's strike price is as follows:

| Option     | Current Market Price<br>Equals the Option's<br>Strike Price<br>(\$5 = \$5) | Current Market Price Is More than the Option's Strike Price (\$6 > \$5) | Current Market Price Is Less than the Option's Strike Price (\$4 < \$5) |
|------------|--|---|---|
| Call (buy) | At the money   | In the money  | Out of the money  |
| Put (sell) | At the money   | Out of the money  | In the money  |

Options are typically purchased for a fee that is usually a small percentage of the optioned item's current value (e.g., 1 to 7 percent). The option's terms stipulate whether the option can be exercised at any time during the option period or only at the end of the exercise period. The minimum value of an option is zero because an option need not be exercised. Therefore, an option can never have a negative value (a liability), and the maximum loss of the holder of an option can incur is the premium initially paid for the option.

Figure 11–9 presents an overview of the major features of forwards, futures, and options.

### **Swaps**

A swap is an arrangement by which two parties exchange cash flows over a period of time. Swaps can be designed to swap currencies, interest rates, or commodities. The two most common types of financial swaps used by companies are (1) currency swaps and (2) interest-rate swaps. An example of a currency swap is Peerless Products Corporation's sale of products in Great Britain for which it receives pounds sterling. Another company located in London, England, sells products in the United States for which it receives U.S. dollars. A currency swap would occur, for example, if Peerless (a U.S. company) agrees that the periodic currency flows in pounds sterling from its Great Britain operations will be forwarded to its counterparty in Great Britain, and the dollar sales in the United States by the London company will be forwarded to Peerless, the U.S. company. At the end of each period, the two companies agree to settle up for any differences in the notional amount of the swap at the end of the period. Thus, both parties to this currency swap avoid dealing in other than their local currencies and avoid foreign currency exchange costs.

Another example of a swap is an interest-rate swap in which two parties agree to exchange the interest payments on a stated amount of principal (also called the "notional amount"). Typically, the

## FIGURF 11-9 Features of Forwards, **Futures, and Options**

| Type of Derivative | Features   |
|--------------------|--|
| Forwards           | <ul> <li>Contracted through a dealer, usually a bank</li> <li>Possibly customized to meet contracting company's terms and need:</li> <li>Typically no margin deposit required</li> <li>Must be completed either with the underlying's future delivery or net cash settlement</li> </ul>  |
| Futures            | <ul> <li>Traded on an exchange and acquired through an exchange broker</li> <li>Cannot be customized; for a specific amount at a specific date</li> <li>Often company required to open a margin account with a small deposit so daily changes in futures value can be posted to the account</li> <li>Usually settled with a net cash amount prior to maturity date; not expected to be completed by the underlying's future delivery</li> </ul>  |
| Options            | <ul> <li>Traded on a variety of exchanges</li> <li>Acquired on a large variety of commodities and major foreign currencies</li> <li>Issued in two types: put (sell) and call (buy)</li> <li>Option premium (fee) paid by the option holder to the writer (counterparty) for that right</li> <li>Taker's or holder's loss limited to a maximum of the premium paid but virtually unlimited potential profit if underlying market moves in the option holder's desired direction</li> <li>Grantor (counterparty or writer) offered potential to earn a maximum of the option premium and to lose a virtually unlimited amount if underlying market moves in the opposite direction than desired</li> </ul> |

swap is an exchange of a variable (floating) rate interest and a fixed-rate interest. For example, Peerless may issue variable-rate debt but wish to fix its interest rates because it believes the variable rate may increase. Peerless may enter into a contract with a counterparty that has a fixed-rate bond but is looking for a variable-rate interest because that company assumes the interest rates may decrease. Often the contract includes a financial intermediary to which net settlement payments are made and that charges a nominal fee for its services. Sometimes the counterparty is a dealer—a bank or an investment banking firm—that makes a market in swaps and other interest-rate derivatives. The notional amount (principal) is specified as the same for both parties, and Peerless fixes the interest rate on its notional amount whereas the counterparty obtains the variable rate it was seeking. Note that the debt is not being extinguished and any fees paid to arrange the swap should be treated as debt issuance costs that are amortized over the term of the debt. Each company is still responsible for its actual interest payment to its creditor. The swap is merely an agreement for the net periodic settlement of the difference between the two interest rates and is done solely between the two companies that contracted for the interest swap. The simple swap of fixed- versus variable-interest rates is sometimes referred to as a plain vanilla swap or a generic swap. An interest-rate swap is presented later in this appendix.

An overview of the accounting for the three major types of hedges is presented in Figure 11–10. Review this figure before proceeding to the examples.

# EXAMPLE OF THE USE OF AN OPTION TO HEDGE AN ANTICIPATED PURCHASE OF INVENTORY: A CASH FLOW HEDGE

Assume that Peerless Products plans in 90 days to purchase 30,000 bushels of wheat that currently have a value of \$75,000 (30,000 bushels  $\times$  \$2.50 spot price per bushel). Also assume that Peerless wants to lock in the value of the anticipated future purchase.

Peerless purchases a call option on wheat futures to hedge against a price change in the anticipated purchase of the inventory. If the price of wheat increases, the profit on the purchased call option will offset the higher price that Peerless would have to pay for the wheat. If the price of wheat decreases, Peerless loses the premium it paid for the call option but can then buy the wheat at a lower price.

FIGURE 11–10 Overview of Three Types of Hedges

| Type of Hedge             | Basic Criteria   | Recognition and Measurement   |
|---------------------------|--|---|
| Fair value<br>hedge       | A hedge of the derivative instrument's exposure to changes in the fair value of an asset or liability, or of an unrecognized firm commitment.  | Gain or loss on the hedging instrument, as well as the related loss or gain on the hedged item, should be recognized currently in earnings.   |
| Cash flow<br>hedge        | Hedge the derivative instrument's exposure to variability in expected future cash flows of a recognized asset or liability, or of a forecasted transaction, that is attributable to a particular risk. | Gain or loss on the effective portion of hedge (e.g., the intrinsic value) is deferred and reported as a component of other comprehensive income. Any gain or loss on the derivative that is not offset by cash flow losses and gains on the hedged forecasted transaction (i.e., ineffective, including the time value of the option) is recognized currently in earnings.   |
| Foreign currency<br>hedge | <ol> <li>A hedge of the foreign currency exposure of</li> <li>An unrecognized firm commitment.</li> <li>An available-for-sale security.</li> <li>A forecasted transaction.</li> </ol>                  | <ul> <li>The recognition and measurement differ by type of hedge:</li> <li>1. This is a foreign currency fair value hedge.</li> <li>2. This is a foreign currency cash flow hedge.</li> <li>3. |                           | 4. A net investment in a foreign operation.  | ,   |

On November 1, 20X1, Peerless purchases call options for a February 1, 20X2, call (90 days in the future) at a call price of \$2.50. Peerless pays a premium of \$0.05 per bushel, for a total cost of \$1,500 (30,000 bushels  $\times$  \$0.05). The call options are for a notional amount of 30,000 bushels of wheat. Peerless specifies that the derivative qualifies for cash flow hedge accounting. It is a cash flow hedge because the option is hedging a forecasted, or planned, future transaction involving cash flows. Note that this example shows the entire \$1,500 as the time value of the option; in other words, it sets a futures price equal to the current market price. This type of contract is sometimes termed "at the money," meaning it specifies the futures price of the underlying at the current market price. Thus, the value of the contract when it is signed is only with regard to the time value of the expectation that the actual future price of the commodity will differ from the current market price.

An overview of this hedge follows:

| Hedging instrument               | Call option on wheat futures   |
|----------------------------------|--------------------------------|
| Hedged item                      | Forecasted purchase of wheat   |
| Type of hedge                    | Cash flow hedge                |
| Underlying                       | Price of a bushel of wheat     |
| Notional amount                  | 30,000 bushels of wheat        |
| Time value at origin of hedge    | \$1,500, at the money          |
| Valuation of call option         | Fair value                     |
| If underlying increases in value | Call option increases in value |
| If underlying decreases in value | Call option decreases in value |
|                                  |                                |

## Gain or loss on hedge:

| Effective portion   | To other comprehensive income; related to change in           |
|---------------------|---|
|                     | intrinsic value of hedge                                      |
| Ineffective portion | To current earnings; related to change in time value of hedge |

The entry to record the purchase of the call options is as follows:

November 1, 20X1 (36)Purchased Call Options 1.500 Cash 1,500

> To record the purchase of call options for 30,000 bushels of wheat at \$2.50 per bushel in 90 days. The options are at the money; therefore, the \$1,500 is all time value.

The fair market information for this example follows:

| Fair Value Computations   |                     |                      |                     |
|---|---------------------|----------------------|---------------------|
|   | November 1,<br>20X1 | December 31,<br>20X1 | February 1,<br>20X2 |
| Bushel of wheat Total: 30,000 bushels Call Option: Option market value  | \$ 2.50             | \$ 2.60              | \$ 2.58             |
| (from market information)  Less: Intrinsic value:  [Number of bushels ×  (Market price – Strike price)]                                   | \$1,500             | \$3,700              | \$2,400             |
| [30,000 bushels $\times$ (\$2.50 - \$2.50)]<br>[30,000 bushels $\times$ (\$2.60 - \$2.50)]<br>[30,000 bushels $\times$ (\$2.58 - \$2.50)] | 0                   | (3,000)              | (2,400)             |
| Time value remaining  | \$1,500             | \$ 700               | \$ 0                |

Note that for a cash flow hedge, the change in the intrinsic value (effective portion) is recognized in Other Comprehensive Income, and the change in the time value (ineffective portion) is recognized in current earnings.

At December 31, 20X1, the price of wheat increases to \$2.60 per bushel. The *intrinsic value* is the change in value of the options due to the change in market value of the underlying. For cash flow hedges, the change in a derivative's intrinsic value is recorded in other comprehensive income. On December 31, the intrinsic value of the options is \$3,000 (30,000 bushels  $\times$  \$0.10 increase).

ASC 815 requires that hedging instruments be revalued to fair value at each balance sheet date. The change in value of the options is due to two factors: the change in the intrinsic value and the reduction of the time value. An option's time value decreases over its term and is zero when the options expire. At December 31, 20X1, the fair market value of the options is \$3,700, meaning that the options' remaining time value is valued by the market at \$700 (\$3,700 fair value less \$3,000 intrinsic value). ASC 815 specifies that the \$800 (\$1,500 initial amount - \$700 remaining) reduction in the time value portion of a derivative is recognized as part of current earnings. Entry (37) records the change in the value of the options to value them at their fair value at the balance sheet date.

| December 31, 20X1          |  |   |
|----------------------------|--|---|
| Purchased Call Options     | 2,200  |   |
| Loss on Hedge Activity     | 800  |   |
| Other Comprehensive Income |  | 3,000   |
|                            | Purchased Call Options<br>Loss on Hedge Activity | Purchased Call Options 2,200 Loss on Hedge Activity 800 |

To revalue the options to their fair market value, recognizing the reduction in time value and the increase in intrinsic value:

\$2,200 = \$3,700 current fair value of options less \$1,500 balance on November 1

\$800 = (\$1,500 - \$700 remaining) reduction in time value of options

30,000 = 30,000 bushels  $\times 0.10$  increase in intrinsic value.

Note that the increase in intrinsic value is recorded in Other Comprehensive Income pending the completion of the forecasted inventory transaction. The Other Comprehensive Income account is used to "store" the intrinsic value gains or losses on cash flow hedges until they are reclassified into earnings when the hedged transaction affects earnings.

At February 1, 20X2, the end of the 90 days, the price of wheat is \$2.58 per bushel. The decrease in the intrinsic value of the call options is recorded as follows:

February 1, 20X2 (38)Other Comprehensive Income 600 **Purchased Call Options** 600 To record the other comprehensive income, deferring the earning

recognition of the loss on the purchased call options:  $$600 = 30,000 \text{ bushels} \times ($2.58 - $2.60).$ 

The next entry (39) recognizes the expiration of the remaining amount (\$700) of the time value of the purchased call option because the option has now expired. The change in the time value portion of a derivative is recognized in current earnings.

February 1, 20X2 (39)Loss on Hedge Activity 700 Purchased Call Options 700

To recognize the loss of the \$700 remaining time value of the purchased call options that have now expired.

Peerless now decides to sell the contracts for their intrinsic value of \$2,400 [30,000 bushels  $\times$  (\$2.58 - \$2.50 call price)]. In addition, Peerless acquires the 30,000 bushels of wheat at the current market price of \$2.58 per bushel. The next entry records the sale of the purchased call options at their current market price.

February 1, 20X2 (40)Cash 2,400 2,400 Purchased Call Options To record the sale of the call options.

Peerless now purchases the 30,000 bushels of wheat at the current market price of \$2.58 per bushel.

February 1, 20X2 (41) 77.400 Wheat Inventory Cash 77,400

Finally, Peerless later sells the wheat at a price of \$100,000 and records the sale as well as the reclassification of the other comprehensive income resulting from the purchased call options. Note that the other comprehensive income is taken into income only when the underlying item enters the income stream.

| (42) | Cash   | 100,000 |         |
|------|--|---------|---------|
| , ,  | Sale   | ,       | 100,000 |
|      | To record the sale of the 30,000 bushels of wheat.         |         |         |
| (43) | Cost of Goods Sold   | 77,400  |         |
|      | Wheat Inventory  |         | 77,400  |
|      | To recognize the cost of the wheat sold.                   |         |         |
| (44) | Other Comprehensive Income—Reclassification                | 2,400   |         |
|      | Cost of Goods Sold   |         | 2,400   |
|      | To reclassify into earnings the other comprehensive income |         |         |

To reclassify into earnings the other comprehensive income from the cash flow hedge.

The reduction of the cost of goods sold increases net income for the period. The earning process for the other comprehensive income was the sale of the wheat. The hedge was successful. Peerless has a gain of \$2,400 less the \$1,500 it paid for the time value of the call options.

# **EXAMPLE OF AN OPTION CONTRACT TO HEDGE AVAILABLE-FOR-SALE SECURITIES: A FAIR VALUE HEDGE**

Assume that on January 1, 20X1, Peerless purchases 100 shares of Special Foods stock at a cost of \$25 per share. The company classifies these as available-for-sale securities because it does not intend to sell them in the near term. To protect itself from a decrease in the value of the investment, on December 31, 20X1, the company purchases, for a \$300 premium, an at-the-money put option (i.e., option price is current market price), which gives it the right but not the obligation to sell 100 shares of Special Foods at \$30 per share. The option expires on December 31, 20X3. The fair values of the investment and the option follow:

| Fair Value Computations   |                         |                           |                         |  |  |
|---|-------------------------|---------------------------|-------------------------|--|--|
|   | December 31             |                           |                         |  |  |
|   | 20X1                    | 20X2                      | 20X3                    |  |  |
| Special Foods shares: Per share Total (100 shares) Put option:  | \$ 30<br>3,000          | \$ 29<br>2,900            | \$ 26<br>2,600          |  |  |
| Market value (a)<br>Less: Intrinsic value (b)<br>Time value (c) | \$ 300<br>(0)<br>\$ 300 | \$ 340<br>(100)<br>\$ 240 | \$ 400<br>(400)<br>\$ 0 |  |  |

(a) Market value is obtained from the current market price. There is a variety of option pricing models, such as the Black-Scholes model, to estimate the value of these options. (b) Intrinsic value is the difference between the current market price and the option price times the number of shares. It is easy to compute at any point in the life of the option. For example, the intrinsic value on December 31, 20X2, is (\$30 option price - \$29 current market price)  $\times$  100 shares

(c) The time value of the option reflects the effect of discounting the expected future cash flows and a portion for the expected volatility in the price of the underlying asset. A simple way to compute the value is by calculating the difference between the option's market value

Note that the time value at December 31, 20X1, is for the entire option price because the option was purchased for the current market price. The time value decreases to zero at the end of the option because no time element remains at that expiration point and the market value of the option is then based solely on its intrinsic value. Peerless exercises the option just before its expiration on December 31, 20X3, and delivers the Special Foods shares to the option writer.

Peerless determines the hedge effectiveness based on the changes in the option's intrinsic value. This is an acceptable method for determining effectiveness using options because of the ultimate value of the option being based on the price of the underlying asset in this example, the stock of Special Foods.

| Hedge Effectiveness Analysis |                    |                      |               |  |  |
|------------------------------|--------------------|----------------------|---------------|--|--|
| Date                         | Change in Option's | Change in Value of   | Effectiveness |  |  |
|                              | Intrinsic Value    | Special Foods Shares | Ratio         |  |  |
|                              | (Gain) Loss        | (Gain) Loss          | for Period    |  |  |
| December 31, 20X2            | \$(100)            | \$100                | 1.00          |  |  |
| December 31, 20X3            | \$(300)            | \$300                | 1.00          |  |  |

| creases in value                           |
|  |

## A gain or loss on this hedge is:

| Effective portion   | To current earnings; related to change in intrinsic value of hedge |
|---------------------|--|
| Ineffective portion | To current earnings; related to change in time value of hedge      |

### The entries for this example follow:

|      | January 1, 20X1   |       |       |
|------|---|-------|-------|
| (45) | Available-for-Sale Securities   | 2,500 |       |
|      | Cash  |       | 2,500 |
|      | Acquire 100 shares of Special Foods stock at a price of \$25 per share.   |       |       |
|      | December 31, 20X1   |       |       |
| (46) | Available-for-Sale Securities   | 500   |       |
|      | Other Comprehensive Income  |       | 500   |
|      | Marked-to-market value of \$30 the Special Foods stock and recognize  |       |       |
|      | the other comprehensive income in accordance with ASC 320:  |       |       |
|      | $$500 = (\$30 - \$25) \times 100 \text{ shares.}$   |       |       |
| (47) | Put Option  | 300   |       |
|      | Cash  |       | 300   |
|      | Purchase put option, at the money, to sell 100 shares of Special Foods at \$30. This \$300 is the time value of the option. |       |       |
|      |   |       |       |

Note that ASC 815 amends ASC 320 and requires the gain or loss on an available-for-sale security designated as a hedged item to be recognized in current earnings during the period. In entry (46), the marked-to-market value for the available-for-sale securities was recognized in other comprehensive income, in accordance with ASC 320. As can be seen in entry (48), once availablefor-sale securities are hedged in a fair value hedge, the gain or loss on marking to market must be taken to earnings for the period.

|      | December 31, 20X2   |     |     |
|------|---|-----|-----|
| (48) | Loss on Hedge Activity                                    | 100 |     |
|      | Available-for-Sale Securities                             |     | 100 |
|      | Record decrease in fair value for the Special Foods stock |     |     |
|      | in accordance with ASC 815:                               |     |     |
|      | $100 = (30 - 29) \times 100$ shares.                      |     |     |

ASC 815 specifies that the change in intrinsic value of fair value hedges be recognized currently in net earnings of the period. This is different from cash flow hedges in which the changes in intrinsic value were taken to other comprehensive income. Therefore, entry (49) recognizes the increase in the intrinsic value of this fair value hedge as a gain that will be closed to Retained Earnings.

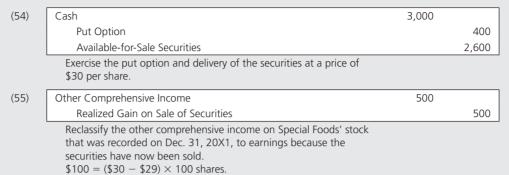

|      | December 31, 20X2   |     |     |
|------|---|-----|-----|
| (49) | Put Option  | 100 |     |
|      | Gain on Hedge Activity  |     | 100 |
|      | Record increase in the intrinsic value of the put option.   |     |     |
|      |   |     |     |
| (50) | Loss on Hedge Activity  | 60  |     |
|      | Put Option  |     | 60  |
|      | To record in earnings the ineffective portion of the change in the fair value of the put options (i.e., the change in the time value). $$60 = $300$ initial time value $- $240$ remaining time value. |     |     |

The entries for December 31, 20X3, continue the valuation process.

|      | to be a second of the second o |     |     |
|------|--|-----|-----|
|      | December 31, 20X3  |     |     |
| (51) | Loss on Hedge Activity   | 300 |     |
|      | Available-for-Sale Securities  |     | 300 |
|      | Marked-to-market value of \$26 the Special Foods stock and recognize   |     |     |
|      | the loss in earnings: $\$300 = (\$26 - \$29) \times 100$ shares.   |     |     |
| (=0) |  |     |     |
| (52) | Put Option   | 300 |     |
|      | Gain on Hedge Activity   |     | 300 |
|      | Record the increase in the intrinsic value of the put option.  |     |     |
|      |  |     |     |
| (53) | Loss on Hedge Activity   | 240 |     |
|      | Put Option   |     | 240 |
|      | Record in earnings the ineffective portion of the change in fair   |     |     |

value of the put option (i.e., the change in the time value).

Entry (53) eliminates the remainder of the option's time value, which was initially \$300. Entry (50) took \$60 of the time value of the option against earnings of 20X2. Entry (53) takes the remainder into earnings of 20X3 because at the end of the option period, no time value remains. The only value of the put option at its term date is its intrinsic value.

It is also important to note that ASC 815 does not permit hedge accounting for hedges of trading securities. ASC 320 requires that trading securities be marked to market with the gain or loss reported in net earnings for the period. Therefore, any gains or losses on financial instruments that are planned to hedge the risks of holding trading securities are always taken to net earnings for the period. See Figure 11-11 for an overview of the journal entries made for the hedged available-for-sale securities and for the hedging put option.

# **EXAMPLE OF AN INTEREST-RATE SWAP TO HEDGE** VARIABLE-RATE DEBT: A CASH FLOW HEDGE

Assume that on June 30, 20X1, Peerless borrows \$5,000,000 of three-year, variable-rate debt with interest payments equal to the six-month US\$ LIBOR (London Interbank Offered Rate) for the prior six months. The debt is not prepayable. The company then enters into a three-year interest-rate swap with First Bank to convert the debt's variable rate to a fixed rate. The swap agreement specifies that Peerless will pay interest at a fixed rate of 7.5 percent and receive interest at a variable rate equal to the six-month US\$ LIBOR rate based on the notional amount of \$5,000,000. Both the debt and the swap require interest to be paid semiannually on June 30 and December 31. Peerless specifies the swap as a cash flow hedge. Refer to Figure 11–12 for a schematic of the swap relationships.

The six-month US\$ LIBOR rate and the market value of the swap agreement, as determined by a swap broker, follow for the first year of the swap agreement:

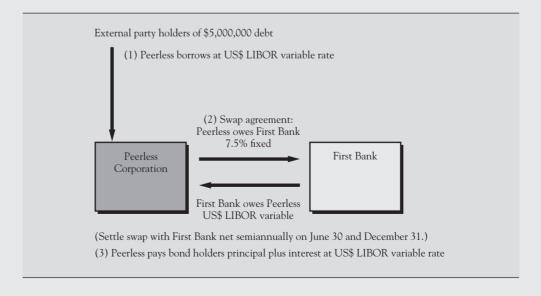

| Date              | Six-Month US\$<br>LIBOR Rate | Swap Agreement<br>Fair Value Asset (Liability) |
|-------------------|------------------------------|--|
| June 30, 20X1     | 6.0%                         | \$ O   |
| December 31, 20X1 | 7.0                          | 165,000  |
| June 30, 20X2     | 5.5                          | (70,000)                                       |

Note that Peerless must still pay the variable interest to the holders of the \$5,000,000 debt. The interestrate swap is just between Peerless and First Bank. The estimate of the fair value of the swap agreement was obtained from a broker-dealer of interest-rate swap agreements. Note that the value of the swap agreement to Peerless is positive if it believes that the variable rate will rise to higher than the fixed rate, but the swap agreement's value to Peerless is negative if it believes that the variable rate will remain lower than the fixed rate. Peerless' payments on the variable-rate debt and the net payments to First Bank on the interest-rate swap agreement are presented for the initial two semiannual periods:

|                                | Interest Payments |               |  |
|--------------------------------|-------------------|---------------|--|
|                                | December 31, 20X1 | June 30, 20X2 |  |
| Variable-rate interest payment | \$150,000 (a)     | \$175,000 (b) |  |
| Interest-rate swap net payment | 37,500 (c)        | 12,500        |  |
| Total cash payment             | \$187,500 (d)     | \$187,500     |  |

- (a)  $$150,000 = 5,000,000 \times 0.06 \times 6/12$  months
- (b)  $$175,000 = 5,000,000 \times 0.07 \times 6/12$  months
- (c) \$37,500 = net payment required to First Bank for difference between variable and fixed interest rates
- (d)  $$187,500 = 5,000,000 \times 0.075$  fixed rate  $\times$  6/12 months

**FIGURE 11–12 Fixed for Variable Interest-Rate Swap on** \$5,000,000 Notional Amount

Peerless recognizes interest expense based on the two factors of the variable rate plus the net payment or receipt from the swap agreement. In essence, Peerless has an interest expense equal to 7.5 percent of the notional amount of \$5,000,000.

The entries to account for the first year of the interest-rate swap follow:

|      | June 30, 20X1  |           |           |
|------|--|-----------|-----------|
| (56) | Cash   | 5,000,000 |           |
|      | Debt Payable   |           | 5,000,000 |
|      | Issue variable-rate debt.  |           |           |
|      | December 31, 20X1  |           |           |
| (57) | Interest Expense   | 150,000   |           |
|      | Cash   |           | 150,000   |
|      | Pay debt holder's semiannual interest at a variable rate of 6.0 percent [from (a) in preceding table]. |           |           |
|      |  |           |           |
| (58) | Interest Expense   | 37,500    |           |
|      | Cash   |           | 37,500    |
|      | Payment to First Bank for semiannual net settlement of swap  |           |           |
|      | agreement [from (c) in preceding table].   |           |           |
| (59) | Swap Agreement   | 165,000   |           |
|      | Other Comprehensive Income   |           | 165,000   |
|      | Recognize change in fair value of swap agreement to Other  |           |           |
|      | Comprehensive Income because the swap is a cash flow hedge.  |           |           |
|      | June 30, 20X2  |           |           |
| (60) | Interest Expense   | 175,000   |           |
|      | Cash   |           | 175,000   |
|      | Pay debt holder's semiannual interest at a variable rate of  |           |           |
|      | 7.0 percent [from (b) in preceding table].   |           |           |
| (61) | Interest Expense   | 12,500    |           |
|      | Cash   |           | 12,500    |
|      | Payment to First Bank for semiannual net settlement of   |           |           |
|      | swap agreement.  |           |           |
| (62) | Other Comprehensive Income   | 235,000   |           |
|      | Swap Agreement   |           | 235,000   |
|      | Recognize decrease in fair value of swap agreement from \$165,000                                      |           |           |
|      | asset to \$(70,000) liability to Other Comprehensive Income because                                    |           |           |
|      | the swap is a cash flow hedge.   |           |           |

The swap agreement is reported on the balance sheet at its fair value. The amounts accumulated in Other Comprehensive Income are indirectly recognized in Peerless' earnings as periodic settlements of the payments required under the swap agreement are made, and the fair value of the swap agreement reaches zero at the end of the term of the agreement.

# **REPORTING AND DISCLOSURE REQUIREMENTS:** DISCLOSURES ABOUT FAIR VALUE OF FINANCIAL **INSTRUMENTS**

ASC 825, requires disclosure of information pertaining to all financial instruments. This standard is the first to require information with respect to the current fair value of the financial instruments. Estimating fair value is of great practical difficulty because many financial instruments do not have a readily traded market from which to determine their value. Estimation methods are permitted, but if no estimation can be made, the reasons for the impracticality must be disclosed.

ASC 825 does not permit the fair values of derivatives to be netted or aggregated with nonderivative financial instruments. The required disclosures are as follows:

- 1. The fair value based on quoted market prices. If fair value is not quoted, a practical estimation is allowed.
- 2. Information relevant to the fair value such as carrying value, effective interest rate, maturity, and reasons why it is not practical to estimate, if such is the case.
- 3. Distinction between instruments held for trading or nontrading purposes.

ASC 815 adds a number of disclosures regarding derivatives and financial instruments. The company holding or issuing derivatives must disclose both its objectives for holding or issuing the instruments and the face or contract amount of the derivatives. The company also must distinguish between derivatives designated as fair value hedges, as cash flow hedges, as hedges of the foreign currency exposure of a net investment in a foreign operation, and all other derivatives. Specific disclosures are required for each type of hedge, but generally the company must disclose the purpose of the activity, the amount of any gains or losses recognized during the period (either in earnings or in other comprehensive income), and where those gains or losses and related assets and liabilities are reported in the income statement and statement of financial position.

Companies operating internationally have increased risks when transacting in more than one currency. For that reason, a number of financial instruments are used in order to manage the increased risk. This chapter has presented the most commonly used financial instrument, the foreign currency forward exchange contract. This appendix briefly discussed several of the other major financial instruments used by multinational companies. It is certain that increased sophistication of the types of risk management tools will continue to occur in the business arena, and accountants must continue their efforts to understand and account for these instruments.

| Questions |        |   |
|-----------|--------|---|
| LO 11-1   | Q11-1  | Explain the difference between indirect and direct exchange rates.  |
| LO 11-1   | Q11-2  | What is the direct exchange rate if a U.S. company receives \$1.3623 in Canadian currency in exchange for \$1.00 in U.S. currency?  |
| LO 11-1   | Q11-3  | The U.S. dollar strengthened against the European euro. Will imports from Europe into the United States be more expensive or less expensive in U.S. dollars? Explain.   |
| LO 11-1   | Q11-4  | Differentiate between a foreign transaction and a foreign currency transaction. Give an example of each.  |
| LO 11-1   | Q11-5  | What types of economic factors affect currency exchange rates? Give an example of a change in an economic factor that results in a weakening of the local currency unit versus a foreign currency unit.   |
| LO 11-2   | Q11-6  | How are assets and liabilities denominated in a foreign currency measured on the transaction date? On the balance sheet date?   |
| LO 11-2   | Q11-7  | When are foreign currency transaction gains or losses recognized in the financial statements? Where are these gains or losses reported in the financial statements?   |
| LO 11-2   | Q11-8  | Sun Company, a U.S. corporation, has an account payable of \$200,000 denominated in Canadian dollars. If the direct exchange rate increases, will Sun experience a foreign currency transaction gain or loss on this payable?   |
| LO 11-3   | Q11-9  | What are some ways a U.S. company can manage the risk of changes in the exchange rates for foreign currencies?  |
| LO 11-3   | Q11-10 | Distinguish between an exposed net asset position and an exposed net liability position.  |
| LO 11-1   | Q11-11 | Explain why a difference usually exists between a currency's spot rate and forward rate. Give two reasons this difference is usually positive when a company enters into a contract to receive foreign currency at a future date.   |
| LO 11-3   | Q11-12 | A forward exchange contract may be used $(a)$ to manage an exposed foreign currency position, $(b)$ to hedge an identifiable foreign currency commitment, $(c)$ to hedge a forecasted foreign currency transaction, or $(d)$ to speculate in foreign currency markets. What are the main differences in accounting for these four uses? |

## Cases

LO 11-1, 11-2

### C11-1 **Effects of Changing Exchange Rates**

**Analysis** 

Since the early 1970s, the U.S. dollar has both increased and decreased in value against other currencies such as the Japanese yen, the Swiss franc, and the British pound. The value of the U.S. dollar, as well as the value of currencies of other countries, is determined by the balance between the demand for and the supply of the currency on the foreign exchange markets. A drop in the value of the U.S. dollar has a widespread impact not only on consumers and businesses that deal with their counterparts overseas but also on consumers and businesses that operate solely within the United States.

### Required

- a. Identify the factors that influence the demand for and supply of the U.S. dollar on the foreign exchange markets.
- b. Explain the effect a drop in value of the U.S. dollar in relation to other currencies on the foreign exchange markets has on
  - (1) The sales of a U.S. business firm that exports part of its output to foreign countries.
  - (2) The costs of a U.S. business firm that imports from foreign countries part of the inputs used in the manufacture of its products.
- c. Explain why and how consumers and business firms are affected by the drop in value of the U.S. dollar in relation to other currencies on the foreign exchange markets.

LO 11-2

### Reporting a Foreign Currency Transaction on the Financial Statements C11-2 [AICPA Adapted]

Judgment

On November 30, 20X5, Bow Company received goods with a cost denominated in pounds. During December 20X5, the dollar's value declined relative to the pound. Bow believes that the original exchange rate will be restored by the time payment is due in 20X6.

### Required

- a. State how Bow should report the impact, if any, of the changes in the exchange rate of the dollar and the pound on its 20X5 financial statements.
- b. Explain why the reporting is appropriate.

LO 11-1

### C11-3 **Changing Exchange Rates**

Research

Search online to obtain and or prepare charts of the monthly average direct exchange rates for the past two years for the U.S. dollar versus (1) the Japanese yen, (2) the European euro, (3) the British pound, and (4) the Mexican peso. Your four charts should each have time on the horizontal axis and the direct exchange rate on the horizontal axis.

### **Questions for Discussion**

- a. Has the dollar strengthened or weakened during this time against each of the currencies?
- b. What major economic or political factors could have caused the changes in the four foreign currencies' exchange rates versus the U.S. dollar?
- c. Select one major factor from part (b) for each currency and present an argument showing how a change in that factor could cause the change in the exchange rate.

### **Accounting for Foreign Currency–Denominated Accounts Payable** C11-4

Research

Mardi Gras Corporation operates a group of specialty shops throughout the southeastern United States. The shops have traditionally stocked and sold kitchen and bath products manufactured in the United States. This year, Mardi Gras established a business relationship with a manufacturing company in Lucerne, Switzerland, to purchase a line of luxury bath products to sell in its shops. As part of the business arrangement, payments by Mardi Gras are due 30 days after receipt of the merchandise, whose cost is quoted and payable in Swiss francs.

Mardi Gras records the purchases in inventory when it receives the merchandise and records a liability to the Swiss company, using the exchange rate for Swiss francs on the date the inventory purchase is recorded. When payment is made, Mardi Gras debits or credits to inventory any difference between the liability previously recorded and the dollar amount required to settle the liability in Swiss francs. Mardi Gras uses a perpetual inventory system and the FIFO method of inventory costing and can easily trace these adjustments to the specific inventory purchased.

### Required

Obtain the most current accounting standards on accounting for foreign currency transactions. You can obtain access to accounting standards through the FASB codification. As a staff accountant with the public accounting firm that audits Mardi Gras's annual financial statements, write a memo to Marie Lamont, the manager in charge of the audit, discussing the client's accounting for its transactions with the Swiss company. Support any recommendations with citations and quotations from the authoritative financial reporting standards.

LO 11-3

### C11-5 **Accounting for Foreign Currency Forward Contracts**

## Research

Avanti Corporation is a small Midwestern company that manufactures wooden furniture. Tim Martin, Avanti's president, has decided to expand operations significantly and has entered into a contract with a German company to purchase specialty equipment for the expansion in manufacturing capacity. The contract fixes the price of the equipment at 4.5 million euros, and the equipment will be delivered in five months with payment due 30 days after delivery.

Tim is concerned that the value of the euro versus the U.S. dollar could increase during the six months between the date of the contract and the date of payment, thus increasing the effective price of the equipment to Avanti. Lindsay Williams, Avanti's treasurer, has suggested that the company enter into a forward contract to purchase 4.5 million euros in six months, thereby locking in an exchange rate for euros. Tim likes the idea of eliminating the uncertainty over the exchange rate for euros but is concerned about the effects of the forward contract on Avanti's financial statements. Because Avanti has not had previous experience with foreign currency transactions, Lindsay is unsure of what the financial statement effects are.

### Required

Obtain the most current accounting standards on accounting for foreign currency forward contracts. You can obtain access to accounting standards through the FASB codification. Lindsay has asked you, as her assistant, to research the accounting for a foreign currency forward contract. Write a memo to her reporting on the results of your research. Support your recommendations with citations and quotations from the authoritative financial reporting standards.

LO 11-3

### C11-6 Accounting for Hedges of Available-for-Sale Securities

### Research

Rainy Day Insurance Company maintains an extensive portfolio of bond investments classified as available-for-sale securities under ASC 320. The bond investments have a variety of fixed interest rates and have maturity dates ranging from 1 to 15 years. Rainy Day acquired the bonds with the expectation that it could hold them until maturity or sell them any time that funds are required for unusually high insurance claims.

Because of the large dollar amount invested, Rainy Day is concerned about fluctuations in interest rates that affect the fair value of its bond portfolio. One of Rainy Day's investment professionals has proposed that the company invest in an interest rate futures contract to hedge its exposure to interest rate changes. Changes in the fair value of the futures contract would offset changes in the bond portfolio's fair value. If Rainy Day applies hedge accounting under ASC 815, the income statement effect of changes in the fair value of the derivative would be offset by recording in earnings the changes in the fair value of the bond portfolio attributable to the hedged (interest rate) risk.

## Required

Obtain the most current accounting standards on accounting for hedges of available-for-sale securities. You can obtain access to accounting standards through the FASB codification. Rainy Day's CFO, Mark Becker, has asked you, as an accountant in Rainy Day's investment division, to determine whether hedge accounting can be used in the scenario proposed. Write a memo to Mark, reporting on the results of your research. Support your recommendations with citations and quotations from the authoritative financial reporting standards.

### Exercises

LO 11-1

### E11-1 **Exchange Rates**

Suppose the direct foreign exchange rates in U.S. dollars are

1 British pound = \$1.60

1 Canadian dollar = \$0.74

### Required

- a. What are the indirect exchange rates for the British pound and the Canadian dollar?
- b. How many pounds must a British company pay to purchase goods costing \$8,000 from a U.S.
- c. How many U.S. dollars must be paid for a purchase costing 4,000 Canadian dollars?

### LO 11-1 **E11-2** Changes in Exchange Rates

Upon arrival at the international airport in the country of Canteberry, Charles Alt exchanged \$200 of U.S. currency into 1,000 florins, the local currency unit. Upon departure from Canteberry's international airport on completion of his business, he exchanged his remaining 100 florins into \$15 of U.S. currency.

## Required

- a. Determine the currency exchange rates for each of the cells in the following matrix for Charles Alt's business trip to Canteberry.
- b. Discuss and illustrate whether the U.S. dollar strengthened or weakened relative to the florin during Charles's stay in Canteberry.
- c. Did Charles experience a foreign currency transaction gain or a loss on the 100 florins he held during his visit to Canteberry and converted to U.S. dollars at the departure date? Explain your answer.

|                       | Arrival<br>Date | Departure<br>Date |
|-----------------------|-----------------|-------------------|
| Direct exchange rate  |                 |                   |
| ndirect exchange rate |                 |                   |

### **E11-3** Basic Understanding of Foreign Exposure

The Hi-Stakes Company has a number of importing and exporting transactions. Importing activities result in payables and exporting activities result in receivables. (LCU represents the local currency unit of the foreign entity.)

## Required

- a. If the direct exchange rate increases, does the dollar weaken or strengthen relative to the other currency? If the indirect exchange rate increases, does the dollar weaken or strengthen relative to the other currency?
- b. Indicate in the following table whether Hi-Stakes will have a foreign currency transaction gain (G), loss (L), or not be affected (NA) by changes in the direct or indirect exchange rates for each of the four situations presented.

|                        |                        | Direct Exc | hange Rate | Indirect Ex | change Rate |
|------------------------|------------------------|------------|------------|-------------|-------------|
| Transaction            | Settlement<br>Currency | Increases  | Decreases  | Increases   | Decreases   |
| Importing              | Dollar                 |            |            |             |             |
| Importing<br>Exporting | LCU<br>Dollar          |            |            |             |             |
| Exporting              | LCU                    |            |            |             |             |

### E11-4 Account Balances

Merchant Company had the following foreign currency transactions:

- 1. On November 1, 20X6, Merchant sold goods to a company located in Munich, Germany. The receivable was to be settled in European euros on February 1, 20X7, with the receipt of €250,000 by Merchant Company.
- 2. On November 1, 20X6, Merchant purchased machine parts from a company located in Berlin, Germany. Merchant is to pay €125,000 on February 1, 20X7.

The direct exchange rates are as follows:

| November 1, 20X6  | €1 = \$0.60 |
|-------------------|-------------|
| ,                 |             |
| December 31, 20X6 | €1 = \$0.62 |
| February 1, 20X7  | €1 = \$0.58 |

### Required

- a. Prepare T-accounts for the following five accounts related to these transactions: Foreign Currency Units (€), Accounts Receivable (€), Accounts Payable (€), Foreign Currency Transaction Loss, and Foreign Currency Transaction Gain.
- b. Within the T-accounts you have prepared, appropriately record the following items:
  - 1. The November 1, 20X6, export transaction (sale).
  - 2. The November 1, 20X6, import transaction (purchase).
  - 3. The December 31, 20X6, year-end adjustment required of the foreign currency—denominated receivable of €250,000.
  - 4. The December 31, 20X6, year-end adjustment required of the foreign currency—denominated payable of €125,000.
  - 5. The February 1, 20X7, adjusting entry to determine the U.S. dollar–equivalent value of the foreign currency receivable on that date.
  - 6. The February 1, 20X7, adjusting entry to determine the U.S. dollar–equivalent value of the foreign currency payable on that date.
  - 7. The February 1, 20X7, settlement of the foreign currency receivable.
  - 8. The February 1, 20X7, settlement of the foreign currency payable.

### E11-5 Determining Year-End Account Balances for Import and Export Transactions

Delaney Inc. has several transactions with foreign entities. Each transaction is denominated in the local currency unit of the country in which the foreign entity is located. For each of the following independent cases, determine the December 31, 20X2, year-end balance in the appropriate accounts for the case. Write "NA" for "not applicable" in the space provided in the following chart if that account is not relevant to the specific case.

- **Case 1.** On November 12, 20X2, Delaney purchased goods from a foreign company at a price of LCU 40,000 when the direct exchange rate was 1 LCU = \$0.45. The account has not been settled as of December 31, 20X2, when the exchange rate has decreased to 1 LCU = \$0.40.
- Case 2. On November 28, 20X2, Delaney sold goods to a foreign entity at a price of LCU 20,000 when the direct exchange rate was 1 LCU = \$1.80. The account has not been settled as of December 31, 20X2, when the exchange rate has increased to 1 LCU = \$1.90.
- Case 3. On December 2, 20X2, Delaney purchased goods from a foreign company at a price of LCU 30,000 when the direct exchange rate was 1 LCU = \$0.80. The account has not been settled as of December 31, 20X2, when the exchange rate has increased to 1 LCU = \$0.90.
- Case 4. On December 12, 20X2, Delaney sold goods to a foreign entity at a price of LCU 2,500,000 when the direct exchange rate was 1 LCU = \$0.003. The account has not been settled as of December 31, 20X2, when the exchange rate has decreased to 1 LCU = \$0.0025.

### LO 11-2

## Required

Provide the December 31, 20X2, year-end balances on Delaney's records for each of the following applicable items:

|        | Accounts<br>Receivable | Accounts<br>Payable | Foreign Currency<br>Transaction<br>Exchange Loss | Foreign Currency<br>Transaction<br>Exchange Gain |
|--------|------------------------|---------------------|--|--|
| Case 1 |                        |                     |  |  |
| Case 2 |                        |                     |  |  |
| Case 3 |                        |                     |  |  |
| Case 4 |                        |                     |  |  |

LO 11-2

### E11-6 **Transactions with Foreign Companies**

Harris Inc. had the following transactions:

1. On May 1, Harris purchased parts from a Japanese company for a U.S. dollar equivalent value of \$8,400 to be paid on June 20. The exchange rates were

2. On July 1, Harris sold products to a Brazilian customer for a U.S. dollar equivalent of \$10,000, to be received on August 10. Brazil's local currency unit is the real. The exchange rates were

| July 1    | 1 real = \$0.20 |
|-----------|-----------------|
| August 10 | 1  real = 0.22  |

## Required

- a. Assume that the two transactions are denominated in U.S. dollars. Prepare the entries required for the dates of the transactions and their settlement in U.S. dollars.
- b. Assume that the two transactions are denominated in the applicable LCUs of the foreign entities. Prepare the entries required for the dates of the transactions and their settlement in the LCUs of the Japanese company (yen) and the Brazilian customer (real).

### **Foreign Purchase Transaction** E11-7

On December 1, 20X1, Rone Imports, a U.S. company, purchased clocks from Switzerland for 15,000 francs (SFr) to be paid on January 15, 20X2. Rone's fiscal year ends on December 31, and its reporting currency is the U.S. dollar. The exchange rates are

| December 1, 20X1  | 1 SFr = \$0.70 |
|-------------------|----------------|
| December 31, 20X1 | 1  SFr = 0.66  |
| January 15, 20X2  | 1  SFr = 0.68  |

### Required

- a. In which currency is the transaction denominated?
- b. Prepare journal entries for Rone to record the purchase, the adjustment on December 31, and the settlement.

LO 11-2

### E11-8 **Adjusting Entries for Foreign Currency Balances**

Chocolate De-lites imports and exports chocolate delicacies. Some transactions are denominated in U.S. dollars and others in foreign currencies. A summary of accounts receivable and accounts payable on December 31, 20X6, before adjustments for the effects of changes in exchange rates during 20X6, follows:

| Accounts receivable:              |           |
|-----------------------------------|-----------|
| In U.S. dollars                   | \$164,000 |
| In 475,000 Egyptian pounds (Ef)   | \$ 73,600 |
| Accounts payable:                 |           |
| In U.S. dollars                   | \$ 86,000 |
| In 21,000,000 yen (¥)             | \$175,300 |
| Accounts payable: In U.S. dollars | \$ 86,000 |

The spot rates on December 31, 20X6, were

E£1=\$0.176

Y1 = 0.0081

The average exchange rates during the collection and payment period in 20X7 are

E£1 = \$0.18

¥1=\$0.0078

### Required

- a. Prepare the adjusting entries on December 31, 20X6.
- b. Record the collection of the accounts receivable in 20X7.
- c. Record the payment of the accounts payable in 20X7.
- d. What was the foreign currency gain or loss on the accounts receivable transaction denominated in E£ for the year ended December 31, 20X6? For the year ended December 31, 20X7? Overall for this transaction?
- e. What was the foreign currency gain or loss on the accounts receivable transaction denominated in ¥? For the year ended December 31, 20X6? For the year ended December 31, 20X7? Overall for this transaction?
- What was the combined foreign currency gain or loss for both transactions? What could Chocolate De-lites have done to reduce the risk associated with the transactions denominated in foreign currencies?

### LO 11-3 **Purchase with Forward Exchange Contract**

Merit & Family purchased engines from Canada for 30,000 Canadian dollars on March 10 with payment due on June 8. Also, on March 10, Merit acquired a 90-day forward contract to purchase 30,000 Canadian dollars at C\$1 = \$0.58. The forward contract was acquired to manage Merit & Family's exposed net liability position in Canadian dollars, but it was not designated as a hedge. The spot rates were

| March 10 | C\$1 = \$0.57 |
|----------|---------------|
| June 8   | C\$1 = \$0.60 |

## Required

Prepare journal entries for Merit & Family to record the purchase of the engines, entries associated with the forward contract, and entries for the payment of the foreign currency payable.

### Purchase with Forward Exchange Contract and Intervening Fiscal Year-End E11-10

Pumped Up Company purchased equipment from Switzerland for 140,000 francs on December 16, 20X7, with payment due on February 14, 20X8. On December 16, 20X7, Pumped Up also acquired a 60-day forward contract to purchase francs at a forward rate of SFr 1 = \$0.67. On December 31, 20X7, the forward rate for an exchange on February 14, 20X8, is SFr 1 = \$0.695. The spot rates were

| December 16, 20X7 | 1 SFr = \$0.68 |
|-------------------|----------------|
| December 31, 20X7 | 1  SFr = 0.70  |
| February 14, 20X8 | 1  SFr = 0.69  |

### Part I

Assume that the forward contract is not designated as a hedge but is entered into to manage the company's foreign currency-exposed accounts payable.

- a. Prepare journal entries for Pumped Up to record the purchase of equipment; all entries associated with the forward contract; the adjusting entries on December 31, 20X7; and entries to record the revaluations and payment on February 14, 20X8.
- b. What was the effect of the foreign currency transactions on the income statement, including both the accounts payable and the forward contract, for the year ended December 31, 20X7?
- c. What was the overall effect of these transactions on the income statement from December 16, 20X7, to February 14, 20X8?

### Part II

Now assume the forward contract is designated as a cash flow hedge of the variability of the future cash flows from the foreign currency account payable. The company uses the forward exchange rate to assess effectiveness.

## Required

Prepare journal entries for Pumped Up to record the purchase of equipment; all entries associated with the forward contract; the adjusting and reclassification entries on December 31, 20X7; and entries to record the revaluations and payment on February 14, 20X8.

### Foreign Currency Transactions [AICPA Adapted] F11-11

Select the correct answer for each of the following questions.

1. Dale Inc., a U.S. company, bought machine parts from a German company on March 1, 20X1, for €30,000, when the spot rate for euros was \$0.4895. Dale's year-end was March 31, when the spot rate was \$0.4845. On April 20, 20X1, Dale paid the liability with €30,000 acquired at a rate of \$0.4945. Dale's income statements should report a foreign exchange gain or loss for the years ended March 31, 20X1 and 20X2 of

|    | 20X1       | 20X2       |
|----|------------|------------|
| a. | \$0        | \$0        |
| b. | \$0        | \$150 loss |
| C. | \$150 loss | \$0        |
| d. | \$150 gain | \$300 loss |

2. Marvin Company's receivable from a foreign customer is denominated in the customer's local currency. This receivable of 900,000 LCUs has been translated into \$315,000 on Marvin's December 31, 20X5, balance sheet. On January 15, 20X6, the receivable was collected in full when the exchange rate was 3 LCU to \$1. The journal entry Marvin should make to record the collection of this receivable is

|    |   | Debit             | Credit  |
|----|---|-------------------|---------|
| a. | Foreign Currency Units<br>Accounts Receivable                           | 300,000           | 300,000 |
| b. | Foreign Currency Units<br>Exchange Loss<br>Accounts Receivable          | 300,000<br>15,000 | 315,000 |
| c. | Foreign Currency Units<br>Deferred Exchange Loss<br>Accounts Receivable | 300,000<br>15,000 | 315,000 |
| d. | Foreign Currency Units<br>Accounts Receivable                           | 315,000           | 315,000 |

3. On July 1, 20X1, Black Company lent \$120,000 to a foreign supplier, evidenced by an interestbearing note due on July 1, 20X2. The note is denominated in the borrower's currency and was equivalent to 840,000 LCUs on the loan date. The note principal was appropriately included at \$140,000 in the receivables section of Black's December 31, 20X1, balance sheet. The note principal was repaid to Black on the July 1, 20X2, due date when the exchange rate was 8 LCUs to \$1. In its income statement for the year ended December 31, 20X2, what amount should Black include as a foreign currency transaction gain or loss on the note principal?

- a. \$0.
- b. \$15,000 loss.
- c. \$15,000 gain.
- d. \$35,000 loss.
- 4. If 1 Canadian dollar can be exchanged for 90 cents of U.S. currency, what fraction should be used to compute the indirect quotation of the exchange rate expressed in Canadian dollars?

  - b. 1/1.10.
  - c. 1/.90.
  - d. 0.90/1.
- 5. On July 1, 20X4, Bay Company borrowed 1,680,000 local currency units (LCUs) from a foreign lender evidenced by an interest-bearing note due on July 1, 20X5, which is denominated in the currency of the lender. The U.S. dollar equivalent of the note principal was as follows:

| Date                      | Amount    |
|---------------------------|-----------|
| 7/1/X4 (date borrowed)    | \$210,000 |
| 12/31/X4 (Bay's year-end) | 240,000   |
| 7/1/X5 (date repaid)      | 280,000   |

In its income statement for 20X5, what amount should Bay include as a foreign exchange gain or loss on the note principal?

- a. \$70,000 gain.
- b. \$70,000 loss.
- c. \$40,000 gain.
- d. \$40,000 loss.
- 6. An entity denominated a sale of goods in a currency other than its functional currency. The sale resulted in a receivable fixed in terms of the amount of foreign currency to be received. The exchange rate between the functional currency and the currency in which the transaction was denominated changed. The effect of the change should be included as a
  - a. Separate component of stockholders' equity whether the change results in a gain or a loss.
  - b. Separate component of stockholders' equity if the change results in a gain and as a component of income if the change results in a loss.
  - c. Component of income if the change results in a gain and as a separate component of stockholders' equity if the change results in a loss.
  - d. Component of income whether the change results in a gain or a loss.
- 7. An entity denominated a December 15, 20X6, purchase of goods in a currency other than its functional currency. The transaction resulted in a payable fixed in terms of the amount of foreign currency and was paid on the settlement date, January 20, 20X7. The exchange rates between the functional currency and the currency in which the transaction was denominated changed at December 31, 20X6, resulting in a loss that should
  - a. Not be reported until January 20, 20X7, the settlement date.
  - b. Be included as a separate component of stockholders' equity at December 31, 20X6.
  - c. Be included as a deferred charge at December 31, 20X6.
  - d. Be included as a component of income from continuing operations for 20X6.

## Sale in Foreign Currency

Marko Company sold spray paint equipment to Spain for 5,000,000 pesetas (P) on October 1, with payment due in six months. The exchange rates were

| October 1, 20X6   | 1 peseta = \$0.0068 |
|-------------------|---------------------|
| December 31, 20X6 | 1 peseta = $0.0078$ |
| April 1, 20X7     | 1 peseta = $0.0076$ |

## Required

- a. Did the dollar strengthen or weaken relative to the peseta during the period from October 1 to December 31? Did it strengthen or weaken between January 1 and April 1 of the next year?
- b. Prepare all required journal entries for Marko as a result of the sale and settlement of the foreign transaction, assuming that its fiscal year ends on December 31.
- c. Did Marko have an overall net gain or net loss from its foreign currency exposure?

### LO 11-3

### **Sale with Forward Exchange Contract** E11-13

Alman Company sold pharmaceuticals to a Swedish company for 200,000 kronor (SKr) on April 20, with settlement to be in 60 days. On the same date, Alman entered into a 60-day forward contract to sell 200,000 SKr at a forward rate of 1 SKr = \$0.167 in order to manage its exposed foreign currency receivable. The forward contract is not designated as a hedge. The spot rates were

| April 20 | SKr 1 = \$0.170 |
|----------|-----------------|
| June 19  | SKr 1 = 0.165   |

## Required

- a. Record all necessary entries related to the foreign transaction and the forward contract.
- b. Compare the effects on net income of Alman's use of the forward exchange contract versus the effects if Alman had not used a forward exchange contract.

### Foreign Currency Transactions [AICPA Adapted] E11-14

Choose the correct answer for each of the following questions.

1. On November 15, 20X3, Chow Inc., a U.S. company, ordered merchandise FOB shipping point from a German company for €200,000. The merchandise was shipped and invoiced on December 10, 20X3. Chow paid the invoice on January 10, 20X4. The spot rates for euros on the respective dates were

| November 15, 20X3 | \$0.4955 |
|-------------------|----------|
| December 10, 20X3 | 0.4875   |
| December 31, 20X3 | 0.4675   |
| January 10, 20X4  | 0.4475   |
| -                 |          |

In Chow's December 31, 20X3, income statement, the foreign exchange gain is

- a. \$9,600.
- b. \$8,000.
- c. \$4,000.
- d. \$1,600.
- 2. Stees Corporation had the following foreign currency transactions during 20X2. First, it purchased merchandise from a foreign supplier on January 20, 20X2, for the U.S. dollar equivalent of \$90,000. The invoice was paid on March 20, 20X2, at the U.S. dollar equivalent of \$96,000. Second, on July 1, 20X2, Stees borrowed the U.S. dollar equivalent of \$500,000 evidenced by a note that was payable in the lender's local currency on July 1, 20X4. On December 31, 20X2, the U.S. dollar equivalents of the principal amount and accrued interest were \$520,000 and \$26,000, respectively. Interest on the note is 10 percent per annum. In Stees's 20X2 income statement, what amount should be included as a foreign exchange loss?
  - a. \$0.
  - b. \$6,000.
  - c. \$21,000.
  - d. \$27,000.
- 3. On September 1, 20X1, Cott Corporation received an order for equipment from a foreign customer for 300,000 LCUs when the U.S. dollar equivalent was \$96,000. Cott shipped the equipment on October 15, 20X1, and billed the customer for 300,000 LCUs when the U.S. dollar equivalent was \$100,000. Cott received the customer's remittance in full on November 16,

20X1, and sold the 300,000 LCUs for \$105,000. In its income statement for the year ended December 31, 20X1, Cott should report a foreign exchange gain of

- a. \$0.
- b. \$4,000.
- c. \$5,000.
- d. \$9,000.
- 4. On April 8, 20X3, Trul Corporation purchased merchandise from an unaffiliated foreign company for 10,000 units of the foreign company's local currency. Trul paid the bill in full on March 1, 20X4, when the spot rate was \$0.45. The spot rate was \$0.60 on April 8, 20X3, and was \$0.55 on December 31, 20X3. For the year ended December 31, 20X4, Trul should report a transaction gain of
  - a. \$1,500.
  - b. \$1,000.
  - c. \$500.
  - d. \$0.
- 5. On October 1, 20X5, Stevens Company, a U.S. company, contracted to purchase foreign goods requiring payment in pesos one month after their receipt in Stevens's factory. Title to the goods passed on December 15, 20X5. The goods were still in transit on December 31, 20X5. Exchange rates were 1 dollar to 22 pesos, 20 pesos, and 21 pesos on October 1, December 15, and December 31, 20X5, respectively. Stevens should account for the exchange rate fluctuations in 20X5 as
  - a. A loss included in net income before extraordinary items.
  - b. A gain included in net income before extraordinary items.
  - c. An extraordinary gain.
  - d. An extraordinary loss.
- 6. On October 2, 20X5, Louis Co., a U.S. company, purchased machinery from Stroup, a German company, with payment due on April 1, 20X6. If Louis's 20X5 operating income included no foreign exchange gain or loss, the transaction could have
  - a. Resulted in an extraordinary gain.
  - b. Been denominated in U.S. dollars.
  - c. Caused a foreign currency gain to be reported as a contra account against machinery.
  - d. Caused a foreign currency translation gain to be reported as a separate component of stockholders' equity.
- 7. Cobb Co. purchased merchandise for 300,000 pounds from a vendor in London on November 30, 20X5. Payment in British pounds (£) was due on January 30, 20X6. The exchange rates to purchase 1 pound were as follows:

|             | November 30, 20X5 | December 31, 20X5 |
|-------------|-------------------|-------------------|
| Spot rate   | \$1.65            | \$1.62            |
| 30-day rate | 1.64              | 1.59              |
| 60-day rate | 1.63              | 1.56              |

In its December 31, 20X5, income statement, what amount should Cobb report as a foreign exchange gain?

- a. \$12,000.
- b. \$9,000.
- c. \$6,000.
- d. \$0.

### LO 11-3 E11-15 Sale with Forward Contract and Fiscal Year-End

Jerber Electronics Inc. sold electrical equipment to a Dutch company for 50,000 guilders (G) on May 14, with collection due in 60 days. On the same day, Jerber entered into a 60-day forward contract to sell 50,000 guilders at a forward rate of G1 = \$0.541. The forward contract is not designated as a hedge. Jerber's fiscal year ends on June 30. The forward rate on June 30 for an exchange on July 13 is G1 = \$0.530. The spot rates follow:

| May 14  | G1 = \$0.530 |
|---------|--------------|
| June 30 | G1 = 0.534   |
| July 13 | G1 = 0.525   |

### Required

- a. Prepare journal entries for Jerber to record (1) the sale of equipment, (2) the forward contract, (3) the adjusting entries on June 30, (4) the July 13 collection of the receivable, and (5) the July settlement of the forward contract.
- b. What was the effect on the income statement in the fiscal year ending June 30?
- c. What was the overall effect of this transaction on the income statement?
- d. What would have been the overall effect on income if the forward contract had not been acquired?

LO 11-3

### E11-16A Hedge of a Purchase (Commitment without and with Time Value of Money Considerations)

On November 1, 20X6, Smith Imports Inc. contracted to purchase teacups from England for £30,000. The teacups were to be delivered on January 30, 20X7, with payment due on March 1, 20X7. On November 1, 20X6, Smith entered into a 120-day forward contract to receive 30,000 pounds at a forward rate of £1 = \$1.59. The forward contract was acquired to hedge the financial component of the foreign currency commitment.

## Additional Information for the Exchange Rate

- 1. Assume the company uses the forward rate in measuring the forward exchange contract and for measuring hedge effectiveness.
- 2. Spot and exchange rates follow:

| Date   | Spot Rate   | Forward Rate for March 1, 20X7        |
|--|---|---------------------------------------|
| November 1, 20X6<br>December 31, 20X6<br>January 30, 20X7<br>March 1, 20X7 | f1 = \$1.61<br>f1 = 1.65<br>f1 = 1.59<br>f1 = 1.585 | f1 = \$1.59<br>f1 = 1.62<br>f1 = 1.60 |

## Required

- a. What is Smith's net exposure to changes in the exchange rate of pounds for dollars between November 1, 20X6, and March 1, 20X7?
- b. Prepare all journal entries from November 1, 20X6, through March 1, 20X7, for the purchase of the subassemblies, the forward exchange contract, and the foreign currency transaction. Assume Smith's fiscal year ends on December 31, 20X6.

*Note:* Requirement (*c*) requires information from Appendix 11A.

c. Assume that interest is significant and the time value of money is considered in valuing the forward contract and hedged commitment. Use a 12 percent annual interest rate. Prepare all journal entries from November 1, 20X6, through March 1, 20X7, for the purchase of the subassemblies, the forward exchange contract, and the foreign currency transaction. Assume Smith's fiscal year ends on December 31, 20X7.

LO 11-3

### E11-17 **Gain or Loss on Speculative Forward Exchange Contract**

On December 1, 20X1, Sycamore Company acquired a 90-day speculative forward contract to sell €120,000 at a forward rate of €1 = \$0.58. The rates are as follows:

<sup>&</sup>quot;A" indicates that the item relates to Appendix 11A.

## Required

- a. Prepare a schedule showing the effects of this speculation on 20X1 income before income taxes.
- b. Prepare a schedule showing the effects of this speculation on 20X2 income before income taxes.

### LO 11-3

### E11-18 **Speculation in a Foreign Currency**

Nick Andros of Streamline Company suggested that the company speculate in foreign currency as a partial hedge against its operations in the cattle market, which fluctuates like a commodity market. On October 1, 20X1, Streamline bought a 180-day forward contract to purchase 50,000,000 yen (¥) at a forward rate of Y1 = 0.0075 when the spot rate was 0.0070. Other exchange rates were as follows:

| Date                                | Spot Rate          | Forward Rate<br>for March 31, 20X2 |
|-------------------------------------|--------------------|------------------------------------|
| December 31, 20X1<br>March 31, 20X2 | \$0.0073<br>0.0072 | \$0.0076                           |

### Required

- a. Prepare all journal entries related to Streamline Company's foreign currency speculation from October 1, 20X1, through March 31, 20X2, assuming the fiscal year ends on December 31, 20X1.
- b. Did Streamline Company gain or lose on its purchase of the forward contract? Explain.

## LO 11-2, 11-3 **E11-19**

## Forward Exchange Transactions [AICPA Adapted]

Select the correct answer for each of the following questions.

1. The following information applies to Denton Inc.'s sale of 10,000 foreign currency units under a forward contract dated November 1, 20X5, for delivery on January 31, 20X6:

|                     | 11/1/X5 | 12/31/X5 |
|---------------------|---------|----------|
| Spot rates          | \$0.80  | \$0.83   |
| 30-day forward rate | 0.79    | 0.82     |
| 90-day forward rate | 0.78    | 0.81     |

Denton entered into the forward contract to speculate in the foreign currency. In its income statement for the year ended December 31, 20X5, what amount of loss should Denton report from this forward contract?

- a. \$400.
- b. \$300.
- c. \$200.
- d. \$0.
- 2. On September 1, 20X5, Johnson Inc. entered into a foreign exchange contract for speculative purposes by purchasing €50,000 for delivery in 60 days. The rates to exchange U.S. dollars for euros follow:

|                     | 9/1/X5 | 9/30/X5 |
|---------------------|--------|---------|
| Spot rate           | \$0.75 | \$0.70  |
| 30-day forward rate | 0.73   | 0.72    |
| 60-day forward rate | 0.74   | 0.73    |

In its September 30, 20X5, income statement, what amount should Johnson report as foreign exchange loss?

- a. \$2,500.
- b. \$1,500.
- c. \$1,000.
- d. \$500.

*Note:* Items 3 through 5 are based on the following:

On December 12, 20X5, Dahl Company entered into three forward exchange contracts, each to purchase 100,000 francs in 90 days. The relevant exchange rates are as follows:

|                   | Spot Rate | Forward Rate<br>for March 12, 20X6 |
|-------------------|-----------|------------------------------------|
| December 12, 20X5 | \$0.88    | \$0.90                             |
| December 31, 20X5 | 0.98      | 0.93                               |

- 3. Dahl entered into the first forward contract to manage the foreign currency risk from a purchase of inventory in November 20X5, payable in March 20X6. The forward contract is not designated as a hedge. At December 31, 20X5, what amount of foreign currency transaction gain should Dahl include in income from this forward contract?
  - a. \$0.
  - b. \$3,000.
  - *c.* \$5,000.
  - d. \$10,000.
- 4. Dahl entered into the second forward contract to hedge a commitment to purchase equipment being manufactured to Dahl's specifications. At December 31, 20X5, what amount of foreign currency transaction gain should Dahl include in income from this forward contract?
  - a. \$0.
  - b. \$3,000.
  - *c.* \$5,000.
  - d. \$10,000.
- 5. Dahl entered into the third forward contract for speculation. At December 31, 20X5, what amount of foreign currency transaction gain should Dahl include in income from this forward contract?
  - a. \$0.
  - b. \$3,000.
  - c. \$5,000.
  - d. \$10,000.

## **Problems**

LO 11-2, 11-3 P11-20

## **Multiple-Choice Questions on Foreign Currency Transactions**

Jon-Jan Restaurants purchased green rice, a special variety of rice, from China for 100,000 renminbi on November 1, 20X8. Payment is due on January 30, 20X9. On November 1, 20X8, the company also entered into a 90-day forward contract to purchase 100,000 renminbi. The forward contract is not designated as a hedge. The rates were as follows:

| Date                                  | Spot Rate        | Forward Rate                         |
|---------------------------------------|------------------|--------------------------------------|
| November 1, 20X8<br>December 31, 20X8 | \$0.120<br>0.124 | \$0.126 (90 days)<br>0.129 (30 days) |
| January 30, 20X9                      | 0.127            |                                      |

### Required

Select the correct answer for each of the following questions.

- 1. The entry on November 1, 20X8, to record the forward contract includes a
  - a. Debit to Foreign Currency Receivable from Exchange Broker, 100,000 renminbi.
  - b. Debit to Foreign Currency Receivable from Exchange Broker, \$12,600.
  - c. Credit to Premium on Forward Contract, \$600.
  - d. Credit to Dollars Payable to Exchange Broker, \$12,600.

- 2. The entries on December 31, 20X8, include a
  - a. Debit to Financial Expense, \$300.
  - b. Credit to Foreign Currency Payable to Exchange Broker, \$300.
  - c. Debit to Foreign Currency Receivable from Exchange Broker, \$300.
  - d. Debit to Foreign Currency Receivable from Exchange Broker, \$12,600.
- 3. The entries on January 30, 20X9, include a
  - a. Debit to Dollars Payable to Exchange Broker, \$12,000.
  - b. Credit to Cash, \$12,600.
  - c. Credit to Premium on Forward Contract, \$600.
  - d. Credit to Foreign Currency Receivable from Exchange Broker, \$12,600.
- 4. The entries on January 30, 20X9, include a
  - a. Debit to Financial Expense, \$400.
  - b. Debit to Dollars Payable to Exchange Broker, \$12,600.
  - c. Credit to Foreign Currency Units (renminbi), \$12,600.
  - d. Debit to Foreign Currency Payable to Exchange Broker, \$12,700.
- 5. The entries on January 30, 20X9, include a
  - a. Debit to Foreign Currency Units (renminbi), \$12,700.
  - b. Debit to Dollars Payable to Exchange Broker, \$12,700.
  - c. Credit to Foreign Currency Transaction Gain, \$100.
  - d. Credit to Foreign Currency Receivable from Exchange Broker, \$12,600.

### LO 11-2, 11-3 P11-21 **Foreign Sales**

Tex Hardware sells many of its products overseas. The following are some selected transactions.

- 1. Tex sold electronic subassemblies to a firm in Denmark for 120,000 Danish kroner (Dkr) on June 6, when the exchange rate was Dkr 1 = \$0.1750. Collection was made on July 3 when the rate was Dkr 1 = \$0.1753.
- 2. On July 22, Tex sold copper fittings to a company in London for £30,000 with payment due on September 20. Also, on July 22, Tex entered into a 60-day forward contract to sell £30,000 at a forward rate of £1 = \$1.630. The spot rates follow:

| July 10      | f1 = \$1.580 |
|--------------|--------------|
| September 20 | f1 = \$1.612 |

3. Tex sold storage devices to a Canadian firm for C\$70,000 (Canadian dollars) on October 11, with payment due on November 10. On October 11, Tex entered into a 30-day forward contract to sell Canadian dollars at a forward rate of C\$1 = \$0.730. The forward contract is not designate to sell Canadian dollars at a forward rate of C\$1 = \$0.730. nated as a hedge. The spot rates were as follows:

| October 11  | C\$1 = \$0.7350 |
|-------------|-----------------|
| November 10 | C\$1 = \$0.7320 |

### Required

Prepare journal entries to record Tex's foreign sales of its products, use of forward contracts, and settlements of the receivables.

### LO 11-2, 11-3 **P11-22 Foreign Currency Transactions**

Globe Shipping, a U.S. company, is an importer and exporter. The following are some transactions with foreign companies.

- 1. Globe sold blue jeans to a South Korean importer on January 15 for \$7,400, when the exchange rate was South Korean won (KRW)1 = \$0.185. Collection, in dollars, was made on March 15, when the exchange rate was \$0.180.
- 2. On March 8, Globe purchased woolen goods from Ireland for €7,000. The exchange rate was  $\leq 1 =$ \$0.622 on March 8, but the rate was \$0.610 when payment was made on May 1.

3. On May 12, Globe signed a contract to purchase toys made in Taiwan for 80,000 Taiwan dollars (NT\$). The toys were to be delivered 80 days later on August 1, and payment was due on September 9, which was 40 days after delivery. On May 12, Globe also entered into a 120-day undesignated forward contract to buy NT\$80,000 at a forward rate of NT\$1 = \$0.0376. On August 1, the forward rate for a September 9 exchange is NT\$1 = \$0.0378. The spot rates were as follows:

| May 12      | NT\$1 = \$0.0370 |
|-------------|------------------|
| August 1    | NT\$1 = 0.0375   |
| September 9 | NT\$1 = 0.0372   |

4. Globe sold microcomputers to a German enterprise on June 6 for €150,000. Payment was due in 90 days on September 4. On July 6, Globe entered into a 60-day undesignated forward contract to sell €150,000 at a forward rate of €1 = \$0.580. The spot rates follow:

| June 6      | €1 | = | \$0.600 |
|-------------|----|---|---------|
| July 6      | €1 | = | 0.590   |
| September 4 | €1 | = | 0.585   |
|             |    |   |         |

### Required

Prepare all necessary journal entries for Globe to account for the foreign transactions, including the sales and purchases of inventory, forward contracts, and settlements.

LO 11-3

### Comprehensive Problem: Four Uses of Forward Exchange Contracts without P11-23A and with Time Value of Money Considerations

On December 1, 20X1, Micro World, Inc., entered into a 120-day forward contract to purchase 100,000 Australian dollars (A\$). Micro World's fiscal year ends on December 31. The direct exchange rates follow:

| Date              | Spot Rate | Forward Rate<br>for March 31, 20X2 |
|-------------------|-----------|------------------------------------|
| December 1, 20X1  | \$0.600   | \$0.609                            |
| December 31, 20X1 | 0.610     | 0.612                              |
| January 30, 20X2  | 0.608     | 0.605                              |
| March 31, 20X2    | 0.602     |                                    |

### Required

Prepare all journal entries for Micro World, Inc., for the following *independent* situations:

- a. The forward contract was to manage the foreign currency risks from the purchase of furniture for A\$100,000 on December 1, 20X1, with payment due on March 31, 20X2. The forward contract is not designated as a hedge.
- b. The forward contract was to hedge a firm commitment agreement made on December 1, 20X1, to purchase furniture on January 30, with payment due on March 31, 20X2. The derivative is designated as a fair value hedge.
- c. The forward contract was to hedge an anticipated purchase of furniture on January 30. The purchase took place on January 30 with payment due on March 31, 20X2. The derivative is designated as a cash flow hedge. The company uses the forward exchange rate to measure hedge effectiveness.
- d. The forward contract was for speculative purposes only.

*Note:* Requirement (e) uses the material in Appendix 11A.

e. Assume that interest is significant and the time value of money is considered in valuing the forward contract. Use a 12 percent annual interest rate. Prepare all journal entries required if, as in requirement (a), the forward contract was to manage the foreign currency-denominated payable from the purchase of furniture for 100,000 Australian dollars on December 1, 20X1, with payment due on March 31, 20X2.

## Foreign Purchases and Sales Transactions and Hedging

StudyGuide .com

# Maple Company had the following export and import transactions during 20X5:

- 1. On March 1, Maple sold goods to a Canadian company for C\$30,000, receivable on May 30. The spot rates for marks were C\$1 = \$0.65 on March 1 and C\$1 = \$0.68 on May 30.
- 2. On July 1, Maple signed a contract to purchase equipment from a Japanese company for ¥500,000. The equipment was manufactured in Japan during August and was delivered to Maple on August 30 with payment due in 60 days on October 29. The spot rates for yen were 41 = 0.102 on July 1, 41 = 0.104 on August 30, and 41 = 0.106 on October 29. The 60-day forward exchange rate on August 30, 20X5, was Y1 = 0.1055.
- 3. On November 16, Maple purchased inventory from a London company for £10,000, payable on January 15, 20X6. The spot rates for pounds were £1 = \$1.65 on November 16, £1 = \$1.63 on December 31, and £1 = \$1.64 on January 15, 20X6. The forward rate on December 31, 20X5, for a January 15, 20X6, exchange was £1 = \$1.645.

### Required

- a. Prepare journal entries to record Maple's import and export transactions during 20X5 and 20X6.
- b. What amount of foreign currency transaction gain or loss would Maple report on its income statement for 20X5?

### Part II

Assume that Maple used forward contracts to manage the foreign currency risks of all of its export and import transactions during 20X5.

- 1. On March 1, 20X5, Maple, anticipating a weaker Canadian dollar on the May 30, 20X5, settlement date, entered into a 90-day forward contract to sell C\$30,000 at a forward exchange rate of C\$1 = \$0.64. The forward contract was not designated as a hedge.
- 2. On July 1, 20X5, Maple, anticipating a strengthening of the yen on the October 29, 20X5, settlement date, entered into a 120-day forward contract to purchase 500,000 at a forward exchange rate of \$1 = \$0.105. The forward contract was designated as a fair value hedge of a firm commitment.
- 3. On November 16, 20X5, Maple, anticipating a strengthening of the pound on the January 15, 20X6, settlement date, entered into a 60-day undesignated forward exchange contract to purchase £10,000 at a forward exchange rate of £1 = \$1.67.

### Required

- a. Prepare journal entries to record Maple's foreign currency activities during 20X5 and 20X6.
- b. What amount of foreign currency transaction gain or loss would Maple report on its income statement for 20X5 if Parts I and II of this problem were combined?
- c. What amount of foreign currency transaction gain or loss would Maple report on its income statement for 20X6 if Parts I and II of this problem were combined?

### LO 11-1, 11-2 P11-25

### **Understanding Foreign Currency Transactions**

Dexter Inc. had the following items in its unadjusted and adjusted trial balances at December 31, 20X5:

|   | Trial Balances |          |
|---|----------------|----------|
|   | Unadjusted     | Adjusted |
| Accounts Receivable (denominated in Australian dollars) | \$42,000       | \$41,700 |
| Dollars Receivable from Exchange Broker                 | 40,600         | ?        |
| Foreign Currency Receivable from Exchange Broker        | 82,000         | 81,000   |
| Accounts Payable (denominated in South Korean won)      | 80,000         | ?        |
| Dollars Payable to Exchange Broker                      | ?              | ?        |
| Foreign Currency Payable to Exchange Broker             | 40,600         | ?        |

### Additional Information

- 1. On December 1, 20X5, Dexter sold goods to a company in Australia for A\$70,000. Payment in Australian dollars is due on January 30, 20X6. On the transaction date, Dexter entered into a 60-day forward contract to sell 70,000 Australian dollars on January 30, 20X6. The 30-day forward rate on December 31, 20X5, was A\$1 = \$0.57.
- 2. On October 2, 20X5, Dexter purchased equipment from a South Korean company for KRW400,000, payable on January 30, 20X6. On the transaction date, Dexter entered into a 120-day forward contract to purchase KRW400,000 on January 30, 20X6. On December 31, 20X5, the spot rate was KRW1 = \$0.2020.

### Required

Using the information contained in the trial balances, answer each of the following questions:

- a. What was the indirect exchange rate for Australian dollars on December 1, 20X5? What was the indirect exchange rate on December 31, 20X5?
- b. What is the balance in the account Foreign Currency Payable to Exchange Broker in the adjusted trial balance?
- c. When Dexter entered into the 60-day forward contract to sell A\$70,000, what was the direct exchange rate for the 60-day forward contract?
- d. What is the amount of Dollars Receivable from Exchange Broker in the adjusted trial balance?
- e. What was the indirect exchange rate for South Korean won on October 2, 20X5? What was the indirect exchange rate on December 31, 20X5?
- f. What is the balance in the account Dollars Payable to Exchange Broker in both the unadjusted and the adjusted trial balance columns?
- g. When Dexter entered into the 120-day forward contract to purchase KRW400,000, what was the direct exchange rate for the 120-day forward contract?
- h. What was the Accounts Payable balance at December 31, 20X5?

- O. Reported when payables are denominated in Swiss francs and the franc strengthens compared to the U.S. dollar.

## P11-27B Multiple-Choice Questions on Derivatives and Hedging Activities

Select the correct answer for each of the following questions.

- 1. According to **ASC 815**, which of the following is *not* an underlying?
  - a. A security price.
  - b. A monthly average temperature.
  - c. The price of a barrel of oil.
  - d. The number of foreign currency units.
- 2. The intrinsic value of a cash flow hedge has increased since the last balance sheet date. Which of the following accounting treatments is appropriate for this increase in value?
  - a. Do not record the increase in the value because it has not been realized in an exchange transaction.
  - b. Record the increase in value to current earnings.
  - c. Record the increase to Other Comprehensive Income.
  - d. Record the increase in a deferred income account.
- 3. The requirements for a derivative instrument include all but which of the following?
  - a. Has one or more underlyings.
  - b. Has one or more notional amounts.
  - c. Requires an initial net investment equal to that required for other types of contracts that would be expected to have a similar response to changes in market factors.
  - d. Requires or permits net settlement.
- 4. A decrease in the intrinsic value of a fair value hedge is accounted for as
  - a. A decrease of current earnings.
  - b. Not recorded because the exchange transaction has not yet occurred.
  - c. A decrease of Other Comprehensive Income.
  - d. A liability to be offset with subsequent increases in the fair value of the hedge.
- 5. Changes in the fair value of the effective portion of a hedging financial instrument are recognized as a part of current earnings of the period for which of the following?

|    | Cash Flow Hedge | Fair Value Hedge |
|----|-----------------|------------------|
| a. | Yes             | Yes              |
| b. | No              | Yes              |
| C. | Yes             | No               |
| d. | No              | No               |

- 6. According to **ASC 815**, for which of the following is hedge accounting not allowed?
  - a. A forecasted purchase or sale.
  - b. Available-for-sale securities.
  - c. Trading securities.
  - d. An unrecognized firm commitment.

LO 11-3

# P11-28B A Cash Flow Hedge: Use of an Option to Hedge an Anticipated Purchase

Mega Company believes the price of oil will increase in the coming months. Therefore, it decides to purchase call options on oil as a price-risk-hedging device to hedge the expected increase in prices on an anticipated purchase of oil.

<sup>&</sup>quot;B" indicates that the item relates to Appendix 11B.

On November 30, 20X1, Mega purchases call options for 10,000 barrels of oil at \$30 per barrel at a premium of \$2 per barrel with a March 1, 20X2, call date. The following is the pricing information for the term of the call:

| Date              | Spot Price | Futures Price<br>(for March 1, 20X2, delivery) |
|-------------------|------------|--|
| November 30, 20X1 | \$30       | \$31   |
| December 31, 20X1 | 31         | 32   |
| March 1, 20X2     | 33         |  |

The information for the change in the fair value of the options follows:

| Date  | Time Value        | Intrinsic Value          | Total Value                  |
|---|-------------------|--------------------------|------------------------------|
| November 30, 20X1<br>December 31, 20X1<br>March 1, 20X2 | \$20,000<br>6,000 | \$ 0<br>10,000<br>30,000 | \$20,000<br>16,000<br>30,000 |

On March 1, 20X2, Mega sells the options at their value on that date and acquires 10,000 barrels of oil at the spot price. On June 1, 20X2, Mega sells the oil for \$34 per barrel.

### Required

- a. Prepare the journal entry required on November 30, 20X1, to record the purchase of the call options.
- b. Prepare the adjusting journal entry required on December 31, 20X1, to record the change in time and intrinsic value of the options.
- c. Prepare the entries required on March 1, 20X2, to record the expiration of the time value of the options, the sale of the options, and the purchase of the 10,000 barrels of oil.
- d. Prepare the entries required on June 1, 20X2, to record the sale of the oil and any other entries required as a result of the option.

### P11-29B

LO 11-3

## A Fair Value Hedge: Use of an Option to Hedge Available-for-Sale Securities

On November 3, 20X2, PRD Corporation acquired 100 shares of JRS Company at a cost of \$12 per share. PRD classifies them as available-for-sale securities. On this same date, PRD decides to hedge against a possible decline in the value of the securities by purchasing, at a cost of \$100, an at-the-money put option to sell the 100 shares at \$12 per share. The option expires on March 3, 20X3. The fair values of the investment and the options follow:

|                         | November 3,<br>20X2 | December 31,<br>20X2 | March 3,<br>20X3 |
|-------------------------|---------------------|----------------------|------------------|
| JRS Company shares      |                     |                      |                  |
| Per share               | \$ 12               | \$ 11                | \$ 10.50         |
| Put option (100 shares) |                     |                      |                  |
| Market value            | \$100               | \$140                | \$150            |
| Intrinsic value         | 0                   | 100                  | 150              |
| Time value              | \$100               | \$ 40                | \$ 0             |

### Required

- a. Prepare the entries required on November 3, 20X2, to record the purchase of the JRS stock and
- b. Prepare the entries required on December 31, 20X2, to record the change in intrinsic value and time value of the options, as well as the revaluation of the available-for-sale securities.
- c. Prepare the entries required on March 3, 20X3, to record the exercise of the put option and the sale of the securities at that date.

### LO 11-3

### Matching Key Terms—Hedging and Derivatives P11-30B

Match the items in the left-hand column with the descriptions/explanations in the right-hand column.

| Items   |    | Descriptions/Explanations   |
|---|----|---|
| 1. Put option 2. Notional amount                        | Α. | Hedge of the exposure to changes in the fair value of a recognized asset or liability or an unrecognized firm commitment. |
| <ol> <li>Intrinsic value</li> <li>Underlying</li> </ol> | В. | Hedge of the exposure to variable cash flows of a forecasted transaction.   |
| 5. Gains or losses on                                   | С. | Derivative instrument that is part of a host contract.  |
| cash flow hedges  |    | Specified interest rate, security price, or other variable.   |
| 6. Foreign currency hedge                               | E. | Number of currency units, shares, bushels, or other units specified in the contract in U.S. dollars.                      |
| 7. Fair value hedge<br>8. Call option                   | F. | Recognized in current earnings in the period of the change in value.  |
| 9. Effectiveness 10. Time value                         | G. | Recognized in Other Comprehensive Income in the period of the change in value.  |
| 11. Gains or losses on fair value hedges                | Н. | Measure of the extent to which the derivative offsets the changes in the fair values or cash flows of the hedged item.    |
| 12. Cash flow hedge                                     | l. | Hedge of the net investment in foreign operations.  |
| 13. Interest rate swap                                  | J. | Conversion of a company's fixed-rate debt to a variable-rate debt.  |
| <ul><li>14. Bifurcation</li><li>15. Embedded</li></ul>  | K. | Option that provides the right to acquire an underlying at an exercise or strike price.                                   |
| derivative  | L. | Option that provides the right to sell an underlying at an exercise or strike price.                                      |
|   | M. | Value of an option due to the spread between the current market price of the hedged item and the option's strike price.   |
|   | N. | Value of an option due to the opportunity to exercise the option over the term of the option period.                      |
|   | Ο. | Process of separating the value of an embedded derivative from its host contract.   |

### LO 11-2, 11-3 **P11-31**

### **Determining Financial Statement Amounts**

Kiwi Painting Company engages in a number of foreign currency transactions in euros (€). For each of the following independent transactions, determine the dollar amount to be reported in the December 31, 2004, financial statements for the items presented in the following requirements. The relevant direct exchange rates for the euro follow:

|   | September 1,<br>2004 | November 30,<br>2004 | December 31,<br>2004 |
|---|----------------------|----------------------|----------------------|
| Spot rate<br>Forward rate for exchange on | \$0.95               | \$1.05               | \$0.98               |
| February 1, 2005                          | 0.97                 | 1.03                 | 1.01                 |

These are the independent transactions:

- 1. Kiwi entered into a forward exchange contract on September 1, 2004, to be settled on February 1, 2005, to hedge a firm foreign currency commitment to purchase inventory on November 30, 2004, with payment due on February 1, 2005. The forward contract was for €20,000, the agreed-upon cost of the inventory. The derivative is designated as a fair value hedge of the firm commitment.
- 2. Kiwi entered into a forward exchange contract on September 1, 2004, to be settled on February 1, 2005, to hedge a forecasted purchase of inventory on November 30, 2004. The inventory was purchased on November 30 with payment due on February 1, 2005. The forward contract was for €20,000, the expected cost of the inventory. The derivative is designated as a cash flow hedge to be continued through to payment of the euro-denominated account payable.

- 3. Kiwi entered into a forward contract on November 30, 2004, to be settled on February 1, 2005, to manage the financial currency exposure of a euro-denominated accounts payable in the amount of €20,000 from the purchase of inventory on that date. The payable is due on February 1, 2005. The forward contract is not designated as a hedge.
- 4. Kiwi entered into a forward contract on September 1, 2004, to speculate on the possible changes in exchange rates between the euro and the U.S. dollar between September 1, 2004, and February 1, 2005. The forward contract is for speculation purposes and is not a hedge.

### Required

Enter the dollar amount that would be shown for each of the following items as of December 31, 2004. Compute the statement amounts net. For example, if the transaction generated both a foreign currency exchange gain and a loss, specify just the net amount that would be reported in the financial statements. If no amount would be reported for an item, enter NA for Not Applicable in the space.

|   | Transaction |   |   |   |
|---|-------------|---|---|---|
|   | 1           | 2 | 3 | 4 |
| Forward contract receivable                 |             |   |   |   |
| Inventory                                   |             |   |   |   |
| Accounts payable (€)                        |             |   |   |   |
| Foreign currency exchange gain (loss), net  |             |   |   |   |
| Other comprehensive income gain (loss), net |             |   |   |   |

## McDONALD'S—THE WORLD'S FAST FOOD FAVORITE

McDonald's was founded in 1940 by two brothers, Dick and Mac McDonald, in San Bernardino, California. The McDonald brothers introduced the "Speedee Service System" in 1948, which laid the groundwork for modern fast-food restaurants.

In 1954, the brothers were using four Multimixer milkshake machines in their San Bernardino location. This piqued the interest of Ray Kroc, one of Multimixer's distributors, so he headed to San Bernardino to see "what the devil was going on." Kroc was so impressed with the McDonald brothers' operation that he convinced them to allow him to franchise their restaurants throughout the country. In 1955, Kroc opened his first McDonald's franchise in Des Plaines, Illinois.

The chain grew slowly at first, operating 79 restaurants at the end of 1958. However, in 1959, Kroc expanded aggressively, opening 66 new restaurants. Two years later, he bought out the McDonald brothers' interest for \$2.7 million. And just four years later he took the company public. Success continued for McDonald's for the rest of the 1960s. In 1963, the company sold its one billionth hamburger and, in 1968, it introduced the famous Big Mac and opened its 1,000th restaurant.

The 1970s were not much different. By 1971, McDonald's was operating restaurants in all 50 states. The company introduced the Egg McMuffin and the Happy Meal in 1975 and 1979, respectively. The McDonald's drive-thru was introduced in 1975 and in 1976 McDonald's sold its 20 billionth hamburger. The 1980s started out strong with the unveiling of the McChicken in 1983. In 1985, McDonald's became one of the 30 companies composing the Dow Jones Industrial Average.

The 1990s was a time of international growth for McDonald's. In 1992, 66 percent of McDonald's revenue came from U.S. sales. That number dropped to about 43 percent in 1998 and then to about 32 percent in 2011. In 1991, only 3,600 international locations were in operation, but by 1998, that number had more than tripled to 11,000. Clearly, McDonald's has become a symbol of globalization. With locations in virtually every country in the world, McDonald's is the epitome of a multinational corporation. Managing such a widespread

global empire requires a detailed understanding of accounting and the effects of currency changes on the company's financial statements.

Differences in accounting standards across countries and jurisdictions can cause significant difficulties for multinational firms such as McDonald's. In fact, one of the significant challenges McDonald's faces is the preparation of financial statements according to the differing standards in countries where its subsidiaries are located and the subsequent consolidation of these foreign-based financial statements. These and other significant problems that result from differences in accounting standards have generated significant interest in the harmonization of accounting standards globally.

In addition, because of its global presence, McDonald's has to constantly monitor fluctuations in foreign currencies. The following table from McDonald's 2011 Form 10-K shows the effects of translating subsidiaries' financial statements from foreign currencies to U.S. dollars. For example, revenues in 2011 were positively affected by \$944 million as a result of foreign currency fluctuations.

|   | Reported Amount |          |          | Currency Translation<br>Benefit/(Cost) |       |            |
|---|-----------------|----------|----------|--|-------|------------|
| In millions, except per share data          | 2011            | 2010     | 2009     | 2011                                   | 2010  | 2009       |
| Revenues                                    | \$27,006        | \$24,075 | \$22,745 | \$ 944                                 | \$188 | \$ (1,340) |
| Company-operated margins                    | 3,455           | 3,173    | 2,807    | 134                                    | 35    | (178)      |
| Franchised margins                          | 7,232           | 6,464    | 5,985    | 213                                    | (14)  | (176)      |
| Selling, general, & administrative expenses | 2,394           | 2,333    | 2,234    | (55)                                   | (12)  | 75         |
| Operating income                            | 8,530           | 7,473    | 6,841    | 301                                    | 13    | (273)      |
| Net income                                  | 5,503           | 4,946    | 4,551    | 195                                    | 13    | (164)      |
| Earnings per common share—diluted           | 5.27            | 4.58     | 4.11     | 0.19                                   | 0.01  | (0.15)     |

Accountants preparing financial statements of global companies must consider (1) differences across national boundaries in accounting principles and (2) differences in currencies used to measure the operations of companies operating in different countries. Translation or restatement into U.S. dollars is necessary before a foreign subsidiary's financial statements can be consolidated with the U.S. parent company's statements, which are already reported in dollars. This chapter summarizes current efforts to develop a global set of high-quality accounting standards and explores the translation of financial statements of a foreign business entity into U.S. dollars.

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 12-1 Understand and explain the benefits and ramifications of convergence to international financial reporting standards (IFRS) and the expected timeline to global convergence.
- LO 12-2 Determine the functional currency and understand the ramifications of different functional currency designations.
- LO 12-3 Understand and explain the differences between translation and remeasurement.
- LO 12-4 Make calculations and translate financial statements of a foreign subsidiary.
- LO 12-5 Prepare consolidated financial statements including a foreign subsidiary after translation.
- LO 12-6 Make calculations and remeasure financial statements of a foreign subsidiary.
- LO 12-7 Prepare consolidated financial statements including a foreign subsidiary after remeasurement.
- LO 12-8 Understand other issues related to foreign operations including the hedging of a net investment in a foreign subsidiary.

## CONVERGENCE OF ACCOUNTING PRINCIPLES

LO 12-1

Understand and explain the benefits and ramifications of convergence to international financial reporting standards (IFRS) and the expected timeline to global convergence.

Methods used to measure economic activity differ around the world. Many factors influence the development of accounting standards in a country, including its economic, legal, educational, and political systems; its stage of technological development; its culture and traditions; and other socioeconomic factors. These differences have led to significant diversity in accounting standards from one nation to another. The lack of a uniform set of accounting standards creates problems for companies, preparers, and users. Some countries develop their accounting principles based on the information needs of the taxing authorities. Other countries have accounting principles designed to meet the needs of central government economic planners. U.S. accounting standards focus on the information needs of the common stockholder or the creditors.

Arthur Levitt, former chairman of the Securities and Exchange Commission (SEC), noted in 1999 that the world economy was in a period of profound change because the notion of distance as a barrier was no longer a relevant impediment to business growth and development. Levitt noted that the flow of capital is a critical factor in global economic development, which had created a compelling need for a common business-reporting language. Indeed, Levitt stated that "new business opportunities demand financial reporting standards that supersede national borders and cultural customs. These standards are not merely an ideal for a better global marketplace—they are fundamental to its very existence."

During the decade following Levitt's statement, significant strides have been taken to move toward a single set of globally accepted reporting standards. Important benefits can be realized from the adoption of globally consistent accounting standards. Expected benefits include continued expansion of capital markets across national borders. Countries in which accounting principles do not currently focus on the needs of investors could more quickly achieve stable, liquid capital markets, which in turn should drive economic growth. Use of a single set of accounting standards should help investors to better evaluate opportunities across national borders, which also should facilitate a more efficient use of global capital. A set of global standards also should reduce reporting costs that corporations currently incur if they attempt to access capital in markets outside their home country because they will no longer need to produce multiple sets of financial statements using different sets of accounting standards. Financial statement users are likely to have more confidence in financial reporting if it conforms to standards that have gained wide global acceptance.

The major financial reporting model that will very likely become globally accepted is being developed by the International Accounting Standards Board (IASB), an independent, privately funded accounting standards-setting body based in London. The IASB's mission is to develop a single set of high-quality, understandable, and enforceable global accounting standards. Standards published by the IASB are called International Financial Reporting Standards (IFRS). The IASB is composed of 15 members who serve a five-year term subject to one reappointment. Members are required to sever all employment relationships that might compromise their independent judgment in setting accounting standards. When evaluating potential standards, the IASB solicits input from the public and publishes a discussion paper and/or an exposure draft subject to comment before issuing a final standard. The IASB also has an advisory council, the Standards Advisory Council, that is composed of approximately 40 individuals from diverse countries and draws members from both countries that have and have not adopted IFRS. The IASB has a mandate from the International Organization of Securities Commissions (IOSCO) to develop a high-quality set of international financial reporting standards. This effort has the support of the U.S. regulators and standard setters.

<sup>&</sup>lt;sup>1</sup> Arthur Levitt, "Remarks to the American Council on Germany: Corporate Governance in a Global Arena," Speech by SEC Chairman, October 7, 1999, http://www.sec.gov/news/speech/speecharchive/1999/spch302.

There is already widespread acceptance of IFRS around the world as these standards are mandated or permitted in more than 100 countries around the world. Beginning in 2005, the European Union (EU) mandated the use of IFRS for companies listing on stock exchanges in the EU, although it continues to accept statements prepared according to U.S. GAAP. According to the SEC, the number of foreign private issuers who file within the United States has increased significantly from a relatively few companies in 2005 to approximately 110 in 2006. These companies prepare financial statements that comply with IFRS as published by the IASB. Furthermore, the Commission expects to see this number continue to increase in the future, particularly because Canada adopted IFRS in 2011; there currently are approximately 500 foreign private issuers from Canada. This movement to IFRS also has begun to affect U.S. issuers, in particular those with a significant global footprint. For instance, certain U.S. issuers may compete for capital globally in industry sectors in which a critical mass of non-U.S. companies reports under IFRS. Also, U.S. issuers with subsidiaries located in jurisdictions that have moved to IFRS may prepare those subsidiaries' financial statements according to IFRS for purposes of local regulatory or statutory filings.

The FASB is working with the IASB to improve the quality of reporting standards and to "converge" their two sets of standards. In September 2002, the FASB issued the "Norwalk Agreement" in which both the FASB and the IASB pledged to work together both to improve the quality of their financial reporting standards and to converge the standards by working to minimize the differences between them. The convergence effort focuses on evaluating and implementing existing standards along with developing new ones. PricewaterhouseCoopers offers a publication on its website entitled "IFRS and US GAAP: Similarities and Differences" that provides a topic-based comparison. This publication can be accessed on the Internet at http://www.pwc.com/us/en/issues/ifrs-reporting/ publications/ifrs-and-us-gaap-similarities-and-differences.jhtml.

Until 2007, the SEC required foreign issuers that do use U.S. GAAP to reconcile their financial statements to U.S. GAAP and to file this reconciliation with the SEC on a Form 20-F. On January 4, 2008, the SEC issued new rules that allow foreign private issuers to file statements prepared in accordance with IFRS as issued by the IASB without reconciliation to U.S. GAAP.<sup>2</sup> Removing the Form 20-F requirement for companies strictly following IFRS reduces costs to foreign private issuers and encourages their continued participation in the U.S. public capital market, which is a benefit to investors by increasing investment possibilities and furthering the efficient allocation of capital. Note, however, that the 20-F reconciliation is still required for companies that do not follow IFRS "as issued by the IASB." Many countries have their own "version" of IFRS in which they adopt most of IFRS as promulgated by the IASB but also require some country-specific exceptions.

In December 2007, the SEC held roundtable discussions with representatives from public companies, audit firms, investor groups, academia, rating agencies, the legal community, and government agencies to obtain feedback on whether public companies in the United States should be permitted or required to file their consolidated financial statements using IFRS as published by the IASB instead of U.S. GAAP. Among this group, there was overwhelming support for the use of a single set of global standards, and the majority of the panelists agreed that IFRS ultimately will be the standard.

In general, panelists at the SEC roundtable felt that U.S. corporations could be more competitive globally if they were permitted to use IFRS for financial reporting. Benefits expected to accrue to U.S. firms include

- Increased quality of information available to investors.
- Reduced costs of compliance for companies that are currently using multiple reporting frameworks.

<sup>&</sup>lt;sup>2</sup> Securities and Exchange Commission, "Acceptance from Foreign Private Issuers of Financial Statements Prepared in Accordance with International Financial Reporting Standards without Reconciliation to U.S. GAAP," Federal Register 73, no. 3 (January 4, 2008), pp. 986-1012, www.sec.gov/rules/final/2008/33-8879fr.pdf.

- Enhanced global capital markets.
- Improved access to capital in the global markets.
- · Enhanced comparability across companies for users. Former SEC Chairman Christopher Cox noted that two-thirds of U.S. investors own securities of foreign companies.

Moreover, because the SEC now permits foreign private issuers to file their financial reports using IFRS without reconciliation, not allowing U.S. companies to report under IFRS could result in U.S. companies bearing costs not incurred by foreign private issuers. Some observers fear that U.S. influence in the world economy could decline if more countries move to IFRS but the United States does not. Not only are U.S. investors divesting themselves of U.S. holdings and investing in non-U.S. holdings but also more companies are electing to raise capital on non-U.S. exchanges. As recently as 2000, nine of every 10 dollars raised for foreign companies through new stock offerings were done in New York. However, by 2005, nine of every 10 dollars were raised through new company listings in London or Luxembourg.<sup>3</sup>

Significant issues still must be addressed before a decision about adoption of IFRS by U.S. corporations can be made. Extensive training for professionals, users, and even regulators may be necessary. Still, many believe that convergence to a single set of international standards is key to economic development. Among 143 worldwide leaders of the accounting profession representing 91 countries who responded to a survey conducted by the International Federation of Accountants, 89 percent indicated that convergence to international financial reporting standards was either important or very important for economic growth in their countries, and only 1 percent said it was not important.

Nevertheless, on February 24, 2010, the SEC issued a formal statement supporting convergence to a single set of global accounting standards, directing its staff to prepare a work plan to allow it to decide on a mandate for accepting IFRS for U.S. registrants. This work plan outlines the activities the SEC staff will undertake to provide the SEC information for determining whether, when, and how to incorporate IFRS into the reporting system in the United States. This work plan addresses six concerns from comments received on the SEC's IFRS Roadmap:

- 1. Sufficient development and application of IFRS for the U.S. domestic reporting system.
- 2. The independence of standard setting for the benefit of investors.
- 3. Investor understanding and education regarding IFRS.
- 4. Examination of the U.S. regulatory environment that would be affected by a change in accounting standards.
- 5. The impact on users, both large and small, including changes to accounting systems, changes to contractual arrangements, corporate governance considerations, and litigation contingencies.
- 6. Human capital readiness.

Each of these issues is significant. Moreover, the final staff report related to the work plan, issued July 13, 2012, is inconclusive. The report does not include a final policy decision (or even a recommendation) about whether IFRS should be incorporated into the U.S. financial reporting system. Hence, the future of IFRS in the U.S. is uncertain.

#### ACCOUNTING FOR DIFFERENCES IN CURRENCIES AND EXCHANGE RATES

#### **Currency Definitions**

Before discussing international transactions in detail, it is helpful to first understand some of the terms commonly used to describe different currencies. The *local currency unit* is the legal tender in the country or jurisdiction where an affiliated subsidiary is located. The

<sup>&</sup>lt;sup>3</sup> Craig Karmin and Aaron Lucchetti, "New York Loses Edge in Snagging Foreign Listings," *The Wall Street* Journal (Eastern Edition), January 26, 2006, p. C1.

recording currency is the currency in which the company records its transactions. Finally, the reporting currency is the currency in which the financial reports will be presented to stakeholders. If a subsidiary is located in the United States, the local currency is the U.S. dollar. Transactions are recorded in dollars and the financial statements are reported in U.S. dollars. However, if for example, a U.S.-based parent company (which reports in U.S. dollars) owns a subsidiary located in Italy (where the local currency is the euro), it is likely that the subsidiary's recording currency will also be the euro. In order to consolidate this Italian subsidiary, the parent company domiciled in the United States will have to restate the Italian subsidiary's financial statements in dollars to facilitate the consolidation process. This chapter explains this process. The first step is to determine the functional currency.

#### DETERMINATION OF THE FUNCTIONAL CURRENCY

LO 12-2

Determine the functional currency and understand the ramifications of different functional currency Imagine that you received 100 British pounds sterling (£) in payment on an account in your London subsidiary on December 31, 20X1, and deposited it in a London bank. Assume that at the end of 20X1, the exchange rate is \$1.80. To report the deposit on your 20X1 balance sheet stated in dollars, you would translate the deposit at the current rate and report an asset of \$180. At the end of 20X2, assume you still have the £100 in the bank, but now the exchange rate is \$1.70. To report the deposit on your 20X2 balance sheet, using the exchange rate at the end of 20X2, this amount would now translate into \$170 and you would have an imbalance, also referred to as a translation adjustment, of \$10 to deal with. If you translated at the historical rate, you would still translate into \$180 and there would be no imbalance. Which is the correct exchange rate to use?

| Date       | <b>Currency on Deposit</b> | <b>Current Exchange Rate</b> | Dollar Equivalent |
|------------|----------------------------|------------------------------|-------------------|
| 12/31/20X1 | £100                       | \$1.80                       | \$180             |
| 12/31/20X2 | 100                        | 1.70                         | 170               |

Two major issues that must be addressed when financial statements are translated from a foreign currency into U.S. dollars are

- 1. Which exchange rate should be used to translate foreign currency balances to domestic currency?
- 2. How should translation gains and losses be accounted for? Should they be included in income?

Three possible exchange rates may be used in converting foreign currency values to the U.S. dollar. The *current rate* is the exchange rate at the end of the trading day on the balance sheet date. The historical rate is the exchange rate that existed when an initial transaction took place, such as the exchange rate on the date an asset was acquired or a liability was incurred. The average rate for the period is usually a simple average for a period of time and is usually the exchange rate used to measure revenues and expenses. Translation methods may employ a single rate or multiple rates. The translation adjustment created by the application of these exchange rates also must be reflected in the financial statements, as either a component of net income or a component of comprehensive income. The disposition of the translation adjustment will be discussed later in this chapter.

ASC 830 provides specific guidelines for translating a foreign currency into U.S. dollars to allow preparation of consolidated financial statements measured, or denominated, in dollars. The purpose of ASC 830 is to present results that are directionally sympathetic to the real economic effects of exchange rate movements. Additionally, ASC 830 seeks to preserve financial results and relationships in the foreign financial statements through the translation process. For instance, if the gross margin on sales is positive when measured in the foreign currency, it should still be positive when sales and cost of goods sold are translated into dollars. The FASB adopted the concept of the *functional currency*,

FIGURE 12–1 Functional Currency Indicators

| Indicator  | Factors Indicating Foreign Currency<br>(Local Currency) Is the Functional<br>Currency   | Factors Indicating U.S. Dollar<br>(Parent's Currency) Is the Functional<br>Currency                                |
|--|---|--|
| Cash flows                                       | Primarily in foreign currency and do not affect parent's cash flows   | Directly impact the parent's current cash flows<br>and are readily available to the parent<br>company              |
| Sales prices                                     | Primarily determined by local competition or local government regulation; not generally responsive to changes in exchange rates             | Responsive to short-term changes in exchange rates and worldwide competition                                       |
| Sales markets                                    | Active local sales markets for company's products; possibly, significant amounts of exports   | Sales markets mostly in parent's country, or sales contracts are denominated in parent's currency                  |
| Expenses   | Labor, materials, and other costs are primarily local costs   | Production components generally obtained from the parent company's country   |
| Financing  | Primarily obtained from, and denominated in, local currency units; entity's operations generate funds sufficient to service financing needs | Primarily from the parent, or other dollar-<br>denominated financing   |
| Intercompany<br>transactions and<br>arrangements | Few intercompany transactions with parent   | Frequent intercompany transactions with parent, or foreign entity is an investment or financing arm for the parent |

which is defined as "the currency of the primary economic environment in which the entity operates; normally that is the currency of the environment in which an entity primarily generates and receives cash." The functional currency is used to differentiate between two types of foreign operations, those that are self-contained and integrated into a local environment and those that are an extension of the parent and integrated with the parent. A U.S. company may have foreign affiliates in many different countries. Each affiliate must be analyzed to determine its individual functional currency.

Refer to Figure 12–1 for the six indicators that must be assessed to determine an entity's functional currency: cash flows, sales prices, sales markets, expenses, financing, and intercompany transactions. If a foreign affiliate uses the local currency for most of its transactions, and if the cash generated is not regularly returned to the parent in the United States, the local currency is usually the functional currency. Also, the foreign affiliate usually has active sales markets in its own country and obtains financing from local sources.

Some foreign-based entities, however, use a functional currency different from the local currency. For example, a U.S. company's subsidiary in Venezuela may conduct virtually all of its business in Brazil, or a branch or a subsidiary of a U.S. company operating in Britain may well use the U.S. dollar as its major currency although it maintains its accounting records in British pounds sterling. The following factors indicate that the U.S. dollar is the functional currency for the British subsidiary: Most of its cash transactions are in U.S. dollars; its major sales markets are in the United States; production components are generally obtained from the United States; and the U.S. parent is primarily responsible for financing the British subsidiary.

The FASB adopted the functional currency approach after considering the following objectives of the translation process (ASC 830):

- a. Provide information that is generally compatible with the expected economic effects of a rate change on an enterprise's cash flows and equity.
- b. Reflect in consolidated statements the financial results and relationships of the individual consolidated entities as measured in their functional currencies in conformity with U.S. generally accepted accounting principles.

<sup>&</sup>lt;sup>4</sup> ASC 830-10-45 to 830-10-55.

The functional currency approach requires the foreign entity to translate all of its transactions into its functional currency. If an entity has transactions denominated in other than its functional currency, the foreign transactions must be adjusted to their equivalent functional currency value before the company may prepare financial statements.

## **Functional Currency Designation in Highly Inflationary Economies**

An exception to the criteria for selecting a functional currency is specified when the foreign entity is located in countries such as Argentina and Peru, which have experienced severe inflation. Severe inflation is defined as inflation exceeding 100 percent over a three-year period. The FASB concluded that the volatility of hyperinflationary currencies distorts the financial statements if the local currency is used as the foreign entity's functional currency. Therefore, in cases of operations located in highly inflationary economies, the reporting currency of the U.S. parent—the U.S. dollar—should be used as the foreign entity's functional currency. This exception prevents unrealistic asset values and income statement charges if the hyperinflation is ignored and normal translation procedures are used. For example, assume that a foreign subsidiary constructed a building that cost 1,000,000 pesos when the exchange rate was \$0.05 = 1 peso. Further assume that because of hyperinflation in the foreign subsidiary's country, the exchange rate becomes \$0.00005 = 1 peso. The translated values of the building at the time it was constructed and after the hyperinflation follow:

|                | Date   | of Construction | After Hyp | erinflation |
|----------------|--------|-----------------|-----------|-------------|
| Amount (noses) | Data   | Translated      | Data      | Translated  |
| Amount (pesos) | Rate   | Amount          | Rate      | Amount      |
| 1,000,000      | \$0.05 | \$50,000        | \$0.00005 | \$50        |

The translated values after the hyperinflation do not reflect the building's market value or historical cost. Thus, the FASB required the use of the U.S. dollar as the functional currency in cases of hyperinflation to give some stability to the financial statements.

Once a foreign affiliate's functional currency is chosen, it should be used consistently. However, if changes in economic circumstances necessitate a change in the designation of the foreign affiliate's functional currency, the accounting change should be treated as a change in estimate: current and prospective treatment only, no restatement of prior periods.

## TRANSLATION VERSUS REMEASUREMENT OF FOREIGN FINANCIAL STATEMENTS<sup>5</sup>

LO 12-3

Understand and explain the differences between transla-

Two different methods are used (in different circumstances) to restate foreign entity statements to U.S. dollars: (1) the translation of the foreign entity's functional currency statements into U.S. dollars and (2) the *remeasurement* of the foreign entity's statements into its functional currency. After remeasurement, the statements must then be translated if the functional currency is not the U.S. dollar. No additional work is needed if the functional currency is the U.S. dollar.

Translation is the most common method used and is applied when the local currency is the foreign entity's functional currency. This is the normal case in which, for example, a U.S. company's French subsidiary uses the euro as its recording and functional currency. The subsidiary's statements must be translated from euros into U.S. dollars. To translate the financial statements, the company will use the current rate, which is the exchange rate on the balance sheet date, to convert the local currency balance sheet account balances into U.S. dollars. Because revenues and expenses are assumed to occur uniformly over the period, revenues and expenses on the income statement are translated using the average

<sup>&</sup>lt;sup>5</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

rate for the reporting period. Any translation adjustment that occurs is a component of comprehensive income. The method used to translate financial statements from the local currency to U.S. dollars is called the *current rate method*.

Remeasurement is the restatement of the foreign entity's financial statements from the local currency that the entity used into the foreign entity's functional currency. Remeasurement is required only when the functional currency is different from the currency used to maintain foreign entity's the books and records. For example, a relatively self-contained Canadian sales branch of a U.S. company may use the U.S. dollar as its functional currency but may select the Canadian dollar as its recording and reporting currency. Of course, if the Canadian branch uses the U.S. dollar for both its functional and reporting currency, no translation or remeasurement is necessary: Its statements are already measured in U.S. dollars and are ready to be combined with the U.S. home office statements.

The method used to remeasure the financial statements from the local currency to the functional currency is called the *temporal method*. Monetary assets and liabilities are those that represent rights to receive or obligations to pay a fixed number of foreign currency units in the future. Under the temporal method, the current rate is usually used to translate these monetary amounts to the functional currency. Nonmonetary items include fixed assets, long-term investments, and inventories. These items are usually translated at the historical rate that existed when the assets originally were purchased or the liability originally was incurred. Revenues and expenses on the income statement are translated using the average rate for the reporting period. Any imbalance that occurs because of the application of the temporal method is included in the calculation of net income on the income statement.

The application of the temporal method converts a foreign currency to the functional currency. If the functional currency is the U.S. dollar, no additional adjustments are needed. If the functional currency is something other than the U.S. dollar, the current rate method must be applied to restate the financial information in U.S. dollars.

One application of remeasurement is for affiliates located in countries experiencing hyperinflation. For example, an Argentinean subsidiary of a U.S. parent records and reports its financial statements in the local currency, the Argentine peso. However, because the Argentine economy experiences inflation exceeding 100 percent over a three-year period, the U.S. dollar is specified as the functional currency for reporting purposes and the subsidiary's statements must then be remeasured from Argentine pesos into U.S. dollars.

Three possible scenarios may require the restatement of financial statements from one currency to another via translation and/or remeasurement.

Case 1: The local currency is the functional currency. Simply translate the financial statements from the functional currency to the reporting currency. No further work is necessary because the consolidation and financial reports can now be prepared in the reporting currency.

Case 2: The local currency is not the functional currency, but the functional currency is the reporting currency. Simply remeasure the financial statements from the local currency to the functional currency. No further work is necessary because the consolidation and financial reports can now be prepared in the functional currency (because it is the reporting currency).

Case 3: The local currency is not the functional currency, and the functional currency is different from the reporting currency. First, remeasure the financial statements from the local currency to the functional currency. Second, translate the financial statements from the functional currency to the reporting currency so that the consolidation and financial statements can be prepared in the reporting currency.

The following examples illustrate a situation for each of these three cases in which restatement of the financial statements is not necessary.

| Local Currency              | Functional<br>Currency | Reporting<br>Currency | Restatement<br>Method (s)                             |
|-----------------------------|------------------------|-----------------------|---|
| U.S. dollar (USD)           | USD                    | USD                   | None  |
| Case 1: Mexican peso (MP)   | MP                     | USD                   | Translate from MP to USD                              |
| Case 2: British pound (BP)  | USD                    | USD                   | Remeasure from BP to USD                              |
| Case 3: Uruguayan peso (UP) | Brazilian real (BR)    | USD                   | Remeasure from UP to BR then translate from BR to USD |

The conceptual reasons for the two different methods, translation and remeasurement, come from a consideration of the primary objective of the translation process: to provide information that shows the expected impact of exchange rate changes on the U.S. company's cash flows and equity. Foreign affiliates fall into two groups. Those in the first group are relatively self-contained entities that generate and spend local currency units. The local currency is the functional currency for this group of entities. These foreign affiliates may reinvest the currency they generate or may distribute funds to their home office or parent company in the form of dividends. Exchange rate changes do not directly affect the U.S. parent company's cash flows but do affect the foreign affiliate's net assets (assets minus liabilities) and, therefore, the U.S. parent company's net investment in the entity. Translation is appropriate for these firms' financial statements.

The second group of foreign affiliates is made up of entities that are extensions of the U.S. company. These affiliates operate in a foreign country but are directly affected by changes in exchange rates because they depend on the U.S. economy for sales mar-

## **CAUTION**

Knowing when to translate and when to remeasure can be difficult. To ensure that you do not become confused, the following rule of thumb can be useful in determining how to restate a U.S.-based parent company's foreign subsidiary's financial statements:

If LC = FC, translate to USD

If LC ≠ FC, remeasure to FC

- If FC = USD, no further work is needed
- If FC ≠ USD, translate to USD

#### Where:

LC = local currency

FC = functional currency

USD = U.S. dollars

kets, production components, or financing. For this group, the U.S. dollar is the functional currency. There is a presumption that the effect of exchange rate changes on the foreign affiliate's net assets will directly affect the U.S. parent company's cash flows, so the exchange rate adjustments are reported in the U.S. parent's income. Remeasurement is appropriate for these firms' financial statements.

Translation and remeasurement include different adjustment procedures and may result in significantly different consolidated financial statements. We illustrate both methods in this chapter.

## TRANSLATION OF FUNCTIONAL CURRENCY STATEMENTS INTO THE REPORTING CURRENCY OF THE U.S. COMPANY

LO 12-4

Make calculations and translate financial statements of a foreign subsidiary.

Most business entities transact and record business activities in the local currency. Therefore, the foreign entity's local currency is its functional currency. The translation of the foreign entity's statement into U.S. dollars is a relatively straightforward process.

The FASB believes that the underlying economic relationships presented in the foreign entity's financial statements should not be distorted or changed during the translation process from the foreign entity's functional currency into the currency of the U.S. parent. For example, if the foreign entity's functional currency statements report a current ratio of 2:1 and a gross margin of 60 percent of sales, these relationships should pass through the translation process into the U.S. parent's reporting currency. It is important to be able to evaluate the performance of the foreign entity's management with the same economic measures used to operate it. To maintain the economic relationships in the functional currency statements, the account balances must be translated by a comparable exchange rate.

The translation is made by using the current exchange rate for all assets and liabilities. This rate is the spot rate on the balance sheet date. The income statement itemsrevenue, expenses, gains, and losses—should be translated at the exchange rate on the dates on which the underlying transactions occurred, although for practical purposes, an average exchange rate for the period may be used for these items with the assumption that revenues and expenses are recognized evenly over the period. However, if a material gain or loss results from a specific event, the exchange rate on the date of the event rather than the average exchange rate should be used to translate the transaction results.

The stockholders' equity accounts, other than retained earnings, are translated at historical exchange rates. The appropriate historical rate is the rate on the latter of the date the parent company acquired the investment in the foreign entity or the date the subsidiary had the stockholders' equity transaction. This is necessary to complete the elimination of the parent company's investment account against the foreign subsidiary's capital accounts in the consolidation process. The subsidiary's translated retained earnings are carried forward from the previous period with additions for this period's income and deductions for dividends declared during the period. Dividends are translated at the exchange rate on the date of declaration. It is interesting to observe that if the foreign entity has not paid its declared dividend by the end of its fiscal period, it has a dividends payable account that is translated at the current rate. Nevertheless, the dividend deduction from retained earnings is translated using the exchange rate on the date of dividend declaration.

In summary, the translation of the foreign entity's financial statements from its functional currency into the reporting currency of the U.S. company is made as follows:

#### Income statement accounts:

Generally, average exchange rate for period Revenue and expenses covered by statement

**Balance sheet accounts:** 

Assets and liabilities Current exchange rate on balance sheet date Stockholders' equity Historical exchange rates

Because various rates are used to translate the foreign entity's individual accounts, the trial balance debits and credits after translation generally are not equal. The balancing item to make the translated trial balance debits equal the credits is called the translation adjustment.

## **Financial Statement Presentation of Translation Adjustment**

The translation adjustment resulting from the translation process is part of the entity's comprehensive income for the period. ASC 220 defines comprehensive income to include all changes in equity during a period except those resulting from investments by owners and distributions to owners. Comprehensive income includes net income and "other comprehensive income" items that are part of the changes in the net assets of a business enterprise from nonowner sources (e.g., not additional capital investments and dividends) during a period. ASC 220 requires the reporting of comprehensive income as part of the entity's primary financial statements. The major items of the other comprehensive income items are the changes during the period in foreign currency translation adjustments, unrealized gains or losses on available-for-sale securities, revaluation of cash flow hedges, and adjustments in the minimum pension liability item.

Each period's other comprehensive income (OCI) is closed to accumulated other comprehensive income (AOCI), which is displayed separately from other stockholders' equity items (e.g., capital stock, additional paid-in capital, and retained earnings). The statement of changes in stockholders' equity opens with the accumulated balance of the other comprehensive income items at the beginning of the period, then includes the change in the translation adjustment and the additional other comprehensive income items during the period that were included in the period's comprehensive income, and ends with the accumulated other comprehensive income balance at the end of the period. The accumulated ending balance of the other comprehensive income items is then reported in the entity's balance sheet as part of the stockholders' equity section, usually after retained earnings. The discussion of the disclosure requirements presented later in this chapter demonstrates the financial statements for the Peerless Products Corporation example presented in the chapter.

## Illustration of Translation and Consolidation of a Foreign Subsidiary

To examine the consolidation of a foreign subsidiary, assume the following facts:<sup>6</sup>

- 1. On January 1, 20X1, Peerless, a U.S. company, purchased 100 percent of the outstanding capital stock of German Company, a firm located in Berlin, Germany, for \$63,000, which is \$3,000 above book value. (The proof of the differential is shown at the end of the next section of the chapter.) The excess of cost over book value is attributable to a patent amortizable over 10 years. Balance sheet accounts in a trial balance format for both companies immediately *before* the acquisition are presented in Figure 12–2.
- 2. The local currency for German Company is the euro (€), which is also its functional currency.
- 3. On October 1, 20X1, the subsidiary declared and paid dividends of  $\leq 6,250$ .
- 4. The subsidiary received \$4,200 in a sales transaction with a U.S. company when the exchange rate was \$1.20 = \$1. The subsidiary still has this foreign currency on December 31, 20X1.
- 5. Relevant direct spot exchange rates (\$/€1) are:

| Date              | Rate   |
|-------------------|--------|
| January 1, 20X1   | \$1.20 |
| October 1, 20X1   | 1.36   |
| December 31, 20X1 | 1.40   |
| 20X1 average      | 1.30   |

## Date-of-Acquisition Translation Worksheet

Figure 12–3 presents the translation of German Company's trial balance on January 1, 20X1. This illustration assumes that the subsidiary's books and records are maintained in European euros, the subsidiary's functional currency.

#### LO 12-5

Prepare consolidated financial statements including a foreign subsidiary after translation.

<sup>&</sup>lt;sup>6</sup> The Chapter 11 examples illustrate the effects of a dollar that strengthens against the euro during 20X1. In the examples for the remainder of this chapter, the dollar weakens against the euro during 20X1. Thus, in Chapters 11 and 12, changes in exchange rates in both directions will have been illustrated.

FIGURE 12-2 **Balance Sheet Accounts** for the Two Companies on January 1, 20X1 (immediately before acquisition of 100 percent of German Company's stock by Peerless Products, a U.S. company)

|                             | Peerless Products  | German Company |
|-----------------------------|--------------------|----------------|
| Cash                        | \$ 350,000         | € 2,500        |
| Receivables                 | 75,000             | 10,000         |
| Inventory                   | 100,000            | 7,500          |
| Land                        | 175,000            | 0              |
| Plant & Equipment           | 800,000            | 50,000         |
| Total Debits                | <u>\$1,500,000</u> | <u>€70,000</u> |
| Accumulated Depreciation    | \$ 400,000         | € 5,000        |
| Accounts Payable            | 100,000            | 2,500          |
| Bonds Payable               | 200,000            | 12,500         |
| Common Stock                | 500,000            | 40,000         |
| Retained Earnings, 12/31/X0 | 300,000            | 10,000         |
| Total Credits               | <u>\$1,500,000</u> | <u>€70,000</u> |

FIGURE 12-3 **Worksheet to Translate** Foreign Subsidiary on January 1, 20X1 (date of acquisition) **Functional Currency** 

Is the European Euro

| Item                     | Trial Balance, € | Exchange Rate, \$/€ | Trial Balance, \$ |
|--------------------------|------------------|---------------------|-------------------|
| Cash                     | 2,500            | 1.20                | 3,000             |
| Receivables              | 10,000           | 1.20                | 12,000            |
| Inventory                | 7,500            | 1.20                | 9,000             |
| Plant & Equipment        | 50,000           | 1.20                | 60,000            |
| Total Debits             | 70,000           |                     | 84,000            |
| Accumulated Depreciation | 5,000            | 1.20                | 6,000             |
| Accounts Payable         | 2,500            | 1.20                | 3,000             |
| Bonds Payable            | 12,500           | 1.20                | 15,000            |
| Common Stock             | 40,000           | 1.20                | 48,000            |
| Retained Earnings        | 10,000           | 1.20                | 12,000            |
| Total Credits            | <u>70,000</u>    |                     | <u>84,000</u>     |

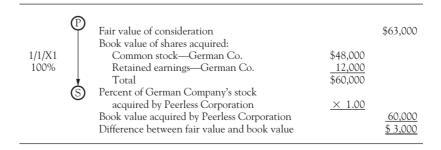

Note: \$1.20 is the direct exchange rate on January 1, 20X1.

The translation of the subsidiary's trial balance from the functional currency (€) into dollars, the U.S. parent's reporting currency, is made using the current rate method. Under acquisition accounting, the subsidiary's stockholders' equity accounts are translated using the current rate on the date the parent company purchased the subsidiary's stock.

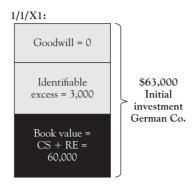

Peerless Products makes this entry to record the purchase of 100 percent of German Company's stock:

January 1, 20X1 (1) Investment in German Company Stock 63,000 Cash 63,000 Purchase of German Company Stock.

The differential on January 1, 20X1, the date of acquisition, is computed as follows:

A graphic representation of the acquisition is as follows:

## Date-of-Acquisition Consolidated Balance Sheet

To prepare the elimination entries, we begin by analyzing the book value of the investment in German Company:

#### **Book Value Calculations:**

This leads to the basic elimination entry:

#### **Basic Elimination Entry:**

The differential is entirely attributable to the patent, \$3,000, so the excess value reclassification entry is as follows:

#### **Excess Value Reclassification Entry:**

| Patent                   | 3,000 |       | ←Excess value assigned to patent      |
|--------------------------|-------|-------|---------------------------------------|
| Investment in German Co. |       | 3,000 | ← Reclassify excess acquisition price |

These two worksheet entries eliminate the balance in Peerless' investment account and the second entry assigns the differential to the patent account.

Finally, we include the optional accumulated depreciation elimination entry:

#### **Optional Accumulated Depreciation Elimination Entry:**

Figure 12-4 presents the consolidation worksheet on the acquisition date.

#### Subsequent to Date of Acquisition

The accounting subsequent to the date of acquisition is very similar to the accounting used for domestic subsidiaries. The major differences are due to the effects of changes in the exchange rates of the foreign currency.

#### Translation of Foreign Subsidiary's Postacquisition Trial Balance

Figure 12-5 illustrates the translation of German Company's December 31, 20X1, trial balance.

Note the account Foreign Currency Units the German subsidiary's trial balance. This account represents the \$4,200 of U.S. dollars held by the subsidiary. Because this account is denominated in a currency other than the subsidiary's reporting currency, German Company made an adjusting journal entry to revalue the account from the amount originally recorded using the exchange rate on the date the company received the currency to that amount's equivalent exchange value at the end of the year.

The subsidiary made the following entry on its books when it received the U.S. dollars:

Record sales and receipt of 4,200 U.S. dollars at spot exchange rate on the date of receipt: €3,500 = \$4,200/\$1.20 exchange rate.

At the end of the period, the subsidiary adjusted the foreign currency units (the U.S. dollars) to the current exchange rate (\$1.40 = \$1) by making the following entry:

| (3) | Foreign Currency Transaction Loss | 500 |
|-----|-----------------------------------|-----|
|     | Foreign Currency Units (\$)       | 500 |

Adjust account denominated in foreign currency units to current exchange rate:

\$4,200/\$1.40 €3,000 Less: Preadjusted balance (3,500)Foreign currency transaction loss € (500).

**FIGURE 12–5** December 31, 20X1. **Translation of Foreign** Subsidiary's Trial **Balance** European Euro Is the **Functional Currency** 

| Item  | Balance, € | Exchange Rate | Balance, \$ |

| Sales   | _50,000    | 1.30          | 65,000      |
| Total   | 123,000    |               | 157,200     |
| Accumulated Other Comprehensive Income—Translation Adjustment | <u>———</u> |               | 11,000      |
| Total Credits   |            |               | 168,200     |
| Total Cicalis   |            |               | 100,200     |

(a) From the January 1, 20X1, translation worksheet.

The foreign currency transaction loss is a component of the subsidiary's net income, and the Foreign Currency Units account is classified as a current asset on the subsidiary's balance sheet. The subsidiary's net income consists of the following elements:

| Sales                             | € 50,000 |
|-----------------------------------|----------|
| Cost of Goods Sold                | (22,500) |
| Operating Expenses                | (14,500) |
| Foreign Currency Transaction Loss | (500)    |
| Net Income                        | € 12,500 |

Because the European euro is the foreign entity's functional currency, the subsidiary's statements must be translated into U.S. dollars using the current rate method. The assets and liabilities are translated using the current exchange rate at the balance sheet date (\$1.40), the income statement accounts are translated using the average rate for the period (\$1.30), and the stockholders' equity accounts are translated using the appropriate historical exchange rates (\$1.20 and \$1.36). The dividends are translated at the October 1 rate (\$1.36), which was the exchange rate on the date the dividends were declared. The example assumes the dividends were paid on October 1, the same day they were declared. If the dividends had not been paid by the end of the year, the liability dividends payable would be translated at the current exchange rate of \$1.40 = \$1.

One of the analytical features provided by the current rate method is that many of the ratios management uses to manage the foreign subsidiary are the same in U.S. dollars as they are in the foreign currency unit. This relationship is true for the assets and liabilities of the balance sheet and the revenue and expenses of the income statement because the translation for these accounts uses the same exchange rate—the current rate for the assets and liabilities, and the average exchange rate for the income statement accounts. Thus, the scale of these accounts has changed but not their relative amounts within their respective statements. This relationship is not true when the ratio includes numbers from both the income statement and the balance sheet or when a stockholders' equity account is included with an asset or liability. The following table illustrates the relative relationships within the financial statements using the data in Figure 12–5:

|  | Measured<br>in € | Measured in U.S. \$ |
|--|------------------|---------------------|
| Current ratio:                               |                  |                     |
| Current assets                               | €29,250          | \$40,950            |
| Current liabilities                          | 3,000            | 4,200               |
| Current ratio                                | 9.75             | 9.75                |
| Cost of goods sold as a percentage of sales: |                  |                     |
| Cost of goods sold                           | €22,500          | \$29,250            |
| Sales  | 50,000           | 65,000              |
| Percent                                      | 45%              | 45%                 |

The translation adjustment in Figure 12–5 arises because the investee's assets and liabilities are translated at the current rate whereas other rates are used for the stockholders' equity and income statement account balances. Although the translation adjustment may be thought of as a balancing item to make the trial balance debits equal the credits, the effects of changes in the exchange rates during the period should be calculated to prove the accuracy of the translation process. This proof for 20X1, the acquisition year, is provided in Figure 12–6.

The proof begins with the determination of the effect of changes in the exchange rate on the beginning investment and on the elements that alter the beginning investment. Note that only events affecting the stockholders' equity accounts will change the net assets investment. In this example, the changes to the investment account occurred from income of €12,500 and dividends of €6,250. No changes occurred in the stock outstanding during the year. The beginning net investment is translated using the exchange rate at the beginning of the year. The income and dividends are translated using the exchange rate at the date the transactions occurred. The income was earned evenly over the year; thus, the average exchange rate for the period is used to translate income. The ending net assets position is translated using the exchange rate at the end of the year. The cumulative translation adjustment at the beginning of the year is zero in this example because the subsidiary was acquired on January 1, 20X1.

The Accumulated Other Comprehensive Income—Translation Adjustment account has a credit balance because the spot exchange rate at the end of the first period of ownership is higher than the exchange rate at the beginning of the period or the average for the period. If the exchange rate had decreased during the period, the translation adjustment would have had a debit balance. Another way of determining whether the accumulated

**FIGURE 12–6 Proof of Translation** Adjustment as of December 31, 20X1 European Euro Is the **Functional Currency** 

| PEERLESS PRODUCTS AND SUBSIDIARY Proof of Translation Adjustment Year Ended December 31, 20X1   |         |                  |                  |  |  |  |
|---|---------|------------------|------------------|--|--|--|
|   | €       | Translation Rate | \$               |  |  |  |
| Net assets at beginning of year Adjustment for changes in net assets position during year:  | 50,000  | 1.20             | 60,000           |  |  |  |
| Net income for year   | 12,500  | 1.30             | 16,250           |  |  |  |
| Dividends paid  | (6,250) | 1.36             | (8,500)          |  |  |  |
| Net assets translated at:<br>Rates during year<br>Rates at end of year  | 56,250  | 1.40             | 67,750<br>78,750 |  |  |  |
| Change in other comprehensive income—<br>net translation adjustment during year<br>Accumulated other comprehensive income—<br>translation adjustment, 1/1 |         |                  | 11,000           |  |  |  |
| Accumulated other comprehensive income—<br>translation adjustment, 12/31 (credit)   |         |                  | 11,000           |  |  |  |

translation adjustment has a debit or credit balance is to use balance sheet logic. For example, the subsidiary's translated balance sheet at the beginning of the year would be

| Translated Balance Sheet, 1/1/X1 |          |                                   |              |  |  |
|----------------------------------|----------|-----------------------------------|--------------|--|--|
| Net assets                       | \$60,000 | Common stock<br>Retained earnings | \$48,000<br> |  |  |
| Total                            | \$60,000 | Total                             | \$60,000     |  |  |

The translated balance sheet at the end of the year would be:

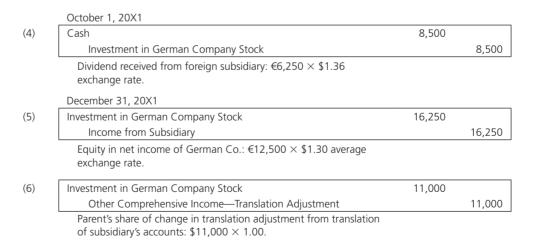

| Translated Balance Sheet, 12/31/X1 |                 |  |                    |  |  |
|------------------------------------|-----------------|--|--------------------|--|--|
| Net assets                         | \$78,750        | Common stock Retained earnings Accumulated other comprehensive income— | \$48,000<br>19,750 |  |  |
|                                    |                 | translation adjustment   | 11,000             |  |  |
| Total                              | <u>\$78,750</u> | Total  | <u>\$78,750</u>    |  |  |

Note that the \$11,000 is a credit balance in order to make the balance sheet "balance."

#### Entries on Parent Company's Books

The parent company makes entries on its books to recognize the dollar equivalent values of its share of the subsidiary's income, amortization of the excess of cost over book value, a cumulative translation adjustment for the parent's differential, and the dividends received from the foreign subsidiary. In addition, the parent company must recognize its share of the translation adjustment arising from the translation of the subsidiary's financial statements. The periodic change in the parent company's translation adjustment from the foreign investment is reported as a component of the parent company's other comprehensive income.

The entries that Peerless Products makes to account for its investment in German Company follow. Peerless Products received the dividend on October 1, 20X1, and immediately converted it to U.S. dollars as follows:

If some time passed between the declaration and payment of dividends, the parent company would record dividends receivable from the foreign subsidiary on the declaration date. This account would be denominated in a foreign currency and would be adjusted to its current exchange rate on the balance sheet date and on the payment date, just like any other account denominated in a foreign currency. Any foreign transaction gain or loss resulting from the adjustment procedure would be included in the parent's income for the period.

#### The Differential

The allocation and amortization of the excess of cost over book value require special attention in the translation of a foreign entity's financial statements. The differential does not exist on the foreign subsidiary's books; it is part of the parent's investment account. However, the translated book value of the foreign subsidiary is a major component of the investment account on the parent's books and is directly related to a foreign-based asset. ASC **830** requires that the allocation and amortization of the difference between the investment cost and its book value be made in terms of the foreign subsidiary's functional currency and that these amounts then be translated at the appropriate exchange rates on the worksheet balance sheet date. The periodic amortization affects the income statement and is therefore measured at the average exchange rate used to translate other income statement accounts. On the other hand, the remaining unamortized balance of the differential is reported in the balance sheet and is translated at the current exchange rate used for balance sheet accounts. The effect of this difference in rates is shown in the parent company's translation adjustment as a revision of part of its original investment in the subsidiary.

Peerless Products amortizes the patent over a five-year period. The patent amortization follows.

|  | European<br>Euros (€) | Translation<br>Rate | U.S.<br>Dollars (\$) |
|--|-----------------------|---------------------|----------------------|
| Income Statement                                   |                       |                     |                      |
| Differential at beginning of year                  | 2,500                 | 1.20                | 3,000                |
| Amortization this period (€5,000/5 years)          | (500)                 | 1.30                | (650)                |
| Remaining balances                                 | 2,000                 |                     | <u>2,350</u>         |
| <b>Balance Sheet</b> Remaining balance on 12/31/X1 |                       |                     |                      |
| translated at year-end exchange rates              | 2,000                 | 1.40                | <u>2,800</u>         |
| Difference to other comprehensive                  |                       |                     |                      |
| income—translation adjustment (credit)             |                       |                     | <u>450</u>           |

Another way to view the \$450 differential adjustment is that it adjusts the parent company's differential, which is currently part of the investment account, to the amount necessary to prepare the consolidated balance sheet. In this example, if no differential adjustment is made, the patent on the consolidated balance sheet would be \$2,350, which is incorrect. Because the balance sheet must report the patent translated at the end-of-period exchange rate of \$2,800, the differential adjustment is made to properly report the amount in the consolidated balance sheet. Thus, the adjustment may be thought of as an adjustment necessary to obtain the correct amount of the differential to prepare the consolidated balance sheet. Depending on the direction of the changes in the exchange rate, the differential adjustment could be a debit or credit amount. In this case, the differential must be increased from \$2,350 to \$2,800, necessitating a \$450 debit to the investment account and a corresponding credit to the Other Comprehensive Income—Translation Adjustment account.

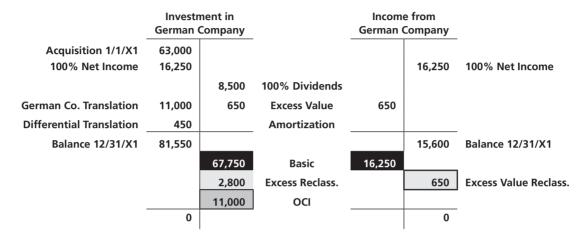

Entry (7) recognizes the amortization of the patent for the period. Entry (8) records the portion of the translation adjustment on the increase in the differential for the investment in the foreign subsidiary.

| (7) | Income from Subsidiary  | 650 |     |
|-----|---|-----|-----|
|     | Investment in German Company Stock  |     | 650 |
|     | Amortization of patent: $$650 = $500 \times $1.30$ average exchange rate. |     |     |
| (8) | Investment in German Company Stock  | 450 |     |
|     | Other Comprehensive Income—Translation Adjustment                         |     | 450 |

Recognize translation adjustment on increase in differential

This \$450 translation adjustment is attributable to the excess of cost paid over the book value of the assets and therefore is added to the differential, which is a component of the investment in the foreign subsidiary, thereby resulting in a debit to the investment account on the parent company's books.

The December 31, 20X1, balance in the Investment in German Company Stock account is \$81,550 and the balance in Income from German Company is \$15,600, as shown in the following T-accounts. A series of four worksheet entries (explained below) eliminates both accounts in the consolidation process.

Note that the \$11,450 Other Comprehensive Income—Translation Adjustment account balance in the parent company's books is composed of its share of the translation adjustment from translating the subsidiary's trial balance (\$11,000) plus the parent company's adjustment (\$450) due to the differential it paid for the investment.

During the parent company's closing entries process, the following two entries would be included to separately close net income from the subsidiary and the other comprehensive income arising from its investment in the subsidiary.

| (9)  | Income from Subsidiary  | 15,600 |        |
|------|---|--------|--------|
|      | Retained Earnings   |        | 15,600 |
|      | To close net income from subsidiary:                              |        |        |
|      | 15,600 = 16,250 - 650.  |        |        |
|      |   |        |        |
| (10) | Other Comprehensive Income—Trans. Adjustment                      | 11,450 |        |
|      | Accumulated OCI—Translation Adjustment                            |        | 11,450 |
|      | To close other comprehensive income resulting from the investment |        |        |
|      | in the German subsidiary:   |        |        |

## Subsequent Consolidation Worksheet

\$11,450 = \$11,000 + \$450.

The consolidation worksheet is prepared after the translation process is completed. The consolidation process is the same as for a domestic subsidiary except for two major differences: (1) The parent company will record its share of the translation adjustment arising from the translation of the foreign subsidiary's accounts. In this example, the parent owns 100 percent of the subsidiary, but, in cases of a less-than-wholly-owned subsidiary, the noncontrolling interest would be assigned its percentage share of the translation adjustment and (2) as shown previously, the patent amortization for the period is translated at the income statement rate (average for the period) whereas the ending patent balance is translated at the balance sheet rate (current exchange rate). Thus, a translation adjustment must be computed on the differential and assigned as part of the parent company's investment in the foreign subsidiary.

To prepare the elimination entries, we begin by analyzing the book value of the investment in German Company:

#### **Book Value Calculations:**

|                             | Peerless 100% | = | Common Stock | + | Retained Earnings |
|-----------------------------|---------------|---|--------------|---|-------------------|
| Beginning book value        | 60,000        |   | 48,000       |   | 12,000            |
| + Net Income                | 16,250        |   |              |   | 16,250            |
| <ul><li>Dividends</li></ul> | (8,500)       |   |              |   | (8,500)           |
| Ending book value           | 67,750        |   | 48,000       |   | 19,750            |

This leads to the basic elimination entry:

#### **Basic Elimination Entry:**

| Retained earnings 12,0 | Common stock balance  Common stock balance  Beginning balance in retained earning  German Company's reported income  100% of German's dividends declared  Net book value in investment account |
|------------------------|--|
|------------------------|--|

The \$3,000 differential is entirely attributable to the patent; nevertheless, because it arises from the acquisition of a foreign subsidiary, we provide these calculations that illustrate the translation adjustment for the differential:

#### **Excess Value (differential) Calculation:**

|   | Total Excess                   | = Patent                       |
|---|--------------------------------|--------------------------------|
| Beginning excess value  - Amortization of differential  + Differential translation adjustment Ending excess value | 3,000<br>(650)<br>450<br>2,800 | 3,000<br>(650)<br>450<br>2,800 |

Note that the adjustments for \$650 and \$450 were already explained in entries (7) and (8).

#### **Amortized Excess Value Reclassification Entry:**

| Operating expense 650 Income from German Co. |  | ← Amortization of patent<br>← Elimination of patent amortization |
|--|--|--|
|--|--|--|

#### **Excess Value (differential) Reclassification Entry:**

| Patent                   | 2,800 |       | ←Excess value assigned to patent      |
|--------------------------|-------|-------|---------------------------------------|
| Investment in German Co. |       | 2,800 | ← Reclassify excess acquisition price |

In addition, we record the other comprehensive income entry illustrated in Chapter 5:

#### Other Comprehensive Income Entry:

| OCI from German Co.    | 11,000     |
|------------------------|------------|
| Investment in German ( | Co. 11,000 |

Finally, we include the optional accumulated depreciation elimination entry:

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 6,000 |       | Accumulated depreciation at the time   |
|--------------------------|-------|-------|--|
| Building and equipment   |       | 6,000 | of the acquisition netted against cost |

| Other Comprehensive Income Translation Adjustment | 11,450    | 11,000   | 11,000     |                 | 11,450       |
| Accumulated Other Comprehensive Income, 12/31/X1  | 11,450    | 11,000   | 11,000     | 0               | 11,450       |

See Figure 12–7 for the worksheet. The trial balance for German Company is obtained from the translated amounts computed earlier in Figure 12-5. The worksheet entries follow in journal entry form. These entries are not made on either company's books; they are only in the worksheet elimination columns.

When the parent company uses the equity method and no intercompany revenue transactions occur, the parent's net income and retained earnings equal the consolidated net income and consolidated retained earnings. This makes it possible to verify the amounts reported on the consolidated financial statements.

## Noncontrolling Interest of a Foreign Subsidiary

Most U.S. companies prefer to own 100 percent of their foreign subsidiaries. Doing so provides for more efficient management of the subsidiary and no requirement to prepare separate financial statements of the subsidiary for a noncontrolling interest. If a foreign subsidiary was less than wholly owned, however, the noncontrolling interest would be computed and accounted for just as it was in Chapter 3 of this text. The only difference is the allocation of the translation adjustment that arises from the translation of the foreign subsidiary's trial balance accounts. Thus, for example, if Peerless had an 80 percent interest in German Company and another investor owned a 20 percent noncontrolling interest, the noncontrolling interest would be allocated its percentage share of the translation adjustment through the elimination entry process. The noncontrolling interest on the consolidated balance sheet at year-end would include its share of the accumulated other comprehensive income from the translation adjustment, as follows:

| Common stock (\$48,000 × 0.20)                        |         | \$ 9,600                                |
|---|---------|---|
| Retained earnings:                                    |         |   |
| Beginning retained earnings ( $$12,000 \times 0.20$ ) | \$2,400 |   |
| Add: Net income (\$16,250 × 0.20)                     | 3,250   |   |
| Less: Dividends ( $\$8,500 \times 0.20$ )             | (1,700) |   |
| Total retained earnings                               |         | 3,950                                   |
| Accumulated other comprehensive income—               |         | ,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,, |
| translation adjustment ( $\$11,000 \times 0.20$ )     |         | 2,200                                   |
| Total noncontrolling interest                         |         | \$15,750                                |
| lotal horicontrolling interest                        |         | <u>#15,750</u>                          |

Figure 12-8's consolidated statement of changes in stockholder's equity shows how the income statement and other comprehensive income accounts flow to the balance sheet's equity ending balances.

## REMEASUREMENT OF THE BOOKS OF RECORD INTO THE **FUNCTIONAL CURRENCY**

LO 12-6

Make calculations and remeasure financial statements of a foreign subsidiary.

A second method of restating foreign affiliates' financial statements in U.S. dollars is remeasurement. Although remeasurement is not as commonly used as translation, some situations in which the foreign affiliate's functional currency is not its local currency exist. Remeasurement is similar to translation in that its goal is to obtain equivalent U.S. dollar values for the foreign affiliate's accounts so they may be combined or consolidated with the U.S. company's statements. The exchange rates used for remeasurement, however, are different from those used for translation, resulting in different dollar values for the foreign affiliate's accounts.

The FASB provided examples of several situations requiring remeasurement:<sup>7</sup>

- 1. A foreign sales branch or subsidiary of a U.S. manufacturer that primarily takes orders from foreign customers for U.S.-manufactured goods, that bills and collects from foreign customers, and that might have a warehouse to provide for timely delivery of the product to those foreign customers. In substance, this foreign operation may be the same as the export sales department of a U.S. manufacturer.
- 2. A foreign division, branch, or subsidiary that primarily manufactures a subassembly shipped to a U.S. plant for inclusion in a product that is sold to customers located in the United States or in different parts of the world.
- 3. A foreign shipping subsidiary that primarily transports ore from a U.S. company's foreign mines to the United States for processing in a U.S. company's smelting plants.
- 4. A foreign subsidiary that is primarily a conduit for euro borrowings to finance operations in the United States.

In most cases, the foreign affiliate may be thought of as a direct production or sales arm of the U.S. company, but it uses the local currency to record and report its operations. In addition, foreign entities located in highly inflationary economies, defined as economies having a cumulative three-year inflation rate exceeding 100 percent, must use the dollar as their functional currency, and their statements are remeasured into U.S. dollars. Many South American countries have experienced hyperinflation with some countries having annual inflation rates in excess of 100 percent. If the foreign affiliate uses the U.S. dollar as both its functional and its reporting currency, no remeasurement is necessary because its operations are already reported in U.S. dollars.

The remeasurement process should produce the same end result as if the foreign entity's transactions had been initially recorded in dollars. For this reason, certain transactions and account balances are restated to their U.S.-dollar equivalents using a historical exchange rate, the spot exchange rate at the time the transaction originally occurred. The remeasurement process divides the balance sheet into monetary and nonmonetary accounts. Monetary assets and liabilities such as cash, short-term or long-term receivables, and short-term or long-term payables have their amounts fixed in terms of the units of currency. They represent amounts that will be received or paid in a fixed number of monetary units. Note that an exception to the general statement in Figure 12-9 about marketable securities applies to trading and available-for-sale securities. Because they are marked to market at each reporting date, they are considered monetary assets and are remeasured using current rates. These accounts are subject to gains or losses from changes in exchange rates. Nonmonetary assets are accounts such as inventories and plant and equipment, which are not fixed in relation to monetary units.

The monetary accounts are remeasured using the current exchange rate. The appropriate historical exchange rate is used to remeasure nonmonetary balance sheet account balances and related revenue, expense, gain, and loss account balances. A list of the accounts to be remeasured with the appropriate historical exchange rate is provided in Figure 12–9 (ASC 830-10-45-18).

Because of the variety of rates used to remeasure the foreign currency trial balance, the debits and credits of the U.S. dollar-equivalent trial balance will probably not be equal. In this case, the balancing item is a *remeasurement gain or loss*, which is included in the period's income statement (i.e., not in other comprehensive income).

<sup>&</sup>lt;sup>7</sup> These examples were provided in the exposure draft of **ASC 830** but were not included in its final draft. The FASB did not want the examples to limit remeasurement to those cases in which the U.S. dollar is the functional currency.

FIGURE 12-9 Accounts to Be **Remeasured Using Historical Exchange** Rates

#### **Examples of Balance Sheet Nonmonetary Items**

Marketable securities:

Equity securities

Debt securities not intended to be held until maturity

Inventories

Prepaid expenses such as insurance, advertising, and rent

Property, plant, and equipment

Accumulated depreciation on property, plant, and equipment

Patents, trademarks, licenses, and formulas

Goodwill

Other intangible assets

Deferred charges and credits except deferred income taxes and policy acquisition costs for life insurance companies

Deferred income

Common stock

Preferred stock carried at issuance price

#### **Examples of Revenue and Expenses Related to Nonmonetary Items**

Cost of goods sold

Depreciation of property, plant, and equipment

Amortization of intangible items such as patents, licenses, etc.

Amortization of deferred charges or credits, except deferred income taxes and policy acquisition costs for life insurance companies

#### Statement Presentation of Remeasurement Gain or Loss

Any exchange gain or loss arising from the remeasurement process is included in the current period income statement, usually under "Other Income." Various account titles are used, such as Foreign Exchange Gain (Loss), Currency Gain (Loss), Exchange Gain (Loss), or Remeasurement Gain (Loss). The title Remeasurement Gain (Loss) is used here because it is most descriptive of the item's source. The remeasurement gain or loss is included in the period's income because if the transactions had originally been recorded in U.S. dollars, the exchange gains and losses would have been recognized this period as part of the adjustments required for valuation of foreign transactions denominated in a foreign currency. Upon completion of the remeasurement process, the foreign entity's financial statements are presented as they would have been had the U.S. dollar been used to record the transactions in the local currency as they occurred.

#### Illustration of Remeasurement of a Foreign Subsidiary

German Company again is used, this time to present remeasurement of financial statements. The only difference between the previous example of translation and the current example is that the foreign subsidiary's functional currency is now assumed to be the U.S. dollar rather than the European euro. German Company maintains its books and records in euros to provide required reports to the German government. Because the dollar is the functional currency, German Company's financial statements will be remeasured into dollars. Once the foreign affiliate's statements are remeasured, the consolidation process is the same as for a domestic subsidiary.

#### Remeasurement of Foreign Subsidiary's Postacquisition Trial Balance

The subsidiary's trial balance must be remeasured from the European euro into the U.S. dollar as shown in Figure 12–10. The current exchange rate is used to remeasure the monetary accounts, and the appropriate historical exchange rates are used for each of the nonmonetary accounts.

Three items need special attention. First, the plant and equipment are remeasured using the historical rate on the date the parent company acquired the foreign subsidiary. If the subsidiary purchases any additional plant or equipment after the parent has acquired the subsidiary's stock, the additional plant or equipment will be remeasured using the

**FIGURE 12-10** December 31, 20X1, Remeasurement of the Foreign Subsidiary's **Trial Balance** U.S. Dollar Is the Functional Currency

<sup>(</sup>c) Carry forward from January 1, 20X1, worksheet.

exchange rate on the date of the purchase of the additional plant. The same cautionary note is applicable to the other nonmonetary items. It is important to maintain a record of the subsidiary's acquisition or disposition of nonmonetary assets and equities after the foreign subsidiary's stock is acquired to ensure use of the proper exchange rates to remeasure these items. Recall that the business combination was accounted for as a purchase; therefore, the appropriate historical rate is the spot rate on the date the parent purchased the foreign subsidiary's stock.

Second, the cost of goods sold consists of transactions that occurred at various exchange rates. The beginning inventory was acquired when the rate was \$1.20 = \$1. Inventory purchases were made at different times during the year, so the average rate of \$1.30 was used for the remeasurement exchange rate. For purposes of illustration, the example assumes that ending inventory was acquired when the direct exchange rate was \$1.38 = €1 and the FIFO inventory method is used.

Third, the operating expenses are also incurred at different exchange rates. The depreciation expense is remeasured at \$1.20 = €1 because it is associated with a nonmonetary account, Plant and Equipment, which is remeasured at the historical exchange rate of \$1.20 = \$1. The average exchange rate is used to remeasure the remaining operating expenses because they are assumed to be incurred evenly throughout the period.

| Remeasurement gain  |                     |   | 1,000   |  |  |  |  |

The remeasurement gain is recognized in this period's income statement. The remeasurement exchange gain is a balancing item to make total debits and total credits equal, but it can be proved by analyzing changes in the monetary items during the period.

## **Proof of Remeasurement Exchange Gain**

Figure 12-11 provides a proof of this balancing item. The analysis primarily involves the monetary items because they are remeasured from the exchange rate at the beginning of the period or on the date of the generating transaction to the current exchange rate at the end of the period. The increase or decrease in net monetary assets resulting from remeasurement is recognized as an exchange gain or loss in the current period.

Schedule 1 presents the net monetary positions at the beginning and end of the year. The €11,250 change in the net monetary position is the change from a net liability opening balance of €2,500 to a net monetary asset position ending balance of €8,750. Schedule 2 presents the detailed effects of exchange rate changes on the foreign entity's net monetary position during this period. The beginning net monetary position is included using the exchange rate at the beginning of the year. Then all increases and decreases in the net monetary accounts are added or deducted using the exchange rates at the time the transactions occurred. Other sources of increases or decreases in the monetary accounts would include financing and investing transactions such as purchases of plant or equipment, issuance of long-term debt, or selling stock. The computed net monetary position at the end of the year using the transaction date exchange rates (\$11,250) is then compared with the year-end net monetary position using the year-end exchange rate (\$12,250). Because of the increasing exchange rate, the net asset position at the year-end was higher when remeasured using the December 31, 20X1, exchange rate of \$1.40. This means that the U.S. dollar-equivalent value of the net monetary assets at year-end increased from \$11,250 to \$12,250 and that a remeasurement gain of \$1,000 should be recognized. If the U.S. dollar-equivalent value of the December 31, 20X1, exposed net monetary assets position, as remeasured with the December 31 exchange rate, would have been lower than the computed value of \$11,250, then a remeasurement loss would have been recognized for the reduction in the U.S. dollar-equivalent value of the net assets.

#### Remeasurement Case: Subsequent Consolidation Worksheet

Figure 12-12 presents the consolidation worksheet for the remeasurement case. The accounts used for German Company in the consolidation worksheet come from the remeasured accounts computed in Figure 12-10. The remeasurement gain is included in the German subsidiary's trial balance because the source of this account is the remeasurement of the subsidiary's accounts.

In the consolidated income statement, the Remeasurement Gain account is usually offset against the foreign currency transaction loss account, generating, in this example, a net gain of \$350 (\$1,000 - \$650). This gain is reported in the other income section of the income statement. The remaining consolidation process is identical to the process for a domestic subsidiary. Note that the \$2,400 patent shown on the consolidated balance sheet is the unamortized portion of the initial \$3,000 amount (\$2,400 = \$3,000 - \$600). No special adjustments are required for the patent when using the remeasurement process.

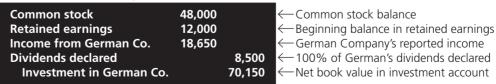

To prepare the elimination entries, we begin by analyzing the book value of the investment in German Company:

### **Book Value Calculations:**

|                             | Peerless 100%               | =  | Common Stock   | +                    | Retained Earnings                          |

| Ending book value           | 70,150                      |  | 48,000   |                      | 22,150                                     |
|                             | + Net Income<br>- Dividends | Beginning book value + Net Income 18,650 - Dividends (8,500) | Beginning book value + Net Income - Dividends  60,000 18,650 (8,500) | Beginning book value | + Net Income 18,650<br>- Dividends (8,500) |

This leads to the basic elimination entry:

#### **Basic Elimination Entry:**

The differential is entirely attributable to the patent, \$3,000; nevertheless, because it arises from the acquisition of a foreign subsidiary, we provide the following

LO 12-7

Prepare consolidated finana foreign subsidiary after remeasurement.

|--------------------------|-------|-------|---------------------------------------|
| Investment in German Co. |       | 2,400 | ← Reclassify excess acquisition price |

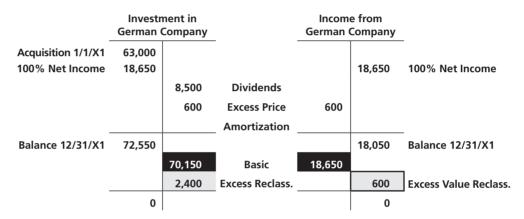

Finally, we include the optional accumulated depreciation elimination entry:

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 6,000 |       | Accumulated depreciation at the  |
|--------------------------|-------|-------|----------------------------------|
| •                        | 0,000 | 6.000 | ← time of the acquisition netted |
| Building and equipment   |       | 6,000 | against cost                     |

A comparison of Figures 12–7 and 12–12 shows that the foreign subsidiary's reported income between translation and remeasurement differs. The primary reason that the subsidiary's reported income is approximately 15 percent higher when the dollar is the functional currency (\$18,650 versus \$16,250 under translation) is that the U.S. dollar weakened against the European euro during the year. This results in a remeasurement gain for the subsidiary because it was transacting in the stronger currency (the euro) during the period. Furthermore, the subsidiary's cost of goods sold and operating expenses also are remeasured at a lower exchange rate, resulting in a higher income.

The following T-accounts illustrate the calculation of the ending balances for Peerless' Investment in German Company and Income from German Company accounts and how the worksheet entries eliminate their balances:

#### **Summary of Translation versus Remeasurement**

When the functional currency is the dollar, the nonmonetary items on the balance sheet are remeasured using historical exchange rates. In this example, the direct exchange rate has increased during the period; therefore, the nonmonetary accounts are lower when remeasured than when translated. See Figure 12-13 for a summary of the differences between the translation and remeasurement methods.

## ADDITIONAL CONSIDERATIONS IN ACCOUNTING FOR FOREIGN **OPERATIONS AND ENTITIES**

LO 12-8

Understand other issues related to foreign operations including hedging of a net investment in a foreign

This section covers special topics in accounting for multinational enterprises. Although many of these additional considerations are very technical, study of this section will complement your understanding of the many issues of accounting for foreign entities. For example, Figure 12–14 illustrates the two-statement approach to display comprehensive income.

#### FOREIGN INVESTMENTS AND UNCONSOLIDATED SUBSIDIARIES

Most companies consolidate their foreign subsidiaries in conformity with ASC 810 and ASC 840. In some cases, these operations are not consolidated because of criteria that apply to foreign subsidiaries. Generally, a parent company consolidates a foreign subsidiary

FIGURE 12–13 Summary of the Translation and Remeasurement Processes

| Item  | Translation Process  | Remeasurement Process  |

except when one of the following conditions becomes so severe that the U.S. company owning a foreign company may not be able to exercise the necessary level of economic control over the foreign subsidiary's resources and financial operations to warrant consolidation:

- 1. Restrictions on foreign exchange in the foreign country.
- 2. Restrictions on transfers of property in the foreign country.
- 3. Other governmentally imposed uncertainties.

An unconsolidated foreign subsidiary is reported as an investment on the U.S. parent company's balance sheet. The U.S. investor company must use the equity method if it has the ability to exercise "significant influence" over the investee's financial and operating policies. If the equity method cannot be applied, the cost method is used to account for the foreign investment, recognizing income only as dividends are received.

When the equity method is used for an unconsolidated foreign subsidiary, the investee's financial statements are either remeasured or translated, depending on the determination of the functional currency. If remeasurement is used, the foreign entity's statements are

remeasured in dollars and the investor records its percentage of the investee's income and makes necessary amortizations or impairments of any differential. A shortcut approach is available for translation: Multiply the foreign affiliate's net income measured in foreign currency units by the average exchange rate during the period and then recognize the parent company's percentage share of the translated net income. In addition, the investor must recognize its share of the translation adjustment arising from the translation of the foreign entity's financial statements. The investor's share of the translation adjustment from its foreign investees is reported on the investor's balance sheet as a separate component of stockholders' equity and as an adjustment of the carrying value of the investment account. The entries on the investor's books are the same under the equity method whether the subsidiary is consolidated or reported as an unconsolidated investment.

## Liquidation of a Foreign Investment

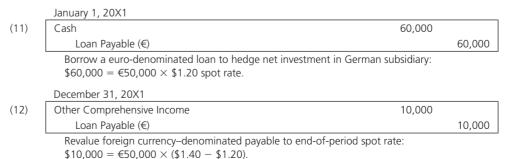

The translation adjustment account is directly related to a company's investment in a foreign entity. If the investor sells a substantial portion of its stock investment, ASC 830 requires that the pro rata portion of the accumulated translation adjustment account attributable to that investment be included in computing the gain or loss on the disposition of the investment. For example, if the parent company sold 30 percent of its investment in a foreign subsidiary, 30 percent of the related cumulative translation adjustment would be removed from the translation adjustment account and included in determining the gain or loss on the disposition of the foreign investment.

#### HEDGE OF A NET INVESTMENT IN A FOREIGN SUBSIDIARY

ASC 815 permits the hedging of a net investment in foreign subsidiaries. For example, Peerless has a net investment of €50,000 in its German subsidiary for which it paid \$66,000. Peerless could decide to hedge all, some, or none of this investment by accepting a liability in euros. Peerless could hedge its net asset investment by contracting for a forward exchange contract to sell euros, or the company could incur a euro-based liability. **ASC 815** states that the gain or loss on the effective portion of a hedge of a net investment is taken to other comprehensive income as part of the translation adjustment. However, the amount of offset to comprehensive income is limited to the translation adjustment for the net investment. For example, if the forward exchange rate is used to measure effectiveness, the amount of offset is limited to the change in spot rates during the period. Any excess on the ineffective portion of the hedge must be recognized currently in earnings.

For example, on January 1, 20X1, Peerless decides to hedge the portion of its investment that it just made in German Company that is related to the book value of German Company's net assets. Peerless is unsure whether the direct exchange rate for euros will increase or decrease for the year and wishes to hedge its net asset investment. On January 1, 20X1, Peerless' 100 percent ownership share of German Company's net assets is equal to €50,000 (€40,000 capital stock plus €10,000 retained earnings). Peerless borrows €50,000 at a 5 percent rate of interest to hedge its equity investment in German Company, and the principal and interest are due and payable on January 1, 20X2.

The entries on Peerless' books to account for this hedge of a net investment follow:

| (13) | Interest Expense  | 3,250  |        |
|------|---|--------|--------|
|      | Foreign Currency Transaction Loss   | 250    |        |
|      | Interest Payable (€)  |        | 3,500  |
|      | Accrue interest expense and payable on euro loan:                         |        |        |
|      | $3,250 = 50,000 \times 0.05$ interest $\times 1.30$ average exchange rate |        |        |
|      | $3,500 = 50,000 \times 0.05$ interest $\times 1.40$ ending spot rate.     |        |        |
| (14) | Accumulated OCI—Translation Adjustment                                    | 10,000 |        |
|      | Profit and Loss Summary (or Retained Earnings)                            | 250    |        |
|      | Foreign Currency Transaction Loss   |        | 250    |
|      | Other Comprehensive Income  |        | 10,000 |
|      |   |        |        |

Close nominal accounts related to hedge of net investment in foreign subsidiary.

Then, when the principal and interest are paid on January 1, 20X2, Peerless makes the following entry:

|      | January 1, 20X2      |        |
|------|----------------------|--------|
| (15) | Interest Payable (€) | 3,500  |
|      | Loan Payable (€)     | 70,000 |
|      | Cash                 | 73,500 |

Pay principal and interest due on euro-denominated hedge: \$70,000 = \$60,000 + \$10,000.

During 20X1, Peerless hedged a portion of its net asset investment in the foreign subsidiary. The dollar weakened against the euro (the direct exchange rate increased) and Peerless recognized a gain on a net asset investment in euros and a loss on a liability payable in euros. Without this hedge of the net investment, Peerless would have reported a \$11,450 credit balance in the cumulative translation portion of accumulated other comprehensive income (\$11,450 = \$11,000 + \$450 differential adjustment). With the hedge of its net investment, Peerless will report just \$1,450 (\$11,450 - \$10,000 effect of hedge) as its change in the cumulative translation adjustment for 20X1. Thus, Peerless has balanced a portion of its net exposure on its January 1, 20X1, net asset investment in German Company.

Note also that the amount of the offset to other comprehensive income is limited to the effective portion of the hedge based on the revaluation of the net assets. Any excess, in this case the \$250 loss on the revaluation of the interest payable in entry (14), is taken directly to current earnings on the income statement.

## DISCLOSURE REQUIREMENTS

ASC 830 requires the aggregate foreign transaction gain or loss included in income to be separately disclosed in the income statement or in an accompanying note. This includes gains or losses recognized from foreign currency transactions, forward exchange contracts, and any remeasurement gain or loss. If not disclosed as a one-line item on the income statement, this disclosure is usually a one-sentence footnote summarizing the company's foreign operations.

Under the translation method, the periodic change in the translation adjustment is reported as an element of other comprehensive income as required by ASC 220. Figure 12–14 presents the two-statement approach to displaying comprehensive income. The consolidated statement of comprehensive income presents the detail of the parent's other comprehensive income of \$11,450. Review Figure 12–8 for the statement of changes in equity that reconciles all of the elements of stockholders' equity. The balance sheet would then display the capital stock, retained earnings, and accumulated other comprehensive income in the stockholders' equity section. In addition, ASC 830 requires footnote disclosure of exchange rate changes that occur after the balance sheet date and their effect on unsettled foreign currency transactions, if significant.

#### Statement of Cash Flows

The statement of cash flows is a link between two balance sheets. Individual companies have some latitude and flexibility in preparing the statement of cash flows. A general rule is that accounts reported in the statement of cash flows should be restated in U.S. dollars using the same rates as used for balance sheet and income statement purposes. Because the average exchange rate is used in the income statement and the ending spot exchange rate (current rate) is used in the balance sheet, a balancing item for the differences in exchange rates appears in the statement of cash flows. This balancing item can be analyzed and traced to the specific accounts that generate the difference, but it does not affect the net change in the cash flow for the period.

## Lower-of-Cost-or-Market Inventory Valuation under Remeasurement

The application of the lower-of-cost-or-market rule to inventories requires special treatment when the recording currency is not the entity's functional currency and, therefore, the foreign entity's financial statements must be remeasured into the functional currency. The historical cost of inventories must first be remeasured using historical exchange rates to determine the functional currency historical cost value. Then these remeasured costs are compared with the market value of the inventories translated using the current rate. The final step is to compare the cost and market, now both in the functional currency, and to recognize any appropriate write-downs to market. The comparison is made in functional currency values, not local or recording currency values; therefore, it is possible to have a write-down appear in the functional currency statements but not on the subsidiary's books, or on the subsidiary's books but not in the consolidated statements.

To illustrate the application of the lower-of-cost-or-market method, assume that a German subsidiary acquired €5,000 of inventory when the direct exchange rate was \$1.38 = €1. At the end of the year, the direct exchange rate had decreased to \$1.20 = €1. The estimated net realizable value of the inventory (ceiling) is €5,500; its replacement cost is €5,000; and the net realizable value less a normal profit margin (floor) is €4,000. The inventory valuation is first specified in the local currency unit (euro) and then evaluated after remeasurement into its functional currency, the U.S. dollar, using the end-of-period exchange rate, as follows:

|   | €                       | Exchange               | U.S. \$                 |
|---|-------------------------|------------------------|-------------------------|
| Historical cost   | 5,000                   | \$1.38                 | 6,900                   |
| Net realizable value (ceiling)<br>Replacement cost<br>Net realizable value less normal profit (floor) | 5,500<br>5,000<br>4,000 | \$1.20<br>1.20<br>1.20 | 6,600<br>6,000<br>4,800 |

The market value of the inventory is €5,000, or \$6,000. Note that the subsidiary recorded no write-down because the inventory's historical cost was the same as market. However, the comparison in functional currency (U.S. dollar) values shows that the U.S. parent requires a \$900 write-down to write the inventory down from its functional currency historical cost of \$6,900 to its functional currency market value of \$6,000.

#### **Intercompany Transactions**

A U.S. parent or home office may have many intercompany sales or purchases transactions with its foreign affiliate that create intercompany receivables or payables. The process of translating receivables or payables denominated in a foreign currency was discussed in Chapter 11. For example, assume that a U.S. company has a foreign currency-denominated receivable from its foreign subsidiary. The U.S. company would first revalue the foreign currency-denominated receivable to its U.S. dollar-equivalent value as of the date of the financial statements. After the foreign affiliate's statements have been translated or remeasured, depending on the foreign affiliate's functional currency, the intercompany payable and receivable should be at the same U.S. dollar value and can be eliminated.

ASC 830 provides an exception when the intercompany foreign currency transactions will not be settled within the foreseeable future. These intercompany transactions may be considered part of the net investment in the foreign entity. The translation adjustments on these long-term receivables or payables are deferred and accumulated as part of the cumulative translation account. For example, a U.S. parent company may loan its German subsidiary \$10,000 for which the parent does not expect repayment for the foreseeable future. Under the translation method, the subsidiary's dollar-denominated loan payable account would first be adjusted for the effects of any changes in exchange rates during the period. Any exchange gain or loss adjustment relating to this intercompany note should be classified as part of the cumulative translation adjustment account in stockholders' equity, not in the subsidiary's net income for the period. The same result would occur whether the longterm intercompany financing was denominated in U.S. dollars or the local currency—in our example, the euro. Thus, when financing is regarded as part of the long-term investment in the foreign entity, any exchange gain or loss adjustments on that financing are accumulated in the cumulative translation adjustment account in stockholders' equity.

A particularly interesting problem arises when unrealized intercompany profits occur from transactions between the parent and foreign subsidiary. The problem is how to eliminate the profit across currencies that are changing in value relative to each other. For example, assume that the parent, Peerless Products Corporation, made a downstream sale of inventory to its German subsidiary. The goods cost the parent \$10,000 but were sold to the subsidiary for  $\leq 10,000$  when the exchange rate was  $\leq 1.30 = \leq 1$ , resulting in an intercompany profit of \$3,000 (\$13,000 - \$10,000). The goods are still in the subsidiary's inventory at the end of the year when the current exchange rate is \$1.40 = \$1. The relevant facts are summarized as follows:

|   | Measured in U.S. Dollars | Measured in<br>European Euros |
|---|--------------------------|-------------------------------|
| Initial inventory transfer date ( $\$1.30 = \$1$ ):<br>Selling price ( $\$10,000 \times \$1.30$ )<br>Cost to parent | 13,000<br>(10,000)       | 10,000                        |
| Intercompany profit   | 3,000                    |                               |
| Balance sheet date ( $\$1.40 = \$1$ ):<br>Inventory translation ( $\$14,000 = \$10,000 \times \$1.40$ )             | 14,000                   | 10,000                        |

#### There are two issues here:

- 1. At what amount should the ending inventory be shown on the consolidated balance sheet—the original intercompany transfer price of \$13,000 (€10,000 × \$1.30), the present equivalent exchange value of \$14,000 (€10,000 × \$1.40 current exchange rate), or some other amount?
- 2. What amount should be eliminated for the unrealized intercompany gain—the original intercompany profit of \$3,000 or the balance sheet date exchange equivalent of the intercompany profit of \$4,000 (\$14,000 present exchange value less \$10,000 original cost to parent)?

ASC 830 provides the following guidance to answer these questions (ASC 830-30-45-10):

The elimination of intra-entity profits that are attributable to sales or other transfers between entities that are consolidated, combined, or accounted for by the equity method in the reporting entity's financial statements shall be based on the exchange rates at the dates of the sales or transfers. The use of reasonable approximations or averages is permitted.

Therefore, for the example, the elimination entry for the intercompany profit is

| Cost of Goods Sold | 3,000 |       |
|--------------------|-------|-------|
| Ending Inventory   |       | 3,000 |

The inventory is shown on the consolidated balance sheet at \$11,000, which is a \$1,000 increase over the initial cost to the parent company. This increase will result in a corresponding increase in a credit to the translation adjustment component of stockholders' equity. The FASB has stated that changes in exchange rates occurring after the date of the intercompany transaction are independent of the initial inventory transfer.

#### **Income Taxes**

Interperiod tax allocation is required whenever temporary differences exist in the recognition of revenue and expenses for income statement purposes and for tax purposes. Exchange gains and losses from foreign currency transactions require the recognition of a deferred tax if they are included in income but not recognized for tax purposes in the same period.

A deferral is required for the portion of the translation adjustment related to the subsidiary's undistributed earnings that are included in the parent's income. ASC 740 presumes that a temporary difference exists for undistributed earnings of a subsidiary unless the earnings are indefinitely reinvested in it. Deferred taxes need not be recognized if the undistributed earnings will be indefinitely reinvested in the subsidiary. However, if the parent expects eventually to receive the presently undistributed earnings of a foreign subsidiary, deferred tax recognition is required, and the tax entry recorded by the parent should include a debit to Other Comprehensive Income rather than to additional income tax, as follows:

(16)Other Comprehensive Income—Translation Adjustment X.XXX **Deferred Taxes Payable** X,XXX

#### Translation When a Third Currency Is the Functional Currency

In a few cases, the foreign subsidiary maintains its books and records in the local currency unit but has a third currency as its functional currency. For example, assume that our subsidiary, German Company, maintains its records in its local currency, the euro. If the subsidiary conducts many of its business activities in the Swiss franc, management may conclude that the Swiss franc is the subsidiary's functional currency. If the entity's books and records are not expressed in its functional currency, the following two-step process must be used:

- 1. Remeasure the subsidiary's financial statements into the functional currency. In our example, the financial statements expressed in euros would be remeasured into Swiss francs. The remeasurement process would be the same as illustrated earlier in the chapter. The statements would now be expressed in the entity's functional currency, the Swiss franc.
- 2. The statements expressed in Swiss francs are then translated into U.S. dollars using the translation process illustrated in the chapter.

As indicated, this occurrence is not common in practice but is a consideration for foreign subsidiaries that have very significant business activities in a currency other than the currency of the country in which the subsidiary is physically located. This discussion indicates that it is important first to determine the foreign entity's functional currency before beginning the translation process.

# Summary of **Key Concepts**

The restatement of a foreign affiliate's financial statements in U.S. dollars may be made using the translation or remeasurement method, depending on the foreign entity's functional currency. Most foreign affiliates' statements are translated using the current rate method because the local currency unit is typically the functional currency. If the U.S. dollar is the functional currency, remeasurement is used to convert the foreign entity's statements from the local currency into dollars. The choice of functional currency affects the valuations of the foreign entity's accounts reported on the consolidated financial statements.

Because translation or remeasurement is performed with different exchange rates applied to balance sheet and income statement accounts, a balancing item called a "translation adjustment" or "remeasurement gain or loss" is created in the process. The translation adjustment is proportionally divided between the parent company and the noncontrolling interest. The parent company's share, adjusted for the effects from the differential paid for the investment, is reported as a component of other comprehensive income and then accumulated in the stockholders' equity section of the consolidated balance sheet. The noncontrolling interest's share is a direct adjustment to noncontrolling interest reported in the consolidated balance sheet. The remeasurement gain or loss is reported in the consolidated income statement.

# **Key Terms**

accumulated other comprehensive income, 623 average rate, 617 comprehensive income, 623 current rate, 617 current rate method, 620 functional currency, 617

reporting currency.

|         |        |   |

### Cases

### C12-1 Comparison of U.S. GAAP and IFRS

### Research

PricewaterhouseCoopers offers a publication on its website entitled "IFRS and US GAAP: Similarities and Differences that provides a topic-based comparison. Access this publication on the Web at http://www.pwc.com/us/en/issues/ifrs-reporting/publications/ifrs-and-us-gaap-similarities-anddifferences.jhtml. On page 17 of this publication, there is a table of contents by reporting issue. Select any three of the items and read about the nature of the differences. Prepare a short paper approximately 2-3 pages long that defines the nature of the differences and discusses what you have found.

### LO 12-1 C12-2 Structure of the IASB

The IASB website can be found at www.ifrs.org. At the top of the page, click on the link "About Research Us." Briefly describe the structure of the IASB.

### LO 12-1 C12-3 **IASB Deliberations**

### Research

The IASB website can be found at www.ifrs.org. Access the website and click on the link at the top of the page for Standards development/Work plan for IFRSs. You may also access this page by going directly to http://www.ifrs.org/Current+Projects/IASB+Projects/IASB+Work+Plan.htm. What are three projects currently on the active agenda that are being addressed by the IASB? What is the timetable identified for milestones on each of the projects? What is the status of the Conceptual Framework project?

### LO 12-2 **Determining a Functional Currency** C12-4

Following are descriptions of several independent situations.

### Judgment

- 1. Rockford Company has a subsidiary in Argentina. The subsidiary does not have much debt because of the high interest costs resulting from the average annual inflation rate exceeding 100 percent. Most of its sales and expense transactions are denominated in Argentinean pesos, and the subsidiary attempts to minimize its receivables and payables. Although the subsidiary owns a warehouse, the primary asset is inventory that it receives from Rockford. The Argentinean government requires all companies located in Argentina to provide the central government with a financial report using the Argentinean system of accounts and government-mandated forms for financial statements.
- 2. JRB International, located in Dallas, Texas, is the world's largest manufacturer of electronic stirrups. The company acquires the raw materials for its products from around the world and begins the assembly process in Dallas. It then sends the partially completed units to its subsidiary in Mexico for assembly completion. Mexico has been able to hold its inflation rate under 100 percent over the last three years. The subsidiary is required to pay its employees and local vendors in Mexican pesos. The parent company provides all financing for the Mexican subsidiary, and the subsidiary sends all of its production back to the warehouse in Dallas, from which it is shipped as orders are received. The subsidiary provides the Mexican government with financial statements.

- 3. Huskie Inc. maintains a branch office in Great Britain. The branch office is fairly autonomous because it must find its own financing, set its own local marketing policies, and control its own costs. The branch receives weekly shipments from Huskie Inc., which it then conveys to its customers. The pound sterling is used to pay the subsidiary's employees and to pay for the weekly shipments.
- 4. Hola Company has a foreign subsidiary located in a rural area of Switzerland, right next to the Swiss-French border. The subsidiary hires virtually all its employees from France and makes most of its sales to companies in France. The majority of its cash transactions are maintained in the European euro. However, it is required to pay local property taxes and sales taxes in Swiss francs and to provide annual financial statements to the Swiss government.

For each of these independent cases, determine

- a. The foreign entity's recording currency in which its books and records are maintained.
- b. The foreign entity's functional currency.
- c. The process to be used to restate the foreign entity's financial statements into the reporting currency of the U.S.-based parent company.

**Understanding** 

C12-5

# Principles of Consolidating and Translating Foreign Accounts [AICPA Adapted]

Petie Products Company was incorporated in Wisconsin in 20X0 as a manufacturer of dairy supplies and equipment. Since incorporating, Petie has doubled in size about every three years and is now considered one of the leading dairy supply companies in the country.

During January 20X4, Petie established a subsidiary, Cream Ltd., in the emerging nation of Kolay. Petie owns 90 percent of Cream's outstanding capital stock; Kolay citizens hold the remaining 10 percent of Cream's outstanding capital stock as Kolay law requires. The investment in Cream, accounted for by Petie using the equity method, represents about 18 percent of Petie's total assets at December 31, 20X7, the close of the accounting period for both companies.

### Required

- a. What criteria should Petie use in determining whether it would be appropriate to prepare consolidated financial statements with Cream Ltd. for the year ended December 31, 20X7? Explain.
- b. Independent of your answer to part a, assume it has been appropriate for Petie and Cream to prepare consolidated financial statements for each year, 20X4 through 20X7. Before they can be prepared, the individual account balances in Cream's December 31, 20X7, adjusted trial balance must be translated into dollars. The kola (K) is the subsidiary's functional currency. For each of the following 10 accounts taken from Cream's adjusted trial balance, specify what exchange rate (e.g., average exchange rate for 20X7, current exchange rate on December 31, 20X7) should be used to translate the account balance into dollars and explain why that rate is appropriate. Number your answers to correspond with these accounts.
  - (1) Cash in Kolay National Bank.
  - (2) Trade Accounts Receivable (all from 20X7 revenue).
  - (3) Supplies Inventory (all purchased during the last quarter of 20X7).
  - (4) Land purchased in 20X4.
  - (5) Short-term note payable to Kolay National Bank.
  - (6) Capital Stock (no par or stated value and all issued in January 20X4).
  - (7) Retained Earnings, January 1, 20X7.
  - (8) Sales Revenue.
  - (9) Depreciation Expense (on buildings).
- (10) Salaries Expense.

LO 12-2, 12-4, 12-5, 12-6

### C12-6 Translating and Remeasuring Financial Statements of Foreign Subsidiaries [AICPA Adapted]

Wahl Company's 20X5 consolidated financial statements include two wholly owned subsidiaries, Wahl Company of Australia (Wahl A) and Wahl Company of France (Wahl F). Functional currencies are the U.S. dollar for Wahl A and the European euro for Wahl F.

**Communication** 

- a. What are the objectives of translating a foreign subsidiary's financial statements?
- b. How are gains and losses arising from the translation or remeasurement of each subsidiary's financial statements measured and reported in Wahl's consolidated financial statements?
- c. ASC 830 identifies several economic indicators to be considered both individually and collectively in determining the functional currency for a consolidated subsidiary. List three of these indicators.
- d. What exchange rate is used to incorporate each subsidiary's equipment cost, accumulated depreciation, and depreciation expense in Wahl's consolidated financial statements?

LO 12-5

### **Translation Adjustment and Comprehensive Income**

**Analysis** 

Dundee Company owns 100 percent of a subsidiary located in Ireland. The parent company uses the Euro as the subsidiary's functional currency. At the beginning of the year, the debit balance in the Accumulated Other Comprehensive Income-Translation Adjustment account, which was the only item in accumulated other comprehensive income, was \$80,000. The subsidiary's translated trial balance at the end of the year is as follows:

|   | Debit     | Credit    |
|---|-----------|-----------|
| Cash  | \$ 50,000 |           |
| Receivables   | 24,700    |           |
| Inventories   | 60,300    |           |
| Property, Plant, & Equipment (net)                            | 328,000   |           |
| Cost of Sales   | 285,000   |           |
| Operating Expenses (including depreciation)                   | 140,000   |           |
| Dividends   | 12,000    |           |
| Current Payables  |           | \$ 16,000 |
| Long-Term Payables  |           | 181,000   |
| Capital Stock   |           | 100,000   |
| Retained Earnings (1/1 balance)                               |           | 135,000   |
| Sales   |           | 560,000   |
| Accumulated Other Comprehensive Income—Translation Adjustment | 92,000    |           |
|   | \$992,000 | \$992,000 |

### Required

- a. Prepare the subsidiary's income statement, ending in net income, for the year.
- b. Prepare the subsidiary's statement of comprehensive income for the year.
- c. Prepare a year-end balance sheet for the subsidiary.
- d. ASC 220 allows for alternative operating statement displays of the other comprehensive income items. Discuss the major differences between the one-statement format of the income statement and comprehensive income versus the two-statement format of the income statement with a separate statement of comprehensive income.

LO 12-5

### C12-8 Changes in the Cumulative Translation Adjustment Account

The following footnote was abstracted from a recent annual report of Johnson & Johnson Company:

**Understanding** 

Footnote 7: Foreign Currency Translation

For translation of its international currencies, the Company has determined that the local currencies of its international subsidiaries are the functional currencies except those in highly inflationary economies, which are defined as those which have had compound cumulative rates of inflation of 100% or more during the last three years.

In consolidating international subsidiaries, balance sheet currency effects are recorded as a separate component of stockholders' equity. This equity account includes the results of translating all balance sheet assets and liabilities at current exchange rates, except those located in highly inflationary economies, principally Brazil, which are reflected in operating results. These translation adjustments do not exist in terms of functional cash flows; such adjustments are not reported as part of operating results since realization is remote unless the international businesses were sold or liquidated.

An analysis of the changes during 20X3 and 20X2 in the separate component of stockholders' equity for foreign currency translation adjustments follows (with debit amounts in parentheses):

| (Dollars in Millions)   | 20X3             | 20X2            |
|---|------------------|-----------------|
| Balance at beginning of year<br>Change in translation adjustments | \$(146)<br>(192) | \$ 134<br>(280) |
| Balance at end of year  | \$(338)          | \$(146)         |

### Reauired

- a. What is the main point of the footnote?
- b. How is the footnote related to the concepts covered in the chapter?
- c. List some possible reasons the company's translation adjustment decreased from a \$134 million credit balance at the end of 20X1 to a \$338 million debit balance at the end of 20X3.
- d. Assume that the translated stockholders' equities of the foreign subsidiaries, other than the cumulative translation adjustment, remained constant from 20X1 through 20X3 at a balance of \$500 million. What were the translated balances in the net assets (assets minus liabilities) of the foreign subsidiaries in each of the three years? What factors might cause the changes in the balances of the net assets over the three-year period?
- e. How would changes in the local currency unit's exchange rate in the countries in which the company has subsidiaries affect the cumulative translation adjustment?
- f. How could you verify the actual causal factors for the changes in the cumulative translation adjustment of Johnson & Johnson Company for the years presented? Be specific!

LO 12-8

### C12-9 **Pros and Cons of Foreign Investment**

Judgment

Many larger U.S. companies have significant investments in foreign operations. For example, McDonald's Corporation, the food service company, obtains 47 percent of its consolidated revenues and 44 percent of its operating income from, and has 45 percent of its invested assets in, non-U.S. locations. Unisys, the information systems company, obtains 51 percent of its consolidated revenues and 65 percent of its operating income from, and has 40 percent of its invested assets in, non-U.S. locations. Foreign operations impose additional types of operating risks to companies, including the risks from changes in the exchange rates for currencies, statutory acts by the foreign governments, and producing and marketing goods in an environment outside the United States.

With the passage of the North American Free Trade Agreement (NAFTA), more companies are confronted with the decision of whether or not to expand their production and marketing investments to Canada and Mexico.

# Required

Using NAFTA as a discussion focus, address the following questions:

- a. Explain why a U.S. company might find it advantageous to increase its production capacity of its subsidiaries in Mexico. Describe some circumstances under which it would be disadvantageous for a U.S. company to increase its investment in production subsidiaries located in
- b. In your opinion, would an increase in U.S. companies' investments in Mexico and Canada be good or bad for U.S. consumers?
- c. What are some possible solutions to the possible problem of an increase in the U.S. unemployment rate if U.S. companies shift their production facilities to non-U.S. locations? Select one and discuss the pros and cons of that possible solution.
- d. What conclusion can you draw from the attempts of the U.S. government to decrease barriers to international trade and investment? In your opinion, is this a good effort on the part of the government, or do you feel this effort should be changed?

LO 12-2

### C12-10 **Determining an Entity's Functional Currency**

Research

Maxima Corporation, a U.S. company, manufactures lighting fixtures and ceiling fans. Eight years ago, it set up a subsidiary in Mexico to manufacture three of its most popular ceiling fan models. When the subsidiary, Luz Maxima, was set up, it did business exclusively with Maxima, receiving shipments of materials from U.S. suppliers selected by Maxima and selling all of its production to Maxima. Maxima's management made a determination that its subsidiary's functional currency was the U.S. dollar.

During the past five years, changes in Luz Maxima's operations have occurred. The subsidiary has developed relationships with suppliers within Mexico and is obtaining a significant percentage of its materials requirements from these suppliers. In addition, Luz Maxima has expanded its production by introducing a new product line marketed within Mexico and Central America. These products now make up a substantial percentage of the subsidiary's sales. Luz Maxima obtained long-term debt financing and a line of credit from several Mexican banks to expand its operations.

Prior to the preparation of Maxima's consolidated financial statements for the current year, Luz Maxima's financial statements, reported in Mexican pesos, had to be converted into U.S. dollars. Maxima's CFO, Garry Parise, is concerned that Luz Maxima's functional currency may no longer be the U.S. dollar and that remeasurement of its financial statements may not be appropriate.

### Required

Research the most current accounting standards on determining an entity's functional currency using the Accounting Standards Codification. Garry has asked you, as an accountant in the controller's department, to research the functional currency issue. Write a memo to him, reporting the results of your research. Support your recommendations with citations and quotations from the authoritative financial reporting standards.

LO 12-5

### **Accounting for the Translation Adjustment**

# Research

Sonoma Company has owned 100 percent of the outstanding common stock of Valencia Corporation, a Spanish subsidiary, for the past 15 years. The Spanish company's functional currency is the euro, and its financial statements are translated into U.S. dollars prior to consolidation.

In the current year, Sonoma sold 30 percent of Valencia's voting common stock to a nonaffiliated company. Sonoma's controller, Renee Voll, calculated a gain on the sale of this portion of its investment in Valencia. The consolidated balance sheet at the end of last year contained a debit balance cumulative translation adjustment related to the Spanish subsidiary. Voll believes that the decrease in Sonoma's share of Valencia's translation adjustment will be automatically included in other comprehensive income as the year-end translation adjustment is calculated and that Sonoma's share is included in the consolidated financial statements. However, she has asked you, as an accountant in her department, to research the accounting for the translation adjustment as a result of the sale of a part of the investment in the Spanish subsidiary.

### Required

Research the most current standards on accounting for the translation adjustment resulting from translating the trial balance of a foreign affiliate using the Accounting Standards Codification. Write a memo to Renee reporting the results of your research. Support your recommendations with citations and quotations from the authoritative financial reporting standards.

# Exercises

### LO 12-4, 12-6

### E12-1 **Multiple-Choice Questions on Translation and Remeasurement** [AICPA Adapted]

For each of the following seven cases, work the case twice and select the best answer. First assume that the foreign currency is the functional currency; then assume that the U.S. dollar is the functional currency.

1. Certain balance sheet accounts in a foreign subsidiary of Shaw Company on December 31, 20X1, have been restated in U.S. dollars as follows:

|  | Restated at                             |   |
|--|---|---|
|  | <b>Current Rates</b>                    | Historical Rates                        |
| Accounts Receivable, Current<br>Accounts Receivable, Long-Term<br>Prepaid Insurance<br>Patents | \$100,000<br>50,000<br>25,000<br>40,000 | \$110,000<br>55,000<br>30,000<br>45,000 |
| Total  | \$215,000                               | \$240,000                               |

What total should be included in Shaw's balance sheet for December 31, 20X1, for these items?

- a. \$215,000.
- b. \$225,000.
- c. \$230,000.
- d. \$240,000.
- 2. A wholly owned foreign subsidiary of Nick Inc. has certain expense accounts for the year ended December 31, 20X4, stated in local currency units (LCU) as follows:

|   | LCU     |
|---|---------|
| Depreciation of Equipment (related assets were purchased January 1, 20X2) | 120,000 |
| Provision for Uncollectible Accounts                                      | 80,000  |
| Rent  | 200,000 |

The exchange rates at various dates were as follows:

|                   | Dollar Equivalent of 1 LCU |
|-------------------|----------------------------|
| January 1, 20X2   | 0.50                       |
| December 31, 20X4 | 0.40                       |
| Average, 20X4     | 0.44                       |

What total dollar amount should be included in Nick's income statement to reflect the preceding expenses for the year ended December 31, 20X4?

- a. \$160,000.
- b. \$168,000.
- c. \$176,000.
- d. \$183,200.
- 3. Linser Corporation owns a foreign subsidiary with 2,600,000 local currency units (LCU) of property, plant, and equipment before accumulated depreciation on December 31, 20X4. Of this amount, 1,700,000 LCU were acquired in 20X2 when the rate of exchange was 1.5 LCU = \$1, and 900,000 LCU were acquired in 20X3 when the rate of exchange was 1.6 LCU = \$1. The rate of exchange in effect on December 31, 20X4, was 1.9 LCU = \$1. The weighted average of exchange rates that were in effect during 20X4 was 1.8 LCU = \$1. Assuming that the property, plant, and equipment are depreciated using the straight-line method over a 10-year period with no salvage value, how much depreciation expense relating to the foreign subsidiary's property, plant, and equipment should be charged in Linser's income statement for 20X4?
  - a. \$144,444.
  - b. \$162,000.
  - *c.* \$169,583.
  - d. \$173,333.
- 4. On January 1, 20X1, Pat Company formed a foreign subsidiary. On February 15, 20X1, Pat's subsidiary purchased 100,000 local currency units (LCU) of inventory. Of the original inventory purchased on February 15, 20X1, 25,000 LCU made up the entire inventory on December 31, 20X1. The exchange rates were 2.2 LCU = \$1 from January 1, 20X1, to June 30, 20X1, and 2 LCU = \$1 from July 1, 20X1, to December 31, 20X1. The December 31, 20X1, inventory balance for Pat's foreign subsidiary should be restated in U.S. dollars in the amount of
  - a. \$10,500.
  - b. \$11,364.
  - c. \$11,905.
  - d. \$12,500.
- 5. At what rates should the following balance sheet accounts in the foreign currency financial statements be restated into U.S. dollars?

|          | Equipment                                      | Accumulated Depreciation of Equipment                |
|----------|--|--|
| b.<br>c. | Current<br>Current<br>Historical<br>Historical | Current<br>Average for year<br>Current<br>Historical |
|          |  |  |

- 6. A credit-balancing item resulting from the process of restating a foreign entity's financial statement from the local currency unit to U.S. dollars should be included as a(an)
  - a. Separate component of stockholders' equity.
  - b. Deferred credit.
  - c. Component of income from continuing operations.
  - d. Extraordinary item.
- 7. A foreign subsidiary of the Bart Corporation has certain balance sheet accounts on December 31, 20X2. Information relating to these accounts in U.S. dollars is as follows:

|  | Restated at                              |  |
|--|--|--|
|  | <b>Current Rates</b>                     | Historical Rates                         |
| Marketable (AFS and Trading) securities<br>Inventories, carried at average cost<br>Refundable deposits<br>Goodwill | \$ 75,000<br>600,000<br>25,000<br>55,000 | \$ 85,000<br>700,000<br>30,000<br>70,000 |
|  | \$755,000                                | \$885,000                                |

What total should be included in Bart's balance sheet on December 31, 20X2, as a result of the preceding information?

- a. \$755,000.
- b. \$780,000.
- c. \$870,000.
- d. \$880,000.

### LO 12-4, 12-5

### E12-2 **Multiple-Choice Questions on Translation and Foreign Currency Transactions** [AICPA Adapted]

The following information should be used for questions 1, 2, and 3.

Select the best answers under each of two alternative assumptions: (a) the LCU is the functional currency and the translation method is appropriate or (b) the U.S. dollar is the functional currency and the remeasurement method is appropriate.

- 1. Refer to the preceding requirements. Gate Inc. had a \$30,000 credit adjustment for the year ended December 31, 20X2, from restating its foreign subsidiary's accounts from their local currency units into U.S. dollars. Additionally, Gate had a receivable from a foreign customer payable in the customer's local currency. On December 31, 20X1, this receivable for 200,000 local currency units (LCU) was correctly included in Gate's balance sheet at \$110,000. When the receivable was collected on February 15, 20X2, the U.S. dollar equivalent was \$120,000. In Gate's 20X2 consolidated income statement, how much should be reported as foreign exchange gain in computing net income?
  - a. \$0.
  - b. \$10,000.
  - c. \$30,000.
  - d. \$40,000.

- 2. Refer to the preceding requirements. Bar Corporation had a realized foreign exchange loss of \$13,000 for the year ended December 31, 20X2, and must also determine whether the following items will require year-end adjustment:
  - (1) Bar had a \$7,000 credit resulting from the restatement in dollars of the accounts of its wholly owned foreign subsidiary for the year ended December 31, 20X2.
  - (2) Bar had an account payable to an unrelated foreign supplier to be paid in the supplier's local currency. The U.S. dollar equivalent of the payable was \$60,000 on the October 31, 20X2, invoice date and \$64,000 on December 31, 20X2. The invoice is payable on January 30, 20X3.

What amount of the net foreign exchange loss in computing net income should be reported in Bar's 20X2 consolidated income statement?

- a. \$6,000.
- b. \$10,000.
- c. \$13,000.
- d. \$17,000.
- 3. Refer to the preceding requirements. The balance in Simpson Corp.'s foreign exchange loss account was \$15,000 on December 31, 20X2, before any necessary year-end adjustment relating to the following:
  - (1) Simpson had a \$20,000 debit resulting from the restatement in dollars of the accounts of its wholly owned foreign subsidiary for the year ended December 31, 20X2.
  - (2) Simpson had an account payable to an unrelated foreign supplier, payable in the supplier's local currency on January 27, 20X3. The U.S. dollar equivalent of the payable was \$100,000 on the November 28, 20X2, invoice date, and \$106,000 on December 31, 20X2.

In Simpson's 20X2 consolidated income statement, what amount should be included as foreign exchange loss in computing net income?

- a. \$41,000.
- b. \$35,000.
- c. \$21,000.
- d. \$15,000.
- 4. When remeasuring foreign currency financial statements into the functional currency, which of the following items would be remeasured using a historical exchange rate?
  - a. Inventories carried at cost.
  - b. Trading securities carried at market values.
  - c. Bonds payable.
  - d. Accrued liabilities.
- 5. A foreign subsidiary's functional currency is its local currency, which has not experienced significant inflation. The weighted-average exchange rate for the current year would be the appropriate exchange rate for translating

|    | Sales to Customers | Wages Expense |
|----|--------------------|---------------|
| a. | No                 | No            |
| b. | Yes                | Yes           |
| C. | No                 | Yes           |
| d. | Yes                | No            |

6. The functional currency of Dahl Inc.'s subsidiary is the European euro. Dahl borrowed euros as a partial hedge of its investment in the subsidiary. In preparing consolidated financial statements, Dahl's debit balance of its translation adjustment exceeded its exchange gain on the borrowing. How should the translation adjustment and the exchange gain be reported in Dahl's consolidated financial statements?

- a. The translation adjustment should be netted against the exchange gain, and the excess translation adjustment should be reported in the stockholders' equity section of the balance sheet.
- b. The translation adjustment should be netted against the exchange gain, and the excess translation adjustment should be reported in the income statement in computing net income.
- c. The translation adjustment is reported as a component of other comprehensive income and then accumulated in the stockholders' equity section of the balance sheet, and the exchange gain should be reported in the income statement in computing net income.
- d. The translation adjustment should be reported in the income statement, and the exchange gain should be reported separately in the stockholders' equity section of the balance sheet.

### E12-3 **Matching Terms**

Match the descriptions on the left with the terms on the right. Terms may be used once, more than once, or not at all.

| Des | scriptions of Terms   | Terms  |
|-----|---|--|
| 1.  | The group that has attempted to harmonize the world's many different accounting methods.  | A. Financial Accounting<br>Standards Board     |
| 2.  | The currency of the primary economic environment in which the entity operates.  | B. Remeasurement gain or loss                  |
| 3.  | The functional currency for a U.S. subsidiary located in a country with > 100 percent inflation over the last three years.  | C. Translation adjustment                      |
| 4.  | Translation of all assets and liabilities of a foreign subsidiary using the foreign exchange rate at the balance sheet date.  | D. Current rate method                         |
| 5.  | Restatement of the fixed assets and inventories of a foreign subsidiary into U.S. dollars using historical exchange rates.  | E. Remeasurement method                        |
| 6.  | Inclusion of this gain or loss on the U.S. company's income statement as part of net income.  | F. U.S. dollar                                 |
| 7.  | The item that balances the debits and credits of the foreign subsidiary's adjusted trial balance in U.S. dollars, assuming the functional currency is the currency of the foreign subsidiary's country. | G. Functional currency                         |
| 8.  | The item that balances the debits and credits of the foreign subsidiary's adjusted trial balance in U.S. dollars, assuming the functional currency is the U.S. dollar.                                  | H. International Accounting<br>Standards Board |
| 9.  | Translation of the income statement accounts of a foreign subsidiary using the average exchange rate for the year.  | I. International Managerial Accounting Society |
| 10. | Restatement of depreciation expense and cost of goods sold of a foreign subsidiary using historical exchange rates.   | J. Functional currency indicators              |
| 11. | An analysis of a foreign subsidiary's cash flows, sales prices, sales markets, expenses, and financing.   | K. Historical rate method                      |
| 12. | The periodic change in this item reported as a component of other comprehensive income.   | L. Cumulative transaction gain or loss         |

### LO 12-4, 12-5

### **Multiple-Choice Questions on Translation and Remeasurement** E12-4

Use the following information for questions 1, 2, and 3.

Bartell Inc., a U.S. company, acquired 90 percent of the common stock of a Malaysian company on January 1, 20X5, for \$160,000. The net assets of the Malaysian subsidiary amounted to 680,000 ringitts (RM) on the date of acquisition. On January 1, 20X5, the book values of the Malaysian subsidiary's identifiable assets and liabilities approximated their fair values. Exchange rates at various dates during 20X5 follow:

|                  | RM \$    |
|------------------|----------|
| January 1        | 1 = 0.21 |
| December 31      | 1 = 0.24 |
| Average for 20X5 | 1 = 0.22 |

- 1. Refer to the preceding information. On January 1, 20X5, how much goodwill was acquired by Bartell?
  - a. \$17,200.
  - b. \$31,480.
  - c. \$11,400.
  - d. \$25,360.
- 2. Refer to the preceding exchange rate information. Assume that Bartell acquired \$10,500 of goodwill on January 1, 20X5, and the goodwill suffered a 10 percent impairment loss in 20X5. If the functional currency is the Malaysian ringgit, how much goodwill impairment loss should be reported on Bartell's consolidated income statement for 20X5?
  - a. \$1,050.
  - b. \$1,200.
  - c. \$1,100.
  - d. \$1,175.
- 3. Refer to the preceding information but now assume that the U.S. dollar is the functional currency. How much goodwill impairment loss should be reported on Bartell's consolidated income statement in this situation?
  - a. \$1,050.
  - b. \$1,200.
  - c. \$1,100.
  - d. \$1,175.

Use the following information for questions 4, 5, 6, and 7.

Mondell Inc., a U.S. company, acquired 100 percent of the common stock of a German company on January 1, 20X5, for \$402,000. The German subsidiary's net assets amounted to €300,000 on the date of acquisition. On January 1, 20X5, the book values of its identifiable assets and liabilities approximated their fair values. As a result of an analysis of functional currency indicators, Mondell determined that the euro was the functional currency. On December 31, 20X5, the German subsidiary's adjusted trial balance, translated into U.S. dollars, contained \$12,000 more debits than credits. The German subsidiary reported income of €25,000 for 20X5 and paid a cash dividend of €5,000 on November 30, 20X5. Included on the German subsidiary's income statement was depreciation expense of €2,500. Mondell uses the fully adjusted equity method of accounting for its investment in the German subsidiary and determined that goodwill in the first year had an impairment loss of 10 percent of its initial amount. Exchange rates at various dates during 20X5 follow:

|                  | € \$     |
|------------------|----------|
| January 1        | 1 = 1.20 |
| November 30      | 1 = 1.30 |
| December 31      | 1 = 1.32 |
| Average for 20X5 | 1 = 1.24 |

- 4. Refer to the preceding information. What amount should Mondell record as "income from subsidiary" based on the German subsidiary's reported net income?
  - a. \$31,000.
  - b. \$26,660.
  - c. \$33,000.
  - d. \$28,660.
- 5. Refer to the preceding information. The receipt of the dividend will result in
  - a. A credit to the investment account for \$6,200.
  - b. A debit to the income from subsidiary account for \$6,600.
  - c. A credit to the investment account for \$6,600.
  - d. A credit to the investment account for \$6,500.

- 6. Refer to the preceding information. On Mondell's consolidated balance sheet at December 31, 20X5, what amount should be reported for the goodwill acquired on January 1, 20X5?
  - a. \$37,660.
  - b. \$37,800.
  - c. \$41,580.
  - d. \$39,880.
- 7. Refer to the preceding information. In the stockholders' equity section of Mondell's consolidated balance sheet at December 31, 20X5, Mondell should report the translation adjustment as a component of other comprehensive income of
  - a. \$12,000.
  - b. \$15,920.
  - c. \$13,400.
  - d. \$8,080.

### E12-5 **Translation**

On January 1, 20X1, Popular Creek Corporation organized RoadTime Company as a subsidiary in Switzerland with an initial investment cost of Swiss francs (SFr) 60,000. RoadTime's December 31, 20X1, trial balance in SFr is as follows:

|                               | Debit       | Credit      |
|-------------------------------|-------------|-------------|
| Cash                          | SFr 7,000   |             |
| Accounts Receivable (net)     | 20,000      |             |
| Receivable from Popular Creek | 5,000       |             |
| Inventory                     | 25,000      |             |
| Plant & Equipment             | 100,000     |             |
| Accumulated Depreciation      |             | SFr 10,000  |
| Accounts Payable              |             | 12,000      |
| Bonds Payable                 |             | 50,000      |
| Common Stock                  |             | 60,000      |
| Sales                         |             | 150,000     |
| Cost of Goods Sold            | 70,000      |             |
| Depreciation Expense          | 10,000      |             |
| Operating Expense             | 30,000      |             |
| Dividends Paid                | 15,000      |             |
| Total                         | SFr 282,000 | SFr 282,000 |

### **Additional Information**

- 1. The receivable from Popular Creek is denominated in Swiss francs. Popular Creek's books show a \$4,000 payable to RoadTime.
- 2. Purchases of inventory goods are made evenly during the year. Items in the ending inventory were purchased November 1.
- 3. Equipment is depreciated by the straight-line method with a 10-year life and no residual value. A full year's depreciation is taken in the year of acquisition. The equipment was acquired on March 1.
- 4. The dividends were declared and paid on November 1.
- 5. Exchange rates were as follows:

|              | SFr \$   |
|--------------|----------|
| January 1    | 1 = 0.73 |
| March 1      | 1 = 0.74 |
| November 1   | 1 = 0.77 |
| December 31  | 1 = 0.80 |
| 20X1 average | 1 = 0.75 |

6. The Swiss franc is the functional currency.

Prepare a schedule translating the December 31, 20X1, trial balance from Swiss francs to dollars.

### LO 12-4, 12-5

### E12-6 **Proof of Translation Adjustment**

Refer to the data in Exercise E12-5.

### Required

- a. Prepare a proof of the translation adjustment computed in Exercise E12-5.
- b. Where is the translation adjustment reported on Popular Creek's consolidated financial statements and its foreign subsidiary?

### LO 12-6, 12-7

### E12-7 Remeasurement

Refer to the data in Exercise E12-5, but assume that the dollar is the functional currency for the foreign subsidiary.

### Required

Prepare a schedule remeasuring the December 31, 20X1, trial balance from Swiss francs to dollars.

### LO 12-6, 12-7

### **Proof of Remeasurement Gain (Loss)** E12-8

Refer to the data in Exercises E12-5 and E12-7.

### Required

- a. Prepare a proof of the remeasurement gain or loss computed in Exercise E12-7.
- b. How should this remeasurement gain or loss be reported on Popular Creek's consolidated financial statements and the financial statements of its foreign subsidiary?

### E12-9 Translation with Strengthening U.S. Dollar

Refer to the data in Exercise E12-5, but now assume that the exchange rates were as follows:

|              | SFr \$   |
|--------------|----------|
| January 1    | 1 = 0.80 |
| March 1      | 1 = 0.77 |
| November 1   | 1 = 0.74 |
| December 31  | 1 = 0.73 |
| 20X1 average | 1 = 0.75 |

The receivable from Popular Creek Corporation is denominated in Swiss francs. Popular Creek's books show a \$3,650 payable to RoadTime.

Assume the Swiss franc is the functional currency.

### Required

- a. Prepare a schedule translating the December 31, 20X1, trial balance from Swiss francs to dollars.
- b. Compare the results of Exercise E12-5, in which the dollar is weakening against the Swiss franc during 20X1, with the results in this exercise (E12-9), in which the dollar is strengthening against the Swiss franc during 20X1.

### LO 12-6, 12-7 **E12-10**

### Remeasurement with Strengthening U.S. Dollar

Refer to the data in Exercise E12-5, but now assume that the exchange rates were as follows:

|              | SFr \$   |
|--------------|----------|
| January 1    | 1 = 0.80 |
| March 1      | 1 = 0.77 |
| November 1   | 1 = 0.74 |
| December 31  | 1 = 0.73 |
| 20X1 average | 1 = 0.75 |

The receivable from Popular Creek is denominated in Swiss francs. Its books show a \$3,650 payable to RoadTime.

Assume that the U.S. dollar is the functional currency.

- a. Prepare a schedule remeasuring the December 31, 20X1, trial balance from Swiss francs to
- b. Compare the results of Exercise E12-7, in which the dollar weakens against the Swiss franc during 20X1, with the results in this exercise (E12-10), in which the dollar strengthened against the Swiss franc during 20X1.

LO 12-5, 12-7 **E12-11**

### Remeasurement and Translation of Cost of Goods Sold

Duff Company is a subsidiary of Rand Corporation and is located in Madrid, Spain, where the currency is the euro (€). Data on Duff's inventory and purchases are as follows:

| Inventory, January 1, 20X7   | €220,000 |
|------------------------------|----------|
| Purchases during 20X7        | 846,000  |
| Inventory, December 31, 20X7 | 180,000  |

The beginning inventory was acquired during the fourth quarter of 20X6, and the ending inventory was acquired during the fourth quarter of 20X7. Purchases were made evenly over the year. Exchange rates were as follows:

|   | € \$  |
|---|---|
| Fourth quarter of 20X6 January 1, 20X7 Average during 20X7 Fourth quarter of 20X7 December 31, 20X7 | 1 = 1.29015<br>1 = 1.32030<br>1 = 1.39655<br>1 = 1.45000<br>1 = 1.47280 |
| December 51, 20/7   | 1 1.47200   |

### Required

- a. Show the remeasurement of cost of goods sold for 20X7, assuming that the U.S. dollar is the functional currency.
- b. Show the translation of cost of goods sold for 20X7, assuming that the euro is the functional currency.

LO 12-4

### E12-12 Equity-Method Entries for a Foreign Subsidiary

Thames Company is located in London, England. The local currency is the British pound (£). On January 1, 20X8, Dek Company purchased an 80 percent interest in Thames for \$400,000, which resulted in an excess of cost-over-book value of \$48,000 due solely to a trademark having a remaining life of 10 years. Dek uses the equity method to account for its investment.

Thames' December 31, 20X8, trial balance has been translated into U.S. dollars, requiring a translation adjustment debit of \$6,400. Thames's net income translated into U.S. dollars is \$60,000. It declared and paid a £15,000 dividend on May 1, 20X8.

Relevant exchange rates are as follows:

|                   | € \$     |
|-------------------|----------|
| January 1, 20X8   | 1 = 1.60 |
| May 1, 20X8       | 1 = 1.64 |
| December 31, 20X8 | 1 = 1.65 |
| Average for 20X8  | 1 = 1.63 |

### Required

- a. Record the dividend received by Dek from Thames.
- b. Prepare the entries to record Dek's equity in the net income of Thames and the parent's share of the translation adjustment.
- c. Show a calculation of the differential reported on the consolidated balance sheet of December 31, 20X8, and the translation adjustment from differential.
- d. Record the amortization of the trademark on Dek's books.
- e. Calculate the amount of the translation adjustment reported on the statement of comprehensive income as an element of other comprehensive income.

LO 12-5

# Effects of a Change in the Exchange Rate—Translation and Other **Comprehensive Income**

Bentley Company owns a subsidiary in India whose balance sheets in rupees (R) for the last two years follow:

|                   | December 31, 20X6 | December 31, 20X7 |
|-------------------|-------------------|-------------------|
| Assets:           |                   |                   |
| Cash              | R 100,000         | R 80,000          |
| Receivables       | 450,000           | 550,000           |
| Inventory         | 680,000           | 720,000           |
| Fixed Assets, net | 1,000,000         | 900,000           |
| Total Assets      | <u>R2,230,000</u> | <u>R2,250,000</u> |
| Equities:         |                   |                   |
| Current Payables  | R 260,000         | R 340,000         |
| Long-Term Debt    | 1,250,000         | 1,100,000         |
| Common Stock      | 500,000           | 500,000           |
| Retained Earnings | 220,000           | 310,000           |
| Total Equities    | R2,230,000        | R2,250,000        |

Bentley formed the subsidiary on January 1, 20X6, when the exchange rate was 30 rupees for 1 U.S. dollar. The exchange rate for 1 U.S. dollar on December 31, 20X6, and December 31, 2007, had increased to 35 rupees and 40 rupees, respectively. Income is earned evenly over the year, and the subsidiary declared no dividends during its first two years of existence.

### Required

- a. Present both the direct and the indirect exchange rate for the rupees for the three dates of (1) January 1, 20X6, (2) December 31, 20X6, and (3) December 31, 20X7. Did the dollar strengthen or weaken in 20X6 and in 20X7?
- b. Prepare the subsidiary's translated balance sheet as of December 31, 20X6, assuming the rupee is the subsidiary's functional currency.
- c. Prepare the subsidiary's translated balance sheet as of December 31, 20X7, assuming the rupee is the subsidiary's functional currency.
- d. Compute the amount that 20X7's other comprehensive income would include as a result of the translation.

LO 12-6

### E12-14 Computation of Gain or Loss on Sale of Asset by Foreign Subsidiary

On December 31, 20X2, your company's Mexican subsidiary sold land at a selling price of 3,000,000 pesos. The land had been purchased for 2,000,000 pesos on January 1, 20X1, when the exchange rate was 10 pesos to 1 U.S. dollar. The exchange rate for 1 U.S. dollar was 11 pesos on December 31, 20X1, and 12 pesos on December 31, 20X2. Assume that the subsidiary had no other assets and no liabilities during the two years that it owned the land.

### Required

- a. Prepare all entries regarding the purchase and sale of the land that would be made on the books of the Mexican subsidiary whose recording currency is the Mexican peso.
- b. Determine the amount of the gain or loss on the transaction that would be reported on the subsidiary's remeasured income statement in U.S. dollars, assuming the U.S. dollar is the functional currency. Determine the amount of the remeasurement gain or loss that would be reported on the remeasured income statement in U.S. dollars.
- c. Determine the amount of the gain or loss on the transaction that would be reported on the subsidiary's translated income statement in U.S. dollars, assuming the Mexican peso is the functional currency. Determine the amount of the other comprehensive income that would be reported on the consolidated statement of other comprehensive income for 20X2.

LO 12-8

### E12-15\* **Intercompany Transactions**

Hawk Company sold inventory to United Ltd., an English subsidiary. The goods cost Hawk \$8,000 and were sold to United for \$12,000 on November 27, payable in British pounds. The goods are still on hand at the end of the year on December 31. The British pound (£) is the functional currency of the English subsidiary. The exchange rates follow:

|                            | € \$                 |
|----------------------------|----------------------|
| November 27<br>December 31 | 1 = 1.60<br>1 = 1.70 |

### Required

- a. At what dollar amount is the ending inventory shown in the trial balance of the consolidated worksheet?
- b. What amount is eliminated for the unrealized intercompany gross profit, and at what amount is the inventory shown on the consolidated balance sheet?

# **Problems**

LO 12-4

### **Parent Company Journal Entries and Translation** P12-16

On January 1, 20X1, Par Company purchased all the outstanding stock of North Bay Company, located in Canada, for \$120,000. On January 1, 20X1, the direct exchange rate for the Canadian dollar (C\$) was C\$1 = \$0.80. North Bay's book value on January 1, 20X1, was C\$90,000. The fair value of North Bay's plant and equipment was C\$10,000 more than book value, and the plant and equipment are being depreciated over 10 years with no salvage value. The remainder of the differential is attributable to a trademark, which will be amortized over 10 years.

During 20X1, North Bay earned C\$20,000 in income and declared and paid C\$8,000 in dividends. The dividends were declared and paid in Canadian dollars when the exchange rate was C\$1 = \$0.75. On December 31, 20X1, Par continues to hold the Canadian currency received from the dividend. On December 31, 20X1, the direct exchange rate is C\$1 = \$0.70. The average exchange rate during 20X1 was C\$1 = \$0.75. Management has determined that the Canadian dollar is North Bay's appropriate functional currency.

### Required

- a. Prepare a schedule showing the differential allocation and amortization for 20X1. The schedule should present both Canadian dollars and U.S. dollars.
- b. Par uses the fully adjusted equity method to account for its investment. Provide the entries that it would record in 20X1 for its investment in North Bay for the following items:
  - (1) Purchase of investment in North Bay.
  - (2) Equity accrual for Par's share of North Bay's income.
  - (3) Recognition of dividend declared and paid by North Bay.
  - (4) Amortization of differential.
  - (5) Recognition of translation adjustment on differential.
- c. Prepare a schedule showing the proof of the translation adjustment for North Bay as a result of the translation of the subsidiary's accounts from Canadian dollars to U.S. dollars. Then provide the entry that Par would record for its share of the translation adjustment resulting from the translation of the subsidiary's accounts.
- d. Provide the entry required by Par to restate the C\$8,000 in the Foreign Currency Units account into its year-end U.S. dollar-equivalent value.

LO 12-4, 12-5 **P12-17** 

# Translation, Journal Entries, Consolidated Comprehensive Income, and Stockholders' Equity

On January 1, 20X5, Taft Company acquired all of the outstanding stock of Vikix, Inc., a Norwegian company, at a cost of \$151,200. Vikix's net assets on the date of acquisition were 700,000 kroner (NKr). On January 1, 20X5, the book and fair values of the Norwegian subsidiary's identifiable

<sup>\*</sup>Indicates that the item relates to "Additional Considerations."

assets and liabilities approximated their fair values except for property, plant, and equipment and patents acquired. The fair value of Vikix's property, plant, and equipment exceeded its book value by \$18,000. The remaining useful life of Vikix's equipment at January 1, 20X5, was 10 years. The remainder of the differential was attributable to a patent having an estimated useful life of 5 years. Vikix's trial balance on December 31, 20X5, in kroner, follows:

|                              | Debits       | Credits      |
|------------------------------|--------------|--------------|
| Cash                         | NKr 150,000  |              |
| Accounts Receivable (net)    | 200,000      |              |
| Inventory                    | 270,000      |              |
| Property, Plant, & Equipment | 600,000      |              |
| Accumulated Depreciation     |              | NKr 150,000  |
| Accounts Payable             |              | 90,000       |
| Notes Payable                |              | 190,000      |
| Common Stock                 |              | 450,000      |
| Retained Earnings            |              | 250,000      |
| Sales                        |              | 690,000      |
| Cost of Goods Sold           | 410,000      |              |
| Operating Expenses           | 100,000      |              |
| Depreciation Expense         | 50,000       |              |
| Dividends Paid               | 40,000       |              |
| Total                        | NKr1,820,000 | NKr1,820,000 |

### Additional Information

- 1. Vikix uses the FIFO method for its inventory. The beginning inventory was acquired on December 31, 20X4, and ending inventory was acquired on December 15, 20X5. Purchases of NKr420,000 were made evenly throughout 20X5.
- 2. Vikix acquired all of its property, plant, and equipment on July 1, 20X3, and uses straight-line depreciation.
- 3. Vikix's sales were made evenly throughout 20X5, and its operating expenses were incurred evenly throughout 20X5.
- 4. The dividends were declared and paid on July 1, 20X5.
- 5. Taft's income from its own operations was \$275,000 for 20X5, and its total stockholders' equity on January 1, 20X5, was \$3,500,000. Taft declared \$100,000 of dividends during 20X5.
- 6. Exchange rates were as follows:

|                   | NKr \$    |
|-------------------|-----------|
| July 1, 20X3      | 1 = 0.15  |
| December 30, 20X4 | 1 = 0.18  |
| January 1, 20X5   | 1 = 0.18  |
| July 1, 20X5      | 1 = 0.19  |
| December 15, 20X5 | 1 = 0.205 |
| December 31, 20X5 | 1 = 0.21  |
| Average for 20X5  | 1 = 0.20  |

# Required

- a. Prepare a schedule translating the trial balance from Norwegian kroner into U.S. dollars. Assume the krone is the functional currency.
- b. Assume that Taft uses the fully adjusted equity method. Record all journal entries that relate to its investment in the Norwegian subsidiary during 20X5. Provide the necessary documentation and support for the amounts in the journal entries, including a schedule of the translation adjustment related to the differential.
- c. Prepare a schedule that determines Taft's consolidated comprehensive income for 20X5.
- d. Compute Taft's total consolidated stockholders' equity at December 31, 20X5.

# LO 12-6, 12-7 P12-18

# Remeasurement, Journal Entries, Consolidated Net Income, and Stockholders' Equity

Refer to the information in Problem P12-17. Assume the U.S. dollar is the functional currency, not the krone.

### Required

- a. Prepare a schedule remeasuring the trial balance from Norwegian kroner into U.S. dollars.
- b. Assume that Taft uses the fully adjusted equity method. Record all journal entries that relate to its investment in the Norwegian subsidiary during 20X5. Provide the necessary documentation and support for the amounts in the journal entries.
- c. Prepare a schedule that determines Taft's consolidated net income for 20X5.
- d. Compute Taft's total consolidated stockholders' equity at December 31, 20X5.

### P12-19 **Proof of Translation Adjustment**

Refer to the information presented in Problem P12-17 and your answer to part a of Problem P12-17.

### Required

Prepare a schedule providing a proof of the translation adjustment.

### LO 12-8

### **Remeasurement Gain or Loss** P12-20

Refer to the information given in Problem P12-17 and your answer to part a of Problem P12-18.

### Required

Prepare a schedule providing a proof of the remeasurement gain or loss. For this part of the problem, assume that the Norwegian subsidiary had the following monetary assets and liabilities at January 1, 20X5:

| Monetary Assets           |            |
|---------------------------|------------|
| Cash                      | NKr 10,000 |
| Accounts Receivable (net) | 140,000    |
| Monetary Liabilities      |            |
| Accounts Payable          | NKr 70,000 |
| Notes Payable             | 140,000    |

On January 1, 20X5, the Norwegian subsidiary has a net monetary liability position of NKr60,000.

# LO 12-4, 12-5 **P12-21**

### **Translation and Calculation of Translation Adjustment**

On January 1, 20X4, Alum Corporation acquired DaSilva Company, a Brazilian subsidiary, by purchasing all its common stock at book value. DaSilva's trial balances on January 1, 20X4, and December 31, 20X4, expressed in Brazilian reals (BRL), follow:

|  | January  | 1, 20X4   | Decembe  | er 31, 20X4  |

| Retained Earnings          |                 | 50,000     |              | 50,000       |
| Sales                      |                 |            |              | 500,000      |
| Cost of Goods Sold         |                 |            | 230,000      |              |
| Insurance Expense          |                 |            | 3,200        |              |
| Depreciation Expense       |                 |            | 32,500       |              |
| Amortization Expense       |                 |            | 12,000       |              |
| Operating Expense          |                 |            | 152,300      |              |
| Dividends Paid             |                 |            | 25,000       |              |
| Total                      | BRL538,500      | BRL538,500 | BRL1,072,100 | BRL1,072,100 |

### **Additional Information**

- 1. DaSilva uses FIFO inventory valuation. Purchases were made uniformly during 20X4. Ending inventory for 20X4 is composed of units purchased when the exchange rate was \$0.25.
- 2. The insurance premium for a two-year policy was paid on October 1, 20X3.
- 3. Plant and equipment were acquired as follows:

| Date            | Cost       |
|-----------------|------------|
| January 1, 20X1 | BRL200,000 |
| July 10, 20X2   | 50,000     |
| April 7, 20X4   | 100,000    |
|                 |            |

- 4. Plant and equipment are depreciated using the straight-line method and a 10-year life, with no residual value. A full month's depreciation is taken in the month of acquisition.
- 5. The intangible assets are patents acquired on July 10, 20X2, at a cost of BRL60,000. The estimated life is five years.
- 6. The common stock was issued on January 1, 20X1.
- 7. Dividends of BRL10,000 were declared and paid on April 7. On October 9, BRL15,000 of dividends were declared and paid.
- 8. Exchange rates were as follows:

| BRL \$   |
|----------|
| 1 = 0.45 |
| 1 = 0.40 |
| 1 = 0.34 |
| 1 = 0.30 |
| 1 = 0.28 |
| 1 = 0.23 |
| 1 = 0.20 |
| 1 = 0.25 |
|          |

### Required

- a. Prepare a schedule translating the December 31, 20X4, trial balance of DaSilva from reals to dollars assuming the real is the functional currency.
- b. Prepare a schedule calculating the translation adjustment as of the end of 20X4. The net assets on January 1, 20X4, were BRL280,000.

### P12-22 Remeasurement and Proof of Remeasurement Gain or Loss

Refer to the information in Problem P12-21. Assume that the dollar is the functional currency.

- a. Prepare a schedule remeasuring DaSilva Company's December 31, 20X4, trial balance from reals to dollars.
- b. Prepare a schedule providing a proof of the remeasurement gain or loss.

### LO 12-4, 12-5 P12-23 **Translation**

Alamo Inc. purchased 80 percent of the outstanding stock of Western Ranching Company, located in Australia, on January 1, 20X3. The purchase price in Australian dollars (A\$) was A\$200,000, and A\$40,000 of the differential was allocated to plant and equipment, which is amortized over a 10-year period. The remainder of the differential was attributable to a patent. Alamo Inc. amortizes the patent over 10 years. Western Ranching's trial balance on December 31, 20X3, in Australian dollars is as follows:

|                           | Debits     | Credits    |
|---------------------------|------------|------------|
| Cash                      | A\$ 44,100 |            |
| Accounts Receivable (net) | 72,000     |            |
| Inventory                 | 86,000     |            |
| Plant & Equipment         | 240,000    |            |
| Accumulated Depreciation  |            | A\$ 60,000 |
| Accounts Payable          |            | 53,800     |
| Payable to Alamo Inc.     |            | 10,800     |
| Interest Payable          |            | 3,000      |
| 12% Bonds Payable         |            | 100,000    |
| Premium on Bonds          |            | 5,700      |
| Common Stock              |            | 90,000     |
| Retained Earnings         |            | 40,000     |
| Sales                     |            | 579,000    |
| Cost of Goods Sold        | 330,000    |            |
| Depreciation Expense      | 24,000     |            |
| Operating Expenses        | 131,500    |            |
| Interest Expense          | 5,700      |            |
| Dividends Paid            | 9,000      |            |
| Total                     | A\$942,300 | A\$942,300 |

### **Additional Information**

- 1. Western Ranching uses average cost for cost of goods sold. Inventory increased by A\$20,000 during the year. Purchases were made uniformly during 20X3. The ending inventory was acquired at the average exchange rate for the year.
- 2. Plant and equipment were acquired as follows:

| Date            | Cost       |
|-----------------|------------|
| January 20X1    | A\$180,000 |
| January 1, 20X3 | 60,000     |

- 3. Plant and equipment are depreciated using the straight-line method and a 10-year life with no residual value.
- 4. The payable to Alamo is in Australian dollars. Alamo's books show a receivable from Western Ranching of \$6,480.
- 5. The 10-year bonds were issued on July 1, 20X3, for A\$106,000. The premium is amortized on a straight-line basis. The interest is paid on April 1 and October 1.
- 6. The dividends were declared and paid on April 1.

### 7. Exchange rates were as follows:

|                   | A\$ \$   |
|-------------------|----------|
| January 20X1      | 1 = 0.93 |
| August 20X1       | 1 = 0.88 |
| January 1, 20X3   | 1 = 0.70 |
| April 1, 20X3     | 1 = 0.67 |
| July 1, 20X3      | 1 = 0.64 |
| December 31, 20X3 | 1 = 0.60 |
| 20X3 average      | 1 = 0.65 |

# Required

- a. Prepare a schedule translating the December 31, 20X3, trial balance of Western Ranching from Australian dollars to U.S. dollars.
- b. Prepare a schedule providing a proof of the translation adjustment.

### LO 12-4 P12-24 **Parent Company Journal Entries and Translation**

Refer to the information given in Problem P12-23 for Alamo and its subsidiary, Western Ranching. Assume that the Australian dollar (A\$) is the functional currency and that Alamo uses the fully adjusted equity method for accounting for its investment in Western Ranching.

### Required

- a. Prepare the entries that Alamo would record in 20X3 for its investment in Western Ranching. Your entries should include the following:
  - (1) Record the initial investment on January 1, 20X3.
  - (2) Record the dividend received by the parent company.
  - (3) Recognize the parent company's share of the equity income of the subsidiary.
  - (4) Record the amortizations of the differential.
  - (5) Recognize the translation adjustment required by the parent from the adjustment of the differential.
  - (6) Recognize the parent company's share of the translation adjustment resulting from the translation of the subsidiary's accounts.
- b. Provide the necessary documentation and support for the amounts recorded in the journal entries, including a schedule of the translation adjustment related to the differential.

### LO 12-5 **Consolidation Worksheet after Translation** P12-25

Refer to the information given in Problems P12-23 and P12-24 for Alamo and its subsidiary, Western Ranching. Assume that the Australian dollar (A\$) is the functional currency and that Alamo uses the fully adjusted equity method for accounting for its investment in Western Ranching. A December 31, 20X3, trial balance for Alamo Inc. follows. Use this translated trial balance for completing this problem.

| Item                             | Debit     | Credit |
|----------------------------------|-----------|--------|
| Cash                             | \$ 38,000 |        |
| Accounts Receivable (net)        | 140,000   |        |
| Receivable from Western Ranching | 6,480     |        |
| Inventory                        | 128,000   |        |

| Interest Payable                   |             |     | 2,000    |
| Common Stock                       |             |     | 500,000  |
| Retained Earnings, January 1, 20X3 |             |     | 179,656  |
| Sales                              |             | 1   | ,000,000 |
| Income from Subsidiary             |             |     | 39,416   |
| Total                              | \$1,871,072 | \$1 | ,871,072 |

### Reauired

- a. Prepare a set of elimination entries, in general journal form, for the entries required to prepare a comprehensive consolidation worksheet (including other comprehensive income) as of December 31, 20X3.
- b. Prepare a comprehensive consolidation worksheet as of December 31, 20X3.

LO 12-7

### P12-26 Remeasurement

Refer to the information in Problem P12-23. Assume the U.S. dollar is the functional currency.

### Required

- a. Prepare a schedule remeasuring the December 31, 20X3, trial balance of Western Ranching from Australian dollars to U.S. dollars.
- b. Prepare a schedule providing a proof of the remeasurement gain or loss. The subsidiary's net monetary liability position on January 1, 20X3, was A\$80,000.

### P12-27 **Parent Company Journal Entries and Remeasurement**

Refer to the information given in Problems P12-23 and P12-26 for Alamo and its subsidiary, Western Ranching. Assume that the U.S. dollar is the functional currency and that Alamo uses the fully adjusted equity method for accounting for its investment in Western Ranching.

### Required

- a. Prepare the entries that Alamo would record in 20X3 for its investment in Western Ranching. Your entries should do the following:
  - (1) Record the initial investment on January 1, 20X3.
  - (2) Record the dividend the parent company received.
  - (3) Recognize the parent company's share of the equity income from the subsidiary.
  - (4) Record the amortizations of the differential.
- b. Provide the necessary documentation and support for the amounts recorded in the journal entries.

LO 12-7

### **Consolidation Worksheet after Remeasurement** P12-28

Refer to the information given in Problems P12-23 and P12-27 for Alamo and its subsidiary, Western Ranching. Assume that the U.S. dollar is the functional currency and that Alamo uses the fully adjusted equity method for accounting for its investment in Western Ranching. A December 31, 20X3, trial balance for Alamo follows. Use this remeasured trial balance for completing this problem.

| Item                             | Debit     | Credit |
|----------------------------------|-----------|--------|

- b. Prepare a three-part consolidation worksheet as of December 31, 20X3.

# LO 12-6, 12-7 P12-29

# Foreign Currency Remeasurement [AICPA Adapted]

On January 1, 20X1, Kiner Company formed a foreign subsidiary that issued all of its currently outstanding common stock on that date. Selected accounts from the balance sheets, all of which are shown in local currency units, are as follows:

|   | December 31 |            |
|---|-------------|------------|
|   | 20X2        | 20X1       |
| Accounts Receivable (net of allowance for uncollectible accounts of 2,200 LCU on December 31, 20X2, and     |             |            |
| 2,000 LCU on December 31, 20X1)   | LCU 40,000  | LCU 35,000 |
| Inventories, at cost  | 80,000      | 75,000     |
| Property, Plant, & Equipment (net of allowance for  |             |            |
| accumulated depreciation of 31,000 LCU on December 31,  |             |            |
| 20X2, and 14,000 LCU on December 31, 20X1)  | 163,000     | 150,000    |
| Long-Term Debt  | 100,000     | 120,000    |
| Common Stock, authorized 10,000 shares, par value<br>10 LCU per share; issued and outstanding, 5,000 shares |             |            |
| on December 31, 20X2, and December 31, 20X1   | 50,000      | 50,000     |

### **Additional Information**

1. Exchange rates are as follows:

|                                 | LCU \$  |
|---------------------------------|---------|
| January 1, 20X1–July 31, 20X1   | 2.0 = 1 |
| August 1, 20X1–October 31, 20X1 | 1.8 = 1 |
| November 1, 20X1–June 30, 20X2  | 1.7 = 1 |
| July 1, 20X2–December 31, 20X2  | 1.5 = 1 |
| Average monthly rate for 20X1   | 1.9 = 1 |
| Average monthly rate for 20X2   | 1.6 = 1 |

2. An analysis of the accounts receivable balance is as follows:

|  | 20X2       | 20X1        |
|--|------------|-------------|
| Accounts Receivable:                               |            |             |
| Balance at beginning of year                       | LCU 37,000 |             |
| Sales (36,000 LCU per month in 20X2 and 31,000 LCU |            |             |
| per month in 20X1)                                 | 432,000    | LCU 372,000 |
| Collections  | (423,600)  | (334,000)   |
| Write-offs (May 20X2 and December 20X1)            | (3,200)    | (1,000)     |
| Balance at end of year                             | LCU 42,200 | LCU 37,000  |

|   | 20X2      | 20X1      |
|---|-----------|-----------|
| Allowance for Uncollectible Accounts:   |           |           |
| Balance at beginning of year            | LCU 2,000 |           |
| Provision for uncollectible accounts    | 3,400     | LCU 3,000 |
| Write-offs (May 20X2 and December 20X1) | (3,200)   | (1,000)   |
| Balance at end of year                  | LCU 2,200 | LCU 2,000 |

3. An analysis of inventories, for which the first-in, first-out inventory method is used, follows:

|                                     | 20X2       | 20X1       |
|-------------------------------------|------------|------------|
| Inventory at beginning of year      | LCU 75,000 |            |
| Purchases (June 20X2 and June 20X1) | 335,000    | LCU375,000 |
| Goods available for sale            | LCU410,000 | LCU375,000 |
| Inventory at end of year            | (80,000)   | (75,000)   |
| Cost of goods sold                  | LCU330,000 | LCU300,000 |

- 4. On January 1, 20X1, Kiner's foreign subsidiary purchased land for 24,000 LCU and plant and equipment for 140,000 LCU. On July 4, 20X2, additional equipment was purchased for 30,000 LCU. Plant and equipment is being depreciated on a straight-line basis over a 10-year period with no residual value. A full year's depreciation is taken in the year of purchase.
- 5. On January 15, 20X1, 7 percent bonds with a face value of 120,000 LCU were issued. These bonds mature on January 15, 20X7, and the interest is paid semiannually on July 15 and January 15. The first interest payment was made on July 15, 20X1.

# Required

Prepare a schedule remeasuring the selected accounts into U.S. dollars for December 31, 20X1, and December 31, 20X2, respectively, assuming the U.S. dollar is the functional currency for the foreign subsidiary. The schedule should be prepared using the following form:

|                                    |                | Appropriate   | Remeasured into |
|------------------------------------|----------------|---------------|-----------------|
| Item                               | Balance in LCU | Exchange Rate | U.S. Dollars    |
| December 31, 20X1:                 |                |               |                 |
| Accounts Receivable (net)          |                |               |                 |
| Inventories                        |                |               |                 |
| Property, Plant, & Equipment (net) |                |               |                 |
| Long-Term Debt                     |                |               |                 |
| Common Stock                       |                |               |                 |
| December 31, 20X2:                 |                |               |                 |
| Accounts Receivable (net)          |                |               |                 |
| Inventories                        |                |               |                 |
| Property, Plant, & Equipment (net) |                |               |                 |
| Long-Term Debt                     |                |               |                 |
| Common Stock                       |                |               |                 |

### LO 12-4, 12-5 **P12-30**

### **Foreign Currency Translation**

Refer to the information in Problem P12-29 for Kiner Company and its foreign subsidiary.

Prepare a schedule translating the selected accounts into U.S. dollars as of December 31, 20X1, and December 31, 20X2, respectively, assuming that the local currency unit is the foreign subsidiary's functional currency.

### LO12-1-12-8 P12-31 **Matching Terms**

Match the items in the left-hand column with the descriptions/explanations in the right-hand column.

### LO 12-4 P12-32 Translation Choices

The U.S. parent company is preparing its consolidated financial statements for December 31, 20X4. The foreign company's local currency (LCU) is the functional currency. Information is presented in Data Set A and Data Set B.

### Data Set A:

|    | Exchange Rate          | Date  |
|----|------------------------|---|
| 1. | LCU 0.74               | June 16, 20X1: date foreign company purchased |
| 2. | 0.80                   | January 1, 20X4: beginning of current year    |
| 3. | 0.87                   | March 31, 20X4                                |
| 4. | 0.86                   | June 12, 20X4                                 |
| 5. | 0.85                   | Average for year 20X4                         |
| 6. | 0.84                   | November 1, 20X4                              |
| 7. | 0.83                   | December 31, 20X4: end of current year        |
| 8. | No translation rate is | s applied                                     |

### Data Set B:

- a. Accounts receivable outstanding from sales on March 31, 20X4.
- b. Sales revenue earned during year.
- c. Dividends declared on November 1, 20X4.
- d. Ending inventory balance from acquisitions through the year.
- e. Equipment purchased on March 31, 20X4.
- f. Depreciation expense on equipment.
- g. Common stock outstanding.
- h. Dividends payable from dividends declared on June 12, 20X4.
- i. Accumulated Other Comprehensive Income balance from prior fiscal year.
- j. Bond payable issued January 1, 20X4.
- k. Interest expense on the bond payable.

- a. Select the appropriate exchange rate from the amounts presented in Data Set A to prepare the translation worksheet for each of the accounts presented in Data Set B.
- b. Determine the direct exchange rate for January 1, 20X4.
- c. Determine whether the U.S. dollar strengthened or weakened against the LCU during 20X4.

### LO 12-5

### **Proof of Translation Adjustment** P12-33

MaMi Co. Ltd. located in Mexico City is a wholly owned subsidiary of Special Foods, a U.S. company. At the beginning of the year, MaMi's condensed balance sheet was reported in Mexican pesos (MXP) as follows:

| Assets | 3,425,000 | Liabilities          | 2,850,000 |
|--------|-----------|----------------------|-----------|
|        |           | Stockholders' Equity | 575,000   |

During the year, the company earned income of MXP270,000 and on November 1 declared dividends of MXP150,000. The Mexican peso is the functional currency. Relevant exchange rates between the peso and the U.S. dollar follow:

| January 1 (beginning of year) | \$0.0870 |
|-------------------------------|----------|
| Average for year              | 0.0900   |
| November 1                    | 0.0915   |
| December 31 (end of year)     | 0.0930   |
|                               |          |

# Required

- a. Prepare a proof of the translation adjustment, assuming that the beginning credit balance of the Accumulated Other Comprehensive Income—Translation Adjustment was \$3,250.
- b. Did the U.S. dollar strengthen or weaken against the Mexican peso during the year?

**SCHWESER** 

### Situation

The Montana Corporation, based in Billings, transacts business in the United States and Mexico. Its wholly owned subsidiary (Cabo, Inc.) is located in Mexico. Both companies assume the United States dollar as their functional currency.

Consolidated financial statements are being prepared for Year One. Montana Corp. and Cabo, Inc., have a December 31 year-end. The currency exchange rates are as follows for the current year (Year One):

| January 1, Year One:   | 1 peso equals \$.088 |
|------------------------|----------------------|
| Average for Year One:  | 1 peso equals \$.090 |
| November 1, Year One:  | 1 peso equals \$.092 |
| December 1, Year One:  | 1 peso equals \$.094 |
| December 31, Year One: | 1 peso equals \$.095 |
| January 31, Year Two:  | 1 peso equals \$.098 |
|                        |                      |

### Topics covered in the simulation

- a. Foreign currency translation.
- b. Foreign currency remeasurement.

# SEGMENT REPORTING AT WALMART

In 1962, Sam Walton opened the first Walmart store in Rogers, Arkansas. By 1967, the company had expanded to 24 stores, and it recorded more than \$12 million in sales that year. In 1968, Walmart opened its first store outside of Arkansas. Then, in 1969, it incorporated, going public the following year. The company continued to expand during the 1970s and 1980s and, by its 25th anniversary, had 1,198 stores, employed more than 200,000 employees, and achieved \$15.9 billion in annual sales. Finally, Walmart opened its first "Supercenter" in 1998.

Walmart jumped into the international market in 1991, opening a store in Mexico City. Three years later, it purchased Woolco to expand its operations into Canada. At the end of 1995, Walmart had nearly 2,000 stores and was just shy of \$100 billion in revenues. The company's rapid expansion has continued into the 21st century. During fiscal 2012, Walmart operated 10,130 stores in 27 countries, employed approximately 2.2 million people, and had more than \$443 billion in revenues.

Walmart divides its operations into three main segments: U.S. Walmart stores, International Walmart stores, and Sam's Club stores. Each segment reports stand-alone financial information. These individual segment financial disclosures reveal differences in operations. For example, in 2012, Sam's Club stores derived 24 percent of its revenues from auto fuel sales, which is unique to this segment. The aggregate numbers reported in the consolidated financial statements do not afford investors and other interested parties the ability to distinguish among the different segments. Hence, these detailed segment disclosures provide a way for financial statement users to better understand the operations of the company.

### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 13-1 Understand accounting issues associated with segment reporting both in the United States and internationally.
- LO 13-2 Understand and be able to calculate threshold tests for segment reporting.
- LO 13-3 Understand the requirements for enterprisewide disclosures.
- LO 13-4 Understand the rules for interim financial reporting.

# REPORTING FOR SEGMENTS

LO 13-1

Understand accounting issues associated with segment reporting both in the United States and internationally.

Diversification into new products and multinational markets during the 1960s and early 1970s created the need for disaggregated information about the individual segments or components of an enterprise. This information need was addressed by the Accounting Principles Board, the Financial Executives Institute, the Institute of Management Accountants, the Securities and Exchange Commission, and, finally, the Financial Accounting Standards Board.

Large, diversified companies can be viewed as a portfolio of assets operated as divisions or subsidiaries, often multinational in scope. The various components of a large company may have different profit rates, different degrees and types of risk, and different opportunities for growth. A major issue for accountants is how to develop and disclose the information necessary to reflect these essential differences. The following discussion presents the accounting standards for reporting an entity's operating components, foreign operations, and major customers.

# SEGMENT REPORTING ACCOUNTING ISSUES

ACS 280 defines an operating segment as having three characteristics:

- 1. The component unit's business activities generate revenue and incur expenses, including any revenue or expenses in transactions with the company's other business units.
- 2. The component unit's operating results are regularly reviewed by the entity's chief operating decision maker, who then determines the resources to assign to the segment and evaluates its performance.
- 3. Separate financial information is available for the component unit.

Generally, the corporate headquarters is not a separate operating segment. Also, the company may choose to aggregate several individual operating segments that have very similar economic characteristics (i.e., products and services, production processes, type or class of customer, methods used to distribute products or provide for services). Management also may believe that the aggregation will provide more meaningful information to the users of the financial statements.

Whenever the issue of defining the income for an enterprise's segment arises, one problem is the allocation of costs to specific segments. For example, should a segment's income include directly traceable costs only, or should it also include an allocation of common costs, such as companywide advertising or a central purchasing department? One accounting researcher has stated that all allocations are arbitrary, that is, not completely verifiable with empirical evidence, and, therefore, net income after deducting any allocated costs is arbitrary. ASC 280 states that the allocations of revenues and costs should be included for a reported segment only if they are included in the segment's profit or loss that the chief operating decision maker uses. Also, only those assets included in the measure of the segment's assets that the chief operating decision maker uses should be reported for that segment. Thus, the FASB desires to align the segments' external financial disclosures with the internal reporting used by the company's management to make resource allocations and other decisions regarding the operating segments.

# **International Financial Reporting Standards** for Operating Segments

Segment reporting is also specified in International Financial Reporting Standard No. 8, "Operating Segments" (IFRS 8). This standard requires disclosure of information about an entity's reportable operating segments in both its annual and its interim financial statements. The international standards are generally similar to those prescribed by U.S.

<sup>&</sup>lt;sup>1</sup> A. Thomas, The Allocation Problem: Part Two (Sarasota, FL: American Accounting Association, 1974).

GAAP. However, there are several notable differences, First, IFRS requires disclosures for both business segments and geographical segments. Second, IFRS requires two different bases of segmentation: (1) a primary basis and (2) a secondary basis. More disclosure is required for primary segments. Third, the amounts disclosed under IFRS are based on the same accounting policies as the amounts recognized in the financial statements, not based on amounts reported to the chief operating decision maker as under U.S. GAAP.

### INFORMATION ABOUT OPERATING SEGMENTS

LO 13-2

Understand and be able to calculate threshold tests for segment reporting.

Many entities are diversified across several lines of business. Each line may be subject to unique competitive factors and may react differently to changes in the economic environment. For example, a large company such as Johnson & Johnson operates in several major lines: consumer, pharmaceutical, and professional. Its products include disposable contact lenses, baby products, surgical products, antibody therapies, and cold and flu medications. A conglomerate may operate in several consumer markets, each with different characteristics. In addition, a company is exposed to different risks in each of the markets in which it acquires its production factors. Consolidated statements present all of these heterogeneous factors in a single-entity context. The purpose of segment reporting is to allow financial statement users to look behind the consolidated totals to the individual components that constitute the entity.

# **Defining Reportable Segments<sup>2</sup>**

The process of determining separately reportable operating segments, that is, segments for which separate supplemental disclosures must be made, is based on management's specification of those operating segments that are used internally for evaluating the enterprise's financial position and operating performance.

# 10 Percent Quantitative Thresholds

The FASB specified three 10 percent significance rules to determine which of the operating segments shall have separately reported information. The separate disclosures are required for segments meeting at least one of the following tests:

- 1. The segment's revenue, including both external sales and intersegment sales or transfers, is 10 percent or more of the total revenues from external sales plus intersegment transactions of all operating segments.
- 2. The absolute value of the segment's profit or loss is 10 percent or more of the higher, in absolute value, of (a) the total profit of all operating segments that did not report a loss or (b) the total loss of all operating segments that did report a loss.
- 3. The segment's assets are 10 percent or more of the total assets of all operating segments.

Note that the revenue test includes intersegment sales or transfers. The FASB found that the full impact of a particular segment on the entire enterprise should be measured. Also, the FASB believed that the definition of an operating segment should include components of an enterprise that sell primarily or exclusively to other components of the enterprise. Information about these "vertically integrated" operations provides insight into the enterprise's production and operations.

Walmart reported the following operating segments in fiscal year 2012 (with sales in parentheses): Walmart U.S. (\$264.2 billion), Walmart International (\$125.9 billion), and Sam's Club (\$53.8 billion). Clearly, the majority of the company's net sales come from Walmart US.

**ASC 280** states that the segment disclosure should include the reportable segments' measures of profit or loss. Thus, the report should be the same as that used for internal decision-making purposes. Some companies allocate operating expenses arising from shared facilities such as a common warehouse. Other companies allocate

<sup>&</sup>lt;sup>2</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

items such as interest costs, income taxes, or income from equity investments to specific segments. Whatever is used for internal decision-making purposes to measure the operating segment's profit or loss should be reported in the external disclosure.

Although an enterprise is required to report the assets of the separately reportable operating segments, ASC 280 also allows companies to report their segments' liabilities if the company finds that the fuller disclosure would be meaningful. The assets to be reported are those used by the chief operating decision maker in making decisions about the segment and might include intangible assets such as goodwill or other intangibles. If commonly used assets are allocated to the segments, then these should be included in the reported amounts. The assets also might include financing items such as investments in equity securities or intersegment loans. The key point is that the revenues, profit or loss, and assets should be reported on the same basis as used for internal decision-making purposes.

If the total external revenue of the separately reportable operating segments is less than 75 percent of the total consolidated revenue, then management must select and disclose information about additional operating segments until at least 75 percent of consolidated revenue is included in reportable segments. The choice of which additional operating segments to report is left to management.

Information about the operating segments that are not separately reportable is combined and disclosed in the "All Other" category. The sources of the revenue in the All Other category must be described, but the level of disclosure for this category is significantly less than for the separately reportable segments. Again, note that the corporate headquarters (or corporate administration) is not typically included as an operating segment of an enterprise.

### Illustration of 10 Percent Tests

See Figure 13-1 for the consolidated financial statements for Peerless Products Corporation and Special Foods Inc. Assume the following information for this example:

- 1. Peerless owns 80 percent of Special Foods' common stock. Special Foods reports a profit of \$50,000 for 20X1 and pays dividends of \$30,000. The December 31, 20X1, balances in Special Foods' stockholders' equity accounts total \$300,000, of which the noncontrolling interest is 20 percent.
- 2. Peerless acquires 40 percent of Barclay Company stock on January 1, 20X1, for a cost of \$160,000, which is equal to the stock's book value on that date. The equity method is used to account for this investment. Barclay earns \$80,000 in profit during 20X1 and pays \$20,000 in dividends. This investment is managed by the corporate office and is not assigned to any operating segment.

Segment disclosure provides a breakdown of the consolidated totals into their constituent parts. The items that appear in the consolidated statements and must be disaggregated are sales of \$572,000 and total assets of \$1,450,000. In the segment analysis, segment profit is also used; however, this figure is not usually presented directly on the consolidated income statement and is computed separately.

Figure 13–2 is a worksheet used to perform the disaggregation from the consolidated totals into the various operating segments. It also includes additional data necessary for preparing the annual report footnote disclosure presented later in this chapter.

Additional information for this illustration is as follows:

- 1. The consolidated entity of Peerless Products and Special Foods comprises five different operating segments as well as a central corporate administration. The operating segments are defined by management as Food Products, Plastic and Packaging, Consumer and Commercial, Health and Scientific, and Chemicals.
- 2. On January 1, 20X1, the Food Products segment of Special Foods issues a \$100,000, 12 percent note payable to the Plastic and Packaging segment of Peerless Products. The intercompany interest is \$12,000 for the year and is properly eliminated from the consolidated statements.

FIGURE 13-1 **Consolidated Financial Statements for Peerless Products Corporation** and Subsidiary

| Cash Accounts Receivable Inventory Investment in Barclay Stock Land Building & Equipment Less: Accumulated Depreciation  | \$1,400,000<br>(770,000)                                      | \$ 131,000<br>125,000<br>165,000<br>184,000<br>215,000                                       |
| Total Assets   |   | \$1,450,000  |
| Accounts Payable Bonds Payable Noncontrolling Interest Common Stock Retained Earnings Total Liabilities & Stockholders' Equity   |   | \$ 200,000<br>300,000<br>60,000<br>500,000<br>390,000<br>\$1,450,000                         |

- 3. Each operating segment makes sales to unaffiliated customers. In addition, \$28,000 of intersegment sales are made during the year by the Food Products, the Plastic and Packaging, and the Consumer and Commercial segments. The cost of these intersegment sales is \$18,000. These goods are still in the ending inventories of the purchasing operating segments, and the unrealized inventory profit of \$10,000 must be eliminated from both cost of goods sold and inventories in preparing the consolidated financials. Specific revenue information is presented in Figure 13–2.
- 4. Figure 13–2 also includes the profit and loss information for each segment as it is defined by the entity. The entity uses a concept it terms "controllable earnings" to measure segment performance. As the company defines it, controllable earnings include interest revenue and interest expense in the entity's definition of segment profit or loss. Therefore, interest is reported on a segment basis. Depreciation is separately reported because if depreciation, depletion, or amortization expenses are included in the measure of segment profit or loss, ASC 280 requires that these cost elements be disclosed separately to provide information to financial statement users to approximate the cash flow for each segment.
- 5. The company acquires a computer costing \$30,000 during the year. The computer is used for production scheduling and control and is depreciated using the straight-line method over a three-year period ( $\$30,000 \div 3 \text{ years} = \$10,000 \text{ per year}$ ). The computer's annual depreciation expense is allocated based on use as monitored by the computer. Figure 13–2 presents these allocated costs below the other costs for each operating segment.

- 6. The intersegment interest expense from the intercompany note is attributable to the Food Products segment, and the intercompany interest income is earned by the Plastic and Packaging segment.
- 7. The company's policy on determining segment performance does not include income from the investment in any of its operating segment's profit or loss. Rather, this item is assigned to corporate administration. This information is collected in the worksheet to reconcile the consolidated totals.
- 8. The assets section of Figure 13–2 presents the assets for the operating segments as well as for the corporate administration center. Included in the segments' assets is an allocation of the production computer's \$20,000 book value (\$30,000 less \$10,000 of accumulated depreciation). Note also that the intersegment notes are assigned to a specific segment for internal decision-making purposes, but these notes are eliminated in the preparation of the consolidated financials.

We next present each of Peerless Products' specific significance tests.

10 Percent Revenue Test The first 10 percent test is applied to each operating segment's total revenue as a percentage of the combined revenue of all segments before elimination of intersegment transfers and sales. If an operating segment's total revenue is 10 percent or more of the combined revenue of all segments, then the segment is separately reportable, and supplementary disclosures must be provided for it in the annual report.

The 10 percent revenue tests are applied as follows:

| Segment                 | Segment<br>Revenue | Percent of Combined<br>Revenue of \$600,000 | Reportable<br>Segment |
|-------------------------|--------------------|---|-----------------------|
| Food Products           | \$323,000          | 53.8%                                       | Yes                   |
| Plastic and Packaging   | 113,000            | 18.8  | Yes                   |
| Consumer and Commercial | 45,000             | 7.5   | No                    |
| Health and Scientific   | 86,000             | 14.3  | Yes                   |
| Chemicals               | 33,000             | 5.5   | No                    |
| Total                   | \$600,000          | 100.0%*                                     |                       |

Unrounded percents for segments total to 100 percent.

The revenue test shows that the following operating segments are separately reportable: Food Products, Plastic and Packaging, and Health and Scientific. A common shortcut is to compute 10 percent of the denominator of the test (for Peerless and its subsidiary,  $$600,000 \times 0.10$ ) and then compare each segment's total revenue with that fraction. In this case, reportable segments are those with \$60,000 or more in total revenue.

10 Percent Profit (Loss) Test The profit or loss test is the second test to determine which operating segments are separately reportable. The test is to determine whether a segment's profit or loss is equal to or more than 10 percent of the absolute value of either the combined operating profits or the combined operating losses of the segments, whichever is higher.

Because two segments had operating losses for the year, we present two separate tabulations as follows:

| Segment                 | Segment Profits | Segment Losses |
|-------------------------|-----------------|----------------|
| Food Products           | \$198,000       |                |
| Plastic and Packaging   | 59,000          |                |
| Consumer and Commercial |                 | \$(25,000)     |
| Health and Scientific   | 22,000          |                |
| Chemicals               |                 | (9,000)        |
| Total                   | \$279,000       | \$(34,000)     |
|                         | <u> </u>        | <u> </u>       |

The higher absolute total is the \$279,000 of profits. This amount becomes the denominator for the 10 percent operating profit or loss test. Because this test is based on absolute amounts, all numbers are treated as positive numbers. The test data follow:

| Segment                 | Profit (Loss) | Percent of Test<br>Amount of \$279,000 | Separately<br>Reportable |
|-------------------------|---------------|--|--------------------------|
| Food Products           | \$198,000     | 71.0%                                  | Yes                      |
| Plastic and Packaging   | 59,000        | 21.1                                   | Yes                      |
| Consumer and Commercial | (25,000)      | 9.0                                    | No                       |
| Health and Scientific   | 22,000        | 7.9                                    | No                       |
| Chemicals               | (9,000)       | 3.2                                    | No                       |

The Food Products and Plastic and Packaging segments are separately reportable using the profit or loss test.

10 Percent Assets Test The last of the tests to determine whether a segment is separately reportable is the 10 percent assets test. Note that management defines the items composing each segment's assets as used for internal decision-making purposes. Management may include intangibles, receivables, and even intercompany items as defined by management. Assume that Peerless' management defines the segment assets to include intercompany items such as the intercompany notes. Recognize that it really is up to management to define what is, and what is not, included in each of the definitions of segment profit or loss and the segment assets.

The combined assets of all operating segments (\$1,276,000) are used for this test. The difference of \$110,000 between the combined assets of the operating segments (\$1,276,000) and the amount included (\$1,166,000) in the consolidated assets is due to (1) the \$10,000 unrealized intercompany profit from intersegment inventory transactions that has not been realized in sales to third parties and (2) the \$100,000 of intersegment notes. These intercompany amounts must be eliminated in the consolidation process.

The 10 percent significance rule is applied to segment assets as follows:

| Segment                 | Assets      | Percent of Test<br>Amount of \$1,276,000 | Separately<br>Reportable |
|-------------------------|-------------|--|--------------------------|
| Food Products           | \$ 411,000  | 32.2%                                    | Yes                      |
| Plastic and Packaging   | 375,000     | 29.4                                     | Yes                      |
| Consumer and Commercial | 100,000     | 7.8                                      | No                       |
| Health and Scientific   | 310,000     | 24.3                                     | Yes                      |
| Chemicals               | 80,000      | 6.3                                      | No                       |
| Total                   | \$1,276,000 | <u>100.0</u> %                           |                          |

The Food Products, Plastic and Packaging, and Health and Scientific operating segments are separately reportable using the 10 percent assets test; that is, their assets are equal to or more than 10 percent of the combined assets of the operating segments  $(\$127,600 = \$1,276,000 \times 0.10).$ 

FYI

GE is one of the most diversified companies in the world. It reports segment information from these segments: Energy, Infrastructure, Aviation, Healthcare, Transportation, Home & Business Solutions, and GE Capital. Energy had the highest revenue (\$43.7 billion) in 2011.

Figure 13–3 is a summary of the results of the three tests. Recall that a segment is separately reportable if it meets any one of the three 10 percent tests. The following segments are separately reportable under the three tests: Food Products, Plastic and Packaging, and Health and Scientific. The remaining segments, Consumer and Commercial and Chemicals, are not separately

FIGURE 13-3 **Summary of Reportable Industry Segments: 10 Percent Tests** 

|                              | Food<br>Products | Plastic<br>and<br>Packaging | Consumer<br>and<br>Commercial | Health<br>and<br>Scientific | Chemicals |
|------------------------------|------------------|-----------------------------|-------------------------------|-----------------------------|-----------|
| Revenue test                 | Yes              | Yes                         | No                            | Yes                         | No        |
| Operating profit (loss) test | Yes              | Yes                         | No                            | No                          | No        |
| Assets test                  | Yes              | Yes                         | No                            | Yes                         | No        |
|                              |                  |                             |                               |                             |           |

reportable under any of the three tests. Specific segment information must therefore be reported in the annual report for the three separately reportable segments, and summary information for the remaining two nonreportable segments must be combined under the heading "All Other."

# **Comprehensive Disclosure Test**

After determining which of the segments is reportable under any of the three 10 percent tests, the company must apply a comprehensive test. The comprehensive test is the 75 percent consolidated revenue test.

# 75 Percent Consolidated Revenue Test

The total revenue from external sources by all separately reportable operating segments must equal at least 75 percent of the total consolidated revenue. The reporting company must identify additional operating segments as reportable until this test is met. Peerless Products and Special Foods, with three reportable segments, compute the 75 percent test as follows:

| Sales to unaffiliated customers by reportable segments:<br>Food Products<br>Plastic and Packaging<br>Health and Scientific | \$317,000<br>95,000<br>86,000 |           |
|--|-------------------------------|-----------|
| Total of reportable segments   |                               | \$498,000 |
| Consolidated revenue<br>Reportable segments' percentage of consolidated  |                               | \$572,000 |
| revenue (\$498,000 ÷ \$572,000)  |                               | 87.1%     |

Because this percentage is equal to or higher than 75 percent, no further operating segments must be separately reported. Had the percentage been less than 75 percent, addi-

# **Stop & Think**

What sales number is appropriate here? The comprehensive disclosure test uses only sales to unaffiliated customers in contrast to the test for determining reportable operating segments, which uses all sales (both external and intersegment sales).

tional individual operating segments would have been required to be treated as reportable until the 75 percent test was met.

### Other Considerations

For practicality, about 10 is used as an upper limit on the number of reportable segments because more than that number can make the supplemen-

tal information overly detailed. A company having more than about 10 reportable segments should consider aggregating the most closely related segments. Peerless Products and Special Foods have just three reportable segments.

In addition, companies must exercise judgment to determine the individual segments to be reported. For example, a segment may meet or fail a specific test because of some unusual situation, such as an abnormally high profit or loss on a one-time contract. The concept of interperiod comparability should be followed in deciding whether the segment should be disclosed in the current period. Companies should separately report segments that have been reported in prior years but fail the current period's significance tests because of

abnormal occurrences. Similarly, companies need not separately report a segment that has met a 10 percent test on a one-time basis only because of abnormal circumstances. A company is required, however, to indicate why a reportable segment is not disclosed.

Finally, if a segment becomes reportable in the current period that was not reported separately in earlier periods, the prior-years comparative segment disclosures, which are included in the current year's annual report, should be restated to obtain comparability of financial data.

# **Reporting Segment Information**

ASC 280 defines the specific disclosures required for each reportable segment. In segment reporting, the following quantitative and descriptive information must be disclosed for each segment determined to be separately reportable:

- 1. General information. Information must be disclosed regarding (a) how the company identifies each separately reportable segment, including information about the company's organizational structure (i.e., whether the company organizes along product lines, geographic areas, or some other factor), and (b) the types of products or services from which each reportable segment earns its revenues.
- 2. Amounts for each separately reportable segment. Segment disclosures must include amounts for (a) each segment's profit or loss and the measurement procedures used to determine the profit or loss, including how the company accounts for intersegment transactions, and (b) each segment's assets.
- 3. Measures of segment profit or loss. Each of the following must be disclosed if the company's chief operating decision maker reviews it to measure the segment profit or loss: (a) revenues from external sales, (b) revenues from transactions with other operating segments of the company, (c) interest revenue, (d) interest expense, (e) depreciation and amortization expense, (f) equity in the income of investees accounted for by the equity method, (g) income tax expense or benefit, (h) extraordinary items, and (i) other significant noncash items.
- 4. Segment assets. The following information on each separately reportable segment's assets must be disclosed if the company's chief operating decision maker includes it in computing: (a) the amount of investment in equity-method investees and (b) the total expenditures for increases to long-term productive assets through the capital budget because these expenditures often indicate which segments the company is building for the future.
- 5. Reconciliations to consolidated totals. Finally, the segment disclosures must include reconciliations between the reportable segments' total revenues, total profits or losses, and total assets and the related consolidated totals for those items. If the company decides to disclose liabilities for each reportable segment, a reconciliation required also is between the reportable segments' total liabilities and the consolidated total liabilities.

Companies are allowed to present these disclosures in separate schedules or in the footnotes. Most companies present footnote disclosures with accompanying schedules. An example of a commonly used disclosure format is presented in Figure 13-4 for Peerless Products and Special Foods. The figure presents only the current year's data for the operating segments used in the example. In practice, however, companies provide comparative data for each of the three fiscal years ending on the balance sheet date.

ASC 280 specifies that segment disclosures also must be made in interim statements such as the quarterly financial statements. The interim reports must disclose the following about each reportable segment: (1) revenues from external customers, (2) intersegment revenues, (3) a measure of segment profit or loss, (4) total assets for which there has been a material change from the most recent annual report, (5) any differences from the most recent annual report in the definition of operating segments or in how segment profit or loss is computed, and (6) a reconciliation of the total of segment profit or loss to the entity's consolidated totals.

# **ENTERPRISEWIDE DISCLOSURES**

LO 13-3

Understand the requirements for enterprisewide disclosures.

The focus in ASC 280 is to provide financial statement users information by which they may determine an entity's risks and potential returns applying the same basis of information aggregation as the company's management used. Certainly, the risks of doing business in one country may be quite different from the risks of doing business in another country. Today's large multinational entities have operations in many countries and foreign markets. In addition, a company that obtains a significant percentage of its revenue from just one customer has a different risk profile than a company that has many smaller customers. Thus, ASC 280 established what it termed enterprisewide disclosure standards to provide users more information about the company's risks. These enterprisewide disclosures are typically made in a footnote to the financial statements.

# **Information about Products and Services**

Three categories of required information are included under enterprisewide disclosures. The first is that the company is required to report the revenues from external customers for each major product and service or each group of similar products and services unless doing so is impracticable. The reason for this requirement is that the company may have organized its operating segments on a basis different from the organization of its product lines. However, if the company does establish its operating segments by product line, then the segment disclosures discussed earlier in this chapter meet this first, enterprisewide disclosure requirement.

# Information about Geographic Areas

The second category is information about the geographic areas in which the company operates. The company must report the following unless doing so is impracticable:

- 1. Revenues from external customers attributed to the company's home country of domicile (the United States for U.S. firms) and the revenue from external customers attributed to all foreign countries in which the enterprise generates revenues. If revenues from external customers generated in an individual country are material, then that country's revenues also must be separately disclosed.
- 2. Long-lived productive assets located in the entity's home country and the total assets located in all foreign countries in which the entity holds assets. As with revenue, if assets are material, then the amount of assets held an individual foreign country's in that specific country also must be disclosed separately.

ASC 280 excludes financial instruments, long-term customer relationships of a financial institution, mortgage, or other servicing rights, deferred policy acquisition costs, and deferred tax assets from long-term assets. The FASB believes that companies typically maintain accounting records on a country-by-country basis because of the political, economic, and other specific factors that differ across countries. Thus, if the company generates a material amount of revenue in a specific country or has made a material long-lived asset investment in a specific country, this information should be readily available for management to include in the enterprisewide disclosures. Although ASC 280 specified no materiality threshold for specific country disclosures, the 10 percent guideline for disaggregated disclosures seems to have gained acceptance.

Note that the revenues for the geographic information are those only to unaffiliated, external customers. Intersegment revenues are not included. The assets are only those long-lived, productive assets and exclude current assets and several types of noncurrent assets as specified by ASC 280. All companies must disclose domestic versus total foreign revenues and long-lived assets unless doing so is impracticable. For purposes of the following disclosure, assume that \$840,000 of the total consolidated assets of \$1,450,000 are determined to be long-lived, productive assets meeting the specifications of ASC 280. Separate country disclosures would be provided for material amounts. Assume that Peerless uses a 10 percent materiality threshold for assessing its foreign operations. Therefore, separate disclosure is presented for any country having more than or equal to 10 percent of the consolidated revenue or the total long-lived assets. An example of the footnote disclosure that Peerless Products could make follows:

| Geographic Information                     |                      |                      |  |  |
|--|----------------------|----------------------|--|--|
| Revenue Long-Lived Asset                   |                      |                      |  |  |
| United States<br>Total foreign             | \$380,000<br>192,000 | \$471,000<br>369,000 |  |  |
| Total                                      | \$572,000            | <u>\$840,000</u>     |  |  |
| Significant countries:<br>Canada<br>Mexico | \$116,000<br>28,000  | \$220,000<br>102,000 |  |  |

The company also must disclose the basis for attributing revenues from external customers to the individual countries. For example, one method may be to assign revenues based on the customer's location.

# **Information about Major Customers**

The third and final category of enterprisewide disclosures required by ASC 280 is information about major customers. An important issue is how to define an individual customer. For applying the disclosure test, each of the following is considered to be an individual customer: any single customer (including a group of customers or companies under common control), the federal government, a state government, a local government, or a foreign government. Materiality is not defined for this disclosure, but again, the 10 percent guideline seems to have gained the support of practice. The disclosures include the amount of revenue from each significant customer and the identity of the segment or segments reporting the revenues. The names of the individual customers need not be disclosed. The following is an example of the type of footnote disclosure that Peerless Products could use:

Revenues from one customer of the Food Products segment represent approximately \$64,000 of the company's consolidated revenues.

This concludes the discussion of segment reporting. The remainder of the chapter presents another major area of financial disclosure: interim financial reporting.

# INTERIM FINANCIAL REPORTING

LO 13-4

Understand the rules for interim financial reporting. *Interim reports*, which cover a time period of less than one year, provide timely information on the entity's operating progress throughout the year. Interim reports can be for a week, a month, a quarter, or several quarters. Many companies prepare monthly financial statements for internal management purposes. Publicly held companies are required to publish quarterly reports, and the rapid stock market reaction to the public release of quarterly information indicates that investors and other financial statement users look closely at these reports. The quarterly report is, in many ways, a smaller version of the annual report. It includes an abbreviated income statement, balance sheet, statement of cash flows, and selected footnotes and other disclosures for the quarter being reported, as well as comparative data for prior quarters.

Form 10-Q is the SEC's quarterly report and, for most companies, this quarterly report must be filed within 35 days after the end of each of the first three quarters. The annual report may be used in place of the interim report for the fourth quarter. The 35-day requirement is for publicly owned companies classified as "accelerated filers," which are companies with at least \$75 million in aggregate market value that have been subject to the periodic and annual reporting requirements for at least one year, including the filing of at least one annual report. Most companies traded on the major stock exchanges are in the accelerated filers category. Those companies not meeting the accelerated filers criteria have 45 days after the end of each of the first three quarters to file their quarterly reports.

The SEC does not require quarterly financial statements to be audited, but selected quarterly financial data must be reported in a footnote in the annual financial report. This annual disclosure requirement means that the independent registered public accounting firm performing the company's annual audit must review the company's quarterly reports made during the fiscal year and note any errors or restatements. Because of the wide use of interim reports, including monthly and quarterly reports, accountants must be aware of the principles and procedures used in preparing these reports.

# THE FORMAT OF THE QUARTERLY FINANCIAL REPORT

Quarterly financial reports generally contain the following items:

- 1. An income statement for the most recent quarter of the current fiscal period and a comparative income statement for the same quarter for the prior fiscal year.
- 2. Income statements for the cumulative year-to-date time period and for the corresponding period of the prior fiscal year.

- 3. A condensed balance sheet at the end of the current quarter and a condensed balance sheet at the end of the prior fiscal year. However, companies should include the balance sheet as of the end of the corresponding interim period of the previous year if it is necessary for an understanding of the impact of seasonal fluctuations on the company's financial condition.
- 4. A statement of cash flows as of the end of the current cumulative year-to-date period and for the same time span for the prior year.
- 5. Footnotes that update those in the last annual report. These interim footnotes include summaries of material changes in measurement or major economic events that have occurred since the end of the most recent fiscal year.
- 6. A report by management analyzing and discussing the results for the latest interim period.

# **ACCOUNTING ISSUES**

Interim reporting presents accountants several technical and conceptual measurement issues. Most of these center on the accounting concept of periodicity and the division of the annual period into interim periods. Note that interim reporting includes financial statements for any period less than one year, including monthly reports, quarterly reports, or any other portion of an annual period.

The use of quarterly reports to provide timely information is a fairly recent development. Many firms began publishing quarterly reports voluntarily in the late 1940s. These early reports raised substantive accounting issues because no standards existed to guide their presentation. Some firms' first three quarterly reports suggested a significant profit for the year and then arbitrary and questionable fourth-quarter adjustments reconciled to an actual loss for the year. The lack of established guidelines led to experimentation with a variety of cost allocations among periods, resulting in unrealistic patterns of quarterly income. It was not until 1973 that guidelines were finally standardized (ASC 270).

# Accounting Pronouncements on Interim Reporting

ASC 270 standardized the preparation and reporting of interim income statements. The opinion defines the income elements and the measurement of costs on an interim basis. The opinion also provides guidance for the annual report footnote summarizing the published interim disclosures and explaining any adjustments required to make the interim figures total the annual figures. This conformance to the annual report increases the reliability of the published interim statements and brings interim reporting under the view of the external auditors who review the footnotes in the annual report as part of the audit.

ASC 250 specifies that a change in an accounting principle made in an interim period is reported using the retrospective application to the prechange interim periods for the direct effects of the change. The financial statements for the earliest period presented, either annual or interim, are adjusted for the effects of the change at that point in time and all subsequent financial statements, again both annual and interim, are adjusted for the newly adopted accounting principle. A change in estimate in an interim period is reported currently and prospectively, and no prior periods are restated. A change in entity in an interim period requires retrospective application.

ASC 740 tackles the difficult problems of measuring the tax provision for interim reports when the actual tax expense is based on annual income. The interpretation allows estimates and judgments in order to obtain a reasonable relationship between the reported interim operating income and the related income tax provision. Examples of accounting for taxes in interim statements are presented later in this chapter.

# **International Financial Reporting Standards for Interim Reporting**

The minimum content for an interim financial report to be in accordance with IFRS is defined in International Accounting Standard 34, "Interim Financial Reporting" (IAS 34). The international standards for interims are very similar to those of U.S. GAAP and explicitly recognize that more estimates may be used in determining interim amounts than for measurements of annual financial data. Materiality tests for interim reporting are made based on the relation to the interim period data, not on an estimate of annual data. IAS 34 requires year-to-date disclosures in addition to the specific interim period disclosures, just as required by U.S. GAAP.

# REPORTING STANDARDS FOR INTERIM INCOME STATEMENTS

The form of the interim income statement is the same as the form of the annual income statement. Some differences exist in the measurement of specific components of income because of the shorter time period. In general, the accounting standards used for interim statements are the same as those used for the annual statements, although ASC 270 and ASC 740 provide an abundance of technical assistance to measure and report on an interim basis. Figure 13-5 presents an overview of the major accounting principles used for the interim income statement. The technical requirements relevant to interim reporting are discussed in the following sections.

### Revenue

One of the most significant elements of the interim income statement is revenue from sales. Investors wish to assess the entity's revenue-generating capability, so they compare revenue of the current interim period with revenue of the corresponding interim period of the prior year. The measurement basis used to determine revenue earned in an interim period should be the same as that used for the full fiscal year.

### FIGURE 13-5 Overview of Interim Income Statement Accounting Principles

| Revenue   | Recognize as earned during an interim period on same basis as used for annual reporting.  |
|---|---|
| Cost of goods sold  | Product costs for interim period recognized on same basis as used for annual reporting, except for interims:  |
|   | <ul> <li>Estimated gross profit rates may be used to determine interim cost of goods sold.</li> <li>Temporary liquidations of LIFO-based inventories are charged to cost of goods sold</li> </ul>   |
|   | <ul> <li>using expected replacement cost of the items.</li> <li>Lower-of-cost-or-market valuation method allows for loss recoveries for increases in market prices in later interim periods of the same fiscal year.</li> </ul>   |
|   | • Standard cost systems should use the same procedures as for annual reporting except that price variances or volume or capacity variances expected to be absorbed by end of the year should be deferred.   |
| All other costs and expenses  | Expense as incurred or allocated among interim periods' expenses based on benefits received or other systematic and rational basis.   |
| Income taxes  | Based on estimated annual effective tax rate with recognition of tax benefits of an operating loss if benefits are assured beyond a reasonable doubt; second and subsequent quarters are based on changes in cumulative amount of tax computed, including changes in estimates. |
| Disposal of a component of<br>the entity, or extraordinary,<br>unusual, infrequently<br>occurring, and contingent |   |
| items   | Recognize in interim period in which they occur.  |
| Accounting changes:   |   |
| <ol> <li>Change in accounting principle</li> <li>Change in an</li> </ol>  | Retrospective application to all prechange interim periods reported.  |
| accounting estimate  3. Change in a reporting   | Apply to current and prospective interim periods only.  |
| entity  | Retrospective application to all prechange interim periods reported.  |
|   |   |

Thus, revenue must be recognized and reported in the period in which it is earned and cannot be deferred to other periods to present a more stable revenue stream. Revenue from seasonal businesses, such as in agriculture, food products, wholesale or retail outlets, and amusements, cannot be manipulated to eliminate seasonal trends.

Businesses that experience material seasonal variations in their revenue are encouraged to supplement their interim reports with information for 12-month periods ending at the interim date for the current and preceding years. Such disclosures reduce the possibility that users of the reports might make unwarranted inferences about the annual results from an interim report with material seasonal variation.

# Cost of Goods Sold and Inventory

Cost of goods sold is generally the largest single expense on the interim income statement. A general rule is that interim cost of goods sold should be computed with the direct and allocated cost elements on the same basis as used to compute the annual cost of goods sold. However, ASC 270 and ASC 740 permit the following practical modifications to this general rule:

- 1. Use estimated gross profit rates. Estimated gross profit rates may be used to compute the interim cost of goods sold. Thus, a physical inventory count does not need to be made in each interim period.
- 2. LIFO temporary liquidations. Due to seasonality and other factors, companies using the LIFO method of inventory valuation sometimes have temporary liquidations of the LIFO-based inventory during one or more interim periods. These temporary liquidations are expected to be replenished by the end of the fiscal year. In these cases, the interim cost of goods sold is charged for the expected replacement cost of the liquidated inventory, not the LIFO historical cost of the inventory. If, by the end of the year, the LIFO inventory base is not replaced, then the liquidated inventory is charged to cost of goods sold at its LIFO cost base.
- 3. Lower-of-cost-or-market valuations. Inventory losses from decreases in market value below cost are recognized in the period of the decline. Recoveries of market price in subsequent interim periods should be recognized in the period of recovery as recoveries of losses that were recognized in prior interim periods of that fiscal year. No gains are recognized for increases of market value above cost. Temporary market price declines that are expected to be reversed by the end of the fiscal year do not have to be recognized in the interim period because no loss is expected for the full fiscal year.
- 4. Standard cost systems. Manufacturers that use standard cost systems to compute cost of goods sold and ending inventory should use the same procedures for determining variances for an interim period as are used for the fiscal year. However, variances that are anticipated to be absorbed by the end of the fiscal year are usually not included in computing interim income.

### Illustration of Temporary LIFO Liquidation

The reason that the interim treatment of LIFO inventory liquidations differs from the annual treatment of LIFO liquidations is that the inventory is expected to be replaced by the end of the fiscal year. Interim income for the period of the temporary liquidation would be overstated if cost of goods sold were charged with the lower LIFO inventory costs in a time of rising prices. The following example illustrates this point.

- 1. During the third quarter of its fiscal year, Special Foods experienced a temporary liquidation of 2,000 units in its LIFO base owing to seasonal fluctuations. The LIFO unit cost is \$25. The liquidation is normal, and the company plans to replace the liquidated inventory during the early part of the next (fourth) interim period.
- 2. The estimated replacement cost of the inventory is \$35 per unit.

The entry in the third interim period to account for the temporary inventory liquidation is

| (1)  | Cost of Goods Sold   | 70,000 |        |
|--|----------------------|--------|--------|
|  | Inventory            |        | 50,000 |
| Excess of Replacement Cost over LIFO Cost of |                      |        |        |
|  | Inventory Liquidated |        | 20,000 |

Record temporary LIFO inventory liquidation:

 $$70,000 = 2,000 \text{ units} \times $35$ 

 $$50,000 = 2,000 \text{ units} \times $25 \text{ LIFO cost.}$ 

The interim income statement presents cost of goods sold at the expected replacement cost. The Excess of Replacement Cost over LIFO Cost of Inventory Liquidated should be shown as a current liability on the interim balance sheet, although some accountants net this against the inventory reported on the interim balance sheet.

When the inventory is replaced at \$36 per unit during the fourth quarter, the following entry is made:

| (2) | Cost of Goods Sold  | 2,000  |        |
|-----|---|--------|--------|
|     | Inventory   | 50,000 |        |
|     | Excess of Replacement Cost over LIFO Cost of Inventory Liquidated | 20,000 |        |
|     | Accounts Pavable  |        | 72.000 |

Record replacement of LIFO inventory liquidation:

 $$50,000 = 2,000 \times $25 \text{ LIFO cost}$ 

 $$72,000 = 2,000 \times $36$ 

The actual replacement price of \$36 is different from the estimated replacement price of \$35. The difference is an adjustment to cost of goods sold in the replacement period. The third quarter's interim report is not retroactively restated. If the liquidated inventory is not replaced by the end of the fiscal year, the liability account is written off to Cost of Goods Sold, decreasing the reported annual cost of goods sold to its correct amount.

# Illustration of Market Write-Down and Recovery

The following example illustrates the use of the lower-of-cost-or-market (LCM) method for interim reports:

- 2. It makes no additional purchases during the year.
- 3. The sales and market values at the end of each quarter during the fiscal year are as follows:

| Quarter | Units Sold<br>in Quarter | Unit Market Values at<br>End of Quarter |
|---------|--------------------------|---|
| 1       | 2,000                    | \$ 7                                    |
| 2       | 2,000                    | 6                                       |
| 3       | 2,000                    | 7                                       |
| 4       | 2,000                    | 11                                      |

Peerless is not certain of the causes of the reductions in market value and considers them to be permanent; therefore, it recognizes the reductions in the quarters in which they occur. No recognition is required if the reductions are anticipated to be temporary with recovery by year-end.

Refer to Figure 13-6 for the calculations needed to adjust Peerless' inventory account to the lower of cost or market. At the end of the first quarter, the ending inventory of the quarter is written down by \$24,000, and a loss is recognized on the interim income statement. Many companies report this write-down as part of their cost of goods sold because it is associated

FIGURE 13-6 **Interim Lower-of-Cost**or-Market Analysis of the Inventory Account of Peerless Products Corporation

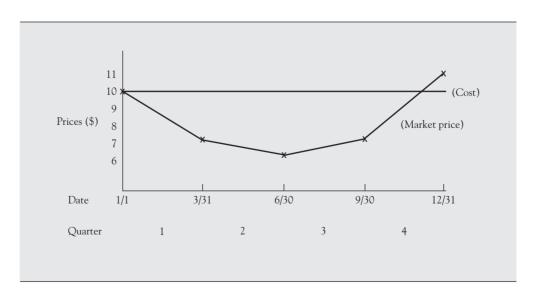

|         |   |         | Inventory         |           |
|---------|---|---------|-------------------|-----------|
| Quarter | Item  | Units   | <b>Unit Price</b> | Dollars   |
|         | Balance, beginning of year  | 10,000  | <u>\$10</u>       | \$100,000 |
| 1       | Inventory sold, first quarter                                     | (2,000) | \$10              | (20,000)  |
|         | Adjustment to market: $[8,000 \text{ units} \times (\$10 - \$7)]$ | 8,000   | (3)               | (24,000)  |
|         | Balance, end of first quarter                                     | 8,000   | <u>\$ 7</u>       | \$ 56,000 |
| 2       | Inventory sold, second quarter                                    | (2,000) | \$ 7              | (14,000)  |
|         | Adjustment to market: $[6,000 \text{ units} \times (\$7 - \$6)]$  | 6,000   | (1)               | (6,000)   |
|         | Balance, end of second quarter                                    | 6,000   | <u>\$ 6</u>       | \$ 36,000 |
| 3       | Inventory sold, third quarter                                     | (2,000) | \$ 6              | (12,000)  |
|         | Market price recovery: $[4,000 \text{ units} \times (\$6 - \$7)]$ | 4,000   | 1                 | 4,000     |
|         | Balance, end of third quarter                                     | 4,000   | <u>\$ 7</u>       | \$ 28,000 |
| 4       | Inventory sold, fourth quarter                                    | (2,000) | \$ 7              | (14,000)  |
|         | Market price recovery: [2,000 units $\times$ (\$7 - \$10)]        | 2,000   | 3                 | 6,000     |
|         | Balance, end of fourth quarter                                    | 2,000   | \$10(a)           | \$ 20,000 |

(a) Note that although market value is \$11, inventory valuation cannot exceed cost.

with inventory. By the end of the second quarter, a \$6,000 write-down of the ending inventory is required. The third-quarter interim report shows a loss recovery of \$4,000 due to an increase in inventory replacement costs. Note that this is a recovery of valuation losses recognized in prior quarters. In quarter 4, the \$11 market price is \$1 higher than the initial cost of the inventory. A \$6,000 loss recovery on the fourth-quarter ending inventory of the 2,000 units is recognized to bring the inventory valuation from \$7 per unit to its original cost of \$10 per unit. Note that the inventory may not be valued at an amount in excess of cost.

A graphical representation of the market prices during the year is presented in Figure 13–7. Note that after decreasing during the first two quarters, the market price increases during the third and fourth quarters. At year-end, the price is \$11 per unit, which is above the initial cost for the inventory.

FIGURE 13-7 **Graph of Market Prices of Inventory** 

Another way to view the effects of the write-downs is to compute the amount that would be reported in each quarter's cost of goods sold that would include the costs assigned to the goods sold during the quarter plus the effects of any inventory writedowns and less the effects of any recoveries of losses recognized in prior interim periods. These market adjustments are normally treated as adjustments of cost of goods sold to represent all product costs in one location on the income statement. The following table shows the computation of cost of goods sold for each quarter:

| Quarter | Costs Assigned to<br>Goods Sold | Ending Inventory<br>Write-Down to Market<br>(or loss recovery) | Total    |
|---------|---------------------------------|--|----------|
| 1       | 2,000 units × \$10              | 8,000 units $	imes$ \$3  | \$44,000 |
| 2       | 2,000 units $\times$ \$7        | 6,000 units $\times$ \$1                                       | 20,000   |
| 3       | 2,000 units $\times$ \$6        | $(4,000 \text{ units} \times \$1)$                             | 8,000    |
| 4       | 2,000 units $\times$ \$7        | $(2,000 \text{ units} \times \$3)$                             | 8,000    |

If the reductions in market value in quarters 1 and 2 were considered temporary, no writedowns would need to be recognized and therefore no loss recoveries would be recognized in quarters 3 and 4. The total of the cost of goods sold reported for the interims must reconcile to the amount reported on the annual financial statements. Note that the year-end market price (\$11) is higher than the market price at the beginning of the year (\$10). On the annual statement:

$$8,000 \text{ units} \times $10 \text{ unit price} = $80,000$$

On the interim statements:

| Quarter 1 | \$44,000        |
|-----------|-----------------|
| Quarter 2 | 20,000          |
| Quarter 3 | 8,000           |
| Quarter 4 | 8,000           |
| Total     | <u>\$80,000</u> |

To be able to focus on the main points of the example, it was assumed that no additional inventory was acquired during the year. Of course, in actual practice, most companies make continuous inventory acquisitions. These purchases would be added to inventory at whatever cost flow method the company uses. The lower-of-cost-or-market valuation method would be applied at the end of each quarter in the same manner as in the example, and the losses or loss recoveries would be recognized.

### All Other Costs and Expenses

The general principle is that costs and expenses should be charged to interim income in the interim period in which they are incurred. Some costs and expenses, however, are allocated among the interim periods based on an estimate of time used, benefit received, or activity level of the interim period, as part of the estimated amount for the full fiscal year.

The choice between immediate recognition of the expenditure on the interim period's income statement and deferral and allocation to several periods' interim income statements is based on a subjective evaluation of the periods that benefit from the expenditure. Although most expenditures are charged to the interim period in which they are incurred, an expenditure may be deferred and allocated to several interim periods as illustrated here:

1. Some companies concentrate their major equipment repairs in a plant shut-down time in one interim period. For interim reporting, these repair costs should be deferred (prepaid asset) or accrued (estimated liability) and allocated to repair expense in each of the interim periods that benefit from the repair costs.

- 2. Property taxes should be deferred or accrued in each interim period rather than recognized fully as an expense of the interim period in which they are paid.
- 3. Major advertising campaign costs should be allocated to the interim periods that benefit from them rather than recognized solely in the interim period in which they are incurred. A typical allocation procedure is to estimate the anticipated sales volume for each of the interim periods that will benefit from the advertising campaign, Generally, the total advertising costs are expensed for determining annual income and no deferral is made beyond the fiscal year-end.

Note that a company can accrue probable and estimable costs in earlier interim periods than the period in which the cash is paid. For example, Peerless has a management policy of closing its main production plant each August for a two-week repairs period. On January 1, the company estimates that a total of \$60,000 will be incurred for this plant rehabilitation effort and that it will benefit all four quarters of the year. The company will allocate this cost to each quarter, even the two quarters preceding the actual shutdown. In this case, an accrual for the repair expense will be made in the first and second quarters. When the actual cost is incurred in the third quarter, the accrual liability will be eliminated, but the repair expense will still be shown for each quarter. The remaining repair expense for the year will then be allocated to the third and fourth quarters. The key point is that the repair expense can be allocated to each quarter that benefits even though the cash flow for the item does not occur until later in the fiscal year. Accruals (estimated liabilities) and deferrals (prepaid assets) are used for these applications.

# Illustration of Deferral and Allocation of Advertising Costs

On April 1, the beginning of the second quarter of Peerless Products and Subsidiary's consolidated fiscal year, a \$20,000 cost was incurred for an advertising campaign expected to benefit the last three quarters of the current year. Consolidated sales for the second, third, and fourth quarters are expected to total \$400,000. In this case, Peerless determined that the advertising campaign would not benefit the first quarter; therefore, no advertising expense was accrued in the first quarter ending March 31, and the only advertising expenditure during the year is the \$20,000 incurred on April 1.

The \$20,000 cost is recorded as a prepaid asset when incurred and then charged to Advertising Expense in each of the interim periods benefited, as shown in Figure 13–8. The allocation base selected is the quarterly sales in the periods benefited as a percentage of the estimated total sales for the period of benefit.

At the beginning of the third quarter (July 1), \$15,000 of advertising cost remains in Prepaid Advertising. If actual quarterly sales differ from the estimated amounts, the allocation procedure is revised for the change in estimate. For example, if on September 30, management determines the consolidated sales for the third quarter, ending on September 30, to be \$120,000 and estimates that fourth-quarter sales will be \$180,000, then the remaining \$15,000 balance in Prepaid Advertising is allocated to the third quarter as follows:

$$\$6,000 = \frac{\$120,000}{\$300,000} \times \$15,000$$

The fourth quarter is charged for any remaining balance in the Prepaid Advertising account.

FIGURE 13-8 **Accounting for Advertising Costs That** Benefit More than One **Interim Period** 

| Date         | Quarterly<br>Sales | Debit Advertising<br>Expense | Credit Prepaid<br>Advertising | Balance in<br>Prepaid Advertising |
|--------------|--------------------|------------------------------|-------------------------------|-----------------------------------|
| April 1      |                    |                              |                               | \$20,000                          |

# **Accounting for Income Taxes in Interim Periods**

The *interim income tax* computation poses a particularly troublesome problem for accountants because the actual tax burden is computed on income for the entire fiscal year. In addition, temporary differences between tax accounting and GAAP accounting require the recognition of deferred taxes. Nevertheless, the interim tax provision is a significant item and requires estimates and a number of subjective evaluations based on the anticipated annual tax. The first step is to determine the effective annual tax rate for use in computing the interim income tax provision.

# Estimating the Effective Annual Tax Rate

Estimates are a normal part of the accounting cycle, and the interim income tax provision is based on an estimate of the effective annual tax rate on income from continuing operations. The estimated annual tax rate includes all anticipated tax credits, state income taxes, foreign income taxes, capital gains taxes, and other tax-planning efforts that are expected for the full fiscal period. The estimate is updated each interim period and the interim tax provision or benefit is then determined.

Items such as unusual or infrequent events, discontinued operations, and extraordinary items are not included in the estimate because the income statement reports these separately along with their related net-of-tax effects. Also, extraordinary items often have specific tax treatments that differ from those for operating income. For example, a fire loss of a building may involve depreciation recapture and other capital loss tax considerations.

Differences between Book and Tax Income There typically will be differences between the amount of operating income computed for financial statement (book) purposes and the operating income computed for tax purposes. ASC 740 discusses two major categories of differences. The first category is most often referred to as "permanent" or nontemporary differences. Permanent differences are not included in determining the amount of taxable income for a period. Examples of these permanent differences include

- 1. Life insurance premiums paid by the company on executive policies for which the company is the beneficiary (not tax deductible).
- 2. Proceeds of life insurance collected (not tax includible).
- 3. Dividends received deduction on dividends received from U.S. corporation stock investments (not tax includible).
- 4. Interest income received on state or local government bonds classified as not taxable (not tax includible).
- 5. Certain types of fines or court penalties designated as not tax deductible.

These items are included in the determination of financial statement (book) income, but they are not included in the computation of taxable income. Thus, book income is adjusted for these items in order to determine the taxable income for the interim period.

The second category of differences is usually referred to as "temporary". Temporary differences between the recognition of a transaction for book versus tax income result in deferred taxes. For example, a revenue may be recognized for tax either before or after the period in which it is recognized for book purposes. Or an expense may be recognized for tax purposes in a period other than the one used for book purposes. Examples of temporary differences include

- 1. Rent collected in advance (reported on tax return in period collected but as revenue on books in period earned).
- 2. Estimated expenses and losses (reported on books at time of accrual but on tax return in period paid).
- 3. Accelerated depreciation on tax return and straight-line depreciation on the income statement (difference of depreciation expense on books versus tax).
- 4. Revaluing inventory to lower of cost or market on financial statements (loss shown on books in period of write-down but on tax return in period sold).

The deferred tax asset or deferred tax liability created by these temporary differences is reported on the balance sheet. The income tax expense shown on the income statement is the sum of the income tax actually payable in the period plus (or minus for a deferred tax asset) the amount of the tax deferral for the period. We now illustrate the reporting process.

# Illustration of Estimating Effective Annual Tax Rate

Refer to Figure 13–9 for an illustration of the computation of the tax rate. While proceeding through the example, note the necessary adjustments, such as the differences between tax accounting and GAAP accounting, to determine the annual rate. Following are data for the illustration:

- 1. Peerless Products and its subsidiary expect to earn \$225,000 consolidated income from continuing operations for the 20X1 fiscal year.
- 2. Permanent differences between accounting income and tax income are expected to be \$2,000 for premiums paid for life insurance the company carried on key officers (company is beneficiary) and an exclusion of \$27,000 for dividends received from investments in stocks of other companies.
- 3. The combined federal and state income tax rate is estimated to be 38 percent (30 percent federal and 8 percent state), and the company expects to be eligible for a \$22,000 business tax credit related to new job development expenditures and employee retraining costs.

The estimated effective tax rate of 24 percent computed in Figure 13-9 is used to determine the income tax provision for the first quarter. Assuming that the first-quarter earnings were \$20,000, the following entry records the tax provision:

| (3)                                 | Income Tax Expense                               | 4,800 |      |
|-------------------------------------|--|-------|------|
|                                     | Income Taxes Payable                             | 4     | ,800 |
| Record first-quarter tax provision: |  |       |      |
|                                     | $4,800 = 20,000 \times 0.24$ effective tax rate. |       |      |

### Updating the Estimated Annual Rate in Subsequent Interim Periods

Assume that the amount of second-quarter actual earnings is \$25,000, for a cumulative total for the year to date \$45,000 (\$20,000 + \$25,000). The consolidated entity must first recompute its estimate of its effective annual tax rate based on the updated information it has at the end of the second quarter, such as additional differences between taxable and accounting income or a better estimate of projected annual earnings. Assuming the new estimated effective annual tax rate is 34 percent because of changes in the estimated amount of the available business tax credit and other changes in estimates, this rate replaces the 24 percent rate used at the end of the first quarter.

FIGURE 13-9 **Estimation of Effective Annual Tax Rate** 

|  | <b>Estimated Annual Amounts</b> |
|--|---------------------------------|
| Income from continuing operations Adjust for permanent differences: Add premiums on key officers' life insurance Deduct dividends received exclusion | \$225,000<br>2,000<br>(27,000)  |
| Estimated annual taxable income<br>Combined federal and state income taxes   | \$200,000<br>× 38%              |
| Estimated annual taxes before tax credits<br>Deduct business tax credit  | \$ 76,000<br>(22,000)           |
| Estimated income taxes for year Divide by estimated annual income from continuing  | \$ 54,000                       |
| operations Estimated effective annual tax rate on continuing operations  | \$225,000                       |
| (\$54,000 ÷ \$225,000)   | 24%                             |

The new estimated tax rate is used to compute the estimated year-to-date income tax provision at the end of the second interim period, as follows:

| Actual cumulative income for first two quarters  |               |
|--|---------------|
| (\$20,000 + \$25,000)                            | \$45,000      |
| Updated estimated effective annual tax rate      | <u>× 34</u> % |
| Cumulative income tax provision (expense)        | \$15,300      |
| Less: Income tax provision made in first quarter | _(4,800)      |
| Income tax provision required in second quarter  | \$10,500      |
|  |               |

Peerless Products and its subsidiary report an income tax expense of \$10,500 on the second-quarter consolidated income statement. The tax provision is cumulative, and the first-quarter provision is *not* retroactively restated for the change in the estimate of the annual tax rate.

The example does not include any temporary differences between accounting income and taxable income that result in deferred taxes. Temporary differences generally do not affect the estimate of the tax provision. Instead, the recognition of any temporary difference is normally made in the entry to record the tax provision and associated tax liability. For example, if \$2,000 of the second-quarter income of \$25,000 is due to a temporary difference in which accounting income is higher than tax income, the following entry is made to recognize the provision and deferral:

| (4)  | Income Tax Expense     | 10.500 |
|------|------------------------|--------|
| ( 1/ | Deferred Tax Liability | 680    |
|      | Income Taxes Payable   | 9,820  |

Record second-quarter tax provision:

\$10,500 = Income taxes payable plus deferred tax liability

680 = Computation of deferred tax liability effect from temporary difference between tax and book income.

### Losses and Operating Loss Carrybacks and Carryforwards

Accountants face an interesting problem when a company has a year-to-date loss as of the end of an interim period. Normally, an operating loss creates a tax benefit (that is, reduces tax payable) because the loss can be carried back against the operating income shown in previous years and the company may file a claim for a refund of taxes paid in prior years. After the carryback portion of an operating loss is depleted, any remaining operating loss is carried forward against future operating income. These carryback and carryforward provisions, however, apply only to annual results, not to interim results.

**ASC 740** discusses these and other special tax problems. The first part of the guidance deals with the numerous alternative income trends possible, such as an operating loss for year to date but income anticipated for the year, or operating income for year to date but loss expected for the year. The possible combinations of interim and annual results are too numerous to show here, but one special case is covered: the determination of the tax benefit for a company with a year-to-date operating loss but with the expectation of an annual income. The issue is how to determine and report the income tax for the interim periods.

**ASC 740** also addresses the issue of accounting for income taxes in an interim period. ASC 740 affirms the general rule that the realization of a tax benefit must be assured beyond a reasonable doubt before the benefit may be recognized in the financial statements. For interim reporting purposes, the most common reason for allowing the recognition of a tax benefit for a company with a year-to-date operating loss is that the company has had consistent seasonal trends in income during the year. Thus, the company has generally had income in the later interim periods that has offset the losses in the earlier interim periods. ASC 740 establishes a more-likely-than-not criterion of having a likelihood of more than 50 percent as the threshold for beyond a reasonable doubt. Therefore, a company with an operating loss in the early interim periods with consistent experience of seasonality and income for the year can recognize a tax benefit of a to-date operating loss in the early interim periods. If the realization of a tax benefit of an interim operating loss is not assured by the end of the fiscal period, the company cannot show any tax benefit on the interim statements.

# Illustration of Interim Operating Loss

See Figure 13-10 for the computation of the tax or benefit that should be shown on the interim statements if a company experiences a year-to-date loss but anticipates an annual income. For example, assume that the consolidated entity of Peerless Products Corporation and Special Foods Inc. has an actual first-quarter loss of \$40,000 but expects an annual income of \$222,000. The estimated annual tax rate is 24 percent. The consolidated entity has a normal seasonal variation of losses in the first quarter followed by profits in subsequent quarters. Therefore, the tax benefit of the operating loss of \$9,600  $(\$40,000 \times 0.24)$  is assured beyond a reasonable doubt, and the tax benefit is shown in the loss quarter.

A partial income statement for the first quarter follows. Note how the tax benefit reduces the reported net loss:

| PEERLESS PRODUCTS AND SPECIAL FOODS Partial Interim Consolidated Income Statement First Quarter Ended March 31, 20X1 |                     |  |  |  |
|--|---------------------|--|--|--|
| Operating Loss before Income Tax Effect Less: Tax Benefit of Operating Loss  | \$(40,000)<br>9.600 |  |  |  |
| Net Loss   | \$(30,400)          |  |  |  |

At the end of 20X1, Peerless Products and its subsidiary computed its actual annual income tax provision for 20X1 as \$62,000. The year-to-date tax provision in the fourth quarter should equal the total actual annual provision, and the amount of tax reported in the fourth quarter is the balance necessary to reach the amount of the annual provision. Therefore, the actual annual income tax rate on continuing income for 20X1 was 27.9 percent (\$62,000 annual tax provision ÷ \$222,000 annual income from continuing operations before the deduction for income to noncontrolling interest).

If the realizability of the tax benefit from the operating loss is not assured beyond a reasonable doubt, no tax benefit should be shown. This case is presented in Figure 13–11. Note that the actual annual provisions are identical; the differences are in the interim presentations.

(a) Year to date: Year-to-date continuing income (loss) × Updated estimated effective annual tax rate.

# Disposal of a Component of the Entity or Extraordinary, Unusual, Infrequently Occurring, and Contingent Items

ASC 270 and ASC 740 require the measurement and reporting of major nonoperating items on the same bases as used to prepare the annual report. Extraordinary items, discontinued operations, and unusual and infrequently occurring items should be reported in the interim period in which they occur, not allocated to the other interim periods of the year. The materiality test for extraordinary items should be based on the estimate of income for the entire fiscal year. The materiality test for discontinued operations and unusual and infrequent transactions should be based on the operating income of the interim period in which the discontinued operations are first reported.

Contingencies or other major uncertainties that could affect the company also must be disclosed on the same basis as that used in the annual report. This disclosure is required to provide information on items that might affect the fairness of the interim report. ASC 450 presents the procedures for measuring and reporting contingencies in both interim and annual reports.

# **ACCOUNTING CHANGES IN INTERIM PERIODS**

**ASC 250** specifies three categories of accounting changes, as follows: (1) change in an accounting principle, (2) change in an accounting estimate, and (3) change in a reporting entity. The statement noted that a correction of an error in previously issued financial statements is not an accounting change and the entity must restate all prior financial statements presented to correct the error(s) in those financials. The standard does not alter the transition provisions presented in existing pronouncements for applying changes in specific accounting requirements covered in an existing standard.

# Change in an Accounting Principle (Retrospective Application)

An entity may make a change in accounting principle only if a new accounting standard requires the change or if the company can justify that the new accounting principle is preferable to the previously used accounting principle. A change from a generally accepted accounting principle to another generally accepted accounting principle for measurement or valuation purposes requires that the retrospective application process be applied to all prior periods' financial statements, including the financial statements for interim periods. Only the direct effects of the change in accounting principle, including any related tax effects, are included in the retrospective application to the prior periods.

A change from an accounting principle *not* generally accepted to a generally accepted accounting principle is a correction of an error, requiring restatement of all prior financial statements. However, accounting for changes in the method of depreciation, amortization, or depletion for long-lived, nonfinancial assets, such as from the straight-line to the accelerated method of depreciation for equipment, are treated as changes in estimates

Effective January 1, 2010, Freddie Mac prospectively adopted amendments to the accounting standards for transfers of financial assets and consolidation of variable interest entities (VIEs). Upon adoption, the company added \$1.5 trillion of assets and liabilities to its consolidated balance sheet. The cumulative effect of these changes in accounting principles as of January 1, 2010, was a net decrease of \$11.7 billion to total equity (deficit), which includes the changes to the opening balances of retained earnings (accumulated deficit) and accumulated other comprehensive income (AOCI), net of taxes.

effected by a change in accounting principle. Changes in accounting estimates are discussed in the next section of this chapter.

### Retrospective Application

Direct effects are those adjustments necessary to make the change in accounting principle in the immediately affected assets or liabilities. Indirect effects are those affecting current or future cash flows that result from making the change in accounting principle. These indirect effects are reported in the period the change is made. An

adjusted balance sheet to reflect the retrospective application of the new accounting principle is provided for the earliest period presented. All financial statements for each subsequent annual and interim period are adjusted for the effects of the change in accounting principle. For example, if a company makes a change from the weighted-average method to the FIFO method of accounting for inventories in the current year, the company would retrospectively apply the FIFO method to all prior periods for which financial statements are provided. The beginning inventory amount for the earliest period presented would be adjusted to reflect the new accounting principle with a corresponding adjustment to retained earnings, and the new method would be reflected in all subsequent financial statements presented.

If the cumulative amount of the effect of the change can be determined but determining its period-by-period effects is impracticable, the company should report the cumulative amount of the change on the financial statements as of the beginning of the earliest period practicable and then revise the subsequent financial statements presented. However, if a company wishes to make an accounting change in principle in an interim period but is not able to determine the effects of the change on the current fiscal year's previous interim periods, the entity must wait until the beginning of a subsequent fiscal year to make the change in accounting principle.

# Change in an Accounting Estimate (Current and Prospective Application)

Changes in accounting estimates are the result of new information that becomes available to the entity. These changes are reported on a current and prospective basis only; that is, the changes are reported only in the current period in which the change is made and in the future periods affected by the change. Previously issued financial statements are not adjusted. An example of a change in accounting estimate is a change in the method of computing the allowance for uncollectibles of accounts receivable because more recent information indicates the prior provisions were inadequate.

### Changes in Depreciation, Amortization, or Depletion

ASC 250 requires a change in the method of accounting for depreciation, amortization, or depletion of long-lived, nonfinancial assets because of new information, such as current usage patterns that differ from expectations, as a change in accounting estimate effected by a change in accounting principle. The current and prospective application is used to report this change and prior financial statements are not restated.

# Change in a Reporting Entity (Retrospective Application)

A change in reporting entity requires a retrospective application to all prior periods presented to reflect the new reporting entity. The primary examples of changes in reporting entity are (1) presenting consolidated or combined financial statements rather than individual statements for the separate entities, (2) changing the specific subsidiaries that comprise the consolidated entity for which consolidated financials are presented, and (3) changing the entities that are included in combined financial statements.

An entity making an accounting change is also required to make a number of disclosures in the period of the change, including effect of the change on income from continuing operations and net income. In the case of a change in accounting principle, the entity also must disclose the nature and justification for the change and the cumulative effect of the change on retained earnings or other components of equity as of the beginning of the earliest period presented.

# **International Financial Reporting Standards** for Accounting Changes

International Accounting Standard No. 8, "Accounting Policies, Changes in Accounting Estimates and Errors" (IAS 8), provides the accounting treatment and disclosures for changes in accounting policies, changes in accounting estimates, and corrections of errors. The international standards for these changes are very similar to U.S. GAAP. IAS 8 specifies that changes in accounting policy be applied retrospectively unless the change was made in initial application of a standard, in which case the specific transitional provisions presented in that standard will be applied. Changes in accounting estimates are recognized in the period of the change and future periods (prospectively). Prior-period errors are included in the international standard and are accounted for retrospectively, just as in U.S. GAAP.

# Summary of **Key Concepts**

Segment disclosures about an entity's component operations and foreign areas in which an entity operates provide information about the different risks and profitability of each of the individual components that the entity comprises. These additional disclosures are useful in assessing past performance and prospects of future performance. A critical issue is the definition of a segment. The FASB allows management the flexibility it needs to disaggregate its operations but imposes several significance tests to determine which segments are separately reportable.

Interim reports must be issued by publicly held corporations so users of the information can assess corporate performance and make predictions about results for the annual fiscal period. The major issues are the measurement and disclosure problems of breaking down the annual reporting period into smaller parts. Many of the technical problems revolve around cost of goods sold and income taxes. Estimates based on expected annual results are allowed when determining both of these costs. Even with the estimation and measurement problems, interim reports are primary disclosure vehicles that investors and other users of financial statements quickly and carefully evaluate.

| LO 13-4 | Q13-14 | How are extraordinary items reported on an interim basis?   |
| LO 13-4 | Q13-15 | Maness Company made a change in accounting for its inventories during the third quarter of its fiscal year. The company switched from the LIFO method to the average cost method. Describe the reporting of this accounting change on prior interim financial statements and on third-quarter interim financial statements. |

### Cases

#### C13-1 **Segment Disclosures [CMA Adapted]**

# Judgment

Chemax Inc. manufactures a wide variety of pharmaceuticals, medical instruments, and other medical supplies. Eighteen months ago the company developed and began to market a new product line of antihistamine drugs under various trade names. Sales and profitability of this product line during the current fiscal year greatly exceeded management's expectations. The new product line will account for 10 percent of the company's total sales and 12 percent of the company's operating income for the fiscal year ending June 30, 20X0. Management believes sales and profits will be significant for several years.

Chemax is concerned that its market share and competitive position could suffer if it discloses the volume and profitability of its new product line in its annual financial statements. Management is not sure how ASC 280 applies in this case.

### Required

- a. What is the purpose of requiring segment information in financial statements?
- b. Identify and explain the factors that should be considered when attempting to decide how products should be grouped to determine a single business segment.
- c. What options, if any, does Chemax Inc. have with the disclosure of its new antihistamine product line? Explain your answer.

### LO 13-4

#### C13-2 Matching Revenue and Expenses for Interim Periods

### **Understanding**

Periodic reporting adds complexity to accounting by requiring estimates, accruals, deferrals, and allocations. Interim reporting creates even greater difficulties in matching revenue and expenses.

- a. Explain how revenue, product costs, gains, and losses should be recognized for interim periods.
- b. Explain how determination of cost of goods sold and inventory differs for interim period reports versus annual reports.
- c. Explain the interim accounting treatment of period costs such as depreciation.
- d. Explain the treatment of the following items for interim financial statements:
  - (1) Long-term contracts
  - (2) Advertising
  - (3) Seasonal revenue
  - (4) Flood loss
  - (5) Annual major repairs and maintenance to plant and equipment during the last two weeks in December

# C13-3 Segment Disclosures in the Financial Statements [CMA Adapted]

Analysis

Bennett Inc. is a publicly held corporation whose diversified operations have been separated into five industry segments. Bennett is in the process of preparing its annual financial statements for the year ended December 31, 20X5. The following information has been collected for the preparation of the segment reports required by **ASC 280.** 

# BENNETT INC. Selected Data For the Year Ended December 31, 20X5 (in thousands)

| Item  | Power        | Fastening         | Household    | Plumbing    | Security |
|---|--------------|-------------------|--------------|-------------|----------|
|   | Tools        | Systems           | Products     | Products    | Systems  |
| Sales to Unaffiliated<br>Customers<br>Intersegment Sales                    | \$32,000<br> | \$ 4,500<br>5,500 | \$ 4,800<br> | \$3,000<br> | \$2,000  |
| Total Revenue Cost of Goods Sold Operating Profit Net Income Segment Assets | \$42,000     | \$10,000          | \$5,000      | \$4,000     | \$2,000  |
|   | 30,000       | 8,000             | 4,500        | 3,100       | 1,700    |
|   | 4,500        | 1,000             | (600)        | 700         | (100)    |
|   | 2,600        | 800               | (750)        | (100)       | (200)    |
|   | 50,000       | 23,000            | 17,000       | 6,000       | 4,000    |

### Required

- a. Determine which of the operating segments are reportable segments for Bennett. Your determination should include all required tests and the results of those tests for each of Bennett's five segments.
- b. The reportable segments determined in (a) must represent a substantial portion of Bennett's total operations when taken together. Describe how to determine whether a substantial portion of Bennett's operations is explained by its segment information.

LO 13-3

### C13-4 Determining Industry and Geographic Segments

Research

A major producer of cereal breakfast foods had been reporting in its annual reports just one dominant product line (cereals) in only the U.S. domestic geographic area. The company had no other separately reportable segments. For several years, the U.S. company has had a Canadian subsidiary that produces a variety of pasta. In 20X5, one brand of pasta, "Healthcare," suddenly became very popular with the health-conscious public in both the United States and Canada, and the Canadian subsidiary more than tripled its sales and profits within the year.

The management of the U.S. parent company did not want to disclose to its competitors how profitable the Canadian subsidiary was because the company wanted to maintain its strong economic position without additional competition.

You have been able to determine the following (in millions):

|                  | Cereal Products | Pasta Products |
|------------------|-----------------|----------------|
| Net sales        | \$3,885         | \$834          |
| Operating profit | 445             | 151            |
| Segment assets   | 1,565           | 147            |

All cereal product operations are located in the United States, and all pasta product operations are located in Canada. The Standard Industrial Classification (SIC) number is 2043 for cereal products and 2098 for the Canadian subsidiary's pasta products. (The Standard Industrial Classification Index is prepared by the U.S. Office of Management and Budget and is used widely to define a company's major industrial groups.)

- a. Why would management be reluctant to disclose information about very successful—and very unsuccessful—operations in the segmental disclosure footnote in the annual report?
- b. Present both theoretical and applied arguments for including the pasta products segment with the cereal products segment as one internal operating segment, thus not requiring separate

- disclosure under ASC 280. How does the fact that the pasta products have suddenly become popular affect the disclosure requirements under ASC 280?
- c. Present the ASC 280 requirements for reporting the cereal products and pasta products by geographic area. Must the Canadian operations be disclosed separately in a geographic disclosure footnote?

#### **Segment Reporting** C13-5

Research

The manager you work for has asked you to perform some research to determine what types of information public companies are providing on their Internet home pages. The public company you work for is considering establishing its own home page. In particular, the manager wants you to note how these companies describe their products and services on their home pages. After researching the home pages, the manager wants you to review each company's Form 10-K by using the Electronic Data Gathering, Analysis, and Retrieval (EDGAR) database. While looking at the Form 10-Ks, the manager wants you to observe how the companies describe the segments of their business. For example, are the segments as described in the Form 10-K similar to the products and services mentioned on the same company's home page?

### Required

- a. Using an Internet search engine, find the home page of a public company. (Hint: A helpful search term is "Company Home Pages.") Then write a brief summary about what you find on the company's home page discussing the following:
  - (1) What type of information related to the company's products or services is provided?
  - (2) What other information is presented on the home page?
- b. Using the EDGAR database, locate the most recent Form 10-K for the company you selected. (Note: The EDGAR database collects and maintains the forms that are required to be filed by public companies to the U.S. Securities and Exchange Commission [SEC]. Hint: The Internet URL for the EDGAR database is http://www.sec.gov/)
  - (1) Review the Form 10-K and locate the segment disclosure information. Print off this segment information.
  - (2) Write a brief report summarizing what you find in the company's Form 10-K regarding segment disclosures. Include the following information:
    - (a) Describe the company's segments as displayed in the Form 10-K. Discuss the basis on which the segments are presented.
    - (b) Discuss which segment(s) has (have) the highest revenues, is (are) the most profitable, and has (have) the most assets.

#### **Interim Reporting** C13-6

Research

The company you work for is considering going public. Your current position is in the external financial reporting group. The manager you work for wants you to review some public company quarterly reports, Form 10-Qs, to see what type of information is disclosed. The manager does not want you to perform technical research to determine what the exact reporting requirements are for the Form 10-Q but to understand generally what information other companies seem to be supplying in their Form 10-Qs.

- a. Determine the name of two public companies you would like to use in your review of Form 10-Qs. (*Hint:* There are various ways to determine the public companies you want to research. For example, you could use an Internet search engine to find a home page of a public company. A helpful search term is "Company Home Pages." Another method would be to select public companies you already know of or you find through the use of a newspaper or periodical.)
- b. Using the EDGAR database, locate the most recent Form 10-Qs for the two companies you selected. (Hint: The Internet URL for the SEC's home page is http://www.sec.gov/. The SEC provides a company search engine for its EDGAR database.) In addition, for one of these companies, locate the Form 10-Q for the same period in the prior year. Prepare a one- to two-page summary after the following:
  - (1) Write a brief summary of the contents of one company's recent doing Form 10-Q. Discuss how the Form 10-Q information compares with the information you know is included in a Form 10-K, which is the annual report to the SEC.

- (2) Review the same company's Form 10-O from the previous year and discuss the similarities and differences you notice in the Form 10-Qs for different time periods.
- (3) Review the other company's Form 10-O from the current year and discuss the similarities and differences you notice in the Form 10-Qs for the two companies.

#### C13-7 **Defining Segments for Disclosure**

Research

Randy Rivera, CFO of Stanford Corporation, a manufacturer of packaged retail food products, has reviewed the company's segment disclosures for the current year. In the first draft of the disclosures, the company reports information about four segments: cheese, snacks and crackers, pizza, and desserts and confectionery. He has suggested that the segment disclosures be expanded to include additional segments.

Randy notes that the cereals segment, included in the segment disclosures last year, is not included in the current year. Although the cereals segment reported a loss for the current year and suffered a significant decline in revenues as a result of a prolonged labor dispute, he believes that Stanford should continue to provide information about this segment. In addition, Stanford recently introduced a new product line, sports beverages. This operating segment is expected to expand rapidly and is highly profitable. Randy believes that shareholders would view its profitability positively if the sports beverage segment were included in the segment disclosures.

The accountant who prepared the segment information has reviewed the segment data with Randy. Revenues of the cereals segment and the sports beverage segment account for 9 percent and 6 percent of combined revenues of all segments, respectively. Each segment's assets are approximately 8 percent of the combined assets of all segments. The cereals segment was the only segment to record a loss, which amounted to 5 percent of the combined profit of all segments reporting profits. The sports beverage segment profit was 9 percent of this total.

After reviewing the data, Randy still believes that the inclusion of the two segments would improve the segment disclosures and has asked you to research the appropriateness of his suggestion.

### Required

Obtain the most current accounting standards on accounting for segments. Write a memo to Randy responding to his suggestion that the segment disclosures be expanded to include the cereals and sports beverage segments. Support your recommendations with citations and quotations from the authoritative financial reporting standards.

#### C13-8 **Income Tax Provision in Interim Periods**

Research

Andrea Meyers, a supervisor in the controller's department at Vanderbilt Company, is reviewing the calculation of the income tax provision to be included in the financial statements for the first quarter of 20X5. She is questioning the estimate of the effective tax rate expected to be applicable for fiscal year 20X5 because it is significantly lower than Vanderbilt's actual effective tax rate for 20X4.

Bob Graber, who prepared the income tax calculation, explains to Andrea that the estimate of the effective annual tax rate reflects the anticipated enactment of a new business energy tax credit that will provide substantial tax benefits to Vanderbilt. This credit has the approval of the president, has been passed by the House of Representatives, and is under consideration in the Senate. It is expected to be enacted no later than the third quarter of 20X5, and its benefits should be available beginning with 20X5 tax returns.

### Required

Obtain the most current accounting standards for interim reporting. Andrea has asked you, an accountant in the controller's department, to research the computation of the estimated effective annual tax rate for interim reporting. Write a memo to her reporting your research results. Support your recommendations with citations and quotations from the authoritative financial reporting standards.

LO 13-4

#### C13-9 **Questions about Interim Reporting**

# Required

**Application** 

Prepare a brief answer to each of the following questions about interim reporting, assuming the company is preparing its Form 10-Q for the third quarter of its fiscal year.

- a. How many different income statements would the company present? Describe the reporting periods presented in the income statements.
- b. How would the company report a change in accounting principle for depreciation of its building that was made effective the first day of the third quarter? The change was made as a result of an accounting study that concluded that the estimated future benefits from the equipment will be different from those previously expected.

- c. How many different balance sheets would the company present? What is the balance sheet date (as of what date) for each balance sheet?
- d. Must interim financial statements filed with the SEC be audited by an independent public accountant who would provide an audit opinion on those statements? Explain your answer.
- e. Is a company required to present segment information in the interim report? If yes, are the interim segment disclosures different from the annual segment disclosures? Explain your answers.
- f. Within what period of time after the end of the quarter must a Form 10-Q be filed with the SEC?
- g. May a company use one accounting method for computing interim total revenues and a different accounting method for computing its annual total revenues?
- h. Is the company required to physically count its ending inventory each quarter so that it can accurately determine its ending inventory for the balance sheet and its cost of goods sold for the income statement? If not, explain how ending inventory is computed for interim reporting.
- i. The company shuts down each year for two weeks during its third quarter to retool its manufacturing lines for the next year's products. Can the company allocate the costs of retooling incurred in its third quarter to the other three quarters (1, 2, and 4) during the year? If yes, explain how this allocation would be made.
- j. How would the company report a change in accounting principle from the completed contract method of revenue recognition to the percentage-of-completion method of revenue recognition on its long-term construction contracts? The change was made on the last day of the third quarter.
- k. The company had assumed during the first two quarters of the year that it would receive a material income tax credit from the federal government. However, during the third quarter, the company was informed that it would not be receiving the expected tax credit this year. The company had included the estimated tax credit in the computation of its income tax rate for the first two quarters of the year. Should the company retroactively restate the first two quarters of tax expense because of the change in information received in the third quarter? Explain your answer.

### Exercises

LO 13-2

#### E13-1 **Reportable Segments**

Data for the seven operating segments of Amalgamated Products follow:

| Segments              | Revenues  | Segment Profit (Loss) | Segment Assets |
|-----------------------|-----------|-----------------------|----------------|
| Electronics           | \$ 42,000 | \$ (8,600)            | \$ 73,000      |
| Bicycles              | 105,000   | 30,400                | 207,000        |
| Sporting Goods        | 53,000    | (4,900)               | 68,000         |
| Home Appliances       | 147,000   | 23,000                | 232,000        |
| Gas and Oil Equipment | 186,000   | 11,700                | 315,000        |
| Glassware             | 64,000    | (19,100)              | 96,000         |
| Hardware              | 178,000   | 38,600                | 194,000        |
| Total                 | \$775,000 | \$71,100              | \$1,185,000    |

Included in the \$105,000 revenue of the Bicycles segment are sales of \$25,000 made to the Sporting Goods segment.

### Required

- a. Which segments are separately reportable?
- b. Do the separately reportable segments include a sufficient portion of total revenue? Explain.

### LO 13-2, 13-3

#### E13-2 Multiple-Choice Questions on Segment Reporting [AICPA Adapted]

Select the correct answer for each of the following questions.

1. Barbee Corporation discloses supplementary operating segment information for its two reportable segments. Data for 20X5 are available as follows:

|                              | Segment E | Segment W |
|------------------------------|-----------|-----------|
| Sales                        | \$750,000 | \$250,000 |
| Traceable operating expenses | 325,000   | 130,000   |

### Additional 20X5 expenses are as follows:

| Indirect operating expenses | \$120,000 |
|-----------------------------|-----------|
| indirect operating expenses | \$120,000 |

Appropriately selected common indirect operating expenses are allocated to segments based on the ratio of each segment's sales to total sales. The 20X5 operating profit for Segment E was

- a. \$260,000.
- b. \$335,000.
- c. \$395,000.
- d. \$425,000.
- 2. Dutko Company has three lines of business, each of which is a significant industry segment. Company sales aggregated \$1,800,000 in 20X6, of which Segment 3 contributed 60 percent. Traceable costs were \$600,000 for Segment 3 from a total of \$1,200,000 for the company as a whole. In addition, \$350,000 of common costs are allocated in the ratio of a segment's income before common costs to the total income before common costs. For Segment 3, Dutko should report a 20X6 segment profit of
  - a. \$200,000.
  - b. \$270,000.
  - c. \$280,000.
  - d. \$480,000.
- 3. Stein Company is a diversified company that discloses supplemental financial information on its industry segments. The following information is available for 20X2:

|           | Sales     | <b>Traceable Costs</b> | Allocable Costs  |
|-----------|-----------|------------------------|------------------|
| Segment A | \$400,000 | \$225,000              |                  |
| Segment B | 300,000   | 240,000                |                  |
| Segment C | 200,000   | 135,000                |                  |
| Totals    | \$900,000 | <u>\$600,000</u>       | <u>\$150,000</u> |

Allocable costs are assigned based on the ratio of a segment's income before allocable costs to total income before allocable costs. This is an appropriate method of allocation. Segment B's profit for 20X2 is

- a. \$0.
- b. \$10,000.
- c. \$30,000.
- d. \$50,000.
- e. None of the above.
- 4. Selected data for a segment of a business enterprise are to be reported separately in accordance with ASC 280 when the revenue of the segment exceeds 10 percent of the
  - a. Combined net income of all segments reporting profits.
  - b. Total revenue obtained in transactions with outsiders.
  - c. Total revenue of all the enterprise's industry segments.
  - d. Total combined revenue of all segments reporting profits.
- 5. Kimber Company operates in four different industries, each of which is appropriately regarded as a reportable segment. Total sales for 20X2 for all segments combined were \$1,000,000. Sales for Segment 2 were \$400,000, and the traceable costs were \$150,000. Total common costs for all segments combined were \$500,000. Kimber allocates common costs based on the ratio of a segment's sales to total sales, an appropriate method of allocation. The segment profit to be reported for Segment 2 for 20X2 is

- a. \$50,000.
- b. \$125,000.
- c. \$200,000.
- d. \$250,000.
- e. None of the above.
- 6. The following information pertains to Reding Corporation for the year ended December 31, 20X6.

| Sales to unaffiliated customers           | \$2,000,000 |
|---|-------------|
| Intersegment sales of products similar to | 4-,,        |
| those sold to unaffiliated customers      | 600,000     |

All of Reding's segments are engaged solely in manufacturing operations. Reding has a reportable segment if that segment's revenue exceeds

- a. \$264,000.
- b. \$260,000.
- c. \$204,000.
- d. \$200,000.
- 7. Snow Corporation's revenue for the year ended December 31, 20X2, was as follows:

| Consolidated revenue per income statement Intersegment sales | \$1,200,000<br>240,000 |
|--|------------------------|
| Combined revenue of all industry segments                    | \$1,440,000            |

Snow has a reportable operating segment if that segment's revenue exceeds

- a. \$6,000.
- b. \$24,000.
- c. \$120,000.
- d. \$144,000.
- 8. Porter Corporation is engaged solely in manufacturing operations. The following data (consistent with prior-years data) pertain to the industries in which operations were conducted for the year ended December 31, 20X5:

| Industry<br>Segment | Total<br>Revenue | Segment<br>Profit | Assets at 12/31/X5 |
|---------------------|------------------|-------------------|--------------------|
| А                   | \$10,000,000     | \$1,750,000       | \$20,000,000       |
| В                   | 8,000,000        | 1,400,000         | 17,500,000         |
| C                   | 6,000,000        | 1,200,000         | 12,500,000         |
| D                   | 3,000,000        | 550,000           | 7,500,000          |
| Е                   | 4,250,000        | 675,000           | 7,000,000          |
| F                   | 1,500,000        | 225,000           | 3,000,000          |
| Totals              | \$32,750,000     | \$5,800,000       | \$67,500,000       |

In its segment information for 20X5, how many reportable segments does Porter have?

- a. Three.
- b. Four.
- c. Five.
- d. Six.
- 9. Boecker is a multidivisional corporation that has both intersegment sales and sales to unaffiliated customers. Boecker should report segment financial information for each segment meeting which of the following criteria?

- a. Segment profit or loss is 10 percent or more of consolidated profit or loss.
- b. Segment profit or loss is 10 percent or more of combined profit or loss of all company
- c. Segment revenue is 10 percent or more of combined revenue of all company segments.
- d. Segment revenue is 10 percent or more of consolidated revenue.

Note: Use the following information for questions 10 and 11.

Ward Corporation, a publicly owned corporation, is subject to the requirements for segment reporting. In its income statement for the year ending December 31, 20X5, Ward reported revenues of \$50,000,000, operating expenses of \$47,000,000, and net income of \$3,000,000. Operating expenses included payroll costs of \$15,000,000. Ward's combined assets of all industry segments at December 31, 20X5, were \$40,000,000.

- 10. In its 20X5 financial statements, Ward should disclose major customer data if sales to any single customer amount to at least
  - a. \$300,000.
  - b. \$1,500,000.
  - c. \$4,000,000.
  - d. \$5,000,000.
- 11. In its 20X5 financial statements, Ward should disclose foreign revenues in a specific country if revenues from foreign operations in that country are at least
  - a. \$5,000,000.
  - b. \$4,700,000.
  - c. \$4,000,000.
  - d. \$1,500,000.

#### Multiple-Choice Questions on Interim Reporting [AICPA Adapted] E13-3

Select the correct answer for each of the following questions.

- 1. Which of the following is an inherent difficulty in determining the results of operations on an interim basis?
  - a. Cost of sales reflects only the amount of product expense allocable to revenue recognized as of the interim date.
  - b. Depreciation on an interim basis is a partial estimate of the actual annual amount.
  - c. Costs expensed in one interim period may benefit other periods.
  - d. Revenue from long-term construction contracts accounted for by the percentage-of-completion method is based on annual completion, and interim estimates may be incorrect.
- 2. Which of the following reporting practices is permissible for interim financial reporting?
  - a. Use of the gross profit method for interim inventory pricing.
  - b. Use of the direct costing method for determining manufacturing inventories.
  - c. Deferral of unplanned variances under a standard cost system until the following year.
  - d. Deferral of nontemporary inventory market declines until year-end.
- 3. On January 1, 20X2, Harris Inc. paid \$40,000 in property taxes on its plant for the calendar year 20X2. In March 20X2, Harris made \$120,000 in annual major repairs to its machinery. These repairs will benefit the entire calendar year's operations. How should these expenses be reflected in Harris's quarterly income statements?

|    | Three Months Ended |          |          |                      |  |  |  |  |

- 5. A company that uses the last-in, first-out (LIFO) method of inventory costing finds at an interim reporting date that there has been a partial liquidation of the base-period inventory level. The decline is considered temporary, and the base inventory will be replaced before year-end. The amount shown as inventory on the interim reporting date should
  - a. Not consider the LIFO liquidation, and cost of sales for the interim reporting period should include the expected cost of replacement of the liquidated LIFO base.
  - b. Be shown at the actual level, and cost of sales for the interim reporting period should reflect the decrease in LIFO base-period inventory level.
  - c. Not consider the LIFO liquidations, and cost of sales for the interim reporting period should reflect the decrease in LIFO base-period inventory level.
  - d. Be shown at the actual level, and the decrease in inventory level should not be reflected in the cost of sales for the interim reporting period.
- 6. During the second quarter of 20X5, Camerton Company sold a piece of equipment at a \$12,000 gain. What portion of the gain should Camerton report in its income statement for the second quarter of 20X5?
  - a. \$12,000.
  - b. \$6,000.
  - c. \$4,000.
  - d. \$0.
- 7. On March 15, 20X1, Burge Company paid property taxes of \$180,000 on its factory building for calendar year 20X1. On April 1, 20X1, Burge made \$300,000 in unanticipated repairs to its plant equipment. The repairs will benefit operations for the remainder of the calendar year. What total amount of these expenses should be included in Burge's quarterly income statement for the three months ended June 30, 20X1?
  - a. \$75,000.
  - b. \$145,000.
  - c. \$195,000.
  - d. \$345,000.
- 8. SRB Company had an inventory loss from a market price decline that occurred in the first quarter. The loss was not expected to be restored in the fiscal year. However, in the third quarter, the inventory had a market price recovery that exceeded the first-quarter decline. For interim financial reporting, the dollar amount of net inventory should
  - a. Decrease in the first quarter by the amount of the market price decline and increase in the third quarter by the amount of the market price recovery.
  - b. Decrease in the first quarter by the amount of the market price decline and increase in the third quarter by the amount of the decrease in the first quarter.
  - c. Not be affected in the first quarter and increase in the third quarter by the amount of the market price recovery that exceeded the amount of the market price decline.
  - d. Not be affected in either the first quarter or the third quarter.

9. For external reporting purposes, it is appropriate to use estimated gross profit rates to determine the cost of goods sold for

| Interim Financial<br>Reporting |     | Year-End Financial<br>Reporting |
|--------------------------------|-----|---------------------------------|
| a.                             | Yes | Yes                             |
| b.                             | Yes | No                              |
| C.                             | No  | Yes                             |
| d.                             | No  | No                              |

- 10. On June 30, 20X5, Park Corporation incurred a \$100,000 net loss from disposal of a business component. Also, on June 30, 20X5, Park paid \$40,000 for property taxes assessed for calendar year 20X5. What amount of the preceding items should be included in the determination of Park's net income or loss for the six-month interim period ended June 30, 20X5?
  - a. \$140,000.
  - b. \$120,000.
  - c. \$90,000.
  - d. \$70,000.

#### **LIFO Liquidation** E13-4

During July, Laesch Company, which uses a perpetual inventory system, sold 1,240 units from its LIFO-based inventory, which had originally cost \$18 per unit. The replacement cost is expected to be \$27 per unit.

# Required

Please respond to the following two independent scenarios as requested.

- a. Case 1: In July, the company is planning to reduce its inventory and expects to replace only 900 of these units by December 31, the end of its fiscal year.
  - (1) Prepare the entry in July to record the sale of the 1,240 units.
  - (2) Discuss the proper financial statement presentation of the valuation account related to the 1,240 units sold.
  - (3) Prepare the entry for the replacement of the 900 units in September at an actual cost of \$31 per unit.
- b. Case 2: In July, the company is planning to reduce its inventory and expects to replace only 300 of its units by December 31, the end of its fiscal year.
  - (1) Prepare the entry in July to record the sale of the 1,240 units.
  - (2) In December, the company decided not to replace any of the 1,240 units. Prepare the entry required on December 31 to eliminate any valuation accounts related to the inventory that will not be replaced.

LO 13-4

#### E13-5 **Inventory Write-Down and Recovery**

Cub Company, a calendar-year entity, had 2,100 geothermal heating pumps in its beginning inventory for 20X1. On December 31, 20X0, the heating pumps had been adjusted down to \$850 per unit from an actual cost of \$920 per unit. It was the lower of cost or market. Cub purchased no additional units during 20X1. The following additional information is provided for 20X1:

| Quarter | Date               | Inventory<br>(units) | Unit Market<br>Value |
|---------|--------------------|----------------------|----------------------|
| 1       | March 31, 20X1     | 1,700                | \$845                |
| 2       | June 30, 20X1      | 1,400                | 860                  |
| 3       | September 30, 20X1 | 1,300                | 830                  |
| 4       | December 31, 20X1  | 900                  | 840                  |

# Required

Please respond to the following two independent scenarios as requested.

# LO 13-4

Chapter 13 Segment and Interim Reporting 711

- a. Case 1: The company does not have sufficient experience with the seasonal market for geothermal pumps and assumes that any reductions in market value during the year will be permanent.
  - (1) Determine the cost of goods sold for each quarter.
  - (2) Verify the total cost of goods sold by computing annual cost of goods sold on a lower-of-cost-ormarket basis.
- b. Case 2: The company has prior experience with the seasonal market for geothermal pumps and expects that any reductions in market value during the year will be only temporary and will recover by year-end.
  - (1) Determine the cost of goods sold for each quarter.
  - (2) Verify the total cost of goods sold by computing annual cost of goods sold on a lower-ofcost-or-market basis.

#### LO 13-4 E13-6 Multiple-Choice Questions on Income Taxes at Interim Dates [AICPA Adapted] Select the correct answer for each of the following questions.

- 1. According to ASC 270 and 740, income tax expense in an income statement for the first interim period of an enterprise's fiscal year should be computed by
  - a. Applying the estimated income tax rate for the full fiscal year to the pretax accounting income for the interim period.
  - b. Applying the estimated income tax rate for the full fiscal year to the taxable income for the interim period.
  - c. Applying the statutory income tax rate to the pretax accounting income for the interim period.
  - d. Applying the statutory income tax rate to the taxable income for the interim period.
- 2. Neil Company, which has a fiscal year ending January 31, had the following pretax accounting income and estimated effective annual income tax rates for the first three quarters of the year ended January 31, 20X2:

| Quarter | Pretax<br>Accounting Income | Estimated Effective Annual Income<br>Tax Rate at End of Quarter, % |
|---------|-----------------------------|--|
| First   | \$60,000                    | 40%  |
| Second  | 70,000                      | 40   |
| Third   | 40,000                      | 45   |

Neil's income tax expenses in its interim income statement for the third quarter are

- a. \$18,000.
- b. \$24,500.
- c. \$25,500.
- d. \$76,500.
- e. None of the above.
- 3. Beckett Corporation expects to sustain an operating loss of \$100,000 for the full year ending December 31, 20X3. Beckett operates entirely in one jurisdiction where the tax rate is 40 percent. Anticipated tax credits for 20X3 total \$10,000. No permanent differences are expected. Realization of the full tax benefit of the expected operating loss and realization of anticipated tax credits are assured beyond any reasonable doubt because they will be carried back. For the first quarter ended March 31, 20X3, Beckett reported an operating loss of \$20,000. How much of a tax benefit should Beckett report for the interim period ended March 31, 20X3?
  - a. \$0.
  - b. \$8,000.
  - c. \$10,000.
  - d. \$12,500.
  - e. None of the above.

- 4. The computation of a company's third-quarter provision for income taxes should be based on earnings
  - a. For the quarter at an expected effective annual income tax rate.
  - b. For the quarter at the statutory rate.
  - c. To date at an expected effective annual income tax rate less prior quarters' provisions.
  - d. To date at the statutory rate less prior-quarters provisions.
- 5. During the first quarter of 20X5, Stahl Company had income before taxes of \$200,000, and its effective income tax rate was 15 percent. Stahl's 20X4 effective annual income tax rate was 30 percent, but Stahl expects its 20X5 effective annual income tax rate to be 25 percent. In its first-quarter interim income statement, what amount of income tax expense should Stahl report?
  - a. \$0.
  - b. \$30,000.
  - c. \$50,000.
  - d. \$60,000.
- 6. Which of the following items will result in the recognition of a deferred tax asset or liability in the second quarter of 20X7 for Nelson Company:
  - a. The portion of dividends received this quarter on an investment in stock of a U.S. corporation that qualifies for the dividend exclusion.
  - b. A provision of an expected loss from a lawsuit that is finally settled in 20X8.
  - c. Expenses related to the acquisition of a municipal bond whose income is not taxable for income tax purposes.
  - d. Life insurance payments made on policies for executives for which the company is the beneficiary.

# **E13-7** Significant Foreign Operations

Information about the domestic and foreign operations of Radon Inc. is as follows:

.com

|   | Geographic Area                |                                |                              |                             |                             |    |                                |

### Required

Prepare schedules showing appropriate tests to determine which countries are material using a 10 percent materiality threshold.

### LO 13-3

### **E13-8** Major Customers

Sales by Knight Inc. to major customers are as follows:

| Customer                   | Sales       | Reporting Segment |
|----------------------------|-------------|-------------------|
| State of Illinois          | \$2,700,000 | Computer hardware |
| Cook County, Illinois      | 3,500,000   | Computer software |
| U.S. Treasury Department   | 3,900,000   | Service contract  |
| U.S. Department of Defense | 2,200,000   | Service contract  |
| Bank of England            | 4,650,000   | Computer software |
| Philips NV                 | 2,850,000   | Computer hardware |
| Honda                      | 5,400,000   | Computer hardware |

### Required

If worldwide sales total \$43,000,000 for the year, which of Knight's customers should be disclosed as major customers?

#### LO 13-4 E13-9 Estimated Annual Tax Rate

Supra, Inc., estimates total federal and state tax rates to be 40 percent. Expected annual pretax earnings from continuing operations are \$1,200,000. Differences between tax income and financial statement income are expected to be the following:

| Dividend exclusion for dividends received on the company's    |          |
|---|----------|
| stock investments   | \$70,000 |
| Tax-exempt income received                                    | 20,000   |
| Premiums for life insurance on officers for which the company |          |
| is the beneficiary  | 12,000   |

A business tax credit of \$40,000 should be available. Supra's first-quarter pretax earnings is \$170,000, which includes an extraordinary loss of \$30,000 before any tax effect of the extraordinary loss.

### Required

- a. Estimate Supra's effective combined federal and state tax rate on income from continuing operations for the year.
- b. Prepare the entry to record the tax provision for the income from continuing operations for the first quarter.

#### LO 13-4 E13-10 **Operating Loss Tax Benefits**

Tem Technology has a first-quarter operating loss of \$100,000 and expects the following income for the other three quarters:

| ond quarter | \$ 80,000 |
|-------------|-----------|
| d quarter   | 160,000   |
| rth quarter | 400,000   |
| rd quarter  | 160,00    |

Tem estimated the effective annual tax rate at 40 percent at the end of the first quarter and changed it to 45 percent at the end of the third quarter. The company has a normal seasonal pattern of losses in the first quarter and income in the other quarters.

### Required

Prepare a schedule computing the tax obligations or benefits that should be shown on the interim statements.

#### LO 13-3 E13-11 **Industry Segment and Geographic Area Revenue Tests**

Symbiotic Chemical Company has four major industry segments and operates both in the U.S. domestic market and in several foreign markets. Information about its revenue from the specific industry segments and its foreign activities for the year 20X2 is as follows:

| Sales to Unaffiliated Customers (in thousands) |          |         |       |  |
|--|----------|---------|-------|--|
| Industry Segment                               | Domestic | Foreign | Total |  |
| Ethical Drugs                                  | \$300    |         | \$300 |  |
| Nonprescription Drugs                          | 325      | \$100   | 425   |  |
| Generic Drugs                                  | 125      | 245     | 370   |  |
| Industrial Chemicals                           | 70       |         | 70    |  |

| Sales to Affiliated Customers (in thousands) |          |         |       |  |
|--|----------|---------|-------|--|
| Industry Segment                             | Domestic | Foreign | Total |  |
| Ethical Drugs                                | \$20     |         | \$ 20 |  |
| Nonprescription Drugs                        | 50       | \$40    | 90    |  |
| Generic Drugs                                | 40       | 60      | 100   |  |
| Industrial Chemicals                         | 10       |         | 10    |  |

All the Nonprescription Drugs segment's foreign revenues, both from unaffiliated and intersegment customers, were attributable to a Taiwanese division of the company. This division operated exclusively in Taiwan except for a \$10,000 sale to a U.S. subsidiary of the company. All other foreign operations of the company take place exclusively within Mexico.

### Required

- a. Determine which of the company's operating segments are separately reportable under the revenue test for segment reporting.
- b. Determine which of the foreign countries are separately reportable under the revenue test for reporting foreign operations using a 10 percent materiality threshold.
- c. Prepare a schedule for disclosing the company's revenue by industry segment for 20X2.
- d. Prepare a schedule for disclosing the company's revenue by geographic area for 20X2.

### LO 13-4

### E13-12 Different Reporting Methods for Interim Reports [CMA Adapted]

Following are seven independent cases on how accounting facts might be reported on an individual company's interim financial reports.

- 1. Bean Company was reasonably certain it would have an employee strike in the third quarter. As a result, the company shipped heavily during the second quarter but plans to defer the recognition of the sales in excess of the normal sales volume until the third quarter when the strike is in progress. Bean management thinks this is more nearly representative of normal second- and third-quarter operations.
- 2. Green Inc. takes a physical inventory at year-end for annual financial statement purposes. Inventory and cost of sales reported in the interim quarterly statements are based on estimated gross profit rates because a physical inventory would result in a cessation of operations.
- 3. ER Company is planning to report one-fourth of its annual pension expense each quarter.
- 4. Fair Corporation wrote down inventory to reflect the lower of cost or market in the first quarter of 20X1. At year-end, the market price exceeds the original acquisition cost of this inventory. Consequently, management plans to write the inventory back up to its original cost as a year-end adjustment.
- 5. Carson Company realized a large gain on the sale of investments at the beginning of the second quarter. The company wants to report one-third of the gain in each of the remaining quarters.
- 6. Ring Corporation has estimated its annual audit fee. Management plans to prorate this expense equally over all four quarters.
- 7. Mega Corporation made a change in the depreciation of its warehouse building during the third quarter of 20X1. The change was from the accelerated method to the straight-line method to better match the depreciation expense to the current levels of usage of the warehouse. The company plans to use the cumulative effect approach to present the effects of the change as of the beginning of the third quarter.

### Required

For each of the seven cases, state whether the method proposed for interim reporting is acceptable under generally accepted accounting principles applicable to interim financial data. Support each answer with a brief explanation.

### **Problems**

### P13-13 Segment Reporting Worksheet and Schedules

West Corporation reported the following consolidated data for 20X2:

| Sales                            | \$ 810.000 |
|----------------------------------|------------|
| Consolidated income before taxes | 128,000    |
| Total assets                     | 1,200,000  |

Data reported for West's four operating divisions are as follows:

|                    | Division A | Division B | Division C | Division D |
|--------------------|------------|------------|------------|------------|
| Sales to outsiders | \$280,000  | \$130,000  | \$340,000  | \$60,000   |
| Intersegment sales | 60,000     |            | 18,000     | 12,000     |
| Traceable costs    | 245,000    | 90,000     | 290,000    | 82,000     |
| Assets             | 400,000    | 105,000    | 500,000    | 75,000     |

Intersegment sales are priced at cost, and all goods have been subsequently sold to nonaffiliates. Some joint production costs are allocated to the divisions based on total sales. These joint costs were \$45,000 in 20X2. The company's corporate center had \$20,000 of general corporate expenses and \$120,000 of assets that the chief operating decision maker did not use in making the decision regarding the operating segments.

### Reauired

Each of the following items is unrelated to the others.

- a. The divisions are industry segments.
  - (1) Prepare a segmental disclosure worksheet for the company.
  - (2) Prepare schedules showing which segments are reportable.
- b. Assume that each division operates in an individual geographic area' Division A is in the domestic area' and each of the other divisions operates in a separate foreign country. Assume that one-half of the assets in each geographic area represents long-lived, productive assets as defined in ASC 280. Prepare schedules showing which geographic areas are reportable using a 10 percent materiality threshold.
- c. Determine the amount of sales to an outside customer that would cause that customer to be classified as a major customer under the criteria of ASC 280.

### P13-14

# **Segment Reporting Worksheet and Schedules**

Calvin Inc. has operating segments in five different industries: apparel, building, chemical, furniture, and machinery. Data for the five segments for 20X1 are as follows:

|                        | Apparel   | Building  | Chemical | Furniture | Machinery |
|------------------------|-----------|-----------|----------|-----------|-----------|
| Sales to nonaffiliates | \$870,000 | \$750,000 | \$55,000 | \$95,000  | \$180,000 |
| Intersegment sales     |           |           | 5,000    | 15,000    | 140,000   |
| Cost of goods sold     | 480,000   | 450,000   | 42,000   | 78,000    | 150,000   |
| Selling expenses       | 160,000   | 40,000    | 10,000   | 20,000    | 30,000    |
| Other traceable        |           |           |          |           |           |
| expenses               | 40,000    | 30,000    | 6,000    | 12,000    | 18,000    |
| Allocated general      |           |           |          |           |           |
| corporate expenses     | 80,000    | 75,000    | 7,000    | 13,000    | 25,000    |
| Other information:     |           |           |          |           |           |
| Segment assets         | 610,000   | 560,000   | 80,000   | 90,000    | 140,000   |
| Depreciation expense   | 60,000    | 50,000    | 10,000   | 11,000    | 25,000    |
| Capital expenditures   | 20,000    | 30,000    |          |           | 15,000    |

### Additional Information

- 1. The corporate headquarters had general corporate expenses totaling \$235,000. For internal reporting purposes, \$200,000 of these expenses were allocated to the divisions based on their cost of goods sold. The chief operating decision maker does not use the other corporate expenses for making segmental decisions.
- 2. The company has an intercorporate transfer pricing policy that all intersegment sales shall be priced at cost. All intersegment sales were sold to outsiders by December 31, 20X1.
- 3. Corporate headquarters had assets of \$125,000 that the chief operating decision maker did not use for making segmental decisions.
- 4. The depreciation expense (listed in the section titled "Other information") has already been added into cost of goods sold in accordance with the company's cost measurement policies.

- a. Prepare a segmental disclosure worksheet for Calvin Inc.
- b. Prepare schedules to show which segments are separately reportable.
- c. Prepare the information about the company's operations in different industry segments as required by ASC 280.
- d. Would there be any differences in the specification of reportable segments if the building segment had \$460,000 in assets instead of \$560,000 and the furniture segment had \$190,000 in assets instead of \$90,000? Justify your answer by preparing a schedule showing the percentages for each of the three 10 percent segment tests for each of the five segments using these new amounts for segment assets.

### P13-15 Interim Income Statement

Chris Inc. has accumulated the following information for its second-quarter income statement for 20X2:

| \$850,000 |
|-----------|
| 420,000   |
| 230,000   |
|           |

### **Additional Information**

- 1. First-quarter income before taxes was \$100,000, and the estimated effective annual tax rate was 40 percent. At the end of the second quarter, expected annual income is \$600,000, and a dividend exclusion of \$30,000 and a business tax credit of \$15,000 are anticipated. The combined state and federal tax rate is 50 percent.
- 2. The \$420,000 cost of goods sold is determined by using the LIFO method and includes 7,500 units from the base layer at a cost of \$12 per unit. However, you have determined that these units are expected to be replaced at a cost of \$26 per unit.
- 3. The operating expenses of \$230,000 include a \$60,000 factory rearrangement cost incurred in April. You have determined that the second quarter will receive about 25 percent of the benefits from this project with the remainder benefiting the third and fourth quarters.

### Required

- a. Calculate the effective annual tax rate expected at the end of the second quarter for Chris Inc.
- b. Prepare the income statement for the second quarter of 20X2. Your solution should include a computation of income tax (or benefit) with the following headings:

|                   | Operating Income (loss before taxes) |                 | Estimated                       |                 | Tax (benefit                   | )                             |
|-------------------|--------------------------------------|-----------------|---------------------------------|-----------------|--------------------------------|-------------------------------|
| Interim<br>Period | Current<br>Period                    | Year<br>to Date | Effective<br>Annual Tax<br>Rate | Year<br>to Date | Less<br>Previously<br>Provided | Reported<br>in This<br>Period |

### LO 13-4

### P13-16 Interim Income Statement

At the end of the second quarter of 20X1, Malta Corporation assembled the following information:

- 1. The first quarter resulted in a \$90,000 loss before taxes. During the second quarter, sales were \$1,200,000; purchases were \$650,000; and operating expenses were \$320,000.
- 2. Cost of goods sold is determined using the FIFO method. The inventory at the end of the first quarter was reduced by \$4,000 to a lower-of-cost-or-market figure of \$78,000. During the second quarter, replacement costs recovered, and by the end of the period, market value exceeded the ending inventory cost by \$1,250.
- 3. The ending inventory is estimated using the gross profit method. The estimated gross profit rate is 46 percent.
- 4. At the end of the first quarter, the effective annual tax rate was estimated at 45 percent. At the end of the second quarter, expected annual income is \$600,000. An investment tax credit of \$15,000 and dividends received deduction of \$75,000 are expected for the year. The combined state and federal tax rate is 40 percent.
- 5. The tax benefits from operating losses are assured beyond a reasonable doubt. Prior-years income totaling \$50,000 is available for operating loss carrybacks.

- a. Calculate the expected effective annual tax rate at the end of the second quarter for Malta.
- b. Prepare the income statement for the second quarter of 20X1. Your solution should include a computation of income tax (or benefit) for the first and second quarters.

#### **Evaluating Foreign Operations** P13-17

For many years, Clark Company operated exclusively in the United States but recently expanded its operations to the Pacific Rim countries of New Zealand, Singapore, and Australia. After a modest beginning in these countries, recent successes have resulted in an increased level of operations in each country. Operating information (in thousands of U.S. dollars) for the company's domestic and foreign operations follows.

|                       | <b>United States</b> | New Zealand | Singapore | Australia |
|-----------------------|----------------------|-------------|-----------|-----------|
| Sales to unaffiliated | \$2,500              | \$320       | \$ 60     | \$120     |
| Interarea sales       | 100                  |             | 10        |           |
| Operating expenses    | 1,820                | 290         | 70        | 30        |
| Long-lived assets     | 2,200                | 280         | 140       | 80        |

In addition, common costs of \$120,000 are to be allocated to operations on the basis of the ratio of an area's sales to nonaffiliates to total company sales to nonaffiliates.

### Required

- a. Determine the profit or loss for each geographic segment.
- b. Discuss the general reporting requirements related to the company's geographic areas.
- c. Determine which, if any, of the three individual foreign geographic segments is separately reportable using a 10 percent materiality threshold.

LO 13-4

#### P13-18 Interim Accounting Changes

During the third quarter of its 20X7 fiscal year, Press Company is considering the different methods of reporting accounting changes on its interim segments. Preliminary data are available for the third quarter of 20X7, ending on September 30, 20X7, prior to any adjustments required for any accounting changes. The company's tax rate is 40 percent of income. Selected interim data for the company, in thousands of dollars, follow:

| Quarter<br>Ended           | Net<br>Sales | Gross<br>Profit | Earnings from<br>Operations,<br>Before Tax | Net<br>Earnings |
|----------------------------|--------------|-----------------|--|-----------------|
| 20X7:                      |              |                 |  |                 |
| March 31                   | \$388        | \$133           | \$27                                       | \$16.2          |
| June 30                    | 406          | 135             | 30   | 18.0            |
| September 30 (preliminary) | 428          | 151             | 32   | 19.2            |
| 20X6:                      |              |                 |  |                 |
| March 31                   | 394          | 139             | 27   | 16.2            |
| June 30                    | 416          | 151             | 32   | 19.2            |
| September 30               | 403          | 148             | 31   | 18.6            |
| December 31                | 385          | 134             | 31   | 18.6            |

### Required

For each of the following independent cases, present the company's interim financial data for the three quarters of 20X7 and the comparative data for 20X6, assuming that in a meeting on the last day of the third quarter of 20X7, the company decides to make the specified accounting change.

a. The company decides to change from the FIFO method of accounting for inventory to the LIFO method. The accounting department has prepared the following schedule of data, in thousands of dollars, showing the cost of goods sold each quarter under the LIFO method. The preceding selected interim data are based on the FIFO method. The accounting department has determined that there will be no difference in cost of goods sold prior to January 1, 20X6.

| Quarter Ended | LIFO  |
|---------------|-------|
| 20X7:         |       |
| March 31      | \$265 |
| June 30       | 283   |
| September 30  | 291   |
| 20X6:         |       |
| March 31      | 267   |
| June 30       | 278   |
| September 30  | 280   |
| December 31   | 260   |
|               |       |

b. The company decides to switch from the straight-line method of depreciation to the accelerated method because of a change in the estimated future benefits from the asset. The company has determined that the accumulated depreciation would have been \$42,000 higher as of January 1, 20X6, if the accelerated method had been used. The depreciation expense determined under the two methods follows:

| Quarter Ended | Depreciation Expense—<br>Accelerated Method | Depreciation Expense—<br>Straight-Line Method |
|---------------|---|---|
| 20X7:         |   |   |
| March 31      | \$45  | \$45  |
| June 30       | 44  | 45  |
| September 30  | 42  | 45  |
| 20X6:         |   |   |
| March 31      | 50  | 40  |
| June 30       | 48  | 40  |
| September 30  | 47  | 40  |
| December 31   | 45  | 40  |

c. The company decides to change its method of accounting for recognizing sales revenue on its longterm contracts. The company had been using the completed contract method but changed to the percentage-of-completion method. The accounting department has prepared an analysis of the sales and gross profit recognition under each of the two methods, in thousands of dollars, as follows:

|               | Completed<br>Contract |                 | Percentage of<br>Completion |                 |
|---------------|-----------------------|-----------------|-----------------------------|-----------------|
| Quarter Ended | Sales                 | Gross<br>Profit | Sales                       | Gross<br>Profit |
| 20X7:         |                       |                 |                             |                 |
| March 31      | \$ 80                 | \$ 20           | \$60                        | \$30            |
| June 30       | 0                     | 0               | 55                          | 30              |
| September 30  | 100                   | 50              | 70                          | 40              |
| 20X6:         |                       |                 |                             |                 |
| March 31      | 0                     | 0               | 60                          | 40              |
| June 30       | 150                   | 100             | 40                          | 20              |
| September 30  | 0                     | 0               | 50                          | 30              |
| December 31   | 60                    | 40              | 50                          | 30              |

#### P13-19 **Segment Disclosures in the Financial Statements**

Multiplex Inc., a public company whose stock is traded on a national stock exchange, reported the following information on its consolidated financial statements for 20X5:

| From the consolidated income statement: |               |
|---|---------------|
| Sales revenues                          | \$564,000,000 |
| Rental revenues                         | 34,000,000    |
| Income before income taxes              | 65,000,000    |
| Income taxes                            | 20,000,000    |
| From the consolidated balance sheet:    |               |
| Total assets                            | \$475,000,000 |

LO 13-2

Multiplex management determined that it had the following operating segments during 20X5: (1) car rental, (2) aerospace, (3) communications, (4) health and fitness products, and (5) heavy equipment manufacturing. The company assembled the following information for these industry segments for 20X5 (dollar amounts stated in millions):

| Item   | Car<br>Rental | Aerospace | Communications | Health/<br>Fitness | Heavy<br>Equipment |
|--|---------------|-----------|----------------|--------------------|--------------------|
| Sales  |               | \$204     | \$60           | \$50               | \$250              |
| Rentals  | \$34          |           |                |                    |                    |
| Intersegment sales   | 5             |           |                |                    | 25                 |
| Cost of goods sold   |               | 141       |                |                    | 177                |
| Selling expenses   | 16            | 42        | 29             | 23                 | 37                 |
| Other traceable expenses   | 4             | 8         | 11             | 5                  | 10                 |
| Allocation of common costs                                       | 2             | 7         | 2              | 2                  | 7                  |
| Assets   | 20            | 107       | 70             | 80                 | 195                |
| Other information:   |               |           |                |                    |                    |
| Depreciation expense<br>(included above)<br>Capital expenditures | 4             | 15<br>30  | 4              | 5<br>15            | 25<br>40           |
|  |               |           |                |                    |                    |

### Additional Information

- 1. The corporate headquarters had general corporate expenses totaling \$33,000,000 and assets of \$25,000,000 (the chief operating decision maker used neither piece of information in defining operating segment performance).
- 2. The car rental segment's \$5,000,000 of intersegment sales consisted of rentals to the aerospace (\$2,000,000) and communications (\$3,000,000) segments. The intersegment sales of \$25,000,000 of the heavy equipment segment were made to the aerospace segment to use in its manufacturing operations. The heavy equipment segment realized a profit of \$8,000,000 from this sale. At December 31, 20X5, \$7,000,000 of this profit was unrealized from a consolidated viewpoint.
- 3. At December 31, 20X5, no intercompany receivables or payables were related to the intersegment car rentals. However, the heavy equipment segment had a \$15,000,000 receivable from the intersegment sale to the aerospace segment. The company's policy is to include intersegment receivables in a segment's assets for purposes of evaluating segment performance.

### Required

- a. Prepare schedules for each of the three 10 percent tests: (1) the revenue test, (2) the profit-or-loss test, and (3) the assets test. Each schedule should indicate which of Multiplex's industry segments are reportable segments for 20X5.
- b. Indicate whether Multiplex's reportable segments meet the 75 percent revenue test.
- c. Prepare the information about the company's operations in different industry segments as required by ASC 280.

#### **Reporting Operations in Different Countries** P13-20

Watson Inc., a multinational company, has operating divisions in France, Mexico, and Japan as well as in the United States. The company reported the following information on its consolidated financial statements for 20X5:

| From the consolidated income statement: |               |
|---|---------------|
| Sales revenues                          | \$856,000,000 |
| Net income                              | 60,000,000    |
| From the consolidated balance sheet:    |               |
| Total assets                            | 750,000,000   |

LO 13-3

The following additional information was assembled for Watson's domestic and international operations for 20X5 (dollars stated in millions):

| Item  | Domestic | France | Mexico | Japan |
|---|----------|--------|--------|-------|
| Sales to unaffiliated customers<br>Intracompany sales between | \$430    | \$300  | \$36   | \$90  |
| geographic areas  | 50       |        |        | 10    |
| Operating profit  | 7        | 40     | 2      | 18    |
| General corporate expenses                                    | 30       |        |        |       |
| Long-lived assets   | 235      | 160    | 29     | 81    |

### **Additional Information**

- 1. The domestic intracompany sales of \$50,000,000 were made to Watson's French division. A total gross profit of \$20,000,000 was realized by Watson's domestic operations on these sales. At December 31, 20X5, \$10,000,000 of the total gross profit was unrealized from a consolidated viewpoint. At December 31, 20X5, Watson's French division owed domestic operations \$15,000,000 related to these sales.
- 2. The intracompany sales made by Watson's Japanese division were made to Watson's Mexican division. The Japanese division realized a gross profit of \$2,000,000 on the sales. At December 31, 20X5, all of the goods sold to the Mexican division remained in its inventory. At December 31, 20X5, the Japanese division had an \$8,000,000 receivable related to these sales.

### Required

- a. Determine whether Watson Inc. must separately report its foreign operations.
- b. Determine which of the three individual foreign geographic segments is separately reportable using a 10 percent materiality threshold.
- c. Prepare the information about the company's domestic and foreign operations as required by ASC 280.

#### LO 13-2, 13-3 P13-21 **Matching Terms**

Match the terms on the left with the descriptions on the right. A description may be used once, more than once, or not at all.

### **Terms Descriptions of Terms** 1. Reportable operating segment 2. 10 percent significance rules 3. Revenue test for material foreign

- country disclosure 4. Asset test for reportable operating
- segments 5. Asset test for material foreign country disclosure
- 6. Comprehensive segment disclosure test
- 7. Enterprisewide disclosures
- 8. Recovery of prior write-down for interim inventory valuations
- 9. Interim LIFO liquidations to be replaced by year-end
- 10. Effective annual tax rate

- A. Based on all assets used by management to assess that business unit's performance.
- B. Not computed until tax is paid.
- C. Includes intercorporate sales and transfers.
- D. Annual statutory tax rate.
- E. Based on long-lived assets used in that business unit only.
- F. Values cost of goods sold at the LIFO cost of the goods sold.
- G. Values cost of goods sold at the expected costs of replacements.
- H. Requires sales to unaffiliated units for separately disclosed segments to be higher than or equal to 75 percent of total consolidated revenue.
- I. Segment that must meet each of the three 10 percent segment significance tests.
- J. Product revenues, geographic areas, and information about major customers.
- K. Recovery allowed by ASC 270 and ASC 740.

(continued)

- L. Based on sales to unaffiliated entities only.
- M. Not permitted under ASC 270 and ASC 740.
- N. Estimate of the income tax that will actually be paid for the year.
- O. Segment that has met at least one of the three 10 percent segment significance tests.

### THE GENESIS OF SECURITIES REGULATION

The need for regulation has gone hand in hand with the offering of securities to the general public. In the 13th century, King Edward I of England established a Court of Aldermen to regulate security trades in London. In the latter part of the 18th century, England's Parliament passed several acts, termed the *Bubble Acts*, to control questionable security schemes that had become popular. In 1790, the New York Stock Exchange was created to serve as a clearinghouse for securities trades between its members. The need for additional sources of capital paralleled the advent of the industrial revolution and the growth of commerce in the United States. Some individuals took advantage of this situation and offered securities of fictitious companies for sale to the general public or used financial reports that were not factual about the offering company's financial picture. In 1911, because of the lack of any federal security regulatory laws, several states began passing what were called *blue-sky laws* to regulate the offering of securities by companies made up only of "blue sky," that is, that did not have a sound financial base.

The era of the 1920s was one of heavy stock speculation by many individuals. Business executives, cab drivers, and assembly-line workers all wanted to participate in the many stock opportunities that existed at that time. Unfortunately, a number of abuses were occurring in the marketplace. For example, certain speculators sought to manipulate selected stock prices by issuing untrue press releases about companies' operations or managements. Companies were not required to be audited, and some of them issued false and misleading financial statements. Investors were using excessive amounts of margin; that is, they were borrowing heavily to invest in stocks. Some employees of companies were using inside information—information that had not been released to the public—to purchase or sell their company's stock for personal advantage.

The month of October 1929 is often viewed as the beginning of the Great Depression. Stock prices plunged to record lows within just a few weeks as panic took over the market. It became obvious that some form of federal regulation was necessary to restore confidence in the stock market. The Federal Securities Acts of 1933 and 1934 were part of President Franklin D. Roosevelt's New Deal legislation. The Securities Act of 1933 regulated the initial distribution of security issues by requiring companies to make "full and fair" disclosure of their financial affairs before their securities could be offered to the public. The Securities Exchange Act of 1934 required all companies whose stocks were traded on a stock exchange to periodically update their financial information. In addition, the 1934 act created the Securities and Exchange Commission and assigned it the responsibility of administering both the 1933 and 1934 acts.

The SEC has the legal responsibility to regulate trades of securities and to determine the types of financial disclosures that a publicly held company must make. Although the SEC has the ultimate legal authority to establish the disclosure requirements, it has worked closely with the accounting profession to prescribe the accounting principles and standards used to measure and report companies' financial conditions and results of operations. The SEC's role is to ensure full and fair disclosure; it does not guarantee the investment merits of any security. Stock markets still operate on a *caveat emptor* ("Let the buyer beware") basis. The SEC has consistently taken the position that

investors must have the necessary information to make their own assessments of the risk and return attributes of a security.

The present role of the SEC is particularly complex. In 1935, its first year of full activity, only 284 new securities were registered for sale to the general public. Now the number of new securities being registered for sale is more than 5,000 per year. The SEC also regulates more than 10,000 securities brokers and dealers and must monitor stock exchange volumes often surpassing a billion shares a day.

### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 14-1 Understand the SEC's structure and regulatory authority.
- LO 14-2 Understand the process of registering securities with the SEC.
- LO 14-3 Understand periodic reporting requirements.
- LO 14-4 Understand requirements for management reporting laws.
- LO 14-5 Understand disclosure requirements.

# INTERNATIONAL HARMONIZATION OF ACCOUNTING STANDARDS FOR PUBLIC OFFERINGS<sup>1</sup>

The global economy has a number of major securities exchanges in which business entities can seek equity or debt capital. The SEC wants to preserve the international prestige of the U.S. capital markets by providing financial markets for multinational and non-U.S. companies. With the encouragement of the SEC and the International Organization of Securities Commissions (IOSCO), the International Accounting Standards Board (IASB) is working with the Financial Accounting Standards Board (FASB) to converge on a uniform set of accounting and financial reporting standards that can be used by all companies seeking financing through any of the world's major stock markets, including those of the United States.

In 2007, the SEC took two actions regarding its roadmap toward a uniform global set of financial reporting standards. In its first action, the SEC published Securities Act Release No. 33-8879, "Acceptance from Foreign Private Issuers of Financial Statements Prepared in Accordance with International Financial Reporting Standards without Reconciliation to U.S. GAAP," under which the SEC will accept financial statements from foreign private issuers<sup>2</sup> without reconciliation to U.S. GAAP if they are prepared using International Financial Reporting Standards (IFRSs) as issued by the IASB. Previously, foreign companies using IFRSs in their SEC filings were required to present a reconciliation schedule that reconciled foreign financial statement items to U.S. GAAP. This schedule, Form 20-F, had been a cause of concern for a number of foreign companies that felt it was an unnecessary requirement and an indirect criticism of the IFRSs. By removing the requirement for the reconciliation schedule, the SEC felt that it would show support for the IASB-approved version of IFRSs and encourage the development of IFRSs as a uniform global standard, not as a divergent set of standards that can be applied differently in each country. This new rule became applicable to financial statements for fiscal years ending after November 15, 2007, and to interim financial statements after that date. Furthermore, the SEC hopes this new rule will encourage more foreign businesses to list their securities on U.S. stock exchanges.

<sup>&</sup>lt;sup>1</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

<sup>&</sup>lt;sup>2</sup> Rule 205 of the Securities Act of 1933 defines foreign private issuer (FPI) as any foreign issuer, other than a foreign government, except an issuer that meets the following conditions: (1) more than 50 percent of its outstanding voting securities are directly or indirectly owned by residents of the United States and (2) any of the following: (a) the majority of its executive officers or directors are U.S. citizens or residents; (b) more than 50 percent of the issuer's assets are located in the United States; or (c) the business of the issuer is administered principally in the United States.

The second action taken by the SEC to support the use of IFRSs in U.S. capital markets was the issuance of Securities Act Release No. 33-8831, "Concept Release on Allowing U.S. Issuers to Prepare Financial Statements in Accordance with International Financial Reporting Standards." However, due to the financial crisis beginning in 2008, the SEC backed off temporarily on the transition toward the adoption of IFRS in the United States. Despite these challenges, the SEC is pushing toward the acceptance of a single set of worldwide, principles-based accounting standards for use in the U.S. securities markets. In a news release on February 24, 2010, the SEC took an additional step toward achieving the goal of a single set of high-quality global accounting standards by executing a "Work Plan" leading toward convergence. The SEC issued a "Final Staff Report" on this work plan on July 13, 2012. The FASB and IASB will continue to work toward convergence of U.S. and international reporting standards, but it appears that much is still to be done. As of this writing, the SEC still has not definitely decided whether or when it will allow U.S. registrants to use IFRS.

### SECURITIES AND EXCHANGE COMMISSION

### LO 14-1

### Understand the SEC's structure and regulatory authority.

## **Organizational Structure of the Commission**

The SEC's five commissioners are appointed by the president of the United States with the advice and consent of the Senate. Figure 14-1 is an organizational chart of the Commission showing the five separate divisions and the 20 major offices that must report directly to the Commission. The five divisions, and their primary responsibilities, are as follows:

As an example, the Division of Enforcement recently reached a settlement with Peter Siris, the New York investment manager of a hedge fund, who was found guilty of illegally helping a Chinese company go public in the United States while concealing his position as the company's consultant and resulting commission. Siris and two firms he controls (Guerrilla Capital Management and Hua Mei 21st Century) were accused of conducting a reverse merger to obtain the Chinese food company China Yingxia. Siris paid US\$1.1 million for the settlement without any comment on the charge.

- 1. Division of Corporation Finance. Develops and administers the disclosure requirements for the securities acts and reviews all registration statements and other issue-oriented disclosures. This is the division with which accountants are most familiar because all registration forms are submitted to it.
- 2. Division of Enforcement. Directs the SEC's enforcement actions. This division has several options for enforcement ranging from persuasion to administrative proceedings to litiga-

tion. An administrative proceeding often is used to gather evidence and present findings on a specific issue, such as a significant shareholder not filing proper reports with the SEC. Many of the administrative proceedings result in a consent action by a registrant, stock

FIGURE 14-1 **Organizational** Structure of the Securities and **Exchange Commission** 

| Divisions  | Offi  | ices  |

| <ul> <li>Corporation Finance</li> <li>Enforcement</li> <li>Investment Management</li> <li>Risk, Strategy, and Financial Innovation</li> <li>Trading and Markets</li> </ul> | <ul> <li>Chief Operating Officer</li> <li>Acquisitions</li> <li>Financial Management</li> <li>Human Resources</li> <li>Information Technology</li> <li>Support Operations</li> <li>Administrative Law Judges</li> <li>Chief Accountant</li> <li>Complance Inspections and Examinations</li> <li>Credit Ratings</li> </ul> | <ul> <li>Equal Employment         Opportunity</li> <li>Ethics Office</li> <li>General Counsel</li> <li>Inspector General</li> <li>International Affairs</li> <li>Investor Education and         Advocacy</li> <li>Legislative and         Intergovernmental Affairs</li> <li>Minority and Women         Inclusion</li> <li>Public Affairs</li> <li>Secretary</li> </ul> |

market participant, or professional practicing before the SEC in which the party accepts the SEC's judgment. Litigation is used for serious infractions of SEC-administered laws, such as a securities broker engaging in the fraudulent sale of securities. Litigation can result in injunctions to discontinue actions as well as civil or criminal sanctions.

- 3. Division of Investment Management. Regulates investment advisers and investment companies.
- 4. Division of Risk, Strategy, and Financial Innovation. Integrates financial economics and rigorous data analytics into the core mission of the SEC.
- 5. Division of Trading and Markets. Regulates national securities exchanges, brokers, and dealers of securities.

Several offices support these divisions; one of the most important for accountants is the Office of the Chief Accountant. This office assists the Commission by studying current accounting issues and preparing position papers for the SEC to consider. The other major offices listed offer the Commission advice on a variety of economic and regulatory matters.

### Laws Administered by the SEC

In addition to the Securities Acts of 1933 and 1934, the SEC is responsible for administering other laws established to regulate companies or individuals involved with the securities markets. The laws are as follows:

- 1. Public Utility Holding Company Act of 1935. Prohibits artificial pyramids of capital in public utilities and allows the SEC to restructure those "holding companies" whose only purpose is to concentrate the stock voting power in a few individuals.
- 2. Trust Indenture Act of 1939. Requires a trustee to be appointed for sales of bonds, debentures, and other debt securities of public corporations, thus bringing in a bonded expert to administer the debt.
- 3. Investment Company Act of 1940. Controls companies such as mutual funds that invest funds for the public. These companies must be audited annually with the auditor reporting directly to the SEC.
- 4. Investment Advisors Act of 1940. Requires complete disclosure of information about investment advisers, including their backgrounds, business affiliations, and bases for compensation.
- 5. Securities Investor Protection Act of 1970. Created the Securities Investor Protection Corporation (SIPC), an entity responsible for insuring investors from possible losses if an investment house enters bankruptcy. A small fee is added to the cost of each stock trade to cover the costs of the SIPC.
- 6. Sarbanes-Oxley Act of 2002. Created the Public Company Accounting Oversight Board (PCAOB) and a number of responsibilities for audit committees of publicly held companies and for public accounting firms.

The SEC is often asked for assistance in the administration of two other major laws, as follows:

- 7. Foreign Corrupt Practices Act of 1977. Amended the 1934 Securities Exchange Act. It requires accurate and fair recording of financial activities and requires management to maintain an adequate system of internal control.
- 8. Federal Bankruptcy Acts. Provides SEC assistance to the courts when a publicly held company declares bankruptcy. The SEC's primary concern in these cases is to protect security holders.

### The Regulatory Structure

Many people beginning a study of the regulatory structure of the SEC are overwhelmed by the myriad of regulations, acts, guides, and releases it uses to perform its tasks. It is easier to understand how the SEC operates after obtaining a basic understanding of these public documents and the nature of the SEC's pronouncements. Refer to Figure 14-2 for an overview of this regulatory structure.

FIGURE 14–2 The Regulatory Structure

| Item   | Contents   |
|--|--|
| Securities Act of 1933                                     | Statute regulating initial registration and sale of securities.  |
| Securities Act rules                                       | Basic definitions of Securities Act terms such as offers, distribution, participation, and accredited investor.  |
| Securities Act regulations                                 | Detailed requirements of registration. At the present time, there are six regulations (Regulations A, B, C, D, E, F) of which two (A and D) specify exemptions from registration requirements for small or private stock offerings.  |
| Securities Act forms                                       | Content of registration forms. The most frequently used forms are Form 1-A for small offerings of securities and Forms S-1, S-2, and S-3, which are general registration forms.  |
| Securities Act industry guides                             | Specifications of additional disclosures required in registration statements of companies in special industries such as oil and gas, banking, and real estate.   |
| Securities Act releases<br>(SRs)                           | Announcements amending or adopting new rules, guides, forms, or policies under the 1933 act. Approximately 6,000 releases have been published.  These are noted with a prefix, for example, for release number 6,000, Release 33-6000.   |
| Securities Exchange Act of 1934                            | Regulation of security trading and requirements for periodic reports by publicly held companies.   |
| Exchange Act rules   | Specific reporting requirements of over-the-counter securities, special reports required by stockholders who own 5 percent or more of a company's outstanding stock, and prohibition of manipulative and deceptive devices or contrivances.  |
| Exchange Act forms   | Specification of the content of periodic reports. The most commonly used forms are Form 10-K (annual report), Form 10-Q (quarterly report), and Form 8-K (current events report).  |
| Exchange Act industry guides                               | Additional periodic reporting requirements of companies in specialized industries such as electric and gas utilities, oil and gas, and banking.  |
| Securities Exchange Act releases (SRs)                     | Announcements of amendments or adoptions of new rules, guides, forms, or policy statements pertaining to the 1934 act. More than 15,000 have been issued, and are identified with a prefix, for example, for number 15,000, Release 34-15000.  |
| Regulation S-X (Reg. S-X)                                  | Articles specifying the form and content of financial disclosures: financial statements, schedules, footnotes, reports of accountants, and pro forma disclosures.  |
| Regulation S-K (Reg. S-K)                                  | Articles specifying disclosure rules of nonfinancial items to be included in registration statements, annual reports, and proxy statements. Major items are descriptions of business, management's discussion and analysis, disagreements with accountants, and required information about new stock issues.   |
| Accounting and Auditing<br>Enforcement Releases<br>(AAERs) | Announcements of enforcement actions involving accountants practicing before the SEC. Includes discussion of the findings and opinions (including sanctions against the accountants involved) of enforcement hearings held by the Commission.  AAER No. 1 is a codification of all enforcement topics previously included in the Accounting Series Releases. |
| Staff Accounting Bulletins<br>(SABs)                       | New or revised administrative practices and interpretations used by the Commission's staff in reviewing financial statements.  |

The Securities Act of 1933 and the Securities Exchange Act of 1934 are broken down into rules, regulations, forms, guides, and releases. The rules generally provide specific definitions for complying with the acts. The regulations establish compliance requirements; for example, the regulations of the 1933 act detail specific reporting requirements for special cases such as small companies. The forms specify the format of the reports to be made under each of the acts. The guides provide specified additional disclosure requirements for selected industries such as oil and gas as well as banks. The releases are used for amendments or adoptions of new requirements under the acts.

Two major regulations, *Regulation S-X* and *Regulation S-K*, govern the preparation of financial statements and associated disclosures made in reports to the SEC. Specifically,

Regulation S-X presents the rules for preparing financial statements, footnotes, and the auditor's report. Regulation S-K covers all nonfinancial items, such as management's discussion and analysis of the company's operations and financial position.

The SEC needed some reporting vehicle to inform accountants about changes made in disclosure requirements, regulatory changes in the auditor-client relationship, and the results of enforcement actions taken against participants in the financial disclosure or securities trading process. Before 1982, the SEC used Accounting Series Releases (ASRs) for this purpose and had issued 307 ASRs covering a wide range of topics. In 1982, these ASRs were classified as covering either financial accounting topics or enforcement actions. Regulatory actions of the SEC are now provided on its website. Those governing reporting and financial accounting requirements are identified by a release number that begins with the number of the securities act being changed or amended (e.g., Release No. 33-8545, Release No. 34-51293, and so on).

The Accounting and Auditing Enforcement Releases (AAERs) present the results of enforcement actions taken against accountants, brokers, and other participants in the filing process. Most of these actions result from the filing of a false or misleading statement. The SEC can use administrative proceedings, in which case the hearings take place before an administrative law judge (ALJ) who is independent of the Commission. Both the SEC and the defendant are allowed to present evidence. The administrative law judge then issues a report that includes the findings of fact and a recommended sanction, such as barring a person from further participation in auditing publicly traded companies or from employment as a broker or a member of management of a publicly traded company. In more serious cases, the SEC may file a complaint with a federal court seeking injunctions prohibiting illegal acts or practices, or other court orders seeking civil monetary penalties or other forms of sanctions.

An interesting example of a civil action is presented in Litigation Release No. 17588, issued June 27, 2002. It is also identified as Accounting and Auditing Release No. 1585. The title of the release is "SEC Charges WorldCom with \$3.8 Billion Fraud. Commission Action Seeks Injunction, Money Penalties, Prohibitions on Destroying Documents and Making Extraordinary Payments to WorldCom Affiliates, and the Appointment of a Corporate Monitor." This litigation release presents the initial SEC action against World-Com for its massive accounting fraud in which the company capitalized and deferred, rather than properly expensing, approximately \$3.8 billion of costs. This fraud eventually led to the bankruptcy of WorldCom and the indictments of several of the company's top management.

The Staff Accounting Bulletins (SABs) allow the Commission's staff to make announcements on technical issues with which it is concerned as a result of reviews of SEC filings. The SABs are not formal actions of the Commission; nevertheless, most preparers follow these bulletins because they represent the views of the staff that will be reviewing their companies' filings.

An example of a Staff Accounting Bulletin is SAB No. 101, "Revenue Recognition in Financial Statements," issued in 1999. SAB No. 101 focused on the several revenue recognition procedures the SEC staff found inconsistently applied by registrants. One special item was the discussion of revenue recognition by the "New Economy" Internet firms. These companies focus on revenue growth, and many do not report any positive income. Analysts and stock market investors gauge these companies based on their revenue growth. For example, Company A, an Internet company, may offer another company's products (Company T) on Company A's website. Customers place their orders and provide a credit card number to A's Internet site. Company A then forwards the order to Company T, which ships the goods to the customer. The goods normally cost \$200, for which Company A receives \$20 for facilitating the sale. The question is this: Can Company A record the \$200 gross sale and a \$180 cost of goods sold to report its profit of \$20, or should Company A record just the net \$20 sales commission as its revenue? SAB No. 101 states that the revenue should be reported on the net basis, not the gross basis that the SEC staff believes inflates both the reported revenue and cost of goods sold. As viewed by the SEC staff, Company A did not take title to the goods, did not incur the risks and rewards of ownership of the goods, and was only an agent or broker for Company T for which it received a commission or fee.

The 1933 and 1934 securities acts gave the SEC broad regulatory powers to determine the accounting and reporting standards for publicly traded companies. The SEC has customarily relied on the accounting profession to establish accounting standards through creation and support for a standard-making body, for example, the APB and the FASB. The cooperation between the SEC and the FASB has worked with varying levels of success. The FASB is sensitive to the changes in the business world and attempts to react quickly to them by promulgating new accounting standards when needed. The SEC, however, continues to fulfill its responsibility by issuing releases on subjects that it believes must be addressed.

### ISSUING SECURITIES: THE REGISTRATION PROCESS

LO 14-2

Understand the process of registering securities with the SEC

The Securities Act of 1933 typically required companies wishing to sell debt or stock securities in interstate offerings to the general public to register those securities with the SEC. The registration process requires extensive disclosure about the company, its management, and the intended use of the proceeds from the issue. The registrant also must provide audited financial statements. The basic financial statements required in the annual report are (1) two years of balance sheets, (2) three years of income statements, (3) three years of statements of cash flows, and (4) three years of statements of shareholders' equity. Prior-years statements are presented on a comparative basis with those for the current period. In addition, the SEC requires at least five years of selected financial information presenting key numbers from the four basic financial statements.

A number of types of securities and securities transactions are exempt from registration under the 1933 act. Although the SEC may exempt these from full registration requirements, the antifraud provisions of the securities acts still apply to all offerings. The exempt securities are commercial paper (i.e., notes) with a maturity of nine months or less; issues in which the securities are offered and sold only within one state; securities exchanged by an issuer exclusively with its existing shareholders with no commission charged (e.g., a stock split or a stock dividend issued by a corporation); issuances of securities by governments, banks, savings and loan associations, farmers, co-ops, and common carriers regulated by the Interstate Commerce Commission; and securities of nonprofit religious, educational, or charitable organizations. Under the SEC's Regulation A, issuances up to \$5,000,000 within a 12-month period can be exempt if the entity files a notice with the SEC and an "offering circular" containing financial and other information provided to the persons to whom the offer is made (the financial statements in the offering circular do not have to be audited). Thus, some required disclosures of financial statements and other financial information fall under Regulation A.

**Regulation D** of the SEC presents three important exemptions from full registration requirements for private placements (i.e., not offered to the general public) of securities, as follows:

- 1. Rule 504 of Regulation D exempts small issuances up to \$1,000,000 within a 12-month period to any number of investors. No specific disclosures are required, but the offerer must send a notice of the offering to the SEC within 15 days of the first sale of the securities.
- 2. Rule 505 of Regulation D exempts issuances up to \$5,000,000 within a 12-month period. The sales can be made to up to 35 "unaccredited investors" and to an unlimited number of "accredited investors." Accredited investors include banks, credit unions, insurance companies, partnerships and corporations, and individuals having a net worth exceeding \$1,000,000 or individual income of \$200,000 for the two most recent years. Unaccredited investors are persons who do not meet the income or net worth requirements. An unaccredited investor who purchases the securities must be supplied audited balance sheets along with other financial statements. If the sales are only to accredited investors, no disclosures are required. Under Rule 505, the SEC must be notified within

- 15 days of the first sale, and the issuer must restrict the purchasers' rights to resell the securities, generally for a period of two years. The securities typically state the nature of their restriction and the fact that they have not been registered with the SEC.
- 3. Rule 506 of Regulation D allows private placements of an unlimited amount of securities and applies, in general, the same rules as Rule 505 except that the maximum of 35 unaccredited investors must be sophisticated investors who have knowledge and experience in financial affairs.

The offering process usually begins with the selection of an investment banker, also called an underwriter, who assists the company in the registration process by providing marketing information and ultimately directing the distribution of the securities. The underwriting agreement is a contract between the company and the underwriter and specifies such items as the underwriter's responsibilities and the final disposition of any unsold securities remaining at the end of the public offering. In some cases, the underwriter agrees to purchase any remaining securities; in others, the company is required to withdraw any unsold securities. An offering team includes the company, the underwriter, the company's independent auditor, the company's legal counsel, and experts such as appraisers or engineers who may be required. Typically, the underwriter requires a comfort letter from the auditor to indicate that the company has fulfilled all accounting requirements in the registration process.

### The Registration Statement

The process of public offerings of securities begins with the preparation of the registration statement. The company must select one from among approximately 20 different forms the SEC currently has for registering securities. The most common are Form S-1, Form S-2, and Form S-3. Others are required when registering stock option plans, foreign issues, limited issuances under Regulation D, and special types of offerings. Form S-1, the most comprehensive registration statement, is for registering first-time offerings by companies that have never issued publicly traded stock. Form S-2 is an abbreviated form for present registrants who have other publicly traded stock; Form S-3 is a brief form available for large, established registrants whose stock has been trading for several years.

Form S-1 has two different levels of disclosure. Part I, often referred to as the prospectus, is intended primarily for investors and includes the basic information package as well as information about the intended use of the proceeds, a description of the securities being offered, and the plan of distribution, including the name of the principal underwriter. Filings for bond issues must include summary information about the ratio of earnings to fixed charges so investors are informed about some of the financial risk the new bond issue adds to the company. Part II of Form S-1 includes more detailed information, such as a list of the expenses of issuing and distributing the new security, additional information about directors and officers and additional financial statement schedules. The registration statement must be signed by the principal executive, financial, and accounting officers as well as a majority of the company's board of directors. The company then submits its registration statement to an SEC review by the Division of Corporation Finance.

# **SEC Review and Public Offering**

The SEC seeks to provide potential investors full and fair disclosure of all material information necessary for assessing the securities' risk and return expectations. The SEC does not, however, guarantee the value of the stock or bond security.

Most first-time registrants receive a "customary review," which is a thorough examination by the SEC that may result in acceptance, or, alternatively, a comment letter specifying the deficiencies that must be corrected before the securities may be offered for sale. Established companies that already have stock widely traded generally are subject to a summary review or a cursory review. Once the registration statement becomes effective, the company may begin selling securities to the public. This review period is 20 days unless the company receives a comment letter from the SEC.

Between the time the registration statement is presented to the SEC and its effective date, the company may issue a preliminary prospectus, referred to as a red herring prospectus, which provides tentative information to investors about an upcoming issue. The name "red herring" comes from the red ink used on the cover of this preliminary prospectus, indicating that it is not an offering statement and that the securities being discussed are not yet available for sale. In addition, the company generally prepares a "tombstone ad" in the business press to inform investors of the upcoming offering. These ads are bordered in black ink, hence the title.

The time period between the initial decision to offer securities and the actual sale may not exceed 120 days. In the interim, many factors can affect the stock market and decrease the company's ability to obtain capital. In 1982, the SEC devised the *shelf reg*istration rule for large, established companies with other issues of stock already actively traded. These companies may file a registration statement with the SEC for a stock issue that may be "brought off the shelf" and, with the aid of an underwriter, updated within a very short time, usually two to three days. A shelf registration is limited to 10 percent of the company's currently outstanding stock but allows large companies to select the optimal time to sell their stock.

### Accountants' Legal Liability in the Registration Process

Accountants play a key role in the registration statement's preparation. The company's own accountants prepare the initial financial disclosures, which the company's independent accountants then audit. The 1933 act created a very broad legal liability for all participants in the registration process, which is particularly high for accountants because financial disclosures make up the majority of the registration statement. Under section 11 of the 1933 act, accountants are liable for any materially false or misleading information to the effective date of the registration statement. The underwriters handling the sale of the securities often require a *comfort letter* from the registrant's public accountants for the period between the filing date and the effective date. This comfort letter provides

### **STOP & THINK**

Accountants are not only responsible for their own actions but also must endeavor to discover their clients' fraudulent actions. A recent civil fraud case against Ernst & Young LLP held that it stood by while Lehman Brothers used accounting gimmickry to mask its shaky finances. The lawsuit says Lehman ran "a massive accounting fraud," but it did not name any former top executives at the investment bank as defendants. Lehman's September 2008 collapse helped spark the global financial crisis. The lawsuit seeks more than \$150 million in fees that Ernst & Young received from 2001 to 2008.

additional evidence that the public accountant has not found any adverse financial changes since the filing date. Plaintiffs suing the accountant are not required to show they relied on the registration statement, only that the statement was wrong at the effective date! Accountants have a "due diligence" defense, the result of interpretations by the courts as to what is generally required in a reasonable investigation of the company's financial position; however, the broad legal exposure causes many anxieties for accountants involved with the offering of securities.

# PERIODIC REPORTING REQUIREMENTS

LO 14-3

Understand periodic reporting requirements.

The Securities Exchange Act of 1934 regulates the trading of securities and imposes reporting requirements on companies whose securities trade on one of the stock exchanges. Companies with more than \$10 million in assets and whose securities are held by more than 500 persons must file annual and other periodic reports as updates on their economic activities. The three basic forms used for this updating are Form 10-K, Form 10-Q, and Form 8-K.

Form 10-K is the annual filing to the SEC. In 2002, the SEC changed the filing deadlines of the Form 10-K for accelerated filers, which are defined as those companies having at least \$75 million in aggregate market value that have been subject to the periodic and annual reporting requirements for at least one year, including the filing of at least one annual report. Accelerated filers must file their Form 10-K within 60 days after the end of the company's fiscal year. Small businesses and others who do not meet the requirements for an accelerated filer have until 90 days after the end of their fiscal years.

Form 10-K has four parts and the general format is similar to the company's annual report to shareholders (ARS). Parts I, II, and III include the management's discussion and analysis, the audited financial statements and footnotes, the report by management on the internal control structure and the assessment of the effectiveness of those controls, the auditor's opinion, and at least five years of condensed financial information disclosures. Some of this information is sometimes "incorporated by reference" to other ARS or other filings made to the SEC. Also included must be a statement signed by the CEO and CFO that certifies that the financials and disclosures in the report are appropriate and that those financial statements and disclosures fairly present, in all material respects, the issuer's operations and the financial condition.

Part IV of the Form 10-K contains additional schedules and exhibits. Form 10-K differs from the annual report to shareholders by providing specific information relevant to the security holders, such as descriptions of any matters submitted to a vote of security holders; discussion of any disagreements with external auditors; management compensation and major ownership blocks; and schedules detailing selected asset and liability accounts, including accounts receivable, property, plant, and equipment, the company's investments in other enterprises, and indebtedness of the company and its affiliates. The SEC also requires disclosure in the annual report as to where investors can obtain access to a company's SEC periodic filings, including whether it provides access to its filings on its website, free of charge, as soon as possible after the filings are made to the SEC.

Form 10-Q is the quarterly report to the SEC. Accelerated filers must submit a Form 10-Q within 35 days after the end of each of their first three quarters. No Form 10-Q is filed for the fourth quarter because that is when the Form 10-K is filed. Companies not classified as accelerated filers must file within 45 days after the end of each of their first three quarters.

Part I of Form 10-Q includes comparative financial statements prepared in accordance with ASC 270 and 740; these interim statements need not be audited. Essentially, the company provides financial statements for the most recent quarter, cumulative statements from the beginning of the fiscal period, and comparative statements for the equivalent quarters in the preceding fiscal year. Selected data from the interim statements also must be disclosed in a footnote in the company's annual report, and the independent auditors, on an ex post basis, review the previously issued interims for the year as part of the year-end annual audit.

Part II of Form 10-Q is an update on significant matters occurring since the last quarter. These include new legal proceedings, changes in the rights of securities, defaults on senior securities, increases or decreases in the number of securities outstanding, and other materially important events affecting security holders.

Form 8-K is used to disclose unscheduled material events. In 2004, the SEC issued final rules that increased the number of reportable items to be disclosed on Form 8-K filings and accelerated the timing of the filing requirement. Companies must file a Form 8-K within four business days of the occurrence of a "triggering event." Many of the triggering events involve the company's board of directors or an authorizing officer of the company making a commitment or conclusion regarding one or more of the reportable items. A number of these events involve accountants, and it is important that accountants understand which events require a Form 8-K filing. Because of the expansion of the number of reportable items, the SEC reorganized Form 8-K items into nine topical sections, each with a subnumbering system used for specific items in that section.

- 1. Registrant's Business and Operations. The three reportable events in this section are (1.01) entry into a material agreement, (1.02) termination of a material agreement, and (1.03) the bankruptcy or receivership of the company.
- 2. Financial Information. This section contains the following six items: (2.01) the completion of the acquisition or disposition of assets, (2.02) the public announcement of material results of operations and financial condition, (2.03) the creation of

- a direct financial obligation under an off-balance sheet arrangement, (2.04) an event that accelerates or increases a direct financial obligation under an off-balance sheet arrangement, (2.05) costs associated with exit or disposal activities when the board commits the company to an exit or disposal of a material part of the business, and (2.06) material impairments of a company's assets.
- 3. Securities and Trading Markets. The three items in this section are (3.01) notice of delisting or failure to satisfy a continuing listing rule, (3.02) an unregistered sale of equity securities, and (3.03) material modifications to the rights of security holders.
- 4. Matters Related to Accountants and Financial Statements. The two items in this section are (4.01) changes in the registrant's certifying accountant and (4.02) nonreliance on previously issued financial statements or a related audit report.
- 5. Corporate Governance and Management. The six items in this section are (5.01) changes in control of the registrant, (5.02) the departure of directors or principal officers, or the election or appointment of principal officers, (5.03) amendments to the articles of incorporation or bylaws, including any change in the registrant's fiscal year, (5.04) the temporary suspension of trading under the registrant's employee benefit plans, (5.05) amendments to the registrant's code of ethics, or waiver of a provision of the code of ethics, and (5.06) a change in shell company status. A shell company has very limited operations and holds only minor amounts of assets. The company is essentially a legal shell under which other companies operate.
- 6. Asset-Based Securities. This section requires disclosure of material items related to assetbacked securities such as a bond issue. Disclosures are required for a change of servicer or trustee of the security, a change in the credit enhancement or other external support for the securities, or a failure to make a distribution required by the security agreement.
- 7. Regulation FD. (Item 7.01) This section requires filing a Form 8-K to broadly report material information that is being provided to securities analysts, selected institutional investors, or others. Regulation FD seeks to eliminate the informational advantages of having access to officers or other management members through public channels. For example, if the CEO of a registrant spoke to a group of financial analysts at a lunch meeting during which the general future of the company and its industry was discussed, the company would file a Form 8-K disclosing the meeting and include major informational items the CEO presented.
- 8. Other Events. (Item 8.01) This section is unstructured and flexible to allow management to disclose items it believes may be of material importance to security holders.
- 9. Financial Statements and Exhibits. (Item 9.01) This section includes a list of the financial statements, pro forma financial information, and exhibits required to be filed as part of Form 8-K.

For changes in the registrant's certifying accountant (Item 4.01), Form 8-K must include the following: the date the former auditor resigned or was dismissed, a statement describing and fully discussing any material disagreements with the former auditors over accounting or auditing standards over the past 24 months, a statement stating whether the former auditor's opinion was qualified in any way for the past two years and describing the nature of any qualification, and a letter from the former auditor as an exhibit to Form 8-K that states whether the former auditor agrees or disagrees with the facts as stated in the Form 8-K as presented by the registrant.

Schedule 13D is filed by any person or persons in a group who acquire a beneficial ownership of more than 5 percent of a class of registered equity securities and must be filed within 10 days after such an acquisition. Beneficial ownership is defined as directly or indirectly having the power to vote the shares or investment power to sell the security. In addition, any time there are material changes in the facts set forth in the schedule, the investor must file an amendment on Schedule 13D. Thus, any investor making an acquisition of 5 percent or more of any class of equity securities of a publicly held company must promptly report the investment to the SEC.

**Proxy statements** are materials submitted to shareholders for votes on corporate matters such as the election of directors, changes in the corporate charter, issuance of new securities or modification of outstanding securities, or plans for a major business combination. In many cases, voting on these matters takes place at the annual meeting but sometimes at a special meeting. A proxy card soliciting the shareholder's vote is often in the form of a checkoff ballot that management encourages the shareholder to return to be voted at the meeting. The proxy solicitation materials must include the specific proposals being presented to the shareholders accompanied by supporting statements of facts and circumstances to explain the proposals. The materials also include information about the committees of the board of directors and executive compensation and share ownership. If there will be an election of directors, the SEC also requires that the registrant's annual report to shareholders be included with the proxy materials. An increasing number of companies are using the Internet to provide their proxy materials, annual report, and proxy cards to shareholders who request the electronic form. The company must send printed materials to all other shareholders. A copy of a registrant's proxy statement is available on the SEC's EDGAR database of filings for that company under the title "DEF 14A" to identify it as the definitive, or final, proxy statement filed under section 14A of the Securities Exchange Act of 1934.

Individual shareholders or a group of shareholders may sometimes use proxy solicitations for proposals that management opposes. Rule 14-8 of the Securities Exchange Act of 1934 presents detailed rules and regulations that must be met in order to have these shareholder proposals included on a company's proxy card and included with any supporting statements in the proxy statement. The rules are quite specific with regard to who is eligible to submit a proposal, the content and subject matter of a proposal, and deadlines for submitting a proposal. At times, the business press carries news of proxy battles between management and nonmanagement groups in which each side is soliciting shareholders' support.

### Accountants' Legal Liability in Periodic Reporting

The 1934 Securities Exchange Act allows a limited level of legal exposure from involvement in preparing and filing periodic reports. Civil liability is imposed for filing materially false or misleading statements. The accountant's liability for registration statements under the 1933 act extends to the date the registration becomes effective. Plaintiffs suing accountants under the 1934 act must show that a periodic report contains a misleading material fact and that they suffered a loss because they relied on that report. Accountants have due diligence defenses to combat any lawsuits brought under the 1934 act.

# ELECTRONIC DATA GATHERING, ANALYSIS, AND RETRIEVAL (EDGAR) SYSTEM

The SEC continues to work to facilitate the registration and filing process and has developed an electronic filing system known as EDGAR (Electronic Data Gathering, Analysis, and Retrieval). Under this system, firms electronically file directly by using computers, facilitating the data transfer and making public data more quickly available. EDGAR filings may be found on the Internet, on the SEC's home page (www.sec.gov) within 24 hours of filing. All public companies are now required to use EDGAR, although some hardship exemptions are allowed for small firms.

The SEC believes that EDGAR is accomplishing its primary purpose of increasing the efficiency and fairness of the securities markets by expediting the receipt, acceptance, dissemination, and analysis of time-sensitive data filed with it. Any individual with access to the Internet can easily download and print the documents from EDGAR, which has become an important data source for corporate researchers, investors, and all other participants in the securities markets.

### FOREIGN CORRUPT PRACTICES ACT OF 1977

LO 14-4

Understand requirements of management reporting In the mid-1970s, Congress held a number of public hearings that identified the payment of millions of dollars in bribes to high government officials of other countries by U.S.based companies seeking to win defense or consumer product contracts. Alarmed by the size and scope of these activities, Congress passed the Foreign Corrupt Practices Act of 1977 (FCPA) as a major amendment to the Securities Exchange Act of 1934. The FCPA has two major sections: Part I prohibits foreign bribes, and Part II requires publicly held companies to maintain an adequate system of internal control and accurate records.

Under Part I, individuals associated with U.S. companies are prohibited from bribing foreign governmental or political officials for the purpose of securing a contract or otherwise increasing the company's business. Small compensating or agents' fees to low-level civil servants are allowed if the purpose of these fees is to facilitate a transaction that is already in process, such as to obtain shipping permits or to acquire local licenses in a foreign country. Both civil and criminal sanctions can be imposed on individuals making bribes to foreign officials.

Part II of the FCPA has had a significant impact on both corporate accountants and independent auditors. This part requires all public companies, whether operating internationally or not, to keep detailed records that accurately and fairly reflect their financial transactions and to develop and maintain an adequate internal control system. An internal control system should ensure that all major transactions are fully authorized, transactions are properly recorded and reported, the company's assets are safeguarded, and management's policies are properly carried out.

Although the FCPA was not specific about the types of internal controls necessary, it defined the following as important aspects of a good internal control system: (1) strong budgetary controls, (2) an objective internal audit function that helps develop, document, and then monitor the control system, (3) an active audit committee of nonmanagement members of the company's board of directors, and (4) a review of the internal control system by the independent auditors. The FCPA allows for the development of "tailored" control procedures that best serve the company. In addition, the FCPA indicated that the cost of an internal control procedure should not outweigh its benefit to the firm.

The FCPA also had a significant effect on independent auditors by requiring them to evaluate a company's internal controls and to communicate any material weaknesses in them to the company's top management and board of directors. The total impact of the FCPA is still unclear. Subsequent proposals offered by the SEC itself have somewhat softened the foreign bribery section of the act; however, Part II of the FCPA, dealing with internal control, certainly increased the interest of companies in maintaining strong internal control systems.

### SARBANES-OXLEY ACT OF 2002

A major law affecting auditors and publicly traded companies was signed into law on July 30, 2002. The proposed law gained impetus after the revelations about accounting and financial mismanagement at Enron, WorldCom, and others. Named after its two sponsors, Senator Paul Sarbanes and Congressman Michael Oxley, the Sarbanes-Oxley Act (broadly known as SOX) has a number of major implications for accountants. Its supporters hoped that the act would minimize corporate governance accounting and financial reporting abuses and help restore investor confidence in the financial reports of publicly traded companies. The following discussion summarizes the major sections of SOX.

### Title I: Public Company Accounting Oversight Board

Section 101 of Title I of SOX established a new accounting oversight board to regulate accounting firms and be responsible for establishing or modifying auditing and attestation standards. The SEC administers the Public Company Accounting Oversight Board (PCAOB) and is responsible for appointing its five full-time members. Two board members must be or must have been CPAs; however, the other three cannot have been CPAs. The PCAOB chair may be a CPA but must not have practiced accounting during the five years prior to being appointed as chair. The board's funding includes mandatory fees from public companies. Accounting firms with publicly held audit clients must be registered with the PCAOB and are subject to continuing quality inspections for compliance to the requirements of the act.

The PCAOB, which many accountants refer to by the nickname "Peekaboo," has the authority to establish or to adopt standards for audit firm quality controls. The range of its authority includes auditing and related attestation standards, quality control, ethics, independence, and other areas necessary to protect the public interest. The board also manages the regular inspection of the registered accounting firms' operations and auditing processes. Any accounting firm that does not cooperate can be prohibited from auditing public companies. If the PCAOB finds any violations of its standards, it can refer the accounting firm involved to the SEC and possibly to the Department of Justice for prosecution.

### Title II: Auditor Independence

SOX made a major change that prohibits auditors from offering certain nonaudit services to their audit clients. These services include information systems design and implementations, appraisals or valuation services, internal audits, human resources services, legal or expert services not related to audit services, and bookkeeping services. Tax services provided by an auditor for a publicly held company require preapproval of the company's audit committee. Thus, accounting firms must determine whether to provide audit or nonaudit services to a company; they cannot provide both to the same company.

Title II requires that both the lead audit partner and the audit review partner for publicly held companies be rotated at least every five years. To avoid a conflict of interest, the company's CEO, controller, CFO, chief accounting officer, or person in an equivalent position cannot have been employed by the company's audit firm during the one-year period preceding the audit.

### Title III: Corporate Responsibility

Title III specifies that audit committees be composed of nonmanagement members of a company's board of directors. Generally, the chair of the audit committee has financial experience. SOX requires the auditor to report directly to, and have its work overseen by, the company's audit committee, not the company's management. The audit committee is responsible for the appointment, compensation, and oversight of the work of the public accounting firm employed by the company. Furthermore, the audit committee must approve all services provided by the auditor, and the auditor must report the following additional information to the audit committee: critical accounting policies and practices, alternative treatments within GAAP that have been discussed with the company's management, accounting disagreements between the auditor and management, and any other important issues arising between the auditor and management.

Section 302 of the act requires both the CEO and the CFO of each publicly traded company to provide a signed statement to accompany each annual and quarterly financial report. These two officers are required to certify that the financial statements and disclosures fairly present, in all material respects, the issuer's operations and conditions. Furthermore, their signed statement must include declarations that they are responsible for establishing and maintaining internal controls and that these controls have been evaluated as to their effectiveness within 90 days prior to the report.

In the case of accounting restatements due to the issuer's material noncompliance, the CEO and CFO must forfeit bonuses and incentive compensation provided on the basis of the incorrect accounting information.

### **Title IV: Enhanced Financial Disclosures**

Financial reports filed with the SEC must reflect all material correcting adjustments that the registered accounting firm has identified and all material off-balance sheet transactions and relationships that may have a material effect on the issuer's financial status. Section 402 prohibits a company from making personal loans to any director or executive officer. However, consumer credit companies may make home improvement and consumer credit loans to its officers if these loans are made on the same terms as those made to the general public.

A major requirement of SOX is specified in section 404, which requires that each annual filing of a stock issuer must contain an *internal control report* by management that reports on the existence and effectiveness of the company's internal control over financial reporting. A company's internal control over financial reporting is a process designed to provide reasonable assurance of the reliability of the financial reporting and preparation of financial statements for external purposes in accordance with generally accepted accounting principles. In May 2003, the SEC released rules (Release No. 33-8238) that established specific requirements for the content of this report. Management's internal control report must include the following items: (1) a statement that management is responsible for establishing and maintaining an adequate system, (2) the identification of the framework used to evaluate the internal controls, (3) a statement as to whether the internal control is effective as of year-end, and (4) the disclosure of any material weaknesses in the internal control system.

In May 2005, the SEC released a statement on the first year's implementation of section 404, suggesting that there had been significant start-up costs from this new requirement. However, the SEC feels that benefits have been produced from section 404's requirements and that the section 404 implementation process will become more efficient over time. The annual filings of publicly held companies now include both the management report on internal control over financial reporting and the expanded independent auditor's report on its audit of that internal control system.

### Title V: Analyst Conflicts of Interest

Research analysts and brokers and dealers must report if they hold securities in any company for which they prepare a research report, if any compensation was received from the company that was the subject of a research report, and if a company that is the subject of a research report was a client of the broker or dealer.

### **Title VI: Commission Resources and Authority**

Title VI increased the funding for the SEC and its disciplinary and litigation authority over auditors, attorneys, brokers and dealers, and others who practice in the securities markets and who have engaged in illegal, unethical, or improper professional conduct.

### **Title VII: Studies and Reports**

The Government Accountability Office (GAO) and SEC are charged with conducting various studies, including of the factors leading to the consolidation of public accounting firms since 1989 and the impacts of that consolidation, the role of credit rating agencies in the securities markets, and whether investment banks and financial advisers assisted public companies in earnings manipulation and obfuscation of financial conditions.

### Title VIII: Corporate and Criminal Fraud Accountability

SOX established severe penalties for anyone who destroys records, commits securities fraud, or fails to report fraud. The penalty for willfully failing to maintain all audit or review workpapers for at least five years is a felony punishable by up to 10 years. Section 802 of the act specifies that persons destroying documents in a federal or bankruptcy investigation are punishable by up to 20 years in prison. The criminal penalty for securities fraud was increased to 25 years.

The statute of limitations for the discovery of fraud was increased to two years from the date of discovery and five years after the actual fraud. Previously, it had been only one year from the date of discovery and three years after the actual fraud. Section 806 provides "whistle-blower protection" to employees of the company or the accounting firm who lawfully assist in an investigation of fraud or other criminal conduct by federal regulators, Congress, or supervisors.

### **Title IX: White-Collar Crime Penalty Enhancements**

This title increases the minimum penalty for mail and wire fraud from 5 to 10 years. makes it a crime to tamper with a record or impede any official proceeding, and allows the SEC to prohibit anyone convicted of securities fraud from being an officer or director of any publicly traded company. In addition, this section of SOX includes criminal liability up to five years for corporate officers who fail to certify financial reports or who willfully certify financial statements knowing they do not comply with the act.

### Title X: Sense of Congress Regarding Corporate Tax Returns

Congress felt that the chief executive officer should sign the corporation's federal income tax return.

### Title XI: Corporate Fraud and Accountability

This section increased the penalties for persons using deceptive devices, engaging in fraudulent transactions, or otherwise acting to impede an official proceeding. It also increased the penalties for violations of the Securities Exchange Act of 1934 up to \$25 million and up to 20 years in prison.

SOX has had a significant impact on financial reporting, auditing, and corporate governance. The SEC provides a link to the complete act on its website (www.sec.gov).

# DISCLOSURE REQUIREMENTS

LO 14-5 requirements. Virtually every SEC accounting release reminds registrants of the commitment to full and fair disclosure of financial information needed by investors. The SEC has taken the lead in requiring management to provide its analysis of the company's operations.

### **Management Discussion and Analysis**

The management discussion and analysis (MD&A) of a company's financial condition and results of operations is part of the basic information package (BIP) required in all major filings with the SEC. The SEC has taken the leadership role in requiring management to analyze and discuss the financial statements for investors, and this discussion often extends to four or more pages of the annual report. The financial statements are, after all, management's expressions of the economic consequences of their decisions made during the period. Management has the clearest picture of the company's financial environment. A key element in the MD&A is a view that looks both historically and forward at the company's liquidity and solvency. The SEC recognizes that investors are particularly concerned with a company's ability to generate adequate amounts of cash to meet short-term and long-term cash needs.

Because it believes the information presented in the MD&A is important for investors, the SEC continually monitors it. In response to the requirement in section 401 of the Sarbanes-Oxley Act and new section 13(j) of the Securities Exchange Act of 1934, the SEC examined the items in its MD&A rules and with Release No. 33-8182 revised the list of required items in the MD&A, effective April 7, 2003. The items now required in the MD&A are

1. Liquidity. Identify trends, commitments, events, or uncertainties that are reasonably likely to materially change the registrant's liquidity. Indicate the course of action that is proposed to remedy any deficiency identified. Also, identify and describe the internal and external sources of liquidity with a brief discussion of any material unused sources of liquid assets.

- 2. Capital resources. Discuss material commitments for capital expenditures, their general purposes, and the expected sources of funds to fulfill those commitments. Also discuss trends and expected material changes in the mix of equity, debt, and any offbalance sheet financing arrangements.
- 3. Results of operations. Describe and discuss unusual or infrequent events or transactions affecting revenues, expenses, and the reported income from continuing operations. Discuss trends or expectations of material impacts on future revenues and expenses. For material increases in net sales, discuss the impact of an increase in price versus the impact of an increase in volume and discuss the impact of the introduction of new products. Then, for each of the most recent three years, discuss the impact of inflation and changing prices on net sales and revenue and on income from continuing operations.
- 4. Off-balance sheet arrangements. A separately identified section that includes discussion of off-balance sheet arrangements that have or are likely to have a material effect on the company's financial condition, changes in financial condition, results of operations, liquidity, capital expenditures, or capital resources. Required disclosures for these off-balance sheet arrangements include the nature and business purpose of the arrangements; the impact of the arrangements on revenues, expenses, and cash flows; and a description of events or other items that would materially change the benefits of the arrangement and the actions the company has taken or would take if those circumstances were to occur.
- 5. Tabular disclosure of contractual obligations. A table in the following format must be provided, listing the aggregated amount of each type of contractual obligation (if present):

|  | Payments Due by Period |                     |           |           |                      |
|--|------------------------|---------------------|-----------|-----------|----------------------|
| Contractual<br>Obligations   | Total                  | Less than<br>1 Year | 1–3 Years | 3–5 Years | More Than<br>5 Years |
| Long-term debt obligations Capital lease obligations Operating lease obligations Purchase obligations for goods or services Other long-term liabilities reflected on the registrant's balance sheet under GAAP Total |                        |                     |           |           |                      |

The MD&A should cover the financial statements and other statistical data for the most recent three-year time span and make year-to-year comparisons of material changes in the line items. Management should attempt to explain the cause(s) of the material changes. Section 401 of SOX specifies the required disclosure of material off-balance sheet transactions, arrangements, and obligations in each annual and each quarterly report. The MD&A in the quarterly reports should be viewed as updating the annual information. Thus, the MD&A in quarterly reports is generally much shorter than that in the annual report.

### **Pro Forma Disclosures**

Pro forma disclosures are essentially "what-if" financial presentations often taking the form of summarized financial statements. Pro forma statements are used to show the effects of major transactions that occur after the end of the fiscal period or that have occurred during the year but are not fully reflected in the company's historical cost financial statements. The SEC requires these to be presented whenever the company has made a significant business combination or disposition, a corporate reorganization, an unusual asset exchange, or a restructuring of existing indebtedness. A pro forma condensed income statement presented in the footnotes shows the impact of the transaction on the company's income from continuing operations, thereby helping investors to focus on the specific effects of the major transaction. The pro forma balance sheet includes all adjustments reflecting the full impact of the transaction. Investors therefore have (1) the historical cost primary financial statements and (2) the pro forma statements, which more fully present and illustrate the effects of the transaction on the company's financial condition.

# Summary of **Key Concepts**

Since its creation in 1934, the SEC has played a significant role in the development of financial disclosures necessary for investor confidence in the capital formation process. The Commission has consistently worked for full and fair disclosure of information it considers necessary so investors can assess the risks and returns of companies wishing to offer their securities to the public. The SEC has taken the leadership in a myriad of reporting issues, predominantly in reporting liquidity and solvency measures, thereby ensuring that investors have access to a management narrative of the company's performance.

Although the SEC has the statutory responsibility to develop and maintain accounting principles used for financial reporting, it has permitted the rule-making bodies of the accounting profession to take the initiative in establishing accounting principles and reporting standards. The cooperation has worked with varying success over the years. The SEC has shown its willingness and capacity to assume the lead in those areas in which it feels the private sector is not moving rapidly enough. It is expected that this arrangement will continue in the future.

### Cases

### LO 14-1, 14-4 C14-1 Objectives of Securities Acts [CMA Adapted]

### Research

During the late 1920s, approximately 55 percent of all personal savings in the United States was used to purchase securities. Public confidence in the business community was extremely high as stock values doubled and tripled in short periods of time. The road to wealth was believed to be through the stock market, and everyone who was able to participated. Thus, the public was severely affected when the Dow Jones Industrial Average fell 89 percent between 1929 and 1933. The public outcry arising from this decline in stock prices motivated the passage of major federal laws regulating the securities industry.

### Required

- a. Describe the investment practices of the 1920s that contributed to the erosion of the stock market.
- b. Explain the basic objectives of each of the following:
  - (1) Securities Act of 1933.
  - (2) Securities Exchange Act of 1934.
- c. More legislation has resulted from abuses in the securities industry. Explain the provisions of the Foreign Corrupt Practices Act of 1977.

### LO 14-1, 14-2 C14-2 Roles of SEC and FASB [CMA Adapted]

Understanding

The development of accounting theory and practice has been influenced directly and indirectly by many organizations and institutions. Two of the most important institutions have been the Financial Accounting Standards Board (FASB) and the Securities and Exchange Commission (SEC).

The FASB is an independent body established in 1972. It is composed of seven persons who represent public accounting and fields other than public accounting.

The SEC is a governmental regulatory agency created in 1934 to administer the Securities Act of 1933 and the Securities Exchange Act of 1934. These acts and the creation of the SEC resulted from the widespread collapse of business and the securities markets in the early 1930s.

### Required

- a. What official role does the SEC have in the development of financial accounting theory and practice?
- b. What is the interrelationship between the FASB and the SEC with respect to the development and establishment of financial accounting theory and practice?

### LO 14-3 C14-3 Information Content of Proxy

The proxy contains an abundance of information the SEC believed to be necessary for stockholders to make an informed vote on the items the company presents for their voting consideration. This case provides opportunities to analyze the proxy of a publicly held company and to survey the types of information presented in the proxy.

### Required

Using EDGAR or another source, obtain the most recent proxy for Caterpillar Inc. or a different company specified by your instructor. Answer the following questions regarding the information presented in the proxy.

a. Summarize the proposals that are being placed before the shareholders for their voting consideration and state the board of directors' recommendation on each proposal.

- b. List and briefly describe the duties of each of the standing committees of the board of directors
- c. For the most recent year presented in your proxy, what was the total annual compensation received by the chairman and CEO of the company?

10 14-3

#### Form 10-K Disclosures C14-4

Form 10-K is the annual filing required of publicly traded entities. The form contains the financial information for the year as well as a number of other disclosures the SEC requires.

### Required

Using EDGAR or another source, obtain the most recent Form 10-K (the annual report) for Caterpillar Inc. or a different company specified by your instructor. Answer the following questions regarding information presented in the Form 10-K.

- a. Identify the categories and major information presented in management's discussion and analysis.
- b. Summarize the information presented in management's Report on Internal Control over Financial Reporting.
- c. What does the Report of Independent Registered Public Accounting Firm include with regard to its evaluation of the company's internal control over financial reporting?
- d. Who has to sign the section 302 certifications? What do these certifications include with regard to the company's internal control over financial reporting?

LO 14-2

#### C14-5 **Registration Process [CMA Adapted]**

StudyGuide .com

Research

Bandex Inc. has been in business for 15 years and has compiled a record of steady but not spectacular growth. Bandex's engineers have recently perfected a product that has an application in the small computer market. Initial orders have exceeded the company's capacity, and the company has made the decision to expand.

Bandex has financed past growth from internally generated funds, and since the initial stock offering 15 years ago, it has sold no further shares. Bandex's finance committee has been discussing methods of financing the proposed expansion. Both short-term and long-term notes were ruled out because of high interest rates. Mel Greene, the chief financial officer, said, "It boils down to either bonds, preferred stock, or additional common stock." Alice Dexter, a consultant employed to help in the financing decision, stated, "Regardless of your choice, you will have to file a registration statement with the SEC."

Bob Schultz, Bandex's chief accountant for the past five years, stated, "I've coordinated the filing of all the periodic reports required by the SEC-10-Ks, 10-Qs, and 8-Ks. I see no reason I can't prepare a registration statement also."

### Required

- a. Identify the circumstances under which a firm must file a registration statement with the SEC.
- b. Explain the objectives of the registration process required by the Securities Act of 1933.
- c. Identify and explain the SEC publications that Bob Schultz would use to guide him in preparing the registration statement.

#### Change in Auditors and Form 8-K [CMA Adapted] C14-6

**Communication** 

Jerford Company is a well-known manufacturing company with several wholly owned subsidiaries. The company's stock is traded on the New York Stock Exchange, and the company files all appropriate reports with the SEC. Jerford's financial statements are audited by a public accounting firm. Jerford changed independent auditors during 20X6. Consequently, the financial statements were certified by a different public accounting firm in 20X6 than in 20X5.

### Required

- a. What information is Jerford responsible for filing with the SEC with respect to this change in auditors? Explain your answer completely. (Hint: Item 304 of Regulation S-K provides guidance on reporting a change in auditor.)
- b. Identify a company that has made a change in its auditor during the last two years. Summarize the reason(s) for the change and the major items reported in its Form 8-K regarding the change, and then compare those items with the requirements listed in Item 304 of Regulation S-K.

### C14-7 Form 8-K [CMA Adapted]

The purpose of the Securities Act of 1933 is to regulate the initial offering of a firm's securities by ensuring that investors are given full and fair disclosure of all pertinent information about the firm. The Securities Exchange Act of 1934 was passed to regulate the trading of securities on secondary markets and to eliminate abuses in the trading of securities after their initial distribution. To accomplish these objectives, the 1934 act created the SEC. Under its auspices, public companies must not only register their securities but also periodically prepare and file Forms 8-K, 10-K, and 10-Q.

### Required

### **Understanding**

- a. With regard to Form 8-K, discuss
  - (1) The report's purpose.
  - (2) The report's timing.
  - (3) The report's format.
  - (4) The role of financial statements in filing the report.
- b. Identify five circumstances under which the SEC requires the filing of Form 8-K.

LO 14-4

### C14-8 Audit Committees [CMA Adapted]

### **Understanding**

An early event leading to the establishment of audit committees as a regular subcommittee of boards of directors occurred in 1940 as part of the consent decree relative to the McKesson-Robbins scandal. (A *consent decree* is the formal statement issued in an enforcement action when a person agrees to terms of a disciplinary nature without admitting to the allegations in the complaint.) An audit committee composed of outside directors was required as part of the consent decree.

Title III of SOX specifies requirements for the membership of the audit committee and its authority. All publicly traded firms must follow SOX.

### Required

- a. Explain the role of the audit committee as SOX specifies, with regard to the annual audit conducted by the company's external auditors.
- b. Discuss the relationship that should exist between the audit committee and a company's internal audit staff.
- c. Explain why the members of the audit committee should be outside (independent of management) board members.

LO 14-1

### C14-9 SEC

Research

The company that employs you is a U.S. publicly traded corporation that manufactures chemicals. You are in the external financial reporting department, and your position requires that you keep current on all the new accounting requirements. Although you realize that Staff Accounting Bulletins (SABs) are not formal SEC actions, you like to review the new SABs periodically to see whether any are relevant to your company.

Today you decided to perform some research to ascertain whether any new SABs have been issued. In addition, your boss, the manager in charge of the department, recently mentioned something to you about the SEC's Division of Enforcement. You do not know a lot about this particular division; however, because you will be doing some SEC research today anyway, you have decided you will find out more about the SEC's Division of Enforcement.

### Required

- a. Prepare a one-page memo summarizing a recent SAB.
- b. Research the SEC's Division of Enforcement. Answer or perform the following:
  - (1) What year was the division formed?
  - (2) Discuss various actions the division may take.
  - (3) Prepare a one-paragraph summary of a recent litigation proceeding.
  - (4) Prepare a one-paragraph summary of a recent administrative proceeding.

LO 14-1

# Organization Structure and Regulatory Authority of the SEC [CMA Adapted]

Select the correct answer for each of the following questions.

- 1. Two interesting and important topics concerning the SEC are the role it plays in the development of accounting principles and the impact it has had and will continue to have on the accounting profession and business in general. Which of the following statements about the SEC's authority on accounting practice is *false*?
  - a. The SEC has the statutory authority to regulate and to prescribe the form and content of financial statements and other reports it receives.
  - b. Regulation S-X of the SEC is the principal source of the form and content of financial statements to be included in registration statements and financial reports filed with the Commission.
  - c. The SEC has little if any authority over disclosures in corporate annual reports mailed to shareholders with proxy solicitations. The type of information disclosed and the format to be used are left to the discretion of management.
  - d. If the Commission disagrees with some presentation in the registrant's financial statements, but the principles used by the registrant have substantial authoritative support, the SEC often accepts footnotes to the statements in lieu of correcting the statements to the SEC view, provided the SEC has not previously expressed its opinion on the matter in published material.
- 2. The Securities and Exchange Commission was established in 1934 to help regulate the U.S. securities market. Which of the following statements is *true* about the SEC?
  - a. The SEC prohibits the sale of speculative securities.
  - b. The SEC regulates securities offered for public sale.
  - c. Registration with the SEC guarantees the accuracy of the registrant's prospectus.
  - d. The SEC's initial influences and authority have diminished in recent years as the stock exchanges have become more organized and better able to police themselves.

- e. The SEC's powers are broad with respect to enforcement of its reporting requirements as established in the 1933 and 1934 acts but narrow with respect to new reporting requirements because these require confirmation by Congress.
- 3. The SEC is organized into several divisions and principal offices. The organization unit that reviews registration statements, annual reports, and proxy statements filed with the Commission is
  - a. The Office of the Chief Accountant.
  - b. The Division of Corporation Finance.
  - c. The Division of Enforcement.
  - d. The Division of Market Regulation.
  - e. The Office of the Comptroller.

### 4. Regulation S-X

- a. Specifies the information that can be incorporated by reference from the annual report into the registration statement filed with the SEC.
- b. Specifies the regulation and reporting requirements of proxy solicitations.
- c. Provides the basis for generally accepted accounting principles.
- d. Specifies the general form and content requirements of financial statements filed with the SEC.
- e. Provides explanations and clarifications of changes in accounting or auditing procedures used in reports filed with the SEC.
- 5. Which of the following is *not* a purpose of the Securities Exchange Act of 1934?
  - a. To establish federal regulation over securities exchanges and markets.
  - b. To prevent unfair practices on securities exchanges and markets.
  - c. To discourage and prevent the use of credit in financing excessive speculation in securities.
  - d. To improve the securities of corporations that are to be traded publicly.
  - e. To control unfair use of information by corporate insiders.
- 6. Regulation S-K disclosure requirements of the SEC deal with the company's business, properties, and legal proceedings; selected five-year summary financial data; management's discussion and analysis of financial condition and results of operations; and
  - a. The form and content of the required financial statements.
  - b. The requirements for filing interim financial statements.
  - c. Unofficial interpretations and practices regarding securities laws disclosure requirements.
  - d. Supplementary financial information such as quarterly financial data and information on the effects of changing prices.
  - e. The determination of the proper registration statement form to be used in any specific public offering of securities.

#### LO 14-2 **Registration of New Securities [CMA Adapted]** E14-2

Select the correct answer for each of the following questions.

- 1. In the registration and sales of new securities issues, the SEC
  - a. Endorses a security's investment merit by allowing its registration to "go effective."
  - b. Provides a rating of the investment quality of the security.
  - c. Disallows the registration to "go effective" if it judges the security's investment risk to be too great.
  - d. Allows all registrations to "go effective" if the issuing company's external accountant is satisfied that disclosures and representations are not misleading.
  - e. Does not make any guarantees regarding the material accuracy of the registration statement.
- 2. The 1933 Securities Act provides for a 20-day review period between the filing and the effective date of the registration. During this review period, the registrant is prohibited from
  - a. Preparing any amendments to the registration statement.
  - b. Announcing the prospective issue of the securities being registered.
  - c. Accepting offers to purchase the securities being registered from potential investors.

- d. Placing an advertisement indicating by whom orders for the securities being registered will be accepted.
- e. Issuing a prospectus in preliminary form.
- 3. Before turning over the proceeds of a securities offering to a registrant, the underwriters frequently require a comfort letter from the public accountant. The comfort letter's purpose is to
  - a. Remove the public distrust of a red herring by converting the letter into a prospectus.
  - b. Indicate whether the public accountant found any adverse financial change between the date of audit and the effective date of the securities offering.
  - c. Provide assurance from the public accountant's audit of the stub-period financial statements contained in the registration statement.
  - *d.* State that SEC regulations requiring the public accountant to give an opinion as an expert on the registrant's financial statements have been met.
  - e. Indicate that the offering conforms to New York Stock Exchange (NYSE) member requirements that a comfort letter from a public accountant be obtained before public sale of securities.

### E14-3 Reporting Requirements of the SEC [CMA Adapted]

Select the correct answer for each of the following questions.

- Form 10-K is filed with the SEC to update the information a company supplied when filing a registration statement under the Securities and Exchange Act of 1934. Form 10-K is a report that is filed
  - a. Annually within 60 days of the end of a company's fiscal year.
  - b. Semiannually within 30 days of the end of a company's second and fourth fiscal quarters.
  - c. Quarterly within 45 days of the end of each quarter.
  - d. Monthly within two weeks of the end of each month.
  - e. Within 15 days of the occurrence of significant events.
- 2. The SEC's Regulation S-X disclosure requirements address
  - a. Changes in and disagreements with accountants on accounting and financial disclosure.
  - b. Management's discussion and analysis of the financial condition and the results of operations.
  - c. The requirements for filing interim financial statements and pro forma financial information.
  - d. Summary information, risk factors, and the ratio of earnings to fixed charges.
  - e. Information concerning recent sales of unregistered securities.
- 3. Form 10-Q is filed with the SEC to keep both investors and experts apprised of a company's operations and financial position. Form 10-Q is a report that is filed within
  - a. 90 days after the end of the fiscal year the report covered.
  - b. 35 days after the end of each of the first three quarters of each fiscal year.
  - c. 90 days after the end of an employee stock purchase plan fiscal year.
  - d. 15 days after the occurrence of a significant event.
  - e. 60 days after the end of the fiscal year covered by the report.
- A company registered under the Securities and Exchange Act of 1934 should report a significant event affecting it on
  - a. Form 10-K.
  - b. Form 10-Q.
  - c. Form S-1.
  - d. Form 8-K.
  - e. Form 11-K.
- 5. Within four days after the occurrence of any event that is of material importance to the stockholders, a company must file a Form 8-K information report with the SEC to disclose the event. An example of the type of event required to be disclosed is
  - a. A salary increase to the officers.
  - b. A contract to continue to employ the same certified public accounting firm as in the prior year.
  - c. A change in projected earnings per share from \$12.00 to \$12.11 per share.

### LO 14-3

- d. The purchase of bank certificates of deposit.
- e. The acquisition of a large subsidiary other than in the ordinary course of business.
- 6. Form 8-K must generally be submitted to the SEC within four days after the occurrence of a significant event. Which one of the following is not an event that would be reported by Form 8-K?
  - a. The replacement of the registrant company's external auditor.
  - b. A change in accounting principle.
  - c. The resignation of one of the directors of the registrant company.
  - d. A significant acquisition or disposition of assets.
  - e. A change in control of the registrant company.
- 7. Which one of the following items is not required to be included in a company's periodic 8-K report filed with the SEC when significant events occur?
  - a. Acquisition or disposition of a significant amount of assets.
  - b. Instigation or termination of material legal proceedings other than routine litigation incidental to the business.
  - c. Change in certifying public accountant.
  - d. Election of a new vice president of finance to replace the retiring incumbent.
  - e. Default in the payment of principal, interest, or sinking fund installment.

#### LO 14-2, 14-3 E14-4 **Corporate Governance [CMA Adapted]**

Select the correct answer for each of the following questions.

- 1. A major impact of the Foreign Corrupt Practices Act of 1977 is that registrants subject to the Securities Exchange Act of 1934 are required to
  - a. Keep records that reflect the transactions and dispositions of assets and maintain a system of internal accounting controls.
  - b. Provide authorized agencies of the federal government access to records.
  - c. Record all correspondence with foreign nations.
  - d. Prepare financial statements in accordance with international accounting standards.
  - e. Produce full, fair, and accurate periodic reports on foreign commerce, foreign political party affiliations, or both.
- 2. Shareholders may ask or allow others to enter their vote at a shareholders' meeting that they are unable to attend. The document furnished to shareholders to provide background information for their vote is a
  - a. Registration statement.
  - b. Proxy statement.
  - c. 10-K report.
  - d. Prospectus.
- 3. Formation and meaningful utilization of an audit committee of the board of directors is required of publicly traded companies that are subject to the rules of the
  - a. Securities and Exchange Commission.
  - b. Financial Accounting Standards Board.
  - c. National Association of Securities Dealers.
  - d. American Institute of Certified Public Accountants.
- 4. An external auditor's involvement with a Form 10-Q that is being prepared for filing with the SEC would most likely consist of
  - a. An audit of the financial statements included in Form 10-Q.
  - b. A compilation report on the financial statements included in Form 10-Q.
  - c. The issuance of a comfort letter that covers stub-period financial data.
  - d. The issuance of an opinion on the internal controls under which the Form 10-Q data were developed.
  - e. A review of the interim financial statements included in Form 10-Q.

#### LO 14-2 E14-5 Application of Securities Act of 1933 [AICPA Adapted]

Various Enterprises Corporation is a medium-size conglomerate listed on the American Stock Exchange. It is constantly in the process of acquiring small corporations and invariably needs additional money. Among its diversified holdings is a citrus grove that it purchased eight years ago as an investment. The grove's current fair market value is in excess of \$2 million. Various also owns 800,000 shares of Resistance Corporation, which it acquired in the open market over a period of years. These shares represent a 17 percent minority interest in Resistance and are worth approximately \$2.5 million. Various does its short-term financing with a consortium of banking institutions. Several of these loans are maturing; in addition to renewing these loans, it wishes to increase its short-term debt from \$3 to \$4 million.

Because of these factors, Various is considering resorting to one or all of the following alternatives to raise additional working capital.

- 1. An offering of 500 citrus grove units at \$5,000 per unit. Each unit would give the purchaser a 0.2 percent ownership interest in the citrus grove development. Various would furnish management and operation services for a fee under a management contract, and net proceeds would be paid to the unit purchasers. The offering would be confined almost exclusively to the state in which the groves are located or in the adjacent state in which Various is incorporated.
- 2. An increase in the short-term borrowing by \$1 million from the banking institution that currently provides short-term funds. The existing debt would be consolidated, extended, and increased to \$4 million and would mature over a nine-month period. This would be evidenced by a short-term note.
- 3. Sale of the 17 percent minority interest in Resistance in the open market through its brokers in an orderly manner in their ordinary course of business over a period of time and in such a way as to avoid decreasing the stock's value.

In separate paragraphs discuss the impact of the registration requirements of the Securities Act of 1933 on each of the proposed alternatives.

#### LO 14-2 E14-6 Federal Securities Acts [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. Which of the following statements concerning the prospectus required by the Securities Act of 1933 is correct?
  - a. The prospectus is a part of the registration statement.
  - b. The prospectus should enable the SEC to pass on the merits of the securities.
  - c. The prospectus must be filed after an offer to sell.
  - d. The prospectus is prohibited from being distributed to the public until the SEC approves the accuracy of the facts embodied therein.
- 2. Which of the following securities would be regulated by the provisions of the Securities Act of 1933?
  - a. Securities issued by not-for-profit, charitable organizations.
  - b. Securities guaranteed by domestic governmental organizations.
  - c. Securities issued by savings and loan associations.
  - d. Securities issued by insurance companies.
- 3. Which of the following securities is exempt from registration under the Securities Act of 1933?
  - a. Shares of nonvoting common stock provided their par value is less than \$1.
  - b. A class of stock given in exchange for another class by the issuer to its existing stockholders without the issuer paying a commission.
  - c. Limited partnership interests sold for the purpose of acquiring funds to invest in bonds issued by the United States.
  - d. Corporate debentures that were previously subject to an effective registration statement provided they are convertible into shares of common stock.

- 4. Pix Corp. is making a \$6,000,000 stock offering. Pix wants the offering exempt from registration under the Securities Act of 1933. Which of the following provisions of the act would Pix have to comply with for the offering to be exempt?
  - a. Regulation A.
  - b. Regulation D, Rule 504.
  - c. Regulation D, Rule 505.
  - d. Regulation D, Rule 506.
- 5. An offering made under the provisions of Regulation A of the Securities Act of 1933 requires that the issuer
  - a. File an offering circular with the SEC.
  - b. Sell only to accredited investors.
  - c. Provide investors the prior four years' audited financial statements.
  - d. Provide investors a proxy registration statement.
- 6. Which of the following factors by itself requires a corporation to comply with the reporting requirements of the Securities Exchange Act of 1934?
  - a. 600 employees.
  - b. Shares listed on a national securities exchange.
  - c. Total assets of \$2 million.
  - d. 400 holders of equity securities.
- 7. Which of the following persons is not an insider of a corporation subject to the Securities Exchange Act of 1934 registration and reporting requirements?
  - a. An attorney for the corporation.
  - b. An owner of 5 percent of the corporation's outstanding debentures.
  - c. A member of the board of directors.
  - d. A stockholder who owns 10 percent of the outstanding common stock.

# THE EVOLUTION OF PRICEWATERHOUSECOOPERS (PwC)

All of today's "Big 4" accounting firms are partnerships and all have evolved over time through continual mergers of existing accounting firms. PricewaterhouseCoopers (PwC) has a long history dating back to the mid-1800s. Samuel Price set up his own accounting practice in London in 1849. A few years later in 1854, William Cooper established his accounting practice in London as well. It would take nearly 150 years for these two firms to eventually come together. In fact, they competed with one another during most of this time.

Price, Holyland, and Waterhouse joined forces in 1865 to form what would eventually become Price, Waterhouse & Company. Not until 1957 did several large accounting firms come together to form Coopers & Lybrand. These two firms became two of the "Big 8" accounting firms. Throughout most of the 20th century, the profession was dominated by these Big 8 accounting firms:

- 1. Arthur Andersen
- 2. Arthur Young
- 3. Coopers & Lybrand
- 4. Ernst & Whinney
- 5. Deloitte Haskins & Sells
- 6. Peat Marwick Mitchell
- 7. Price Waterhouse
- 8. Touche Ross

In 1989 due to intense competition, Ernst & Whinney merged with Arthur Young to form Ernst & Young. That same year, Deloitte, Haskins & Sells merged with Touche Ross to form Deloitte & Touche. These mergers narrowed the field to the "Big 6," and Price Waterhouse continued to compete with Coopers & Lybrand during the 1990s. Finally, in 1998, one of the largest mergers in the history of the public accounting profession occurred when Price Waterhouse merged with Coopers & Lybrand to form PricewaterhouseCoopers. This merger brought about the brief reign of the "Big 5" before the demise of Arthur Andersen in 2002 in the wake of the Enron scandal, which limited the playing field to the current "Big 4" accounting firms.

Most of the early mergers in the accounting profession were general partnerships. Not until the 1990s did a new type of legal entity, the limited liability partnership (LLP),

emerge, allowing some protection to partners for liabilities incurred by other partners. Although only two states in the United States allowed LLPs in 1992, by the end of the decade, most had passed laws allowing LLPs. All of the Big 4 accounting firms are now LLPs.

According to the U.S. Census Bureau, as of 2008, 3.1 million partnerships filed tax returns compared to 22.6 million proprietorships and 5.8 million corporations. Accountants are often called on to aid in the formation and operation of partnerships to ensure proper measurement and valuation of the partnership's transactions. This chapter focuses on the formation and operation of partnerships, including accounting for the addition of new partners and the retirement of an existing partner. Chapter 16 presents the accounting for the termination and liquidation of partnerships.

### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 15-1 Understand and explain the nature and regulation of partnerships.
- LO 15-2 Understand and explain the differences among different types of partnerships.
- LO 15-3 Make calculations and journal entries for the formation of partnerships.
- LO 15-4 Make calculations and journal entries for the operation of partnerships.
- LO 15-5 Make calculations and journal entries for the allocation of partnership profit
- LO 15-6 Make calculations and journal entries to account for changes in partnership ownership.

### THE NATURE OF THE PARTNERSHIP ENTITY

LO 15-1

Understand and explain the nature and regulation of

The partnership is a popular form of business because it is easy to form and allows several individuals to combine their talents and skills in a particular business venture. In addition, partnerships provide a means of obtaining more equity capital than a single individual can obtain and allow the sharing of risks for rapidly growing businesses.

Accounting for partnerships requires recognition of several important factors. First, from an accounting viewpoint, the partnership is a separate business entity. The Internal Revenue Code, however, views the partnership as a conduit only, not separable from the business interests of the individual partners. Therefore, tax and financial accounting rules for specific partnership events differ from those for other forms of business in several ways, such as the value assigned to assets contributed in the formation of the partnership. This chapter presents the generally accepted accounting principles of partnership accounting. We present a brief discussion of the tax aspects of a partnership in Appendix 15A.

Second, although many partnerships account for their operations using accrual accounting, others use the cash basis or modified cash basis of accounting. These alternatives are allowed because partnership records are maintained for the partners and must reflect their information needs. The partnership's financial statements are usually prepared only for the partners but occasionally for the partnership's creditors. Unlike publicly traded corporations, most partnerships are not required to have annual audits of their financial statements. Although many partnerships adhere to generally accepted accounting principles (GAAP), deviations from GAAP are found in practice. The partners' specific needs should be the primary criteria for determining the accounting policies to be used for a specific partnership.

### **Legal Regulation of Partnerships**

The partnership form of business has several unique elements because of its legal and accounting status. Each state regulates the partnerships that are formed in it. Accountants advising partnerships must be familiar with partnership laws because these laws describe many of the rights of each partner and of creditors during the creation, operation, and liquidation of the partnership. Each state tends to begin with a uniform or model act and then modifies it to fit that state's business culture and history. The Uniform Partnership Act of 1914 served for many years as the model for defining the rights and responsibilities of the partners to each other and to the creditors of the partnership. In 1994, the National Conference of Commissioners on Uniform State Laws (NCCUSL) approved the first major revision of the model act to better reflect current business practices while retaining many of the original act's valuable provisions. This 1994 revision was titled the Revised Uniform Partnership Act (RUPA). During the next three years, the NCCUSL continued to make small revisions to the model act and in 1997, it approved the final model as the *Uniform* Partnership Act of 1997 (UPA 1997). Most states have now adopted the UPA 1997 model because, although the UPA 1997 includes many features of the Uniform Partnership Act of 1914, the UPA 1997 reflects today's more complex partnership events and transactions, and stresses the fiduciary responsibilities of the partners to each other. We use the UPA 1997 for discussion and illustration in this and the next chapter on partnerships.

### **Definition of a Partnership**

Section 202 of the UPA 1997 states that "... the association of two or more persons to carry on as co-owners of a business for profit forms a partnership. . . . " This definition encompasses three distinct factors:

- 1. Association of two or more persons. The "persons" are usually individuals; however, they also may be corporations or other partnerships.
- 2. To carry on as co-owners. This means that each partner has the apparent authority, unless restricted by the partnership agreement, to act as an agent of the partnership for transactions in the ordinary course of business of the kind carried on by the partnership. These transactions can legally bind the partnership to third parties.
- 3. Business for profit. A partnership may be formed to perform any legal business, trade, profession, or other service. However, the partnership must attempt to make a profit; therefore, not-for-profit entities such as fraternal groups may not be organized as partnerships.

### Formation of a Partnership

A primary advantage of the partnership form of entity is ease of formation. The agreement to form a partnership may be as informal as a handshake or as formal as a many-paged partnership agreement. Each partner must agree to the formation agreement, and partners are strongly advised to have a formal written agreement to avoid potential problems that could arise during the operation of the business. It is usually true that if the potential partners cannot agree on the various operating aspects before a partnership is formed, many future disputes that could cause severe management problems and seriously imperil the partnership's operations might arise. Each partner should sign the partnership agreement to indicate acceptance of its terms. A carefully prepared partnership agreement can prevent many of these problems in operations.

The partnership agreement should include the following items:

- 1. The name of the partnership and the names of the partners.
- 2. The type of business to be conducted by the partnership and the duration of the partnership agreement.
- 3. The initial capital contribution of each partner and the method by which to account for future capital contributions.
- 4. A complete specification of the profit or loss distribution, including salaries, interest on capital balances, bonuses, limits on withdrawals in anticipation of profits, and the percentages used to distribute any residual profit or loss.
- 5. Procedures used for changes in the partnership, such as admission of new partners and the retirement of a partner.
- 6. Other aspects of operations the partners decide on, such as each partner's management rights and the election procedures and accounting methods to use.

### Other Major Characteristics of Partnerships

After a state adopts the provisions of the UPA 1997, the act regulates all partnerships formed in that state. For partnerships that do not have a formal partnership agreement, the act provides the legal framework that governs the relationships among the partners and the rights of creditors of the partnership; in essence, the UPA 1997 becomes the partnership agreement for those partnerships that do not have one. The following presents the sections of the UPA 1997 applicable to the formation and operation of a partnership. Chapter 16 will present the sections of the UPA 1997 applicable to the dissolution and liquidation of a partnership.

- 1. Partnership agreement. The UPA 1997 governs in those partnership relations that are not specifically presented in the partnership agreement; thus, the courts use the UPA 1997 when there is no partnership agreement. Several provisions of the UPA 1997 are not waivable by partnership agreement. For example, a partnership may not restrict a partner's rights of access to the partnership's books and records, eliminate the obligations of partners for good faith and fair dealing with the other partners and the partnership, restrict any rights of third parties under the UPA 1997, or reduce any legal rights of individual partners.
- 2. Partnership as a separate entity. A partnership is a separate business entity distinct from its partners. This entity concept means that a partnership can sue or be sued and that its property belongs to the partnership, not to any individual partner. Thus, there is no new partnership entity when a membership change in the partners occurs (a new partner is admitted or a partner leaves).
- 3. Partner as an agent of the partnership. Each partner is an agent of the partnership for transactions carried on in the ordinary course of the partnership business unless the partner did not have the authority to act for the partnership in that specific matter and the third party knew or had received a notification that the partner lacked authority. This agency relationship among the partners is very important. If the partnership determines that only specific partners have the authority for conducting specific business transactions, then the partnership must make third parties aware of the limitations of authority of other partners. This notice should be in a public form either as a formal filing of a statement of partnership authority (discussed in the next point) or in direct communications with third parties. Otherwise, third parties may presume a partner has the authority to act as an agent for the partnership in those normal business transactions engaged in for the business the partnership operates.
- 4. Statement of partnership authority. A Statement of Partnership Authority describes the partnership and identifies the specific authority of partners to transact specific types of business on behalf of the partnership. This voluntary statement is filed with the secretary of the state. The statement is a notice of any limitations on the rights of specific partners to enter into specific types of transactions. Partnerships should file these statements particularly for the firm's real estate transactions. The UPA 1997 states that a filed statement of partnership authority is sufficient constructive notice to third parties for partnership real estate transactions, but it is not necessarily sufficient notice for other types of partnership transactions.
- 5. Partner's liability is joint and several. All partners are liable jointly and severally for all obligations of the partnership unless otherwise provided by law. In the event a partnership fails and its assets are not sufficient to pay its obligations, partners are required to make contributions to the partnership in the proportion to which they share partnership losses. If a partner fails to make a contribution of the amount required, all other partners must contribute in the proportion to which those partners share partnership losses. Partnership creditors must first be satisfied from partnership assets, and additional partner contributions are classified as partnership assets. However, a partner is liable for partnership liabilities incurred prior to that partner's admission into the partnership only to the extent of the partner's capital credit. A new partner is not

- personally liable for partnership debts incurred prior to his or her admission to the firm. If a partnership creditor takes legal action against an individual partner for a partnership obligation, the creditor does not have any superior rights to the partner's individual assets. In this case, the partnership creditor joins with the other personal creditors.
- 6. Partner's rights and duties. Each partner is to have a capital account showing the amount of his or her contributions to the partnership, net of any liabilities, and the partner's share of the partnership profits or losses, less any distributions. The partner is entitled to an equal share of the profits or losses unless otherwise agreed to in the partnership agreement. New partners can be admitted only with the consent of all of the partners. Each partner has a right of access to the partnership's books and records, and each partner has a duty to act for the partnership in good faith and fair dealing.
- 7. Partner's transferable interest in the partnership. Under the entity approach to a partnership stated in the act, a partner is not a co-owner of any partnership property. This means that the only transferable interest of a partner is his or her share of the profits and losses of the partnership and the right to receive distributions, including any liquidating distribution. A partner may not transfer any rights of management or authority to transact any of the partnership's business operations. Thus, the partner's individual creditors may not attach any of the partnership's assets, but a partner's personal creditor may obtain a legal judgment for attachment of the partner's transferable interest.
- 8. Partner's dissociation. A partner's dissociation means that the partner can no longer act on the firm's behalf. A partner is dissociated from a partnership when any of the following events occurs: (a) he or she gives notice to the partnership of his or her express will to withdraw as a partner, (b) the firm expels him or her the firm in accordance with the partnership agreement, typically or for violating some part of the partnership agreement or his or her continuance becomes unlawful, (c) one of several judicial determinations occurs (such as the partner's committing a material breach of the partnership agreement or engaging in serious conduct that materially and adversely affects the partnership), (d) the partner becomes a debtor in bankruptcy, or (e) the partner dies.

### LO 15-2

Understand and explain the differences among different types of partnerships.

### Types of Limited Partnerships

Many persons view the possibility of personal liability for a partnership's obligations as a major disadvantage of the general partnership form of business. For this reason, sometimes people become limited partners in one of the several limited partnership forms. A limited partnership (LP) differs from a limited liability partnership (LLP) and a limited liability limited partnership (LLLP). The variations are based on the degree of liability shield provided to the partners.

Limited Partnerships (LP) A limited partnership (LP) has at least one general partner and one or more limited partners. The general partner is personally liable for the partnership's obligations and has management responsibility. Limited partners are liable only to the extent of their capital contribution but do not have any management authority. The Uniform Limited Partnership Act of 2001 (ULPA 2001) is the model law regulating limited partnerships and has been adopted in many states. Accounting for the investment in a limited partnership is based on an evaluation of control. Typically, the general partner has the necessary elements of operational control of the limited partnership and consolidates the investment on her or his books. The limited partners typically use the equity method to account for their investments. However, ASC 810 indicates that in cases in which the limited partners have either (1) the ability to dissolve the limited partnership or to remove the general partners without cause (the so-called kick-out right) or (2) substantive participating rights to be actively engaged in the significant decisions of the LP's business. The presumption of the general partners' control could be overcome and then each would account for its investment in the LP using the equity method of accounting. The identifier, LP or Limited Partnership, must be included in the name or identification of the limited partnership.

Limited Liability Partnerships (LLP) A limited liability partnership (LLP) is one in which each partner has some degree of liability shield. An LLP has no general or limited partners; thus, each partner has the rights and duties of a general partner but limited legal liability. A partner in a limited liability partnership is not personally liable for a partnership obligation. However, several states have determined that each partner in an LLP is fully liable for the partnership's obligations, though not for acts of professional negligence or malpractice committed by other partners. Some legal support for the LLP came as a result of the fact that most professional service partnerships, such as accounting firms, have significant amounts of insurance to cover judgments in lawsuits and other losses from offering services. An LLP must identify itself as such by adding the LLP letters following the partnership's name in all correspondence or other means of identifying the firm. Virtually all large public accounting firms are LLPs. This designation has not changed the nature of accounting services provided to clients and has been generally accepted in the business market.

Limited Liability Limited Partnership (LLLP) In most states, a limited partnership may elect to become a limited liability limited partnership. Each partner in an LLLP is liable only for the business obligations of the partnership, not for acts of malpractice or other wrongdoing by the other partners in the normal course of the partnership's business. The ULPA 2001 includes the regulatory guidance for LLLPs. The advantage of an LLLP is that general partners, even though responsible for management of the partnership, have no personal liability for partnership obligations, similar to the shield provided to limited partners. The identifier LLLP or the phrase Limited Liability Limited Partnership must be included in the entity's name or identification.

## **Accounting and Financial Reporting Requirements** for Partnerships

Most partnerships are small or medium-size entities, although some are large. Partnerships do not issue stock; thus, its information needs typically differ from those of corporations that have stockholders. A partnership has much more flexibility to select specific accounting measurement and recognition methods and specific financial reporting formats.

If a partnership wishes to issue general-purpose financial statements for external users such as credit grantors, vendors, or others, it should use GAAP as promulgated by the FASB and other standard-setting bodies, and the independent auditor can issue an opinion that the statements are in accordance with GAAP. The FASB created the Private Company Financial Reporting Committee in June 2006 to provide input to the FASB on proposed and existing accounting standards as to their impact on nonpublic business entities. Thus, the FASB has a vehicle by which GAAP standards can be adapted to meet the cost/benefit perspective of nonpublic entities.

If a partnership has only internal reporting needs, the accounting and financial reporting should meet the partners' internal information needs. In this case, the partnership may use non-GAAP accounting methods and have financial reports in a format different from those required under GAAP. For example, some partnerships use the accounting methods prescribed by tax laws, thereby generating tax-based financial reports. Some partnerships use the cash-based accounting system, often with some adjustments, so the financial reports provide specific cash flow and cash positions. Other partnerships may use accounting methods that are proximate to GAAP with some adjustments that fit the partners' information needs, such as recognizing increases in the fair value of nonfinancial assets at the time of admission of a new partner. In these cases, if the financial statements are presented to users external to the partnership, such as banks, vendors, or regulatory bodies, the statements should clearly identify the specific accounting methods the entity used so that the users understand that the information presented does not conform to GAAP. An independent accountant's opinion on these financial statements also would have to disclose the specific accounting methods used or the deviations from GAAP that affected the amounts reported. It is up to the partners to determine their financial information needs, and then the partnership accountant applies the necessary accounting measurement, recognition, and reporting methods that meet the partners' financial information needs.

### International Financial Reporting Standards for Small and Medium-Size Entities and Joint Ventures

In 2009, the International Accounting Standards Board issued "International Financial Reporting Standard for Small and Medium-sized Entities," more commonly known as International Financial Reporting Standards (IFRS) for small and medium-size enterprises (SMEs). SMEs are defined as those entities that (1) do not have public accountability (i.e., do not have stock or issue bonds in a public capital market) and (2) publish general-purpose financial statements for external users. This standard presents the definitions of items and accounting concepts that are quite similar to those already in the international financial accounting and reporting standards except that less detail and fewer disclosures are mandated and more flexibility is provided for the formats of the financial statements. Moreover, International Accounting Standards (IAS) 31 on the accounting for joint ventures, many of which are accounted as partnerships, also became effective in July 2009. Thus, the International Accounting Standards Board (IASB) is addressing the specific accounting and financial reporting requirements for SMEs and joint ventures that are required to provide general-purpose financial statements to external users. However, these standards do not apply to partnerships that do not have public accountability and do not issue general-purpose financial statements to external users.

# ACCOUNTING FOR THE FORMATION OF A PARTNERSHIP<sup>1</sup>

LO 15-3

Make calculations and journal entries for the formation of partnerships

At the formation of a partnership, it is necessary to assign a proper value to the noncash assets and liabilities contributed by the partners. Section 201 of the UPA 1997 specifies that a partnership is an entity distinct from its partners. Thus, an item contributed by a partner becomes partnership property. The partnership must clearly distinguish between capital contributions and loans made to the partnership by individual partners. Loan arrangements should be evidenced by promissory notes or other legal documents necessary to show that a loan arrangement exists between the partnership and an individual partner. Also, it is important to clearly distinguish between tangible assets that the partnership owns and those specific assets that individual partners own but are used by the partnership. Accurate records of the partnership's tangible assets must be maintained.

ASC 820 continues the long-held accounting concept that the contributed assets should be valued at their fair values, which may require appraisals or other valuation techniques. Liabilities assumed by the partnership should be valued at the present value of the remaining cash flows.

The individual partners must agree to the percentage of equity that each will have in the partnership's net assets. Generally, the capital balance is determined by the proportionate share of each partner's capital contribution. For example, if A contributes 70 percent of the net assets in a partnership with B, then A will have a 70 percent capital share and B will have a 30 percent capital share. In recognition of intangible factors, such as a partner's special expertise or necessary business connections, however, partners may agree to any proportional division of capital. Therefore, before recording the initial capital contribution, all partners must agree on the valuation of the net assets and on each partner's capital share.

## Illustration of Accounting for Partnership Formation

The following illustration is used as the basis for the remaining discussion in this chapter. Alt, a sole proprietor, has been developing software for several types of computers. The business has the following account balances as of December 31, 20X0:

| Cash<br>Inventory<br>Equipment | \$ 3,000<br>7,000<br>20,000 | Liabilities<br>Alt, Capital | \$10,000<br>15,000 |
|--------------------------------|-----------------------------|-----------------------------|--------------------|
| Less: Accumulated Depreciation | (5,000)                     |                             |                    |
| Total Assets                   | \$25,000                    | Total Liabilities & Capital | \$25,000           |

Alt needs additional technical assistance to meet increasing sales and offers Blue an interest in the business. Alt and Blue agree to form a partnership. Alt's business is audited, and its net assets are appraised. The audit and appraisal disclose that \$1,000 of liabilities have not been recorded, inventory has a market value of \$9,000, and the equipment has a fair value of \$19,000.

Alt and Blue prepare and sign a partnership agreement that includes all significant operating policies. Blue will contribute \$10,000 cash for a one-third capital interest. The AB Partnership is to acquire all of Alt's business and assume its debts.

The entry to record the initial capital contribution on the partnership's books is

|     | January 1, 20X1 |        |
|-----|-----------------|--------|
| (1) | Cash            | 13,000 |
|     | Inventory       | 9,000  |
|     | Equipment       | 19,000 |
|     | Liabilities     | 11,000 |
|     | Alt, Capital    | 20,000 |
|     | Blue, Capital   | 10,000 |

Record the formation of AB Partnership by capital contributions of Alt and Blue.

## Key Observations from Illustration

Note that the partnership is an accounting entity separate from each of the partners and that the assets and liabilities are recorded at their market values at the time of contribution. No accumulated depreciation is carried forward from the sole proprietorship to the partnership. All liabilities are recognized and recorded.

The partnership's capital is \$30,000. This is the sum of the individual partners' capital accounts and is the value of the partnership's assets less liabilities. The fundamental accounting equation—assets less liabilities equals capital—is used often in partnership accounting. Blue is to receive a one-third capital interest in the partnership with a contribution of \$10,000. In this case, his capital interest equals his capital contribution.

Each partner's capital amount recorded does not necessarily have to equal his or her capital contribution. The partners could decide to divide the total capital equally regardless of the source of the contribution. For example, although Alt contributed \$20,000 of the \$30,000 partnership capital, he could agree to \$15,000 as his initial capital balance and permit Blue the remaining \$15,000 as a capital credit. On the surface, this may not seem to be a reasonable action by Alt, but it is possible that Blue has some particularly important business experience the partnership needs, and Alt agrees to the additional credit to Blue in recognition of her experience and skills. The key point is that the partners may allocate the capital contributions in any manner they desire. The accountant must be sure that all partners agree to the allocation and then record it accordingly.

## ACCOUNTING FOR THE OPERATIONS OF A PARTNERSHIP

LO 15-4

Make calculations and journal entries for the operation of partnerships.

A partnership provides services or sells products in pursuit of profit. These transactions are recorded in the appropriate journals and ledger accounts. Many partnerships use accrual accounting and GAAP to maintain their books because its use provides better measures of income over time. Some creditors, such as banks, and some vendors, such as large suppliers to the partnership, may periodically require audited financial statements, and if GAAP is used, the financial statements can then receive a "clean" or unqualified audit opinion. Furthermore, the partners can compare the GAAP-based financial statements of their business to published financial profiles, such as Moody's or many published by the U.S. government, or those of other companies in the same line of business so that the partners can evaluate their respective financial performance and position.

But some partnerships use alternative non-GAAP methods, such as the cash-basis method or the modified cash-basis method. These two methods have simplified recordkeeping requirements and can continuously provide the partners the current cash position of their partnership. A few partnerships revalue all their assets at the end of each fiscal period in order to estimate the market value of their business as a whole at year-end. Some partnerships use federal income tax rules to account for transactions so the partners can determine the effects of transactions that will be reportable on their personal income tax returns. The accountant works with the partners to determine their specific information needs regarding the partnership and then applies the appropriate accounting and financial reporting methods to meet those needs.

#### Partners' Accounts

The partnership may maintain several accounts for each partner in its accounting records. These *partners' accounts* are capital, drawing, and loan accounts.

## Capital Accounts

A partner's initial investment, any subsequent capital contributions, profit or loss distributions, and any withdrawals of capital are ultimately recorded in the partner's capital account. Each partner has one capital account, which usually has a credit balance. On occasion, a partner's capital account may have a debit balance, called a deficiency or sometimes a *deficit*, which occurs because the partner's share of losses and withdrawals exceeds his or her capital contribution and share of profits. A deficiency is usually eliminated by additional capital contributions. The balance in the capital account represents the partner's share of the partnership's net assets.

## Drawing Accounts

Partners generally withdraw assets from the partnership during the year in anticipation of profits. A separate drawing account often is used to record the periodic withdrawals and is then closed to the partner's capital account at the end of the period. For example, the following entry is made in the AB Partnership's books for a \$3,000 cash withdrawal by Blue on May 1, 20X1:

Noncash drawings should be valued at their market values at the date of the withdrawal. A few partnerships make an exception to the rule of market value for partners' withdrawals of inventory and record withdrawals of inventory at cost, thereby not recording a gain or loss on these drawings.

#### Loan Accounts

A partnership may look to its present partners for additional financing. Any loans between a partner and the partnership should always be accompanied by proper loan documentation such as a promissory note. A loan from a partner is shown as a payable on the partnership's books, the same as for any other loan. Unless all partners agree otherwise, the partnership is obligated to pay interest on the loan to the individual partner. Note that interest is not required to be paid on capital investments unless the partnership agreement states that capital interest is to be paid. The partnership records interest on loans as an operating expense. Alternatively, the partnership may lend money to a partner in which case it records a loan receivable from the partner. Again, unless all partners agree otherwise, these loans should bear interest, and the interest income should be recognized on the partnership's income statement. The following entry is made to record a \$4,000, 10 percent, one-year loan from Alt to the partnership on July 1, 20X1:

The loan payable to Alt is reported in the partnership's balance sheet. A loan from a partner is a related-party transaction for which separate footnote disclosure is required, and it must be reported as a separate balance sheet item, not included with other liabilities.

## ALLOCATING PROFIT OR LOSS TO PARTNERS

LO 15-5

Make calculations and journal entries for the allocation of partnership profit or loss.

Profit or loss is allocated to the partners at the end of each period in accordance with the partnership agreement. If the entity does not have a formal partnership agreement, section 401 of the UPA 1997 indicates that all partners should share profits and losses equally. Virtually all partnerships have a profit or loss allocation agreement that must be followed precisely, and if it is unclear, the accountant should make sure that all partners agree to the profit or loss distribution. Many problems and later arguments can be avoided by carefully specifying the profit or loss distribution in the articles of copartnership.

A wide range of *profit distribution plans* is found in the business world. Some partnerships have straightforward distribution plans; others have extremely complex ones. It is the accountant's responsibility to distribute the profit or loss according to the partnership agreement regardless of how simple or complex that agreement is. Profit distributions are similar to a corporation's dividends: These distributions should not be included on the partnership's income statement regardless of how the profit is distributed. Profit distributions are recorded directly into the partner's capital accounts, not treated as expense items.

Most partnerships use one or more of the following distribution methods:

- 1. Preselected ratio.
- 2. Interest on capital balances.
- 3. Salaries to partners.
- 4. Bonuses to partners.

## **CAUTION**

Note that the titles for these distribution methods can be deceiving. They simply describe different ways to allocate a fixed amount of partnership profit. For example, if a partnership earns \$100,000 in profit for a given period, these methods are simply four different ways to divide the \$100,000 among the partners.

**Preselected ratios** are usually the result of negotiations between the partners. Ratios for profit distributions may be based on the percentage of total partnership capital, time, and effort invested in the entity, or a variety of other factors. Small partnerships often split profits evenly among the partners. In addition, some partnerships have different ratios if the firm suffers a loss rather than earns a profit. The partnership form of business allows a wide selection of profit distribution ratios to meet the partners' individual desires.

Distributing partnership income based on interest on capital balances simply means that the partners divide some or all of the \$100,000 among themselves based on the relative balances they have maintained in their capital accounts. This method recognizes the contribution of the partners' capital investments to the partnership's profit-generating capacity and requires the allocation of profits based on a fixed rate multiplied by the partner's capital account balance. This allocation of profits based on capital balances is generally not an expense of the partnership (like interest on a loan from a bank). It is simply a method for distributing profits.

If one or more of the partners' services are important to the partnership, the profit distribution agreement may provide for salaries or bonuses. Again, these represent fixed amounts allocated to partners from the \$100,000 earned during the period. They are simply a form of profit distribution, not a partnership expense. Think of a salary as a fixed amount of company profits allocated to a given partner and a bonus as a portion of profits allocated to a partner based on a predetermined performance formula. Occasionally, the distribution process may depend on the size of the profit or may differ if the partnership has a loss for the period. For example, salaries to partners might be paid only if revenue exceeds expenses by a certain amount. The accountant must carefully read the partnership agreement to determine the precise profit distribution plan for the specific circumstances at the time.

The profit or loss distribution is recorded with a closing entry at the end of each period. The revenue and expenses are often closed into an income summary account that is then allocated to the partners' capital accounts based on the formula prescribed in the partnership agreement (which could include one or more of the four methods described earlier). If the partnership earns \$100,000 for the period, the formula provided in the partnership agreement tells the accountant how to allocate this amount to the partners' capital accounts. Sometimes partnerships bypass the income summary account and close revenue and expense accounts directly to the partners' capital accounts. In the following examples, we use an income summary account. Its balance (either net income or net loss) is closed and distributed to the partners' capital accounts.

## **Illustrations of Profit Allocation**

During 20X1, the AB Partnership earned \$45,000 of revenue and incurred \$35,000 in expenses, leaving a profit of \$10,000 for the year. Alt maintains a capital balance of \$20,000 during the year, but Blue's capital investment varies during the year as follows:

| Date        | Debit   | Credit | Balance  |
|-------------|---------|--------|----------|
| January 1   |         |        | \$10,000 |
| May 1       | \$3,000 |        | 7,000    |
| September 1 |         | \$500  | 7,500    |
| November 1  | 1,000   |        | 6,500    |
| December 31 |         |        | 6,500    |

The debits of \$3,000 and \$1,000 are recorded in Blue's drawing account; the additional investment is credited to her capital account.

## **Arbitrary Profit-Sharing Ratio**

Alt and Blue could agree to share profits in a ratio unrelated to their capital balances or to any other operating feature of the partnership. For example, assume the partners agree to share profits or losses in the ratio of 60 percent to Alt and 40 percent to Blue. Some partnership agreements specify this ratio as 3:2 (i.e., 3/5 to Alt and 2/5 to Blue). The following schedule illustrates how the net income is distributed using a 3:2 profitsharing ratio:

|                           | Alt            | Blue           | Total       |
|---------------------------|----------------|----------------|-------------|
| Profit-sharing percentage | 60%            | 40%            | 100%        |
| Net income                |                |                | \$10,000    |
| Allocate 60:40            | \$6,000        | \$4,000        | (10,000)    |
| Total                     | <u>\$6,000</u> | <u>\$4,000</u> | <u>\$ 0</u> |

This schedule shows how net income is distributed to the partners' capital accounts. The actual distribution is accomplished by closing the Income Summary account. In addition, the drawing accounts are closed to the capital accounts at the end of the period.

|     | December 31, 20X1             |        |        |
|-----|-------------------------------|--------|--------|
| (4) | Blue, Capital                 | 4,000  |        |
|     | Blue, Drawing                 |        | 4,000  |
|     | Close Blue's drawing account. |        |        |
| (5) | Revenue                       | 45,000 |        |
|     | Expenses                      |        | 35,000 |
|     | Income Summary                |        | 10,000 |
|     | Close revenue and expenses.   |        |        |
| (6) | Income Summary                | 10,000 |        |
|     | Alt, Capital                  |        | 6,000  |
|     | Blue, Capital                 |        | 4,000  |

Distribute profit in accordance with partnership agreement.

## Interest on Capital Balances

The partnership agreement may provide for interest to be credited on the partners' capital balances as part of the distribution of profits. The rate of interest is often a stated percentage, but some partnerships use a rate determined by reference to current U.S. Treasury rates or current money market rates.

As stated earlier, interest calculated on partners' capital is generally a form of profit distribution. The calculation is made after net income has been determined in order to decide how to distribute the income.

Particular caution must be exercised when interest on capital balances is included in the profit distribution plan. For example, the amount of the distribution can be significantly different depending on whether the interest is computed on beginning capital balances, ending capital balances, or average capital balances for the period. Most provisions for interest on capital specify that a weighted-average capital should be used. This method explicitly recognizes the time span for which each capital level is maintained during the period. For example, Blue's weighted-average capital balance for 20X1 is computed as follows:

| Date                 | Debit          | Credit | Balance  | Months<br>Maintained | Months Times<br>Dollar Balance |
|----------------------|----------------|--------|----------|----------------------|--------------------------------|
| January 1            |                |        | \$10,000 | 4                    | \$40,000                       |
| May 1                | \$3,000        |        | 7,000    | 4                    | 28,000                         |
| September 1          |                | \$500  | 7,500    | 2                    | 15,000                         |
| November 1           | 1,000          |        | 6,500    | _2                   | 13,000                         |
| Total                |                |        |          | 12                   | \$96,000                       |
| Average capital (\$9 | 6,000 ÷ 12 mor | nths)  |          |                      | \$ 8,000                       |

Assume Alt and Blue agree to allocate profits first based on 15 percent of the weightedaverage capital balances and then to any remaining profit based on a 60:40 ratio; the distribution of the \$10,000 profit would be calculated as follows:

|                                      | Alt             | Blue           | Total       |
|--------------------------------------|-----------------|----------------|-------------|
| Profit percentage<br>Average capital | 60%<br>\$20,000 | 40%<br>\$8,000 | 100%        |
| Net income                           | \$20,000        | \$6,000        | \$10,000    |
| Interest on average capital (15%)    | \$ 3,000        | \$1,200        | (4,200)     |
| Residual income                      |                 |                | \$ 5,800    |
| Allocate 60:40                       | 3,480           | 2,320          | (5,800)     |
| Total                                | \$ 6,480        | \$3,520        | <u>\$ 0</u> |

#### **Salaries**

Recall that salaries to partners are simply fixed amounts allocated to partners as part of the regular allocation of profits. They are generally included as part of the profit distribution plan to recognize and compensate partners for differing amounts of personal services provided to the business.

Section 401 of the UPA 1997 states that a partner is not entitled to compensation for services performed for the partnership except for reasonable compensation for services in winding up the partnership business. Some partnership agreements, however, do specify a management fee to be paid to a partner who provides very specific administration responsibilities.

## **STOP & THINK**

What if the partnership experiences losses? Can salaries to the partners during the year be treated as a distribution of profits? Although any amounts actually paid to partners during the year are really drawings made in anticipation of profits, the agreed salary amounts usually are added to the loss, and that total is then distributed to the partners' capital accounts. Caution should be exercised if the partnership experiences a loss during the year. Some partnership agreements specify different distributions for profit than for losses. The accountant must be especially careful to follow precisely the partnership agreement when distributing the period's profit or loss to the partners.

As mentioned previously, a general precept of partnership accounting is that salaries to partners are not operating expenses but are part of the profit distribution plan. This precept is closely related to the proprietary concept of owner's equity. According to the proprietary theory, the proprietor invests capital and personal services in pursuit of income. The earnings are a result of those two investments. The same logic applies to the partnership form of organization. Some partners invest capital, and others invest personal time. Those who invest capital are typically rewarded with interest on their capital balances; those who invest personal time are rewarded with

salaries. However, both interest and salaries result from the respective investments and are used not to determine income but to determine the proportion of income to credit to each partner's capital account.

To illustrate the allocation of partnership profit based on salaries, assume that the partnership agreement provides for fixed allocations of \$2,000 to Alt and \$5,000 to Blue. Any remainder is to be distributed in the profit and loss-sharing ratio of 60:40 percent. The profit distribution is calculated as follows:

| Alt            | Blue                    | Total                                     |
|----------------|-------------------------|---|
| 60%            | 40%                     | 100%                                      |
| \$2,000        | \$5,000                 | (7,000)                                   |
|                |                         | \$ 3,000                                  |
| 1,800          | 1,200                   | (3,000)                                   |
| <u>\$3,800</u> | <u>\$6,200</u>          | <u>\$ 0</u>                               |
|                | 60%<br>\$2,000<br>1,800 | 60% 40%<br>\$2,000 \$5,000<br>1,800 1,200 |

#### **Bonuses**

Bonuses are sometimes used to provide additional compensation to partners who have provided services to the partnership, and are typically stated as a percentage of income either before or after subtracting the bonus. Sometimes the partnership agreement requires a minimum income to be earned before a bonus is calculated, which is easily done by deriving and solving an equation. To illustrate the difference between a bonus based on partnership profits before and a bonus after subtracting the bonus, we provide the following example. Assume that a bonus of 10 percent of income in excess of \$5,000 is to be credited to Blue's capital account before distributing the remaining profit. In Case 1, the bonus is computed as a percentage of income before subtracting the bonus amount. In Case 2, the bonus is computed as a percentage of income after subtracting it.

```
Case 1:
    Bonus = X \% (NI – MIN)
  where: X = The bonus percentage
        NI = Net income before bonus
      MIN = Minimum amount of income before bonus
    Bonus = 0.10 (\$10,000 - \$5,000)
           = $500
Case 2:
    Bonus = X \% (NI – MIN – Bonus)
           = 0.10 (\$10,000 - \$5,000 - Bonus)
           = 0.10 (\$5,000 - Bonus)
           = $500 - 0.10 \text{ Bonus}
1.10 \text{ Bonus} = \$500
    Bonus = $454.55
           ≈ $455
```

The distribution of net income based on Case 2 is calculated as follows:

|   | Alt                | Blue               | Total                       |
|---|--------------------|--------------------|-----------------------------|
| Profit percentage<br>Net income<br>Bonus to partner | 60%                | 40%<br>\$ 455      | 100%<br>\$10,000<br>(455)   |
| Residual income<br>Allocate 60:40<br>Total          | \$5,727<br>\$5,727 | \$3,818<br>\$4,273 | \$ 9,545<br>(9,545)<br>\$ 0 |

## **Multiple Profit Allocation Bases**

A partnership agreement may provide a formula describing several allocation procedures to be used to distribute profit. For example, assume the AB Partnership profit and loss agreement of specifies the following allocation process:

- 1. Interest of 15 percent on weighted-average capital balances.
- 2. Salaries of \$2,000 for Alt and \$5,000 for Blue.
- 3. A bonus of 10 percent of profits to be paid to Blue on partnership income exceeding \$5,000 before subtracting the bonus, partners' salaries, and interest on capital balances.
- 4. Any residual to be allocated in the ratio of 60 percent to Alt and 40 percent to Blue.

The partnership agreement also should specify the allocation process in the event that partnership income is not sufficient to satisfy all allocation procedures. Some partnerships specify a profit distribution to be followed but only to the extent possible (i.e., stop following the formula once profits are exhausted). Most agreements specify that the entire process is to be completed and any remainder at each step of the process (whether positive or negative) is to be allocated in the profit and loss ratio as illustrated in the following schedule:

|  | Alt      | Blue    | Total      |
|--|----------|---------|------------|
| Profit percentage                        | 60%      | 40%     | 100%       |
| Average capital                          | \$20,000 | \$8,000 |            |
| Net income:<br>Step 1:                   |          |         | \$10,000   |
| Interest on average capital (15 percent) | \$ 3,000 | \$1,200 | _(4,200)   |
| Remaining after step 1<br>Step 2:        |          |         | \$ 5,800   |
| Salary                                   | 2,000    | 5,000   | (7,000)    |
| Deficiency after step 2<br>Step 3:       |          |         | \$ (1,200) |
| Bonus                                    |          | 500     | (500)      |
| Deficiency after step 3<br>Step 4:       |          |         | \$ (1,700) |
| Allocate 60:40                           | _(1,020) | (680)   | 1,700      |
| Total                                    | \$ 3,980 | \$6,020 | \$ 0       |

In this case, the first two distribution steps created a deficiency. The AB Partnership agreement provided that the entire profit distribution process must be completed and any deficiency distributed in the profit and loss ratio. A partnership agreement could specify that the profit distribution process should stop at any point in the event of an operating loss or the creation of a deficiency. Again, it is important for the accountant to have a thorough knowledge of the partnership agreement before beginning the profit distribution process.

## **Special Profit Allocation Methods**

Some partnerships distribute net income on the basis of other criteria. For example, most public accounting partnerships distribute profit on the basis of partnership "units." A new partner acquires a certain number of units, and a firmwide compensation committee assigns additional units for obtaining new clients, providing the firm specific areas of industrial expertise, serving as a local office's managing partner, or accepting a variety of other responsibilities.

Other partnerships may devise profit distribution plans that reflect the firms' earnings. For example, some medical or dental partnerships allocate profit on the basis of billed services. Other criteria may be number or size of clients, years of service with the firm, or the partner's position within it. An obvious advantage of the partnership form of organization is the flexibility it allows partners for profits distribution.

## PARTNERSHIP FINANCIAL STATEMENTS

A partnership is a separate reporting entity for accounting purposes, and the three financial statements—income statement, balance sheet, and statement of cash flows—typically are prepared for the partnership at the end of each reporting period. Interim statements also may be prepared to meet the partners' information needs. In addition to the three basic financial statements, a statement of partners' capital is usually prepared to present the changes in the partners' capital accounts for the period. The statement of partners'

capital for the AB Partnership for 20X1 under the multiple-base profit distribution plan illustrated in the prior section follows:

| AB PARTNERSHIP Statement of Partners' Capital For the Year Ended December 31, 20X1 |                 |                     |                     |
|--|-----------------|---------------------|---------------------|
|  | Alt             | Blue                | Total               |
| Balance, January 1, 20X1<br>Add: Additional investment                             | \$20,000        | \$10,000<br>500     | \$30,000<br>500     |
| Net income distribution  | 3,980           | 6,020               | 10,000              |
| Less: Withdrawal   | \$23,980        | \$16,520<br>(4,000) | \$40,500<br>(4,000) |
| Balance, December 31, 20X1   | <u>\$23,980</u> | <u>\$12,520</u>     | <u>\$36,500</u>     |

## **CHANGES IN MEMBERSHIP**

LO 15-6

Make calculations and journal entries to account for changes in partnership ownership.

Changes in the membership of a partnership occur with the addition of new partners or the dissociation of present partners. New partners are often a primary source of additional capital or needed business expertise. The legal structure of a partnership requires that the admission of a new partner be subject to the unanimous approval of the existing partners. Furthermore, public announcements are typically made about new partner additions that third parties transacting business with the partnership are aware of this to ensure change. Section 306 of the UPA of 1997 states that a person admitted as a new partner of an existing partnership is not personally liable for any partnership obligation incurred before the new partner was admitted. Thus, a new partner can be charged for partnership liabilities existing prior to admission only up to the amount of his or her capital contribution at the time of admission.

The retirement or withdrawal of a partner from a partnership is a dissociation of that partner. A partner's dissociation does not necessarily mean a dissolution and winding up of the partnership. Many partnerships continue in business and, under section 701 of the UPA 1997, the partnership may purchase the dissociated partner's interest at a buyout *price*. The buyout price is the estimated amount if (1) the assets were sold for a price equal to the higher of the liquidation value or the value based on a sale of the entire business as a going concern without the dissociated partner and (2) the partnership was wound up at that time with payment of all the partnership's creditors and termination of the business. Partners who simply wish to leave a partnership may be liable to the partnership for damages to the partnership caused by a wrongful dissociation, which occurs when the dissociation is in breach of an express provision of the partnership agreement or, for partnerships formed for a definite term or specific undertaking before the term or undertaking has been completed. Some events require judicial dissolution and winding up of the partnership. These will be discussed in Chapter 16.

## General Concepts to Account for a Change in Membership in the Partnership

## The Partnership as an Entity Separate from the Individual Partners and the Use of GAAP

The UPA of 1997 clearly defines a partnership as an entity separate from the individual partners. As such, the partnership entity does not change because of an individual partner's addition or withdrawal of. This is similar to the concept of the entity for the corporate form of business in which the business is not necessarily revalued each time there is a change in stockholders.

Some partnerships choose to comply with GAAP in their accounting and financial reporting. These partnerships follow the same standards established by the FASB and other regulatory bodies as those for public companies. Often venture capital firms or other credit suppliers may require that the private partnership company comply with GAAP so that financials can be compared with those of other public companies. Venture capital firms have a goal of eventually taking their investees public. Thus, a partnership that follows GAAP and is audited by external auditors can receive an audit opinion stating that it is in conformity with GAAP.

A partnership following GAAP and defining its company as an entity separate from the individual partners would account for a change in membership in the same manner as a corporate entity would account for changes in its investors. Additional investments would be recognized at their fair values along with the related increase in the company's total capital.2

Frequently, a partnership's existing assets are undervalued when a partner joins the partnership. The difficulty lies in recording the admission of additional partners in a manner that is fair and equitable to all parties involved. Two main methods for recording the admission of a new partner to a partnership are

- 1. The bonus method (follows GAAP).
- 2. The revaluation method (does not follow GAAP).

Both methods require the partnership to make journal entries based on fair value estimates. The problem with making journal entries based on estimates is that should the estimates not materialize in the future, inequalities among the partners can arise.<sup>3</sup>

**Bonus Method** Partners sometimes agree to use the **bonus method** to record the admission of a new partner. This method records an increase in the partnership's total capital only for the capital amount the new partner invests, in accordance with GAAP. However, the bonus method assigns partners' capital account balances based on the partners' agreement, which is often based on the value of the new partner's investment. In some cases, the existing partners assign some of their capital to a new partner; in others, a new partner agrees to assign a portion of his or her capital interest to the existing partners. Thus, the bonus method does not violate GAAP because partners may legally assign any or all of their transferable partnership capital interest to other partners.

Revaluation Method The partners in a private company may choose to follow non-GAAP accounting methods that meet their specific information needs. These partnerships may use the transactions surrounding the change of members as an opportunity for recognizing increases in the fair value of the partnership's existing nonfinancial assets or for recording previously unrecognized goodwill.

The practices of recognizing increases in a partnership's existing net assets using the revaluation method, or recognizing previously unrecorded goodwill (sometimes called the goodwill recognition method) are not in compliance with GAAP. Partnerships using these non-GAAP methods argue that revaluing all assets and liabilities at the time of

<sup>&</sup>lt;sup>2</sup> In a few situations, GAAP allows for the recognition of decreases in the fair value of specific nonfinancial assets. One of these allowed decreases may be triggered by a change in partnership membership. For example, ASC 350 presents procedures for recognizing impairments of currently held goodwill. ASC 360 presents the accounting standards for recognizing impairment losses on long-lived assets. Net asset revaluations performed using the appropriate accounting standards are in accordance with GAAP. However, no GAAP standards provide for increases in the value of nonfinancial assets or recognition of new goodwill solely due to a change in partnership membership.

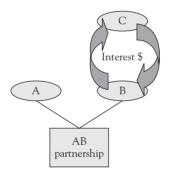

<sup>&</sup>lt;sup>3</sup> An alternative to these methods is to appraise assets and liabilities when a new partner joins the partnership and make special provisions in the partnership agreement on how gains or losses on existing assets and liabilities should be allocated to the partners. In this way, the partnership can avoid making journal entries based on estimates but wait until assets and liabilities have been disposed to make journal entries. The benefit of this approach is that the partnership agreement specifies how to deal with the admission date differential so that no inequalities arise in the future.

the change in partnership membership states fully the true economic condition at that point in time and properly assigns the partnership's changes in asset and liability values and goodwill to the partners who have been managing the business during the time the changes in value occurred.

Partners in private companies have free choice as to how they may account for changes in partnership membership. As noted, a private partnership may use either GAAP or non-GAAP methods based on the partners' information needs. Because some partnerships record increases in value by applying the revaluation (or goodwill recognition) method, the following sections of this chapter discuss these non-GAAP methods of accounting for the change in the partnership membership.

## New Partner Purchases Partnership Interest Directly from an **Existing Partner**

An individual may acquire a partnership interest directly from one or more of the existing partners. In this type of transaction, cash or other assets are exchanged outside the partnership, and the only entry necessary on its books is a reclassification of the partnership's total capital. For example, a new partner, Cha, could purchase Blue's partnership interest directly from her (as depicted in the diagram). This simple example would result in an entry to remove Blue's capital account from the books with a debit and transfer the balance to Cha's new capital account with a credit.

Note that the bonus and revaluation methods mentioned previously do not apply when the new partner simply purchases a partnership interest directly from an existing partner and the journal entry simply transfers the investment's book value from the existing partner to the new partner.

This type of transaction focuses solely on a transfer of the selling partner's share of the partnership's book value to the new partner. The book value of a partnership is simply the total amount of partnership capital, which is just another name for the partnership's net assets (total assets minus total liabilities). Book value is important because it serves as a basis for asset and liability revalua-

tions or goodwill recognition.

To provide a more complex example, assume that after operations and partners' withdrawals during 20X1 and 20X2, AB Partnership has a book value of \$30,000 and profit percentages on January 1, 20X3, as follows:

|       | Capital Balance | Profit Percentage |
|-------|-----------------|-------------------|
| Alt   | \$20,000        | 60                |
| Blue  | 10,000          | 40                |
| Total | <u>\$30,000</u> | 100               |

The following information describes the case:

1. On January 1, 20X3, Alt and Blue invite Cha to become a partner in their business. The resulting partnership will be called the ABC Partnership.

- 2. Cha purchases a 25 percent interest in the partnership capital directly from Alt and Blue for a total cost of \$9,000, paying \$5,900 to Alt and \$3,100 to Blue. Cha will have a capital credit of \$7.500 ( $\$30.000 \times 0.25$ ) in a proportionate reclassification from Alt and Blue's capital accounts.
- 3. Cha will be entitled to a 25 percent interest in the partnership's profits or losses. The remaining 75 percent interest will be divided between Alt and Blue in their previous profit ratio of 60:40 percent. The resulting profit and loss percentages after Cha's admission follow:

| Partner | Profit Percentage |
|---------|-------------------|
| Alt     | 45 (75% of 0.60)  |
| Blue    | 30 (75% of 0.40)  |
| Cha     | 25                |
| Total   | 100               |

In this example, Cha's 25 percent share of partnership profits or losses is the same as her 25 percent capital interest. These two percentage shares do not have to be the same. As described previously, a partner's capital interest may change over time because of profit distributions, withdrawals, or additional investments in capital. Furthermore, Cha could have acquired her entire capital interest directly from either partner (or proportionately from both). It is not necessary that a new partner directly purchasing an interest do so in a proportionate reclassification from each of the existing partners.

The transaction is between Cha and the individual partners and is not reflected on the partnership's books. The only entry in this case is to reclassify the partnership capital. Both Alt and Blue provide 25 percent of their capital to Cha, as follows:

|     | January 1, 20X3 |       |
|-----|-----------------|-------|
| (7) | Alt, Capital    | 5,000 |
|     | Blue, Capital   | 2,500 |
|     | Cha, Capital    | 7,500 |

Reclassify capital to new partner: From Alt:  $$5,000 = $20,000 \times 0.25$ From Blue:  $$2,500 = $10,000 \times 0.25$ .

In this case, the capital credit to Cha is only \$7,500, although \$9,000 is paid for the 25 percent interest. The \$9,000 payment implies that the fair value of the partnership is \$36,000, calculated as follows:

$$$9,000 = \text{Fair value} \times 0.25$$
  
 $$36,000 = \text{Fair value}$ 

The partnership's book value is \$30,000 before Cha's investment. The \$9,000 payment is made directly to the individual partners, but it does not become part of the firm's assets. The \$6,000 difference between the partnership's fair value and its new book value could be due to understated assets or to unrecognized goodwill.

## Recognizing Fair Value Increases in the Partnership's Net Assets (Non-GAAP)

Up to this point, the partnership has followed GAAP because the partners may legally assign any or all of their transferable partnership capital interest to other persons or among themselves as they agree. If the partners wish to be in accordance with GAAP, they must follow the appropriate recognition and measurement methods for the net assets as prescribed in GAAP.

Assume that Alt and Blue decide to use the evidence from Cha's investment to recognize increases in fair values of the nonfinancial long-lived assets that have taken place before Cha's admission. The partnership's accountant has informed the members that this type of revaluation is not in accordance with GAAP. For example, if the partnership has land undervalued by \$6,000 and sells it after Cha is admitted to the partnership, she will share in the gain on the sale according to the profit ratio. To avoid this possible problem, some partnerships revalue the assets at the time a new partner is admitted even if the new partner purchases the partnership interest directly from the present partners. In this case, Alt and Blue could recognize the increase in the value of the land immediately before Cha's admission and allocate the increase to their capital accounts in their 60:40 profit ratio, as follows:

| (8) | Land          | 6,000 |
|-----|---------------|-------|
|     | Alt, Capital  | 3,600 |
|     | Blue, Capital | 2,400 |

Revaluation of land before admission of new partner:

To Alt:  $\$3.600 = \$6.000 \times 0.60$ To Blue:  $$2,400 = $6,000 \times 0.40$ .

Note that the partnership's total resulting capital is \$36,000 (\$30,000 prior plus the \$6,000 revaluation). The transfer of a 25 percent capital credit to Cha is recorded as follows:

Reclassify capital to new partner:

Cha =  $(\$30,000 + \$6,000) \times 0.25 = \$9,000$ 

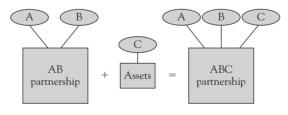

From Alt =  $(\$20,000 + \$3,600) \times 0.25 = \$5,900$ 

From Blue =  $(\$10,000 + \$2,400) \times 0.25 = \$3,100$ .

The partnership's accountant should ensure that sufficient evidence exists for any revaluation of assets and liabilities to prevent valuation abuses. Corroborating evidence such as appraisals or an extended period of excess earnings helps support asset valuations.

## **New Partner Invests in Partnership**

A new partner may acquire a share of the partnership by investing in the business. In this case, the partnership receives the cash or other assets.

Three cases are possible when a new partner invests in a partnership:

- Case 1: The new partner's investment equals the new partner's proportion of the partnership's book value.
- Case 2: The investment is for *more* than the new partner's proportion of the partnership's book value. This indicates that the partnership's prior net assets are undervalued on the books or that unrecorded goodwill exists.
- Case 3: The investment is for less than the new partner's proportion of the partnership's book value. This suggests that the partnership's prior net assets are overvalued on its books or that the new partner may be contributing goodwill in addition to other assets.

The first step in determining how to account for the admission of a new partner is to compute the new partner's proportion of the partnership's net book value as follows:

The new partner's proportion of the partnership's book value of net assets is compared with the new partner's investment to determine the procedures to follow in accounting for his or her admission. See Figure 15-1 for an overview of the three possible cases. Step 1 compares the new partner's investment with his or her proportion of the partnership's book value. Note that this is done before any revaluations the recognition of goodwill. Step 2 determines the specific admission method. As explained previously, two methods are available to the partnership to account for the admission of a new partner when a difference exists between the new partner's investment and his or her proportion of the partnership's book value. The two methods are to (1) revalue existing net assets or recognize goodwill and (2) use the bonus method. Under the revaluation of net assets and goodwill recognition method, the historical cost bases of the partnership's net assets are adjusted at the time of the new partner's admission. Some partners object to this departure from historical cost and prefer the bonus method, which uses capital interest transfers among the partners to align the partnership's total resulting capital. Under the bonus method, net assets remain at their historical cost bases to the partnership. The choice of accounting method for the admission of a new partner is up to the partners.

The accounting for the admission of a new partner parallels the accounting for an investment in the stock of another company. If a new partner pays more than book value, the excess of cost over book value—that is, the positive differential—may be due to unrecognized goodwill or to undervalued assets, the same cases as in accounting for the differential for stock investments. If book value equals the investment cost, no differential exists, indicating that the book values of the net assets equal their fair values. If the new partner's investment is less than the proportionate book value—that is, an excess of book value over cost exists—the assets of the partnership may be overvalued. A concept unique to partnership accounting is the use of the bonus method. Figure 15–1 serves as a guide through the following discussion.

FIGURE 15-1 Overview of Accounting for Admission of a New Partner

| Step 1: Compare Proportionate<br>Book Value and Investment of<br>New Partner | Step 2: Alternative Methods to<br>Account for Admission  | Key Observations  |
|--|--|---|
| Investment cost > Book value (Case 2)  | <ol> <li>Revalue net assets up to market value, record unrecognized goodwill, and allocate to existing partners.</li> <li>Assign bonus to existing partners.</li> </ol>                                  | • Existing partners receive asset valuation increase, goodwill, or bonus indicated by the excess of new partner's investment over book value of the capital share initially assignable to new partner. Alternatively, new partner is assigned goodwill or bonus as part of admission incentive. |
|  |  | • Recording asset valuation increase or existing partners' goodwill increases total resulting partnership capital.  |
| Investment cost = Book value (Case 1)  | No revaluations, bonus, or<br>goodwill.  | <ul> <li>No additional allocations necessary because new<br/>partner will receive a capital share equal to the<br/>amount invested.</li> </ul>  |
|  |  | • Total resulting partnership capital equals existing partners' capital plus investment of new partner.   |
| Investment cost < Book value (Case 3)  | <ol> <li>Revalue existing net assets down to<br/>market value, allocate to existing<br/>partners, and recognize goodwill<br/>brought in by new partner.</li> <li>Assign bonus to new partner.</li> </ol> | <ul> <li>Existing partners are assigned the reduction of asset values occurring before admission of the new partner.</li> <li>Recording the decrease in asset valuation reduces total resulting capital, and recording new partner goodwill increases total resulting capital.</li> </ul>       |

We again use the AB Partnership example presented earlier to illustrate the three cases. A review of the major facts for this example follows:

- 1. The January 1, 20X3, capital of the AB Partnership is \$30,000. Alt's balance is \$20,000, and Blue's balance is \$10,000. Alt and Blue share profits in the ratio of 60:40.
- 2. Cha is invited into the partnership. Cha will have a 25 percent capital interest and a 25 percent share of profits. Alt and Blue will share the remaining 75 percent of profits in the ratio of 60:40, resulting in Alt having a 45 percent share of any profits and Blue having a 30 percent share.

## Case 1: Investment Equals Proportion of the Partnership's Book Value

The partnership's total book value before the admission of the new partner is \$30,000, and the new partner, Cha, is buying a 25 percent capital interest for \$10,000.

The amount of a new partner's investment is often the result of negotiations between the existing partners and the prospective partner. As with any acquisition or investment, the investor must determine its market value. In a partnership, the prospective partner attempts to ascertain the market value and earning power of the partnership's net assets. The new partner's investment is then a function of the percentage of partnership capital being acquired. In this case, Cha must believe that the \$10,000 investment required is a fair price for a 25 percent interest in the resulting partnership; otherwise, she would not make the investment.

After the amount of investment is agreed on, it is possible to calculate the new partner's proportionate book value. For a \$10,000 investment, Cha will have a 25 percent interest in the partnership, as follows:

| Investment in partnership   | \$10,000    |
|---|-------------|
| New partner's proportionate book value: ( $\$30,000 + \$10,000$ ) $\times$ 0.25 | (10,000)    |
| Difference (Investment = Book value)  | <u>\$ 0</u> |

Because the amount of the investment (\$10,000) equals the new partner's 25 percent proportionate book value ( $\$10,000 = \$40,000 \times 0.25$ ), there is an implication that the net assets are fairly valued. Total resulting capital equals the original partners' capital (\$30,000) plus the new partner's tangible investment (\$10,000). Note that the capital credit assigned to the new partner is her share of the total resulting capital of the partnership after her admission as partner. The entry on the partnership's books is

The following schedule presents the key concepts in Case 1:

|   | Prior<br>Capital | New<br>Partner's<br>Tangible<br>Investment | New Partner's<br>Proportion of<br>Partnership's<br>Book Value<br>(25%) | Total<br>Resulting<br>Capital | New Partner's<br>Share of<br>Total Resulting<br>Capital<br>(25%) |
|---|------------------|--|--|-------------------------------|--|
| Case 1 New partner's investment equals proportionate book value No revaluations, bonus, or goodwill | \$30,000         | \$10,000                                   | \$10,000   | \$40,000                      | \$10,000   |

## Case 2: New Partner's Investment More than Proportion of the Partnership's **Book Value**

In some cases, a new partner may invest more in an existing partnership than his or her proportionate share of the partnership's book value. This means that the new partner perceives some value in the partnership that the books of account do not reflect.

For example, assume Cha invests \$11,000 for a 25 percent capital interest in the ABC Partnership. The first step is to compare her investment with her proportionate book value, as follows:

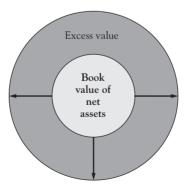

| Investment in partnership New partner's proportionate book value: $(\$30,000 + \$11,000) \times 0.25$ | \$11,000<br>(10,250) |
|---|----------------------|
| Difference (Investment > Book value)  | \$ 750               |

Cha has invested \$11,000 for an interest with a book value of \$10,250, thus paying an excess of \$750 over the present book value.

Generally, an excess of investment over the respective book value of the partnership interest indicates that the partnership's prior net assets are undervalued or that the partnership has some unrecorded goodwill. Two alternative accounting treatments can be used in this case:

- 1. Revaluation method. Under this alternative:
  - a. Increase the book values of existing net assets to their market values.
  - b. Record unrecognized goodwill.
  - c. Increase the existing partners' capital accounts for their respective shares of the increase in the book values of the net assets and the recorded goodwill.
  - d. The partnership's total resulting capital reflects the existing capital balances plus the amount of asset revaluation plus the new partner's investment.

Under the revaluation method, the partnership's assets (tangible and/or intangible) are revalued upward either to recognize unrecorded excess value or to record previously unrecorded goodwill. Thus, the size of the "pie" the partners are to divide among themselves becomes larger, so that the "slice" for each becomes proportionately larger.

2. Bonus method. Essentially, the bonus method is a transfer of capital balances among the partners. This method is used when the partners do not wish to record adjustments in asset and liability accounts or recognize goodwill. Thus, the size of the pie stays the same (the book value of existing equity plus the contribution of the new partner), but one or more partners will give some of his or her "slice" to the other partners.

Under this method:

- a. The existing partners' capital accounts are increased for their respective shares of the bonus paid by the new partner.
- b. The partnership's total resulting capital reflects the existing capital balances plus the new partner's investment.

The partnership may use either of the two alternatives. The decision is usually a result of negotiations between the existing partners and the prospective partner. Some accountants criticize the revaluation of net assets or recognition of goodwill because it results in a marked departure from the historical cost principle and differs from the accepted accounting principles in ASC 350, which prohibits corporations from recognizing goodwill that has not been acquired by purchase. Accountants who use the goodwill or asset revaluation methods argue that the goal of partnership accounting is to state fairly the relative capital equities of the partners, and this may require accounting procedures that differ from those that corporate entities use.

The accountant's function is to ensure that any estimates used in the valuation process are based on the best evidence available. Subjective valuations that could impair the fairness of the presentations made in the partnership's financial statements should be avoided or minimized.

Illustration of Revaluation Approach (Non-GAAP) Assume that Cha paid a \$750 excess (\$11,000 - \$10,250) over her proportionate book value because the partnership owns land on which it has constructed warehouse buildings. The land has a book value of \$4,000, but a recent appraisal indicates that it has a market value of \$7,000. The partnership expects to continue using the land for warehouse space for as long as the business operates. The accountant has informed the original partners that GAAP does not allow increasing the value of nonfinancial, long-lived assets held and used in the operations of the business. But the original partners decide to use the admission of the new partner to recognize the increase in the land's value and to assign this increase to their capital accounts. The increase in land value is allocated to the partners' capital accounts in the profit and loss ratio that existed during the time of the increase. Alt's capital increases by \$1,800 (60 percent of the \$3,000 increase), and Blue's capital increases by \$1,200 (40 percent of the \$3,000). The partnership makes the following entry for the revaluation of the land:

| (11) | Land          | 3,000 |
|------|---------------|-------|
|      | Alt, Capital  | 1,800 |
|      | Blue, Capital | 1,200 |

Revalue partnership land to market value.

Cha's \$11,000 investment brings the partnership's total resulting capital to \$44,000, as follows:

| Prior capital of AB Partnership            | \$30,000 |
|--|----------|
| Revaluation of land to market value        | 3,000    |
| Cha's investment                           | 11,000   |
| Total resulting capital of ABC Partnership | \$44,000 |

Cha is acquiring a 25 percent interest in ABC Partnership's total resulting capital. Her capital credit, after revaluing the land, is calculated as follows:

New partner's share of total resulting capital = 
$$(\$30,000 + \$3,000 + \$11,000) \times 0.25 = \$11,000$$

The entry to record Cha's admission into the partnership follows:

(12)Cash 11.000 Cha, Capital 11,000

Admission of Cha for 25 percent capital interest in ABC Partnership.

When the land is eventually sold, Cha will participate in the gain or loss calculated on the basis of the new \$7,000 book value, which is the land's market value at the time of her admission into the partnership. The entire increase in the land value before Cha's admission belongs to the original partners.

An important key to remember is that the new partner's capital account balance should be equal to her respective ownership percentage multiplied by either the book value of net assets (the small pie) under the bonus method or the revalued net assets (the large pie) under the revaluation (or goodwill) method. In this case, the partners decided to revalue the balance sheet upward by recording the land's excess fair value at the time of Cha's admission. Thus, Cha's capital account balance upon admission is 25 percent of the newly expanded "pie," or \$11,000.

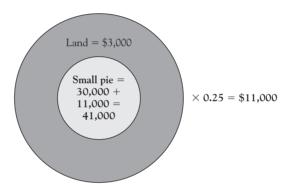

Illustration of Goodwill Recognition (Non-GAAP) An entering partner may pay an extra amount to compensate the existing partners for unrecognized goodwill, indicated by the partnership's high profitability. Some partnerships use the change in membership as an opportunity to record unrecognized goodwill created by the existing partners. Recording unrecognized goodwill is used for partnership accounting to establish appropriate capital equity among the partners. As noted earlier, this is not in accordance with the rule established in ASC 350, but the partners' information needs and the specific purposes of the partnership's financial statements could serve to support the use of this non-GAAP method.

Generally, the amount of goodwill is determined by negotiations between the current and prospective partners and is based on estimates of future earnings. For example, the current and new partners may agree that, due to the existing partners' efforts, the partnership has superior earnings potential and that \$3,000 of goodwill should be recorded to recognize this fact. The new partner's negotiated investment cost will be based partly on the partnership's earnings potential. Alternatively, goodwill may be estimated from the amount of the new partner's investment. For example, in this case, Cha is investing \$11,000 for a 25 percent interest; therefore, she must believe the total resulting partnership capital is \$44,000 ( $$11,000 \div 0.25$ ). The estimated goodwill is \$3,000:

| Step 1 25% of estimated total resulting capital Estimated total resulting capital ( $$11,000 \div 0.25$ )      | \$ 11,000<br><u>\$ 44,000</u> |
|--|-------------------------------|
| Step 2 Estimated total resulting capital Total net assets not including goodwill (\$30,000 prior plus \$11,000 | \$ 44,000                     |
| invested by Cha)   | (41,000)                      |
| Estimated goodwill   | \$ 3,000                      |

Another way to view the creation of goodwill at the time of a new partner's admission is to use a T-account form for the partnership's balance sheet. Any additional net assets, such as goodwill recognition, must be balanced with additional capital, as follows:

|   | Balance Sheet      |                      |   |                      |
|---|--------------------|----------------------|---|----------------------|
| Prior to admission of new<br>partner Cha<br>New partner's cash investment | Net assets<br>Cash | \$30,000<br>\$11,000 | Partners' capital<br>New tangible capital | \$30,000<br>\$11,000 |
| Capital prior to recognizing<br>goodwill<br>Estimated new goodwill        | Goodwill           | \$41,000<br>\$ 3,000 | Capital from goodwill                     | \$41,000<br>\$ 3,000 |
| Total resulting capital   | Net assets         | \$44,000             | Total resulting capital                   | \$44,000             |

Once the new ABC Partnership's total resulting capital is estimated (\$44,000), the new goodwill (\$3,000) is the balance sheet balancing difference between the tangible capital (\$41,000), which includes the new partner's cash investment and the estimated total resulting capital of ABC Partnership (\$44,000).

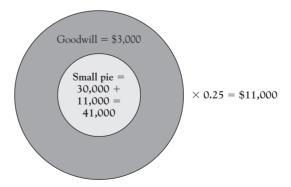

The unrecorded goodwill is recorded, and the original partners' capital accounts are credited for the increase in assets. The adjustments to the capital accounts are in the profit and loss ratio that existed during the periods the goodwill was developed. This increased Alt's capital by 60 percent of the goodwill and Blue's by 40 percent. The entries to record goodwill and the admission of Cha are as follows:

| (13) | Goodwill   | 3,000  |        |
|------|--|--------|--------|
|      | Alt, Capital   |        | 1,800  |
|      | Blue, Capital  |        | 1,200  |
|      | Recognize unrecorded goodwill.                                     |        |        |
| (14) | Cash   | 11,000 |        |
|      | Cha, Capital   |        | 11,000 |
|      | Admission of Cha to partnership for a 25 percent capital interest: |        |        |

Another reason for recording goodwill is that the new partner may want her capital balance to equal the amount of investment made. The investment is based on the partnership's market value, and for this equality to occur, the partnership must restate its previous net assets to their fair values.

 $$44.000 \times 0.25$ .

Again, it is important to note that the \$11,000 credit to Cha's capital account is 25 percent of ABC Partnership's total resulting capital of \$44,000. Again, because the partners elected to revalue the balance sheet upward by recording goodwill, Cha's capital account balance is 25 percent of the larger pie (the newly expanded net assets).

In future periods, any goodwill impairment loss will be charged against partnership earnings before net income is distributed to the partners. Consequently, Cha's future profit distribution may be affected by the goodwill recognized at the time of her admission into the partnership.

*Illustration of Bonus Method (GAAP)* Some partnerships are averse to recognizing asset revaluations or unrecorded goodwill when a new partner is admitted. Instead, they record a portion of the new partner's investment as a bonus to the existing partners to align the capital balances properly at the time of the new partner's admission. In this case, the \$750 excess Cha is paid a bonus allocated to the original partners in their profit and loss ratio of 60 percent to Alt and 40 percent to Blue. ABC Partnership's total resulting capital consists of \$30,000 existing capital of Alt and Blue plus the \$11,000 investment of Cha. No additional capital is recognized by revaluing assets. Because the partners do not revalue the balance sheet, they simply divide the existing (small) pie based on their relative ownership percentages. Thus, Cha's capital account balance will be 25 percent of the small pie, \$10,250.

The entry to record Cha's admission under the bonus method is as follows:

Admission of Cha with bonus to Alt and Blue.

 $Alt = $750 \times 0.60 = $450$ 

Blue =  $$750 \times 0.40 = $300$ .

Cha may dislike the bonus method because her capital balance is \$750 less than her investment in the partnership. This is a disadvantage of the bonus method.

The following schedule presents the key concepts for Case 2:

|   | Prior<br>Capital | New<br>Partner's<br>Tangible<br>Investment | New Partner's<br>Proportion of<br>Partnership's<br>Book Value<br>(25%) | Total<br>Resulting<br>Capital    | New Partner's<br>Share of Total<br>Resulting<br>Capital (25%) |
|---|------------------|--|--|----------------------------------|---|
| Case 2 New partner's investment of more than proportionate book value 1. Revalue assets by increasing land \$3,000 2. Recognize \$3,000 goodwill for original partners 3. Bonus of \$750 to original partners | \$30,000         | \$11,000                                   | \$10,250   | \$44,000<br>\$44,000<br>\$41,000 | \$11,000<br>\$11,000<br>\$10,250                              |

## Case 3: New Partner's Investment Less than Proportion of the Partnership's **Book Value**

It is possible that a new partner may pay less than his or her proportionate share of the partnership's book value. For example, assume Cha invests \$8,000 for a 25 percent capital interest in the ABC Partnership. The first step is to compare the new partner's investment with her proportionate book value, as follows:

| New partner's proportionate book value: $(\$30,000 + \$8,000) \times 0.25$ | 8,000<br>(9,500)<br>(1,500) |
|--|-----------------------------|
|--|-----------------------------|

The fact that Cha's investment is less than the book value of a 25 percent interest in the partnership indicates that the partnership has overvalued net assets or the original partners recognize that Cha is contributing additional value in the form of her expertise or skills that the partnership needs. In this case, Cha is investing \$8,000 in cash and an additional amount that may be viewed as goodwill.

As with Case 2, in which the investment is more than the book value acquired, there are two alternative approaches to account for the differential when the investment is less than the book value acquired. The two approaches are as follows:

#### 1. Revaluation method. Under this alternative:

- a. Decrease book values of net assets to recognize the reduction in their values.
- b. Decrease the original partners' capital accounts for their respective share of the decrease in the values of the net assets.
- c. Record goodwill or other intangible benefits brought in by the new partner and record the increase in the new partner's capital account.
- d. Recognize that the partnership's total resulting capital reflects the prior capital balances less the amount of the net asset valuation write-down plus the new partner's investment and new goodwill.

#### 2. Bonus method. Under the bonus method:

- a. The new partner is assigned a bonus from the original partners' capital accounts, which are decreased for their respective shares of the bonus paid to the new partner.
- b. The partnership's total resulting capital reflects the prior capital balances plus the new partner's investment.

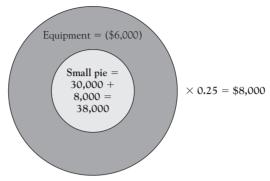

*Illustration of Revaluation of Net Assets Approach (GAAP)* Almost all of an entity's assets and liabilities have one or more generally accepted accounting principles for recognizing impairment losses or write-downs to fair value. Several examples of these GAAP are recognition of a valuation loss on inventory valued using the lower-of-cost-or-market method, impairment losses on goodwill, impairment losses on long-lived assets used in the business, and losses on financial assets such as investments. Thus, GAAP allows the recognition of decreases in the values of many assets. The process of admitting a new partner is a common time for evaluating the fair values of the partnership's net assets and comparing those values with the book values.

Assume that the reason Cha paid only \$8,000 for a 25 percent interest in the partnership is that equipment used in current production is recorded at a book value of \$14,000 but has a fair value of only \$8,000. The partners agree to recognize the impairment loss and write down the equipment to its fair value before the new partner's admission. The write-down is allocated to the original partners in the profit and loss ratio that existed during the period of the decline in the equipment's fair value: 60 percent to Alt and 40 percent to Blue. The write-down is recorded as follows:

| (16) | Alt, Capital  | 3,600 |
|------|---------------|-------|
|      | Blue, Capital | 2,400 |
|      | Equipment     | 6,000 |

Recognize impairment loss on equipment.

Note that the partnership's total capital has now been reduced from \$30,000 to \$24,000 as a result of the \$6,000 write-down. The value of Cha's share of ABC Partnership's total resulting capital, after the write-down, is calculated as follows:

In this case, the revaluation actually reduces the size of the pie. Cha's capital account is credited for 25 percent of \$32,000 for \$8,000.

Note that because the "excess value" portion is really negative, the size of the pie is actually shrinking, not growing. The entry to record the admission of Cha as a partner in the ABC Partnership is

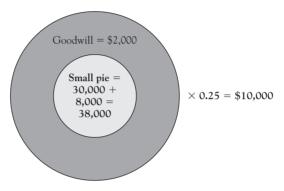

Cha's recorded capital credit is equal to her investment because the total partnership capital of \$32,000 (\$24,000 + \$8,000) now represents the partnership's fair value.

Illustration of Recording Goodwill for New Partner (Non-GAAP) The original partners may offer Cha a 25 percent capital interest in the ABC Partnership for an \$8,000 investment because she has essential business experience, skills, customer contacts, reputation, or other aspects of goodwill that she will bring into the partnership. The amount of goodwill the new partner brings in is usually determined through negotiations between the original partners and the prospective partner. For example, Alt, Blue, and Cha may agree that Cha's abilities will generate excess earnings for the resulting ABC Partnership. They agree that Cha should be given \$2,000 of goodwill recognition when she joins the partnership in recognition of her anticipated excess contribution to the partnership's future earnings. The negotiated goodwill is recognized and added to her tangible investment to determine the amount of capital credit.

Alternatively, the amount of goodwill the new partner brings in may be estimated from the amount of the total capital being retained by the original partners. In this case, they are retaining a 75 percent interest in the partnership and allowing the new partner a 25 percent capital interest. The dollar amount of the original partners' 75 percent interest is \$30,000. Cha's investment of \$8,000 plus goodwill makes up the remaining 25 percent. The amount of goodwill that Cha brought into the partnership is determined as follows:

| Step 1 75% of estimated total resulting capital Estimated total resulting capital (\$30,000 ÷ 0.75)                      | \$30,000<br>\$40,000             |
|--|----------------------------------|
| Step 2 Estimated total resulting capital Total net assets not including goodwill (\$30,000 + \$8,000) Estimated goodwill | \$40,000<br>(38,000)<br>\$ 2,000 |

Note that the goodwill estimate for the new partner is made using the information from the original partners' interests. In Case 2, the estimate of goodwill to the original partners was made using the information from the new partner's investment. The reason for this difference is that the best available information should be used for the goodwill estimates. If the new partner's goodwill is being estimated, it is not logical to use his or her tangible investment to estimate the total investment he or she made, including goodwill. This is circular reasoning that involves using a number to estimate itself. Furthermore, when goodwill is being assigned to the original partners, it is not logical to use their existing capital to estimate their goodwill. A useful way to remember how to estimate goodwill is to use the opposite partner's information for the estimate. Use the new partner to estimate goodwill to original partners; use them to estimate goodwill to the new partner. Cha's capital account balance will be 25 percent of the newly revalued partnership balance sheet, \$10,000.

The entry to record Cha's admission into the ABC Partnership is

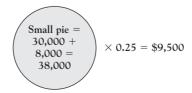

Note that the ABC Partnership's total resulting capital is now \$40,000 with Alt and Blue together having a 75 percent interest and Cha having a 25 percent interest.

*Illustration of Bonus Method (GAAP)* Cha's admission as a new partner with a 25 percent interest in the ABC Partnership for an investment of only \$8,000 may be accounted for by recognizing a bonus the original partners give Cha. The \$1,500 bonus is the difference between Cha's \$9,500 book value and her \$8,000 investment. The original partners' capital accounts are reduced by \$1,500 in their profit and loss ratio of 60 percent for Alt and 40 percent for Blue, and Cha's capital account is credited for \$9,500, as follows:

| (19) | Cash                             | 8,000 |       |
|------|----------------------------------|-------|-------|
|      | Alt, Capital                     | 900   |       |
|      | Blue, Capital                    | 600   |       |
|      | Cha, Capital                     |       | 9,500 |
|      | Admission of Cha to partnership. |       |       |

 $Alt = $1,500 \times 0.60 = $900$ Blue =  $$1,500 \times 0.40 = $600$ .

Note that the amount of the capital credit assigned to the new partner is her share of the total resulting capital (the small pie) because the partners did not elect to revalue the balance sheet other than to record Cha's capital contribution.

The following schedule presents the key concepts for Case 3:

|  | Prior<br>Capital | New<br>Partner's<br>Tangible<br>Investment | New Partner's<br>Proportion of<br>Partnership's<br>Book Value<br>(25%) | Total<br>Resulting<br>Capital | New Partner's<br>Share of<br>Total<br>Resulting<br>Capital (25%) |
|--|------------------|--|--|-------------------------------|--|
| Case 3 New partner's investment less than  |                  |  |  |                               |  |
| proportionate book value   | \$30,000         | \$8,000                                    | \$9,500  |                               |  |
| Revalue assets by decreasing equipment<br>by \$6,000     Recognize goodwill of \$2,000 for new |                  |  |  | \$32,000                      | \$ 8,000   |
| partner 3. Bonus of \$1,500 to new partner   |                  |  |  | \$40,000<br>\$38,000          | \$10,000<br>\$ 9,500   |

## Summary and Comparison of Accounting for Investment of New Partner

See Figure 15–2 for the entries made in each of the three cases discussed. In addition, the capital balance of each of the three partners immediately after Cha's admission is presented to the right of the journal entries.

The following summarizes the alternative methods of accounting for the investment of a new partner:

## Case 1: New partner's investment equals his or her proportion of the partnership's book value.

- 1. The new partner's capital credit equals his or her investment.
- 2. This case recognizes no goodwill or bonus.

## Case 2: New partner's investment is more than his or her proportion of the partnership's book value.

- 1. The revaluation of an asset (or recognition of goodwill) increases the partnership's total resulting capital. The increase is allocated to the existing partners in their profit and loss ratio.
- 2. After recognition of the asset revaluation or unrecorded goodwill, the new partner's capital credit equals his or her investment and his or her percentage of the total resulting capital.
- 3. Under the bonus method, the partnership's total resulting capital is the sum of the existing partnership's capital plus the new partner's investment. The capital credit recorded for the new partner is less than the investment but equals his or her percentage of the resulting partnership capital.

## Case 3: New partner's investment is less than his or her proportion of the partnership's book value.

- 1. Under the revaluation of assets approach, the write-down of the assets reduces the existing partners' capital in their profit and loss ratio. The new partner's capital is then credited for the amount of the investment. Moreover, the goodwill is assigned to the new partner, increasing the partnership's total resulting capital. The new partner's capital is credited for his or her percentage interest in the partnership's total resulting capital.
- 2. The bonus method results in a transfer of capital from the existing partners to the new partner. The new partnership's total resulting capital equals the prior capital plus the new partner's investment. The new partner's capital credit is more than the investment made but equals his or her percentage of the total resulting capital.

## **Determining a New Partner's Investment Cost**

The previous sections have provided the amount of the new partner's contribution. In some instances, accountants are requested to determine the amount of cash investment by asking the new partner to contribute. The basic principles of partnership accounting provide the means to answer this question. For example, let's continue the basic example of partners Alt and Blue wishing to admit Cha as a new partner. The original partnership capital was \$30,000, and the partners wish to invite Cha into the partnership for a 25 percent interest.

Assume that the original partners, Alt and Blue, agree that the partnership's assets should be revalued up by \$3,000 to recognize the increase in value of the land the partnership holds. The question is how much Cha, the new partner, should be asked to invest for her 25 percent interest.

When determining the new partner's investment cost, it is important to note the partnership's total resulting capital and the percentage of ownership interest the existing partners retain. In this example, they retain a 75 percent interest in the resulting partnership, for which their 75 percent capital interest is \$33,000, the \$30,000 of existing capital plus the \$3,000 from the revaluation of the land, as follows:

| 75% of total resulting capital                                    | \$33,000             |
|---|----------------------|
|   | ÷ 0.75               |
| Total resulting capital (100%)<br>Less existing partners' capital | \$44,000<br>(33,000) |
| Cash contribution required of new partner                         | <u>\$11,000</u>      |
|   |                      |

Note that this is simply another way to evaluate the admission process as discussed in the net asset revaluation illustration under Case 2.

In some cases, the bonus amount may be determined prior to determining the new partner's required cash contribution. For example, assume that Alt and Blue agree to give Cha a bonus of \$1,500 for joining the partnership. The following schedule determines the cash investment amount required of Cha, the new partner:

| Prior capital of Alt and Blue<br>Less bonus given to Cha upon admission                    | \$30,000<br>(1,500)  |
|--|----------------------|
| Capital retained by Alt and Blue (75%)   | \$28,500             |
| Total resulting capital (\$28,500 ÷ 0.75)<br>Less original partners' capital               | \$38,000<br>(28,500) |
| Capital credit required of new partner<br>Less bonus to new partner from original partners | \$ 9,500<br>(1,500)  |
| Cash contribution required of new partner  | \$ 8,000             |

This second example is another way to view the bonus-to-new-partner method under Case 3 as presented. The key is to determine the amount of capital that the existing partners will retain for their percentage share in the partnership's total resulting capital after admitting the new partner. The new partner's cash contribution can be computed simply by determining the amount of the capital credit that will be assigned to him or her and then recognizing any bonuses that will be used to align the capital balances.

## Dissociation of a Partner from the Partnership

When a partner retires or withdraws from a partnership, that partner is dissociated from the partnership. In most cases, the partnership purchases the dissociated partner's interest in the partnership for a buyout price. Section 701 of the UPA 1997 states that the buyout price is the estimated amount if (1) the partnership's assets were sold at a price equal to the higher of the liquidation value or the value based on a sale of the entire business as a going concern without the dissociated partner and (2) the partnership was wound up at that time with all partnership obligations settled. Note that goodwill may be included in the valuation. The partnership must pay interest to the dissociated partner from the date of dissociation to the date of payment. In cases of wrongful dissociation, the partnership may sue the partner for damages the wrongful dissociation causes the partnership.

In the case in which the partnership agrees to the dissociation and it is not wrongful, the accountant can aid in computing the buyout price. It is especially important to determine all existing liabilities on the dissociation date. The partnership agreement may include other procedures to use in the case of a partner dissociation, such as the specifics of valuation, the process of the acquisition of the dissociated partner's transferable value, and other aspects of the change in membership process.

Some partnerships have an audit performed when a change in partners is made. This audit establishes the existence of and the accuracy of the book values of the assets and liabilities. On occasion, accounting errors are found during an audit. Errors should be corrected and the partners' capital accounts adjusted based on the profit and loss ratio that existed in the period in which the errors were made. For example, if an audit disclosed that three years ago depreciation expense was charged for \$4,000 less than it should have been, the error is corrected retroactively, and the partners' capital accounts are charged with their respective shares of the adjustment based on their profit and loss ratio of three

Generally, the continuing partners buy out the retiring partner either by making a direct acquisition or by having the partnership acquire the retiring partner's interest. If the continuing partners directly acquire the retiring partner's interest, the only entry on the partnership's books is to record the reclassification of capital among the partners. If the partnership acquires the retiring partner's interest, the partnership must record the reduction of total partnership capital and the corresponding reduction of assets paid to the retiring partner. Computation of the buyout price when a partner dissociates from the partnership can take the form of three possible scenarios. These are discussed next.

#### 1. Buyout Price Equal to Partner's Capital Credit

Assume Alt retires from the ABC Partnership when his capital account has a balance of \$55,000 after recording all increases in the partnership's net assets including income earned up to the date of the retirement. All partners agree to \$55,000 as the buyout price of Alt's partnership interest. The entry made by the ABC Partnership is

If the partnership is unable to pay the total of \$55,000 to Alt at the time of retirement, it must recognize a liability for the remaining portion.

## 2. Buyout Price Higher than Partner's Capital Credit

Assume Alt has a capital credit of \$55,000 and all the partners agree to a buyout price of \$65,000. Most partnerships would account for the \$10,000 payment above Alt's capital credit (\$65,000 paid - \$55,000) as a capital adjustment bonus to Alt from the capital accounts of the remaining partners. In this case, the \$10,000 would be allocated against the capital accounts of Blue and Cha in their profit ratio. Blue has a 30 percent interest, and Cha has a 25 percent interest in ABC Partnership's net income. The sum of their respective shares is 55 percent (30 percent + 25 percent), and their relative profit percentages, rounded to the nearest percentage, are 55 percent for Blue and 45 percent for Cha, computed as follows:

|       | Prior Profit<br>Percentage | Remaining Profit<br>Percentage |
|-------|----------------------------|--------------------------------|
| Alt   | 45                         | 0                              |
| Blue  | 30                         | 55 (30/55)                     |
| Cha   | 25                         | 45 (25/55)                     |
| Total | 100                        | 100                            |

The entry to record Alt's retirement is

| (21) | Alt, Capital  | 55,000 |
|------|---------------|--------|
|      | Blue, Capital | 5,500  |
|      | Cha, Capital  | 4,500  |
|      | Cash          | 65,000 |

Retirement of Alt.

The \$10,000 bonus paid to Alt is allocated to Blue and Cha in their respective profit ratios. Blue is charged for 55 percent, and Cha is charged for the remaining 45 percent.

Occasionally, a partnership uses the retirement of a partner to record unrecognized goodwill. In this case, the partnership may record the retiring partner's share only, or it may impute the entire amount of goodwill based on the retiring partner's profit percentage. If it imputes total goodwill, the remaining partners also receive their respective shares of the total goodwill recognized. Many accountants criticize recording goodwill on the retirement of a partner on the same theoretical grounds as they criticize recording unrecognized goodwill on the admission of a new partner. Nevertheless, partnership accounting sometimes uses all the recognition of goodwill at this event.

For example, if \$65,000 is paid to Alt and only his share of unrecognized goodwill is to be recorded, the partnership makes the following entries at the time of his retirement:

| (22) | Goodwill                           | 10,000 |       |
|------|------------------------------------|--------|-------|
|      | Alt, Capital                       | 1      | 0,000 |
|      | Recognize Alt's share of goodwill. |        |       |
| (23) | Alt, Capital                       | 65,000 |       |
| (23) | Cash                               | •      | 5,000 |
|      | Patiroment of Alt                  |        |       |

Retirement of Alt.

## 3. Buyout Price Less than Partner's Capital Credit

Sometimes, the buyout price is less than a partner's capital credit. This could result if liquidation values of net assets are less than their book values or because the dissociating partner wishes to leave the partnership badly enough to accept less than his or her current capital balance. For example, Alt agrees to accept \$50,000 as the buyout price for his partnership interest. The partnership should evaluate its net assets to determine whether any impairments or write-downs should be recognized. If no revaluations of the net assets are necessary, then the \$5,000 difference (\$50,000 cash paid less \$55,000 capital credit) is distributed as a capital adjustment to Blue and Cha in their respective profit and loss ratio.

| (24) | Alt, Capital  | 55,000 |
|------|---------------|--------|
|      | Blue, Capital | 2,750  |
|      | Cha, Capital. | 2,250  |
|      | Cash          | 50,000 |

Retirement of Alt.

## Summary of **Key Concepts**

Accounting for partnerships recognizes the unique aspects of this form of business organization. Most states have enacted the major provisions of the Uniform Partnership Act of 1997 (UPA 1997), which delineates the rights and responsibilities of the partners, both with third parties and among the partners, and the rights of third parties, such as creditors, with the partnership. A partnership agreement is very important because many sections of the UPA 1997 can be waived with a formal partnership agreement. The partnership also should file a Statement of Partnership Authority with the secretary of the state and the clerk of the county in which the partnership business takes place. The UPA 1997 includes sections stating that the partnership is an entity distinct from its partners, that partners are the partnership's agents, that partners are personally liable for the partnership obligations that exceed its assets, that partnership profits or losses are shared equally, and that a partner may dissociate, in which case that partner no longer may share in the partnership's management.

Partnerships use a wide variety of profit or loss distribution methods, and accountants must ensure that the partnership agreement is followed closely. Most partnerships continue in business when a partner dissociates (leaves the partnership) by purchasing that partner's interest at a buyout price based on the partnership's value were it to wind up its business. Several accounting methods are used to account for changes in partnership membership. Some partnerships use a net asset revaluation approach, sometimes including goodwill recognition. The other major accounting approach used to account for changes in membership is the bonus method, which uses a reclassification of partner capital. Partnerships provide four financial statements: the income statement, the balance sheet, the statement of cash flows, and a statement of partners' capital that presents the changes in the partners' capital accounts during the period.

# Appendix 15A Tax Aspects of a Partnership

The Internal Revenue Service views the partnership form of organization as a temporary aggregation of some of the individual partners' rights. The partnership is not a separate taxable entity. Therefore, the individual partners must report their share of the partnership income or loss on their personal tax returns, whether withdrawn or not. This sometimes creates cash flow problems for partners who leave their share of income in the partnership and permit the firm to use their share for growth. In such cases, the partners must pay income tax on income that was not distributed to them. However, this tax conduit feature also offers special tax features to the individual partners. For example, charitable contributions made by the partnership are reported on the partners' individual tax returns. Also, any tax-exempt income earned by the partnership is passed through to the individual partners.

This pass-through benefits individual partners when the business has an operating loss. The individual partners can recognize their shares of the partnership loss on their own tax returns, thereby offsetting other taxable income. If the business is incorporated, the loss does not pass through to the stockholders.

## TAX BASIS OF ASSET INVESTMENTS

For capital investments, the accounting basis and the tax basis are computed differently. For tax purposes, a partnership must value the assets invested in it at the tax basis of the individual partner who invests the assets. For example, assume that partner A contributes a building to the AB Partnership. The building originally cost \$6,000 and has been depreciated \$2,000, leaving a book value of \$4,000. The building has a market value of \$10,000. For tax purposes, the partnership records the building at \$4,000, partner A's adjusted basis.

This tax valuation differs from the amount that is recognized under generally accepted accounting principles. A basic GAAP concept is to value asset transfers between separate reporting entities at their respective fair market values. In this case, the partnership records the building at its \$10,000 fair value for accounting purposes. Most partnerships maintain their accounting records and financial statements using GAAP, and they use a separate adjusting schedule at the end of each period to report the results for tax purposes on Form 1065, the partnership tax information form.

In addition to asset transfers, a partnership also may assume the liabilities associated with an asset. For example, if the building was subject to a \$2,000 mortgage, which the AB Partnership assumed with the building, partner A benefits because the other partners have assumed a portion of the mortgage that A originally owed entirely.

A partner's tax basis in a partnership is the sum of the following:

The partner's tax basis of any assets contributed to the partnership.

Plus: The partner's share of other partners' liabilities assumed by the partnership.

Less: The amount of the partner's liabilities assumed by the other partners.

To illustrate, A contributes the building discussed, which has an adjusted tax basis of \$4,000 (\$6,000 cost less \$2,000 depreciation) and is subject to a mortgage of \$2,000. The building's market value is \$10,000. B contributes machinery that has a book value of \$15,000 and a market value of \$20,000 and is subject to a note payable of \$5,000. The partners agree to share equally in the liabilities assumed by the AB Partnership. The tax basis of each partner in the partnership is calculated as follows:

|  | Partner A | Partner B |
|--|-----------|-----------|
| Tax basis of assets contributed                  | \$4,000   | \$15,000  |
| Partner's share of other partner's liabilities   |           |           |
| assumed by partnership:                          |           |           |
| Partner A: (1/2 of \$5,000)                      | 2,500     |           |
| Partner B: (1/2 of \$2,000)                      |           | 1,000     |
| Partner's liabilities assumed by other partners: |           |           |
| Partner A: (1/2 of \$2,000)                      | (1,000)   |           |
| Partner B: (1/2 of \$5,000)                      |           | (2,500)   |
| Tax basis of partner's interest                  | \$5,500   | \$13,500  |
|  |           |           |

Each partner's tax basis is used for tax recognition of gains or losses on subsequent disposals of the partner's investment in the partnership.

For GAAP purposes, each partner's investment is based on the fair value of the assets less liabilities assumed. Thus, in the preceding case, partner A's accounting basis is \$8,000 (\$10,000 market value of the building less \$2,000 mortgage), and partner B's accounting basis is \$15,000 (\$20,000 market value of the equipment less \$5,000 note payable). Any asset disposal gain or loss in the accounting financial statements is based on the valuations made using GAAP. A separate schedule of tax bases for each of the partners is typically maintained in case the information is required for a partner's individual tax return.

## S CORPORATIONS AND LIMITED LIABILITY COMPANIES

An S corporation is a corporate entity that elects to be taxed in the same manner as a partnership with the shareholders including their share of corporate income or loss in their personal returns whether or not the income has been distributed as dividends. This eliminates the double taxation of corporate income: first, as taxable income to the corporation and, second, as taxable dividend income to the shareholder. The S corporation form provides the shareholders the liability limitation of an investment in a corporation. The Internal Revenue Service has certain qualifying criteria for S corporation status: (1) a maximum of 75 shareholders, all of whom must be either U.S. citizens or permanent resident aliens, is permitted, (2) only one class of stock may be issued, and (3) no more than 25 percent of the corporation's gross income can be derived from passive investment activities.

A limited liability company (LLC) is form of corporate entity governed by the laws of the state in which it is formed. The LLC provides liability protection to its investors as well as the pass-through taxation benefits of partnerships and S corporations. However, each state has its own distinct set of laws governing LLCs whereas the IRS has just one set of definitions for an S corporation.

# Appendix 15B Joint Ventures

A joint venture usually is a business entity owned and operated by a small group of investors as a separate and specific business project organized for the mutual benefit of the ownership group. Many joint ventures are short-term associations of two or more parties to fulfill a specific project, such as the development of real estate, joint oil or gas drilling efforts, the financing of a joint production center, or the financing of a motion picture effort. Many international efforts to expand production or markets involve joint ventures either with foreign-based companies or with foreign governments. A recent phenomenon is the formation of research joint ventures in which two or more corporations agree to share the costs and eventual research accomplishments of a separate research laboratory. The venturers might not have equal ownership interests; a venturer's share could be as low as 5 or 10 percent or as high as 90 or 95 percent. Many joint ventures of only two venturers, called 50 percent—owned ventures, divide the ownership share equally.

A joint venture may be organized as a corporation, partnership, or undivided interest. A corporate joint venture is usually formed for long-term projects such as developing and sharing of technical knowledge among a small group of companies. The incorporation of the joint venture formalizes the legal relationships between the venturers and limits each investor's liability to the amount of her or his investment in the venture. The venture's stock is not traded publicly, and the venturers usually have other business transactions between them. Accounting for a corporate joint venture is guided by ASC 323 which requires that investors use the equity method to account for their investments in the common stock of corporate joint ventures.

When one corporation controls another, the controlled corporation is considered a subsidiary rather than a corporate joint venture even if it has a small number of other owners. A subsidiary should be consolidated by the controlling owner, and a noncontrolling interest recognized for the interests of other owners.

A partnership joint venture is accounted for as any other partnership. All facets of partnership accounting presented in the chapter apply to these partnerships, each of which has its own accounting records. Some joint ventures are accounted for on one of the venturer's books; however, this combined accounting does not fully reflect the fact that the joint venture is a separate reporting entity. Each partner, or venturer, maintains an investment account on its books for its share of the partnership venture capital. The investment in the partnership account is debited for the initial investment and for the investor's share of subsequent profits. Withdrawals and shares of losses are credited to the investment account; its balance should correspond to the balance in the partner's capital account shown on the joint venture partnership's statements.

ASC 323, states that intercompany profits should be eliminated and the investor-partners should record their shares of the venture's income or loss in the same manner as with the equity method. For financial reporting purposes, if one of the investor-venturers in fact controls the joint venture, she or he should consolidate the joint venture into its financial statements. If all investor-venturers maintain joint control, then the one-line equity method should be used to report the investment in the joint venture.

Accounting for unincorporated joint ventures that are undivided interests usually follows the accounting method used by partnerships. An undivided interest exists when each investor-venturer owns a proportionate share of each asset and is proportionately liable for its share of each liability. Some established industry practices, especially in oil and gas venture accounting, provide for a pro rata recognition of a venture's assets, liabilities, revenue, and expenses. For example, assume that both A Company and B Company are 50 percent investors in a joint venture, called JTV, for the purposes of oil exploration. The JTV venture has plant assets of \$500,000 and long-term liabilities of \$200,000. Therefore, both A Company and B Company have an investment of \$150,000 ( $$300,000 \times 0.50$ ). Under the method, the balance sheets of both A and B companies report the investment as a \$150,000 investment in joint venture.

International Accounting Standard No. 31, "Interests in Joint Ventures" (IAS 31), specifies the reporting of joint ventures under international accounting financial reporting standards. IAS 31 identifies three types of joint ventures: (1) jointly controlled operations, for which each venturer recognizes the assets that it controls and the liabilities and the expenses it incurs and its share of the joint venture's income, (2) jointly controlled assets, for which each venturer recognizes its share of the jointly controlled assets, any liabilities it has incurred plus its share of any liabilities the joint venture incurred, and its share of the income together with its share of the expenses incurred from the joint venture's operations plus any expenses that the individual venturer has incurred from its interest in the joint venture, and (3) jointly controlled entities, for which each venturer recognizes its interest in the joint venture using proportionate consolidation or the equity method.

Under the proportionate consolidation method, each venturer recognizes a pro rata share of the assets, liabilities, income, and expenses of the jointly controlled entity. This approach is illustrated in the JTV example. In this case, assets of \$250,000 (\$500,000  $\times$  0.50) and liabilities of \$100,000 (\$200,000  $\times$  0.50) are added to the present assets and liabilities of each investor-venturer. The proportionate share of the assets and liabilities should be added to similar items in the investor's financial statements. The same pro rata method is also used for the joint venture's revenue and expenses. A comparison of the equity method and the proportionate consolidation for venturer A Company is presented in Figure 15–3.

Joint ventures provide their investors flexibility as to management, operations, and the division of profits or losses. However, companies need to be aware of ASC 810. When an investor does not have a majority stock ownership, contractual or other agreements may specify the allocation of the entity's profits or losses. ASC 810 specifies that consolidation of a variable interest entity (VIE) is required if an investor will absorb a majority of its expected losses or receive a majority of the entity's expected return. Therefore, an equity investor not having a controlling financial interest may be determined to be the primary beneficiary of the VIE and thus be required to fully consolidate that entity.

Real estate development is often conducted through joint ventures. Accounting for noncontrolling interests in real estate joint ventures is guided by ASC 970, which recommends the use of the equity method to account for noncontrolling investments in corporate or noncorporate real estate ventures.

A joint venture also makes footnote disclosures to present additional details about the its formation and operation, its methods of accounting, and a summary of its financial position and earnings.

Another form of business association is the syndicate, which is usually short term and has a defined single purpose, such as developing a financing proposal for a corporation. Syndicates are typically very informal; nevertheless, the legal relationships between the parties should be clearly specified before beginning the project.

FIGURE 15-3 **Comparative Balance** Sheets for Reporting a Joint Venture

| Question | ıs      |   |
|----------|---------|---|
| LO 15-1  | Q15-1   | Why is the partnership form of business organization sometimes preferred over the corporate or sole proprietorship forms?   |
| LO 15-1  | Q15-2   | What is the Uniform Partnership Act of 1997 and what is its relevance to partnership accounting?  |
| LO 15-1  | Q15-3   | What items are typically included in the partnership agreement?   |
| LO 15-1  | Q15-4   | Define the following features of a partnership: $(a)$ separate business entity, $(b)$ agency relationship, and $(c)$ partner's joint and several liability.   |
| LO 15-4  | Q15-5   | Under what circumstances would a partner's capital account have a debit, or deficiency, balance? How is the deficiency usually eliminated?  |
| LO 15-5  | Q15-6   | A partnership agreement specifies that profits will be shared in the ratio of 4:6:5. What percentage of profits will each partner receive? Allocate a profit of \$60,000 to each of the three partners.   |
| LO 15-5  | Q15-7   | The Good-Nite partnership agreement includes a provision for profit distribution of interest on capital balances. Unfortunately, the provision does not state the specific capital balance to be used in computing the profit share. What choices of capital balances are available to the partners? What is the preferred capital balance to be used in an interest allocation? Why?               |
| LO 15-4  | Q15-8   | Are salaries to partners a partnership expense? Why or why not?   |
| LO 15-6  | Q15-9   | Does a partner leaving the partnership require the partnership to dissolve and wind up its business? Explain how the partnership may purchase the dissociated partner's interest in the partnership.  |
| LO 15-6  | Q15-10  | What is the book value of a partnership? Does book value also represent its market value?   |
| LO 15-6  | Q15-11  | Present the arguments for and against the bonus method of recognizing the admission of a new partner.   |
| LO 15-6  | Q15-12  | In which cases of a new partner's admission does the credit to capital equal the new partners' investment? In which cases of a new partner's admission is his or her capital credit less than or more than the amount of the investment?  |
| LO 15-5  | Q15-13  | Aabel, a partner in the ABC Partnership, receives a bonus of 15 percent of income. If income for the period is \$20,000, what is Aabel's bonus, assuming that it is computed as a percentage of income <i>before</i> the bonus? What is the bonus if it is computed as a percentage of income <i>after</i> deducting the bonus?   |
| LO 15-6  | Q15-14  | Caine, a new partner in the ABC Partnership, has invested \$12,000 for a one-third interest in a partnership with capital of \$21,000 before Caine's admission. What is the ABC Partnership's implied fair value? If the partners agree to recognize goodwill for the difference between the book value and fair value, present the entries the ABC Partnership should make upon Caine's admission. |
|          | Q15-15A | S. Horton contributes assets with a book value of \$5,000 to a partnership. The assets have a market value of \$10,000 and a remaining liability of \$2,000 that the partnership assumes. If the liability is shared equally with the other three partners, what is the basis of Horton's contribution for tax purposes? For GAAP purposes?   |
|          | Q15-16B | What is a joint venture? How are corporate joint ventures accounted for on the books of the investor companies?   |

## Cases

LO 15-1, 15-5 C15-1 **Partnership Agreement** 

Judgment

Nitty and Gritty are considering the formation of a partnership to operate a crafts and hobbies store. They have come to you to obtain information about the basic elements of a partnership agreement. These agreements usually specify an income and loss-sharing ratio. They also may

<sup>&</sup>quot;A" indicates that the item relates to Appendix 15A, and "B" indicates that the item relates to Appendix 15B.

provide for additional income and loss-sharing features such as salaries, bonuses, interest allowances on invested capital.

## Required

- a. Discuss why a partnership agreement may need features in addition to the income and losssharing ratio.
- b. Discuss the arguments in favor of recording salary and bonus allowances to partners as expenses included in computing net income.
- c. What are the arguments against recording salary and bonus allowances to partners as partnership expenses?
- d. Some partnership agreements provide for interest on invested capital in distributing income to the individual partners. List the additional provisions that should be included so the interest amounts can be computed.

#### LO 15-6

Communication

### C15-2 Comparisons of Bonus, Goodwill, and Asset Revaluation Methods

Bill, George, and Anne are partners in the BGA Partnership. A difference of opinion exists among the partners as to how to account for Newt's admission as a new partner. The three present partners have the following positions:

Bill wants to use the bonus method.

George believes the goodwill method is best.

Anne wants to revalue the existing tangible assets.

You have been called in to advise the three partners.

#### Required

Prepare a memo discussing the three different methods of accounting for the admission of a new partner, including consideration of the effects on partnership capital in the year Newt is admitted and on the capital balances in future years.

#### LO 15-1

#### C15-3 **Uniform Partnership Act Issues**

(Note: Obtain a copy of the Uniform Partnership Act of 1997 [UPA 1997] for answering this case question. The UPA 1997 can be obtained from your university's general library, law library, or the Internet.)

### Research

You are in a group that is considering forming a partnership to purchase a coffee shop located near your campus. The coffee shop offers freshly brewed coffee and rolls in the morning and soup and sandwiches the remainder of the day. During your preliminary discussions, several issues have emerged for which your group needs additional information.

#### Reauired

Research and provide a written summary for the following:

- a. Does every partner in fact have the right to serve as an agent of the partnership and bind the partnership by that individual partner's actions in carrying out the partnership business?
- b. If a new partner is admitted after the partnership operates for a time, what is the new partner's liability for partnership obligations arising before his or her admission? What is the new partner's liability for obligations of the partnership incurred after his or her admission?
- c. Should all partners be able to examine the accounting records (the partnership's books) at
- d. What happens if the term of the partnership is set at one year and the partners decide to continue doing business? Is a new partnership agreement necessary at that time?
- e. What happens if an individual partner wishes to leave the partnership? Can that person just announce to the other partners that he or she no longer wishes to be in the partnership and will not be liable for any future partnership obligations? What are the rights of the other partners in this matter?
- f. What items do you believe should be in the partnership agreement prepared before actually agreeing to form the partnership?

## C15-4 Defining Partners' Authority

## **Understanding**

Adam, Bob, and Cathy are planning to form a partnership to create a business that will retail cell phones in a new shopping center just completed in their city. They have been able to reach agreement on many issues, but Cathy is still concerned that Adam might become a little irresponsible and use his position as a partner and the partnership's name in business transactions that Cathy would not approve for the partnership. Cathy feels that Adam has superb marketing skills that will benefit the business, but she wonders what he might do in regard to transactions with third parties on behalf of the partnership.

## Required

Prepare a memo to Cathy discussing each partner's rights to engage in transactions on behalf of the partnership and how a partnership can restrict a partner's authority to engage in specific types of transactions.

#### LO 15-4, 15-5

## C15-5 Preferences for Using GAAP for Partnership Accounting

## Understanding

You are providing accounting services for the JR Company partnership. The two partners, Jason and Richard, are thinking of adding a third partner to their business, and they have several questions regarding the use of GAAP for their partnership.

#### Required

Prepare a memo for the partners addressing each of their questions.

- a. Why are salaries to partners not shown on the partnership's income statement prepared using GAAP?
- b. Why should the partnership use GAAP to account for the admission of a new partner? Why is it not preferable for the partnership to recognize holding gains on its long-lived assets at the time of admitting the third partner? (The two partners argue that recognizing these gains now would allocate them to the partners who were growing the business prior to a new partner's admission.)
- c. Why should the partners and the partnership fully analyze all the partnership's liabilities to ensure that there are no unrecognized liabilities when a new partner is admitted? (The two partners feel this is an unnecessary cost because an unpaid supplier will simply send another bill in the future.)

## **Exercises**

#### LO 15-3

## E15-1 Multiple-Choice on Initial Investment [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. On May 1, 20X1, Cathy and Mort formed a partnership and agreed to share profits and losses in the ratio of 3:7, respectively. Cathy contributed a parcel of land that cost her \$10,000. Mort contributed \$40,000 cash. The land was sold for \$18,000 immediately after the partnership's formation. What amount should be recorded in Cathy's capital account at the time the partnership is formed the partnership's?
  - a. \$18,000.
  - b. \$17,400.
  - c. \$15,000.
  - d. \$10,000.
- On July 1, 20X1, James and Short formed a partnership. James contributed cash. Short, previously a sole proprietor, contributed property other than cash, including realty subject to a mortgage, which the partnership assumed. Short's capital account on July 1, 20X1, should be recorded at
  - a. Short's book value of the property on July 1, 20X1.
  - b. Short's book value of the property less the mortgage payable on July 1, 20X1.
  - c. The property's fair value less the mortgage payable on July 1, 20X1.
  - d. The property's fair value on July 1, 20X1.

- 3. Two individuals who were previously sole proprietors form a partnership. Property other than cash that is part of the initial investment in the partnership is recorded for financial accounting purposes at the
  - a. Proprietors' book values or the property's fair value on the date of the investment, whichever is higher.
  - b. Proprietors' book values or the property's fair value on the date of the investment, whichever is lower.
  - c. Proprietors' book values of the property on the date of the investment.
  - d. Property's fair value at the date of the investment.
- 4. Mutt and Jeff formed a partnership on April 1 and contributed the following assets:

|              | Mutt      | Jeff                 |
|--------------|-----------|----------------------|
| Cash<br>Land | \$150,000 | \$ 50,000<br>310,000 |

The land was subject to a \$30,000 mortgage, which the partnership assumed. Under the partnership agreement, Mutt and Jeff share profit and loss in the ratio of one-third and two-thirds, respectively. Jeff's capital account at April 1 should be

- a. \$300,000.
- b. \$330,000.
- c. \$340,000.
- d. \$360,000.
- 5. On July 1, Mabel and Pierre formed a partnership, agreeing to share profits and losses in the ratio of 4:6, respectively. Mabel contributed a parcel of land that cost her \$25,000. Pierre contributed \$50,000 cash. The land was sold for \$50,000 on July 1, four hours after formation of the partnership. How much should be recorded in Mabel's capital account on the partnership formation?
  - a. \$10,000.
  - b. \$20,000.
  - c. \$25,000.
  - d. \$50,000.

LO 15-5

## E15-2 Division of Income—Multiple Bases

The partnership agreement of Angela and Dawn has the following provisions:

- 2. Angela and Dawn are to earn salaries of \$25,000 and \$15,000, respectively.
- 3. Any remaining income or loss is to be divided between Angela and Dawn using a 70:30 ratio.

Angela's average capital is \$50,000 and Dawn's is \$30,000.

#### Reauired

Prepare an income distribution schedule assuming the income of the partnership is (a) \$80,000 and (b) \$20,000. If no partnership agreement exists, what does the UPA 1997 prescribe as the profit or loss distribution percentages?

LO 15-5

StudyGuide

.com

#### E15-3 Division of Income—Interest on Capital Balances

Left and Right are partners. Their capital accounts during 20X1 were as follows:

| Left, Capital Right, Cap | Right, Capital |                         |  |
|--------------------------|----------------|-------------------------|--|
| 4/3 8,000                | 7/6            | 0,000<br>7,000<br>5,000 |  |

Partnership net income is \$50,000 for the year. The partnership agreement provides for the division of income as follows:

- 1. Each partner is to be credited 8 percent interest on his or her average capital.
- 2. Any remaining income or loss is to be divided equally.

Prepare an income distribution schedule.

#### Distribution of Partnership Income and Preparation of a Statement of E15-4 **Partners' Capital**

The income statement for the Apple-Jack Partnership for the year ended December 31, 20X5, follows:

| APPLE-JACK PARTNERSHIP Income Statement For the Year Ended December 31, 20X5 |           |  |  |  |  |  |
|--|-----------|--|--|--|--|--|
| Net Sales  | \$300,000 |  |  |  |  |  |
| Cost of Goods Sold   | (190,000) |  |  |  |  |  |
| Gross Margin   | \$110,000 |  |  |  |  |  |
| Operating Expenses   | (30,000)  |  |  |  |  |  |
| Net Income   | \$ 80,000 |  |  |  |  |  |

### Additional Information for 20X5

- 1. Apple began the year with a capital balance of \$40,800.
- 2. Jack began the year with a capital balance of \$112,000.
- 3. On April 1, Apple invested an additional \$15,000 into the partnership.
- 4. On August 1, Jack invested an additional \$20,000 into the partnership.
- 5. Throughout 20X5, each partner withdrew \$400 per week in anticipation of partnership net income. The partners agreed that these withdrawals are not to be included in the computation of average capital balances for purposes of income distributions.

Apple and Jack have agreed to distribute partnership net income according to the following plan:

|   | Apple    | Jack     |
|---|----------|----------|
| 1. Interest on average capital balances                       | 6%       | 6%       |
| 2. Bonus on net income before the bonus but after interest on |          |          |
| average capital balances                                      | 10%      |          |
| 3. Salaries   | \$25,000 | \$30,000 |
| 4. Residual (if positive)                                     | 70%      | 30%      |
| Residual (if negative)  | 50%      | 50%      |

#### Required

- a. Prepare a schedule that discloses the distribution of partnership net income for 20X5. Show supporting computations in good form. Round to the nearest dollar.
- b. Prepare the statement of partners' capital at December 31, 20X5.
- c. How would your answer to part a change if all of the provisions of the income distribution plan were the same except that the salaries were \$30,000 to Apple and \$35,000 to Jack?

#### LO 15-1–15-6 **E15-5**

#### **Matching Partnership Terms with Their Descriptions**

#### Required

Match the descriptions on the left with the terms on the right. A term may be used once, more than once, or not at all.

#### **Descriptions of Terms**

- 1. Item that occurs when the new partner's investment exceeds the new partner's capital credit.
- 2. Partner who cannot actively participate in the management of the partnership.
- 3. A allocation of partnership profits and losses when nothing is stated in the partnership agreement.
- 4. Item that occurs when the new partner's investment equals the new partner's capital credit and no change occurs in the existing partners' capital balances.
- 5. Cost not deducted to determine the partnership's net income for the period.
- 6. Partner who actively participates in the partnership management and who is personally liable for the partnership's debts.
- 7. Item that occurs when the new partner's capital credit exceeds his or her investment and no change occurs in the existing partners' capital balances.
- 8. Account that increases when a partner takes assets out of the partnership in anticipation of partnership net income.
- 9. Account that increases for the fair value of noncash assets invested by a partner.
- 10. Related-party transaction that must be disclosed in the notes to the financial statements.
- 11. Item that occurs when the new partner's investment equals his or her capital credit and an increase occurs in the existing partners' capital balances.
- 12. Item that occurs when the new partner's capital credit exceeds his or her investment and a decrease occurs in the existing partners' capital balances.
- 13. Recognition of an intangible asset upon a new partner's admission to the partnership that results in increases in the existing partners' capital balances.
- 14. Account closed to the capital account at year-end.
- 15. Deduction of interest expense on this payable to determine the partnership's net income.

#### Terms

- A. General partner
- B. Note payable to a partner
- C. Recognition of neither bonus nor goodwill
- D. Drawing account
- E. Limited partner
- F. Bonus to existing partners
- G. Interest on capital accounts
- H. Partnership income or loss shared equally
- I. New partner's goodwill recognized
- J. Existing partners' goodwill recognized
- K. Partnership agreement
- L. Bonus to new partner
- M. Capital account

#### LO 15-6

#### E15-6 Admission of a Partner

In the GMP partnership (to which Elan seeks admittance), the capital balances of Mary, Gene, and Pat, who share income in the ratio of 6:3:1, are

| \$240,000 |
|-----------|
| 120,000   |
| 40,000    |
|           |

#### Required

- a. If no goodwill or bonus is recorded, how much must Elan invest for a one-third interest?
- b. Prepare journal entries for the admission of Elan if she invests \$80,000 for a 20 percent interest and goodwill is recorded.
- c. Prepare journal entries for the admission of Elan if she invests \$200,000 for a 20 percent interest. Total capital will be \$600,000; the partners use the bonus method.
- d. Elan is concerned that she may be held liable for the partnership liabilities existing on the day she is admitted to the GMP partnership. She found nothing in the partnership agreement on this item. What does the UPA 1997 state with regard to the liability of a new partner for partnership obligations incurred prior to admission?

#### LO 15-6 E15-7 Admission of a Partner

Pam and John are partners in PJ's partnership, having capital balances of \$120,000 and \$40,000, respectively, and share income in a ratio of 3:1. Gerry is to be admitted into the partnership with a 20 percent interest in the business.

#### Required

For each of the following independent situations, first record Gerry's admission into the partnership and then specify and briefly explain why the accounting method used in that situation is GAAP or non-GAAP.

- a. Gerry invests \$50,000, and goodwill is to be recorded.
- b. Gerry invests \$50,000. Total capital is to be \$210,000; the partners use the bonus method.
- c. Gerry purchases the 20 percent interest by directly paying Pam \$50,000. Gerry is assigned 20 percent interest in the partnership solely from Pam's capital account.
- d. Gerry invests \$35,000. Total capital is to be \$195,000; the partners use the bonus method.
- e. Gerry invests \$35,000, and goodwill is to be recorded.
- f. Gerry invests \$35,000. During the valuation process made as part of admitting the new partner, the partnership's inventory is determined to be overvalued by \$20,000 because of obsolescence. PJ's partnership uses the lower-of-cost-or-market value method for inventories.

#### LO 15-6 E15-8 Multiple-Choice Questions on the Admission of a Partner

Select the correct answer for each of the following questions.

(Note: The following balance sheet is for the partnership of Alex, Betty, and Claire in questions 1 and 2.)

| Cash                        | \$ 20,000 |
|-----------------------------|-----------|
| Other Assets                | _180,000  |
|                             | \$200,000 |
| Liabilities                 | \$ 50,000 |
| Alex, Capital (40%)         | 37,000    |
| Betty, Capital (40%)        | 65,000    |
| Claire, Capital (20%)       | 48,000    |
| Total Liabilities & Capital | \$200,000 |
|                             |           |

(Note: Figures shown parenthetically reflect agreed-upon profit and loss–sharing percentages.)

- 1. If the assets are fairly valued on this balance sheet and the partnership wishes to admit Denise as a new one-sixth-interest partner without recording goodwill or bonus, Denise should contribute cash or other assets of
  - a. \$40,000.
  - b. \$36,000.
  - c. \$33,333.
  - d. \$30,000.
- 2. If assets on the initial balance sheet are fairly valued, Alex and Betty give their consent, and Denise pays Claire \$51,000 for her interest, the revised capital balances of the partners would be
  - a. Alex, \$38,000; Betty, \$66,500; Denise, \$51,000.
  - b. Alex, \$38,500; Betty, \$66,500; Denise, \$48,000.
  - c. Alex, \$37,000; Betty, \$65,000; Denise, \$51,000.
  - d. Alex, \$37,000; Betty, \$65,000; Denise, \$48,000.
- 3. On December 31, 20X4, Alan and Dave are partners with capital balances of \$80,000 and \$40,000, and they share profit and losses in the ratio of 2:1, respectively. On this date, Scott invests \$36,000 cash for a 20 percent interest in the capital and profit of the new partnership.

The partners agree that the implied partnership goodwill is to be recorded simultaneously with Scott's admission. The firm's total implied goodwill is

- a. \$4,800.
- b. \$6,000.
- c. \$24,000.
- d. \$30,000.
- 4. Boris and Richard are partners who share profits and losses in the ratio of 6:4. On May 1, 20X9, their respective capital accounts were as follows:

| Boris   | \$60,000 |
|---------|----------|
| Richard | 50,000   |

On that date, Lisa was admitted as a partner with a one-third interest in capital and profits for an investment of \$40,000. The new partnership began with a total capital of \$150,000. Immediately after Lisa's admission, Boris's capital should be

- a. \$50,000.
- b. \$54,000.
- c. \$56,667.
- d. \$60,000.
- 5. At December 31, Rod and Sheri are partners with capital balances of \$40,000 and \$20,000, and they share profits and losses in the ratio of 2:1, respectively. On this date, Pete invests \$17,000 in cash for a 20 percent interest in the new partnership's capital and profit. Assuming that the bonus method is used, how much should be credited to Pete's capital account on December 31?
  - a. \$12,000.
  - b. \$15,000.
  - c. \$15,400.
  - d. \$17,000.
- 6. The capital accounts of the partnership of Ella, Nick, and Brandon follow with their respective profit and loss ratios:

| Ella    | \$139,000 | (.500) |
|---------|-----------|--------|
| Nick    | 209,000   | (.333) |
| Brandon | 96,000    | (.167) |
|         |           |        |

Tony was admitted to the partnership when he purchased directly, for \$132,000, a proportionate interest from Ella and Nick in the partnership's net assets and profits. As a result, Tony acquired a 20 percent interest in the firm's net assets and profits. Assuming that implied goodwill is not to be recorded, what is the combined gain realized by Ella and Nick upon the sale of a portion of their partnership interests to Tony?

- a. \$0.
- b. \$43,200.
- c. \$62,400.
- d. \$82,000.
- 7. Fred and Ralph are partners who share profits and losses in the ratio of 7:3, respectively. Their respective capital accounts are as follows:

| Fred  | \$35,000 |
|-------|----------|
| Ralph | 30,000   |

They agreed to admit Lute as a partner with a one-third interest in the capital and profits and losses upon an investment of \$25,000. The new partnership will begin with total capital of \$90,000. Immediately after Lute's admission, what are the capital balances of Fred, Ralph, and Lute, respectively?

- a. \$30,000, \$30,000, \$30,000.
- b. \$31,500, \$28,500, \$30,000.
- c. \$31,667, \$28,333, \$30,000.
- d. \$35,000, \$30,000, \$25,000.
- 8. If A is the total capital of a partnership before the admission of a new partner, B is the total capital of the partnership after the new partner's investment, C is the amount of the new partner's investment, and D is the amount of capital credit to the new partner, then there is
  - a. A bonus to the new partner if B = A + C and D < C.
  - b. Goodwill to the old partners if B > (A + C) and D = C.
  - c. Neither bonus nor goodwill if B = A C and D > C.
  - d. Goodwill to the new partner if B > (A + C) and D < C.

#### LO 15-6

#### E15-9 Withdrawal of a Partner

In the LMK partnership, Luis's capital is \$40,000, Marty's is \$50,000, and Karl's is \$30,000. They share income in a 4:1:1 ratio, respectively. Karl is retiring from the partnership.

Prepare journal entries to record Karl's withdrawal according to each of the following independent assumptions:

- a. Karl is paid \$38,000, and no goodwill is recorded.
- b. Karl is paid \$42,000, and only his share of the goodwill is recorded.
- c. Karl is paid \$35,000, and all implied goodwill is recorded.
- d. Prepare a one-paragraph note summarizing the guidance the UPA 1997 offers on computing the buyout price for a partner who is retiring from the partnership.

StudyGuide

.com

#### E15-10 **Retirement of a Partner**

On January 1, 20X1, Eddy decides to retire from the partnership of Cobb, Davis, and Eddy. The partners share profits and losses in the ratio of 3:2:1, respectively. The following condensed balance sheets present the account balances immediately before and, for six independent cases, after Eddy's retirement.

|                             | Balances prior          |           | Bala      | nces after E | ces after Eddy's Retirement |           |           |  |
|-----------------------------|-------------------------|-----------|-----------|--------------|-----------------------------|-----------|-----------|--|
| Accounts                    | to Eddy's<br>Retirement | Case 1    | Case 2    | Case 3       | Case 4                      | Case 5    | Case 6    |  |
| Assets:                     |                         |           |           |              |                             |           |           |  |
| Cash                        | \$ 90,000               | \$ 10,000 | \$ 16,000 | \$ 25,000    | \$ 16,000                   | \$ 50,000 | \$ 90,000 |  |

#### Required

Prepare the necessary journal entries to record Eddy's retirement from the partnership for each of the six independent cases.

## **Problems**

LO 15-6

#### P15-11 **Admission of a Partner**

Debra and Merina sell electronic equipment and supplies through their partnership. They wish to expand their computer lines and decide to admit Wayne to the partnership. Debra's capital is \$200,000, Merina's capital is \$160,000, and they share income in a ratio of 3:2, respectively.

#### Reauired

Record Wayne's admission for each of the following independent situations:

- a. Wayne directly purchases half of Merina's investment in the partnership for \$90,000.
- b. Wayne invests the amount needed to give him a one-third interest in the partnership's capital if no goodwill or bonus is recorded.
- c. Wayne invests \$110,000 for a 25 percent interest. Goodwill is to be recorded.
- d. Debra and Merina agree that some of the inventory is obsolete. The inventory account is decreased before Wayne is admitted. Wayne invests \$100,000 for a 25 percent interest.
- e. Wayne directly purchases a 25 percent interest by paying Debra \$80,000 and Merina \$60,000. The land account is increased before Wayne is admitted.
- f. Wayne invests \$80,000 for a 20 percent interest in the total capital of \$440,000.
- g. Wayne invests \$100,000 for a 20 percent interest. Goodwill is to be recorded.

| 9/1 | 8,000                | 1/1 | 30,000 | 3/1 | 9,000             | 1/1 | 40,000 | 8/1 | 12,000 | 1/1      | 50,000 |
|     |                      | 5/1 | 6,000  |     |                   | 7/1 | 5,000  |     |        | 4/1      | 7,000  |
|     |                      |     |        |     |                   | 9/1 | 4,000  |     |        | 6/1      | 3,000  |

#### Reauired

For each of the following independent income-sharing agreements, prepare an income distribution

- a. Salaries are \$15,000 to Eastwood, \$20,000 to North, and \$18,000 to West. Eastwood receives a bonus of 5 percent of net income after deducting his bonus. Interest is 10 percent of ending capital balances. Eastwood, North, and West divide any remainder in a 3:3:4 ratio, respectively. Net income was \$78,960.
- b. Interest is 10 percent of weighted-average capital balances. Salaries are \$24,000 to Eastwood, \$21,000 to North, and \$25,000 to West. North receives a bonus of 10 percent of net income after deducting the bonus and her salary. Any remainder is divided equally. Net income was \$68,080.
- c. West receives a bonus of 20 percent of net income after deducting the bonus and the salaries. Salaries are \$21,000 to Eastwood, \$18,000 to North, and \$15,000 to West. Interest is 10 percent of beginning capital balances. Eastwood, North, and West divide any remainder in an 8:7:5 ratio, respectively. Net income was \$92,940.

LO 15-6

#### **Determining a New Partner's Investment Cost** P15-13

The following condensed balance sheet is presented for the partnership of Der, Egan, and Oprins, who share profits and losses in the ratio of 4:3:3, respectively.

| Cash         | \$ 40,000 | Accounts Payable            | \$150,000 |
|--------------|-----------|-----------------------------|-----------|
| Other Assets | 710,000   | Der, Capital                | 260,000   |
|              |           | Egan, Capital               | 180,000   |
|              |           | Oprins, Capital             | 160,000   |
| Total Assets | \$750,000 | Total Liabilities & Capital | \$750,000 |

Assume that the partnership decides to admit Snider as a new partner with a 25 percent interest.

#### Required

For each of the following independent cases, determine the amount that Snider must contribute in cash or other assets.

- a. No goodwill or bonus is to be recorded.
- b. Goodwill of \$30,000 is to be recorded and allocated to the original partners.
- c. A bonus of \$24,000 is to be paid by Snider and allocated to the original partners.
- d. The original partners, Der, Egan, and Oprins, agree to give Snider \$10,000 of goodwill upon admission to the partnership.
- e. Other assets are revalued for an increase of \$20,000, and goodwill of \$40,000 is recognized and allocated to the original partners at the time of Snider's admission.
- f. The partners agree that total resulting capital should be \$820,000 and no goodwill should be recognized.
- g. Other assets are revalued down by \$20,000 and a bonus of \$40,000 is paid to Snider at the time of admission.

LO 15-5

#### **Division of Income** P15-14

| Luc, Capital |        |            |                 | Dennis, | Capita | ı <b>l</b> |                  |
|--------------|--------|------------|-----------------|---------|--------|------------|------------------|
| 8/1          | 15,000 | 1/1<br>4/1 | 50,000<br>5,000 | 7/1     | 10,000 | 1/1<br>9/1 | 70,000<br>22,500 |

#### Reauired

For each of the following independent situations, prepare an income distribution schedule.

- a. Interest is based on weighted-average capital balances. The 5 percent bonus is calculated on net income after deducting the bonus. In 20X3, net income was \$64,260. Any remainder is divided between Luc and Dennis in a 3:2 ratio, respectively.
- b. Interest is based on ending capital balances after deducting salaries, which the partners normally withdraw during the year. The 8 percent bonus is calculated on net income after deducting the bonus and salaries. Net income was \$108,700. Any remainder is divided equally.
- c. Interest is based on beginning capital balances. The 12.5 percent bonus is calculated on net income after deducting the bonus. Net income was \$76,950. Any remainder is divided between Luc and Dennis in a 4:2 ratio, respectively.

LO 15-6

#### Withdrawal of a Partner under Various Alternatives

The partnership of Ace, Jack, and Spade has been in business for 25 years. On December 31, 20X5, Spade decided to retire. The partnership balance sheet reported the following capital balances for each partner at December 31, 20X5:

| \$150,000 |
|-----------|
| 200,000   |
| 120,000   |
|           |

The partners allocate partnership income and loss in the ratio 20:30:50, respectively.

#### Required

Record Spade's withdrawal under each of the following independent situations.

- a. Jack acquired Spade's capital interest for \$150,000 in a personal transaction. Partnership assets were not revalued, and partnership goodwill was not recognized.
- b. Assume the same facts as in part a except that partnership goodwill applicable to the entire business was recognized by the partnership.

- c. Spade received \$180,000 of partnership cash upon retirement. Capital of the partnership after Spade's retirement was \$290,000.
- d. Spade received \$60,000 of cash and partnership land with a fair value of \$120,000. The carrying amount of the land on the partnership books was \$100,000. Capital of the partnership after Spade's retirement was \$310,000.
- e. Spade received \$150,000 of partnership cash upon retirement. The partnership recorded the portion of goodwill attributable to Spade.
- f. Assume the same facts as in part e except that partnership goodwill attributable to all partners was recorded.
- g. Because of limited cash in the partnership, Spade received land with a fair value of \$100,000 and a partnership note payable for \$50,000. The land's carrying amount on the partnership books was \$60,000. Capital of the partnership after Spade's retirement was \$360,000.

#### LO 15-5-15-6 P15-16

#### Multiple-Choice Questions—Initial Investments, Division of Income, Admission and Retirement of a Partner [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. When property other than cash is invested in a partnership, at what amount should the noncash property be credited to the contributing partner's capital account?
  - a. Contributing partner's tax basis.
  - b. Contributing partner's original cost.
  - c. Assessed valuation for property tax purposes.
  - d. Fair value at the date of contribution.
- 2. William and Martha drafted a partnership agreement that lists the following assets contributed at the partnership's formation:

|                       | Contributed by |          |  |
|-----------------------|----------------|----------|--|
|                       | William        | Martha   |  |
| Cash                  | \$20,000       | \$30,000 |  |
| Inventory             |                | 15,000   |  |
| Building              |                | 40,000   |  |
| Furniture & Equipment | 15,000         |          |  |

The building is subject to a \$10,000 mortgage, which the partnership has assumed. The partnership agreement also specifies that profits and losses are to be distributed evenly. What amounts should be recorded as capital for William and Martha at the partnership's formation?

|    | William  | Martha   |
|----|----------|----------|
| a. | \$35,000 | \$85,000 |
| b. | \$35,000 | \$75,000 |
| C. | \$55,000 | \$55,000 |
| d. | \$60,000 | \$60,000 |
|    |          |          |

- 3. Smith and Duncan are partners with capital balances of \$60,000 and \$20,000, respectively. Profits and losses are divided in the ratio of 60:40. Smith and Duncan decided to form a new partnership with Johnson, who invested land valued at \$15,000 for a 20 percent capital interest in the new partnership. Johnson's cost of the land was \$12,000. The partnership elected to use the bonus method to record Johnson's admission into the partnership. Johnson's capital account should be credited for
  - a. \$12,000.
  - b. \$15,000.
  - c. \$16,000.
  - d. \$19,000.

- 4. On April 30, 20X5, Apple, Blue, and Crown formed a partnership by combining their separate business proprietorships. Apple contributed \$50,000 cash. Blue contributed property with a \$36,000 carrying amount, a \$40,000 original cost, and \$80,000 fair value. The partnership accepted responsibility for the property's \$35,000 mortgage. Crown contributed equipment with a \$30,000 carrying amount, a \$75,000 original cost, and \$55,000 fair value. The partnership agreement specifies that profits and losses are to be shared equally but is silent regarding capital contributions. Which partner's capital account has the largest April 30, 20X5, balance?

  - b. Blue.
  - c. Crown.
  - d. All capital account balances are equal.

(Note: The following information is for questions 5 and 6.)

The Moon-Norbert Partnership was formed on January 2, 20X5. Under the partnership agreement, each partner has an equal initial capital balance accounted for under the goodwill method. Partnership net income or loss is allocated 60 percent to Moon and 40 percent to Norbert. To form the partnership, Moon originally contributed assets costing \$30,000 with a fair value of \$60,000 on January 2, 20X5, and Norbert contributed \$20,000 in cash. Partners' drawings during 20X5 totaled \$3,000 by Moon and \$9,000 by Norbert. Moon-Norbert's net income for 20X5 was \$25,000.

- 5. Norbert's initial capital balance in Moon-Norbert is
  - a. \$20,000.
  - b. \$25,000.
  - c. \$40,000.
  - d. \$60,000.
- 6. Moon's share of Moon-Norbert's net income is
  - a. \$15,000.
  - b. \$12,500.
  - c. \$12,000.
  - d. \$7,800.
- 7. In the Crowe-Dagwood partnership, Crowe and Dagwood had a capital ratio of 3:1 and a profit and loss ratio of 2:1. They used the bonus method to record Elman's admittance as a new partner. What ratio should be used to allocate to Crowe and Dagwood the excess of Elman's contribution over the amount credited to Elman's capital account?
  - a. Crowe and Dagwood's new relative capital ratio.
  - b. Crowe and Dagwood's new relative profit and loss ratio.
  - c. Crowe and Dagwood's previous capital ratio.
  - d. Crowe and Dagwood's previous profit and loss ratio.
- 8. Blue and Green formed a partnership in 20X4. The partnership agreement provides for annual salary allowances of \$55,000 for Blue and \$45,000 for Green. The partners share profits equally and losses in a 60:40 ratio, respectively. The partnership had earnings of \$80,000 for 20X5 before any allowance to partners. What amount of these earnings should be credited to each partner's capital account?

| Blue     | Green                            |
|----------|----------------------------------|
| \$40,000 | \$40,000                         |
| \$43,000 | \$37,000                         |
| \$44,000 | \$36,000                         |
| \$45,000 | \$35,000                         |
|          | \$40,000<br>\$43,000<br>\$44,000 |

- 9. When Jill retired from the partnership of Jill, Bill, and Hill, the final settlement of her interest exceeded her capital balance. Under the bonus method, the excess
  - a. Was recorded as goodwill.
  - b. Was recorded as an expense.

- c. Reduced the capital balances of Bill and Hill.
- d. Had no effect on the capital balances of Bill and Hill.

#### LO 15-3-15-6 P15-17

#### Partnership Formation, Operation, and Changes in Ownership

The partnership of Jordan and O'Neal began business on January 1, 20X7. Each partner contributed the following assets (the noncash assets are stated at their fair values on January 1, 20X7):

|             | Jordan    | O'Neal    |
|-------------|-----------|-----------|
| Cash        | \$ 60,000 | \$ 50,000 |
| Inventories | 80,000    | 0         |
| Land        | 0         | 130,000   |
| Equipment   | 100,000   | 0         |

The land was subject to a \$50,000 mortgage, which the partnership assumed on January 1, 20X7. The equipment was subject to an installment note payable that had an unpaid principal amount of \$20,000 on January 1, 20X7. The partnership also assumed this note payable. Jordan and O'Neal agreed to share partnership income and losses in the following manner:

|  | Jordan   | O'Neal   |
|--|----------|----------|
| Interest on beginning capital balances | 3%       | 3%       |
| Salaries                               | \$12,000 | \$12,000 |
| Remainder                              | 60%      | 40%      |

During 20X7, the following events occurred:

- 1. Inventory was acquired at a cost of \$30,000. At December 31, 20X7, the partnership owed \$6,000 to its suppliers.
- 2. Principal of \$5,000 was paid on the mortgage. Interest expense incurred on the mortgage was \$2,000, all of which was paid by December 31, 20X7.
- 3. Principal of \$3,500 was paid on the installment note. Interest expense incurred on the installment note was \$2,000, all of which was paid by December 31, 20X7.
- 4. Sales on account amounted to \$155,000. At December 31, 20X7, customers owed the partnership \$21,000.
- 5. Selling and general expenses, excluding depreciation, amounted to \$34,000. At December 31, 20X7, the partnership owed \$6,200 of accrued expenses. Depreciation expense was \$6,000.
- 6. Each partner withdrew \$200 each week in anticipation of partnership profits.
- 7. The partnership's inventory at December 31, 20X7, was \$20,000.
- 8. The partners allocated the net income for 20X7 and closed the accounts.

#### Additional Information

On January 1, 20X8, the partnership decided to admit Hill to the partnership. On that date, Hill invested \$99,800 of cash into the partnership for a 20 percent capital interest. Total partnership capital after Hill was admitted totaled \$450,000.

#### Required

- a. Prepare journal entries to record the formation of the partnership on January 1, 20X7, and to record the events that occurred during 20X7.
- b. Prepare the income statement for the Jordan-O'Neal Partnership for the year ended December 31, 20X7.
- c. Prepare a balance sheet for the Jordon-O'Neal Partnership at December 31, 20X7.
- d. Prepare the journal entry for the admission of Hill on January 1, 20X8.

#### P15-18A **Initial Investments and Tax Bases [AICPA Adapted]**

The DELS partnership was formed by combining individual accounting practices on May 10, 20X1. The initial investments were as follows:

|                                   | Current Value | Tax Basis |
|-----------------------------------|---------------|-----------|
| Delaney:                          |               |           |
| Cash                              | \$ 8,000      | \$ 8,000  |
| Building                          | 60,000        | 32,000    |
| Mortgage payable, assumed by DELS | 36,000        | 36,000    |
| Engstrom:                         |               |           |
| Cash                              | 9,000         | 9,000     |
| Office furniture                  | 23,000        | 17,000    |
| Note payable, assumed by DELS     | 10,000        | 10,000    |
| Lahey:                            |               |           |
| Cash                              | 12,000        | 12,000    |
| Computers and printers            | 18,000        | 21,000    |
| Note payable, assumed by DELS     | 15,000        | 15,000    |
| Simon:                            |               |           |
| Cash                              | 21,000        | 21,000    |
| Library (books and periodicals)   | 7,000         | 5,000     |
|                                   |               |           |

## Required

- a. Prepare the journal entry to record the initial investments using GAAP accounting.
- b. Calculate the tax basis of each partner's capital if Delaney, Engstrom, Lahey, and Simon agree to assume equal amounts for the payables.

#### LO 15-3-15-6 P15-19

#### Formation of a Partnership and Allocation of Profit and Loss

Haskins and Sells formed a partnership on January 2, 20X3. Each had been a sole proprietor before forming their partnership.

#### Part I

Each partner's contributions follow. The amounts under the cost column represent the amounts reported on the books of each sole proprietorship immediately before the formation of the partnership.

|   | Cost      | Fair Value |
|---|-----------|------------|
| Haskins:                                    |           |            |
| Cash  | \$ 45,000 | \$ 45,000  |
| Inventories (FIFO)                          | 48,000    | 49,000     |
| Trade accounts receivable                   | 40,000    | 40,000     |
| Allowance for uncollectible accounts        | (1,500)   | (2,000)    |
| Building                                    | 550,000   | 370,000    |
| Accumulated depreciation                    | (200,000) |            |
| Mortgage on building assumed by partnership | (175,000) | (175,000)  |
| Sells:                                      |           |            |
| Cash  | \$ 10,000 | \$ 10,000  |
| Trade accounts receivable                   | 30,000    | 30,000     |

| Temporary investments                       | 100,000   | 81,500     |
| Customer lists                              | 0         | 60,000     |
|   |           |            |

#### Required

Using the preceding information, prepare a classified balance sheet as of January 2, 20X3, for the Haskins and Sells partnership. Assume that \$25,000 of the mortgage is due in 20X3 and that the customer lists are accounted for as an intangible asset to be amortized over a five-year period.

Part II During 20X3, the Haskins and Sells Partnership reported the following information:

| Revenues   | \$650,000         |
|--|-------------------|
| Cost of goods sold   | 320,000           |
| Selling, general, and administrative expenses  | 70,000            |
| Salaries paid to each partner (not included in selling, general, and administrative expenses): |                   |
| Haskins  | 90,000            |
| Sells  | 70,000            |
| Bonus paid to Haskins (not included in selling, general, and administrative expenses)          | 10% of net income |
| Withdrawals made during the year in addition to salaries:                                      |                   |
| Haskins  | 10,000            |
| Sells  | 5,000             |
| Residual profit and loss–sharing ratio:  |                   |
| Haskins  | 20%               |
| Sells  | 80%               |

## Required

- a. Prepare an income statement for the Haskins and Sells partnership for the year ended December 31, 20X3.
- b. Prepare a schedule that shows how to allocate the partnership net income for 20X3.
- c. What is the capital balance for each partner that will appear on the December 31, 20X3, balance sheet?
- d. Assume that the distribution of partnership net income remains the same (i.e., Haskins will continue to receive a 10 percent bonus and salaries will continue to be \$90,000 and \$70,000 to Haskins and Sells, respectively) and the residual profit and loss-sharing ratio will continue to be 20:80. What would partnership net income have to be for each partner to receive the same amount of income?

### THE DEMISE OF LAVENTHOL & HORWATH

In 1990, when the "Big Six" accounting firms dominated the profession, Laventhol & Horwath was the seventh largest accounting firm with more than 3,400 employees and a firm record revenue of \$345.2 million. The Philadelphia-based accounting partnership had been in operation since 1915 and its prospects could not have seemed brighter. However, serious problems had begun in October 1989 when Laventhol was forced to pay more than \$30 million to nine banks that had relied on Laventhol's audit of a real estate corporation. Five months later, the firm negotiated a \$13 million settlement with another group of plaintiffs. As the lawsuits continued to pile up, the strain on Laventhol increased.

In an effort to stay afloat following these large settlements, Laventhol announced a 10 percent across-the-board salary cut in October 1990. In fact, in a press release accompanying the cut, the firm was said it was "optimistic" about the future. Sadly, "the future" lasted only about a month. In November 1990, the firm fired the majority of its employees and filed for Chapter 11 bankruptcy protection in New York. At the time of the filing, Laventhol had 110 pending lawsuits and \$75 million in debt.

# LAVENTHOL & HORWATH

Because of the normal risks of doing business, the majority of partnerships begun in any year fail within three years and require dissolution and liquidation. The ending of a partnership's business is often an emotional event for the partners. They may have had high expectations and invested a large amount of personal resources and time in the business. The end of the partnership often is the end of those business dreams. Accountants usually assist in the winding-up and liquidation process and must recognize the legitimate rights of and any amounts due to the many parties involved in the partnership: its individual partners, creditors, and customers as well as others doing business with it.

The Uniform Partnership Act of 1997 has 71 sections, 7 of which deal specifically with the dissolution and winding-up of a partnership. Several sections discuss the specific rights of the partnership's creditors. They have first claim to the partnership's assets. After the creditors are fully satisfied, any remaining assets are distributed to the partners based on the balances in their capital accounts. This chapter presents the concepts that accountants must know if they offer professional services to partnerships undergoing winding-up and liquidation.

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 16-1 Understand and explain terms associated with partnership liquidations.
- LO 16-2 Make calculations related to lump-sum partnership liquidations.
- LO 16-3 Make calculations related to installment partnership liquidations.

# **OVERVIEW OF PARTNERSHIP LIQUIDATIONS**

LO 16-1

Understand and explain terms associated with partnership liquidations.

Most states have adopted the major provisions of the UPA 1997, which is used for the illustrations in this chapter. The chapter first presents the UPA 1997's major provisions regarding events and processes associated with partnership liquidations. After this overview, the chapter illustrates the winding-up process in both a lump-sum liquidation and an installment liquidation.

# Dissociation, Dissolution, Winding-Up, and Liquidation of a Partnership

**Dissociation** is the legal description of a partner's withdrawal, including the following:

- 1. A partner's death.
- 2. A partner's voluntary withdrawal (i.e., a retirement).
- 3. A judicial determination, including (a) the partner engaged in wrongful conduct that materially and negatively affected the partnership, (b) the partner willfully committed a material breach of the partnership agreement, (c) the partner became a debtor in bankruptcy, or (d) a partner cannot perform his or her duties under the partnership agreement.

Not all dissociations result in a partnership liquidation. Many involve only a buyout of the withdrawing partner's interest rather than a winding-up and liquidation of the partnership's business.

Dissolution is the termination of a partnership. Events that cause its dissolution and winding-up are presented in section 801 of the UPA 1997, as follows:

- 1. A partner gives notice of his or her intention to leave the partnership. An at-will partnership is one in which there is, at most, only an oral understanding among the partners and no definite term or specific task undertaking. A partnership agreement can eliminate this event as a cause for dissolution by including, for example, a provision for a buyout of that partner's interest in the partnership.
- 2. A dissolution of a partnership created for a definite term or specific undertaking takes place when (a) after a partner's death or wrongful dissociation, at least half of the remaining partners decide to wind up the partnership business, (b) all partners agree to wind up the partnership business, or (c) the term or specific undertaking has expired or been completed.
- 3. An event occurs that makes carrying on a substantial part of the partnership business unlawful.
- 4. A judicial determination that (a) the partnership's economic purpose is unlikely to be achieved, (b) a partner has engaged in conduct relating to the partnership that makes continuing the business impracticable, or (c) carrying on the partnership in conformity with the partnership agreement is not reasonably practicable.

On dissolution, the partnership begins the winding-up of its business.

#### Winding-Up and Liquidation

Winding-up and liquidation of the partnership begins after its dissolution. The partnership continues for the limited purpose of winding-up the business and completing work in process. The winding-up process includes the transactions necessary to liquidate the partnership such-as the collection of receivables, including any receivables from partners; conversion of the noncash assets to cash; payment of the partnership's obligations; and the distribution of any remaining net balance to the partners, in cash, according to their capital interests. If the partnership agreement does not provide for a special liquidation ratio, profits or losses are distributed during liquidation in the normal profit and loss ratio used during the partnership's operation.

Some terminating partnerships change to the liquidation basis of accounting once they no longer consider the business to be a going concern. When the liquidation basis of accounting is adopted, the partnership's assets are valued at their estimated net realizable liquidation values and liabilities at their estimated settlement amounts. Because of the apparent uncertainties in practice of specifically defining the point at which an entity is no longer a going concern, the FASB, decided (in March 2010) not to specifically define a going concern. Instead, the Board decided to require detailed disclosures when management, applying commercially reasonable business judgment, is aware of conditions and events that indicate, based on current facts and circumstances, that it is reasonably foreseeable that an entity may not be able to meet its obligations as they become due.

Loans to or from Partners Under the UPA 1997, liabilities to partners for loans they have made to the partnership ("inside debt") have the same status as liabilities to the partnerships' third-party creditors ("outside debt"). In effect, UPA 1997 removes previous rules formally subordinating inside debt to outside debt. However, a partner ultimately is personally liable for any outside debt that is still unsatisfied if the partnership has insufficient funds to satisfy all claims of outside creditors. The result is that the obligation to satisfy partnership debts effectively ends in the equitable subordination of inside debt to outside debt when the partnership assets are insufficient to satisfy all obligations to nonpartners. Even though the UPA 1997 indicates that partnership obligations to the individual partners must normally be paid during its winding-up on the same proportional basis as the firm's other liabilities, outside creditors frequently require partners to subordinate their receivables from the partnership. Thus, in all examples, we assume partners have agreed to subordinate their receivables from the partnership to outside debt. Therefore, we typically illustrate examples in which liquidation payments are made in the following order: (1) outside debt, (2) inside debt, and (3) partner's capital.

**Deficits in Partners' Capital Accounts** As part of the liquidation process, each partner with a deficit in his or her capital account must make a contribution to the partnership to remedy that capital deficit. The partnership makes a liquidating distribution, in cash, to each partner with a capital credit balance. The UPA 1997 specifies cash for these liquidating distributions. If a partner fails to make a required contribution to remedy his or her capital deficit, all other partners must contribute the additional amount necessary to pay the partnership's obligations in the proportion to which those partners share partnership losses.

Although the UPA 1997 does not provide for a formal offset of a loan payable to an individual partner with a deficit in his or her capital account, a failure to do so can result in inequalities. For example, assume a partnership owes a partner \$10,000. If it pays

#### **STOP & THINK**

Assume partner Z lends \$10,000 to the XYZ Partnership during a time when the partnership is short on cash to pay its obligations. At a subsequent date, the partnership sells some of its assets at a loss and allocates the loss to the partners' capital accounts, resulting in a deficit balance in Z's \$2,000 capital account of \$2,000. Assume Z's only source of additional cash to remedy her deficit balance is the savings account she established years before to fund her son's college education. Should Z be required to remove the \$2,000 in her son's college savings account to wipe out the deficit in her capital account?

Although the UPA 1997 states that Z would need to contribute cash to dispose of her deficit balance, the courts have dealt with similar situations. As a result, the legal doctrine of setoff suggests that Z's deficit balance can be offset against her loan balance. Instead of making her write a check to pay the partnership \$2,000 so that it can then write a check to pay her \$10,000, the partnership can simply write off her deficit against the loan balance so that it will only have to pay her \$8,000 to satisfy her loan.

the partner the \$10,000, he or she could spend the money and subsequently become personally insolvent. Then, if the allocation of losses incurred on the sale of assets later results in a deficit balance in that partner's capital account, the other partners would have to absorb the deficit. Therefore, the legal doctrine of setoff effectively treats loans from partners to the partnership as additional capital investments that can be offset against a deficit capital account balance to avoid inequalities in the liquidation process.

# Statement of Partnership Realization and Liquidation

To guide and summarize the partnership liquidation process, a statement of partnership realization and liquidation may be prepared. The statement, often called a "statement of liquidation," is the basis of the journal entries made to record the liquidation. It presents in worksheet form the effects of the liquidation on the partnership's balance sheet accounts. The statement summarizes the conversion of assets into cash, the allocation of any gains or losses to the partners, and the distribution of cash to creditors and partners. This statement is a basic feature of accounting for a partnership liquidation and is presented and illustrated in the remainder of the chapter.

# **LUMP-SUM LIQUIDATIONS**

LO 16-2

Make calculations related to lump-sum partnership liquidations.

A *lump-sum liquidation* of a partnership is one in which all assets are converted into cash within a very short time, creditors are paid, and a single, lump-sum payment is made to the partners for their capital interests. Although most partnership liquidations take place over an extended period, as illustrated later, the lump-sum liquidation is an excellent focal point for presenting the major concepts of partnership liquidation.

# Realization of Assets<sup>1</sup>

Typically, a partnership experiences losses on the disposal of its assets. It may have a "Going out of Business" sale in which its inventory is marked down well below normal selling price to encourage immediate sale. Often the firm sells the remaining inventory to companies that specialize in acquiring assets of liquidating businesses. The partnership's furniture, fixtures, and equipment also may be offered at a reduced price or sold to liquidators. Any goodwill on the partnership's books is generally written off when the partnership begins a liquidation because it is no longer a going concern.

The partnership attempts to collect its accounts receivable. Sometimes it offers a large cash discount for the prompt payment of any remaining receivables whose collection may otherwise delay terminating the partnership. Alternatively, the receivables may be sold to a factor, a business that specializes in acquiring accounts receivable and immediately paying cash to the seller. The partnership records the sale of the receivables as it would any other asset. Typically, the factor acquires only the best of a business's receivables at a price below face value, but some factors are willing to buy all receivables at a price significantly lower than face value.

A partnership's assets, including any receivables from the partners and any contributions required of partners to remedy their capital deficits, are applied to pay the firm's creditors. Loans to or from partners must be settled during the winding-up process. Any remaining amount is then paid, in cash, as required by Section 807 of the UPA 1997 to the partners in accordance with their rights to liquidating distributions.

## **Liquidation Expenses**

The liquidation process usually begins with scheduling the partnership's known assets and liabilities. The names and addresses of creditors and the amounts owed to each are specified. As diligent as the effort usually is, additional, unscheduled creditors may become known during the liquidation process, which also involves some expenses, such as additional legal and accounting costs. The partnership also may incur costs of disposing of the business, such as special advertising and locating specialized equipment dealers. These expenses are allocated to partners' capital accounts in the profit and loss distribution ratio.

## Illustration of a Lump-Sum Liquidation

The following illustration presents the liquidation of the ABC Partnership, whose partners, Alt, Blue, and Cha, decide to terminate the business on May 1, 20X5. The AB Partnership was formed on January 1, 20X1. Cha was admitted into the partnership on January 1, 20X3, and the name of the business was changed to the ABC Partnership. For purposes of this illustration, assume that Alt remained in the partnership and, in 20X4,

<sup>&</sup>lt;sup>1</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

the partners agreed to a realignment of their profit and loss-sharing percentages to more closely conform with each partner's efforts. The profit and loss-sharing percentages after realignment in 20X4 were as follows: Alt, 40 percent; Blue, 40 percent; and Cha, 20 percent. The company's condensed trial balance on May 1, 20X5, the day the partners decide to liquidate the business, follows:

| Т  | PARTNERSHIP<br>rial Balance<br>/lay 1, 20X5 |   |
|--|---|---|
| Cash<br>Noncash Assets<br>Liabilities<br>Alt, Capital (40%)<br>Blue, Capital (40%)<br>Cha, Capital (20%) | \$ 10,000<br>90,000                         | \$ 42,000<br>34,000<br>10,000<br>14,000 |
| Total  | \$100,000                                   | \$100,000                               |

The basic accounting equation, Assets – Liabilities = Owners' equity, applies to partnership accounting. In this case, owners' equity is the sum of the partners' capital accounts, as follows:

Assets – Liabilities = Partners' equity 
$$$100,000 - $42,000 = $58,000$$

The following three cases illustrate the partnership liquidation concepts used most commonly. Each case begins with ABC's May 1, 20X5, trial balance. The amount of cash realized from the disposal of the noncash assets is different for each of the three cases, and the effects of the different realizations are shown in the statement of partnership realization and liquidation presented for each case.

#### Case 1: Partnership Solvent and No Deficits in Partners' Capital Accounts

The noncash assets are sold for \$80,000 on May 15, 20X5, at a \$10,000 loss. The partnership's creditors are paid their \$42,000 on May 20, and the remaining \$48,000 cash is distributed to the partners on May 30, 20X5.

Refer to Figure 16-1 for the statement of realization and liquidation for Case 1. The statement includes only balance sheet accounts across the columns, with all noncash assets presented together as a single total. Note that each row in the spreadsheet must balance (i.e., Assets = Liabilities + Partners' equity). Once a business has entered liquidation, the balance sheet accounts are the only relevant ones; the income statement is for a going concern. The liquidation process is presented in the order of occurrence in the rows of the worksheet. Thus, the worksheet includes the entire realization and liquidation process and is the basis for the journal entries to record the liquidation.

Other important observations are as follows:

- 1. The preliquidation balances are obtained from the May 1, 20X5, trial balance.
- 2. When the partnership's noncash assets are sold, the \$10,000 loss is allocated to the partners' capital accounts.
- 3. Creditors, including individual partners who have made any loans to the partnership, are paid before any cash is distributed to partners.
- 4. Payments to partners are made for their positive capital balances.
- 5. The postliquidation balances are all zero, indicating the accounts are all closed and the partnership is fully liquidated and terminated.

|     | Cash  |  | 42,000 |
|     | Pay creditors.  |  |        |
|     | May 30, 20X5  |  |        |
| (3) | Alt, Capital  | 30,000   |        |
|     | Blue, Capital   | 6,000  |        |
|     | Cha, Capital  | 12,000   |        |
|     | Cash  |  | 48,000 |
|     | Lump-sum payments to partners.                                    |  |        |

## Case 2: Partnership Solvent and Deficit Created in Partner's Capital Account

A deficit in a partner's capital account can occur if its credit balance is too low to absorb his or her share of losses. A capital deficit may be created at any time in the liquidation process. Such deficits may be remedied by either of the following means:

- 1. The partner invests cash or other assets to eliminate the capital deficit.
- 2. The partner's capital deficit is distributed to the other partners in their resulting losssharing ratio.

The approach used depends on the solvency of the partner with the capital deficit. A partner who is personally solvent and has sufficient net worth to eliminate the capital deficit must make an additional investment in the partnership to cover the deficit. On the other hand, if the partner is personally insolvent—that is, personal liabilities exceed personal assets—section 807 of the UPA 1997 requires the remaining partners to absorb the insolvent partner's deficit by allocating it to their capital accounts in their resulting loss-sharing ratio.

The following lump-sum distribution illustrates these points:

1. The three partners' personal financial statements are as follows:

|  | Alt       | Blue       | Cha       |
|--|-----------|------------|-----------|
| Personal assets Personal liabilities Net worth (deficit) | \$150,000 | \$ 12,000  | \$ 42,000 |
|  | (86,000)  | (16,000)   | (14,000)  |
|  | \$ 64.000 | \$ (4,000) | \$ 28,000 |

Blue is personally insolvent; Alt and Cha are personally solvent.

- 2. The partnership's noncash assets are sold for \$35,000 on May 15, 20X5, and the \$55,000 loss is allocated to the partners' capital accounts.
- 3. The partnership pays its creditors \$42,000 on May 20, 20X5.
- 4. Because Blue is personally insolvent, her \$12,000 capital deficit is allocated to the other partners.
- 5. The remaining \$4,000 cash is distributed as a lump-sum payment on May 30, 20X5.

Review the statement of partnership realization and liquidation for Case 2 in Figure 16–2. Note the following from this illustration:

1. The \$55,000 loss on the realization of noncash assets is allocated in the partners' losssharing ratio of 40 percent for Alt, 40 percent for Blue, and 20 percent for Cha. Blue's \$22,000 share of the loss on disposal creates a \$12,000 deficit in her capital account. Blue is personally insolvent and is unable to make an additional investment to remove the capital deficit.

FIGURE 16-2 Case 2: Partnership Solvent; Deficit Created in Personally Insolvent Partner's Capital Account

- 2. The partnership pays its creditors before making any distributions to the partners.
- 3. Blue's \$12,000 deficit is distributed to Alt and Cha in their resulting loss-sharing ratio. Note that the UPA 1977 specifies use of the loss-sharing ratio for this allocation. Alt absorbs two-thirds (40/60) of Blue's deficit, and Cha absorbs one-third (20/60).
- 4. The distribution of Blue's deficit creates a deficit in Cha's capital account. Because Cha is personally solvent, she must contribute \$1,000 to remedy her capital deficit.
- 5. Alt receives a lump-sum payment for his \$4,000 capital balance.
- 6. All postliquidation balances are zero, indicating the completion of the liquidation process.

## Case 3: Partnership Is Insolvent and Deficit Created in Partner's Capital Account

A partnership is insolvent when existing cash and cash generated by the sale of the assets are not sufficient to pay the partnership's liabilities. In this case, the individual partners are liable for the remaining unpaid partnership liabilities. The following illustration presents an insolvent partnership and a deficit in one of the partner's capital accounts.

- 1. Alt and Cha are personally solvent, and Blue is personally insolvent as in Case 2.
- 2. The firm sells noncash assets for \$20,000 on May 15, 20X5.
- 3. The partnership pays creditors \$42,000 on May 20, 20X5.

See Figure 16–3 for the statement of partnership realization and liquidation for Case 3. The following observations are made from this illustration:

- 1. The \$70,000 loss is allocated to the partners in their loss-sharing ratio. This allocation creates a deficit of \$18,000 in Blue's capital account.
- 2. Because Blue is personally insolvent, her \$18,000 deficit is distributed to Alt and Cha in their loss-sharing ratio of 40:60 for Alt and 20:60 for Cha. The distribution of Blue's deficit results in a \$6,000 deficit for both Alt and Cha.

FIGURE 16-3 Case 3: Partnership Insolvent; Deficit Created in Personally Insolvent Partner's Capital Account

| \$70,000 loss   | 20,000             |   | (90,000) |   |                    |   | (28,000) |    | (28,000)     |    | (14,000) |
|   | 30,000             |   | 0        |   | 42,000             |   | 6,000    |    | (18,000)     |    | 0        |
| Allocation of insolvent partner's deficit: $40/60 \times $18,000$                         |                    |   |          |   |                    |   | (12,000) |    | 18,000       |    |          |
| 20/60 × \$18,000  |                    |   |          |   |                    |   |          |    |              |    | (6,000)  |
|   | 30,000             |   | 0        |   | 42,000             |   | (6,000)  |    | 0            |    | (6,000)  |
| Contributions by Alt and Cha to   | 12.000             |   |          |   |                    |   |          |    |              |    |          |
| remedy capital deficits   | 12,000             |   |          |   | 42.000             |   | 6,000    |    |              |    | 6,000    |
| Payment to creditors  | 42,000<br>(42,000) |   | 0        |   | 42,000<br>(42,000) |   | 0        |    | 0            |    | 0        |
| Postliquidation balances  | 0                  |   | 0        |   | 0                  |   | 0        |    | 0            |    | 0        |

- 3. Because Alt and Cha are personally solvent, they make additional capital contributions to remedy their respective capital deficits of \$6,000 and \$6,000.
- 4. The \$42,000 partnership cash now available is used to pay its creditors.
- 5. The postliquidation balances are zero, indicating completion of the partnership liquidation.

In Case 3, both Alt and Cha made additional capital contributions to eliminate their capital deficits. When a partner must remedy another partner's capital deficit, the partner making the remedy has cause to bring suit against the failing partner. Blue's failure in the amount of \$12,000 in Case 2 and \$18,000 in Case 3 required Alt and Cha to remedy Blue's deficit. Alt and Cha can sue Blue and be included in the list of her personal liabilities. Although Blue is personally insolvent, Alt and Cha may obtain a partial recovery of their amounts.

# INSTALLMENT LIQUIDATIONS

LO 16-3

Make calculations related to installment partnership liquidations.

An *installment liquidation* typically requires several months to complete and includes periodic, or installment, payments to the partners during the liquidation period because they require funds for personal purposes. Most partnership liquidations take place over an extended period in order to obtain the largest possible amount from the realization of the assets.

Some partnerships using installment liquidations prepare a Plan of Liquidation and Dissolution prior to beginning the liquidation. This plan sets out the intended liquidation of its assets and the winding-up of its affairs. The partners discuss and perhaps modify the plan, but their agreement is expected. And some partnerships, upon obtaining the consent of the partners to proceed with the installment liquidation, adopt the liquidation basis of accounting under which assets are stated at their estimated net realizable value, and liabilities, including projected costs of liquidation, are stated at their estimated settlement amounts. These partnerships may prepare a statement of net assets in liquidation and a statement of changes in net assets in liquidation. However, partnerships using GAAP apply ASC 360 to value their long-lived assets to be disposed of by sale. ASC **360** states that these assets are to be classified separately and valued at the lower of carrying amount or fair value less costs to sell. And ASC 20 requires that costs associated with an exit activity be recognized and measured at fair value in the period in which the liability is incurred, not in earlier periods when, for example, a restructuring plan is adopted. Most partnerships use the statement of partnership realization and liquidation during the installment liquidation process and recognize gains or losses from the liquidation events.

Installment liquidations involve distributing cash to partners before complete liquidation of the assets occurs. The accountant must be especially cautious when distributing available cash because future events may change the amounts to be paid to each partner. We illustrate two methods for ensuring fairness and equality in making cash distributions in an installment liquidation: (1) the schedule of safe payments to partners and (2) the *cash distribution plan*. A new schedule of safe payments must be prepared each time cash becomes available for distribution to the partners whereas the cash distribution plan is prepared only once at the beginning of the liquidation process. We first demonstrate the use of schedules of safe payments and later illustrate the use of a cash distribution plan. Either method is acceptable. The following practical guidelines should be followed in preparing schedules of safe payments to the partners:

- 1. Distribute no cash to the partners until all outside liabilities and actual plus potential liquidation expenses have been paid or provided for by reserving the necessary cash.
- 2. Anticipate the worst, or most restrictive, possible case before determining the amount of cash installment each partner receives. Make the following hypothetical assumptions to determine how much excess capital (if any) the partners have in their capital accounts:

## **STOP & THINK**

Why would these hypothetical "worst-case" assumptions lead to the optimal cash distributions to partners at any particular point in time? Picture the accounting equation after all outside loans have been paid (and assuming no inside loans):

Cash + Noncash assets = Partners' capital accounts

By hypothetically assuming that the noncash assets are worthless, we are essentially assuming this is the last cash we'll ever collect. To whom should it be distributed? The hypothetical loss would be written off to the partners' capital accounts, leaving the following accounting equation:

Cash = Partners' capital accounts

Once hypothetical deficits created by the assumed write-off of the noncash assets have been absorbed by partners with positive capital balances, the cash on hand equals the amount of "extra capital" remaining in partner's accounts after absorbing the most extreme losses possible. Partners with this much "extra" capital riding in their capital accounts deserve to receive the cash that is available.

- a. Assume that all remaining noncash assets will be written off as a loss; that is, assume that nothing will be realized on future asset disposals.
- b. Assume that any deficits created in the partners' capital accounts by the hypothetical assumption that all noncash assets are worthless will be absorbed by the remaining partners with positive hypothetical capital balances; that is, assume that hypothetical deficits will not be eliminated by additional partner capital contributions.
- 3. After the accountant has assumed these two hypothetical worst possible cases, the remaining credit balances in capital accounts represent safe distributions of cash that may be distributed to partners in those amounts.

# **Illustration of Installment Liquidation**

We now use the same illustration in the lump-sum liquidation of the ABC Partnership to illustrate liquidation in installments. Alt, Blue, and Cha decide to liquidate their business over a period of time and to receive installment distributions of available cash during the liquidation process.

ABC Partnership's condensed trial balance on May 1, 20X5, the day the partners decide to liquidate the business, follows. Each partner's profit and loss–sharing percentage is also shown.

| ABC PARTNERSHIP Trial Balance May 1, 20X5 |                  |                  |  |  |  |
|---|------------------|------------------|--|--|--|
| Cash                                      | \$ 10,000        |                  |  |  |  |
| Noncash Assets                            | 90,000           |                  |  |  |  |
| Liabilities                               |                  | \$ 42,000        |  |  |  |
| Alt, Capital (40%)                        |                  | 34,000           |  |  |  |
| Blue, Capital (40%)                       |                  | 10,000           |  |  |  |
| Cha, Capital (20%)                        |                  | 14,000           |  |  |  |
| Total                                     | <u>\$100,000</u> | <u>\$100,000</u> |  |  |  |

The following information describes this case in more detail.

1. The partners' net worth statements on May 1, 20X5, are as follows:

|                      | Alt       | Blue              | Cha      |
|----------------------|-----------|-------------------|----------|
| Personal assets      | \$150,000 | \$12,000          | \$42,000 |
| Personal liabilities | (86,000)  | (16,000)          | (14,000) |
| Net worth (deficit)  | \$ 64,000 | <u>\$ (4,000)</u> | \$28,000 |

Blue is personally insolvent; Alt and Cha are personally solvent.

2. The noncash assets are sold as follows:

| Date    | Book Value | Proceeds | Loss     |
|---------|------------|----------|----------|
| 5/15/X5 | \$55,000   | \$45,000 | \$10,000 |
| 6/15/X5 | 30,000     | 15,000   | 15,000   |
| 7/15/X5 | 5,000      | 5,000    |          |

- 3. The partnership pays the creditors \$42,000 on May 20. Note that, given our assumption of subordination of all loans received from partner to outside liabilities, outside creditors must always be paid in full before any cash is distributed to the partners.
- 4. The partners agree to maintain a \$10,000 cash reserve during the liquidation process to pay for any liquidation expenses.
- 5. The partners agree to distribute the available cash at the end of each month; that is, installment liquidations will be made on May 31 and June 30. The final cash distributions to partners will be made on July 31, 20X5, the end of the liquidation process. The amounts to be distributed at the end of each month must be calculated using a schedule of safe payments to partners, as seen in Figure 16-5.

Refer to Figure 16–4 for the statement of partnership realization and liquidation for the ABC Partnership installment liquidation.

#### Transactions during May 20X5

The events during May 20X5 result in a distribution of \$3,000 to the partners. The procedure to arrive at this amount is as follows:

- 1. The sale of \$55,000 of assets results in a loss of \$10,000, which is distributed to the three partners in their loss-sharing ratio.
- 2. Payments of \$42,000 are made to the partnership's outside creditors for the known liabilities.
- 3. Available cash is distributed to the partners on May 31, 20X5, as calculated by the schedule of safe payments to partners (Figure 16-5).

To determine the safe payment of cash to be distributed to partners, the accountant must make some assumptions about the future liquidation of the remaining assets. Under the assumption of the worst possible situation, the remaining \$35,000 of assets will result

When a partner has a loan outstanding to the partnership, the legal doctrine of setoff essentially treats the loan as an additional cash contribution. Thus, loans to the partnership are added to the partner's capital balance at the start of the schedule of safe payments to accurately reflect the partner's total contributions.

Conversely, if a partner has borrowed from the partnership (i.e., the partnership has a receivable from that partner), the loan is subtracted from the partner's capital balance at the commencement of the schedule of safe payments.

in a total loss. Before making a cash distribution to the partners, the accountant prepares a schedule of safe payments to partners using the worst-case assumptions. See Schedule 1 in Figure 16–5 for the schedule of safe payments to partners as of May 31, 20X5.

The schedule of safe payments begins with the partners' capital balances as of May 31. The logic of using just the capital accounts comes from the accounting equation: Assets - Liabilities = Partners' capital balances. Thus, for example, if there were an increase in a liability that reduced the net assets, the equality of the accounting equation would also result in a decrease in the total of partners' capital balances. Because the partners' capital accounts are the focus of the payments to partners, it is unnecessary to include the assets and liabilities in the schedule of safe payments to partners. The schedule includes all information partners need to know how much cash they will receive at each cash distribution date.

Alt, Blue, and Cha agree to withhold \$10,000 for possible liquidation expenses. In addition, the noncash assets have a remaining balance of \$35,000 on May 31. A worstcase assumption is a complete loss on the noncash assets and \$10,000 of liquidation expenses, totaling \$45,000 of charges to be distributed to the partners' capital accounts. The capital accounts of Alt, Blue, and Cha would be charged for \$18,000, \$18,000, and \$9,000, respectively, for their shares of the \$45,000 assumed loss. These assumptions result in a pro forma deficit in Blue's capital account. This is not an actual deficit that must be remedied! It is merely the result of applying the worst-case assumptions.

Continuing such worst-case planning, the accountant assumes that Blue is insolvent (which happens to be true in this example) and distributes the pro forma deficit in Blue's capital account to Alt and Cha in their loss-sharing ratio of 40:60 to Alt and 20:60 to Cha. The resulting credit balances indicate the amount of cash that may be safely distributed to the partners. Refer to Figure 16–4 for the May 31 cash distribution. The available cash of \$3,000 is distributed to Alt. The ending balances should satisfy the equality of assets and equities of the accounting equation. If the equality has been destroyed, an error has occurred that must be corrected before proceeding. As of May 31, after the installment distribution, the accounting equation is

Assets – Liabilities = Partners' equity 
$$$45,000 - $0 = $45,000$$

#### Transactions during June 20X5

Transactions for June 20X5 continue in Figure 16–4 as follows:

- 1. The company sells noncash assets of \$30,000 on June 15 for a \$15,000 loss, which is distributed to the partners in their loss-sharing ratio, resulting in a zero capital balance for Blue.
- 2. On June 30, 20X5, available cash is distributed as an installment payment to the partners.

The schedule of safe payments to partners as of June 30, 20X5, in Figure 16–5 shows how to calculate the distribution amounts. A worst-case plan assumes that the remaining noncash assets of \$5,000 must be written off as a loss and that the \$10,000 cash in reserve will be completely used for liquidation expenses. This \$15,000 pro forma loss is allocated to the partners in their loss-sharing ratio, which creates a \$6,000 deficit in Blue's capital account. Continuing the worst-case scenario, it is assumed Blue will not eliminate this debit balance. Therefore, the \$6,000 potential deficit is allocated to Alt and Cha in their resulting loss-sharing ratio of 40/60 to Alt and 20/60 to Cha. The resulting credit balances in the partners' capital accounts show the amount of cash that can be distributed safely. Only \$15,000 of the available cash is distributed to Alt and Cha on June 30, (Figure 16–4).

#### Transactions during July 20X5

The last part of Figure 16-4 shows the completion of the liquidation transactions during July 20X5:

- 1. The firm sells its remaining assets at their book value of \$5,000.
- 2. The partnership pays actual liquidation costs of \$7,500 and allocates them to the partners in their loss-sharing ratio, creating a deficit of \$3,000 in Blue's capital account. The remaining \$2,500 of the \$10,000 reserved for the expenses is released for distribution to the partners.

- 3. Because Blue is personally insolvent and cannot contribute to the partnership, the \$3,000 deficit is distributed to Alt and Cha in their loss-sharing ratio. Note that this is an actual, not a pro forma, deficit.
- 4. The \$7,500 of remaining cash is paid to Alt and Cha to the extent of their capital balances. After this last distribution, all account balances are zero, indicating the completion of the liquidation process.

## **Cash Distribution Plan**

At the beginning of the liquidation process, accountants commonly prepare a cash distribution plan, which gives the partners an idea of the installment cash payments each will receive as cash becomes available. The actual installment distributions are determined using the statement of realization and liquidation supplemented with the schedule of safe payments to partners as presented in the preceding section. The cash distribution plan is a pro forma projection of the application of cash as it becomes available.

#### Loss Absorption Potential

A basic concept of the cash distribution plan at the beginning of the liquidation process is loss absorption potential (LAP). An individual partner's LAP is defined as the maximum loss that the partnership can realize before that partner's capital account balance is extinguished. The LAP is a function of two elements, as follows:

$$LAP = \frac{Partner's capital account balance}{Partner's loss share}$$

#### FYI

When a partner has a loan outstanding to the partnership, the legal doctrine of setoff essentially treats the loan as an additional cash contribution. Thus, loans to the partnership are added to the numerator of the LAP calculation, effectively increasing that partner's loss absorption potential. In other words, that partner is assumed to have "more skin in the game."

Conversely, if a partner has borrowed from the partnership (i.e., the partnership has a receivable from that partner), the loan is subtracted from the partner's capital in the numerator, decreasing that partner's loss absorption potential.

For example, on May 1, 20X5, Alt has a capital account credit balance of \$34,000 and a 40 percent share in the losses of ABC Partnership. Alt's LAP is

$$LAP = \frac{\$34,000}{0.40} = \$85,000$$

This means that \$85,000 in losses on disposing of noncash assets or from additional liquidation expenses would eliminate the credit balance in Alt's capital account, as follows:

$$\$85,000 \times 0.40 = \$34,000$$

#### Illustration of Cash Distribution Plan

The following illustration is based on the ABC Partnership example. A trial balance of its balance sheet accounts on May 1, 20X5, the day the partners decide to liquidate the business, is prepared.

| ABC PARTNERSHIP<br>Trial Balance<br>May 1, 20X5   |                                  |  |  |  |  |

The partners ask for a cash distribution plan as of May 1, 20X5, to determine the distributions of cash as it becomes available during the liquidation process. Such a plan always provides for paying the partnership's outside creditors before making any distributions to the partners. See Figure 16-6 for the cash distribution plan as of May 1, the beginning date of the liquidation process.

The important observations from this illustration are as follows:

- 1. Each partner's loss absorption potential is computed as his or her capital balance divided by that partner's loss-sharing percentage. Alt has the highest LAP (\$85,000), Cha has the next highest (\$70,000), and Blue has the lowest (\$25,000). Each partner's LAP is the amount of loss that would completely eliminate his or her net capital credit balance. Alt is the least vulnerable to a loss, and Blue is the most vulnerable.
- 2. The least vulnerable partner is the first to receive any cash distributions after paying creditors. Alt is the only partner to receive cash until his LAP is decreased to the level of the next highest partner, Cha. To decrease Alt's LAP by \$15,000 requires paying Alt \$6,000 ( $\$15,000 \times 0.40$ ). After payment of \$6,000 to Alt, his new loss absorption potential will be the same as Cha's, calculated as Alt's remaining capital balance of \$28,000 divided by his loss-sharing percentage of 40 percent (\$28,000/0.40 = \$70,000).

| 20/60 to Cha   |          |          | (2,500) |
| Postliquidation balances, July 31  | 0        | 0        | 0       |

- 3. Alt's and Cha's LAPs are now equal, and they will receive cash distributions until the LAP of each decreases to the next highest level, the \$25,000 of Blue. Multiplying the loss absorption potential of \$45,000 (\$70,000 - \$25,000) by the two partners' loss-sharing ratios shows how much of the next available cash can be safely paid to each partner. Alt and Cha will receive cash distributions according to their loss-sharing ratios. As the next \$27,000 of cash becomes available, it will be distributed to Alt and Cha in the ratio of 40:60 to Alt and 20:60 to Cha.
- 4. Finally, when all three partners have the same LAPs, any remaining cash is distributed according to their loss-sharing ratios.

The summary of the cash distribution plan at the bottom of Figure 16–6 is provided to the partners. From this summary, they are able to determine the relative amounts each will receive as cash becomes available to the partnership.

See Figure 16-7 for the capital balances for each partner in the ABC Partnership during the installment liquidation period from May 1, 20X5, through July 31, 20X5. The installment payments to partners are computed on the statement of partnership realization and liquidation (Figure 16–4) using a schedule of safe distributions to partners (Figure 16–5). The actual distributions of available cash conform to the cash distribution plan prepared at the beginning of the liquidation process (Figure 16–7), with adjustment because of Blue's actual deficit that Alt and Cha absorb.

## ADDITIONAL CONSIDERATIONS

# **Incorporation of a Partnership**

As a partnership continues to grow, the partners may decide to incorporate the business to have access to additional equity financing, to limit their personal liability, to obtain selected tax advantages, or to achieve other sound business purposes. At the incorporation, the partnership is terminated, and the assets and liabilities are revalued to their fair values. The gain or loss on revaluation is allocated to the partners' capital accounts in the profit and loss-sharing ratio.

Capital stock in the new corporation is then distributed in proportion to the partners' capital accounts. The separate business entity of the partnership should now close its accounting records and the corporation, as a new business entity, should open its own new accounting records to record the issuance of its capital stock to the partnership's previous partners.

We use the ABC Partnership's trial balance on May 1, 20X5, as shown previously, to illustrate incorporation of a partnership. Instead of liquidating the partnership as shown throughout the chapter, assume the partners agree to incorporate it.

The new corporation is to be called Peerless Products Corporation. At the time of conversion from a partnership to a corporation, all assets and liabilities should be appraised and valued at their fair values. Any gain or loss must be distributed to the partners in their profit and loss-sharing ratios. Assume that the noncash assets have an \$80,000 fair value. The \$10,000 loss to fair value is allocated to the partners' capital accounts before the incorporation, as follows:

| (4) | Alt, Capital   | 4,000  |
|-----|----------------|--------|
|     | Blue, Capital  | 4,000  |
|     | Cha, Capital   | 2,000  |
|     | Noncash Assets | 10,000 |

Recognize loss on reduction of assets to fair values.

Of course, in practice, specific asset accounts are used instead of the general classification of noncash assets. Gains on asset revaluations also may occur when a successful partnership elects to incorporate.

The partnership's net assets have a fair value of \$48,000 (\$90,000 of assets less \$42,000 of liabilities). The corporation issues 4,600 shares of \$1 par common stock in exchange for ABC Partnership's assets and liabilities. Peerless Products Corporation makes this entry to acquire the partnership's assets and liabilities in exchange for the issuance of the 4.600 shares of stock

| (5) | Cash                             | 10,000 |
|-----|----------------------------------|--------|
|     | Noncash Assets                   | 80,000 |
|     | Liabilities                      | 42,000 |
|     | Common Stock                     | 4,600  |
|     | Paid-in Capital in Excess of Par | 43,400 |

Issuance of stock for partnership's assets and liabilities.

The partners make the following entry on the partnership's books:

| (6) | Investment in Peerless Products | 48,000 |
|-----|---------------------------------|--------|
|     | Liabilities                     | 42,000 |
|     | Cash                            | 10,000 |
|     | Noncash Assets                  | 80,000 |

Receipt of stock in Peerless Products in exchange for partnership's net assets.

Recall that the noncash assets were reduced to their fair values in entry (4). To distribute the stock to the partners and close the partnership's books, the final entry is as follows:

| (7) | Alt, Capital           | 30,000 |
|-----|------------------------|--------|
|     | Blue, Capital          | 6,000  |
|     | Cha, Capital           | 12,000 |
|     | Investment in Peerless | 48,000 |

Distribution of Peerless Products stock to partners.

# Summary of **Key Concepts**

The process of terminating and liquidating a partnership is often traumatic for partners. The Uniform Partnership Act of 1997 provides guidance for the liquidation process and specifies the legal rights of the partners and of partnership creditors.

Dissociation of a partner is his or her withdrawal, either voluntarily or involuntarily, from the partnership. Dissolution is the ending of a partnership. Not all dissociations and dissolutions require termination, which is the cessation of normal business functions, or liquidation with the disposal of assets, payment of liabilities, and distribution of remaining cash to the partners. UPA 1997 defines a partnership as a legal entity apart from the individual partners. Therefore, unless required by judicial determination, termination and liquidation often can be avoided by carefully preparing the partnership agreement to allow continuation of the business when a partner retires or leaves the partnership. The most common reasons for involuntary liquidation are court decrees or the bankruptcy of the partnership.

Liquidation can involve a single lump-sum payment to partners. Most liquidations, however, take several months and involve installment payments to partners during the process. Items that facilitate liquidations are the statement of partnership realization and liquidation, and a worksheet summarizing the liquidation process and serving as a basis for the journal entries to record the events. Installment payments to partners are determined on a worst-case basis using a schedule of safe payments to partners, which assumes that all noncash assets will be written off and that partners with debit balances in their capital accounts will not be able to remedy the deficiencies.

A cash distribution plan provides information to partners about the installment payments they will receive as cash becomes available to the partnership. The plan is prepared at the beginning of the liquidation process. Actual cash distributions during the liquidation are determined with the statement of partnership realization and liquidation. The concept of loss absorption potential (LAP) is central to the development of the cash distribution plan. LAP is the amount of partnership loss required to eliminate a given partner's capital credit balance. The LAP is determined by dividing a partner's net capital credit balance by his or her loss-sharing percentage.

cash distribution plan, 812 dissociation (of a partner), 805 dissolution

(of a partnership), 805 installment liquidation, 812 loss absorption potential (LAP), 817 lump-sum liquidation, 807 schedule of safe payments to partners, 812

statement of partnership realization and liquidation, 806

# Appendix 16A Partners' Personal Financial Statements

At the beginning of the liquidation process, partners are usually asked for personal financial statements to determine each partner's personal solvency. Guidelines for preparing personal financial statements are found in ASC 274.

Personal financial statements consist of the following:

- 1. Statement of financial condition, or personal balance sheet, that presents the partner's assets and liabilities at a point in time.
- 2. Statement of changes in net worth, or personal income statement, that presents the primary sources of changes in the partner's net worth.

In addition to presenting a partner's assets and liabilities, the statement of financial condition should include an estimate of the income taxes incurred as if all the assets were converted and the liabilities extinguished. The partner's net worth would then be computed as assets less liabilities less estimated taxes (see Figure 16-8). In general, the accrual basis of accounting should be used to determine the partner's assets and liabilities, and comparative statements are usually provided. However, unlike a balance sheet of a business that is based on historical cost, the assets in the personal statement of financial condition are stated at their estimated current values. The liabilities are stated at the lower of the discounted value of future cash payments or the current cash settlement amount. Included immediately below the liabilities are the estimated taxes that would be paid if all assets were converted to cash and all the liabilities were paid.

**FIGURE 16-8** Personal Statement of **Financial Condition** 

#### C. ALT Statement of Financial Condition May 1, 20X5 and 20X4

|  | Year |         |            |        |
|--|------|---------|------------|--------|
|  |      | 20X5    |            | 20X4   |
| Assets   |      |         |            |        |
| Cash   | \$   | 4,000   | \$         | 2,500  |
| Receivables  |      | 3,500   |            | 4,000  |
| Investments:   |      |         |            |        |
| Marketable securities  |      | 5,000   |            | 4,000  |
| ABC Partnership  |      | 34,000  |            | 26,000 |
| Cash surrender value of life insurance                         |      | 3,100   |            | 3,000  |
| Residence  |      | 84,000  |            | 76,000 |
| Personal effects   |      | 16,400  |            | 12,500 |
| Total assets   | \$1  | 150,000 | <u>\$1</u> | 28,000 |
| Liabilities and Net Worth                                      |      |         |            |        |
| Charge accounts  | \$   | 2,000   | \$         | 3,000  |
| Income taxes—current-year balance                              |      | 1,200   |            | 800    |
| 10 percent note payable  |      | 6,000   |            | 10,000 |
| Mortgage payable   |      | 60,000  |            | 62,000 |
| Estimated income taxes on the difference between the estimated |      |         |            |        |
| current values of assets & liabilities & their tax bases       |      | 16,800  |            | 12,200 |
| Net worth  |      | 64,000  |            | 40,000 |
| Total liabilities & net worth                                  | \$1  | 150,000 | \$1        | 28,000 |

Assets and liabilities are presented in their order of liquidity and maturity, not as current and noncurrent. ASC 274 provides guidelines for determining the current value of a person's assets and liabilities. The primary valuation methods are the discounted value of future cash flows, current market prices of marketable securities or other investments, and appraisals of properties. An investment in a separate business entity (e.g., a partnership) should be reported as a one-line, combined amount valued at the net investment's market value. The liabilities are stated at their discounted cash flow value or current liquidation value. The accountant uses applicable tax laws, carryover provisions, and other regulations to compute the estimated tax liability from the assumed conversion of assets and the assumed extinguishment of liabilities.

The statement of changes in net worth presents the major sources of income. It recognizes both realized and unrealized income. The income statement of a commercial business may not recognize holding gains on some marketable securities, but an individual's statement of changes in net worth recognizes such gains.

#### ILLUSTRATION OF PERSONAL FINANCIAL STATEMENTS

The following illustration presents Alt's personal financial condition as of May 1, 20X5, the day the partners decide to liquidate the ABC Partnership. His net worth on this date is as follows:

| Personal assets      | \$150,000 |
|----------------------|-----------|
| Personal liabilities | (86,000)  |
| Net worth            | \$ 64,000 |

#### **Statement of Financial Condition**

Figure 16-8 included Alt's statement of financial condition on May 1, 20X5, as well as the prioryear statement. The 20X5 statement illustrates the following:

- 1. Receivables due to Alt from other people have a present value of \$3,500.
- 2. Alt has two investments, one of which is his interest in the ABC Partnership, valued at estimated current market value, which in this case also equals its book value of \$34,000. The marketable security investments are shown at market value.

**FIGURF 16-9 Personal Statement of Changes in Net Worth** 

#### C. ALT **Statement of Changes in Net Worth** For the Years Ended May 1, 20X5 and 20X4

|  | Year End             | Year Ended May 1   |  |
|--|----------------------|--------------------|--|
|  | 20X5                 | 20X4               |  |
| Realized increases in net worth:   |                      |                    |  |
| Salary   | \$ 36,900            | \$ 34,900          |  |
| Dividends & interest income  | 800                  | 400                |  |
| Distribution from ABC Partnership  | 3,000                | 1,000              |  |
| Cash surrender value of life insurance                                     | 100                  | 100                |  |
| Gains on sales of marketable securities                                    | 1,400                | 1,200              |  |
|  | \$ 42,200            | \$ 37,600          |  |
| Realized decreases in net worth:   |                      |                    |  |
| Income taxes   | \$ 8,200             | \$ 7,800           |  |
| Interest expense   | 1,400                | 700                |  |
| Real estate taxes Insurance payments (including \$100 for increase in cash | 2,400                | 2,200              |  |
| surrender value of life insurance)   | 400                  | 300                |  |
| Personal expenditures  | 18,800               | 18,600             |  |
|  | \$(31,200)           | \$(29,600)         |  |
| Net realized increase in net worth   |                      |                    |  |
|  | <u>\$ 11,000</u>     | \$ 8,000           |  |
| Unrealized increases in net worth:   |                      |                    |  |
| Marketable securities  | \$ 1,600             | \$ 400             |  |
| ABC Partnership<br>Residence   | 8,000                | 5,000              |  |
| vezidelice   | 8,000                | 4,000              |  |
| Unrealized decreases in net worth:   | \$ 17,600            | \$ 9,400           |  |
| Increase in estimated income taxes on the difference                       |                      |                    |  |
| between the estimated current values of assets &                           |                      |                    |  |
| liabilities & their tax bases  | (4,600)              | (4,400)            |  |
| Net unrealized increase in net worth                                       | \$ 13,000            | \$ 5,000           |  |
|  | <del>\$ 13,000</del> | <del>* 3,000</del> |  |
| Net increase in net worth:  Realized & unrealized                          | \$ 24,000            | \$ 13,000          |  |
| Net worth at beginning of period   | 40,000               | 27,000             |  |
|  |                      |                    |  |
| Net worth at end of period   | \$ 64,000            | \$ 40,000          |  |

- 3. The cash surrender value of life insurance is presented net of any loans payable on the policies.
- 4. Alt's residence and personal effects are presented at their appraised values.
- 5. Liabilities are presented at their estimated current liquidation value or the discounted value of the future cash flows.
- 6. The estimated income taxes on the difference between the estimated current values of assets and liabilities and their tax bases represent the amount of income tax Alt would be liable for if all assets were converted to cash and all liabilities were paid.
- 7. Net worth is the difference between the estimated current value of Alt's assets and liabilities, including estimated tax.

# **Statement of Changes in Net Worth**

Alt's statement of changes in net worth, shown in Figure 16–9, illustrates the following:

1. The statement separates the realized and unrealized changes in net worth. Realized changes are cash flows to or from Alt that have already taken place. Unrealized changes are equivalent to holding gains or losses. They have not yet been converted to cash. For example, Alt received \$3,000 from the ABC Partnership during the year ended May 1, 20X5. In addition, Alt's partnership interest increased by \$8,000 during the year.

- 2. Alt had \$42,200 of realized increases in net worth during the year ended May 1, 20X5. The primary source was a salary of \$36,900 from full-time employment outside the ABC Partnership.
- 3. The major realized decrease in net worth during the year ended May 1, 20X5, was for personal expenditures of \$18,800.
- 4. Unrealized increases of \$17,600 during the year were primarily from an increase in the value of Alt's personal residence (\$8,000) and an increase in the investment value of his partnership interest in the ABC Partnership (\$8,000). Unrealized holding gains of \$1,600 are available in Alt's investments in marketable securities.
- 5. The change in the estimated tax liability is an unrealized decrease because this amount is due only if Alt converts these assets to cash.
- 6. The net unrealized changes in net worth are added to the net realized changes in net worth to obtain the total change in Alt's net worth for each year. His net worth increased by \$13,000 during the year ended May 1, 20X4, and by \$24,000 during the year ended May 1, 20X5.

## **Footnote Disclosures**

Sufficient footnote disclosures should accompany the two personal financial statements. The footnotes should describe the following:

- 1. The methods used to value the major assets.
- 2. The names and the nature of businesses in which the person has major investments.
- 3. The methods and assumptions used to compute the estimated tax bases and a statement that the tax provision in an actual liquidation will probably differ from the estimate because the actual tax burden will then be based on actual realizations determined by market values at the point of liquidation.
- 4. Maturities, interest rates, and other details of any receivables and debt.
- 5. Any other information needed to present fully the person's net worth.

| Questions     |        |   |
|---------------|--------|---|
| LO 16-1       | Q16-1  | What are the major causes of a dissolution? What are the accounting implications of a dissolution?  |
| LO 16-1       | Q16-2  | During a partnership liquidation, do a partnership's liabilities to individual partners have a lower priority than the partnership's obligations to other, third-party creditors? Explain.  |
| LO 16-1       | Q16-3  | X,Y, and $Z$ are partners. The partnership is liquidating, and Partner $Z$ is personally insolvent. What implications may this have for Partners $X$ and $Y$ ?  |
| LO 16-1       | Q16-4  | May an individual partner simply decide to leave a partnership? Does the partnership have any legal recourse against that partner? Explain.   |
| LO 16-2, 16-3 | Q16-5  | Contrast a lump-sum liquidation with an installment liquidation.  |
| LO 16-1       | Q16-6  | How is a deficit in a partner's capital account eliminated if he or she is personally insolvent?  |
| LO 16-2       | Q16-7  | The DEF Partnership has total assets of \$55,000. Partner D has a capital credit of \$6,000, Partner E has a capital deficit of \$20,000, and Partner F has a capital credit of \$8,000. Is the DEF Partnership solvent or insolvent?   |
| LO 16-1       | Q16-8  | Assume that, because of a new law recently passed, the types of significant transactions in which a partnership engages are no longer lawful. Two of the five partners wish to wind up and terminate the partnership. Can these two partners require the partnership to terminate? Explain. |
| LO 16-3       | Q16-9  | How are a partner's personal payments to partnership creditors accounted for on the partnership's books?  |
| LO 16-3       | Q16-10 | What is the purpose of the schedule of safe payments to partners?   |
| LO 16-1       | Q16-11 | In what ratio are losses during liquidation assigned to the partners' capital accounts? Is this ratio used in all instances?  |
| LO 16-3       | Q16-12 | The installment liquidation process uses a worst-case assumption in computing the payments to partners. What does <i>worst-case assumption</i> mean?  |

LO 16-3 O16-13 Define loss absorption potential and explain its importance in determining cash distributions to partners.

LO 16-3 Q16-14 Partner A has a capital credit of \$25,000. Partner B's capital credit is also \$25,000. Partners A and B share profits and losses in a 60:40 ratio. Which partner will receive the first payment of cash in an installment liquidation?

LO 16-3 Q16-15\* Explain the process of incorporating a partnership.

## Cases

C16-1 **Cash Distributions to Partners** 

**Analysis** 

The partnership of Bull and Bear is in the process of termination. The partners have disagreed on virtually every decision and have decided to liquidate the present business with each partner taking his own clients from the partnership. Bull wants cash distributed as it becomes available; Bear wants no cash distributed until all assets have been sold and all liabilities settled. You are called in to aid in the termination and liquidation process.

#### Reauired

How would you respond to each of the partners' requests?

C16-2 **Cash Distributions to Partners** 

> Adam and Bard agreed to liquidate their partnership. Having been asked to assist them in this process, you prepare the following balance sheet for the date of the beginning of the liquidation. The loss-sharing percentages are in parentheses next to the capital account balances.

**Analysis** 

| Cash<br>Loan Receivable from Adam | \$ 40,000 |
|-----------------------------------|-----------|
|                                   | 10,000    |
| Other Assets                      | 200,000   |
| Total                             | \$250,000 |
| Accounts Payable                  | \$ 30,000 |
| Loan Payable to Bard              | 100,000   |
| Adam, Capital (50%)               | 80,000    |
| Bard, Capital (50%)               | 40,000    |
| Total                             | \$250,000 |
|                                   |           |

Bard is demanding that the loan from him be paid before any cash is distributed to Adam. Adam believes the available cash should be paid to him until his capital account is reduced to \$40,000, the same as Bard's. Adam will then pay the loan receivable to the partnership with the cash received. You have been asked to reconcile the argument.

#### Required

What would you advise in this case?

#### C16-3\* Incorporation of a Partnership

After successfully operating a partnership for several years, the partners have proposed to incorporate the business and admit another investor. The original partners will purchase at par an amount of preferred stock equal to the book values of their capital interests in the partnership and common stock for the amount of the market value, including unrecognized goodwill, of the business that exceeds book value. The new investor will make an investment at a 5 percent premium over par value in both preferred and common stock equal to one-third of the total number of shares the original partners purchased. The corporation will acquire all the partnership's assets, assume its liabilities, and employ the original partners and the new investor.

#### Required

- a. Discuss the differences in accounts used and valuations expected in comparing the balance sheets of the proposed corporation and the partnership.
- b. Discuss the differences that would be expected in a comparison of the income statements of the proposed corporation with that of the partnership.

# LO 16-3

<sup>\*</sup>Indicates that the item relates to "Additional Considerations."

LO 16-1

## C16-4 Sharing Losses during Liquidation

Research

Hiller, Luna, and Welsh are attempting to form a partnership to operate a travel agency. They have agreed to share profits in a ratio of 4:3:2 but cannot settle on the terms of the partnership agreement relating to possible liquidation. Hiller believes that it is best not to get into any arguments about potential liquidation now because the partnership will be a success and it is not necessary to think negatively now. Luna believes that in the event of liquidation, any losses should be shared equally because each partner would have worked equally for the partnership's success, or lack thereof. Welsh believes that any losses during liquidation should be distributed in the ratio of capital balances at the beginning of any liquidation because then the losses will be distributed based on a capital ability to bear the losses.

You have been asked to help resolve the differences and to prepare a memo to the three individuals including the following items.

#### Required

- a. Specify the procedures for allocating losses among partners stated in the Uniform Partnership Act of 1997 to be used if no partnership agreement terms are agreed upon regarding liquidation. (You may wish to access a copy of the UPA 1997 for this requirement.)
- b. Critically assess each partner's viewpoint, discussing the pros and cons of each.
- c. Specify another option for allocating potential liquidation losses not included in the positions the three individuals currently take. Critically assess the pros and cons of your alternative.

LO 16-1

#### C16-5 Analysis of a Court Decision on a Partnership Liquidation

The *Mattfield v. Kramer Brothers* court case presents a number of the interesting legal issues that often arise from the dissolution of a partnership. The case was heard in the Supreme Court of the State of Montana in 2005 and decided on May 31, 2005, as Case 03-796. The court's decision includes a summary of the disputes and lower court decisions.

The Montana State Supreme Court's decision is available at the FindLaw website. The easiest way to obtain the script of the decision is to search the Internet for the term "Mattfield v. Kramer Brothers" and then follow the link to the Court's 2005 decision. The legal briefs that each side presented to the Supreme Court may be obtained at the State Law Library of Montana website by searching the Internet for "State of Montana Law Library" or, using the URL: http://courts.mt.gov/library, click on Cases, and then search using case number 03-796, or a text term such as Mattfield. The briefs will then be made available.

#### Required

Obtain a copy of the Montana Supreme Court decision in the *Mattfield v. Kramer Brothers* case. Then answer each of the following questions regarding it.

- *a.* Prepare a short summary of the history of the Kramer Brothers Co-Partnership from formation through the appeal to the Montana Supreme Court.
- b. What type of partnership agreement existed? Recommend several provisions that you feel should have been included in a formal, written partnership agreement.
- c. When the case was appealed to the Supreme Court, did Bill Kramer still have an economic interest in the partnership? Explain.
- d. What legal recourse did the other partners have when Don Kramer dissociated from the partnership in 1994?
- e. In February 1997, why did Don Kramer's attorney, Floyd Brower, request copies of Ray Kramer's and Doug Kramer's personal tax returns?
- f. Select and discuss two key points regarding partnership liquidations that this case illustrates and that you feel are important.

LO 16-2, 16-3

#### **E16-1** Multiple-Choice Questions on Partnership Liquidations

Select the correct answer for each of the following questions.

(*Note:* The following information is for questions 1, 2, and 3.)

The balance sheet for the partnership of Joan, Charles, and Thomas, whose shares of profits and losses are 40, 50, and 10 percent, respectively is as follows:

| Cash         | \$ 50,000        | Accounts Payable             | \$150,000 |
|--------------|------------------|------------------------------|-----------|
| Inventory    | 360,000          | Joan, Capital                | 160,000   |
|              |                  | Charles, Capital             | 45,000    |
|              |                  | Thomas, Capital              | 55,000    |
| Total Assets | <u>\$410,000</u> | Total Liabilities & Equities | \$410,000 |

Assume Charles is insolvent.

- 1. If the inventory is sold for \$300,000, how much should Joan receive upon liquidation?
  - a. \$48,000.
  - b. \$100,000.
  - c. \$136,000.
  - d. \$160,000.
- 2. If the inventory is sold for \$180,000, how much should Thomas receive upon liquidation?
  - a. \$28,000.
  - b. \$32,500.
  - c. \$37,000.
  - d. \$55,000.
- 3. The partnership will be liquidated in installments. As cash becomes available, it will be distributed to the partners. If inventory costing \$200,000 is sold for \$140,000, how much cash should be distributed to each partner at this time?

| Joan        | Charles  | Thomas   |
|-------------|----------|----------|
| a. \$56,000 | \$70,000 | \$14,000 |
| b. \$16,000 | \$20,000 | \$ 4,000 |
| c. \$32,000 | \$ 0     | \$ 8,000 |
| d. \$20,000 | \$ 0     | \$20,000 |
|             | \$ 0     | \$ 8,00  |

- 4. In accounting for partnership liquidation, cash payments to partners after all creditors' claims have been satisfied but before the final cash distribution should be according to
  - a. The partners' relative profit and loss–sharing ratios.
  - b. The final balances in partner capital accounts.
  - c. The partners' relative share of the gain or loss on liquidations.
  - d. Safe payments computations.
- 5. After all noncash assets have been converted into cash in the liquidation of the Adam and Kay Partnership, the ledger contains the following account balances:

|                      | Debit    | Credit   |
|----------------------|----------|----------|
| Cash                 | \$47,000 |          |
| Accounts Payable     |          | \$32,000 |
| Loan Payable to Adam |          | 15,000   |
| Adam, Capital        | 7,000    |          |
| Kay, Capital         |          | 7,000    |

Available cash should be distributed with \$32,000 going to accounts payable and then

- a. \$15,000 to the loan payable to Adam.
- b. \$7,500 each to Adam and Kay.
- c. \$8,000 to Adam and \$7,000 to Kay.
- d. \$7,000 to Adam and \$8,000 to Kay.

(*Note:* The following information is for questions 6 and 7.)

F, A, S, and B are partners sharing profits and losses equally. The insolvent partnership is to be liquidated. The status of the partnership and each partner is as follows:

|       | Partnership<br>Capital Balance | Personal Assets<br>(exclusive of<br>partnership interest) | Personal Liabilities<br>(exclusive of<br>partnership interest) |
|-------|--------------------------------|---|--|
| F     | \$(15,000)                     | \$100,000   | \$40,000   |
| Α     | (10,000)                       | 30,000  | 60,000   |
| S     | 20,000 <sup>a</sup>            | 80,000  | 5,000  |
| В     | 30,000 <sup>a</sup>            | 1,000   | 28,000   |
| Total | \$ 25,000 <sup>a</sup>         |   |  |

<sup>&</sup>lt;sup>a</sup> Deficit

#### 6. The partnership creditors

- a. Must first seek recovery against S because she is personally solvent and has a negative capital balance.
- b. Will not be paid in full regardless of how they proceed legally because the partnership assets are less than its liabilities.
- c. Will have to share A's interest in the partnership on a pro rata basis with A's personal
- d. Have first claim to the partnership assets before any partner's personal creditors have rights to those assets.
- 7. The partnership creditors should seek recovery of their claims
  - a. From the partnership, including additional contributions from F and S.
  - b. From the personal assets of either F or A.
  - c. From the personal assets of either S or B.
  - d. From the personal assets of any of the partners for all or some of their claims.

#### Multiple-Choice Questions on Partnership Liquidation [AICPA Adapted] E16-2

Select the correct answer for each of the following questions.

1. On January 1, 20X7, the partners of Casey, Dithers, and Edwards, who share profits and losses in the ratio of 5:3:2, decided to liquidate their partnership. On this date, its condensed balance sheet was as follows:

| Assets       |           | Liabilities and  | Liabilities and Capital |  |
|--------------|-----------|------------------|-------------------------|--|
| Cash         | \$ 50,000 | Liabilities      | \$ 60,000               |  |
| Other Assets | 250,000   | Casey, Capital   | 80,000                  |  |
|              |           | Dithers, Capital | 90,000                  |  |
|              |           | Edwards, Capital | 70,000                  |  |
| Total        | \$300,000 | Total            | \$300,000               |  |

On January 15, 20X7, the first cash sale of other assets with a carrying amount of \$150,000 realized \$120,000. Safe installment payments to the partners were made on the same date. How much cash should be distributed to each partner?

|    | Casey    | Dithers  | Edwards  |
|----|----------|----------|----------|
|    | \$15,000 | \$51,000 | \$44,000 |
| b. | \$40,000 | \$45,000 | \$35,000 |
| C. | \$55,000 | \$33,000 | \$22,000 |
| d. | \$60,000 | \$36,000 | \$24,000 |
|    |          |          |          |

- 2. In a partnership liquidation, the final cash distribution to the partners should be made in accordance with the
  - a. Partners' profit and loss-sharing ratio.
  - b. Balances of the partners' capital accounts.

LO 16-3

- c. Ratio of the capital contributions by the partners.
- d. Ratio of capital contributions less withdrawals by the partners.

(*Note:* The following information is for questions 3 through 5.)

The balance sheet for the Art, Blythe, and Cooper Partnership is as follows. Figures shown parenthetically reflect agreed profit and loss-sharing percentages.

| Assets       |           | Liabilities and Ca    | apital    |
|--------------|-----------|-----------------------|-----------|
| Cash         | \$ 20,000 | Liabilities           | \$ 50,000 |
| Other Assets | 180,000   | Art, Capital (40%)    | 37,000    |
|              |           | Blythe, Capital (40%) | 65,000    |
|              |           | Cooper, Capital (20%) | 48,000    |
| Total        | \$200,000 | Total                 | \$200,000 |

3. If the firm, as shown on the balance sheet, is dissolved and liquidated by selling assets in installments and if the first sale of noncash assets having a book value of \$90,000 realizes \$50,000 and all cash available after settlement with creditors is distributed, the respective partners would receive (to the nearest dollar)

|    | Art     | Blythe   | Cooper   |
|----|---------|----------|----------|
| a. | \$8,000 | \$ 8,000 | \$ 4,000 |
| b. | \$6,667 | \$ 6,667 | \$ 6,666 |
| C. | \$ 0    | \$13,333 | \$ 6,667 |
| d. | \$ 0    | \$ 3,000 | \$17,000 |

4. If the facts are as in question 3 except that \$3,000 cash is to be withheld, the respective partners would then receive (to the nearest dollar)

|    | Art     | Blythe   | Cooper   |
|----|---------|----------|----------|
| a. | \$6,800 | \$ 6,800 | \$ 3,400 |
| b. | \$5,667 | \$ 5,667 | \$ 5,666 |
| C. | \$ 0    | \$11,333 | \$ 5,667 |
| d. | \$ 0    | \$ 1,000 | \$16,000 |

5. If each partner properly received some cash in the distribution after the second sale, if the cash to be distributed amounts to \$12,000 from the third sale, and if unsold assets with an \$8,000 book value remain, ignoring questions 3 and 4, the respective partners would receive

|    | Art      | Blythe   | Cooper   |
|----|----------|----------|----------|
| a. | \$ 4,800 | \$ 4,800 | \$ 2,400 |
| b. | \$ 4,000 | \$ 4,000 | \$ 4,000 |
| C. | 37/150   | 65/150   | 48/150   |
|    | of       | of       | of       |
|    | \$12,000 | \$12,000 | \$12,000 |
| d. | \$ 0     | \$ 8,000 | \$ 4,000 |

6. The following condensed balance sheet is for the partnership of Arnie, Bart, and Kurt, who share profits and losses in the ratio of 4:3:3, respectively:

| Assets       |           | Liabilities and Capital |                  |
|--------------|-----------|-------------------------|------------------|
| Cash         | \$100,000 | Liabilities             | \$150,000        |
| Other Assets | 300,000   | Arnie, Capital          | 40,000           |
|              |           | Bart, Capital           | 180,000          |
|              |           | Kurt, Capital           | 30,000           |
| Total        | \$400,000 | Total                   | <u>\$400,000</u> |

The partners agreed to dissolve the partnership after selling the other assets for \$200,000. On dissolution of the partnership, Arnie should receive

- a. \$0.
- b. \$40,000.
- c. \$60,000.
- d. \$70,000.

## LO 16-2

#### **Computing Alternative Cash Distributions to Partners** E16-3

Bracken, Louden, and Menser, who share profits and losses in a ratio of 4:3:3, respectively are partners in a home decorating business that has not been able to generate the income the partners had hoped for. They have decided to liquidate the business and have sold all assets except for their decorating equipment. All partnership liabilities have been settled and all the partners are personally insolvent. The decorating equipment has a book value of \$40,000, and the partners have capital account balances as follows:

| Bracken, capital | \$25,000 |
|------------------|----------|
| Louden, capital  | 5,000    |
| Menser, capital  | 10,000   |

# Required

Determine the amount of cash each partner will receive as a liquidating distribution if the decorating equipment is sold for the amount stated in each of the following independent cases:

- a. \$30,000.
- b. \$21,000.
- c. \$7,000.

#### LO 16-2

#### **Lump-Sum Liquidation** E16-4

Matthews, Mitchell, and Michaels are partners in BG Land Development Company and share losses in a 5:3:2 ratio, respectively. The balance sheet on June 30, 20X1, when they decide to liquidate the business, is as follows:

| Assets         |                  | Liabilities and Capital      |                  |
|----------------|------------------|------------------------------|------------------|
| Cash           | \$ 20,000        | Accounts Payable             | \$ 30,000        |
| Noncash Assets | 150,000          | Mitchell, Loan               | 10,000           |
|                |                  | Matthews, Capital            | 80,000           |
|                |                  | Mitchell, Capital            | 36,000           |
|                |                  | Michaels, Capital            | 14,000           |
| Total Assets   | <u>\$170,000</u> | Total Liabilities & Equities | <u>\$170,000</u> |

The noncash assets are sold for \$110,000.

#### Required

- a. Prepare a statement of partnership realization and liquidation.
- b. Prepare the required journal entries to account for the liquidation of BG Land Development Company.

## LO 16-3

# **Schedule of Safe Payments**

After working for In the Kitchen remodeling business for several years, Terry and Phyllis decided to go into business for themselves and formed the Kitchens Just for You Partnership. Three years ago, they admitted Connie as a partner and recognized goodwill at that time because of her good client list for planned kitchen makeovers. However, they were not able to gain a sufficient market for new customers and on September 1, 20X9, they agreed to dissolve and liquidate the business. They decided on an installment liquidation to complete the projects already initiated. The balance sheet, with profit and loss-sharing percentages at the beginning of liquidation, is as follows:

# KITCHENS JUST FOR YOU **Balance Sheet** September 1, 20X9

| Assets       |                  | <b>Liabilities and Equities</b> |                  |  |
|--------------|------------------|---------------------------------|------------------|--|
| Cash         | \$ 12,000        | Accounts Payable                | \$ 43,000        |  |
| Receivables  | 63,000           | Connie, Loan                    | 15,000           |  |
| Terry, Loan  | 9,000            | Terry, Capital (30%)            | 12,000           |  |
| Inventory    | 48,000           | Phyllis, Capital (50%)          | 36,000           |  |
| Goodwill     | 28,000           | Connie, Capital (20%)           | 54,000           |  |
| Total Assets | <u>\$160,000</u> | Total Liabilities & Equities    | <u>\$160,000</u> |  |

Connie's loan was for working capital; the loan to Terry was for his unexpected personal medical bills. During September 20X9, the first month of liquidation, the partnership collected \$41,000 in receivables and decided to write off \$12,000 of the remaining receivables. Sales of one-half of the book value of the inventory realized a loss of \$4,000. The partners estimate that the costs of liquidating the business (newspaper ads, signs, etc.), are expected to be \$6,000 for the remainder of the liquidation process.

## Required

Prepare a schedule of safe payments to partners as of September 30, 20X9, to show how the avail-

able cash should be distributed to the partners.

#### **Schedule of Safe Payments to Partners** E16-6

Partners Maness and Joiner have decided to liquidate their business. The ledger shows the following account balances:

| Cash      | \$ 25,000 | Accounts Payable | \$15,000 |
|-----------|-----------|------------------|----------|
| Inventory | 120,000   | Maness, Capital  | 65,000   |
|           |           | Joiner, Capital  | 65,000   |

Maness and Joiner share profits and losses in an 8:2 ratio. During the first month of liquidation, half the inventory was sold for \$40,000, and \$10,000 of the accounts payable was paid. During the second month, the rest of the inventory was sold for \$30,000, and the remaining accounts payable were paid. Cash was distributed at the end of each month, and the liquidation was completed at the end of the second month.

#### Required

Prepare a statement of partnership realization and liquidation with a schedule of safe payments for the two-month liquidation period.

#### E16-7 Alternative Profit and Loss-Sharing Ratios in a Partnership Liquidation

Nelson, Osman, Peters, and Quincy have decided to terminate their partnership because of recurrent arguments among the partners. The partnership's balance sheet when they decide to wind up follows:

| Cash           | \$ 17,000 | Accounts Payable             | \$ 12,000 |
|----------------|-----------|------------------------------|-----------|
| Noncash Assets | 190,000   | Nelson, Capital              | 15,000    |
|                |           | Osman, Capital               | 75,000    |
|                |           | Peters, Capital              | 75,000    |
|                |           | Quincy, Capital              | 30,000    |
| Total Assets   | \$207,000 | Total Liabilities & Equities | \$207,000 |

During the winding-up of the partnership, the other assets were sold for \$100,000 and the accounts payable were paid. Osman and Peters are personally solvent, but Nelson and Quincy are personally insolvent.

## Required

Determine the amount of cash each partner will receive from the final distributions of the partnership for each of the following independent cases of profit and loss ratios for Nelson, Osman, Peters, and Quincy respectively,

LO 16-2

- b. The partners share profits and losses in the ratio of 3:1:3:3.
- c. The partners share profits and losses in the ratio of 3:1:2:4.

#### LO 16-2 E16-8 **Cash Distribution Plan**

Adams, Peters, and Blake share profits and losses for their APB Partnership in a ratio of 2:3:5. When they decide to liquidate, the balance sheet is as follows:

| Assets       |           | Liabilities and Equities     |           |  |
|--------------|-----------|------------------------------|-----------|--|
| Cash         | \$ 40,000 | Liabilities                  | \$ 50,000 |  |
| Adams, Loan  | 10,000    | Adams, Capital               | 55,000    |  |
| Other Assets | 200,000   | Peters, Capital              | 75,000    |  |
|              |           | Blake, Capital               | 70,000    |  |
| Total Assets | \$250,000 | Total Liabilities & Equities | \$250,000 |  |

Liquidation expenses are expected to be negligible. No interest accrues on loans with partners after termination of the business.

## Required

Prepare a cash distribution plan for the APB Partnership.

#### LO 16-3 E16-9 **Confirmation of Cash Distribution Plan**

Refer to the data in exercise E16-8. During the liquidation process for the APB Partnership, the following events occurred:

- 1. During the first month of liquidation, noncash assets with a book value of \$85,000 were sold for \$65,000, and \$21,000 of the liabilities were paid.
- 2. During the second month, the remaining noncash assets were sold for \$79,000. The loan receivable from Adams was collected, and the rest of the creditors were paid.
- 3. Cash is distributed to partners at the end of each month.

#### Required

Prepare a statement of partnership realization and liquidation with a schedule of safe payments to partners for the liquidation period.

#### E16-10\* **Incorporation of a Partnership**

When Alice and Betty decided to incorporate their partnership, its trial balance was as follows:

|                           | Debit     | Credit    |
|---------------------------|-----------|-----------|
| Cash                      | \$ 8,000  |           |
| Accounts Receivable (net) | 22,400    |           |
| Inventory                 | 36,000    |           |
| Equipment (net)           | 47,200    |           |
| Accounts Payable          |           | \$ 17,200 |
| Alice, Capital (60%)      |           | 62,400    |
| Betty, Capital (40%)      |           | 34,000    |
| Total                     | \$113,600 | \$113,600 |

The partnership's books will be closed, and new books will be used for A & B Corporation. The following additional information is available:

1. The estimated fair values of the assets follow:

| Accounts Receivable | \$21,600 |
|---------------------|----------|
| Inventory           | 32,800   |
| Equipment           | 40,000   |

- 2. All assets and liabilities are transferred to the corporation.
- 3. The common stock is \$10 par. Alice and Betty receive a total of 7,100 shares.
- 4. The partners' profit and loss-sharing ratio is shown in the trial balance.

#### Required

- a. Prepare the entries on the partnership's books to record (1) the revaluation of assets, (2) the transfer of the assets to A & B Corporation and the receipt of the common stock, and (3) the closing of
- b. Prepare the entries on A & B Corporation's books to record the assets and the issuance of the common stock.

## LO 16-3

#### E16-11A Multiple-Choice on Personal Financial Statements [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. On December 31, 20X7, Judy a fully vested participant in a company-sponsored pension plan. According to the plan's administrator, Judy has at that date the nonforfeitable right to receive a lump sum of \$100,000 on December 28, 20X8. The discounted amount of \$100,000 is \$90,000 at December 31, 20X7. The right is not contingent on Judy's life expectancy and requires no future performance on her part. In her December 31, 20X7, personal statement of financial condition, the vested interest in the pension plan should be reported at
  - a. \$0.
  - b. \$90,000.
  - c. \$95,000.
  - d. \$100,000.
- 2. On December 31, 20X7, Mr. and Mrs. McManus owned a parcel of land held as an investment. They had purchased it for \$95,000 in 20X0, and the mortgage on it had a principal balance of \$60,000 at December 31, 20X7. On this date, the land's fair value was \$150,000. In the McManuses' December 31, 20X7, personal statement of financial condition, at what amount should the land investment and mortgage payable be reported?

|    | Land Investment | Mortgage Payable |
|----|-----------------|------------------|
| a. | \$150,000       | \$60,000         |
| b. | \$ 95,000       | \$60,000         |
| C. | \$ 90,000       | \$ 0             |
| d. | \$ 35,000       | \$ 0             |

- 3. Rich Drennen's personal statement of financial condition at December 31, 20X6, shows net worth of \$400,000 before consideration of employee stock options owned on that date. Information relating to the stock options is as follows:
  - Options are to purchase 10,000 shares of Oglesby Corporation stock.
  - Options' exercise price is \$10 a share.
  - Options expire on June 30, 20X7.
  - Market price of the stock is \$25 a share on December 31, 20X6.
  - The exercise of the options in 20X7 would result in ordinary income taxable at 35 percent.

After giving effect to the stock options, Drennen's net worth at December 31, 20X6, would be

- a. \$497,500.
- b. \$550,000.
- c. \$562,500.
- d. \$650,000.

<sup>&</sup>quot;A" indicates that the item relates to Appendix 16A.

- 4. Nancy Emerson owns 50 percent of the common stock of Marks Corporation. She paid \$25,000 for this stock in 20X3. At December 31, 20X8, her 50 percent stock ownership in Marks had a current value of \$185,000. Marks's cumulative net income and cash dividends declared for the five years ended December 31, 20X8, were \$300,000 and \$30,000 respectively. In Nancy's personal statement of financial condition at December 31, 20X8, what amount should she report as her net investment in Marks?
  - a. \$25,000.
  - b. \$160,000.
  - c. \$175,000.
  - d. \$185,000.
- 5. In a personal statement of financial condition, which of the following should be reported at estimated current values?

|    | Investments in<br>Closely Held Business | Investments in<br>Leaseholds |  |
|----|---|------------------------------|--|
| a. | Yes                                     | Yes                          |  |
| b. | Yes                                     | No                           |  |
| C. | No                                      | No                           |  |
| d. | No                                      | Yes                          |  |

6. Personal financial statements should include which of the following statements?

|    | Financial<br>Condition | Changes in<br>Net Worth | Cash Flows |
|----|------------------------|-------------------------|------------|
| a. | No                     | Yes                     | Yes        |
| b. | Yes                    | No                      | No         |
| C. | Yes                    | Yes                     | No         |
| d. | Yes                    | Yes                     | Yes        |

- 7. A business interest that constitutes a large part of an individual's total assets should be presented in a personal statement of financial condition as
  - a. A single amount equal to the proprietorship equity.
  - b. A single amount equal to the estimated current value of the business interest.
  - c. A separate list of the individual assets and liabilities, at cost.
  - d. Separate line items of both total assets and total liabilities, at cost.
- 8. Personal financial statements should report assets and liabilities at
  - a. Historical cost.
  - b. Historical cost and, as additional information, at estimated current values at the date of the financial statements.
  - c. Estimated current values at the date of the financial statements.
  - d. Estimated current values at the date of the financial statements and, as additional information, at historical cost.
- 9. The following information pertains to Kent's marketable equity securities:

|  | Fair Value at<br>December 31 |                             |                             |
|--|------------------------------|-----------------------------|-----------------------------|
| Stock  | 20X3                         | 20X2                        | Cost in 20X0                |
| City Manufacturing Inc. Tri Corporation Zee Inc. | \$95,500<br>3,400            | \$93,000<br>5,600<br>10,300 | \$89,900<br>3,600<br>15,000 |

Kent sold the Zee stock in January 20X3 for \$10,200. In his personal statement of financial condition at December 31, 20X3, what amount should he report for marketable equity securities?

- a. \$93,300.
- b. \$93,500.
- c. \$94,100.
- d. \$98,900.
- 10. Personal financial statements should report an investment in life insurance at the
  - a. Face amount of the policy less the amount of premiums paid.
  - b. Cash value of the policy less the amount of any loans against it.
  - c. Cash value of the policy less the amount of premiums paid.
  - d. Face amount of the policy less the amount of any loans against it.
- 11. Mrs. Taft owns a \$150,000 insurance policy on her husband's life. The policy's cash value is \$125,000, and there is a \$50,000 loan against it. The Tafts' personal statement of financial condition at December 31, 20X3, should show what amount as an investment in life insurance?
  - a. \$150,000.
  - b. \$125,000.
  - c. \$100,000.
  - d. \$75,000.

#### LO 16-3 E16-12A **Personal Financial Statements**

Leonard and Michelle have asked you to prepare their statement of changes in net worth for the year ended August 31, 20X3. They have prepared the following comparative statement of financial condition based on estimated current values as required by ASC 274:

# **LEONARD AND MICHELLE Statement of Financial Condition** August 31, 20X3 and 20X2

|  | <u> </u> | 20X3      |          | 20X2      |
|--|----------|-----------|----------|-----------|
| Assets                                 |          |           |          |           |
| Cash                                   |          | \$ 3,600  |          | \$ 6,700  |
| Marketable securities                  |          | 4,900     |          | 16,300    |
| Residence                              |          | 94,800    |          | 87,500    |
| Personal effects                       |          | 10,000    |          | 10,000    |
| Cash surrender value of life insurance |          | 3,200     |          | 5,600     |
| Investment in farm business:           |          |           |          |           |
| Farmland                               | \$42,000 |           | \$32,100 |           |
| Farm equipment                         | 22,400   |           | 9,000    |           |
| Note payable on farm equipment         | (10,000) |           | 0        |           |
| Net investment in farm                 |          | 54,400    |          | 41,100    |
| Total assets                           |          | \$170,900 |          | \$167,200 |
| Liabilities & Net Worth                |          |           |          |           |
| Credit card                            |          | \$ 2,400  |          | \$ 1,500  |

| Mortgage payable on residence          |          | 71,000    |          | 76,000    |
| Estimated income taxes on the          |          |           |          |           |
| difference between the estimated       |          |           |          |           |
| current values of assets & liabilities |          |           |          |           |
| and their tax bases                    |          | 19,700    |          | 16,500    |
| Net worth                              |          | 66,400    |          | 60,800    |
| Total liabilities & net worth          |          | \$170,900 |          | \$167,200 |

#### Additional Information

- 1. Leonard and Michelle's total salaries during the fiscal year ended August 31, 20X3, were \$44,300; farm income was \$6,700; personal expenditures were \$43,500; and interest and dividends received were \$1.400.
- 2. They purchased marketable securities in 20X1 at a cost of \$11,000 and with a market value of \$11,000 on August 31, 20X2, and sold them on March 1, 20X3, for \$10,700. Leonard and Michelle neither purchased nor sold additional marketable securities during the fiscal year.
- 3. The values of the residence and farmland are based on year-end appraisals.
- 4. On August 31, 20X3, Leonard purchased a used combine at a cost of \$14,000. He made a \$4,000 down payment and signed a five-year, 10 percent note payable for the \$10,000 balance owed. He did not purchase or sell other farm equipment during the fiscal year.
- 5. The cash surrender value of the life insurance policy increased during the fiscal year by \$1,600. However, Leonard had borrowed \$4,000 against the policy on September 1, 20X2. Interest at 15 percent for this loan's first year was paid when due on August 31, 20X3.
- 6. Leonard and Michelle paid federal income taxes of \$12,400 during the 20X3 fiscal year.
- 7. Mortgage payments made during the year totaled \$9,000, which included payments of principal and interest.

# Required

Using the comparative statement of financial condition and additional information provided, prepare the statement of changes in net worth for the year ended August 31, 20X3. (Hint: It will be helpful to use T-accounts to determine several realized and unrealized amounts. An analysis of the cash, personal effects, and credit card accounts should not be required to properly complete the statement.)

| Personal assets Personal liabilities | \$250,000<br>(230,000) | \$300,000<br>(240,000) | \$350,000<br>(325,000) |
| Personal net worth                   | \$ 20,000              | \$ 60,000              | \$ 25,000              |

- 2. Carlos, Dan, and Gail share profits and losses in the ratio 20:40:40.
- 3. CDG sold all noncash assets on December 10, 20X6, for \$260,000.

## Required

- a. Prepare a statement of realization and liquidation for the CDG Partnership on December 10, 20X6.
- b. Prepare a schedule of the net worth of each of the three partners as of December 10, 2006, after the partnership liquidation is completed.

P16-14

# Installment Liquidation [AICPA Adapted]

On January 1, 20X1, partners Art, Bru, and Chou, who share profits and losses in the ratio of 5:3:2, respectively, decide to liquidate their partnership. The partnership trial balance at this date follows:

|            |                           | Debit       |
|------------|---------------------------|-------------|
| Advanced   | Cash                      | \$ 18,000   |
| StudyGuide | Accounts Receivable       | 66,000      |
| .com       | Inventory                 | 52,000      |
|            | Machinery & Equipment (no | et) 189,000 |
|            | Accounts Payable          |             |
|            | Art, Capital              |             |
|            | Bru, Capital              |             |
|            | Chou, Capital             |             |

The partners plan a program of piecemeal conversion of assets to minimize liquidation losses. All available cash, less an amount retained to provide for future expenses, is to be distributed to the partners at the end of each month. A summary of the liquidation transactions follows:

\$325,000

#### January 20X1

- 1. Collected \$51,000 on accounts receivable; the balance is uncollectible.
- 2. Received \$38,000 for the entire inventory.
- 3. Paid \$2,000 liquidation expenses.

Total

- 4. Paid \$50,000 to creditors, after offset of a \$3,000 credit memorandum received on January 11, 20X1.
- 5. Retained \$10,000 cash in the business at the end of the month for potential unrecorded liabilities and anticipated expenses.

# February 20X1

- 6. Paid \$4,000 liquidation expenses.
- 7. Retained \$6,000 cash in the business at the end of the month for potential unrecorded liabilities and anticipated expenses.

# March 20X1

- 8. Received \$146,000 on sale of all items of machinery and equipment.
- 9. Paid \$5,000 liquidation expenses.
- 10. Retained no cash in the business.

# Required

Prepare a statement of partnership liquidation for the partnership with schedules of safe payments to partners.

#### **Cash Distribution Plan** P16-15

StudyGuide .com

The Pen, Evan, and Torves Partnership has asked you to assist in winding-up its business affairs. You compile the following information.

1. The partnership's trial balance on June 30, 20X1, is

|                           | Debit     | Credit    |
|---------------------------|-----------|-----------|
| Cash                      | \$ 6,000  |           |
| Accounts Receivable (net) | 22,000    |           |
| Inventory                 | 14,000    |           |
| Plant & Equipment (net)   | 99,000    |           |
| Accounts Payable          |           | \$ 17,000 |
| Pen, Capital              |           | 55,000    |
| Evan, Capital             |           | 45,000    |
| Torves, Capital           |           | 24,000    |
| Total                     | \$141,000 | \$141,000 |
|                           |           |           |

- 2. The partners share profits and losses as follows: Pen, 50 percent; Evan, 30 percent; and Torves, 20 percent.
- 3. The partners are considering an offer of \$100,000 for the firm's accounts receivable, inventory, and plant and equipment as of June 30. The \$100,000 will be paid to creditors and the partners in installments, the number and amounts of which are to be negotiated.

#### Required

Prepare a cash distribution plan as of June 30, 20X1, showing how much cash each partner will receive if the partners accept the offer to sell the assets.

LO 16-3

#### P16-16 **Installment Liquidation**

Refer to the facts in Problem 16-15. The partners have decided to liquidate their partnership by installments instead of accepting the \$100,000 offer. Cash is distributed to the partners at the end of each month. A summary of the liquidation transactions follows:

#### July

- 1. Collected \$16,500 on accounts receivable; balance is uncollectible.
- 2. Received \$10,000 for the entire inventory.
- 3. Paid \$1,000 liquidation expense.
- 4. Paid \$17,000 to creditors.
- 5. Retained \$8,000 cash in the business at the end of the month.

# August

- 6. Paid \$1,500 in liquidation expenses.
- 7. As part payment of his capital, Torves accepted an item of special equipment that he developed, which had a book value of \$4,000. The partners agreed that a value of \$10,000 should be placed on this item for liquidation purposes.
- 8. Retained \$2,500 cash in the business at the end of the month.

# September

- 9. Received \$75,000 on sale of remaining plant and equipment.
- 10. Paid \$1,000 liquidation expenses, retaining no cash in the business.

#### Required

Prepare a statement of partnership realization and liquidation with supporting schedules of safe payments to partners.

# P16-17 Installment Liquidation

The DSV Partnership decided to liquidate as of June 30, 20X5. Its balance sheet as of this date follows:

| DSV PARTNERSHIP  Balance Sheet  At June 30, 20X5                                     |                                 |  |
|--|---------------------------------|--|
| Assets Cash Accounts Receivable (net) Inventories Property, Plant, & Equipment (net) |                                 | \$ 50,000<br>95,000<br>75,000<br>500,000 |
| Total Assets  Liabilities & Partners' Capital  Liabilities:                          |                                 | \$720,000                                |
| Accounts Payable Partners' Capital: D, Capital S, Capital V, Capital                 | \$100,000<br>140,000<br>_75,000 | \$405,000                                |
| Total Capital Total Liabilities & Capital  |                                 | 315,000<br>\$720,000                     |

## **Additional Information**

1. The personal assets (excluding partnership loan and capital interests) and personal liabilities of each partner as of June 30, 20X5, follow:

|                                      | D                      | S                      | V                      |
|--------------------------------------|------------------------|------------------------|------------------------|
| Personal assets Personal liabilities | \$250,000<br>(270,000) | \$450,000<br>(420,000) | \$300,000<br>(240,000) |
| Personal net worth                   | \$ (20,000)            | \$ 30,000              | \$ 60,000              |

2. The DSV Partnership was liquidated during the months of July, August, and September. The assets sold and the amounts realized follow:

| Month     | Assets Sold                  | Carrying Amount | Amount Realized |
|-----------|------------------------------|-----------------|-----------------|
| July      | Inventories                  | \$ 50,000       | \$ 45,000       |
|           | Accounts receivable (net)    | 60,000          | 40,000          |
|           | Property, plant, & equipment | 400,000         | 305,000         |
| August    | Inventories                  | 25,000          | 18,000          |
|           | Accounts receivable (net)    | 10,000          | 4,000           |
| September | Accounts receivable (net)    | 25,000          | 10,000          |
|           | Property, plant, & equipment | 100,000         | 45,000          |

# Required

Prepare a statement of partnership realization and liquidation for the DSV Partnership for the three-month period ended September 30, 20X5. D, S, and V share profits and losses in the ratio 50:30:20, respectively. The partners wish to distribute available cash at the end of each month after reserving \$10,000 of cash at the end of both July and August to meet unexpected liquidation expenses. Actual liquidation expenses incurred and paid each month amounted to \$2,500. Support each cash distribution to the partners with a schedule of safe installment payments.

LO 16-3

## P16-18 Cash Distribution Plan

Refer to the information in problem 16-17. Assume the following cash amounts were received during the months of July, August, and September from the sale of DSV Partnership's noncash assets:

| \$390,000 |
|-----------|
| 22,000    |
| 55,000    |
|           |

The partnership wishes to keep \$10,000 of cash on hand at the end of both July and August to pay for unexpected liquidation expenses.

It paid liquidation expenses of \$2,500 at the end of each month, July, August, and September.

# Required

- a. Prepare a statement as of June 30, 20X5, showing how cash will be distributed among partners as it becomes available.
- b. Prepare schedules showing how cash is distributed at the end of July, August, and September 20X5.

# LO 16-1–16-3 P16-19

## P16-19 Matching

Match the terms on the left with the descriptions on the right. Each description may be used only once (or not at all).

# LO 16-1

# P16-20 Partnership Agreement Issues [AICPA Adapted]

A partnership involves an association between two or more persons to carry on a business as coowners for profit. Items 1 through 10 relate to partnership agreements.

The statement of facts for Parts A and B are followed by numbered sentences that state legal conclusions relating to those facts. Determine whether each legal conclusion is correct or not and mark it with the letter Y for yes, correct, or N for no, not correct.

#### Part A

Adams, Webster, and Coke were partners in a construction business. Coke decided to retire and found Black, who agreed to purchase his interest. Black was willing to pay Coke \$20,000 and promised to assume Coke's share of all firm obligations.

# Required (Use Y for yes and N for no)

- 1. Unless the partners agree to admit Black as a partner, she could not become a member of the firm.
- 2. The retirement of Coke would cause a dissolution of the firm.
- 3. The firm's creditors are third-party beneficiaries of Black's promise to Coke.
- 4. If Black purchased Coke's interest and promised to pay his share of the firm's debts, Coke would be released from all liability for those debts.
- 5. If the other partners refused to accept Black as a partner, Coke could retire, thereby causing a dissolution.

#### Part B

Carson, Crocket, and Kitt were partners in an importing business. They needed additional capital to expand and located White who agreed to purchase a one-quarter interest in the partnership by contributing \$50,000 in capital. Before White became a partner, several creditors had loaned money to the partnership. The partnership subsequently failed, and the creditors are now attempting to assert personal liability against White.

# Required (Use Y for yes and N for no)

- 6. White is personally liable on all of the firm's debts contracted subsequent to his entry into the firm.
- 7. Creditors of the partnership prior to White's admission automatically continue to be creditors of the partnership after the admission of the new partner.
- 8. Creditors of the partnership that existed prior to White's entry can assert rights against his capital contribution.
- 9. White has personal liability for firm debts existing prior to his entry into the firm.
- 10. White must remain in the partnership for at least one year to be subject to personal liability.

City of

San Diego

# ACCOUNTING FOR THE BUSTLING CITY OF SAN DIEGO

The City of San Diego, California, is one of the most popular places to visit in the United States. The city has everything from beaches, lakes, and parks to a world-class zoo and pro sports teams. Because of its beauty and nearly perfect climate, San Diego is a popular location for visitors to hold meetings and conventions year-round. It is also a very desirable place to live and work. With a population of 1.33 million, it is the eighth largest city in the United States and the second largest in California.

Have you ever considered what it takes to run a city of this size and diversity? In addition to maintaining the popular tourist attractions such as beaches and parks, the city manages public pools, a cemetery, libraries, public transportation, youth recreation programs, law enforcement, emergency services, public utilities, airports, social services, schools, and countless other activities. To facilitate all of these programs, services, and activities, San Diego City has a long list of departments from Police to Lifeguard Services and from Engineering to Environmental Services, to name a few. Naturally, the city has to report on its stewardship of these many activities, services, and programs to its citizens. This chapter and Chapter 18 explore the financial reporting aspects of governmental units such as San Diego City, San Diego County, and the State of California.

Each of the 50 states follows relatively uniform accounting standards; however, some states have unique statutory provisions for selected items. Local governments are political subdivisions of state government. The 89,000-plus local governmental units in the United States are classified as (1) general-purpose local governments, such as counties, cities, towns, villages, and townships, (2) special-purpose local governments, such as soil conservation districts, and (3) authorities and agencies, such as the Port Authority of New York and New Jersey and local housing authorities. Authorities and agencies differ from other governmental units because they typically do not have taxing power and may sell only revenue bonds, not general obligation bonds.

The first part of this chapter introduces the accounting and reporting requirements for state and local governmental units. We first discuss and illustrate the major concepts of governmental accounting. In the last part of this chapter, we present a comprehensive illustration of accounting for a city's general fund. The comprehensive illustration reviews and integrates the concepts presented in the first part of the chapter. Chapter 18 continues the comprehensive illustration to complete the discussion of state and local governmental accounting and reporting.

#### LEARNING OBJECTIVES

When you finish studying this chapter, you should be able to:

- LO 17-1 Understand and explain the basic differences between governmental and private sector accounting.
- LO 17-2 Understand and explain major concepts of governmental accounting.
- LO 17-3 Understand and explain the differences between the various governmental
- LO 17-4 Understand and explain basic concepts for financial reporting in governmental accounting.
- LO 17-5 Understand and explain the basic differences in the measurement focus and basis of accounting between governmental and private sector accounting.
- LO 17-6 Understand and explain basic budgeting concepts in governmental accounting.
- LO 17-7 Make calculations and record journal entries for the general fund.
- LO 17-8 Make calculations and record journal entries for basic interfund activities.

# DIFFERENCES BETWEEN GOVERNMENTAL AND PRIVATE SECTOR ACCOUNTING

LO 17-1

Understand and explain the basic differences between governmental and private sector accounting.

During the last decade, the combined annual spending of federal, state, and local governments exceeded \$4.0 trillion. Governmental purchases of goods and services constitute approximately 20 percent of the total gross national product of the United States.<sup>1</sup>

Governmental entities have operating objectives that differ from those of commercial entities; therefore, governmental accounting is different from accounting for commercial enterprises. The major differences between governmental and for-profit entities are as follow:

- 1. Governmental accounting must recognize that governmental units collect resources and make expenditures to fulfill societal needs. Society expects governmental units to develop and maintain an infrastructure of highways, streets, and sewer and sanitation systems as well as to provide public protection, recreation, and cultural services.
- 2. Except for some proprietary activities such as utilities, governmental entities do not have a general profit motive. Police and fire departments do not have a profit motive; instead these units must be evaluated on their abilities to provide for society's needs.
- 3. Governmental operations have legal authorization for their existence, raise revenue through the power of taxation, and have mandated expenditures they must make to provide their services. The governmental accounting system must make possible the determination and demonstration of compliance with finance-related legal and contractual provisions. Governmental units are subject to extensive regulatory oversight through laws, grant restrictions, bond indentures, and a variety of other legal constraints.
- 4. Governmental entities use comprehensive budgetary accounting, which serves as a significant control mechanism and provides the basis for comparing actual operations against budgeted amounts. The budget is a legally established control vehicle.
- 5. The primary emphasis in governmental fund accounting is to measure and report on management's stewardship of the financial resources committed to the objectives of the governmental unit. Accountability for the flow of financial resources is a chief objective of governmental accounting. The managers of the governmental unit must be able to show that they are in compliance with the many legal regulations governing its operations.

<sup>&</sup>lt;sup>1</sup> Annual reports of the national income and product accounts, including aggregate revenues and expenditures of governmental entities, are presented in the Survey of Current Business, published periodically by the U.S. Department of Commerce.

- 6. Governmental entities typically are required to establish separate funds to carry out their various missions. Each fund is an independent accounting and fiscal entity and is responsible for using its own resources to accomplish its specific responsibilities.
- 7. Many fund entities do not record fixed assets or long-term debt in their funds. These fund entities record the purchase of assets such as equipment and buildings as expenditures of the period. The governmental unit maintains a separate record of fixed assets and long-term debt.
- 8. An important objective of governmental financial reporting is accountability. Governments must be able to explain and justify to citizens and to other governments the raising and using of public resources. A key element of accountability is interperiod equity in which it is determined whether current year revenues are sufficient to pay for services provided during that year or if future taxpayers will be required to assume burdens for services previously provided or deficits created in prior years.

# HISTORY OF GOVERNMENTAL ACCOUNTING

Before 1984, the Municipal Finance Officers Association (MFOA) directed the development of accounting principles for local governmental units. In 1934, the National Committee on Municipal Accounting, a committee of the MFOA, published the first statement on local governmental accounting, A Tentative Outline—Principles of Municipal Accounting. In 1968, the National Committee on Governmental Accounting, the successor committee, published Governmental Accounting, Auditing, and Financial Reporting (GAAFR). Some governmental accountants call it the "blue book" after the color of its cover. The GAAFR is periodically updated to include the most recent governmental financial reporting standards.

In 1974, the American Institute of Certified Public Accountants (AICPA) published an industry audit guide, Audits of State and Local Governmental Units, stating that "except as modified in this guide, they (GAAFR) constitute generally accepted accounting principles." In March 1979, the National Council on Governmental Accounting (NCGA) issued its Statement No. 1, "Governmental Accounting and Financial Reporting Principles" (NCGA 1), which established a set of accounting principles for governmental reporting.

In 1984, the Financial Accounting Foundation created a companion group to the Financial Accounting Standards Board. The Governmental Accounting Standards Board (GASB) is now responsible for maintaining and developing accounting and reporting standards for state and local governmental entities. In GASB Statement No. 1, "Authoritative Status of NCGA Pronouncements and AICPA Industry Audit Guide" (GASB 1), released in July 1984, the GASB stated that all NCGA statements and interpretations issued and in effect on that date were accepted as generally accepted accounting principles for governmental accounting. In 1985, the GASB published a codification of the existing GAAP for state and local governments, Codification of Governmental Accounting and Financial Reporting Standards. The first section of the codification is virtually identical to NCGA 1 as amended by subsequent NCGA statements. The focus of Section 2 is on the financial reporting issues for governmental entities. Sections 3 and 4 address specific balance sheet and operating statement topics. The GASB continues to publish updated codifications periodically. The codification is an authoritative source for accounting and financial reporting principles for governmental units.

A very significant change in the governmental reporting model for governmental units was required by GASB Statement 34, "Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments" (GASB 34), issued in 1999. GASB 34 established government-wide financial statements to be prepared on the accrual basis of accounting and an array of fund-based financial statements. This standard also required several new footnote and schedule disclosures that increase the

<sup>&</sup>lt;sup>2</sup> Committee on Governmental Accounting and Auditing, Audits of State and Local Governmental Units (New York: American Institute of Certified Public Accountants, 1974), pp. 8–9.

transparency of governmental reporting. The GASB continues to issue new standards to meet the information needs of citizens, creditors, and other users of governmental units' financial reports.

Accounting for governmental entities is given the general name of *fund accounting* to distinguish it from accounting for commercial entities. This chapter first presents an overview of fund accounting, including accounting for typical transactions and providing required financial statements for a governmental entity. After introducing the major concepts of governmental accounting, we present a comprehensive illustration of accounting and financial reporting for the general fund, typically the most important fund of most governmental entities. Chapter 18 presents the accounting for a governmental entity's remaining funds and its required financial statements. The comprehensive illustration provides integrated examples of the governmental accounting and financial reporting concepts that the first part of this chapter discusses. Some students may initially find governmental accounting to be quite different from the financial accounting learned in earlier accounting courses. However, after studying the concepts and working through the comprehensive illustration, the reasons and logic for fund accounting and the content and form of governmental financial statements become more focused.

# MAJOR CONCEPTS OF GOVERNMENTAL ACCOUNTING

LO 17-2

Understand and explain major concepts of governmental accounting.

Governmental entities use a fund-based accounting system in which some of the funds use a modified-accrual accounting method as opposed to the accrual method used by commercial entities. Also, the financial statements of governmental entities have a foundation in the individual funds but aggregate to a government-wide level. The following section discusses the major concepts for governmental accounting.

# **Elements of Financial Statements**

In 2007, the GASB published **Concepts Statement No. 4,** "Elements of Financial Statements" (CON 4), that defined each of the seven elements of financial statements of state and local governments (five elements of statements of financial condition and two elements of resource flows statements.) Each definition uses the central focus of a *resource*, which is an item having a present capacity to provide, directly or indirectly, services for the governmental entity. This present service capacity may be in the form of direct provision of services as well as those items having the ability to affect cash flows in the future.

The five elements of a statement of financial condition are

- 1. Assets. Resources with present service capacity that the entity presently controls.
- 2. *Liabilities*. Present obligations to sacrifice resources that the entity has little or no discretion to avoid.
- 3. A *deferred outflow of resources*. A consumption of net assets that is applicable to a future reporting period.
- 4. A *deferred inflow of resources*. An acquisition of net assets that is applicable to a future reporting period.
- 5. *Net position*. The residual of all other elements presented in a statement of financial condition.

The two elements of the resource flows statements are

- 1. An *outflow of resources*. A consumption of net assets that is applicable to the current reporting period.
- 2. An *inflow of resources*. An acquisition of net assets that is applicable to the current reporting period.

The central focus of present service capacity for defining the elements of governmental financial statements is different from the FASB's focus in its **Statement of Financial Accounting Concepts No. 6,** "Elements of Financial Statements" (CON 6). The FASB

developed its definitions of the elements of financial statements based on the usefulness of financial reporting information to investors and creditors in making economic decisions for allocating scarce resources among alternative uses.

The GASB felt that its concepts statement provides a framework that will enhance consistency in setting future governmental accounting standards and serve as guidance for preparers and auditors when evaluating transactions that are not explicitly included in existing governmental accounting standards.

# **Expendability of Resources versus Capital Maintenance Objectives**

The major differences between commercial and governmental accounting and reporting stem from the entities' objectives. In commercial, profit-seeking enterprises, the measurement focus is on the flow of all economic resources of the firm. The accrual method of accounting is used to record the revenues and expenses during a period with the purpose of measuring profitability. The company's balance sheet contains both current and noncurrent assets and liabilities, and the change in retained earnings reflects the company's ability to maintain its capital investment.

In contrast, the measurement focus for the governmental funds of a government entity is on changes in *current financial resources* available to provide services to the public in accordance with the governmental entity's legally adopted budget. The modified accrual method of accounting is used to measure the revenues that are available to finance current expenditures and the expenditures made during the period. The balance sheet reports only current assets, current liabilities, and a fund balance. The legislative governing body initiates the operating authorization for a fiscal period's transactions when it passes a budget. Managers of governmental units must be fiscally accountable to show that resources are expended in compliance with the legal and financial restrictions placed on the governmental entity by its legislative body.

In 2006, the GASB published a white paper that identified a number of key differences between financial reporting for governments and for-profit businesses.<sup>3</sup> The white paper argued that users of governmental financial reports and users of business financial reports require substantially different financial and economic information to evaluate fiscal and operational performance. The white paper expands on the differences stated in the preceding list and presents the GASB's perspective on the need for separate governmental accounting and financial reporting standards.

# **Definitions and Types of Funds**

Fund accounting must recognize the unique aspects of governmental operations. Governmental units must provide a large range of services such as fire and police protection, water and sewerage, legal courts, and construction of public buildings and other facilities. In addition, governmental units receive their resources from many different sources and must make expenditures in accordance with legal restrictions.

The operations of a governmental unit also must be separated into periodic reporting intervals of fiscal years because the management of these public operations may change as a result of elections or new appointments. Thus, governmental accounting must recognize the governmental unit's many different purposes, its different sources of revenue, mandated expenditures, and its fiscal periodicity. To accomplish the governmental unit's objectives, the unit establishes a variety of funds as that unit's fiscal and accounting entities. A fund is a separate accounting group with accounts to record the transactions and prepare the financial statements of a defined part of the governmental entity that is responsible for specific activities or objectives. Each fund records those transactions affecting its assets, related liabilities, and residual fund balance.

Different funds are established for the specific functions that a government must provide. Most funds obtain resources from taxes on property, income, or commercial sales; they also may obtain resources from grants provided by other governmental agencies, fines

LO 17-3

Understand and explain the differences between the various governmental fund types.

<sup>&</sup>lt;sup>3</sup> Governmental Accounting Standards Board, Why Governmental Accounting and Financial Reporting Is—and Should Be—Different (Norwalk, CT: GASB, 2006).

or licenses, and charges for services. Each fund must make its expenditures in accordance with its specified purposes. For example, a fund established for fire protection cannot be used to provide school buses for the local school. The fire department may make expenditures only as directly related to its function of providing fire protection.

Each governmental fund has its own asset and liability accounts and its own revenue and expenditures accounts. The term *expenditures* refers to decreases in net financial resources available under the current financial resources measurement focus. The governmental unit makes expenditures in accordance with its budget established by that unit's governing body, and the internal control structure of a vouchers payable system is generally used prior to paying external vendors. Upon receipt and acceptance of the goods or services from the external vendor, the journal entry to recognize the approved expenditure is a debit to expenditures and a credit to vouchers payable. The increase in the payables decreases the net financial resources available. The unit's governing body then must approve the payment of the vouchers payable.

Separate fund-based financial statements must be prepared for each fiscal period. In this manner, governing bodies or other interested parties may assess the fiscal and operating performance of each fund in fulfillment of the specific purposes for which each fund was established.

Governmental accounting systems are established on a fund basis in three major categories: governmental, proprietary, and fiduciary. Refer to Figure 17–1 for an overview of each fund and a brief description of the types of activities each fund accounts for.

## Governmental Funds

Five types of *governmental funds* account for basic governmental services to the public. They are (1) the general fund, (2) special revenue funds, (3) capital projects funds, (4) debt service funds, and (5) permanent funds (see Figure 17–1). The number of governmental funds the entity maintains is based on its legal and operating requirements. Each governmental entity creates only one general fund, but it may create more than one of each of the other types of governmental funds based on the entity's specific needs. For example, some governmental entities establish a separate capital projects fund for each major capital project.

In its 2011 comprehensive annual financial report, the City of San Diego listed 10 separate capital project funds it used to track separately the financial resources dedicated to specific projects.

# **Proprietary Funds**

Some of a governmental unit's activities, such as the operation of a public swimming pool or a municipal water system, are similar to those of commercial enterprises. The governmental unit's objective is to recover its costs in these operations

through a system of user charges. The two types of *proprietary funds* that governmental entities typically use are enterprise funds and internal service funds (see Figure 17–1). Accounting and reporting for a proprietary fund are similar to accounting for a commercial operation. The balance sheet of each proprietary fund reports all assets, including long-term capital assets, and all liabilities, including long-term liabilities. Chapter 18 presents a complete discussion of proprietary funds.

# Fiduciary Funds

The two main types of *fiduciary funds*, trust and agency funds, account for resources that are maintained by but do not belong to a governmental unit. Specifically, the three types of trust funds that account for financial resources maintained in trust by the government are (1) pension and other employee benefit trust funds, (2) investment trust funds, and (3) private-purpose trust funds. Agency funds are used to account for resources the government holds solely in a custodial capacity (see Figure 17–1). Note that the permanent fund, which is a governmental fund, includes resources that are legally restricted so that the entity must maintain the principal and can use only the earnings from the fund's resources to benefit the government's programs for all of its citizens. The private-purpose trust funds include trusts under which the principal may or may not be expendable but for which the trust agreement specifies that the principal, if expendable, and the earnings may be used only for the benefit of specific individuals, organizations, or other governments. Chapter 18 presents examples of fiduciary funds.

| Tuna structure   |   |
|--|---|
| <b>Governmental Fund Types</b>   |   |
| 1. General fund  | Accounts for all financial resources except for those accounted for in another fund. Includes transactions for general governmental services provided by the entity's executive, legislative, and judicial operations.  |
| 2. Special revenue fund  | Accounts for the proceeds of specific revenue sources that are restricted for specified purposes. Includes resources and expenditures for operations, such as public libraries, when a separate tax is levied for their support.  |
| 3. Capital projects fund   | Accounts for financial resources for the acquisition or construction of major capital facilities that benefit many citizens, such as parks and municipal buildings. This fund exists only during the acquisition or construction of the facilities and is closed once the project is completed.   |
| 4. Debt service fund   | Accounts for the accumulation of resources for, and the payment of, general long-term debt principal and interest. This fund is used for servicing the government's long-term debt.   |
| 5. Permanent fund  | Accounts for resources that are restricted such that only earnings, but not principal, may be used in support of governmental programs that benefit the government or its citizenry.  |
| Proprietary Fund Types   |   |
| 6. Enterprise fund   | Accounts for operations of governmental units that charge for services provided to the general public. Includes activities financed in a manner similar to private business enterprises regarding the governing body's intent to recover the costs of providing goods or services to the general public on a continuing basis through user charges. Also includes operations that the governing body intends to operate at a profit. Examples include sports arenas, municipal electric utilities, and municipal bus companies. |
| 7. Internal service fund   | Accounts for the financing of goods or services provided by one governmental unit's department or agency to other of its departments or agencies. The services are usually provided on a cost-reimbursement basis and are offered only to other governmental agencies, not the general public. Examples are municipal motor vehicle pools, city print shops, and central purchasing operations.   |
| Fiduciary Fund Types and Simila  | ar Component Units  |
| Trust funds     a. Pension (and other     employee benefit) trust     fund | Accounts for resources required to be held in trust for the members and beneficiaries of pension plans, other postemployment benefit plans, or other employee benefit plans.  |
| b. Investment trust fund   | Accounts for the external portion of investment pools reported by the sponsoring government.  |
| c. Private-purpose trust fund  | Accounts for all other trust arrangements under which the fund's resources are to be used to benefit specific individuals, private organizations, or other governments as the trust agreement specified.  |
| 9. Agency fund   | Accounts for assets held by a governmental unit in an agency capacity for employees or for other governmental units. An example is the city employees' payroll withholding for health insurance premiums.   |

# FINANCIAL REPORTING OF GOVERNMENTAL ENTITIES<sup>4</sup>

# LO 17-4

Understand and explain basic concepts for financial reporting in governmental accounting.

A governmental unit may control a variety of boards, commissions, authorities, or other component units. Its financial statements are presented for the *reporting entity*, which consists of

- 1. The *primary government* such as a state government, a general-purpose local government, or a special-purpose local government that has a separately elected governmental body.
- 2. *Component units*, legally separate organizations for which the primary unit has financial accountability.
- 3. Other organizations that have a significant relationship with the primary government and need to be included in its financial statements to avoid misleading or incomplete financial representations. (More on these "other organizations" will be presented in Chapter 18.)

<sup>&</sup>lt;sup>4</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

GASB Statement No. 14, "The Financial Reporting Entity" (GASB 14), states that financial accountability exists for those component units if the primary governmental unit appoints a majority of an organization's governing body and

- (a) is able to impose its will on the organization, or
- (b) possesses a financial benefit or assumes a financial burden for the organization.

GASB Statement No. 34, "Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments" (GASB 34) specifies the use of the governmental financial reporting model. See Figure 17–2 for the names of the financial statements and the other major information GASB 34 specifies. The reporting model has two integrated levels of financial statements.

- 1. The first level is the *fund-based financial statements* because governments continue to use fund-based accounting to record transactions in accordance with the legal or budgetary requirements established by their governing body. These fund-based financial statements demonstrate fiscal accountability of the management of each fund.
- 2. The second level is the government-wide financial statements. After preparing the fund-based financial statements, the government prepares reconciliation schedules to go from the governmental fund financial statements to the government-wide financial statements. In addition to the governmental funds, the reporting entity includes other funds in the government-wide financial statements. These statements also include the governmental entity's capital assets, such as buildings and equipment, and long-term debt. The government-wide financial statements demonstrate the operational accountability of the governmental unit's management as a whole.

This chapter and the first part of Chapter 18 focus on the fund-based financial statements. After completing our discussion of each fund type in Chapter 18, we present the government-wide financial statements.

## Fund-Based Financial Statements: Governmental Funds

Two financial statements are required for governmental funds: (1) balance sheet and (2) statement of revenues, expenditures, and changes in fund balance.

# FIGURE 17-2 The Government **Reporting Model**

- 1. Independent auditors' report
- 2. Management's Discussion and Analysis (required supplementary information)
- 3. Government-wide financial statements
  - a. Statement of Net Assets
  - b. Statement of Activities
- 4. Fund-based financial statements
  - a. Governmental funds
    - (1) Balance Sheet
    - (2) Statement of Revenues, Expenditures, and Changes in Fund Balances
    - (3) Reconciliation Schedules (of each of the two governmental fund-based statements to their related government-wide financial statements, either at the bottom of each of the two fund-based financial statements or in an accompanying schedule)
  - b. Proprietary funds
    - (1) Statement of Net Assets
    - (2) Statement of Revenues, Expenses, and Changes in Fund Net Assets
    - (3) Statement of Cash Flows
  - c. Fiduciary funds
    - (1) Statement of Fiduciary Net Assets
    - (2) Statement of Changes in Fiduciary Net Assets
- 5. Notes to the financial statements
- 6. Required Supplementary Information (RSI) (in addition to the MD&A)
  - a. Budgetary Comparison Schedules
  - b. Information about Infrastructure Assets
  - c. Information about Pensions

# Balance Sheet for Governmental Funds

The balance sheet format with added parenthetical guidance for learning assistance for each of the governmental funds is

| Balance Sheet for Governmental Funds                                       |      |                |
|--|------|----------------|
| Assets (financial resources available for current use; presented in order  |      |                |
| of liquidity)  |      | \$X,XXX        |
| Total Assets   |      | <u>\$X,XXX</u> |
| Liabilities & Fund Balances  |      |                |
| Liabilities (due and expected to be paid from current financial resources; |      |                |
| presented in order of due date)  |      | \$ XXX         |
| Fund Balances  |      |                |
| Nonspendable   | \$XX |                |
| Spendable:   |      |                |
| Restricted   | XX   |                |
| Limited  | XX   |                |
| Assigned   | XX   |                |
| Unassigned   | XX   | XX             |
| Total Liabilities & Fund Balances  |      | \$X,XXX        |

The five governmental funds use the current financial resources measurement focus. Under this method, the asset section of the balance sheet reports only financial assets such as cash or other assets that will convert into cash (e.g., receivables) in the normal course of operations over the near future, which has been determined to mean within 60 days after the reporting period end. Some governments report inventories or other prepayments because they save the entity from incurring future outflows of current financial resources. Long-term capital items such as equipment or buildings are not reported on the fund-based balance sheet because these amounts are no longer currently available for expenditure. However, the long-term capital assets of the governmental entity are scheduled and reported in the government-wide financial statements as illustrated in Chapter 18.

The liability section of the balance sheet reports only those liabilities that have become due and will require current financial resources to liquidate, such as vouchers payable or the current portion of long-term debt. A short-term debt often used in governmental funds is a tax-anticipation note that represents loans obtained using future taxes as collateral. Most states restrict these borrowings to taxes that have been levied but not yet collected. Notes payable are paid from the first tax collections of the tax levy to which the notes are related. The principal of long-term debt not due within the next year is not reported on the balance sheet because it will not be settled in the near term with current financial resources. However, the governmental unit's long-term debt is scheduled and is reported in the government-wide financial statements.

The third section of the balance sheet for the five governmental funds reports the net fund balance, which is the amount of the difference between reported assets and reported liabilities. GASB 54 specifies that the fund balances for the governmental funds should be segregated into two categories:

- 1. Nonspendable fund balances. Amounts that are (a) not in spendable form, such as amounts related to inventories and prepaid items, or (b) required by legal or contractual provisions to be maintained intact, such as the principal of a permanent fund.
- 2. Spendable fund balances. Amounts that are available for spending. Amounts in this portion of the fund balance would be further classified as (a) restricted, (b) limited, (c) assigned, or (d) unassigned. The classification would be based on an examination

of requirements imposed by legal or contractual provisions and then of any constraints established by the entity's governing body.<sup>5</sup>

# Statement of Revenues, Expenditures, and Changes in Fund Balance for Governmental Funds

This is often called the *operating statement* of the governmental funds, but the financial statements for the governmental funds use the full title. The statement of revenues, expenditures, and changes in fund balance has four major sections:

- 1. Operating section. The top section contains the revenues less expenditures for the period with the difference indicated as the excess (or deficiency) of revenues over expenditures.
- 2. Other financing sources or uses. This section includes nonrevenue items such as bond issue proceeds and interfund transfers. (Note that issuance of bonds and debt refundings of governmental long-term debt are included in the other financing sources and uses section although the long-term debt is not shown on the fund's balance sheet.)
- 3. Special and extraordinary items. This section lists extraordinary items that are both unusual and infrequent, such as losses due to a hurricane. Special items are transactions or events within management's control that are either unusual or infrequent in occurrence. An example of a special item is the one-time sale of county park land.
- 4. Fund balance. The bottom portion includes the balances of both the beginning and the ending fund.

The format of the statement of revenues, expenditures, and changes in fund balance, with added parenthetical guidance, is

| Statement of Revenues, Expenditures, and Changes in Fund Bala   | ince                   |
|---|------------------------|
| Revenues (recognized when both measurable and available; presented by source of revenue)  Expenditures (approved decreases in net financial resources; presented by   | \$XX,XXX               |
| function and character)   | X,XXX                  |
| Excess of Revenues over Expenditures Other Financing Sources or Uses (other increases or decreases in net financial resources available, such as bond issue proceeds and interfund transfers) Special Items & Extraordinary Items | \$ XXX<br>XX<br>(X)    |
| Net Change in Fund Balance Fund Balance—Beginning Fund Balance—Ending (reconciles to total fund balance on balance sheet)   | \$ XX<br>XXX<br>\$ XXX |

Revenues: Under the current financial resources measurement focus, revenues are recognized when they become both measurable and available to finance expenditures of the fiscal period. Profit-seeking businesses measure revenue by the accrual basis as it is earned, but the current financial resources measurement focus requires that the expected timing of the revenue-related inflow be evaluated. The word available means that the transaction will result in financial resources collectible within the current period or soon thereafter to be used to pay liabilities of the current period.

<sup>&</sup>lt;sup>5</sup> In March 2009, the GASB published **GASB 54,** "Fund Balance Reporting and Governmental Fund Type Definitions." This statement modifies the definitions of some governmental funds to make the definitions consistent across all governmental units. Furthermore, the standard establishes a fund balance classification system for the governmental fund types. Note that this statement applies only to the governmental fund types, not to proprietary or fiduciary fund types. The governmental fund balance classification system uses a hierarchy based on the extent to which a government is required to comply with constraints placed upon the use of resources reported in governmental funds. The hierarchy separates the fund balance into nonspendable and spendable resources. Note that the statement changed only the presentation of the fund balances for the governmental funds, not the accounting.

Expenditures: The expenditure portion of the operating statement reports reductions in available current financial assets. Only when the governmental entity receives approved services or goods does it recognize the expenditure. Vouchers Payable or some other payable is credited when the expenditure is recognized. The increase in liabilities decreases the net financial resources still available for spending to meet the public purposes established by the governing body. Expenditures also include amounts to purchase capital assets such as trucks or buildings because they result in a net outflow of current financial assets. Note that once the expenditure has been made for a capital asset, that amount is no longer currently available to spend. Thus, although an expenditure is recognized for the purchase of a capital asset, that asset (e.g., truck) is not reported on the governmental fund's balance sheet.

Other Financing Sources and Uses: The second section of the operating statement, other financing sources and uses, reports changes in current financial resources from nonrevenue items, such as sales of bonds or interfund transfers with other funds of the governmental entity. Note that under the current financial resources focus, the proceeds from a sale of bonds are reported in the operating statement, but the longterm bond payable is not reported in the liabilities on the governmental fund's balance sheet. Interfund transfers are discussed in depth later in this chapter.

Special Items: The special items section includes unusual or infrequent items that affect the fund balance but are not revenue or expenditure items. Finally, the fund balance section indicates the change in the fund balance to obtain its ending fund balance whose amount should reconcile to the total fund balance shown on the balance sheet.

After each governmental fund prepares its financial statements, it prepares a combined balance sheet and a combined operating statement. These combined statements include all governmental funds. The format for the combined governmental funds statements is multicolumnar with a separate column for each of the major governmental funds and a separate column for the aggregated nonmajor (small) governmental funds. The columns are then added together horizontally and shown in a total column for each line item in the governmental funds. We will illustrate combined governmental financial statements in Chapter 18.

# **MEASUREMENT FOCUS AND BASIS OF ACCOUNTING (MFBA)**

LO 17-5

Understand and explain the basic differences in the measurement focus and basis of accounting between governmental and private sector accounting.

Because the concepts of measurement focus and basis of accounting are so important in understanding accounting for the various funds of state and local governments, we first present a brief review of these two concepts. Then we provide additional detail about the accounting measurement and recognition requirements applicable to revenues and expenditures in the governmental funds.

The *measurement focus* refers to the flows that should be measured for operations. For example, most businesses focus on the flow of all economic resources in and out of the company whereas governmental funds focus solely on the flow of current financial resources.

The *basis of accounting* refers to the timing of recognizing a transaction for financial reporting purposes. In other words, the basis of accounting tells us when we should recognize transactions in the financial statements. For example, the cash basis recognizes revenue or expenditures when cash is received or paid. The accrual basis recognizes revenue or expenditures when the transaction or event takes place. The modified accrual basis is a hybrid system that includes some aspects of accrual accounting and some aspects of cash basis accounting. The modified accrual basis is used in funds that have a flow of current financial resources measurement focus. This measurement focus concentrates on the flow of current financial resources and their proper expendability for designated purposes and determination of the available resources remaining to be expended. Expenditures recognized under the modified accrual basis are the amounts that would normally be liquidated with expendable available financial resources. The five governmental funds maintain this focus.

The accrual basis is used in funds that have a flow of *economic resources measurement focus*. This measurement focus concerns all economic resources available to a fund during a particular time period, thereby allowing for a comparison of revenues and expenses and a focus on maintenance of capital. The proprietary funds and fiduciary funds have this focus.

In addition, as is presented in Chapter 18, the government-wide financial statements are based on the accrual basis. This necessitates a reconciliation schedule for those items accounted for under the modified accrual basis for governmental fund accounting to obtain the accrual basis amount that is reported on the government-wide financials. The reconciliation schedule is discussed in more detail in Chapter 18.

# **Basis of Accounting—Governmental Funds**

The current financial resources measurement focus and the modified accrual basis of accounting are used for the governmental funds financial statements. The modified accrual basis is applied as follows:

- 1. *Revenue*. Recorded in the accounting period in which it is both *measurable* and *available* to finance expenditures made during the current fiscal period.
- 2. *Expenditures*. Recognized in the period in which the liabilities are both *measurable* and *incurred* and are payable out of current financial resources.

Measurable means that the amount of the revenue or expenditure can be objectively determined. Available means that income is due or past due and receivable within the current period and collected within the current period or expected to be collected soon enough thereafter to be used to pay current-period liabilities. The definition of "soon enough thereafter" has been stated for property taxes as a period of not more than 60 days after the end of the current fiscal period.

# Recognition of Revenue—Exchange and Nonexchange Transactions

The accrual method of accounting recognizes revenues from exchange transactions (sales of goods or services) and from nonexchange transactions in which the government gives or receives value without directly receiving or giving equal value in exchange. Private sector accrual accounting recognizes revenue almost exclusively from exchange transactions (i.e., sales of goods or services). A government's authority to levy taxes gives it the ability to receive value without directly giving equal value in exchange. This is called *revenue from nonexchange transactions*. In **GASB Statement 33**, "Accounting and Financial Reporting for Nonexchange Transactions" (GASB 33), issued in 1998, the GASB classified nonexchange transactions into four categories. How revenues are recognized depends on the category. We discuss the four categories next.

- 1. *Derived tax revenues*. From assessments on exchange transactions. Examples are income taxes and sales taxes.
  - a. The asset (cash or receivable). Recognized when the underlying transaction occurs or resources are received, whichever comes first.
  - b. Revenue recognition. Depends on the accounting basis used to measure the transaction. Under accrual accounting (proprietary and fiduciary funds), revenue is recognized when the underlying exchange transaction occurs. Under modified accrual accounting (governmental funds), revenue is recognized when the underlying exchange has occurred and the resources are available.

Resources received prior to the exchange transaction is reported as deferred revenue (reported as a liability) until the revenue recognition requirement is met for the fund receiving the resources.

- 2. Imposed nonexchange revenues. From assessments on nongovernmental entities, including individuals. Examples include property taxes and fines.
  - a. The asset (cash or receivable). Recognized when the government has an enforceable legal claim to the resources or has received them, whichever comes first.
  - b. Revenue recognition. Made in the period when use of the resources for current expenditures is first permitted or required or when the asset is recorded if no time restriction on the fund's use of the resources exists.

Resources received or recorded as receivables prior to the period in which they can be recognized as revenue should be reported as deferred revenues.

Providers of financial resources often impose additional eligibility requirements for the next two categories. These requirements must be met before the transaction can be completed, that is, before the receiving governmental unit can recognize an asset and the associated revenue. The four types of eligibility requirements are typically (1) the recipient's characteristics as specified by the provider of the financial resources (e.g., the receiving entity must be a school district), (2) the time for expending the resources (e.g., within a specific fiscal period), (3) the reimbursements for only those costs determined to be allowable and incurred in conformity with the program, and (4) contingencies in which the recipient has met all conditions the provider stipulated. If the recipient has met all eligibility requirements the provider imposed, the provider should recognize the liability (or decrease in assets) and expense, and the recipient should recognize the receivable (or increase in assets) and revenue at that time. The two categories are as follows:

- 3. Government-mandated nonexchange transactions. From one governmental unit's provision of resources to a governmental unit at another level and the requirement that the recipient use the resources for a specific purpose. An example of this type is federal programs that state or local governments are required to perform.
- 4. Voluntary nonexchange transactions. From legislative or contractual agreements other than exchanges. Examples include certain grants and private donations.

GASB Statement No. 36, "Recipient Reporting for Certain Shared Nonexchange Revenues" (GASB 36), issued in 2000, amended GASB 33 for government-mandated and voluntary nonexchange situations in which a government provides part of its own derived tax units to recipients. Typically, the government provides a periodic report of the amount of shared revenues the recipients should anticipate. GASB 36 states that if the notification from the providing government is not available in a timely manner, the recipient government should use a reasonable estimate of the amount to be accrued, to avoid waiting to record the transaction after the actual receipt of the cash resources.

The following examples present the accounting, under the modified accrual basis of accounting as used in preparing the governmental funds financial statements.

1. Property taxes. Property taxes involve a series of steps that guide the recognition of the property tax asset and the property tax revenue. A typical process is as follows:

#### Year 1:

- Step 1: Levy filed for enforceable claims to property taxes for year 1.
- Step 2: Assessment notice presenting assessed value as of levy date mailed to each property owner and any appeals heard.
- Step 3: Property tax bills for year 1 mailed to each property owner. (Each property's tax is based on assessed value multiplied by the tax rate that is determined based on the requirements specified in the levy request filed by each unit of government within the taxing district.)

#### Year 2:

- Step 4: First installment of property taxes for year 1 are due.
- Step 5: Second (and last) installment of property taxes for year 1 are due.

The levy creates an enforceable claim to the future collection of property taxes and a property tax receivable should be recorded at that date along with a deferred property tax revenue credit. As explained, the property tax bill is mailed to each property owner in one fiscal period and the property taxes applicable to that fiscal period are then collected in the next fiscal period. There normally is a legally imposed time restriction on the use of the property tax resources until, in this example, year 2, at which time the resources become available for expenditure. In this example, property tax revenue would not be recognized until year 2 when the time restriction is extinguished. The year 2 entry would include a debit to deferred property tax revenue and a credit to property tax revenue. Although this example presents the levy date in year 1 and the collection in year 2, some governmental entities make the levy and the collection within the same fiscal period. The key to the timing of recognizing revenue from property taxes is to determine the fiscal period in which the use of the resources for current expenditures is permitted, not necessarily when the property taxes are levied or collected.

**NCGA Interpretation No. 3,** "Revenue Recognition—Property Taxes" (NCGA 3), specifies that property taxes must be collectible within a maximum of 60 days after the end of the current fiscal period to be recognized as revenue in that period. Taxes collectible 60 or more days after the current period ends are recorded as deferred revenue for that period and then accounted for as next period's revenue.

Revenue from another governmental unit or tax-exempt entity in lieu of taxes, such as a university's payment to a city for police and fire protection, should be accrued and recorded as revenue when it becomes billable.

Revenue from property taxes should be recorded *net* of any uncollectibles or abatements. The Property Taxes Receivable account is debited for the full amount of the taxes levied with estimated uncollectibles recorded separately in an allowance account reported as a contra account to the receivable.

- 2. Interest on investments and delinquent taxes. Interest on investments or delinquent property taxes is accrued in the period in which it is earned and available to finance that period's expenditures. The governmental funds may temporarily invest available cash in interest-generating financial instruments such as certificates of deposit and federal or state securities. Governmental entities should carefully determine the credit and market risks of possible investments to minimize their potential loss. Governmental funds report their own current and long-term financial investments and any accrued interest receivable as assets of the funds.
- 3. Income taxes and sales taxes. These derived tax revenues are recognized as assets under the modified accrual basis of accounting in the period in which the tax is imposed or when the resources are received, whichever comes first. These taxes must be available to finance expenditures made during the current fiscal period before recognition as revenue for the period. Income tax revenue should be reported net of any anticipated refunds to taxpayers. Sales taxes collected by another governmental unit (e.g., the state government) but not yet distributed should be accrued prior to receipt by the governmental unit to which they will be distributed (e.g., a city) if the taxes are both measurable and available for expenditure. Measurability in this case is based on an estimate of the sales taxes to be received, and availability is based on the ability of the governing entity (the city) to obtain current resources through credit by using future sales tax collections as collateral for the loan.
- 4. *Miscellaneous revenue*. Miscellaneous revenues such as license fees, fines, parking meter revenue, and charges for services are generally recorded when the cash is received because these amounts cannot be predicted accurately. Often states take custody of private property when its legal owner cannot be found as with unclaimed estates or abandoned bank accounts. The property is said to *escheat* (or revert) to the state government. The government should record the property as revenue at its fair market value less a liability for any anticipated claims from possible heirs or other claimants. States generally record the net revenue in the general fund, but some states prefer to account for these resources in a separate, private-purpose trust fund.

5. Grants, entitlements, and shared revenue. These resources are received from other governmental units. Grants are contributions from another governmental unit to be used for a specified purpose, activity, or facility. Entitlements are payments local governments are authorized to receive as determined by the federal government. Shared revenue is levied by one governmental unit but shared with others on some predetermined basis (e.g., revenue from taxes on the retail sale of gasoline collected by the state). Grants are recognized as revenue in the period in which all eligibility requirements have been met. This may be at the point the grant is authorized, but, in practice, some governmental units wait until the cash is received because the grantor might withdraw the grant. Some grants are made to reimburse a governmental unit for expenditures made in accordance with legal requirements. The revenue from such grants should be recognized only when the expenditure is made and all other eligibility requirements have been met. For example, a state government might agree to provide a grant for a local government's purchase of firefighting vehicles. Typically, the local government must meet all the grant's requirements before it receives the monies from the state government. In these cases, the local government would record the grant revenue when it is received. In a few cases, such as a state grant of reimbursement for the purchase of the firefighting vehicles, the local government may receive grant monies before all the steps of the required expenditure are completed. In those few cases, the local government may be required to record the receipt of the grant monies as an unearned revenue (liability) until all requirements have been met and the grant is expendable—at which time the unearned revenue is reclassified as earned revenue.

Proceeds from the sale of bonds are not revenue! These proceeds are reported as other financing sources on the statement of revenues, expenditures, and changes in fund balance. Although bond sales do increase the resources available for expenditure, bonds must be repaid whereas revenue of the governmental unit does not need to be repaid.

# Recognition of Expenditures

Under the modified accrual basis of accounting, expenditures are recorded in the period in which the related liability is both measurable and incurred. Specific examples are as follows:

- 1. Costs for personal services, such as wages and salaries, are generally recorded in the period paid because they are a governmental unit's normal, recurring expenditures.
- 2. Goods and services obtained from outside the governmental entity are recorded as expenditures in the period in which they are received.
- 3. Capital outlays for equipment, buildings, and other long-term facilities are recorded as expenditures in the period of acquisition.
- 4. Interest on long-term debt is recorded in the period in which it is legally payable.

# Basis of Accounting—Proprietary Funds

The two major proprietary funds are the internal service fund and the enterprise fund. Proprietary funds are established for governmental operations that have a management focus of income determination and capital maintenance; therefore, the accrual method as used by profit-seeking corporate entities is used to account for these funds. Proprietary funds record their own long-term assets and recognize depreciation on these assets. Long-term debt is recorded and interest is accrued as it is for commercial operations.

# Basis of Accounting—Fiduciary Funds

The accrual basis of accounting is used for all fiduciary funds. Agency funds are for those resources for which the governing unit is the temporary custodian. Agency funds have only assets and liabilities; no fund equity, revenue, or expenditures are used. An example of an agency fund is a county's billing and collecting taxes on behalf of other governmental entities, such as a city and a school district. After collection is completed on the "tax roll," the county properly distributes the taxes in accordance with each governmental entity's approved levy.

For fiduciary trust funds, the economic resources measurement focus and the accrual basis of accounting are used. Note that the fiduciary trust funds include funds in which both the principal and income may be used for the benefit of specific individuals, organizations, or other governments, in accordance with the terms under which the trust fund was established. Agency and trust funds are discussed in depth in Chapter 18.

# **BUDGETARY ASPECTS OF GOVERNMENTAL OPERATIONS**

LO 17-6

Understand and explain basic budgeting concepts in governmental accounting.

Governmental accounting uses *budgets* to assist in management control and to provide the legal authority to levy taxes, collect revenue, and make expenditures in accordance with the budget. A budget establishes the governmental units' objectives and priorities.

Governors propose budgets for state governments, and legislative bodies debate elements in the budgets. Governing boards such as the city council, county board, or township board hold public hearings and discussions prior to adopting the final budget. After passage, the budget usually becomes part of the fiscal period's state law. The mayor or the major administrator may propose a local government's budget.

A governmental unit may have several types of budgets, including the following:

1. *Operating budgets*. These budgets specify expected revenue from the various sources provided by law. The operating budget includes expected expenditures for various line items, such as employee payrolls, supplies, and goods and services to be obtained from outside the governing unit. Operating budgets are used in the general fund, special revenue funds, and sometimes debt service funds.

In 2011, the City of San Diego budgeted total revenues of \$986,988, total expenditures of \$1,067,408, and total other financing sources of \$80,730.

 Capital budgets. These budgets are prepared to provide information about proposed construction projects such as new buildings or street projects. Capital budgets are used in the capital projects funds.

Although budgets may be prepared for proprietary funds, these budgets do not serve as a primary control vehicle. Budgets in the proprietary funds are advisory in much the same way that commercial entities use them.

# **Recording the Operating Budget**

Budgets are such an important control vehicle that governmental funds with legally adopted annual operating budgets should enter their budgets into the formal accounting records, although capital budgets are not normally entered. Recording the operating budgets permits better management control and facilitates a year-end comparison of budgeted and actual amounts. This comparison is part of the required supplementary information for the government reporting model for the funds that must have operating budgets. A budget-to-actual comparison provides an assessment of management's stewardship of the governmental entity and allows citizens and others to determine whether the governmental entity remained within its operating budgetary limits.

To help understand the process of accounting for operating budgets, this text uses the technique illustrated in *Governmental Accounting, Auditing, and Financial Reporting* (GAAFR)<sup>6</sup> that identifies the budgetary accounts with all capital letters. Capitalization of the budgetary accounts clearly separates the budgetary nominal accounts from the governmental unit's operating accounts. Although budgetary accounts are not capitalized in actual practice, this convention is helpful in learning the following material.

The following example demonstrates the recording of the operating budget for the general fund. Assume that at January 1, 20X1, the first day of the new fiscal period, the city council of Barb City approves the operating budget for the general fund, providing for \$900,000 in revenue and \$850,000 in expenditures. Approval of the budget provides

<sup>&</sup>lt;sup>6</sup> Governmental Accounting, Auditing, and Financial Reporting is updated periodically by the Government Finance Officers Association (Chicago).

the legal authority to levy the local property taxes and to appropriate resources for the expenditures. The term *appropriation* is the legal description of the authority to expend resources. The entry made in the general fund's accounting records on this date follows:

|     | January 1, 20X1                   |         |   |
|-----|-----------------------------------|---------|---|
| (1) | ESTIMATED REVENUES CONTROL        | 900,000 |   |
|     | APPROPRIATIONS CONTROL            | 850,000 | ) |
|     | BUDGETARY FUND BALANCE—UNASSIGNED | 50,000  | ) |

Record general fund budget for year.

Note the word CONTROL used as part of the account titles. Governmental accounting often use control accounts in the major journals with subsidiary accounts recording the detail behind each control account. This method is similar to a commercial entity's using a control account for its accounts receivable and then using subsidiary ledgers for the specific customer transactions. Throughout this chapter, the control account level is illustrated to focus on the major issues.

In practice, detailed accounting is maintained for each separate classification of revenue and appropriation, either in the major journal or in a subsidiary ledger. The AICPA uses both control-level accounts and budgetary accounts on the Uniform CPA Examination, although it does not capitalize the letters of the budgetary accounts used in the exam.

The ESTIMATED REVENUES CONTROL account is an anticipatory asset; that is, the governmental unit anticipates receiving resources from the revenue sources listed in the budget. The APPROPRIATIONS CONTROL account is an anticipatory liability; that is, the governmental unit anticipates incurring expenditures and liabilities for the budgeted amount. The excess of estimated revenues over anticipated expen-

ditures is the budget surplus and is recorded to BUDGETARY FUND BALANCE— UNASSIGNED. Some approved budgets have deficits in which expected expenditures exceed anticipated revenue. These budgets are recorded with a debit to BUDGETARY FUND BALANCE—UNASSIGNED.

Recording the budget in the governmental entity's books makes it a formal accounting control mechanism for the fiscal period. In addition, having the budget in the accounting records provides the necessary information for the budgetary comparison schedules that are part of the required supplementary information (RSI) footnotes that GASB 34 imposes on the government reporting model. At the end of the year, after the appropriate financial statements have been prepared, all the budgetary accounts are closed.

# ACCOUNTING FOR EXPENDITURES

LO 17-7

Make calculations and record journal entries for the general fund.

The governmental funds use a variety of controls over expenditures to ensure that each expenditure is made in accordance with any legal restrictions on the fund.

# The Expenditure Process

The expenditure process in governmental accounting comprises the following sequential steps: appropriation, encumbrance, expenditure, and disbursement.

# Step 1. Appropriation

The budget enables the appropriating authority to make future expenditures. Operating budgets are prepared for the general, special revenue, and often the debt service funds. Because appropriations originate in the operating budget, it is always the starting point for making all expenditures. The capital projects fund prepares capital budgets.

The appropriation was recorded in entry (1) made previously for Barb City's general fund. Recall that a total of \$850,000 in anticipated expenditures was approved in the budget.

# Step 2. Encumbrance

An encumbrance is a reservation of part of the budgetary appropriation and is recognized at the time an order is placed for goods or services. An encumbrance is a unique element of governmental accounting. Its purpose is to ensure that the expenditures within a period do not exceed the budgeted appropriations. The approved budget establishes the appropriation level and sets the legal maximum that may be expended for each budgeted item. The managers of the governmental unit must be sure that they do not exceed this budgetary authority. Thus, encumbrances provide a control system and safeguard for governmental unit administrators.

When an order is placed for goods or services to be received from outside the governmental unit, the budgeted appropriation is encumbered for the order's estimated cost. Encumbrances are of greatest use when an order is placed and a period of time expires before delivery. Payroll costs, immaterial costs, and costs for goods acquired from within the governmental entity typically are not encumbered because they are normal and recurring and the managers of the governmental unit are able to predict these costs based on past experiences and other administrative controls, such as employment agreements.

A sensible approach should be used with an encumbrance system. For example, it is not necessary to establish an individual encumbrance when an employee orders a pad of paper. Rather, a blanket purchase order with a maximum dollar amount, for example, a total of \$500, should be prepared and encumbered, and then can serve as the control for small, routine supply purchases. Encumbrances provide unit administrators an important accounting control to fulfill their management responsibilities within an approved budget.

To illustrate encumbrance accounting, assume that on August 1, 20X1, Barb City completed a purchase order (PO) to buy goods estimated to cost \$15,000 from an outside vendor. The entry to record this application of the budgeted appropriation authority for the period follows:

Note that the ENCUMBRANCES account is a budgetary account that reserves part of the budget's appropriation authority. For detailed accounting, governmental entities often maintain a subsidiary ledger including accounts for specific types of encumbrances to correspond to each specific type of appropriation. For purposes of this illustration, we use the single title ENCUMBRANCES to indicate a control-level account to focus attention on the major aspects of governmental accounting. In practice, very detailed account titles and classification numbers are used to fully account for each type of transaction. It is important to note that the BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES is a *reservation (or restriction) of the budgetary fund balance*, not an actual liability.

# Step 3. Expenditure

An expenditure and a corresponding liability are recorded when the governmental entity receives the goods or services ordered in step 2. When the goods are received, the encumbrance entry is reversed for the amount encumbered and the expenditure is recorded for the actual cost to the governmental entity. Although the actual cost is typically very close to the encumbered amount, some differences may exist because of partially completed orders, less expensive replacements, or unforeseen costs. Assume that the goods are received on September 20, 20X1, at an actual cost of \$14,000. The entries to reverse the encumbrance for the goods and to record the actual expenditures are as follows:

|     | September 20, 20X1                               |        |        |
|-----|--|--------|--------|
| (3) | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES | 15,000 |        |
|     | ENCUMBRANCES                                     |        | 15,000 |
|     | Reverse encumbrances for goods received.         |        |        |
| (4) | Expenditures                                     | 14,000 |        |
|     | Vouchers Payable                                 |        | 14,000 |
|     | Receive goods at cost of \$14,000.               |        |        |

At any time, the remaining appropriating authority available to the fund managers can be determined by the following equation:

```
Appropriating
  authority
             = APPROPRIATIONS - (ENCUMBRANCES + Expenditures)
 remaining
  available
           Remaining appropriating authority
                                               Total APPROPRIATIONS
            ENCUMBRANCES outstanding
                                                      from the
                                                   operating budget
                 Expenditures to date
```

# Step 4. Disbursement

A disbursement is the payment of cash for expenditures. The governing board or council usually must approve disbursements as an additional level of control over them.

Virtually all governmental entities use a comprehensive voucher system to control cash outflows. The governing board receives a schedule of vouchers to be approved for payment by vote of the board. This is usually one of the early agenda items in any board or council meeting as a vote is taken to "pay all bills." Checks are then written and delivered to the supplier of the specified goods. If the Barb City council approved the voucher at its October 8 meeting and a check was prepared in the amount of \$14,000 and mailed on October 15, 20X1, the following entry records the disbursement:

# Payment of voucher for goods received.

# Classification of Expenditure Transactions and Accounts

Governmental accounting places many controls over expenditures, and much of the financial reporting focuses on the various aspects of an expenditure. Expenditures should be classified by fund, character, function (or program), organizational unit, activity, and principal classes of objects. See Figure 17-3 for a description of the major expenditure classifications.

Many governmental units have a comprehensive chart of accounts with specific coding digits that provide the basis for classifying each expenditure. For example, an expenditure journal entry might specify the expenditure account to be charged as number 421.23-110. The chart of accounts shows that the 421.23 account is for public safety: police—crime control and investigation—patrol, as follows:

```
420. Public safety
      421. Police
            421.2 Crime control and investigation
                    421.23 Patrol
```

The -110 suffix indicates that this expenditure is for personal services in the form of salaries and wages for regular employees. It is not unusual for some accounting systems to have 11- to 14-digit accounts classifying each individual transaction. The level of specificity in the chart of accounts depends on the particular governing entity's information needs. Classifying information with such specificity allows the governing entity to maintain complete database control over the expenditure information, which it can use

FIGURE 17–3 Major Expenditure Classifications for Governmental Funds

| Classification        | Description  |
|-----------------------|--|
| Fund                  | The fund is identified to show the specific source of the expenditure. For example, the general fund would be noted for expenditures from that fund.   |
| Character             | Character classifications are based primarily on the period the expenditures are anticipated to benefit. Four major character classifications are current, capital outlay, debt service, and intergovernmental.  |
| Function (or program) | Functions are group-related activities directed at accomplishing a major service or regulatory responsibility. Standard classifications of function include general governmental, public safety, highway and streets, sanitation, health and welfare, culture and recreation, and education.   |
| Organizational unit   | Classifying by organizational unit maintains each unit director's accountability. The organizational unit is determined by the governmental unit's organization chart. For example, public safety could be separated into police, fire, corrections, protective inspection (such as plumbing and electrical code inspections), and other protection (such as flood control, traffic engineering, and examination of licensed occupations).   |
| Activity              | Activities within a function are recorded to maintain a record of the efficiency of each activity. For example, the police function could be classified in the following activities: police administration, crime control and investigation, traffic control, police training, support service (such as communication services and ambulance services), special detail services, and police station and building maintenance. Each of these activities could be categorized further, if desired.   |
| Object class          | Object class groups types of items purchased or services obtained. For example, operating expenditures include personal services, purchased and contractual services, and commodities. Each of these objects could be further categorized, depending on the governmental entity's information needs. For example, purchased services could include utility services, cleaning services (such as custodial, lawn care, and snow plowing), repair and maintenance services, rentals, construction services, and other purchased services, such as insurance or printing. |

at any time in aggregate or relational analysis. For the examples in this chapter, only the expenditure control level is presented; in practice, a complete specification of the expenditure is made.

# Outstanding Encumbrances at the End of the Fiscal Period

In the previous example, Barb City received the goods within the same fiscal period in which they were ordered. What happens if the goods are ordered in one fiscal year and received in the next year? In this case, the encumbrance is not reversed before the end of the fiscal period.

Accounting for these outstanding encumbrances depends on the governmental unit's policy. The government may allow outstanding encumbrances to lapse; that is, the unit is not required to honor these encumbrances carried over to the new year, and the new year's budget must rebudget them. In virtually all cases, the encumbrances will be rebudgeted and honored; however, this policy specifically recognizes the legal authority of the new governing board to determine its own expenditures. A second method is to carry over the encumbrances as nonlapsing spending authority. This method recognizes the practical aspects of encumbrances outstanding at the end of a fiscal period. Either method may be used in governmental accounting.

FIGURE 17-4 Comparison of Accounting for Lapsing and Nonlapsing Encumbrances at Year-End

| February 1, 20X2  |  |        |        |  |        |                 |  |
| Receive goods and<br>remove budgetary<br>reserve for<br>encumbrances  | BUDGETARY FUND BALANCE— ASSIGNED FOR ENCUMBRANCES ENCUMBRANCES       | 15,000 | 15,000 |  |        |                 |  |
| Record actual expenditure for goods received  | Expenditures<br>Vouchers Payable                                     | 14,000 | 14,000 | Expenditures—20X1  Vouchers Payable  | 14,000 | 14,000          |  |
| December 31, 20X2   |  |        |        |  |        |                 |  |
| Close expenditures account  | Fund Balance—Unassigned<br>Expenditures                              | 14,000 | 14,000 | Fund Balance—Assigned for<br>Encumbrances—20X1<br>Expenditures—20X1<br>Fund Balance—Unassigned | 15,000 | 14,000<br>1,000 |  |

To illustrate the differences between the lapsing and nonlapsing methods of accounting for encumbrances, assume the following:

- 1. On August 1, 20X1, the unit ordered \$15,000 of goods and made an appropriate entry to record the encumbrance.
- 2. The unit had not received the goods on December 31, 20X1, the end of the fiscal period.
- 3. It receives the goods on February 1, 20X2, at an actual cost of \$14,000.

Refer to Figure 17–4 for a comparison of the journal entries that would be required under each of the two methods of accounting for unfilled encumbrances at year-end.

# Lapse of Outstanding Encumbrances at Year-End

The entries on December 31, 20X1, close the remaining budgetary encumbrances and establish a reserve of the actual fund balance on the December 31, 20X1, balance sheet. Although the GAAFR recommends that a reserve for lapsing encumbrances be reported on the balance sheet, the GASB's codification allows the alternative of only footnote disclosure of lapsing orders at year-end that are expected to be honored in the next fiscal period. If only footnote disclosure is used, the governmental entity would have only the first closing entry on December 31, 20X1, to close out the budgetary accounts related to the encumbrance. No balance sheet reserve is established if the footnote disclosure alternative is used.

Normal procedure for many governmental entities is for the next year's governing board to meet after elections or appointments for the next year. This meeting is generally held shortly before the beginning of the next fiscal year so that the budget is effective beginning on January 1 of the next year. Thus, the incoming governing board typically decides during the budget process whether to honor year-end outstanding encumbrances in the next fiscal period. If the new governing board decides not to honor the 20X1 year-end outstanding encumbrances, only the closing entry to close the remaining budgetary encumbrances would be made on December 31, 20X1. If the governmental entity uses the footnote disclosure alternative, no footnote disclosure in the 20X1 financial statements would be made for those outstanding encumbrances not expected to be renewed in the next fiscal year.

If the new governing board decides to honor the outstanding encumbrances from 20X1, they must be included in the 20X2 budgeted appropriations. An entry is made as of January 1, 20X2, to establish budgetary control over the expected expenditure. A "fresh start," new spending authority is established, and the sequence of entries continues as if this is a new purchase order effective for 20X2.

In the unusual case that the new governing board decides as of January 1, 20X2, not to honor the outstanding encumbrances and the December 31, 20X1, entry had already been recorded, the following entry is made as of January 1, 20X2, to record the cancellation of the outstanding encumbrance from 20X1:

Eliminate reserve for outstanding encumbrances not being renewed.

If the January 1, 20X2, entries had already been made and the governing board later decides not to honor the outstanding encumbrance from 20X1, reversing entries would be made to eliminate the actual fund balance reserve and the budgetary fund balance reserve that had been created on January 1, 20X2. If the governmental entity used only footnote disclosure in its 20X1 financial statements for the year-end outstanding encumbrances expected to be honored, only a reversing entry is required to reverse the January 1, 20X2, entry that had established the budgetary encumbrances and budgetary fund balance reserve. The governmental entity then simply cancels the order with the external vendor.

## Nonlapsing Outstanding Encumbrances at Year-End

Some governing entities carry over prior-year appropriations authority as nonlapsing encumbrances. In this case, the budget for the second fiscal period does not show these carryovers because they arose from the prior-year appropriations authority. The nonlapsing encumbrances are dated for the prior year to indicate they arose from that year's appropriating authority. Some governmental accountants believe this method is realistic for many situations in which orders placed with outside vendors cannot easily be canceled.

The 20X1 year-end closing entries in Figure 17–4 show the required reservation of the

actual fund balance. Note that these are the same two entries made under the lapsing method with balance sheet recognition of the reserve of the fund balance. The differences between the two methods become apparent during the second fiscal period. Under the nonlapsing method, separately identifying expenditures made from spending authority carried over from prior periods is important. Typically this is done in a reclassification entry on the first day of the second fiscal period, which dates the Fund Balance—Assigned for Encumbrances. No budgetary entry is made in the second year because the appropriation authority comes from the first year's budget. When the goods are received, the expenditures account is also dated to indicate that the expenditure authority emanated from 20X1.

At the end of 20X2, the Expenditures—20X1 account is closed directly to the Fund Balance—Assigned for Encumbrances—20X1. Note that the \$1,000 difference between the actual \$14,000 cost and the \$15,000 assigned amount is closed to Fund Balance— Unassigned because the actual cost is less than the amount encumbered from the prioryear appropriation authority. If the actual cost is more than the reserve, the difference must be approved as part of the appropriation authority for 20X2.

# Key Observations from the Illustrations

As a practical matter, almost all a governmental unit's outstanding encumbrances at yearend are honored and completed in the next fiscal period. The method of accounting for open encumbrances at year-end is based on the unit's budgetary policy, which may be affected by legal statutes controlling carryover of appropriating ability from one fiscal period to the next. Both methods are used in practice. It is important to note that, in this example, the 20X1 statement of revenues, expenditures, and changes in fund balance will report no expenditures relating to this item. In 20X2, \$14,000 of expenditures will be recognized. Under the nonlapsing method, expenditures made in 20X2 but carried over from 20X1 encumbrances are dated to note that they arose from 20X1's appropriations. The comprehensive illustration presented later in this chapter uses the lapsing method because of its widespread use.

# Reporting of Encumbrances under the Recent Standard on Fund Balance Reporting

GASB 54 does not report any reserves of fund balance on the balance sheet. Rather, it includes the amount of encumbrances as part of the spendable fund balance, usually in the assigned category. Only footnote disclosure is now used to report the aggregate amount of encumbrances along with the required disclosures about other significant commitments. Because governments will continue to use encumbrance accounting because of the control and management information an encumbrance system provides, we continue to show encumbrance accounting even though encumbrances are no longer reported in the balance sheet. GASB 54 does not restrict the accounting systems used by governments.

# **Expenditures for Inventory**

Most governmental units maintain a small amount of inventory in office supplies. A first issue is to determine which of two methods should be followed to account for the expenditure of inventories. The first method recognizes the entire expenditure for inventory in the period the supplies are acquired. This is called the *purchase* method. The second method is the consumption method; it recognizes expenditures for only the amount of inventory used in the period. The specific method to follow depends on the governing unit's policy and how inventory expenditures are included in the budget.

A second issue is whether to show inventory as an asset on the governmental funds' balance sheet. Inventory is not an expendable asset; that is, it may not be spent as the governing entity wishes. NCGA 1 states that inventory should be shown on the balance sheets for governmental funds if the inventory amount is material. Immaterial inventories need not be shown on the balance sheet. If the inventory is material, it is presented as an asset on the balance sheet; an amount equal to the inventory also should be shown as a reservation of the fund balance, indicating that that amount is no longer expendable.

The entries to account for inventories under both the purchase method and the consumption method appear in Figure 17–5. The illustration assumes that Barb City acquires \$2,000 of inventory on November 1, 20X1, having held no inventory previously.

Item **Purchase Method of Accounting Consumption Method of Accounting** November 1, 20X1 **Expenditures** 2.000 Record acquisition of **Expenditures** 2.000 \$2,000 of Vouchers Payable 2,000 Vouchers Payable 2,000 inventory. December 31, 20X1 Recognize ending Inventory of Supplies 1.400 Inventory of Supplies 1.400 inventory of Fund Balance— **Expenditures** 1,400 \$1,400 Nonspendable 1,400 Fund Balance—Unassigned 1.400 Fund Balance—Nonspendable 1,400 December 31, 20X2 Record remaining Fund Balance—Nonspendable **Expenditures** 900 Inventory of Supplies 900 Inventory of Supplies 900 inventory of \$500, with Fund Balance—Nonspendable 900 \$900 of supplies Fund Balance—Unassigned 900 having been consumed during 20X2.

FIGURE 17-5 Comparison of Accounting for Inventories—Purchase versus Consumption Method

On December 31, 20X1, the end of Barb City's fiscal year, a physical count shows \$1,400 still in stock. During 20X2, \$900 of this inventory is used, resulting in a \$500 remaining balance of supplies on December 31, 20X2.

# Purchase Method of Accounting for Inventories

Under the purchase method, the entire amount of inventory acquired is charged to Expenditures in the period acquired. On December 31, 20X1, the end of the fiscal year, an adjusting entry is made to recognize the \$1,400 remaining inventory as an asset and to restrict the fund balance for the nonexpendable portion applicable to inventories.

The \$2,000 expenditure is closed into Fund Balance—Unassigned for 20X1 in a closing entry made at the end of the fiscal year. The December 31, 20X1, balance sheet includes the inventory of supplies as an asset in the amount of \$1,400, and Fund Balance—Nonspendable for \$1,400 to indicate that the inventory cannot be used to pay for current obligations. The 20X1 operating statement shows a \$2,000 expenditure for supplies.

At the end of 20X2, an adjusting entry is made to recognize the use of the \$900 of supplies of the \$1,400 remaining from the 20X1 purchase. This entry reduces the reservation of the fund balance and decreases inventory. At the end of 20X2, Inventory of Supplies is \$500, and Fund Balance—Assigned for Inventories is \$500 for the remaining unused supplies.

In summary, the \$2,000 expenditure is recognized in the period in which the supplies are purchased. No expenditures are recognized in subsequent periods although some of the supplies are used in those periods.

# Consumption Method of Accounting for Inventories

Under the consumption method, expenditures for a period are reported only for the amount consumed. In this case, the budget for the period should be based on the expected amount of use so that the budgeted and actual amounts compared at year-end are on the same basis.

The City of San Diego uses the consumption method to account for inventory.

A net expenditure of \$600 (\$2,000 – \$1,400) for supplies used is reported in 20X1, the year the supplies were acquired. With \$500 of inventory remaining at the end of 20X2, an expenditure of \$900 is reported in the 20X2 operating statement

to show the amount of supplies consumed during 20X2. The consumption method relates the expenditures with the use of the inventory.

A comparison of selected account balances under the purchase method and consumption method shows the different amounts reported under these two methods:

|                       | <b>Purchase Method</b> | <b>Consumption Method</b> |
|-----------------------|------------------------|---------------------------|
| 20X1:                 |                        |                           |
| Expenditures          | \$2,000                | \$ 600                    |
| Inventory of Supplies | 1,400                  | 1,400                     |
| 20X2:                 |                        |                           |
| Expenditures          | 0                      | 900                       |
| Inventory of Supplies | 500                    | 500                       |
|                       |                        |                           |

Note that the choice of methods has no effect on the balance sheet amounts; the only effect is on the period in which the expenditures for inventory are reported.

Both inventory methods are used in practice. The method a specific governmental unit uses depends on its budgeting policy. If the unit includes all inventory acquisitions in its appropriations for the period, it should use the purchase method. If the governmental unit includes only the expected amount of inventory to be used during a period in that period's appropriations, it should use the consumption method.

# Reporting of Inventory under the New Standard on Fund Balance Reporting

If they are material in amount, inventories are reported as an asset on the balance sheet. Under GASB 54, reserves of fund balance are not reported on the face of the balance sheet. But the fund balance associated with inventories is reported in the nonspendable fund balance category.

# **Accounting for Fixed Assets**

Governmental entities may acquire equipment that has an economic life of more than one year. Accounting for this acquisition depends on which fund expends the resources for it. Governmental funds are concerned with the expendability and control over available resources and account for equipment acquisitions as expenditures. Governmental funds recognize the entire amount of the cost of the acquisition of equipment and other capital assets as an expenditure in the year the asset is acquired. No capital assets are recorded in the general fund; they are treated as expenditures of the period.

Proprietary funds are concerned with capital maintenance and account for acquisitions of capital assets in the same manner as commercial entities. Thus, accounting for the purchase of a capital asset differs in the five governmental funds from the accounting used in the proprietary funds.

For example, assume that Barb City acquires a truck from the resources of, and is accounted for in, the general fund. The encumbrance is \$12,000, but the actual cost is \$12,500 because of minor modifications required by the city.

The general fund makes the following entries to account for the truck's acquisition:

| (7) | ENCUMBRANCES                                     | 12,000 |        |
|-----|--|--------|--------|
|     | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES |        | 12,000 |
|     | Order truck at estimated cost of \$12,000.       |        |        |
| (8) | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES | 12,000 |        |
|     | ENCUMBRANCES                                     |        | 12,000 |
|     | Cancel reserve for truck received.               |        |        |
| (9) | Expenditures                                     | 12,500 |        |
|     | Vouchers Payable                                 |        | 12,500 |
|     | D  |        |        |

Receive truck at actual cost of \$12,500.

The truck is not recorded as an asset in the general fund but as an expenditure in it. Sales of capital assets are recorded as a debit to Cash (or receivable) and a credit to Other Financing Sources—Sales of General Capital Assets for the amount received from the sale. If the amount from the sale is immaterial, the governmental entity may elect to record the credit to other revenues. Governmental entities should maintain a schedule or ledger to track the acquisition or sale of capital assets by any governmental fund, but that record is only used in preparing the government-wide financial statements, which do report a governmental unit's long-term assets.

# Works of Art and Historical Treasures

For the purposes of government-wide financial statements, governments should capitalize works of art, historical treasures, and similar types of assets at their historical costs at acquisition or at their fair values at the date of the contribution. For example, if the general fund expended \$10,000 for a work of art, it reports an expenditure for that amount. However, when preparing the government-wide financial statements, the cost of the work of art is reported as an asset of the government. If the assets are donated, contribution revenue is recognized in the government-wide financial statements.

The GASB provided practical guidance to the general rule of capitalizing works of art and historical treasures. For example, many collections have a very large number of items collected over long periods of time, and it is virtually impossible to determine the cost or fair value at the times of acquisition. A provision in **GASB 34** states that the government is not required but is still encouraged to capitalize a collection of art or historical treasures if the government meets all three of the following provisions: (1) holds the collection for public exhibition, education, or research, (2) protects and preserves the collection, and (3) has an organizational policy that requires the proceeds from sales of collection items to be used to acquire other items for collections. If contributed items are not capitalized, the government-wide financial statements report both a program expense and a contribution revenue for the item's fair market value the time of its donation.

Capitalized collections that are exhaustible, such as displays of works whose useful lives are reduced due to display, or used for education or research should be depreciated over their estimated useful lives. Collections or individual items whose lives are inexhaustible are not depreciated.

# **Long-Term Debt and Capital Leases**

Commercial, profit-seeking businesses recognize long-term debt and capital leases as noncurrent liabilities. Businesses take on debt or enter into capital leases in order to earn income. As a result, they recognize a liability under the flow of economic resources measurement focus model. However, the flow of current financial resources measurement focus model directly affects the accounting for long-term liabilities in governmental funds.

The governmental funds, which include the general fund, record the proceeds from a bond issue as a debit to Cash and a credit to Bond Issue Proceeds, an other-financing source. Bond issue proceeds are not revenue because the bonds must be repaid. Other financing sources are shown in the middle section of the statement of revenues, expenditures, and other changes in fund balances. Bonds are not reported on the governmental funds' balance sheets but only on the government-wide financial statements.

Capital leases are accounted for in a manner similar to long-term debt. If a proprietary

In an effort to spur economic growth in the region, Hamilton County, Ohio, issued more than \$1 billion in bonds to fund stadiums for the Cincinnati Bengals and Cincinnati Reds. In 2012, the county sold a hospital valued in 2006 at \$30 million for just \$15 million, presumably to cover financing costs related to investments in the stadiums.

fund (e.g., internal service or enterprise fund) enters into a capital lease, the lease is accounted for using methods similar to those that commercial, profit-seeking entities use by recording an asset and a lease liability. However, if a governmental fund (e.g., general fund) enters into a capital lease, it accounts for the capital lease in a manner similar to a bond's accounting.

## **Investments**

Some entities maintain investments in stock or bond securities. The purpose of doing this typically is to obtain an investment return on available resources. GASB Statement No. 31, "Accounting and Financial Reporting for Certain Investments and for External Investment Pools" (GASB 31), established a general rule of fair market valuation for investments held by a governmental entity. The following investments are to be valued at fair value if determinable in the asset section of the balance sheet for the governmental entity: (1) investments in debt securities, (2) investments in equity securities (other than those accounted for under the equity method as provided for in ASC 325), including option contracts, stock warrants, and stock rights, (3) investments in open-end mutual funds, (4) investment pools in which a governmental entity combines with other investors, and (5) interest-earning investment contracts in which the value is affected by market (interest rate) changes. GASB Statement No. 52, "Land and Other Real Estate Held as Investments by Endowments" (GASB 52), extended the general rule of using fair value to real estate investments by endowments. The periodic changes in the fair value of all the types of investments included in GASB 31 and GASB 52 should be recognized as an element of investment income in the operating statement (or statement of activities) of each fund making the investment. For financial reporting purposes, an internal investment pool that combines the resources of several of the governmental entity's funds allocates the pool's assets and its income to each individual fund based on its percentage of the total amount invested.

Many state and local governments have deposits and make investments that are open to a variety of risks. GASB Statement No. 40, "Deposit and Investment Risk Disclosures" (GASB 40), established detailed note disclosure requirements related to the following types of investment risks: credit risk (including concentrations of credit risk), interest rate risk, foreign currency risk, and deposit risks of custodial credit risk and foreign currency risk. The main objective of GASB 40 is to require footnote disclosures of the policies and the profiles of the government's investment portfolios, such as the credit quality ratings of debt securities and other fixed-income securities and the terms of investments whose fair value is highly sensitive to changes in the interest rate.

# **INTERFUND ACTIVITIES**

LO 17-8

Make calculations and record journal entries for basic interfund activities.

A basic concept in governmental accounting is that each fund is a separate entity and has separate sources of resources, sometimes including the power to levy and collect taxes. Each fund's revenues must then be expended in accordance with the budget and legal restrictions. Because a single governmental entity has a number of separate funds, it sometimes becomes necessary to transfer resources from one fund to another. Interfund activities are resource flows between fund entities. In a consolidated financial statement for a commercial entity, intercompany transactions are eliminated to report only the effect of transactions with external entities. Governmental accounting, on the other hand, requires the separate maintenance and reporting of interfund items. The governing body must approve any interfund transfers and transactions to provide a public record and to prevent distortion of fund uses. Many governmental entities include in their operating budgets for the year interfund activities anticipated during a fiscal year. The comprehensive example of Sol City presented later in this chapter illustrates budgetary entries for interfund activities. Interfund transfers must be accounted for carefully to ensure that the legal and budgetary restrictions are followed and that resources intended for one fund are not used in another.

GASB 34 establishes four types of interfund activities: (1) interfund loans, (2) interfund services provided and used, (3) interfund transfers, and (4) interfund reimbursements. A discussion of the four interfund items follows; they are illustrated in Figure 17–6.

FIGURE 17-6 Interfund Transactions and Transfers

| Item                       | Entry in General F  | und    |        | Entry in Other Fu   | und    |        |

| 4. Interfund reimbursement | Cash<br>Expenditures  | 3,000  | 3,000  | Expenditures<br>Cash  | 3,000  | 3,000  |
|                            |   |        |        |   |        |        |

# (1) Interfund Loans

State law may allow lending or borrowing activities between funds. The loans must be repaid, usually within one year or before the end of the fiscal period. Loans and advances are not shown on a fund's statement of revenues, expenditures, and changes in fund balance; however, all outstanding loans or advances must be shown on the balance sheet as payables or receivables. Interest usually is not charged on interfund financing arrangements. If interest is charged, it is accounted for in the funds in the same manner as for other interest income or expense.

Some governmental entities distinguish between short-term and long-term financing arrangements by using the term "Advances to (or from)" to denote a long-term agreement and "Due to (or from)" for a short-term agreement.

The illustration of an interfund financing transaction in Figure 17–6 assumes that Barb City's general fund loans the internal service fund \$4,000 for two months. The general fund reports a receivable for the amount of the loan until it is repaid.

# (2) Interfund Services Provided and Used

These interfund activities are transactions that would be treated as revenue, expenditures, or expenses if they involved parties external to the governmental unit. These activities are still reported as revenue, expenditures, or expenses but differently because they are entirely within the governmental unit. These interfund activities are often normal and recurring items, usually involving at least one proprietary fund. Three examples follow:

- 1. The general fund purchases goods or services from an internal service or enterprise fund.
- 2. Payments are made to the general fund from the enterprise fund for fire and police protection.
- 3. A transfer of resources from the general fund to the pension trust fund is made to pay for the city's cost of pension benefits for its employees. This is a cost associated with employee services provided to the city and is therefore an expenditure of the general fund.

Usually these transfers involve the recognition of a receivable or payable because of the time lag between the purchase of the services and the disbursement of funds. A "Due to (or from)" account is used for short-term interfund receivables and payables rather than a formal Vouchers Payable account.

The illustration of this type of interfund activity in Figure 17–6 assumes that Barb City's general fund uses an auto from the city motor pool. The motor pool operates as an internal service fund. The general fund is billed \$100 based on mileage and pays the bill 30 days later.

# (3) Interfund Transfers

The general fund often transfers resources into another fund for the receiving fund to use for its own operations; occasionally, the general fund receives resources from other funds. These interfund transfers are not expected to be repaid. Such transfers are not fund revenues or expenditures but are instead called interfund transfers. These transfers are classified under "Other Financing Sources or Uses" in the operating financial statements of the funds. The reason that the receiving fund does not recognize these transfers as revenue is that the issuing fund has already properly recognized these resources as revenue. Thus, recording these transfers as other financing sources eliminates the possibility of double-counting the same resources as revenue in two different funds of the combined governmental entity. Examples include the following:

- 1. A transfer of resources, such as cash or other assets, is made from the general fund to an enterprise fund or internal service fund that has an operating deficit that must be eliminated.
- 2. A transfer of resources from the general fund to a capital projects fund is made to help finance new construction.
- 3. A transfer of resources from the general fund to the debt service fund is made to pay principal and interest.

The illustration of an interfund transfer in Figure 17–6 assumes that Barb City's general fund agrees to provide \$10,000 to the capital projects fund toward the construction of a new library. The Transfer Out account in the general fund is closed to its Unassigned Fund Balance at the end of the fiscal period. The capital projects fund also closes its Transfer In account at the end of the fiscal period to its Unassigned Fund Balance. These interfund transfers are not expected to be repaid.

# (4) Interfund Reimbursements

A reimbursement transaction is for reimbursing a fund's expenditure or expense that was initially made from the fund but that is properly chargeable to another fund. These initial payments are sometimes made either because of improper classification to the wrong fund or for expediency within the governmental entity. The reimbursement from one fund to another is recorded as a reduction of the expenditure in the fund initially recording the expenditure and a recording of the expenditure in the proper fund for the appropriate amount. Two examples as follow:

- 1. The general fund initially records and pays an expenditure properly chargeable to the special revenue fund, and the special revenue fund subsequently reimburses the general fund.
- 2. The general fund records and pays for an expenditure to provide preliminary architectural work on the planning for a new sports arena. The sports arena enterprise fund later reimburses the general fund.

The illustration of an interfund reimbursement in Figure 17–6 assumes that Barb City's general fund recorded a \$3,000 expenditure for a bill from outside consultants that is later discovered to be properly chargeable to the capital projects fund. Upon notification, the capital projects fund reimbursed the general fund and properly recorded the expenditure in its fund.

# FIGURE 17-7 **Overview of General Fund**

| Item   | Description  |
|--|--|
| Measurement focus  | Flow of current financial resources—expendability.   |
| Accounting basis   | Modified accrual.  |
| Budgetary basis  | Operating budget.  |
| Financial statements   | 1. Balance sheet.  |
|  | 2. Statement of revenues, expenditures, and changes in fund balance.   |
| Balance Sheet  |  |
| Current assets   | Includes current financial resources such as cash, certificates of deposit, accrued property taxes receivable, and estimated allowance for uncollectible taxes.  Interfund loans receivable included as assets. Material inventories reported. |
| Long-term productive assets  |  |
| (buildings, etc.)  | Fixed assets not reported in general fund.   |
| Current liabilities  | Vouchers payable are the primary current liabilities. Interfund loans payable also included as liabilities.  |
| Long-term debt   | Governmental unit long-term debt not reported in general fund.   |
| Fund balance   | Unassigned fund balance and reservations of fund balance (e.g., encumbrances and inventories).   |
| Statement of Revenues,<br>Expenditures, and<br>Changes in Fund Balance |  |
| Revenue  | Recorded when measurable and available under the modified accrual basis of accounting. Interfund services provided and used included in revenues   |
|  | (or expenditures).   |
| Expenditures   | Recognized in period when measurable and fund liability arises.  |
| Other financing sources and uses                                       | Includes bond issue proceeds and interfund transfers.  |
| Changes in fund balance  | Reconciles changes in fund balance during period, including changes in reservations of fund balance.   |

# OVERVIEW OF ACCOUNTING AND FINANCIAL REPORTING FOR THE GENERAL FUND

Review Figure 17-7 for an overview of the accounting for the general fund, including accounting for the interfund activities on the general fund's operating statement, the statement of revenues, expenditures, and changes in fund balance. Note that the interfund loans are reported only on the fund's balance sheet.

Chapter 18 presents an example of the fund balance reporting for the governmental fund types under the proposed statement.

# COMPREHENSIVE ILLUSTRATION OF ACCOUNTING FOR THE GENERAL FUND

The following example illustrates the accounting for Sol City's general fund for the January 1, 20X2, to December 31, 20X2, fiscal year. The entries are presented by topic, not necessarily in chronological order. The balance sheet for the general fund as of December 31, 20X1 (Figure 17–8), represents the opening balances for fiscal 20X2.

**FIGURE 17–8 General Fund Balance Sheet at the Beginning** of 20X2

| SOL CITY General Fund Balance Sheet December 31, 20X1 |           |           |
|---|-----------|-----------|
| Assets:<br>Cash                                       |           | \$ 50,000 |
| Property Taxes Receivable—Delinquent                  | \$100,000 | \$ 50,000 |
| Less: Allowance for Uncollectibles—Delinquent         | (5,000)   | 95,000    |
| Inventory of Supplies                                 |           | 14,000    |
| Total Assets  |           | \$159,000 |
| Liabilities & Fund Balance:                           |           |           |
| Vouchers Payable                                      |           | \$ 30,000 |
| Fund Balance:   |           |           |
| Nonspendable:<br>Supplies Inventory                   | \$ 14,000 |           |
| Spendable:  | \$ 14,000 |           |
| Assigned to:  |           |           |
| General Government Services                           | 11,000    |           |
| Unassigned  | 104,000   | 129,000   |
| Total Liabilities & Fund Balance                      |           | \$159,000 |

| Total Other Financing Uses   |                     | (30,000)  |  |
| Excess of Estimated Revenue and Interfund Transfers over Appropriations and Interfund Transfers  |                     | \$ 20,000 |  |

# **Adoption of the Budget**

The city council adopts the budget for fiscal 20X2 (Figure 17–9). Charles Alt, a Sol City alderman, voted in favor of adopting the budget, which summarizes the city's four major functions: general government, streets and highways, public safety (fire and police), and sanitation. In the complete budget used by the city council, the expenditures in each of the four functions are separated into the following categories: personal services, supplies, other services and charges, and capital outlay. The public safety budget includes a budgeted capital outlay of \$50,000 for a new fire truck.

Among the city's accounting policies, it elects to use the following:

1. Consumption method for inventories. The city budgets the supplies inventory on the consumption method, including only the costs of expected inventory use during the year.

- 2. Lapsing method of accounting for encumbrances. The city uses the lapsing method for accounting for any encumbrances outstanding at the end of fiscal periods. The APPROPRIATIONS CONTROL for fiscal 20X2 includes a reappropriation of the \$11,000 of outstanding encumbrances as of December 31, 20X1.
- 3. Use of control accounts. The city uses a comprehensive system of control accounts for its major journals. The following accounts have extensive subsidiary ledgers that correspond to the entries made in the journal: ESTIMATED REVENUES CONTROL, APPROPRIATIONS CONTROL, ENCUMBRANCES, and Expenditures. The subsidiary records maintain the specific details supporting each control account. To focus on the major aspects of governmental accounting, the Sol City illustration includes the control-level entries only.
- 4. Budgeted interfund activities. The city includes in the budget all anticipated interfund activities during the fiscal year. The general fund is expected to have the following interfund transfers:

| OTHER FINANCING USES:                 |          |
|---------------------------------------|----------|
| Transfer Out to Capital Projects Fund | \$20,000 |
| Transfer Out to Internal Service Fund | 10,000   |

The interfund transfer out to the capital projects fund is to pay for the city's share of a municipal courthouse addition project, and the transfer out to the internal service fund is to initiate the internal service fund.

The following entries are made to record the budget and to renew the lapsing encumbrances from the prior period:

|      | January 1, 20X2  |         |         |
|------|--|---------|---------|
| (10) | ESTIMATED REVENUES CONTROL                                   | 875,000 |         |
|      | APPROPRIATIONS CONTROL                                       |         | 825,000 |
|      | estimated other financing uses—transfer out to               |         |         |
|      | CAPITAL PROJECTS   |         | 20,000  |
|      | ESTIMATED OTHER FINANCING USES—TRANSFER OUT TO               |         |         |
|      | INTERNAL SERVICE   |         | 10,000  |
|      | BUDGETARY FUND BALANCE—UNASSIGNED                            |         | 20,000  |
|      | Record budget for fiscal 20X2.                               |         |         |
| (11) | Fund Balance—Assigned for Encumbrances                       | 11,000  |         |
|      | Fund Balance—Unassigned                                      |         | 11,000  |
|      | Reverse prior-year encumbrances reserve.                     |         |         |
| (12) | ENCUMBRANCES   | 11,000  |         |
|      | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES             |         | 11,000  |
|      | Renew encumbrances from prior period as included in budgeted |         |         |

(Note: The technique of capitalizing the account titles of all budgetary accounts continues through the comprehensive illustration. This technique is used in the text to differentiate the budgetary from the operating accounts. In practice, the budgetary accounts are not capitalized.)

# **Property Tax Levy and Collection**

appropriations in 20X2.

Most municipalities obtain resources from property taxes, which are recorded as a receivable when an enforceable legal claim arises. Revenue is recorded if the property taxes are measurable and available for current expenditures. Recall that the 60-day rule for property taxes allows the recognition of revenue for the current fiscal period if the property taxes are expected to be collected within 60 days of the end of the current fiscal period. A deferred revenue account is credited if the property taxes are not available for current expenditures. Sol City's property taxes are due and available for use within the fiscal period and therefore are recorded as revenue as of the levy date. Note that a provision for uncollectibles must be recorded as a reduction of property tax revenue, not a bad debts expense as in commercial accounting. Governmental funds have no such account as bad debts expense. The receivables are classified as current, collectible within this period, or delinquent for past due accounts.

The entries in Sol City's general fund for the transactions relating to property taxes follow:

| (13) | Property Taxes Receivable—Current                                | 785,000 |         |
|------|--|---------|---------|
|      | Allowance for Uncollectible Taxes—Current                        |         | 10,000  |
|      | Revenue—Property Tax   |         | 775,000 |
|      | Property taxes levied for this fiscal year with a reduction from |         |         |
|      | revenues for the estimated uncollectibles.                       |         |         |
| (14) | Cash   | 791,000 |         |
|      | Property Taxes Receivable—Current                                |         | 695,000 |
|      | Property Taxes Receivable—Delinquent                             |         | 96,000  |
|      | Collect portion of property taxes including \$96,000 of past due |         |         |
|      | accounts.  |         |         |
| (15) | Allowance for Uncollectible Taxes—Delinquent                     | 4,000   |         |
|      | Property Taxes Receivable—Delinquent                             |         | 4,000   |
|      | Write off remaining \$4,000 of delinquent property taxes.        |         |         |
| (16) | Allowance for Uncollectible Taxes—Delinquent                     | 1,000   |         |
|      | Allowance for Uncollectible Taxes—Current                        | 5,000   |         |
|      | Revenues—Property Tax  |         | 6,000   |
|      | Revise estimate of uncollectibles from \$10,000 to \$5,000 and   |         |         |
|      | close remaining \$1,000 balance of allowance account for         |         |         |
|      | delinquent accounts.   |         |         |
| (17) | Property Taxes Receivable—Delinquent                             | 90,000  |         |
|      | Allowance for Uncollectible Taxes—Current                        | 5,000   |         |
|      | Property Taxes Receivable—Current                                |         | 90,000  |
|      | Allowance for Uncollectible Taxes—Delinquent                     |         | 5,000   |
|      | Reclassify remaining receivables and allowance account from      |         |         |

Reclassify remaining receivables and allowance account from current to delinguent.

# **Other Revenue**

Other sources of income are grants from other governmental units, a portion of the sales tax collected on retail sales made within the city, and miscellaneous revenue from parking meters, fines, and licenses. The city should recognize grants from other governmental units as revenue when the grants become available and measurable. The city's policy is to recognize these grants as the monies are received because the grantor might withdraw the grants at any time up to the actual transmittal of the monies. In our example, the city receives only 60 percent of the expected grant that had been budgeted at \$55,000. Sales tax revenue may be accrued if the city can make a good estimate of the amount to be received and if the sales tax revenue is available for current expenditures. The city's policy is to recognize the sales taxes when received. Miscellaneous revenue is recognized as received.

The entries to record the other sources of income follow:

| (18) | Cash                                       | 33,000 |  |
|------|--|--------|--|
|      | Revenue—Grant                              | 33,000 |  |
|      | Receive only 60 percent of expected grant. |        |  |
| (19) | Cash                                       | 32,000 |  |
|      | Revenue—Sales Tax                          | 32,000 |  |
|      | Receive sales tax revenue from state.      |        |  |
| (20) | Cash                                       | 18,000 |  |
|      | Revenue—Miscellaneous                      | 18,000 |  |

Receive miscellaneous revenue from fines, license fees, minor disposals of equipment, and other sources.

# **Expenditures**

The appropriations were recorded in the budget entry (entry [10]) with a renewal of the encumbrances carried over from the prior period under the lapsing method of accounting for encumbrances (entries [11] and [12]). Orders for goods and services from outside vendors are encumbered, and a voucher system is used. Recall that a governmental entity typically does not encumber internal payroll.

Sol City makes the following entries for the encumbrances, expenditures, and disbursements made in the general fund during the year:

| (21) | ENCUMBRANCES  | 210,000 |         |
|------|---|---------|---------|
|      | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES  |         | 210,000 |
|      | Encumber for purchase orders for goods and services ordered from outside vendors.   |         |         |
| (22) | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES  | 5,000   |         |
|      | ENCUMBRANCES  |         | 5,000   |
|      | Reverse encumbrance for portion of order that is not deliverable because item has been discontinued.  |         |         |
| (23) | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES  | 190,000 |         |
|      | ENCUMBRANCES  |         | 190,000 |
|      | Reverse reserve for partial order of goods received.  |         |         |
| (24) | Expenditures  | 196,000 |         |
|      | Vouchers Payable  |         | 196,000 |
|      | Receive goods at actual cost of \$196,000 that had been encumbered for \$190,000. Difference due to increase in cost of items. Includes supplies for inventory. |         |         |
| (25) | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES  | 11,000  |         |
|      | ENCUMBRANCES  |         | 11,000  |
|      | Reverse reserve for goods received that were ordered in prior year.   |         |         |
| (26) | Expenditures  | 9,000   |         |
|      | Vouchers Payable  |         | 9,000   |
|      | Receive goods ordered in prior year. Actual cost is \$9,000 on encumbered amount of \$11,000. Difference due to price reduction as part of special sale.        |         |         |
| (27) | Expenditures  | 550,000 |         |
|      | Vouchers Payable  |         | 550,000 |
|      | Payroll costs to employees for period.  |         |         |
| (28) | Vouchers Payable  | 730,000 |         |
|      | Cash  |         | 730,000 |
|      |   |         |         |

# **Acquisition of Capital Asset**

The fire department's budget includes \$50,000 for a new fire truck. This capital outlay is accounted for as any other expenditure of available resources. The resources for the fire truck are encumbered when the order is placed with the manufacturer. The entries in the general fund for the fire truck acquisition follow:

Vouchers approved by city council and paid during period.

| (29) | ENCUMBRANCES                                     | 50,000 |        |
|------|--|--------|--------|
|      | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES |        | 50,000 |
|      | Order fire truck at estimated cost of \$50,000   |        |        |
| (30) | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES | 50,000 |        |
|      | ENCUMBRANCES                                     |        | 50,000 |

Reverse reserve for fire truck received.

| (31) | Expenditures   | 58,000 |        |
|------|--|--------|--------|
|      | Vouchers Payable   |        | 58,000 |
|      | Receive fire truck at actual cost of \$58,000 due to approved additional items required to meet new fire code. |        |        |
| (32) | Vouchers Payable   | 58,000 |        |
|      | Cash   |        | 58,000 |

Voucher approved and disbursement made for fire truck.

# **Interfund Activities**

The anticipated interfund items are included in the budget for the fiscal period. They include the estimated transfer out of \$10,000 to initiate the internal service fund and the estimated transfer out of \$20,000 for capital improvements to a capital projects fund. In addition to these transfers, the general fund also has an interfund transaction with the internal service fund for services received in the amount of \$1,000, and it lends the enterprise fund \$3,000.

The following entries in the general fund record its side of the interfund activities during the year. Chapter 18 continues the comprehensive example of Sol City and presents the entries for these interfund transactions and transfers in each of the related funds so that both sides of accounting for interfund items are illustrated for the Sol City example:

| (33)         | Other Financing Uses—Transfer Out to Internal Service Fund             | 10,000 |        |
|--------------|--|--------|--------|
|              | Due to Internal Service Fund   |        | 10,000 |
|              | Recognize the transfer out and associated liability to the internal    |        |        |
|              | service fund as included in the budget.                                |        |        |
| <b>/-</b> -> |  |        |        |
| (34)         | Other Financing Uses—Transfer Out to Capital Projects Fund             | 20,000 |        |
|              | Due to Capital Projects Fund   |        | 20,000 |
|              | Recognize the transfer out and associated liability to the capital     |        |        |
|              | projects fund as included in the budget.                               |        |        |
| (35)         | Due to Internal Service Fund   | 10,000 |        |
|              | Cash   | •      | 10,000 |
|              | Pay cash to internal service fund for payable from interfund transfer  |        |        |
|              | out previously recognized.   |        |        |
|              |  |        |        |
| (36)         | Due to Capital Projects Fund   | 20,000 |        |
|              | Cash   |        | 20,000 |
|              | Pay cash to capital projects fund for payable from interfund transfer  |        |        |
|              | out previously recognized.   |        |        |
| (37)         | Expenditures   | 1,000  |        |
|              | Due to Internal Service Fund   | •      | 1,000  |
|              | Recognize payable for interfund supplies provided and used             |        | ,      |
|              | (received from the internal service fund).                             |        |        |
|              | ,  |        |        |
| (38)         | Due to Internal Service Fund   | 1,000  |        |
|              | Cash   |        | 1,000  |
|              | Pay cash to eliminate payable.   |        |        |
| (39)         | Due from Enterprise Fund   | 3,000  |        |
| (,           | Cash   |        | 3,000  |
|              | City Council approves loan to enterprise fund to be repaid in 90 days. |        | -,     |
|              |  |        |        |

# **Adjusting Entries**

Certain adjusting entries are required to state the year's balance sheet items correctly. Assume that a physical count of the inventory shows an ending balance of \$17,000 on December 31, 20X2. This is a net increase of \$3,000 from the beginning balance of \$14,000.

The policy of the general fund is to recognize inventory as an asset and to report a reserve against fund balance for the ending balance. Recall that the city is using the consumption method of accounting for inventories. The entries required to adjust the ending balance of the supplies inventory follow:

| (40) | Inventory of Supplies   | 3,000 |       |
|------|---|-------|-------|
|      | Expenditures  |       | 3,000 |
|      | Adjust ending inventory to \$17,000 and reduce expenditures to net amount consumed during the period. |       |       |
| (41) | Fund Balance—Unassigned   | 3,000 |       |
|      | Fund Balance—Assigned for Inventories   |       | 3,000 |
|      | Adjust the reserve for inventories from beginning belonge of  |       |       |

Adjust the reserve for inventories from beginning balance of \$14,000 to its ending balance of \$17,000.

# **Closing Entries**

The final set of entries closes the nominal accounts. The format presented first reverses the budget entry and then closes the operating revenues and expenditures. Some governmental entities close the accounts in a slightly different order by closing budgeted revenue against actual revenue and budgeted appropriations against actual expenditures. The specific order of closing the accounts has no impact on the final effect; all budgetary accounts and nominal operating accounts must be closed at year-end.

Refer to the preclosing trial balance in Figure 17–10. Recall that the city is using the lapsing method of accounting for encumbrances open at the end of the fiscal year. The closing entries for Sol City's general fund for fiscal 20X2 follow:

|      | December 31, 20X2   |         |         |
|------|---|---------|---------|
| (42) | APPROPRIATIONS CONTROL  | 825,000 |         |
|      | ESTIMATED OTHER FINANCING USES—TRANSFER OUT TO                  |         |         |
|      | CAPITAL PROJECTS  | 20,000  |         |
|      | ESTIMATED OTHER FINANCING USES—TRANSFER OUT                     |         |         |
|      | TO INTERNAL SERVICES  | 10,000  |         |
|      | BUDGETARY FUND BALANCE—UNASSIGNED                               | 20,000  |         |
|      | ESTIMATED REVENUES CONTROL                                      |         | 875,000 |
|      | Close budgetary accounts.                                       |         |         |
| (43) | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES                | 15,000  |         |
|      | ENCUMBRANCES  |         | 15,000  |
|      | Close remaining encumbrances by reversing remaining budgetary   |         |         |
|      | balance.  |         |         |
| (44) | Fund Balance—Unassigned   | 15,000  |         |
|      | Fund Balance—Assigned for Encumbrances                          |         | 15,000  |
|      | Reservation of fund balance for encumbrances that lapse but are |         |         |
|      | expected to be honored in 20X3.                                 |         |         |
| (45) | Revenue—Property Tax  | 781,000 |         |
|      | Revenue—Grant   | 33,000  |         |
|      | Revenue—Sales Tax   | 32,000  |         |
|      | Revenue—Miscellaneous   | 18,000  |         |
|      | Expenditures  |         | 811,000 |
|      | Other Financing Uses—Transfer Out to Capital Projects Fund      |         | 20,000  |
|      | Other Financing Uses—Transfer Out to Internal Service Fund      |         | 10,000  |
|      | Fund Balance—Unassigned   |         | 23,000  |

| Total   | \$1,943,000       | \$1,943,000 |
| Total   | <u>#1,545,000</u> | ¥1,545,000  |

The following reconciliation explains the calculation of the Fund Balance—Unassigned account balance:

| Fund Balance—Unassigned |        |                         |                   |
|-------------------------|--------|-------------------------|-------------------|
| (41)                    | 3,000  | Bal. 1/1/X2<br>(11)     | 104,000<br>11,000 |
| (44)                    | 15,000 | Bal. Preclosing<br>(45) | 112,000<br>23,000 |
| <u> </u>                |        | Bal. 12/31/X2           | 120,000           |

# **General Fund Financial Statement Information**

The general fund is always specified as a major governmental fund type. The two required statements for a major governmental fund are (1) the balance sheet and (2) the statement of revenues, expenditures, and changes in fund balance. For purposes of illustration, we provide the financial statements for the general fund, applying the requirements of GASB 34, and then we present the fund balance section of the balance sheet under the proposed governmental accounting statement on fund balance reporting and governmental fund type definitions.

# The Balance Sheet

See Figure 17–11 for the balance sheet required under GASB 34. It includes the supplies inventory for \$17,000 and the associated reservation of fund balance, reflecting that the portion of the fund balance already applied to inventory is not expendable. The \$3,000 receivable from the interfund loan transaction with the enterprise fund is shown as a current asset. The \$15,000 outstanding encumbrances are a reservation of fund

**FIGURE 17–11 General Fund Balance Sheet Information at** the End of the Fiscal Period

| Total Liabilities & Fund Balance   |                      | \$207,000       |  |

balance indicating that a portion of the year's appropriation has been used but that the ordered goods or services have not yet been received.

# The General Fund's Balance Sheet under GASB 54

The recent statement on fund balance reporting and governmental fund type definitions does not change the reporting of assets or liabilities. The statement affects only the reporting of the fund balance for governmental fund types that includes the general fund. The fund balance section of the balance sheet could report only aggregate amounts for the nonspendable and spendable categories with detail presented in the footnotes. Alternatively, the balance sheet can report the detailed items within each category of the general fund balance. The nonspendable category includes the two classifications of amounts not in spendable form, such as inventories, or amounts that are legally or contractually required to be maintained. The spendable category includes resources that are in spendable form and are considered to be available for spending, such as fund balance related to cash, investments, and receivables. Amounts in the spendable fund balance category can then be classified as restricted, limited, assigned, or unassigned based on a hierarchy of the level of control over the spending of the resources.

Under GASB 54, reserves are not reported on the balance sheet; rather, the amount of encumbrances is reported in a footnote along with other commitments. The Sol City government has no restricted or limited spendable fund balances, but it does have an assigned amount for resources the government intends to use for the specific purpose of paying currently outstanding encumbrances from goods and services ordered to be used for general government functions.

# The Statement of Revenues, Expenditures, and Changes in Fund Balance

Refer to Figure 17–12 for the required statement of revenues, expenditures, and changes in fund balance, which has the following sections:

- 1. Operating section. This section reports revenues less expenditures, resulting in an excess of revenues over expenditures for the period. Expenditures include the interfund services provided and used, and separate reporting of outlays for capital assets.
- 2. Other financing sources (uses). This section includes interfund transfers and nonrevenue proceeds such as bond issues.

FIGURF 17-12 **General Fund** Statement of Revenues. Expenditures, and **Changes in Fund Balance Information** for Fiscal 20X2

| SOL CITY Statement of Revenues, Expenditures, and Changes in Fund Balance Information General Fund For the Year Ended December 31, 20X2 |             |           |
|---|-------------|-----------|
| Revenues:   |             |           |
| Property Taxes  | \$781,000   |           |
| Grants  | 33,000      |           |
| Sales Taxes   | 32,000      |           |
| Miscellaneous   | 18,000      |           |
| Total Revenues<br>Expenditures:   |             | \$864,000 |
| General Government  | \$206,000   |           |
| Streets & Highways  | 71,000      |           |
| Public Safety   | 335,000     |           |
| Sanitation  | 141,000     |           |
| Capital Outlay:   |             |           |
| Public Safety   | 58,000      |           |
| Total Expenditures  |             | 811,000   |
| Excess of Revenues over Expenditures Other Financing Sources (Uses):  |             | \$ 53,000 |
| Transfer Out to Capital Projects Fund   | \$ (20,000) |           |
| Transfer Out to Internal Service Fund   | (10,000)    |           |
| Total Other Financing Sources (Uses)  |             | (30,000)  |
| Net Change in Fund Balances   |             | \$ 23,000 |
| Fund Balance, January 1   |             | 129,000   |
| Fund Balance, December 31   |             | \$152,000 |
| Tana balance, becember 31   |             | <u> </u>  |

3. Reconciliation of fund balance. The ending balance in fund balances, including both assigned and unassigned, is reconciled for (a) the results of operations, (b) other financing sources or uses, and (c) special or extraordinary items in the period.

Revenues should be classified by major sources and expenditures by character and major functions. Although the entries in the illustrations for Sol City did not categorize the expenditures by function (general government, streets and highways, public safety, and sanitation), the actual governmental accounting process does categorize them so each expenditure can be classified by both function and object (personal services, supplies, and other services and charges). The amounts in the expenditures section in Figure 17–12 are the assumed amounts from a comprehensive accounting system. Total expenditures do reconcile to the expenditures recorded in the Sol City illustration.

The statement of revenues, expenditures, and changes in fund balance presents the total fund balance, including both assigned and unassigned. Note that in this example, Sol City reported no extraordinary items or special items. Special items would include significant transactions or other events within the control of management that were either unusual in nature or infrequent in occurrence. An example of a special item could be a one-time sale of some city park land. If the city did have a special or extraordinary item, the city would report it below the other financing sources (uses) section.

# The General Fund's Statement of Revenues, Expenditures, and Changes in Fund Balance

GASB 54 on governmental fund type balances does not require any changes in the statement of revenues, expenditures, and changes in fund balance. The reconciliation in this financial statement is to total fund balance, not to a specific classification of the fund balance. Therefore, this financial statement is the same under GASB 54 as was previously required under GASB 34.

# Summary of **Key Concepts**

Accounting for state and local governmental units requires the use of fund accounting to recognize properly the governmental unit's variety of services and objectives. Funds are separate fiscal and accounting entities established to segregate, control, and account for resource flows. Governmental units use three types of funds: governmental funds, of which the general fund is usually the most important; proprietary funds; and fiduciary funds. The basis of accounting for each fund depends on the fund's objective. Governmental financial statements use the current financial resources measurement focus and the modified accrual basis of accounting. The economic resources measurement focus and accrual basis of accounting are used for the government-wide statements, the proprietary fund statements, and the fiduciary fund statements.

The modified accrual basis recognizes revenue when it is both measurable and available for financing expenditures of the period. A major source of revenue is property tax levies, but other sources may include sales taxes; grants from other governmental units; and fines, licenses, or permits. Note that in the five governmental funds, the estimated uncollectible property taxes are a reduction of the property tax revenue, not an expense as in commercial accounting. Expenditures are recognized in the period in which the related liability is both measurable and incurred. The expenditure process usually begins with a budget, which establishes the fund's spending authority. Encumbrances are used for purchases outside the governmental entity to recognize the use of a portion of the spending authority for the period and to avoid overspending the expenditure authority. Under current GAAFR, encumbrances outstanding at the end of a fiscal period are reported as a reserve of the fund balance and may be accounted for as lapsing or nonlapsing. Another type of fund balance reserve is a reserve for inventories, which is used if the amount of inventory is material.

The general fund is responsible for offering many of the usual services of governmental units. Fire and police protection, the local government's administrative and legislative functions, and many other basic governmental services are administered through the general fund. It will provide balance sheet information and statement of revenues, expenditures, and changes in fund balances information to the governmental funds financial statements.

The government reporting model, as established by GASB 34, specifies that both fund-based financial statements and government-wide financial statements must be presented. The general fund uses the modified accrual basis of accounting to recognize revenue and expenditure transactions. Furthermore, no long-term capital assets or general long-term debt is recorded in the general fund. However, a reconciliation schedule will be required to go from the governmental fund types financial statements to the government-wide financial statements. The government-wide financial statements use the accrual basis of accounting and report all capital assets and all long-term debt. Government-wide financial statements are presented in Chapter 18 after the conclusion of that chapter's discussion of the remaining funds.

Interfund activities must be evaluated carefully to ensure that the governmental unit's legal and budgetary controls are not violated. Four types of interfund activities exist: (1) interfund loans, (2) interfund services provided and used, (3) interfund transfers, and (4) interfund reimbursements. Outstanding interfund loans are presented as receivables or payables on the fund's balance sheet information. Interfund services provided and used are reported as part of the revenues and expenditures on the operating statements. Interfund transfers are reported separately in the other financing sources (uses) section of the operating statement. Interfund reimbursements are not reported separately on the fund's financial statements.

# **Key Terms**

appropriation, 858 basis of accounting, 852 budgets, 857 current financial resources measurement focus, 850 disbursement, 860 economic resources measurement focus, 853 encumbrance, 858 expenditure, 847

fiduciary funds, 847 fund-based financial statements, 849 funds, 846 governmental financial reporting model, 849 governmental funds, 847 government-wide financial statements, 849 interfund activities, 868

measurement focus, 852 modified accrual basis, 852 proprietary funds, 847 reporting entity, 848 reservation (or restriction) of the budgetary fund balance, 859

| Questions |        |  |
|-----------|--------|--|
| LO 17-1   | Q17-1  | What is a fund? How does a fund receive resources?   |
| LO 17-1   | Q17-2  | What are the 11 funds that local and state governments generally use? Briefly state the purpose of each fund.  |
| LO 17-1   | Q17-3  | Compare the modified accrual basis with the accrual accounting basis.  |
| LO 17-3   | Q17-4  | Which of the two, the modified accrual basis or the accrual basis, is used for funds for which expendability is the concern? Why?  |
| LO 17-5   | Q17-5  | When are property taxes recognized as revenue in the general fund?   |
| LO 17-4   | Q17-6  | How are taxpayer-assessed income and sales taxes recognized in the general fund? Why?  |
| LO 17-6   | Q17-7  | What is meant by <i>budgetary accounting</i> ? Explain the accounting for expected revenue and anticipated expenditures.   |
| LO 17-6   | Q17-8  | Are all expenditures encumbered?   |
| LO 17-5   | Q17-9  | Why do some governmental units not report small amounts of supply inventories in their balance sheets?   |
| LO 17-6   | Q17-10 | What are the main differences between the lapsing and nonlapsing methods of accounting for encumbrances outstanding at the fiscal year-end? What are the differences in accounting between the lapsing and nonlapsing methods when accounting for the actual expenditure in the subsequent year? |
| LO 17-4   | Q17-11 | When is the expenditure for inventories recognized under the purchase method? Under the consumption method?  |
| LO 17-6   | Q17-12 | Explain the difference between an interfund service provided and used and an interfund transfer. Give examples of each.  |
| LO 17-4   | Q17-13 | Where is an interfund transfer reported on the general fund's financial statements?  |
| LO 17-4   | Q17-14 | The general fund agrees to lend the enterprise fund \$2,000 for three months. How is this interfund loan reported on the general fund's financial statements?  |
| LO 17-4   | Q17-15 | Explain how an expenditure may be classified by (1) function, (2) activity, and (3) object within a governmental unit's financial statements.  |

# Cases

LO 17-6

#### C17-1 **Budget Theory**

# **Understanding**

Governmental accounting gives substantial recognition to budgets, which are being recorded in the governmental unit's accounts.

## Required

- a. What is the purpose of a governmental accounting system, and why is the budget recorded in the accounts of a governmental unit? Include in your discussion the purpose and significance of appropriations.
- b. Describe when and how a governmental unit (1) records its budget and (2) closes out the budgetary accounts.

# LO 17-1

#### **Municipal versus Financial Accounting** C17-2

# Judgment

Wilma Bates is executive vice president of Mavis Industries Inc., a publicly held industrial corporation. She has just been elected to Gotham City's council. Before assuming office, she asks you to explain the major differences in accounting and financial reporting for a large city compared with accounting and reporting for a large industrial corporation.

# Required

- a. Describe the major differences that exist in the purpose of accounting and financial reporting and in the type of financial reports of a large city when compared with that of a large industrial corporation.
- b. Why are inventories often ignored in accounting for local governmental units? Explain.

LO 17-4

#### C17-3 Revenue Issues

## Communication

The bookkeeper for the community of Spring Valley has asked for your assistance regarding the following items.

## Required

Prepare a memo discussing the proper accounting and financial reporting in the general fund for each of the following items.

- a. Property taxes receivable are recognized at the levy date. One percent of the levy is not expected to be collected.
- b. Spring Valley collects property taxes in advance of the year in which they are expendable.
- c. Spring Valley receives sales tax revenues from the state, but the state still owes the city another \$15,000 that will not be received until the next month.
- d. Spring Valley receives an unexpected state grant to finance the purchase of fire prevention equipment. One-half of the grant is expended in this fiscal period, and the remainder is expected to be expended in the next fiscal period.
- e. Interest is earned on short-term investments made from the general fund's resources.
- f. A gift from a local citizen was given to be used for a new city park once it has been completed. If the park is not constructed within two years, the gift must be returned to the grantor. The park's completion is expected in the next fiscal period.

# C17-4 Examining the General Fund Disclosures in a Comprehensive Annual Financial Report (CAFR)

Analysis

This case focuses on a governmental unit's general fund.

Using the CAFR for a governmental entity chosen by your instructor, answer the following questions that relate to the overall government and governmental funds:

- a. Find the budgetary comparison schedules for the general fund. Using them, what were the estimated revenues and appropriations for the most recent fiscal year?
- b. Using the same information as in part (a), list the amounts of any transfers in and transfers out that were budgeted for the most recent year.
- c. Based on the notes following the financial statements, what is the policy of the general fund with respect to outstanding encumbrances at the fiscal year-end?
- d. On the balance sheet of the general fund at the most recent fiscal year-end what is the total amount reported for assets and for fund balance? Of the total amount reported for fund balance, how much is unassigned?
- e. On the balance sheet of the general fund at the most recent fiscal year-end what is the amount reported for inventories? If inventories are reported, does the government use the purchase method or the consumption method?
- f. Based on the notes following the financial statements, what is the government's revenue recognition policy with respect to property taxes in the general fund? What percentage of the property tax levy is estimated to be uncollectible?
- g. Read the CAFR section that contains management's discussion and analysis. What reasons were given for the increase or decrease in general fund revenues for the most recent year?
- h. Examine the statement of revenues, expenditures, and changes in fund balance for the most recent year. Compare the change in fund balance for the general fund with the amount of change in fund balance that was budgeted for the year. Were the government's general fund actual results better or worse than expected?
- i. After revenue from taxes, what was the next most significant source of revenue for the general fund for the most recent year?
- j. Has the general fund engaged in any interfund loans and advances? If yes, show the amounts that are owed to or by the general fund as of the most recent year-end.

# **Examining Deposit and Investment Risk Disclosures** of a Governmental Entity

The financial reports of governmental entities must provide footnote disclosure of the deposit and investment risks the entity faces. GASB Statement No. 40, "Deposit and Investment Risk Disclosures" (GASB 40), amended GASB Statement No. 3, "Deposits with Financial Institutions, Investments (including Repurchase Agreements) and Reverse Repurchase Agreements" (GASB 3).

The GASB requires disclosures of (1) the nature of the deposits and of investment risks the governmental entity faces, (2) the governmental entity's policies regarding each of those risks, and (3) specific ones such as credit ratings of investments in fixed income securities and a schedule of their maturity dates and fair values; the types of other investment securities held and their amounts and fair values; any concentrations of investments, other than those in U.S. government securities or in mutual or pooled investment funds, consisting of 5 percent or more of total investments; and the risks from changing interest rates and changing foreign exchange rates.

## Required

First, go to the GASB's website (www.gasb.org) and obtain the summaries of GASB 40 and GASB 3 (the GASB does not provide online access to their complete publications). Second, using an online search engine such as Google, locate the most recent annual report of a local government near your college or university. Then complete parts (a) through (e).

- a. List the types of deposit and investment risks addressed in GASB 3 and GASB 40.
- b. Explain why disclosures of information about these risks are important to the users of the government's financial statements.

Complete the following instructions using the footnote information for Deposits and Investments from your local government's most recent annual report.

- c. Describe the types of deposit and investment risks of your local government.
- d. Describe the policies your local government has for each type of risk identified.
- e. Describe the types of specific disclosures of information for each type of risk identified.

# **Exercises**

LO 17-7

#### E17-1 Multiple-Choice Questions on the General Fund [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. One difference between accounting for a governmental (not-for-profit) unit and a commercial (for-profit) enterprise is that a governmental unit should
  - a. Not record depreciation expense in any of its funds.
  - b. Always establish and maintain complete self-balancing accounts for each fund.
  - c. Use only the cash basis of accounting.
  - d. Use only the modified accrual basis of accounting.
- 2. Belle Valley incurred \$100,000 of salaries and wages for the month ended March 31, 20X2. How should this be recorded on that date?

|    |                                 | Debit   | Credit  |
|----|---------------------------------|---------|---------|
| a. | Expenditures—Salaries and Wages | 100,000 |         |
|    | Vouchers Payable                |         | 100,000 |
| b. | Salaries and Wages Expense      | 100,000 |         |
|    | Vouchers Payable                |         | 100,000 |
| C. | Encumbrances—Salaries and Wages | 100,000 |         |
|    | Vouchers Payable                |         | 100,000 |
| d. | Fund Balance                    | 100,000 |         |
|    | Vouchers Payable                |         | 100,000 |

- 3. Which of the following accounts of a governmental unit is credited when taxpayers are billed for property taxes?
  - a. Estimated Revenue.
  - b. Revenue.
  - c. Appropriations.
  - d. Fund Balance—Assigned for Encumbrances.
- 4. Fixed assets purchased from general fund revenue were received. What account, if any, should have been debited in the general fund?
  - a. None.
  - b. Fixed Assets.
  - c. Expenditures.
  - d. Fund Balance—Unassigned.
- 5. The initial transfer of cash from the general fund to establish an internal service fund requires the general fund to credit Cash and debit
  - a. Accounts Receivable—Internal Service Fund.
  - b. Transfers Out.
  - c. Budgetary Fund Balance—Assigned for Encumbrances.
  - d. Expenditures.

# Matching for General Fund Transactions [AICPA Adapted]

For each general fund transaction in items 1 through 12, select its appropriate recording next to letters A through O. A letter may be selected once, more than once, or not at all.

### **Transactions Recording of Transactions** A. Credit Revenues 1. Made an interfund transfer out to the capital projects fund. B. Debit Expenditures 2. Issued approved purchase orders C. Debit Encumbrances D. Debit Inventories for supplies. 3. Received the above-mentioned supplies E. Debit Interfund Services Provided and Used F. Credit Budgetary Fund Balance—Unassigned whose invoices were approved. G. Debit Appropriations Control 4. Incurred salaries and wages. 5. Transferred cash to establish an H. Credit Property Taxes Receivable—Current internal service fund. I. Credit Appropriations Control 6. Sent tax bills to property owners after city J. Credit Residual Equity Transfer Out council passed the property tax levy. K. Debit Interfund Transfer Out 7. Collected property taxes for the current L. Credit Interfund Transfer Out M. Debit Estimated Revenues Control 8. Recorded appropriations upon adoption N. Debit Budgetary Fund Balance—Unassigned of the budget. O. Debit Computer Equipment 9. Recorded estimated revenues upon adoption of the budget. 10. Received excess of estimated inflows over estimated outflows. 11. Received invoices for computer equipment. 12. Received billing from water and sewer fund (enterprise fund) for using city water and sewer.

LO 17-7

### Multiple-Choice Questions on Budgets, Expenditures, and Revenue E17-3 [AICPA Adapted]

Select the correct completion of each of the following items.

- 1. Which of the following steps in the acquisition of goods and services occurs first?
  - a. Appropriation.
  - b. Encumbrance.
  - c. Budget.
  - d. Expenditure.
- 2. What account is used to earmark the fund balance to recognize the contingent obligations of goods ordered but not yet received?
  - a. Appropriations.
  - b. Encumbrances.
  - c. Obligations.
  - d. Fund Balance—Assigned for Encumbrances.
- 3. When a governmental unit's Estimated Revenues Control account is closed out at the end of the fiscal year, the excess of estimated revenues over estimated appropriations is
  - a. Debited to Fund Balance—Unassigned.
  - b. Debited to Fund Balance—Assigned for Encumbrances.
  - c. Debited to Budgetary Fund Balance—Unassigned.
  - d. Credited to Fund Balance—Assigned for Encumbrances.
- 4. Carson City's general fund issued purchase orders of \$630,000 to vendors for supplies. Which of the following entries should the city make to record this transaction?

|    |  | Debit   | Credit  |
|----|--|---------|---------|
| a. | ENCUMBRANCES                                     | 630,000 |         |
|    | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES |         | 630,000 |
| b. | Expenditures                                     | 630,000 |         |
|    | Vouchers Payable                                 |         | 630,000 |
| C. | Expenses   | 630,000 |         |
|    | Accounts Payable                                 |         | 630,000 |
| d. | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES | 630,000 |         |
|    | ENCUMBRANCES                                     |         | 630,000 |
|    |  |         |         |

5. The following balances are included in the subsidiary records of Dogwood's Parks and Recreation Department on March 31, 20X2:

| Appropriations—Supplies    | \$7,500 |
|----------------------------|---------|
| Expenditures—Supplies      | 4,500   |
| Encumbrances—Supply Orders | 750     |

How much does the department have available to purchase additional supplies?

- a. \$0.
- b. \$2,250.
- *c*. \$3,000.
- d. \$6,750.

- 6. The board of commissioners of the City of Elgin adopted its budget for the year ending July 31, 20X2, which indicated revenue of \$1,000,000 and appropriations of \$900,000. If the budget is formally integrated into the accounting records, what is the required journal entry?
  - a. Memorandum entry only

| b. | APPROPRIATIONS CONTROL            | 900,000   |           |
|----|-----------------------------------|-----------|-----------|
|    | BUDGETARY FUND BALANCE—UNASSIGNED | 100,000   |           |
|    | ESTIMATED REVENUES CONTROL        |           | 1,000,000 |
| C. | ESTIMATED REVENUES CONTROL        | 1,000,000 |           |
|    | APPROPRIATIONS CONTROL            |           | 900,000   |
|    | BUDGETARY FUND BALANCE—UNASSIGNED |           | 100,000   |
| d. | REVENUE RECEIVABLE                | 1,000,000 |           |
|    | EXPENDITURES PAYABLE              |           | 900,000   |
|    | BUDGETARY FUND BALANCE—UNASSIGNED |           | 100,000   |

- 7. Which of the following accounts of a governmental unit is credited when the budget is recorded?
  - a. Encumbrances.
  - b. Budgetary Fund Balance—Assigned for Encumbrances.
  - c. Estimated Revenue Control.
  - d. Appropriations Control.
- 8. Which of the following accounts of a governmental unit is debited when supplies previously ordered are received?
  - a. Encumbrances.
  - b. Budgetary Fund Balance—Assigned for Encumbrances.
  - c. Vouchers Payable.
  - d. Appropriations Control.
- 9. Which of the following situations will increase a governmental unit's fund balance at the fiscal year-end?
  - a. Appropriations are less than expenditures and budgetary fund balance assigned for encumbrances.
  - b. Appropriations are less than expenditures and encumbrances.
  - c. Appropriations are more than expenditures and encumbrances.
  - d. Appropriations are more than estimated revenue.
- 10. Which of the following accounts of a governmental unit is credited to close it out at the fiscal year-end?
  - a. Appropriations Control.
  - b. Revenue—Property Tax.
  - c. Budgetary Fund Balance—Assigned for Encumbrances.
  - d. Encumbrances.

#### E17-4 Multiple-Choice Questions on the General Fund LO 17-2, 17-7

Select the correct answer for each of the following items.

- 1. The primary focus in accounting and reporting for governmental funds is
  - a. Income determination.
  - b. Flow of financial resources.
  - c. Capital maintenance.
  - d. Transfers relating to proprietary activities.

2. The governmental fund measurement focus is the determination of

|    | Income | Financial<br>Position | Flow of Financial Resources |
|----|--------|-----------------------|-----------------------------|
| a. | Yes    | Yes                   | No                          |
| b. | No     | Yes                   | No                          |
| C. | No     | No                    | Yes                         |
| d. | No     | Yes                   | Yes                         |

- 3. A Budgetary Fund Balance—Assigned for Encumbrances in excess of a balance of Encumbrances Control indicates
  - a. An excess of vouchers payable over encumbrances.
  - b. An excess of purchase orders over invoices received.
  - c. A recording error.
  - d. An excess of appropriations over encumbrances.
- 4. The Encumbrances Control account of a governmental unit is debited when
  - a. Goods are received.
  - b. A voucher payable is recorded.
  - c. A purchase order is approved.
  - d. The budget is recorded.
- 5. The following pertains to property taxes levied by Cedar City for the calendar year 20X6:

| Expected collections during 20X6                      | \$500,000 |
|---|-----------|
| Expected collections during the first 60 days of 20X7 | 100,000   |
| Expected collections during the remainder of 20X7     | 60,000    |
| Expected collections during January 20X8              | 30,000    |
| Estimated to be uncollectible (3/1/X7 through 1/1/X8) | 10,000    |
| Total levy  | \$700,000 |

City Cedar should report revenues from property taxes for 20X6 of

- a. \$700,000.
- b. \$600,000.
- c. \$690,000.
- d. \$500,000.
- 6. Oak City issued a purchase order for supplies with an estimated cost of \$5,000. When the supplies and accompanying invoice were received, the invoice indicated a \$4,950 actual price. What amount should Oak City debit (credit) to Budgetary Fund Balance—Assigned for Encumbrances?
  - a. \$5,000.
  - b. \$(50).
  - c. \$4,950.
  - d. \$50.
- 7. For the budgetary year ending December 31, 20X6, Johnson City expects the following inflows of resources in its general fund:

| Property taxes, licenses, and fines    | \$9,000,000 |
|--|-------------|
| Transfer in from internal service fund | 500,000     |
| Transfer in from debt service fund     | 1,000,000   |

In the budgetary entry, what amount should Johnson City record for estimated revenues?

- a. \$9,000,000.
- b. \$9,500,000.
- c. \$10,500,000.
- d. \$10,000,000.
- 8. Encumbrances outstanding at year-end in a state's general fund should be reported as a
  - a. Liability in the general fund.
  - b. Fund balance designation in the general fund.
  - c. Fund balance reserve in the general fund.
  - d. Liability in the general long-term debt account group.
- 9. Interperiod equity is an objective of financial reporting for governmental entities. According to the Governmental Accounting Standards Board, is interperiod equity fundamental to public administration? Is it a component of accountability?

|    | Fundamental to Public | Component of   |
|----|-----------------------|----------------|
|    | Administration        | Accountability |
| a. | Yes                   | Yes            |
| b. | No                    | No             |
| C. | Yes                   | No             |
| d. | No                    | Yes            |

- 10. Which of the following statements is correct regarding comparability of governmental financial reports?
  - a. Comparability is not relevant in governmental financial reporting.
  - b. Differences between financial reports should be due to substantive differences in underlying transactions or the governmental structure.
  - c. Selection of different alternatives in accounting procedures or practices account for the differences between financial reports.
  - d. Similarly designated governments perform the same functions.

#### **Encumbrances at Year-End** E17-5

The City of Batavia ordered new computer equipment for \$21,000 on November 3, 20X2. The equipment had not been received by December 31, 20X2, Batavia's fiscal year-end.

## Required

- a. Assume that the city has a policy that outstanding encumbrances lapse at year-end.
  - (1) Prepare the entry to record the encumbrance on November 3, 20X2.
  - (2) Prepare the entries required on December 31, 20X2.
  - (3) Assuming that the city council accepts outstanding encumbrances in its budget for the next fiscal period (20X3), prepare entries on January 1, 20X3.
  - (4) Prepare entries on January 18, 20X3, when the equipment was received with an invoice cost of \$21,800 and accepted by the city.
  - (5) Prepare the entry on December 31, 20X3, to close the expenditures account.
- b. Assume the city's policy is that outstanding encumbrances are nonlapsing.
  - (1) Prepare the entry to record the encumbrance on November 3, 20X2.
  - (2) Prepare the entries required on December 31, 20X2.
  - (3) Prepare the entry on January 1, 20X3, to classify the expenditure in 20X2, the year the encumbrance was initiated.
  - (4) Prepare the entry on January 18, 20X3, when the equipment was received for \$21,800. The City Council approved the additional \$800 equipment cost as an addition to 20X3's expenditures.
  - (5) Prepare the entries on December 31, 20X3, to close the expenditures accounts.

- c. Now assume the city has a policy that outstanding encumbrances are nonlapsing, but the 20X3 City Council decided, during its budget hearings for 20X3, not to accept the encumbrance for the computer equipment that had been ordered on November 3, 20X2.
  - (1) Prepare the entry required on January 1, 20X3, to cancel the encumbrance reserve for the equipment ordered on November 3, 20X2.

## LO 17-7

### **Accounting for Inventories of Office Supplies** E17-6

Georgetown purchased supplies on August 8, 20X2, for \$3,600. At the fiscal year-end on September 30, the inventory of supplies was \$2,800.

# Required

- a. Assume that Georgetown uses the consumption method of accounting for inventories.
  - (1) Prepare the entry for the purchase on August 8, 20X2.
  - (2) Prepare the entries required on September 30, 20X2, including the closing of the Expenditures account.
  - (3) Assuming the supplies were used during 20X3, prepare the entries on September 30, 20X3.
- b. Assume that Georgetown uses the purchase method of accounting for inventories.
  - (1) Prepare the entry for the purchase on August 8, 20X2.
  - (2) Prepare the entries required on September 30, 20X2, including the closing of the Expenditures account.
  - (3) Assuming the supplies were used during 20X3, prepare the entry on September 30, 20X3.

### E17-8 Computation of Revenues Reported on the Statement of Revenues, **Expenditures, and Changes in Fund Balance for the General Fund**

a. Acquired a three-year fire insurance policy for \$5,400 on September 1, 20X1.

Gilbert City had the following transactions involving resource inflows into its general fund for the year ended June 30, 20X8:

- 1. The general fund levied \$2,000,000 of property taxes in July 20X7. The city estimated that 2 percent of the levy would be uncollectible and that \$100,000 of the levy would not be collected until after August 31, 20X8.
- 2. On April 1, 20X8, the general fund received \$50,000 repayment of an advance made to the internal service fund. Interest on the advance of \$1,500 also was received.
- 3. During the year ended June 30, 20X8, the general fund received \$1,800,000 of the property taxes levied in transaction (1).
- 4. The general fund received \$250,000 in grant monies from the state to be used solely to acquire computer equipment. During March 20X8, the general fund acquired computer equipment using \$235,000 of the grant. The city has not yet determined the use of the remainder of the grant.
- 5. During the year ended June 30, 20X8, the general fund received \$125,000 from the state as its portion of the sales tax. At June 30, 20X8, the state owed the general fund an additional \$25,000 of sales taxes. The general fund does not expect to have the \$25,000 available until early August 20X8.

- 6. In July 20X7, the general fund borrowed \$800,000 from a local bank using the property tax levy as collateral. The loan was repaid in September 20X7 with the proceeds from property tax collections.
- 7. In February 20X8, a terminated debt service fund transferred \$30,000 to the general fund. The \$30,000 represented excess resources left in the debt service fund after a general long-term debt obligation had been paid in full.
- 8. On July 1, 20X7, the general fund estimated that it would receive \$75,000 from the sale of liquor licenses during the fiscal year ended June 30, 20X8. For the year ended June 30, 20X8, \$66,000 had been received from liquor license sales.
- 9. The general fund received \$15,000 in October 20X7 from one of the city's special revenue funds. The amount received represented a reimbursement for an expenditure of the special revenue fund that the city's general fund paid.
- 10. In July 20X7, the general fund collected \$80,000 of delinquent property taxes that had been classified as delinquent on June 30, 20X7. In the entry to record the property tax levy in July 20X6, the general fund estimated that it would collect all property tax revenues by July 31, 20X7.

## Reauired

Prepare a schedule showing the amount of revenue that should be reported by Gilbert City's general fund on the statement of revenues, expenditures, and changes in fund balance for the year ended June 30, 20X8.

LO 17-7

# Computation of Expenditures Reported on the Statement of Revenues, Expenditures, and Changes in Fund Balance for the General Fund

Benson City had the following transactions involving resource outflows from its general fund for the year ended June 30, 20X8:

- 1. During March 20X8, the general fund transferred \$150,000 to a capital projects fund to help pay for the construction of a new police station.
- 2. During August 20X7, the general fund ordered computer equipment at \$200,000 estimated cost. The equipment arrived in September 20X7, and a \$202,000 invoice was paid.
- 3. In November 20X7, the city authorized the establishment of an internal service fund for the maintenance of city-owned vehicles. The general fund was authorized to transfer \$500,000 to the internal service fund in late November. Of this amount, the internal service fund will repay \$200,000 in two years with interest at 6 percent; the remaining \$300,000 represents a permanent transfer to the internal service fund.
- 4. In May 20X8, the general fund paid \$15,000 to one of the city's special revenue funds. The amount paid represented a reimbursement to the special revenue fund for expending \$15,000 of its resources on behalf of the general fund.
- 5. During the year ended June 30, 20X8, the general fund received bills from the city's water department totaling \$12,000. Of this amount, the general fund had paid all but \$500 by June 30, 20X8.
- 6. During the year ended June 30, 20X8, the general fund acquired supplies costing \$35,000 and paid the salaries and wages of its employees totaling \$900,000. The general fund uses the purchase method of accounting for its supplies. At June 30, 20X8, unused supplies in the general fund amounted to \$5,000.
- 7. At June 30, 20X8, outstanding encumbrances for goods ordered in the general fund amounted to \$25,000. Outstanding encumbrances do not lapse at the end of the fiscal year.
- 8. On March 15, 20X8, the general fund repaid a local bank \$265,000 for a loan of which \$250,000 represented the principal borrowed. The general fund borrowed the money in July 20X7 and used collections of the property tax levy to repay the loan.
- 9. For the year ended June 30, 20X8, the general fund transferred \$95,000 to the city's pension trust fund. The amount transferred represented the employer's contribution to the pension trust on behalf of the employees of the general fund.

10. During May 20X8, the general fund decided to lease several copying machines instead of purchasing them. The lease arrangement was properly accounted for as an operating lease. By June 30, 20X8, the general fund had made lease payments of \$10,000 to the owner.

## Required

Prepare a schedule showing the amount of expenditures that Benson's general fund should reported on the statement of revenues, expenditures, and changes in fund balance for the year ended June 30, 20X8.

#### LO 17-7 E17-10 **Closing Entries and Balance Sheet**

The preclosing trial balance at December 31, 20X1, for Lone Wolf's general fund follows.

|  | Debit       | Credit      |
|--|-------------|-------------|
| Cash   | \$ 90,000   |             |
| Property Taxes Receivable—Delinquent             | 100,000     |             |
| Allowance for Uncollectibles—Delinquent          |             | \$ 7,200    |
| Due from Other Funds                             | 14,600      |             |
| Vouchers Payable                                 |             | 65,000      |
| Due to Other Funds                               |             | 8,400       |
| Fund Balance—Unassigned                          |             | 119,000     |
| Property Tax Revenue                             |             | 1,130,000   |
| Miscellaneous Revenue                            |             | 40,000      |
| Expenditures                                     | 1,140,000   |             |
| Other Financing Uses—Transfer Out                | 25,000      |             |
| Estimated Revenues Control                       | 1,200,000   |             |
| Appropriations Control                           |             | 1,145,000   |
| Estimated Other Financing Uses—Transfer Out      |             | 25,000      |
| Encumbrances                                     | 32,000      |             |
| Budgetary Fund Balance—Assigned for Encumbrances |             | 32,000      |
| Budgetary Fund Balance—Unassigned                |             | 30,000      |
| Total  | \$2,601,600 | \$2,601,600 |

Lone Wolf uses the purchase method of accounting for inventories and the lapsing method of accounting for encumbrances.

# Required

- a. Prepare the closing entries for the general fund.
- b. Prepare a general fund-only balance sheet at December 31, 20X1.

#### E17-11 Statement of Revenues, Expenditures, and Changes in Fund Balance

Refer to the preclosing trial balance in Exercise 17-10. Assume that the balances on December 31, 20X0, were as follows:

| Fund Balance—Assigned for Encumbrances | \$28,000 |
|--|----------|
| Fund Balance—Unassigned                | 91,000   |

# Required

LO 17-8

Prepare a general fund-only statement of revenues, expenditures, and changes in fund balance for fiscal 20X1.

## Matching Items Involving Interfund Transactions and Transfers

Mattville's general fund had several interfund activities during the fiscal year ended June 30, 20X9 (see the left-hand column of the following table). The right-hand column lists the types of interfund activities that occur in state and local governmental accounting. For each general fund transaction/transfer, select a letter from the list on the right that best describes the interfund activity.

# **General Fund Transactions and Transfers**

- 1. Received bills from an internal service fund for using city-owned vehicles.
- 2. Transferred cash to start an enterprise fund that does not have to return the cash to the general fund.
- 3. Received cash from a discontinued special revenue fund.
- 4. Transferred cash to a capital projects fund to help construct a building.
- 5. Transferred cash to a debt service fund to pay interest and principal of general long-term debt.
- 6. Transferred cash to the pension trust fund representing the employer's contribution the pension of general fund employees.
- 7. Transferred resources to an enterprise fund that is not expected to repay these resources with interest.
- 8. Transferred cash to a special revenue fund that incurred and paid expenditures on behalf of the general fund.
- 9. Received from an internal service fund cash that represented repayment of an advance made during the previous year.
- 10. Received bills from an enterprise fund for using public parking facilities.

# Type of Interfund **Transactions and Transfers**

- A. Interfund loan
- B. Interfund service provided and used
- C. Interfund transfer
- D. Interfund reimbursement

# Additional Information

The budget for the fiscal year ended June 30, 20X2, provided for estimated revenue of \$2,000,000 and appropriations of \$1,940,000. Encumbrances of \$1,070,000 were made during the year.

# Required

Prepare proper journal entries to record the budgeted and actual transactions for the fiscal year ended June 30, 20X2. Include closing entries.

# P17-14 General Fund Entries [AICPA Adapted]

The following trial balances were taken from the accounts of Omega City's general fund before the books had been closed for the fiscal year ended June 30, 20X2:

|  | Trial Balance | Trial Balance      |
|--|---------------|--------------------|
|  | July 1, 20X1  | June 30, 20X2      |
| Cash   | \$400,000     | \$ 700,000         |
| Taxes Receivable                                 | 150,000       | 170,000            |
| Allowance for Uncollectible Taxes                | (40,000)      | (70,000)           |
| Estimated Revenues Control                       | _             | 3,000,000          |
| Expenditures                                     | _             | 2,900,000          |
| Encumbrances                                     |               | 91,000             |
| Total  | \$510,000     | \$6,791,000        |
| Vouchers Payable                                 | \$ 80,000     | \$ 408,000         |
| Due to Other Funds                               | 210,000       | 142,000            |
| Fund Balance—Assigned for Encumbrances           | 60,000        | _                  |
| Fund Balance—Unassigned                          | 160,000       | 220,000            |
| Revenue from Taxes                               | _             | 2,800,000          |
| Miscellaneous Revenues                           | _             | 130,000            |
| Appropriations Control                           | _             | 2,980,000          |
| Budgetary Fund Balance—Assigned for Encumbrances | _             | 91,000             |
| Budgetary Fund Balance—Unassigned                |               | 20,000             |
| Total  | \$510,000     | <u>\$6,791,000</u> |

## **Additional Information**

- 1. The estimated taxes receivable for the year ended June 30, 20X2, were \$2,870,000, and the taxes collected during the year totaled \$2,810,000. Miscellaneous revenue of \$130,000 also was collected during the year.
- 2. Encumbrances in the amount of \$2,700,000 were recorded. In addition, the \$60,000 of lapsed encumbrances from the 20X1 fiscal year was renewed.
- 3. During the year, the general fund was billed \$142,000 for services performed on its behalf by other city funds (debit Expenditures).
- 4. An analysis of the transactions in the Vouchers Payable account for the year ended June 30, 20X2, follows:

|   | Debit (Credit) |
|---|----------------|
| Current expenditures (liquidating all encumbrances to date except |                |
| for renewed 20X1 commitment)                                      | \$(2,700,000)  |
| Expenditures applicable to previous year                          | (58,000)       |
| Vouchers for payments to other funds                              | (210,000)      |
| Cash payments during year   | 2,640,000      |
| Net change  | \$ (328,000)   |

5. On May 10, 20X2, encumbrances were recorded for the purchase of next year's supplies at an estimated cost of \$91,000.

# Required

On the basis of the data presented, reconstruct the original detailed journal entries that were required to record all transactions for the fiscal year ended June 30, 20X2, including the recording of the current year's budget. Do not prepare closing entries for June 30, 20X2.

## LO 17-7, 17-8 P17-15

## **General Fund Entries and Statements**

The postclosing trial balance of the general fund of the town of Pine Ridge on December 31, 20X1, is as follows:

|   | Debit     | Credit    |
|---|-----------|-----------|
| Cash                                    | \$111,000 |           |
| Property Taxes Receivable—Delinquent    | 90,000    |           |
| Allowance for Uncollectibles—Delinquent |           | \$ 9,000  |
| Vouchers Payable                        |           | 31,000    |
| Fund Balance—Assigned for Encumbrances  |           | 21,000    |
| Fund Balance—Unassigned                 |           | 140,000   |
| Total                                   | \$201,000 | \$201,000 |

## Additional Information Related to 20X2

- 1. Estimated revenue consisted of property taxes, \$1,584,000 from a tax levy of \$1,600,000 of which 1 percent was estimated uncollectible; sales taxes, \$250,000; and miscellaneous, \$43,000. Appropriations totaled \$1,840,000, and estimated transfers out were \$37,000. Appropriations included outstanding purchase orders from 20X1 of \$21,000. Pine Ridge uses the lapsing method for outstanding encumbrances.
- 2. Cash receipts consisted of property taxes, \$1,590,000, including \$83,000 from 20X1; sales taxes, \$284,000; licenses and fees, \$39,000; and a loan from the motor pool, \$10,000. The remaining property taxes from 20X1 were written off, and those remaining from 20X2 were reclassified.
- 3. Orders were issued for \$1,800,000 in addition to the acceptance of the \$21,000 outstanding purchase orders from 20X1. A total of \$48,000 of purchase orders still was outstanding at the end of 20X2. Actual expenditures were \$1,788,000, including \$42,000 for office furniture. Vouchers paid totaled \$1,793,000.
- 4. Other cash payments and transfers follow:

| Loan to central stores | \$13,000 |
|------------------------|----------|
| Transfer out           | 37,000   |

# Required

- a. Prepare entries to summarize the general fund budget and transactions for 20X2.
- b. Prepare a preclosing trial balance.
- c. Prepare closing entries for the general fund.
- d. Prepare a balance sheet for the general fund as of December 31, 20X2.
- e. Prepare a statement of revenues, expenditures, and changes in fund balance for 20X2 for the general fund.

## LO 17-2, 17-6 P17-16

# **Matching Governmental Terms with Descriptions**

Match the terms on the left with the descriptions on the right. A description may be used once or

| Terms  | Descriptions of Terms   |

| 15. Government-wide financials                                 | O. Appropriation authority that does not carry over to the next fiscal year for these orders.                         |
| 16. Accrual method   | P. Type of transaction that occurs when the general fund makes a cash transfer to establish an internal service fund. |
|  | Q. Account debited in the general fund when an invoice for  |
|  | computer equipment is received.   |
|  | R. Account that would indicate a budget surplus or deficit in the general fund.                                       |

# LO 17-2, 17-8 P17-17

# **Identification of Governmental Accounting Terms**

Give the term(s) that is (are) described in each of the following numbered statements.

- 1. This is the set of financial statements that presents the governmental unit's infrastructure assets and long-term debt.
- 2. At the present time, this body has the authority to prescribe generally accepted accounting principles for state and local governmental entities.
- 3. This is a fiscal and an accounting entity with a self-balancing set of accounts recording cash and other financial resources with all related liabilities and residual equities or balances and changes therein segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.
- 4. This type of interfund activity is accounted for as an expenditure or revenue.
- 5. These are the proprietary funds.
- 6. These are assets of the governmental unit and include roads, municipal buildings, sewer systems, sidewalks, and so forth.
- 7. These are the fiduciary funds.
- 8. This basis is used in funds that have a flow of financial resources measurement focus.
- 9. This is the measurement focus of government-wide financials.
- 10. This gives the governmental entity the legal right to collect property taxes.
- 11. These are the governmental funds.
- 12. This is subtracted from Property Taxes Receivable—Current to determine the revenue from property taxes for the year.
- 13. This account is credited in the budget entry for the general fund if expected resource inflows exceed expected resource outflows.

- 14. This account is debited when the general fund records a purchase order for goods or services.
- 15. This method of accounting for supplies inventories in the general fund reports expenditures for supplies for only the amount used during the year.
- 16. This account is debited in the general fund when a transfer out is made to another fund.
- 17. This account is debited in the general fund when it records a billing from another fund for services that were provided to the general fund.
- 18. This is reported on the general fund balance sheet when assets exceed liabilities and assigned fund balance.
- 19. This account is debited in the general fund when fixed assets are acquired. Assume that a purchase order to acquire the fixed assets was not recorded.
- 20 This is the legal term that allows the general fund to make expenditures.
- 21. Under this method of accounting for encumbrances outstanding at year-end, expenditures are dated in the following year when the orders are received.

## LO 17-2, 17-8 P17-18

# **General Fund Entries [AICPA Adapted]**

DeKalb City Council approved and adopted its 20X2 budget that contained the following amounts:

| Estimated revenues                                       | \$700,000 |
|--|-----------|
| Appropriations   | 660,000   |
| Authorized transfer out to the library debt service fund | 30,000    |

During 20X2, various transactions and events occurred that affected the general fund.

## Required

For items 1 through 39, indicate whether the item should be debited (D), credited (C), or is not affected (N).

Items 1 through 5 involve recording the adopted budget in the general fund.

- 1. Estimated Revenues.
- 2. Budgetary Fund Balance.
- 3. Appropriations.
- 4. Estimated Transfer Out.
- 5. Expenditures.

Items 6 through 10 involve recording the 20X2 property tax levy in the general fund. It was estimated that \$5,000 would be uncollectible.

- 6. Property Tax Receivable.
- 7. Bad Debts Expense.
- 8. Allowance for Uncollectibles—Current.
- 9. Revenues.
- 10. Estimated Revenues.

Items 11 through 15 involve recording encumbrances in the general fund at the time purchase orders are issued.

- 11. Encumbrances.
- 12. Budgetary Fund Balance—Assigned for Encumbrances.
- 13. Expenditures.
- 14. Vouchers Payable.
- 15. Purchases.

Items 16 through 20 involve the recording in the general fund of expenditures that had been encumbered earlier in the current year.

- 16. Encumbrances.
- 17. Budgetary Fund Balance—Assigned for Encumbrances.
- 18. Expenditures.
- 19. Vouchers Payable.
- 20. Purchases.

Items 21 through 25 involve the recording in the general fund of the transfer out of \$30,000 made to the library debt service fund. (No previous entries were made regarding this transaction.)

- 21. Interfund Services Provided and Used.
- 22. Due from Library Debt Service Fund.
- 24. Other Financing Uses—Transfer Out.
- 25. Encumbrances.

Items 26 through 35 involve the recording in the general fund of the closing entries (other than encumbrances) for 20X2.

- 26. Estimated Revenues.
- 27. Budgetary Fund Balance.
- 28. Appropriations.
- 29. Estimated Transfer Out.
- 30. Expenditures.
- 31. Revenues.
- 32. Other Financing Uses—Transfer Out.
- 33. Allowance for Uncollectibles—Current.
- 34. Bad Debt Expense.
- 35. Depreciation Expense.

Items 36 through 39 involve the recording in the general fund of the closing entry relating to the \$12,000 of outstanding encumbrances at the end of 20X2 and an adjusting entry to reflect the intent to honor these commitments in 20X3.

- 36. Encumbrances.
- 37. Budgetary Fund Balance—Assigned for Encumbrances.
- 38. Fund Balance—Unassigned.
- 39. Fund Balance—Assigned for Encumbrances.

### LO 17-7, 17-8 P17-19 **Questions on Fund Items [AICPA Adapted]**

The following information relates to actual results from Central Town's general fund for the year ended December 31, 20X1:

|  | Revenues  | Expenditures and Transfers |
|--|-----------|----------------------------|
| Property tax collections:                                      |           |                            |
| Current year taxes collected                                   | \$630,000 |                            |
| Prior-year taxes due 12/1/X0, collected 2/1/X1                 | 50,000    |                            |
| Current year taxes due 12/1/X1, collection expected by 2/15/X2 | 70,000    |                            |
| Other cash receipts  | 190,000   |                            |
| General government expenditures:                               |           |                            |
| Salaries & wages   |           | \$160,000                  |
| Other  |           | 100,000                    |
| Public safety & welfare expenditures:                          |           |                            |
| Salaries & wages   |           | 350,000                    |
| Other  |           | 150,000                    |
| Capital outlay   |           | 140,000                    |
| Transfer out to debt service fund                              |           | 30,000                     |

- Other cash receipts include a county grant of \$100,000 for a specified purpose, of which \$80,000 was expended; \$50,000 in fines; and \$40,000 in fees.
- General Government Expenditures—Other includes employer contributions to the pension plan and \$20,000 in annual capital lease payments for computers over three years; the fair value and present value at lease inception are \$50,000.
- Capital outlay is for police vehicles.

• Debt service represents annual interest payments due December 15 of each year on \$500,000 face value, 6 percent, 20-year term bonds.

# Capital Projects Fund

Central Town's council approved \$750,000 for construction of a fire station to be financed by \$600,000 in general obligation bonds and a \$150,000 state grant. Construction began during 20X1, but the fire station was not completed until April 20X2. During 20X1, the following transactions were recorded:

| State grant                              | \$150,000 |
|--|-----------|
| Bond proceeds                            | 610,000   |
| Expenditures                             | 500,000   |
| Unpaid invoices at year-end              | 30,000    |
| Outstanding encumbrances at year-end,    |           |
| which do not lapse and are to be honored |           |
| the following year                       | 25,000    |
|  |           |

The unassigned fund balance in the capital projects fund at January 1, 20X1, was \$110,000.

## Required

For questions (a) through (i), determine the December 31, 20X1, year-end amounts to be recognized in the particular fund. If the item is not reported in a particular fund but is reported on the governmentwide financial statements, specify the amount that would be reported on the financials. Select your answer from the list of amounts following the questions. An amount may be selected once, more than

- a. What amount was recorded for property tax revenues in the general fund?
- b. What amount was recorded for other revenues in the general fund?
- c. What amount was reported for capital leases of computers in the government-wide statement of net assets?
- d. What amount was reported for the new police vehicles in the government-wide statement of net assets?
- e. What amount was reported for the debt service interest payment in the debt service fund?
- f. What was the total amount recorded for function expenditures in the general fund?
- g. What amount was recorded for revenues in the capital projects fund?
- h. What amount was reported for construction in progress in the government-wide statement of net assets?
- i. What amount was reported as the Fund Balance—Unassigned at December 31, 20X1, in the capital projects fund?

| Amounts |           |  |
|---------|-----------|--|
| 1.      | \$0       |  |
| 2.      | \$30,000  |  |
| 3.      | \$50,000  |  |

#### **Identifying Types of Revenue Transactions**

#### Required

Using the requirements of GASB Statement No. 33, "Accounting and Financial Reporting for Nonexchange Transactions," classify each of the following independent transactions for the community of Fair Lake into the proper category of revenue presented in the right-hand column.

#### **Transactions**

- 1. Property taxes were levied by the general fund.
- 2. The electric utility (enterprise) fund billed the general fund for power usage.
- 3. The city received a state grant for training its police force in additional security measures of public property.
- 4. The city estimated its share of locally generated sales taxes that it expects to receive within the next month.
- 5. The city collected various fines it imposed during the period.
- 6. The city sold excess office equipment from its municipal headquarters.
- 7. The city received resources from the state that must be used to pay for local welfare costs.
- 8. The city received a bequest from a local citizen to buy children's recreational items for the city park.
- 9. The city collects its share of the local hotel taxes whose proceeds are legislatively required to be used for a new community convention center.
- 10. The state reimburses the city for specific costs related to extra security training of the city's fire department employees.
- 11. The city receives its share of funds for environmental improvement resources under a state-required program.
- 12. The city receives resources from the federal government to acquire new fire-prevention equipment that it has not yet acquired.
- 13. The city receives grant monies under a state program encouraging cities to make their infrastructure assets wheelchair accessible.
- 14. A company that manufactures road-repaving materials gives the city a grant for the company to conduct a research project on the durability of various types of road repair materials.

#### Types of Revenue

- A. Derived tax revenue
- B. Imposed nonexchange revenue
- C. Government-mandated nonexchange transaction
- D. Voluntary nonexchange transaction
- E. None of the above

#### **GOVERNMENTAL ACCOUNTING IN MARYLAND**

In 1498, John Cabot was the first to explore the area that is now the state of Maryland. One of the original 13 colonies, Maryland began its provincial government after receiving its charter from King Charles I in 1632. The various governments of this geographical area have kept accounting records for nearly 400 years. The evolution from province to colony to state along with a growing population has led to increasingly more complex governmental functions and programs, which, in turn, have led to more complex accounting. However, not until the 20th century did accounting standards for governmental entities become widely accepted.

Chapter 17 discussed the various public services provided by the City of San Diego, but those of the State of Maryland are even more complex and diverse. Consider the following representative sample of the varied activities the State of Maryland administers:

- Public safety (state police, prisons, crime prevention, firearms control)
- **Housing and home ownership** (public housing, construction regulation, energy programs)
- Children and parenting (adoption, child care assistance, foster parenting)
- Disabilities (Special Olympics, transportation for people with disabilities, disability programs)
- Assistance programs (food assistance, energy assistance, homelessness prevention)
- Senior citizens (assisted living programs, home nursing programs, Senior Olympics)
- Business (environmental permits, agriculture licenses, unemployment programs)
- **Employment** (employment of minors, equal opportunity programs, injured workers programs)
- Youth education (Pre-K through Grade 12, public schools)
- Adult learning (literacy programs, rehabilitation services, English language schools)
- **Higher education** (colleges and universities, online learning)
- Financial aid (college savings programs, grant and loan programs)

- Travel and tourism (maps and travel guides, welcome centers and rest areas, state
- **Recreation and sports** (camping information, fisheries service, golf courses)
- Arts and culture (museums, historical locations, Maryland Science Center)

Although this list is not exhaustive, it illustrates the diverse activities and programs the state oversees. The disclosure of these many activities is a major part of the state's fiscal responsibility to its citizens. Maryland's 2011 comprehensive annual financial report (CAFR) is 164 pages long. It summarizes all activities of the different departments, programs, and entities affiliated with the state government. In addition to the general fund, discussed in Chapter 17, governments usually have a number of other funds. Maryland's 2011 CAFR contains government-wide financial statements similar to consolidated financial statements in the private sector as well as financial statements of these individual funds. This chapter presents the accounting and financial reporting requirements for (1) the four remaining governmental fund types, (2) the two proprietary fund types, and (3) the two fiduciary fund types.

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 18-1 Understand and explain the differences in financial reporting requirements of the different fund types.
- LO 18-2 Make calculations and record journal entries for capital projects funds.
- LO 18-3 Make calculations and record journal entries for debt service funds.
- LO 18-4 Make calculations and record journal entries for permanent funds.
- LO 18-5 Understand and explain how governmental funds are reported and rules for separate reporting as major funds.
- LO 18-6 Make calculations and record journal entries for enterprise funds.
- LO 18-7 Understand and explain the financial reporting of proprietary funds.
- LO 18-8 Make calculations and record journal entries for internal service funds.
- LO 18-9 Make calculations and record journal entries for trust funds.
- LO 18-10 Make calculations and record journal entries for agency funds.
- LO 18-11 Understand and explain the preparation of government-wide financial statements.
- LO 18-12 Understand and explain the additional disclosures that accompany government-wide financial statements.

#### SUMMARY OF GOVERNMENTAL FUND TYPES

LO 18-1

Understand and explain the differences in financial reporting requirements of the different fund types.

See Figure 18-1 for the typical fund organization for a local government. In practice, the funds are often identified with the acronyms from the first letters of their titles, as follows:

#### **Governmental Fund Types**

GF General fund

**SRF** Special revenue funds **DSF** Debt service funds **CPF** Capital projects funds PF

Permanent funds

#### **Proprietary Fund Types**

EF Enterprise funds **ISF** Internal service funds

#### **Fiduciary Fund Types**

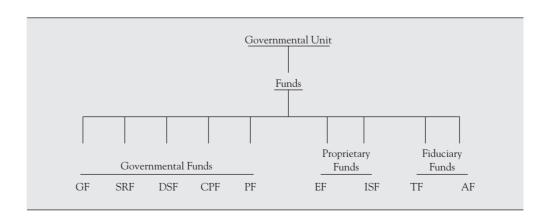

TF Trust funds AF Agency funds

A government should establish those funds required by law and the governmental entity's specific operating and management needs. Unnecessary, additional funds add unneeded complexity and do not enhance the government's operational efficiency. Many governmental units follow the general rule that all activities should be accounted for in the general fund unless specifically required by law or the different measurement focus used for proprietary and fiduciary funds. This rule does not prohibit the creation of additional funds but places a reasonable restraint on their proliferation. Most state and local governmental systems typically use the structure of funds discussed in this chapter.

One event may require entries in several funds. For example, the construction of a new municipal building through the issuance of general obligation bonds may require entries in both a capital project fund and a debt service fund. In addition, interfund activities require entries in two or more funds.

Governmental funds use the modified accrual basis of accounting, and proprietary and fiduciary funds use the accrual basis. Governmental entities recognize estimated uncollectible amounts as a reduction of revenue, not as an expense. The five governmental funds do not report long-term assets or long-term debt, but the government-wide statements do report them. Investments are reported in the appropriate funds and are valued at their fair market values at each balance sheet date. The governmental entity's

FIGURE 18-1 Funds for a **Governmental Entity** 

financial report includes both fund-based and government-wide financial statements. The government-wide statements are prepared using the accrual basis of accounting. Reconciliation schedules are required to show the differences in the amounts reported in the governmental fund's financial statements presented using the modified accrual basis of accounting and the amounts reported in the government-wide financial statements presented using the accrual basis.

Some governmental units have pension trust funds for their employees. Accounting and reporting for pension trust funds is quite complex and beyond the scope of an advanced financial accounting course. Pension trust funds are covered briefly in the "Additional Considerations" section of this chapter.

This chapter continues the Sol City example started in Chapter 17, which presented the entries and financial reports for the general fund for 20X2. Sol City uses the lapsing method of accounting for encumbrances and the consumption method for inventories and records all expected budgetary accounts including anticipated interfund transactions. The techniques of capitalizing all budgetary accounts and recording journal entries at the control level are continued from Chapter 17. The financial statements for the illustration are prepared using the requirements of GASB 34. Many of the numbers for the Sol City example are assumed in order to focus on the main concepts of accounting and financial reporting for a governmental entity. Thus, some of the numbers cannot be computed from the data given. Instead, focus on the concepts being discussed. We present the fund balance reported for the governmental funds that is now required under the recent GASB 54. The final section of this chapter presents Sol City's government-wide financial statements.

An overview of the major accounting and financial standards for the individual funds in Figure 18–2 can be used as a continual reference point during study of this

#### **GOVERNMENTAL FUNDS WORKSHEETS**

Each of the five governmental funds reports two fund-based financial statements: the balance sheet and the statement of revenues, expenditures, and changes in fund balance. Rather than presenting each of the separate governmental funds' financial statements in the chapter, we provide worksheets to summarize all governmental funds' financial statements. Specifically, refer to Figure 18-3 for the individual fund information that is used to prepare the governmental funds' balance sheet and to Figure 18-4 for the individual governmental funds information used to prepare the governmental funds' statement of revenues, expenditures, and changes in fund balance. The amounts for the general fund are taken from the information in Chapter 17. The amounts for the other funds will be developed throughout this chapter. We use these two worksheets, which also include major funds tests, throughout the chapter as the basis for preparing the governmental funds' financial statements that will be presented later in the chapter. Thus, we develop the two worksheets through the discussions of each fund type in this chapter.

#### SPECIAL REVENUE FUNDS

Current governmental resources may be restricted to expenditures for specific purposes, such as the development of a state highway system, the maintenance of public parks, or the operation of the public school system, city libraries, and museums. The necessary revenue often comes from special tax levies or federal or state governmental grants. Some minor revenue may be earned through user charges, but they are usually not sufficient to fully fund the service. Special revenue funds are used to account for such restricted resources. The governmental entity usually has a separate special revenue fund for each different activity of this type. Thus, a city may have several special revenue funds.

The State of Maryland uses a special revenue fund to account for resources related to the Maryland Department of Transportation.

The accounting for special revenue funds is identical to the accounting for the general fund. Special revenue funds use the modified accrual basis of accounting, they do not report fixed assets or depreciation, their oper-

ating budgets are typically recorded in the accounts, and they do not record longterm debt.

We do not illustrate special revenue fund accounting in the chapter because its principles are the same as those for the general fund as covered in Chapter 17. For purposes of the governmental funds statements, assume that \$62,000 of property taxes was collected for the special revenue fund and that \$49,000 was expended for the designated culture and recreation purposes for which the special revenue fund was established. This chapter focuses on the unique or interesting aspects of governmental accounting and financial reporting. Review Figure 18-3 for the assumed numbers for the special revenue fund's balance sheet and Figure 18-4 for the revenues (\$62,000) and expenditures (\$49,000) assumed for the special revenue fund.

## CAPITAL PROJECTS FUNDS<sup>1</sup>

LO 18-2

Make calculations and record journal entries for capital projects funds.

Capital projects funds account for financial resources specified for the acquisition or construction of major capital facilities or improvements that benefit the public. Typical examples are the construction of libraries, civic centers, fire stations, courthouses, bridges, major streets, and city municipal buildings. A separate capital projects fund is created when the project is approved and ceases at its completion. Each project or group of related projects usually is accounted for in a separate capital projects fund.

Accounting for capital projects funds is similar to accounting for the general fund. Capital projects funds use the modified accrual basis of accounting. Moreover, they do not record fixed assets, depreciation, or long-term debt. Capital projects funds, however, typically do not have annual operating budgets. Instead, the entity must prepare a capital budget as a basis for selling bonds to finance a project, and the capital budget is the control mechanism for the project's length. The capital budget for the project may or may not be formally recorded in the accounts. Theoretically, encumbrances are part of the budgetary system and should flow from the budget's appropriating authority. However, the entity may record encumbrances even if it does not record the capital project budget. Encumbrances maintain an ongoing accounting record of the expenditure commitments that have been made on a project, and Sol City has a policy to use encumbrances in its capital projects funds and chooses not to formally enter the project budget into the accounts.

The capital projects fund records capital outlays as expenditures. Thus, this fund does not record fixed assets. A record of the construction in progress, however, may be maintained in memorandum format. Finally, completed fixed assets are transferred to a general capital assets ledger or schedule so that these assets may be included in the governmentwide financial statements.

#### Illustration of Transactions

On January 1, 20X2, Sol City establishes a capital projects fund to account for a capital addition to the municipal courthouse. The expected cost of the addition is \$120,000. A \$100,000, 10 percent general obligation bond issue is sold at 102 for total proceeds of \$102,000. The bond is a five-year serial bond with equal amounts of \$20,000 to be paid each year, beginning on December 31, 20X2, until the debt is extinguished. The bond proceeds are not revenue to the capital projects fund; they are reported in the other financing sources section of the fund's statement of revenues, expenditures, and changes in fund balance. Any debt issue costs such as underwriting fees or attorney fees are recognized as expenditures when the liabilities are both measurable and incurred and are payable out of current financial resources.

<sup>&</sup>lt;sup>1</sup> To view a video explanation of this topic, visit advanced study guide.com.

The capital projects fund is not entitled to the \$2,000 premium on the sale of bonds. This premium is transferred out to the debt service fund immediately upon receipt. The debt service fund records the receipt of the transfer as a transfer in (see entry [15] later in this chapter). The premium is viewed as an adjustment of the interest rate, not as a part of the funds expendable by the capital projects fund. If bonds are sold at a discount, either the amount expended for the improvement must be decreased or the general fund must make up the difference to the face value of the bonds.

In addition, the city receives a federal grant for \$10,000 as financial support for part of the capital addition, and the capital projects fund receives an interfund transfer in of \$20,000 from the city's general fund. Recall that an interfund transfer is an interfund transaction in which resources are moved from one fund, usually from the general fund, to another fund to be used for the operations of the receiving fund. The general fund records this transfer of \$20,000 as an interfund transfer out (see entry [34] in Chapter 17). The following entries are recorded for the 20X2 fiscal year.

#### Capital Projects Revenue and Bond Proceeds

The sale of the bonds and receipt of the federal grant and operating transfer in are recorded as follows:

| (1) | Cash  | 102,000 |         |
|-----|---|---------|---------|
|     | Other Financing Sources—Bond Issue                                |         | 100,000 |
|     | Other Financing Sources—Bond Premium                              |         | 2,000   |
|     | Issue \$100,000 of bonds at 102.                                  |         |         |
| (2) | Other Financing Uses—Transfer Out to Debt Service Fund            | 2,000   |         |
|     | Cash  |         | 2,000   |
|     | Forward bond premium to debt service fund.                        |         |         |
| (3) | Cash  | 10,000  |         |
|     | Revenue—Federal Grant   |         | 10,000  |
|     | Receive federal grant to be applied to courthouse addition.       |         |         |
| (4) | Due from General Fund   | 20,000  |         |
|     | Other Financing Sources—Transfer In from General Fund             |         | 20,000  |
|     | Establish receivable for interfund transfer in from general fund. |         |         |
| (5) | Cash  | 20,000  |         |
|     | Due from General Fund   |         | 20,000  |
|     | Receive transferred resources from general fund.                  |         |         |

Entry (3) recognizes the \$10,000 grant from the federal government as revenue when the grant is received. Some grants from the federal government are termed "expendituredriven" grants for which revenue can be recognized only as expenditures are incurred in conformity with the grant agreement. The local governmental entity recognizes revenue from expenditure-driven grants only after it has met the eligibility requirements for the government-mandated nonexchange transaction: that is, the allowable expenditures have been made.

#### Capital Projects Fund Expenditures

The following encumbrances, expenditures, and disbursements are recorded in 20X2.

| (6) | ENCUMBRANCES   | 110,000      |         |
|-----|--|--------------|---------|
|     | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES                     |              | 110,000 |
|     | Budgetary entry to record the issuance of a construction contract fo | r \$110,000. |         |
|     |  |              |         |
| (7) | BUDGETARY FUND BALANCE—ASSIGNED FOR ENCUMBRANCES                     | 110,000      |         |
|     | ENCUMBRANCES   |              | 110,000 |
|     | Budgetary entry to record the completion of the construction project | t. Reverse   |         |
|     | reserve for encumbrances.  |              |         |

| (8)  | Expenditures   | 118,000 |         |
|------|--|---------|---------|
|      | Contract Payable   |         | 108,000 |
|      | Contract Payable—Retained Percentage                               |         | 10,000  |
|      | Actual construction cost of courthouse addition is \$118,000.      |         |         |
|      | Additional cost is approved. Contract terms include retained       |         |         |
|      | percentage of \$10,000 until full and final acceptance of project. |         |         |
|      |  |         |         |
| (9)  | Expenditures   | 6,000   |         |
|      | Vouchers Payable   |         | 6,000   |
|      | Additional items for courthouse addition.                          |         |         |
|      |  |         |         |
| (10) | Vouchers Payable   | 6,000   |         |
|      | Contract Payable   | 108,000 |         |
|      | Cash   |         | 114,000 |

Pay current portion of construction contract and vouchers.

Entry (8) credits Contract Payable \$108,000 for the current portion due, and Contract Payable—Retained Percentage for \$10,000. Entry (10) indicates the payment in full of the \$108,000 current portion of the contract liability. A normal practice of governmental units is to hold back a retained percentage of the total amount due under a construction contract to ensure that the contractor fully completes the project to the unit's satisfaction. For example, a city may stipulate that 10 percent of the total contract price be retained until the project is fully completed and accepted. The governmental unit releases and pays this retainage payable upon it final acceptance of the project.

#### Closing Entries in the Capital Projects Fund

The following entries close the nominal accounts:

| (11) | Revenue—Federal Grant                                  | 10,000  |         |
|------|--|---------|---------|
|      | Fund Balance—Unassigned                                | 114,000 |         |
|      | Expenditures   |         | 124,000 |
|      | Close operating accounts of revenue and expenditures.  |         |         |
|      |  |         |         |
| (12) | Other Financing Sources—Bond Issue                     | 100,000 |         |
|      | Other Financing Sources—Bond Premium                   | 2,000   |         |
|      | Fund Balance—Unassigned                                |         | 102,000 |
|      | Close other financing sources.                         |         |         |
|      |  |         |         |
| (13) | Other Financing Sources—Transfer In from General Fund  | 20,000  |         |
|      | Other Financing Uses—Transfer Out to Debt Service Fund |         | 2,000   |
|      | Fund Balance—Unassigned                                |         | 18,000  |
|      | Close interfund transfers.                             |         |         |

No encumbrances are outstanding as of the end of the fiscal year. At this point, the Fund Balance—Unassigned account has a credit balance of \$6,000. Depending on its policy, the governmental unit transfers the remaining fund balance upon the capital project's completion and final approval either to the general fund or to the debt service fund. It is a transfer out for the capital projects fund and a transfer in for the receiving fund because it involves the one-time transfer of the remaining resources in the capital projects fund. In the preceding example, Sol City decided that the fund should remain open through the first part of the next fiscal year in case any minor modifications of the new courthouse addition are required. If no further modifications are required the city officially accepts the courthouse addition project and pays the contractor the \$10,000 in the Contract Payable—Retained Percentage account. Any remaining resources in the capital projects fund are then transferred and the capital projects fund is closed.

#### Financial Statement Information for the Capital Projects Fund

The financial statement information for the capital projects funds is presented in Figure 18–3 for the balance sheet and in Figure 18-4 for the statement of revenues, expenditures, and changes in fund balances. Sol City created its capital projects fund on January 1, 20X2, the date the capital addition was approved and the serial bonds were sold. The only asset remaining in this fund on December 31, 20X2 (Figure 18–3), is \$16,000 of cash, which includes the \$10,000 for the contract payable–retainage. The capital projects fund column (Figure 18–4) presents the \$102,000 of proceeds from the bond issue, which is reported among other financing sources with a reduction for the transfer out of the \$2,000 premium to the debt service fund and the transfer in of \$20,000, netting against the large excess of expenditures over revenue in the amount of \$114,000. The statement of revenues, expenditures, and changes in fund balance reconciles to the \$6,000 fund balance at the end of the fiscal period.

#### **DEBT SERVICE FUNDS**

LO 18-3

Make calculations and record journal entries for debt service funds.

Debt service funds account for the accumulation and use of resources for the payment of general long-term debt principal and interest. A government may have several types of general long-term debt obligations, as follows:

- 1. Serial bonds. Serial bonds are the most common form of debt issued by governments. The bonds are repaid in installments over the life of the debt. A serial bond is called regular if the installments are equal and irregular if they are not equal.
- 2. Term bonds. This form of debt is less frequent now than in the past. The entire principal of the debt is due at the maturity date.
- 3. Special assessment bonds. Tax liens on the property located within the special assessment tax district secure special assessment bonds. The governmental unit also may become obligated in some manner to assume the debt payment in the event the property owners default. Special assessment bonds may finance capital projects or acquire other assets such as ambulances or fire engines necessary to operate the governmental unit. Special assessment bonds sold to acquire enterprise fund assets, however, should be accounted for within the enterprise fund. The special assessment feature simply states the source of financing and means of repayment.
- 4. Notes and warrants. These consist of debt typically issued for one or two years. These debts are usually secured by specific tax revenue, which must first be used to repay the debt. The property tax anticipation warrant is an example.
- 5. Capital leases. Governmental entities must record capital leases in accordance with generally accepted accounting principles. These leases then become the governmental unit's long-term liabilities.

Some governmental entities service long-term debt directly from the general fund, thereby eliminating the need for a debt service fund as a separate fiscal, accounting, and reporting entity. However, if a governmental entity has several long-term general obligations outstanding, bond indentures or other regulations may require it to establish a separate debt service fund for each obligation to account for properly servicing each debt obligation.

**FYI** 

As of 2011, the State of Maryland maintained two debt service fund accounts: general obligation bonds and transportation bonds.

The accounting and financial reporting for debt service funds is the same as for the general fund. The modified accrual basis of accounting is used, and only that portion of the long-term debt that has matured and is currently payable is recorded in the debt service funds.

Interest payable on long-term debt is not accrued; interest is recognized as a liability only when it comes due and payable. The "when-due" recognition of interest matches the debt service expenditures with the resources accumulated to repay the debt. This approach prevents an understatement of the debt service fund balance. For example, if interest is accrued before it is actually due, the fund balance may show a deficit because of the excess of liabilities over assets. The function of the debt service fund is to accumulate resources to pay debt principal and interest as they become due. Thus, the when-due recognition of interest is consistent with the fund's objectives. Entities usually record long-term debt in a general long-term liabilities ledger or schedule so that they may be included in the government-wide financial statements. Many municipal governments maintain a general capital assets and general long-term liabilities (GCA-GLTL) ledger to record all long-term items because the governmental financial statements have a current focus.

#### Illustration of Transactions

Sol City establishes a debt service fund to service the \$100,000, five-year, 10 percent serial bond issued on January 1, 20X2, to finance the capital project courthouse addition. The city initially sold the bond at a premium of \$2,000. A property tax levy specifically for debt service will provide the resources to pay the bond principal and interest as they become due.

#### Adoption of Debt Service Fund Budget

Debt service funds are not required to adopt annual operating budgets because bond agreements generally mandate the fund's expenditures and an operating budget may be viewed as unnecessarily redundant. Nevertheless, there is no restriction against having an operating budget for the debt service fund as part of a comprehensive budgeting system for a governmental entity as illustrated here.

Sol City adopts its annual operating budget for the debt service fund when it creates the fund to service the serial bonds sold for the courthouse addition. The city budgets appropriations of \$30,000 to pay \$20,000 of maturing principal and \$10,000 of interest for the year. Sol City budgets all expected interfund transactions and records the anticipated interfund transfer in of the \$2,000 premium on the serial bonds sold with the budget:

| (14) | ESTIMATED REVENUES CONTROL                    | 30,000 |
|------|---|--------|
|      | ESTIMATED OTHER FINANCING SOURCES—TRANSFER IN | 2,000  |
|      | APPROPRIATIONS CONTROL                        | 30,000 |
|      | BUDGETARY FUND BALANCE                        | 2,000  |
|      | Adopt budget for 20X2.                        |        |

The budgetary accounts ESTIMATED REVENUES CONTROL and APPROPRIA-TIONS CONTROL are used to account for servicing serial bonds.

#### Debt Service Fund Revenue and Other Financing Sources

In this example, the debt service fund obtains revenue from a specified property tax levy. The bond premium received from the capital projects fund is recognized as a transfer in. Note that the capital projects fund records this transfer as an interfund transfer out (see entry [2] earlier in this chapter). The entries to record the receipt of the bond premium and the levy and collection of taxes follow:

| (15) | Cash  | 2,000  |        |
|------|---|--------|--------|
|      | Other Financing Sources—Transfer In from Capital Projects Fund  |        | 2,000  |
|      | Receive bond premium from capital projects fund.                |        |        |
| (16) | Property Taxes Receivable                                       | 35,000 |        |
|      | Allowance for Uncollectible Taxes                               |        | 5,000  |
|      | Revenue—Property Tax  |        | 30,000 |
|      | Levy property taxes and provide for allowance for uncollectible |        |        |
|      | taxes. Estimated uncollectible property taxes reduce revenue.   |        |        |
| (17) | Cash  | 30,000 |        |
|      | Property Taxes Receivable                                       |        | 30,000 |
|      | Receive portion of property taxes.                              |        |        |
| (18) | Property Taxes Receivable—Delinquent                            | 5,000  |        |
|      | Allowance for Uncollectible Taxes                               | 5,000  |        |
|      | Property Taxes Receivable                                       |        | 5,000  |
|      | Revenue—Property Tax  |        | 3,000  |
|      | Allowance for Uncollectible Taxes—Delinquent                    |        | 2,000  |
|      | Reclassify remaining property taxes as delinquent and reduce    |        |        |

Reclassify remaining property taxes as delinquent and reduce allowance for uncollectible taxes from \$5,000 to \$2,000.

#### **Debt Service Fund Expenditures**

The primary expenditures of the debt service fund are for the first annual payment of principal and interest on the serial bonds payable. Governmental entities typically do not use an encumbrance system for matured principal and interest because the debt agreement serves as the expenditure control mechanism:

| (19) | Expenditures—Principal                    | 20,000 |        |
|------|---|--------|--------|
|      | Matured Bonds Payable                     |        | 20,000 |
|      | Recognize matured portion of serial bond: |        |        |
|      | \$100,000 ÷ 5 years.                      |        |        |
|      |   |        |        |
| (20) | Expenditures—Interest                     | 10,000 |        |
|      | Matured Interest Payable                  |        | 10,000 |
|      | Recognize interest due this period:       |        |        |
|      | $100,000 \times 0.10 \times 1$ year.      |        |        |
|      |   |        |        |
| (21) | Matured Bonds Payable                     | 20,000 |        |
|      | Matured Interest Payable                  | 10,000 |        |
|      | Cash                                      |        | 30,000 |

Pay first year's installment plus interest on bond.

#### Closing Entries in the Debt Service Fund

The nominal accounts are closed as follows:

| (22) | APPROPRIATIONS CONTROL   | 30,000 |        |
|------|--|--------|--------|
|      | BUDGETARY FUND BALANCE   | 2,000  |        |
|      | ESTIMATED REVENUES CONTROL                                     |        | 30,000 |
|      | ESTIMATED OTHER FINANCING SOURCES—TRANSFER IN                  |        | 2,000  |
|      | Close budgetary accounts.                                      |        |        |
| (23) | Revenue—Property Tax   | 33,000 |        |
| (23) |  | 33,000 |        |
|      | Expenditures—Principal   |        | 20,000 |

| (24) | Other Financing Sources—Transfer In from Capital Projects Fund | 2.000  |        |
| ,    | Fund Balance—Assigned for Debt Service                         | •      | 2,000  |
|      | Close interfund transfer.                                      |        |        |

If the debt service fund services term bonds, a different budgetary account system is used. The following budgetary entry would be made for term bonds for the periods prior to the maturity date:

| RE | QUIRED CONTRIBUTIONS   | XXX |     |
|----|------------------------|-----|-----|
| RE | QUIRED EARNINGS        | XXX |     |
|    | BUDGETARY FUND BALANCE |     | XXX |

The budgetary amounts are determined based on a computation of the contributions needed each period to be invested, earning a given return to accumulate to the amount required for the bonds payment. The debt service fund may then receive resources from the general fund or from a tax levy, which it would invest until the term bonds became due. In the period that the term bonds reach maturity, the debt service fund pays the matured principal and interest from its available resources. The debt service fund may make temporary investments of excess cash to maximize the return from its resources. The debt service fund reports these investments as an asset. Most temporary investments are made in low-risk U.S. Treasury securities or in certificates of deposit from large banks. Interest income is accrued as earned. The investments are valued in accordance with GASB Statement No. 31, "Accounting for Financial Reporting for Certain Investments and for External Investment Pools" (GASB 31). The general valuation standard in GASB 31 is fair value for most investments made by a governmental entity. However, an exception is allowed for governmental entities other than external investment pools in order to report market investments at amortized cost, provided the investment has a remaining maturity of one year or less from the date of purchase. Unrealized gains or losses on investments are combined with realized gains or losses, and the governmental entity's operating statements report them as net investment income or loss.

#### Financial Statement Information for the Debt Service Fund

The financial statement information for the debt service fund for the governmental funds is presented in Figure 18-3 for the balance sheet and Figure 18-4 for the governmental funds statement of revenues, expenditures, and changes in fund balance.

#### PERMANENT FUNDS

LO 18-4

Make calculations and record journal entries for permanent funds.

Government entities establish *permanent funds* when a donor restriction stipulates that the fund principal must be preserved and that the income from these permanent funds be used to benefit the government's programs or its general citizenry. The donorrestricted donation may be from individuals, estates, and public or private organizations. Permanent funds are classified in the governmental funds category because the income resources in these funds are to be used toward the government's programs and services for its general citizenry. Permanent funds use the modified accrual basis of accounting and the financial statements for the permanent funds are the same as for all other governmental funds.

#### **Illustration of Transactions**

On January 1, 20X2, Sol City receives a \$100,000 bequest from a long-term city resident. The will stipulates that the \$100,000 be invested and the income be used to provide for maintenance and improvement of the city park. Note that a privatepurpose fund, which would be a fiduciary fund, requires the government to use the principal or earnings for the benefit of specific individuals, private organizations, or other designated governments, as stated in the trust agreement. This bequest is for the benefit of the general citizenry, however, and is established as a permanent fund that is a governmental fund type. Entries (25)–(29) in this permanent fund during 20X2 follow:

This contribution will be reported as a special item after other financing sources and uses toward the bottom of the statement of revenues, expenditures, and changes in fund balance.

#### **Investment and Interest**

Sol City uses the fund's resources to acquire \$100,000 face value, high-grade, 8 percent governmental securities at 90 to yield an effective interest rate of 10 percent. The fund uses the modified accrual method for interest income, which means that the revenue recognition may be for only the interest amount that is both measurable and available to finance expenditures made during the current fiscal period. Therefore, only the \$8,000 of accrued interest receivable is available for expenditures this period, and the modified accrual basis financial statements would not show the discount amortization.

| (26) | Investment in Bonds  | 90,000 |        |
|------|--|--------|--------|
|      | Cash   |        | 90,000 |
|      | Acquire \$100,000 face value government securities at 90.  |        |        |
| (27) | Accrued Interest Receivable                                | 8,000  |        |
|      | Interest Revenue   |        | 8,000  |
|      | Accrue interest:   |        |        |
|      | $\$8,000 = \$100,000 \times 0.08$ , nominal (coupon) rate. |        |        |
| (28) | Cash   | 8,000  |        |
|      | Accrued Interest Receivable                                |        | 8,000  |
|      | Collect accrued interest on securities.                    |        |        |

#### **Expenditures**

The permanent trust fund expends \$5,000 during the period for maintenance of the city park and recognizes the following entry:

| (29) | Expenditures | 5,000 |
|------|--------------|-------|
|      | Cash         | 5,000 |

Expenditures made for maintenance of the city park.

See Figure 18–3 for the permanent fund's balance sheet information as of December 31, 20X2. The entire amount of the fund balance for the permanent fund is classified as unspendable because the principal must be preserved and its income is required to be used for specified purposes. The information for the statement of revenues, expenditures, and changes in fund balance for the permanent fund is in Figure 18-4. Note that the \$100,000 contribution is not part of operations but is reported at the bottom of the operating statement.

#### **GOVERNMENTAL FUNDS FINANCIAL STATEMENTS**

#### LO 18-5

Understand and explain how governmental funds are reported and rules for separate reporting as major funds

GASB Statement No. 34, "Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments" (GASB 34), requires two financial statements for the governmental funds: (1) the governmental funds balance sheet (Figure 18–5) and (2) the governmental statement of revenues, expenditures, and changes in fund balance (Figure 18-6). The worksheets in Figures 18-3 and 18-4 are the basis for preparing these two financial statements. In practice, the governmental entity prepares the two financial statements for each individual governmental fund and these individual fund statements serve as the foundation for the financial statements. However, the fund-based financial statements in the governmental entity's CAFR only report major governmental funds individually, not necessarily each of the five governmental funds. GASB 34 specifies that the general fund is always a major fund. But some of the other governmental funds may not be determined to be major funds and are aggregated and reported in a single column as other governmental funds. GASB 34 establishes criteria that also encompass the enterprise funds. To determine which of the other governmental or specific enterprise funds are major, GASB 34 specifies that both of the following criteria must be met:

- 1. 10 percent criterion. Total assets, liabilities, revenues, or expenditures/expenses of that individual governmental or enterprise fund are at least 10 percent of the corresponding total (assets, liabilities, revenues, or expenditures/expenses) for all funds of that category or type (i.e., total governmental funds or total enterprise funds).
- 2. 5 percent criterion. Total assets, liabilities, revenues, or expenditures/expenses of the individual governmental fund or enterprise fund are at least 5 percent of the corresponding total for all governmental *plus* enterprise funds combined.

| Courthouse Project                 | ·           | \$ 6,000            |             |                       | 6,000                 |
| Debt Service                       |             |                     |             | 5,000                 | 5,000                 |
| Unassigned                         | 120,000     |                     |             |                       | 120,000               |
| Total Fund Balances                | \$152,000   | \$ 6,000            | \$103,000   | \$18,000              | \$279,000             |
| Total Liabilities & Fund Balances  | \$207,000   | \$16,000            | \$103,000   | \$21,000              | \$347,000             |

Note that the major fund reporting requirements apply to a governmental or enterprise fund only if the same element (e.g., assets, liabilities, revenues, or expenditures/ expenses) exceeds both the 10 percent and the 5 percent criteria. We present these major funds tests at the bottom of Figures 18–3 and 18–4. To prepare the tests, information is also required for the enterprise funds. The underlying transactions for Sol City's enterprise fund are presented in the next section of this chapter. We obtain the information for the total assets, liabilities, revenues, and expenses of Sol City's enterprise fund from the enterprise fund's financial statement information. For now, we present the information for the enterprise fund solely to discuss the major funds tests. Immediately after the following discussion of the two major funds tests, we present more detail on the enterprise fund.

#### 10 Percent Criterion Tests

To compute the 10 percent criterion tests for the five governmental funds, the denominators of the four tests (assets, liabilities, revenues, and expenditures) are the totals from the five governmental funds. For example, the assets of the governmental funds in Figure 18–3 total \$347,000. Note again that the general fund is always a major fund, so no percentages need be computed for that fund. The 10 percent asset test shows that the permanent

FIGURE 18-6 Governmental Funds Statement of Revenues, Expenditures, and Changes in Fund Balance

| Fund Balances—Beginning  | 129,000                                   | 0                               | 0         | 0                              | 129,000   |
| Fund Balances—Ending   | \$152,000                                 | \$ 6,000                        | \$103,000 | <u>\$18,000</u>                | \$ 279,000  |

fund meets the 10 percent criterion for total assets ( $29.68\% = \$103,000 \div \$347,000$ ). Continuing down to the liabilities, only the capital projects fund meets the 10 percent criterion for total liabilities (14.71% =  $\$10,000 \div \$68,000$ ). Information in Figure 18–4 indicates that none of the nongeneral governmental funds meets the 10 percent criterion for revenues. For expenditures, the capital projects fund meets the 10 percent criterion for total expenditures (12.17% =  $\$124,000 \div \$1,019,000$ ). Thus, the only two nongeneral governmental funds that meet the 10 percent criterion tests for a major fund are (1) the permanent fund (for total assets) and (2) the capital projects fund (for both total liabilities and total expenditures).

#### 5 Percent Criterion Tests

To compute the 5 percent criterion tests, the second group of major fund tests, the GASB specifies that the denominator of each of the four tests (assets, liabilities, revenues, and expenditures/expenses) be the combined total of each of these items for the five governmental funds plus the enterprise funds. For example, in Figure 18–3, the combined assets for the 5 percent asset test total \$487,000 (\$347,000 from the governmental funds plus \$140,000 from the enterprise fund). For the nongeneral governmental funds, the permanent fund is the only one that meets the 5 percent criterion for total assets  $(21.15\% = \$103,000 \div \$487,000)$ . For total liabilities, the capital projects fund meets the 5 percent criterion (5.56% =  $$10,000 \div $180,000$ ). For revenues, the special revenue fund meets the 5 percent criterion  $(6.11\% = \$62,000 \div \$1,014,000)$  (Figure 18-4). For expenditures/expenses, only the capital projects fund meets the 5 percent criterion  $(11.76\% = \$124,000 \div \$1,054,000).$ 

Note that to be classified as a major fund, a governmental fund other than the general fund must meet both the 10 percent and the 5 percent criterion tests for at least one of the four financial statement items. Thus, the following governmental funds are classified as major funds: (1) the general fund—always a major fund, (2) the capital projects fund (for liabilities and expenditures), and (3) the permanent fund (for assets). As in Figures 18–5 and 18–6, the governmental funds financial statements present details on these three funds. The two nonmajor funds, special revenue and debt service, are combined into a single Other Governmental Funds column. However, the governmental unit's management may elect to disclose separately any nonmajor fund that it believes is important for users of the financial statements to fully understand. GASB 34 requires that a total for all governmental funds be provided. Note that enterprise funds are not governmental-type funds.

Governmental units are permitted to disclose designations of unassigned funds on the governmental funds' balance sheet. A designation is not a legal reservation or restriction but is similar to an appropriation of retained earnings for a commercial entity. The designation represents management's plans for the intended use of the resources and is a communication to users of the financial statements. However, designations are not permitted to be reported on the government-wide financial statements.

GASB 34 requires a reconciliation schedule to the government-wide financial statements to be presented either at the bottom of each of the two fund financial statements or in accompanying schedules. These two schedules reconcile the modified accrual basis of accounting used for the governmental funds to the accrual basis of accounting used for reporting in the two government-wide financial statements. We present the reconciliation schedules later in this chapter within the discussion of presenting the government-wide financial statements.

#### **ENTERPRISE FUNDS**

LO 18-6

Make calculations and record journal entries for enterprise funds.

Governments sometimes offer goods or services for sale to the public. The amounts charged to customers are intended to recover all or most of the cost of these goods or services. For example, a city may operate electric, gas, and water utilities; transportation systems such as buses, trains, and subways; airports; sports arenas; parking lots and garages; and public housing. Such operations are accounted for in *enterprise funds*, which differ from special revenue funds in that user charges reimburse the costs of enterprise fund activities. Therefore, the primary difference between establishing a special revenue fund and an enterprise fund is the revenue source.

The enterprise fund is one of the two proprietary fund types and has a measurement focus on all economic resources and uses the accrual basis of accounting. Proprietary funds report fixed assets, which are depreciated, and long-term debt, if issued, and focus on income determination and capital maintenance as do commercial entities. The financial statements for proprietary funds are very similar to those for commercial entities: (1) the statement of net assets (balance sheet), (2) the statement of revenues, expenses, and changes in fund net assets (income statement), and (3) the statement of cash flows.

Budgeting in the proprietary funds also has the same role as in commercial entities. A budget may be prepared for management planning purposes; however, it is normally not entered into the accounts.

#### Illustration of Transactions

Sol City operates a municipal water utility as an enterprise fund. The utility's trial balance as of January 1, 20X2, the first day of the 20X2 fiscal year, follows:

| SOL CITY Trial Balance for Water Utility Enterprise Fund January 1, 20X2  |                    |                               |  |  |  |
|---|--------------------|-------------------------------|--|--|--|
| Cash<br>Machinery & Equipment   | \$ 9,000<br>94,000 |                               |  |  |  |
| Buildings Accumulated Depreciation—Machinery and Equipment Accumulated Depreciation—Buildings Bonds Payable, 5% Net Assets: | 40,000             | \$ 15,000<br>2,000<br>100,000 |  |  |  |
| Invested in Capital Assets, Net of Related Debt<br>Unrestricted   | <u>\$143,000</u>   | 17,000<br>9,000<br>\$143,000  |  |  |  |

One difference between balance sheet accounts for commercial entities and those for proprietary funds is the absence of a stockholders' equity section in governmental accounting. The general public is the theoretical owner of all governmental assets. Furthermore, proprietary funds issue no stock certificates; therefore, a net assets section is used instead of common stock and additional paid-in capital. GASB 34 requires the separate disclosure of the net assets invested in capital assets, net of related debt. Proprietary funds report the book value (cost basis less accumulated depreciation) invested in capital assets such as land, buildings, machinery, equipment, and other tangible and intangible assets having expected useful lives exceeding one year. These resources are not readily available for other unrestricted uses as are the current assets. The related debt is that directly associated with the capital assets and is typically long term in nature. For our example, assume the \$100,000 of bonds payable is related to the \$117,000 of net capital assets (\$134,000 cost less \$17,000 of accumulated depreciation). Other interesting differences are the large relative amounts of fixed assets and long-term debt because enterprise funds typically require large investments in productive assets in order to provide the necessary level of service to the public, and long-term revenue bonds these investments usually finance.

The water utility sells its product to the residents of Sol City based on a user charge. In addition to water revenue, the utility receives a \$3,000 short-term interfund loan from the general fund and obtains its office supplies from the city's centralized purchasing operation, which is accounted for as an internal service fund. During the year, the water utility acquires a new pump costing \$6,000.

#### Enterprise Fund Revenues

The water utility provides service during the period and bills its customers for the amount of water used. The utility estimates that 7.5 percent of its billings will not be collected. Note that revenues are reported net of uncollectibles. These transactions are recorded as follows:

| (0.0) |   | 40.000 |        |
|-------|---|--------|--------|
| (30)  | Accounts Receivable   | 40,000 |        |
|       | Allowance for Uncollectibles                                  |        | 3,000  |
|       | Revenue—Water Sales   |        | 37,000 |
|       | Bill customers for water used as indicated by meter readings. |        |        |
|       | Estimate \$3,000 of billings will be uncollectible.           |        |        |
| (31)  | Cash  | 32,000 |        |
|       | Accounts Receivable   | •      | 32,000 |
|       | Collect portion of accounts receivable.                       |        |        |

#### Capital Asset Acquisition

The water utility acquires a new pump during the year.

| (32) | Equipment                        | 6,000 |
|------|----------------------------------|-------|
|      | Vouchers Payable                 | 6,000 |
|      | Receive new pump for well house. |       |
|      |                                  |       |
| (33) | Vouchers Payable                 | 6,000 |
|      | Cash                             | 6,000 |

Pay voucher for new pump.

In its 2011 comprehensive annual financial report, the State of Maryland reported almost \$13 billion of total assets on its statement of fund net assets for enterprise funds.

#### **Interfund Activities**

Several interfund transactions occur during the year. First, in an interfund financing transaction, the water utility receives \$3,000 from the general fund as a short-term loan to be repaid within 90 days. The general fund records this as a short-

term receivable, Due from Enterprise Fund (see entry [39] in Chapter 17). Second, the utility acquires its office supplies from the internal service fund in an interfund services provided and used transaction. The internal service fund reports this as a revenue transaction (see entry [48] later in this chapter):

| (34) | Cash  | 3,000 |       |
|------|---|-------|-------|
|      | Due to General Fund                           |       | 3,000 |
|      | Recognize payable for loan from general fund. |       |       |
| (35) | Supplies Inventory                            | 3,000 |       |
|      | Due to Internal Service Fund                  |       | 3,000 |
|      | Receive office supplies from centralized      |       |       |
|      | purchasing department at a cost of \$3,000.   |       |       |
| (36) | Due to Internal Service Fund                  | 2,000 |       |
|      | Cash  |       | 2,000 |
|      | Approve payment of \$2,000 to centralized     |       |       |
|      | purchasing department for supplies received.  |       |       |

purchasing department for supplies received.

#### Enterprise Fund Expenses

The water utility fund incurs \$9,000 of operating expenses during the period. Several adjusting journal entries are required at the end of the fiscal year to recognize additional expenses. Note that these adjusting entries are similar to those of a commercial entity:

| (37) | General Operating Expenses                       | 9,000  |        |
|------|--|--------|--------|
|      | Vouchers Payable                                 |        | 9,000  |
|      | Incur operating expenses during year.            |        |        |
|      |  |        |        |
| (38) | Vouchers Payable                                 | 6,000  |        |
|      | Cash   |        | 6,000  |
|      | Pay approved vouchers for operating expenses.    |        |        |
|      |  |        |        |
| (39) | General Operating Expenses                       | 3,000  |        |
|      | Supplies Inventory                               |        | 3,000  |
|      | Adjust for \$3,000 of supplies consumed.         |        |        |
| (40) | Depreciation Expense                             | 18,000 |        |
|      | Accumulated Depreciation—Buildings               |        | 3,000  |
|      | Accumulated Depreciation—Machinery and Equipment |        | 15,000 |
|      | Recognize depreciation expense for year.         |        |        |
| (44) | [ <del>.</del>                                   |        |        |
| (41) | Interest Expense                                 | 5,000  |        |
|      | Accrued Interest Payable                         |        | 5,000  |
|      |  |        |        |

Accrue interest on bond payable:  $100,000 \times 0.05 \times 1$  year.

#### Closing and Reclassification Entries in the Enterprise Fund

The enterprise fund's nominal accounts are closed, the period's profit or loss is determined, and, at the close of the fiscal year, the government reclassifies the various components of net assets based on the year-end amount invested in capital assets, net of related debt:

| (42) | Revenue—Water Sales   | 37,000 |        |
|------|---|--------|--------|
|      | General Operating Expenses  |        | 12,000 |
|      | Depreciation Expense  |        | 18,000 |
|      | Interest Expense  |        | 5,000  |
|      | Profit and Loss Summary   |        | 2,000  |
|      | Close nominal accounts into profit and loss summary.  |        |        |
| (43) | Profit and Loss Summary   | 2,000  |        |
|      | Net Assets—Unrestricted   |        | 2,000  |
|      | Close profit and loss summary into net assets.  |        |        |
| (44) | Net Assets—Invested in Capital Assets, Net of Related Debt  | 12,000 |        |
|      | Net Assets—Unrestricted   |        | 12,000 |
|      | To reclassify net assets as of end of fiscal period:  12/31/X1 balance: \$ 5,000 = \$105,000 capital assets - \$100,000 of related debt  1/1/X1 balance: 17,000 = \$117,000 capital assets - \$100,000 of related debt  \$12,000 = Decrease during period in net assets |        |        |
|      | invested in capital assets, net of related de   | ebt.   |        |

#### LO 18-7

Understand and explain the financial reporting of proprietary funds.

### **Financial Statements for the Proprietary Funds**

Three financial statements are required for the proprietary funds. A governmental entity that has more than one enterprise fund must individually assess each using both the 10 percent criterion and the 5 percent criterion tests to determine whether it is a major fund. Sol City has only one enterprise fund. See Figure 18-7 for the statement of net assets for the enterprise proprietary fund and for the internal service proprietary fund that will be discussed in the next section of this chapter. Figure 18-8 on page 923 is the statement of revenues, expenses, and changes in fund net assets for Sol City's two proprietary funds. Figure 18-9 on page 924 is the statement of cash flows for these two proprietary funds.

The statement of net assets in Figure 18–7 is similar to that required for commercial entities. Proprietary funds report their own fixed assets, investments, and longterm liabilities. GASB 34 specifies that the net assets section for the proprietary funds, which is presented below liabilities, be separated into three components: (1) invested in capital assets, net of related debt, (2) restricted because of restrictions beyond the government's control, such as externally imposed restrictions or legal requirements, and (3) unrestricted. GASB Statement 46, "Net Assets Restricted by Enabling Legislation" (GASB 46), issued in 2004, amended GASB 34 with regard to net assets restricted by legally enforceable actions such as enabling legislation, which specifies that a government use resources only for the purposes stated in the enabling legislation. GASB 46 provides guidance for reporting the restricted net assets and accounting for changes when new enabling legislation replaces the prior legislation. The key point is that GASB 46 confirms the GASB 34 requirement for separate disclosure of net assets restricted by legal requirements. Our example has no externally imposed or legal restrictions on net assets. The amount of the net assets invested in capital assets, net of related debt, is computed as capital assets less accumulated depreciation, less outstanding principal of related debt. For purposes of this example, assume that the information in Figure 18–7 shows that the enterprise fund has \$5,000 of net assets invested in capital assets, net of related debt (\$105,000 - \$100,000), and the internal service fund has \$2,000 invested in capital assets, net of related debt (\$2,000 - \$0).

FIGURE 18-7 **Proprietary Funds Statement of Net** Assets

| Total Liabilities                                    | \$112,000         | \$ 6,000                 |
| Net Assets:  |                   |                          |
| Invested in Capital Assets, Net of Related Debt      | \$ 5,000          | \$ 2,000                 |
| Unrestricted   | 23,000            | 5,000                    |
| Total Net Assets                                     | \$ 28,000         | \$ 7,000                 |

The statement of revenues, expenses, and changes in fund net assets is similar to the income statement for commercial entities. A separation of operating and nonoperating revenues and expenses is made to provide more information value regarding the operations of the proprietary funds. Contributions and transfers in or out are reported below the income (loss) line in the statement of revenues, expenses, and changes in fund net assets. Contributions would include any capital asset transfers from a governmental fund to a proprietary fund. For example, the general fund may transfer equipment to an enterprise fund. Note that the governmental funds describe the interfund transfers as other financing sources or uses, but the proprietary funds use only the terms transfer in or transfer out to describe these nonoperating interfund transactions. And both interest income and interest expense are reported as nonoperating items.

GASB Statement No. 9, "Reporting Cash Flows of Proprietary and Nonexpendable Trust Funds and Governmental Entities That Use Proprietary Fund Accounting" (GASB 9), requires the statement of cash flows for enterprise funds. This standard provides a format that differs somewhat from the three-section format of the statement of cash flows for commercial entities. Because of the large number of capital asset acquisition and financing

| Change in Net Assets<br>Net Assets—Beginning                          | \$ 2,000<br>_26,000    | \$ 7,000<br>0              |
| Net Assets—Ending   | <u>\$28,000</u>        | <u>\$ 7,000</u>            |

transactions in proprietary funds, the GASB specified four sections of the statement of cash flows, as follows:

- 1. Cash flows from operating activities. This first section includes all transactions from providing services and delivering goods. GASB 34 requires the use of the direct method of computing cash flows from operating activities. This section includes cash flows from interfund operating transactions and reimbursements from other funds.
- 2. Cash flows from noncapital financing activities. This second section includes activities such as borrowing or repaying money for purposes other than to acquire, construct, or improve capital assets. It includes cash for financing activities received from, or paid to, other funds except that specified for capital asset use.
- 3. Cash flows from capital and related financing activities. This third section includes all activities clearly related to, or attributable to, the acquisition, disposition, construction, or improvement of capital assets. This section also includes the interest paid on borrowings for capital assets.
- 4. Cash flows from investing activities. This fourth section includes all investing activities, interest and dividend revenue, and acquisition and disposition of debt or equity instruments.

In addition to the statement of cash flows, the GASB also requires proprietary funds to provide a supplementary schedule that reconciles the cash flow from operating activities with the operating income or loss reported on the statement of revenues, expenses, and changes in fund net assets.

#### INTERNAL SERVICE FUNDS

LO 18-8

Make calculations and record journal entries for internal service funds.

Internal service funds account for the financing of goods or services provided by one department or agency to other departments or agencies on a cost-reimbursement basis. These services are not available to the general public, making the internal service fund different from the enterprise fund. Examples are motor vehicle pools, central computer facilities, printing shops, and centralized purchasing and storage facilities. Separate internal service funds are established for each of these functions the local governmental unit maintains.

| Adjustments to Reconcile Operating Income to Net Cash      |                                       |                       |
| Provided (Used) by Operating Activities:                   |                                       |                       |
| Depreciation   | 18,000                                | 1,000                 |
| Change in Assets & Liabilities:                            |                                       |                       |
| Increase in Net Accounts Receivable                        | (5,000)                               |                       |
| Increase in Due from Other Funds from Billings             |                                       | (1,000)               |
| Increase in Inventory of Supplies                          |                                       | (6,000)               |
| Increase in Vouchers Payable                               | 3,000                                 | 6,000                 |
| Increase in Due to Internal Service Fund                   | 1,000                                 |                       |
| Net Cash Provided (Used) by Operating Activities           | <u>\$24,000</u>                       | <u>\$(3,000</u> )     |
| Net Cash Provided (Used) by Operating Activities           | <u>\$24,000</u>                       | <u>\$(3,000)</u>      |

Accounting and financial reporting for internal service funds is the same as for enterprise funds or for commercial entities. The accrual basis is used to measure revenue and expenses, and the balance sheet may include fixed assets, which are depreciated, and long-term debt, if issued. The statement of revenue, expenses, and changes in fund net assets reports the fund's income for the period. The statement of cash flows also is required.

#### **Illustration of Transactions**

Sol City decides to establish a centralized purchasing and storage function as an internal service fund. This centralized purchasing department provides office supplies to all other funds of the local government on a user-charge basis. After acquiring the necessary supplies, the centralized purchasing department makes the following sales:

| Buying          | Selling | Cost to Internal |
|-----------------|---------|------------------|
| Fund            | Price   | Service Fund     |
| General fund    | \$1,000 | \$ 500           |
| Enterprise fund | 3,000   | 1,500            |

Sol City makes entries (45), (46), and (47) during the year to record the activities of the centralized purchasing and storage department.

#### Establishment of Internal Service Fund and Acquisition of Inventories

An entity starts its internal service fund with a transfer in from the general fund in the amount of \$10,000, which the internal service fund then uses to acquire inventory and equipment. The general fund records this interfund transfer as a transfer out (see entry [33] in Chapter 17):

| (45) | Cash  | 10,000 |        |
|------|---|--------|--------|
| (43) |   | 10,000 |        |
|      | Transfer In   |        | 10,000 |
|      | Receive interfund transfer in from general fund           |        |        |
|      | to initiate centralized purchasing and storage function.  |        |        |
|      | to initiate centralized parendshing and storage ranctions |        |        |
| (46) | Inventory   | 8,000  |        |
| (40) | Inventory   | 8,000  |        |
|      | Vouchers Payable  |        | 8,000  |
|      | Acquire inventory of supplies.                            |        |        |
|      |   |        |        |
| (47) | Machinery and Equipment                                   | 3,000  |        |
| , ,  | Vouchers Payable  | •      | 3,000  |
|      | ,   |        | 3,000  |
|      | Acquire equipment.  |        |        |

#### Internal Service Fund Revenue

The internal service fund earns revenue by selling supplies to other funds and billing them for the value of the supplies. The billing rate is typically established at more than the operating costs of the internal service fund so that the fund may acquire replacement assets or new assets:

| (48) | Due from General Fund                     | 1,000 |       |
|------|---|-------|-------|
|      | Due from Enterprise Fund                  | 3,000 |       |
|      | Charges for Services                      |       | 4,000 |
|      | Recognize revenue from providing supplies |       |       |
|      | to general fund and enterprise fund.      |       |       |
| (49) | Cash                                      | 3,000 |       |
| (15) | Due from General Fund                     | 5,000 | 1,000 |
|      | Due from Enterprise Fund                  |       | 2,000 |
|      | Collect portion of receivables            |       | 2,000 |
|      | CORECT DOLLION OF LECENADIES              |       |       |

The general fund records the \$1,000 for supplies as an interfund expenditures transaction (see entry [37] in Chapter 17). The enterprise fund records the \$3,000 as an interfund inventory purchase transaction (see entry [35] earlier in this chapter).

#### **Internal Service Fund Expenses**

The internal service fund incurs \$4,000 of operating expenses, including payroll, during the period. In addition, the fund recognizes cost of goods sold of \$2,000 and \$1,000 of depreciation expense in adjusting entries. The \$9,000 of vouchers paid include a voucher in the amount of \$3,000 for the equipment acquired in entry (47) above:

| (50) | General Operating Expenses       | 4,000 |    |
|------|----------------------------------|-------|----|
|      | Vouchers Payable                 | 4,00  | 00 |
|      | Incur operating expenses.        |       |    |
| (51) | Vouchers Payable                 | 9,000 |    |
|      | Cash                             | 9,00  | 00 |
|      | Pay approved vouchers.           |       |    |
|      |                                  |       |    |
| (52) | Cost of Goods Sold               | 2,000 |    |
|      | Inventory                        | 2,00  | 00 |
|      | Recognize cost of supplies sold. |       |    |
| (53) | Depreciation Expense             | 1,000 |    |
|      | Accumulated Depreciation         | 1,00  | 00 |
|      | Depreciation of equipment.       |       |    |

#### Closing Entries in the Internal Service Fund

The closing and reclassifying entries for the internal service fund follow. In this example, we use Profit and Loss Summary in the closing process; however, some governmental units use the account Excess of Net Revenues over Costs to perform the same function.

| (54) | Charges for Services        | 4,000  |       |
|------|-----------------------------|--------|-------|
|      | Profit and Loss Summary     | 3,000  |       |
|      | Cost of Goods Sold          |        | 2,000 |
|      | General Operating Expenses  |        | 4,000 |
|      | Depreciation Expense        |        | 1,000 |
|      | Close revenue and expenses. |        |       |
|      |                             |        |       |
| (55) | Transfer In                 | 10,000 |       |

| (55) | Transfer In             | 10,000 |       |
|------|-------------------------|--------|-------|
|      | Profit and Loss Summary |        | 3,000 |
|      | Net Assets—Unrestricted |        | 7,000 |
|      |                         |        |       |

Close profit and loss summary and transfer in to net assets.

| (56) | Net Assets—Unrestricted                                    | 2,000 |       |
|------|--|-------|-------|
|      | Net Assets—Invested in Capital Assets, Net of Related Debt |       | 2,000 |

To reclassify net assets as of end of fiscal period: \$2.000 = \$2.000 net capital assets - \$0 related debt.

#### **Financial Statements for Internal Service Funds**

The financial statements required for internal service funds are the same as those required for the enterprise fund. See Figure 18-7 for the statement of net assets Figure 18-8 for the statement of revenues, expenses, and changes in fund net assets for the internal service fund, and Figure 18–9 for the statement of cash flows for the internal service fund.

#### TRUST FUNDS

LO 18-9

Make calculations and record journal entries for trust funds.

A trust fund is a fiduciary fund type that accounts for resources held by a governmental unit in a trustee capacity. The unit acts as a fiduciary for monies or properties held on behalf of individuals, employees, or other governmental agencies. The three main types of fiduciary trust funds are (1) pension and other employee benefit trust funds, (2) investment trust funds, and (3) private-purpose trust funds.

Fiduciary funds use the accrual basis of accounting, and the financial statements required for fiduciary funds are the statement of fiduciary net assets (Figure 18-10) and the statement of changes in fiduciary net assets (Figure 18–11). The statement of fiduciary

**FIGURE 18–10 Fiduciary Funds** Statement of **Fiduciary Net Assets**

net assets includes all trusts and agency funds. The statement of changes in fiduciary net assets includes only the trust funds because agency funds do not have a net asset balance; their assets must equal their liabilities. We discuss agency funds after trust funds.

Private-purpose trust funds account for trust agreements for which the principal and/ or income benefits specific individuals, private organizations, or other governments. Note that the benefit is limited to private, rather than general public, purposes. The trust agreement may require the principal to be preserved (i.e., nonexpendable principal), in which case an endowment is created. In other trust agreements, both the principal and income may be used for the specific purposes for which the trust was created. The governmental entity does not have to accept the donation if it is not consistent with the government's objectives. However, in many cases, a governmental entity accepts the donation and agrees to its provisions because of the benefits that the resources can achieve. For example, a citizen group may donate money to a city to be used for award recognition for businesses located in the downtown area that update and improve the appearances of their storefronts. The governmental entity is typically allowed to charge the private-purpose trust fund a fee for managing the trust's resources, which would include investing the resources and making the allowed expenditures from the resources.

An example of a private-purpose trust fund is illustrated in the next section of this chapter. We discuss public employee pension funds in the "Additional Considerations" section later in the chapter.

#### Illustration of Private-Purpose Trust Fund

On January 1, 20X2, Sol City received a \$50,000 donation from Charles Alt, a citizen of Sol City. The terms of the trust agreement specify that the city is to use about \$25,000 each year for the next two years to help alleviate the cost of transporting senior citizens to and from the senior citizens' center. The city accepts the donation and, as allowed by the trust agreement, invests \$25,000 in highly rated bonds. It deposited the remaining \$25,000 in a bank account that earns 4 percent interest. The terms of the trust agreement allow the city to deduct \$1,000 per year for its administrative costs of managing the trust and the transportation services. During the first year, 20X2, the fund paid \$23,000 for transportation services. The fund pays the remaining resources in 20X3.

| (57) | Cash                    | 50,000 |
|------|-------------------------|--------|
|      | Additions—Contributions | 50,000 |

The city accepts a private-purpose trust fund of \$50,000.

| (58) | Investment in Bonds  | 25,000 |        |
|------|--|--------|--------|
|      | Cash   |        | 25,000 |
|      | The city invests half of the trust funds, as allowed                             |        |        |
|      | by the trust agreement.  |        |        |
| (59) | Cash   | 600    |        |
|      | Additions—Interest   |        | 600    |
|      | Interest earned during the year on the monies deposited                          |        |        |
|      | in the bank is recognized from bank statements.                                  |        |        |
| (60) | Deductions—Transportation Benefits   | 23,000 |        |
|      | Cash   |        | 23,000 |
|      | Transportation costs during the year are paid.                                   |        |        |
| (61) | Deductions—Administration Costs  | 1,000  |        |
|      | Cash   |        | 1,000  |
|      | The \$1,000 of administrative costs allowed to the city are recognized and paid. |        |        |

An adjusting journal entry made on December 31, 20X2, revalues the investment in bonds to their fair values, as follows:

| (62) | Investment in Bonds  | 1,200 |       |
|------|--|-------|-------|
|      | Additions—Investment Revalued                                  |       | 1,200 |
|      | The fair value of the investment in bonds increased by \$1,200 |       |       |

by the end of the year.

Note that this private-purpose trust fund had an expendable principal as well as earnings. The requirement for a private-purpose trust fund is that its resources are to be used only for specific individuals, organizations, or other governmental units as the donor specified. Some private-purpose trust funds specify that the principal is nonexpendable and that only the earnings are to be used for the private purpose. A private-purpose trust fund is differentiated from a permanent fund, which is part of the governmental funds, in the following manner. A permanent fund must maintain its principal but may use the earnings to support the government's programs that benefit all citizens. A privatepurpose trust fund must be used only for the purposes the donor or grantor of the trust fund specified and is not available to support the government's general programs.

Sol City reports the statement of fiduciary net assets for the fiduciary funds, including the private-purpose fund and agency fund (Figure 18–10). Refer to Figure 18–11 for the statement of changes in fiduciary net assets for the private-purpose trust fund. The next section of the chapter discusses Agency funds.

#### **AGENCY FUNDS**

#### LO 18-10

Make calculations and record journal entries for agency funds.

An *agency fund* is a fiduciary fund type that accounts for resources held by a governmental unit as a custodial agent for individuals, private organizations, other funds, or other governmental units. Examples are tax collection funds that collect property taxes and then distribute them to local governmental units and employee benefit funds for such items as dental insurance or charitable contributions that employees authorize as withholdings from their paychecks.

Accounting for agency funds uses the accrual basis of accounting. Because agency funds are custodial in nature, assets always equal liabilities and there is no fund equity. The financial statement for agency funds is the statement of fiduciary net assets presented in Figure 18-9. Note that agency funds cannot have any net asset balance; therefore, no statement of changes in fiduciary net assets is required for them. As a result, the accounting equation for agency funds is rather unique: Assets = Liabilities.

#### Illustration of Transactions in an Agency Fund

Sol City has established an agency fund to account for employees' share of health insurance, which is deducted from their monthly paychecks and then forwarded to the insurance company on a quarterly basis. For this example, the city deducted a total of \$9,000 from the employees' paychecks and paid \$8,000 to the insurance company in 20X2. The remaining \$1,000 will be paid to the insurance company in the first quarter of 20X3.

#### Agency Fund Receipts and Disbursements

The receipts and disbursements in the agency fund during 20X2 follow:

| (63) | Cash                                    | 9,000 |
|------|---|-------|
|      | Due to Insurance Company                | 9,000 |
|      | Employees' contributory share of health |       |
|      | insurance deducted from payroll checks. |       |
|      |   |       |
| (64) | Due to Insurance Company                | 8,000 |
|      | Cash                                    | 8,000 |

Pay liability to insurance company for employees' share of insurance cost.

#### THE GOVERNMENT REPORTING MODEL

LO 18-11

Understand and explain the preparation of government-wide

GASB 34 specifies the reporting model for governmental entities. All general-purpose units such as states, counties, and municipalities must provide all financial statements that GASB 34 requires. These statements are both the fund-based financial statements presented earlier in this chapter and the government-wide financial statements that we discuss in a following section of this chapter. Some special-purpose governmental units such as cemetery associations engaged in a single governmental activity are not required to provide the government-wide financial statements but still must provide fund-based financial statements. We now discuss four major issues that arise in the governmental reporting model.

#### **Four Major Issues**

#### Issue 1: What Organizations Compose the Reporting Entity?

The first issue to address is the determination of the *reporting entity* for which the statements will be provided. The primary government is part of the reporting entity, but this issue concerns what other boards, commissions, agencies, or authorities should be included with the reporting entity. GASB 34 defines the reporting entity as (1) the primary government, such as a city, county, or state, (2) a component unit for which the primary government is financially accountable, and (3) any organization that has a significant relationship with the primary government and should be included to avoid misleading or incomplete financial statements.

#### Issue 2: What Constitutes Financial Accountability?

GASB Statement No. 14, "The Financial Reporting Entity" (GASB 14), states that the primary government's financial accountability for the component organization is evidenced by either board appointment or fiscal dependence. Financial accountability is evidenced when the primary government appoints a majority of the organization's governing board. Thus, the primary government has effective control over the organization, which in turn may provide specific benefits to, or may impose specific financial burdens on, the primary government. Financial accountability also may exist if the organization has a separately elected or appointed board but depends on the primary government for the financial resources required to operate.

The primary government's ability to impose its will on an organization is evidenced by such things as its ability to (1) remove appointed members of the organization's governing board, (2) approve or modify the organization's budget or approve rates or fee changes, (3) veto or overrule the decisions of the organization's governing body, or (4) appoint, hire, reassign, or dismiss those persons responsible for the organization's day-to-day operations. The potential for an organization to impose specific burdens on the primary government is evidenced by such things as its legal obligation or assumption of the obligation to finance the deficits or otherwise provide financial support to the organization or the primary government's obligation in some manner for the debt of the organization. These criteria indicate that when the primary governmental unit is financially accountable for legally separate organizations, those organizations should be included in the primary government's financial statements as component units.

#### Issue 3: What Other Organizations Should Be Included in the Reporting Entity?

GASB 14 specifies a third category of organizations to be evaluated to determine whether they are part of the reporting entity with the primary government. These are legally separate, tax-exempt entities for which the primary government is *not* financially accountable. GASB Statement No. 39, "Determining Whether Certain Organizations Are Component Units" (GASB 39), amended parts of GASB 14 to more fully define what other organizations should be included in a government's reporting entity. In general, a legally separate, tax-exempt organization is reported as a component unit of the primary government if all three of the following characteristics are met:

- 1. The resources of the separate organization are held for the benefit of the primary government, its component units, or the persons served by the primary government or its component units.
- 2. The primary government or its component units are entitled to, or can use, a majority of the economic resources of the separate organization.
- 3. The economic resources of the separate organization that the primary government or its component units can use are significant to the primary government.

Examples of other organizations that should be included in the reporting entity include university foundations and university alumni associations.

#### Issue 4: How Should the Financial Results of the Component Units Be Reported?

The fourth issue is how to report component units, financial results. A choice between two methods must be made: (1) discrete presentation in a separate column of the primary government's financial statements or (2) blended presentation by combining the organization's results into the primary government's financial results.

Most component units are discretely presented; however, the blending method should be used when the component unit is so intertwined with the primary government that, in essence, they are the same governmental unit. Blending should be used when either (1) the component unit's governing body is substantively the same as the primary government's governing body or (2) the component unit provides services entirely, or almost entirely, to the primary government or almost exclusively benefits it. Some of these organizations are similar to the internal services fund. Component units may use governmental fund accounting or proprietary fund accounting, depending on their types of activities. Neither discretely presenting nor blending should change the measurement basis of the type of accounting the component unit; however, a general fund of a blended component unit should be reported as a special revenue fund for the primary government.

For purposes of the Sol City example, assume that the city has a separate library board responsible for managing the city library. The mayor appoints the library board, and the mayor and council must approve its budget and tax levy. In this case, the library is a component unit that will be discretely presented in a separate column of Sol City's two government-wide financial statements.

#### FIGURE 18–12 The Comprehensive Annual Financial Report (CAFR)

Section 1: Introductory Section This section contains organizational information and other preliminary items. Section 2: Financial Section The financial section contains the following items:

- 1. Independent auditors' report.
- 2. Management's discussion and analysis (required supplementary information) (GASB 34).
- 3. Government-wide financial statements.
  - a. Statement of net assets (Figure 18-13).
  - b. Statement of activities (Figure 18–14).
- 4. Fund-based financial statements.
  - a. Governmental funds.
    - (1) Balance sheet (Figure 18-5).
    - (2) Statement of revenues, expenditures, and changes in fund balances (Figure 18-6).
    - (3) Reconciliation schedules (Figures 18-15 and 18-16).
  - b. Proprietary funds.
    - (1) Statement of net assets (Figure 18-7).
    - (2) Statement of revenues, expenses, and changes in fund net assets (Figure 18-8).
    - (3) Statement of cash flows (Figure 18-9).
  - c. Fiduciary funds.
    - (1) Statement of fiduciary net assets (Figure 18-10).
    - (2) Statement of changes in fiduciary net assets (Figure 18–11).
- 5. Notes to the financial statements (GASB 34 and 38).
- 6. Required supplementary information (RSI).
  - a. Budgetary comparison schedules (Figure 18–17) (GASB 41).
  - b. Information about infrastructure assets (GASB 34 for modified approach).
  - c. Information about pension funding progress and employer contributions to retirement and pension funds (GASB 25, 27, 43, 45, and 50).

Section 3: Combining and Individual Fund Financial Statements This section contains the financial statements of each individual fund as well as financial statements showing the combining of individual funds as a fund type (e.g., combining all individual special projects fund into one fund).

Section 4: Statistical Section This section presents the economic condition reporting that GASB 44 requires to be presented in the statistical section of the annual report.

#### **Government Financial Reports**

The annual report of a governmental entity is termed the *comprehensive annual financial* report (CAFR). Refer to Figure 18–12 for the components of the CAFR and parenthetical information noting the figure number in the text, or the number of the GASB standard providing guidance on the information to be included in that item.

The GASB has continued to develop the reporting standards for the statistical section to make it more useful and comparative for users of the annual report. In 2004, the GASB issued GASB Statement 44, "Economic Condition Reporting: The Statistical Section an Amendment of NCGA Statement 1" (GASB 44), which specifies the types of information that should be reported in each of the five sections of the statistical section: (1) financial trends information, (2) revenue capacity information, (3) debt capacity information, (4) demographic and economic information, and (5) operating information. The intent of this statement is to further improve the understandability and usefulness of this section by also requiring the governmental unit to add information about the sources of the data and the major assumptions used and explanations for any unusual information presented. Thus, the statistical section is an important part of the CAFR.

The fund-based financial statements were discussed previously in this chapter. The following discussion centers on the government-wide financials and the required supplementary information (RSI).

FIGURE 18–13 Government-wide Statement of Net Assets

| Unrestricted   | 177,000                 | 23,000                      | 200,000     | 4,000             |  |  |
| Total Net Assets   | \$4,407,000             | \$ 28,000                   | \$4,435,000 | \$754,000         |  |  |

#### **Government-wide Financial Statements**

The government-wide financial statements include (1) the statement of net assets and (2) the statement of activities. GASB 34 requires that government-wide financial statements be prepared on the economic resources measurement focus with the accrual basis of accounting. Note: The fiduciary funds (e.g., private-purpose trust funds and agency funds) are not included in the two government-wide financial statements because fiduciary funds are not available to support government programs.

#### Statement of Net Assets

Some important points regarding Sol City's statement of net assets (Figure 18–13) follow:

- 1. Format. The format of the statement is Assets Liabilities = Net assets. This focuses attention on the governmental entity's net assets.
- 2. Columnar presentation. A columnar presentation is used because it emphasizes that the primary government has two different categories of activities, each needing a net asset base to support that category's activities, and the reporting entity's component units have their own net asset base.
  - a. The primary government's activities are assigned to either governmental activities or business-type activities.
  - b. The internal service funds are included as part of the governmental activities because internal service funds provide service to only the governmental entity, not to external parties.

- c. The enterprise funds are presented as business-type activities of the primary government because the enterprise funds offer services to the public, and thus they are more business oriented.
- 3. Assets. Reported assets include all types of the governmental entity's assets, including infrastructure such as roads, sewers, and so on. These capital assets are not reported in the governmental funds that, under the current financial resources measurement focus, record costs of capital assets as expenditures of the period. GASB 34 requires that all capital and infrastructure assets be reported on the government-wide financial statements. Capital assets, such as buildings and equipment, are depreciated and that depreciation appears as an expense on the government-wide statement of activities. Infrastructure assets are, by their definition, long-lived assets that can be maintained for a much longer time than capital assets. Roads can be paved over, bridges can be repaired, and water and sewer systems can be maintained.

Because of the difficulty in determining any reasonable estimated useful life for the infrastructure assets, GASB 34 provides two methods to account for the depreciating attribute of these infrastructure assets:

- a. Report estimated depreciation expense. The first method requires governments to estimate depreciation expense and report that estimated expense on the government-wide statement of activities.
- b. Use the modified approach. The second approach allows governments to avoid estimating depreciation expense on infrastructure assets that are part of a network or a network subsystem as long as the government manages those assets using an asset management system and can document that the assets are preserved approximately at, or above, a condition level the government established. Under the modified approach, the governmental entity annually expenses actual renewal costs associated with the infrastructure assets. Additions and improvements are added to the cost basis of the infrastructure asset. Required footnote disclosures include (1) an estimate of the cost required to maintain or preserve the infrastructure assets as well as the actual costs for each of the last five years and (2) the presentation of condition assessments of the infrastructure assets for the last three years to show that these assets are indeed being maintained.

Many governments use the modified approach rather than the estimated depreciation expense method. Regardless of the method used for depreciation, the government must report the infrastructure assets in the asset section of the government-wide statement of net assets.

Note that Sol City distinguishes between its infrastructure assets and its buildings and equipment. Sol City has chosen to use the modified approach in recognizing the depreciating factors in its infrastructure assets. Thus, the depreciation expense reported on the statement of activities is from only the Depreciable Assets category, which includes items such as buildings and equipment. The asset Internal Balances represents interfund receivables/payables between the governmental activities and the business-type activities. In the Sol City example, the enterprise fund owes a total of \$4,000 to other funds: \$3,000 to the general fund for a loan and \$1,000 to the internal fund for supplies purchases. Note again that the internal fund is considered a governmental activity because the fund provides services and supplies only to other entities within the government's reporting entity.

The asset Internal Balances represents interfund receivables/payables between the primary government's funds composing the governmental activities (governmental funds plus internal service funds) and the funds composing the business-type activities (the enterprise funds). These internal balances cancel out each other for the total column. Prior to 2001, state and local governments were required to capitalize construction-period interest on capital assets used in governmental activities. GASB Statement No. 37, "Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments: Omnibus" (GASB 37), requires that interest be shown as an indirect expense of the period in which it is incurred.

- 4. Categories of net assets. Net assets are separated into three categories:
  - a. Invested in capital assets, net of related debt.
  - b. Restricted (by external requirements of creditors, grantors, contributors, or other governmental entities).
  - c. Unrestricted.

Note that restricted and unrestricted do not mean the same things as assigned and unassigned as used for the fund-based statements.

#### Statement of Activities

Important observations regarding the statement of activities for Sol City (Figure 18–14)

- 1. Accrual basis. The full accrual basis of accounting is used to measure revenues and expenses for the government-wide statements. A reconciliation between the modified accrual basis of accounting for the governmental funds and the accrual basis of the government-wide statements is required.
- 2. Format. The format of the statement of activities is based on the governmental unit's functions or programs.
  - a. Program revenues are categorized by type, and the net expenses (revenues) are shown separately for each of the governmental and business-type activities.
  - b. The internal service fund is blended into the Governmental Activities because this fund provides service solely within the governmental entity.
  - c. The enterprise funds are presented in the Business-Type Activities column because this fund includes resources obtained by user charges to the public.
  - d. Fiduciary funds are not reported on the statement of activities because these funds are not available for providing governmental services.
  - e. Note that the component unit, the city library, is discretely presented in its own column.
- 3. Expenses. The expenses include depreciation of the capital assets and expenses for any infrastructure assets. However, the expenses would not include any expenditures in the governmental funds that were made for long-term capital assets. For government-wide statements, these expenditures must be included as increases to long-term capital assets on the balance sheet.
- 4. General revenues. General revenues are reported separately on the bottom of the statement. These are revenues not directly tied to any specific program. GASB 34 requires that contributions to permanent endowments, special items, and extraordinary items be reported in this section for the government-wide statements. Special items are events within management control that are either unusual in nature or infrequent in occurrence. Sol City has no special or extraordinary items, and the only contribution to a permanent endowment was the \$100,000 received by the permanent fund. Note that the amount of ending net assets reported in this statement articulates with the amount of ending net assets presented on the statement of net assets.

#### **Reconciliation Schedules**

GASB 34 requires that two reconciliation schedules be presented to reconcile the net change in the total amounts reported on the governmental funds statements with the amounts reported on the government-wide statements. These reconciliation schedules may be presented as part of the governmental funds statements or in an accompanying schedule on the page immediately following the governmental fund financial statement it supports. The two required reconciliation schedules are as follows:

1. Reconciliation schedule for statement of net assets. See Figure 18-15 for the first reconciliation schedule, the reconciliation between the fund balances reported for the governmental funds to the net assets for the government-wide financials. This schedule describes the adjustments necessary to move from the modified accrual basis used in

#### LO 18-12

Understand and explain the additional disclosures that accompany government-wide financial statements.

**FIGURF 18-15** Reconciliation Schedule for the Statement of **Net Assets** 

| SOL CITY  Reconciliation of the Balance Sheet of  Governmental Funds to the Statement of Net Assets  December 31, 20X2   |                    |
|--|--------------------|
| Fund balances reported in the governmental funds  Amounts reported for the governmental activities in the statement of net assets are different because:   | \$ 279,000         |
| Capital assets used in governmental activities are not financial resources and therefore are not reported in the governmental funds.  Management uses internal service funds to charge the costs of certain activities, such as centralized purchasing and storage functions, to individual funds. The assets and liabilities of the internal service fund are included in | 4,200,000          |
| governmental activities in the statement of net assets.  Long-term liabilities, including bonds payable, are not due and payable in the  | 7,000              |
| current period and therefore are not reported in the funds.  Interest on bonds in the permanent fund is recognized in that fund under the modified accrual basis but must be adjusted to the accrual basis for the   | (80,000)           |
| government-wide financial statements.  | 1,000              |
| Net assets of governmental activities  | <u>\$4,407,000</u> |

the governmental funds to the accrual basis used for the government-wide statements. For example, the balance sheets of the governmental funds do not include infrastructure and capital assets. These costs are recognized as expenditures in the periods in which they are made. However, the government-wide statement of net assets must report the balance sheet date cost less depreciation of these infrastructure and capital assets. In addition, the government-wide statements must include the accounts of the internal service funds, which are reported separately from the governmental funds in the fund-based financial statements.

2. Reconciliation schedule for Statement of Activities. The second reconciliation schedule (Figure 18–16), requires the reconciliation between the net change in fund balances reported in the governmental funds' statement of revenues, expenditures, and changes in fund balance to the change in net assets reported in the government-wide financials. For example, interest revenue on the investment in bonds in the permanent fund was presented in that fund under the modified accrual basis for the amount of \$8,000. However, under the accrual basis, the interest revenue would be computed based on the effective interest rate with amortization of the discount in the amount of  $$9,000 ($90,000 \times 0.10)$ . The difference of \$1,000 is an adjustment both to the change in net assets and to the net assets.

## **Budgetary Comparison Schedule**

GASB 34 requires that a budgetary comparison schedule be presented as required supplementary information for the general fund and for each special revenue fund that has a legally adopted annual budget. This schedule may be presented as a separate financial statement after the governmental funds financials or in the footnotes of the annual report. The budgetary comparison schedule for Sol City's general fund is in Figure 18–17.

Important observations regarding the budgetary comparison schedule follow:

- 1. GASB 34 requires that both the original budget and the final budget be presented. The original budget is the first budget for the fiscal period adopted by the governmental entity. Through the year, many governmental entities modify the original budget because of new events or changes in expectations. These changes must go through the legislative process of the government, such as the city council. For our example, no changes were made to the formal budget during the year.
- 2. The budgetary comparison schedule should be presented in the same format with the same terminology and classifications as the original budget.

**FIGURE 18-16** Reconciliation Schedule for the Statement of Revenues, Expenditures, and Changes in **Fund Balances** 

| SOL CITY  Reconciliation of the Statement of Revenues, Expenditures, and Changes in Fund Balances of Governmental Funds to the Statement of Activities  For the Year Ended December 31, 20X2  |           |
|---|-----------|
| Net change in fund balances—governmental funds Governmental funds report capital outlays as expenditures. However, in the statement of activities, the costs of those assets are capitalized and depreciated over their estimated useful lives. This is the amount by which capital outlays in the governmental funds (\$182,000) exceeded depreciation of the governmental   | \$150,000 |
| assets (\$119,000).  Bond proceeds provide current financial resources for the governmental funds.  However, the issuance of debt increases long-term liabilities in the statement of net assets. Repayment of debt principal is an expenditure in the governmental funds, but the repayment reduces the long-term liabilities in the statement of net assets. This is the amount by which bond proceeds (\$102,000) exceeded the | 63,000    |
| net repayments of principal (\$20,000).  Revenues in the statement of activities are recorded on the accrual basis. Interest revenue in the governmental funds is recorded on the modified accrual basis.  This is the amount that accrual interest exceeded the interest recognized in the   | (82,000)  |
| permanent funds.  Management used internal service funds to charge the costs of certain services, such as a centralized purchasing function, to individual funds. The net revenue (expense) of the internal service funds is reported with governmental activities.   | 7,000     |
| Change in net assets of governmental activities   | \$139,000 |

3. A separate column for the variance between the final budget and the actual amounts is encouraged but not required. It is presented here to provide a complete presentation of the possible disclosures of a governmental entity.

| Total charges to appropriations                           | \$855,000 | \$855,000 | \$841,000         | \$ 14,000                     |
| Budgetary fund balance, December 31                       | \$149,000 | \$149,000 | \$152,000         | \$ 3,000                      |

## Management's Discussion and Analysis

GASB 34 specifies that Management's Discussion and Analysis (MD&A) be included in the required supplementary information (RSI) of the government-wide financial statements, MD&A comes before the financial statements and provides an analytical overview of the government's financial and operating activities.

MD&A discusses current period operations and financial position and then compares those with the same information for prior periods. The purpose of this RSI item is to provide financial statement users an objective discussion of whether the government's financial position has improved or deteriorated during the year. GASB 37 states that MD&A should be limited to the items specified in GASB 34 rather than present an abundance of other topics not specifically required. The GASB believes that additional discussions beyond those required might result in information that is not objective and cannot be directly analyzed. Governments that wish to provide additional information may do so in other supplementary information such as footnotes or transmittal letters.

#### Notes to the Government-wide Financial Statements

GASB Statement No. 34, "Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments" (GASB 34), specified a number of required note disclosures in the government-wide financial statements that include the following:

- 1. Accounting and measurement policies that the primary governmental entity uses.
- 2. Information about capital assets, including beginning and ending balances as well as capital acquisitions and sales during the year and depreciation expense and accumulated depreciation.
- 3. For collections not capitalized, disclosures describing the collection and the reasons for not capitalizing them.
- 4. Note disclosures about long-term liabilities, including a schedule of the beginning and ending balances and increases or decreases during the year, for each long-term debt item; the current portion of each long-term item; and the amount of annual debt service required.
- 5. Disclosures about donor-restricted endowments, including net increases in investments for which the income is available for expenditure, and the policy for spending investment income.
- 6. Segment information for the enterprise funds included in the government-wide financial statements.

GASB Statement No. 38, "Certain Financial Statement Note Disclosures" (GASB 38), states that the required footnotes should be modified as follows:

- 1. Provide in the summary of significant accounting policies descriptions of the activities accounted for in the major funds, internal service fund type, and fiduciary fund types. This change is a result of **GASB 34**'s focus on major funds rather than all funds.
- 2. Delete the requirement to disclose the accounting policy for encumbrances in the summary of significant accounting policies (i.e., the lapsing or nonlapsing method).
- 3. Disclose the period of availability used for recording revenues in governmental funds.
- 4. Disclose debt service requirements to maturity, separately identifying principal and interest for each of the subsequent five years and in five-year increments thereafter and changes in variable-rate debt. In addition, governments should disclose the future minimum payments for capital and noncancelable operating leases for each of the five succeeding years.
- 5. Provide a schedule of changes in short-term debt during the year including the purposes for which the debt was issued.
- 6. Add a disclosure of actions taken to address any significant violations of financerelated legal or contractual provisions to the footnote describing these violations.

- 7. Disclose details of the payable and receivable amounts for interfund balances and the purposes of the interfund transfers. In addition, disclosures should be made regarding the amounts of interfund transfers during the period as well as a description and amount of significant transfers that are not expected to occur on a routine basis.
- 8. Provide details of the components of accounts payable so that the financial statement users can understand the payables' timeliness and payment priorities.
- 9. Provide details about significant individual accounts when aggregation obscures their nature. For example, more disclosure could be made for receivables that contain a myriad of different credit risks or liquidity attributes.

## **Other Financial Report Items**

Governments may choose to provide additional information beyond that required as discussed previously. For example, some governmental entities present comprehensive annual financial reports (CAFRs), which include additional statistical information about the sources of revenues, property tax levies and property values, demographic statistics, and other miscellaneous statistics that the entity's management believes will aid financial report users. Some governmental entities additionally disclose financial statements for individual funds or combined by fund type. Some governments go beyond the required footnote disclosures and provide additional schedules and information. As with commercial enterprises, it is up to the entity's management to determine how much additional disclosure it wishes to provide in its annual report.

## **Interim Reporting**

Governmental entities generally are not required to publish interim reports although many prepare monthly or quarterly reports to determine the current progress of compliance with legal and budgetary limitations and to plan for changes in events or developments that were not foreseen when the annual budget was prepared. Interim reports are a valuable internal management control instrument; they typically are not made available to the general public.

## **Auditing Governmental Entities**

Most governmental entities are audited annually because of state or federal requirements or because long-term creditors demand audited statements as part of the debt agreements. The audit of a governmental entity is different from the audit of a commercial entity. The auditor not only must express an opinion on the fairness of the audited entity's financial statements in conformity with applicable accounting principles but also must assess the audited entity's compliance with legal or contractual provisions of state law, debt covenants, terms of grants from other governmental entities, and other restrictions on the entity. The AICPA publishes the "State and Local Governments—Audit and Accounting Guide" that provides guidance relevant to audits of state and local governments. The guide includes planning the audit under the Risk Assessment Statements of Auditing Standards (SAS) in eight recent standards, number 104 through number 111. In addition, the guide defines internal control deficiencies for state and local governments.

The Single Audit Act of 1984 is a federal law specifying the audit requirements for all state and local governments receiving federal financial assistance. The audit act requires auditors to determine whether (1) the financial statements fairly present the government's financial condition, (2) the governmental entity has an internal control system to provide reasonable assurance that it is managing federal financial assistance programs in compliance with applicable laws and regulations, and (3) the governmental entity has complied with laws and regulations that may have a material effect on each federal program. The auditors issue not only the standard audit report but also special reports on items (2) and (3).

The Single Audit Act does not apply to all governmental entities receiving federal assistance. Governmental entities that expend \$500,000 or more in federal awards in a year must have either a single or a program-specific audit for that year. A governmental entity is eligible for a program-specific audit only if the federal award is expended under a single federal program and that federal program's laws, regulations, or grant agreements do not require the entity to have a financial statement audit. Otherwise a single audit is required. Governmental entities that expend less than \$500,000 in federal awards in a year are exempt from the single audit requirement for that year. However, their records must be available for review or audit by officials from the federal agency, the pass-through entity providing the award, or the Government Accountability Office (GAO).

## ADDITIONAL CONSIDERATIONS

## **Special-Purpose Governmental Entities**

This chapter and Chapter 17 discuss the accounting and financial reporting standards for general-purpose governments such as states, counties, and municipalities. However, a number of governments are *special-purpose governments*, which are legally separate entities. They may be component units of a general-purpose government or stand-alone governments apart from a general-purpose government. Special-purpose governments include governmental entities such as cemetery districts, levee districts, park districts, tollway authorities, and school districts. Some of these special-purpose entities may be engaged in governmental activities that generally are financed through taxes, intergovernmental revenues, and other nonexchange revenues. Governmental or internal service funds usually report these activities. Some of these entities are engaged in business-type activities financed by fees charged for goods or services. Enterprise funds usually report these activities. GASB 34 establishes specific reporting requirements for each of the following types of special-purpose governments:

- 1. Engaged in more than one governmental program or in both governmental and business-type activities. These governmental entities must provide both fund financial statements and government-wide financial statements as presented earlier in this chapter and in Chapter 17.
- 2. Engaged in a single governmental program (such as cemetery districts or drainage districts). These governmental entities may present a simplified set of governmentwide and fund-based financial statements, often combining the two statements.
- 3. Engaged in only business-type activities. These governmental entities must present only the financial statements required for enterprise funds. Many public universities and public hospitals are included in this category.
- 4. Engaged in only fiduciary-type activities. These governmental entities are not required to present the government-wide financials but must provide only the financial statements required for fiduciary funds. This category includes special-purpose governmental entities responsible for managing pension funds.

Regardless of the category of special-purpose governmental entity, all governments must include in their financial reports MD&A, the footnotes, and any required supplementary information.

# Summary of **Key Concepts**

This chapter completes the discussion of accounting and financial reporting principles that local and state governments use. Governments may use five governmental fund types, two proprietary fund types, and two fiduciary fund types (including agency funds). The governmental funds use the modified accrual basis of accounting; the other funds use the accrual basis.

GASB 34 the governmental reporting model currently specifies. It requires both fundbased financial statements and government-wide financial statements. The government-wide statements are based on the accrual basis and present both long-term capital assets, including infrastructure assets, and long-term debt. Governmental entities must include required supplementary information (RSI) in their annual financial reports as specified by GASB 34. This RSI includes reconciliation schedules and a budgetary comparison schedule. A recent GASB statement, GASB 54, specifies changes for fund balance reporting in the governmental fund types.

# Appendix 18A Other Governmental Entities—Public School Systems and the Federal Government

In addition to local and state governmental entities, two other governmental entities—public schools and the federal government—have pervasive influences on the lives of citizens. This appendix presents a brief overview of the basic accounting and financial reporting requirements for these two governmental entities.

# **PUBLIC SCHOOL SYSTEMS**

In the United States today, approximately 50 million students attend nearly 94,000 public elementary and secondary school systems employing about 3.3 million teachers and expending more than \$571 billion annually. Many other students attend one of the myriad of private schools formed by religious or other groups.<sup>2</sup>

## Accounting and Financial Reporting for Public School Systems

Accounting for public schools is similar to accounting for local or state governments. Most funds use the modified accrual basis of accounting, and the financial statements for a school district are similar to those of a local government. More than half of school district revenue is obtained from local property taxes; the remaining sources are fees for services, state education aid, and federal grants to education. Most school districts have an elected school board that serves a public policymaking body.

The fund structure for a school district is similar to the fund structure for a local or state government. School district funds include the general fund, special revenue funds, capital projects funds, debt service funds, enterprise funds, internal service funds, and trust and agency funds.

The school district expends general fund resources for costs directly associated with the education process: teachers' salaries, books and supplies, and other costs. Special revenue funds may include specific funds for operations, building, and maintenance (OBM) of the school district's physical facilities as well as the transportation special revenue fund, which is responsible for acquiring and maintaining the buses for transporting children to and from the schools.

Public school systems have a public hearing on the annual budget, which is then approved by the school board or other governing body. The budget specifies the revenue from the three basic sources: local property taxes and fees, state school aid, and federal sources. The expenditures are categorized into the following three dimensions: program, such as gifted, vocational, elementary, secondary, and adult/continuing education; function, such as guidance counselors, instructional staff, school administration, and student transportation; and object, such as salaries, employee benefits, purchased services, and supplies and materials.

Each state department of education receives the annual reports from that state's school districts. Typically independent auditors must audit these financial statements. Many school districts are legally separate, fiscally independent, special-purpose governmental entities engaged in both governmental and business-type activities. These school districts have their own legally mandated budget process and tax levy authority, and they do not depend financially on another governmental entity. In these cases, school districts present their financial statements in accordance with GASB 34, which requires government-wide financial statements as well as fund financial statements. GASB 34 also requires an MD&A, footnotes, and specified supplementary information. School

<sup>&</sup>lt;sup>2</sup> These statistics are compiled by the National Center for Education Statistics: http://nces.ed.gov/fastfacts/ display.asp?id=372.

districts that are fiscally dependent and component units of a primary governmental entity, such as the city government in which the school is located, present their financial information within the primary government's financial statements, usually discretely in a column separate from the primary government's financial data. Other required statements are the same as for other governmental units. In addition, the comprehensive annual financial report for a school district includes a variety of other disclosures relevant to the district, such as the cost per student, the district's debt capacity, and the assessed valuation of all property included in the school district.

# Federal Government Accounting

An accounting structure for the federal government has been part of the U.S. statutes since 1789. The following individuals or entities have significant roles in the federal budgeting and expending

| Executive Branch   | Legislative Branch  |
|--|---|
| President Office of Management and Budget (OMB) Secretary of the Treasury Federal agencies | Congress<br>Government Accountability Office (GAO)<br>Congressional Budget Office (CBO) |

The fiscal period for the U.S. federal government is from October 1 to September 30 of the next calendar year. The president of the United States directs that the annual budget be prepared by the director of the Office of Management and Budget, who is a member of the president's staff. The director of the OMB then consults the various federal agencies and the secretary of the treasury and prepares the budget that the president presents to Congress. The Congressional Budget Office then evaluates the executive budget and may propose that Congress present one of its own. After the legislative process runs its course and the budget is approved, Congress provides the authority for the executive branch to obtain revenue through taxation or other charges. The primary agency responsible for obtaining revenue is the Internal Revenue Service, which is an agency of the Department of the Treasury.

The appropriation-expenditure process is a little different for the federal government than for local governmental units. The federal budget provides the appropriation authority for the federal government. This appropriation authority is then allocated to the various agencies through a process of apportionments made by the OMB. The apportionment is then divided among the agency's programs and activities by a process of allotments. The agency then makes obligations by incurring costs for services provided. These obligations are then liquidated through the preparation of vouchers, which are submitted to the Department of the Treasury for payment.

The Federal Accounting Standards Advisory Board (FASAB) establishes the generally accepted accounting principles for federal financial reporting entities. In 1990, three federal government officials created the FASAB as a federal advisory committee. The three officials were the secretary of the treasury, the director of the OMB, and the comptroller general of the United States. The FASAB has issued more than 43 statements and several technical releases establishing federal financial accounting standards. These standards are quite different from those for either profitseeking entities (FASB) or state and local governmental entities (GASB) because of the many unique aspects of the federal government's operations.

The Department of Treasury annually issues the "Financial Report of the United States Government," which includes the auditor's report from the comptroller general of the United States. The financial report presents information on the federal government and its agencies, including a stewardship report and a statement of net cost by agency. The financial report is available on the Department of Treasury's website.

#### Audits of Federal Agencies

The comptroller general of the United States is the head of the Government Accountability Office (GAO), an agency of the legislative branch of the federal government that works with the Department of the Treasury, an executive department, to develop and maintain the federal government's accounting system. The GAO reviews the accounting systems of each executive agency each year from both financial and compliance perspectives. The compliance part of the audit ensures that the agency fulfilled all legal and budgetary restrictions. Exceptions are reported to Congress, which then communicates them to the executive branch, thus completing the cycle that began when the executive branch first proposed the annual budget to Congress.

| Questions |        |   |
|-----------|--------|---|
| LO 18-1   | Q18-1  | In what circumstances would a governmental unit use a special revenue fund rather than a general fund?  |
| LO 18-1   | Q18-2  | Which governmental funds use operating budgets? Which use capital budgets?  |
| LO 18-3   | Q18-3  | How is interest on long-term debt accounted for in the debt service fund?   |
| LO 18-1   | Q18-4  | What are the major differences between a special revenue fund and an enterprise fund?   |
| LO 18-7   | Q18-5  | What is the basis of accounting in the proprietary funds? Why?  |
| LO 18-11  | Q18-6  | What financial statements must be prepared for the governmental funds? For the enterprise funds?  |
| LO 18-2   | Q18-7  | How are the proceeds from a bond issue accounted for in governmental funds? Where are these proceeds reported on the governmental funds' statement of revenues, expenditures, and changes in fund balance?            |
| LO 18-1   | Q18-8  | What are the primary differences between a permanent fund (governmental) and a private-purpose trust fund (fiduciary)?  |
| LO 18-11  | Q18-9  | Not all governmental funds need to be separately presented on the governmental funds financial statements. What are the two tests for determining major governmental funds for which separate disclosure is required? |
| LO 18-11  | Q18-10 | How are contributions to governmental funds as well as special or extraordinary items reported on the governmental funds' statement of revenues, expenditures, and changes in fund balance?                           |
| LO 18-10  | Q18-11 | Do agency funds have a net fund balance? Why or why not?  |
| LO 18-11  | Q18-12 | What are component units of a government, and how are they reported on the government-wide financial statements?  |
| LO 18-12  | Q18-13 | A reconciliation schedules is a required disclosure in the government-wide financial statements. What are the purpose and content of these reconciliation schedules?  |
| LO 18-12  | Q18-14 | <b>GASB 34</b> requires a budgetary comparison schedule for each governmental fund that has a legally adopted budget. What information does this budgetary comparison schedule present?                               |
| LO 18-11  | Q18-15 | How are infrastructure and other long-term assets as well as general long-term debt reported on the government-wide financial statements?   |

#### Cases

#### C18-1 **Basis of Accounting and Reporting Issues**

Judgment

The accounting system of Barb City is organized and operated on a fund basis. Among the types of funds used are a general fund, a special revenue fund, and an enterprise fund.

#### Required

- a. Explain the basic differences in revenue recognition between the accrual basis of accounting and the modified accrual basis of accounting in relation to governmental accounting.
- b. What basis of accounting should be used for each of the following: (1) general fund, (2) special revenue fund, and (3) enterprise fund?

LO 18-2, 18-3,

#### C18-2 Capital Projects, Debt Service, and Internal Service Funds

The funds of Lake City include a debt service fund, a capital projects fund, and an internal service fund.

#### Required

#### **Understanding**

- a. Explain the use of capital projects funds. Include what they account for, the basis of accounting used, unusual entries and accounts, and their financial statements.
- b. Explain the use of debt service funds. Include what they account for, the basis of accounting used, unusual entries and accounts, and their financial statements.
- c. Explain the use of internal service funds. Include what they account for, the basis of accounting used, unusual entries and accounts, and their financial statements.

C18-3 Discovery

Research

This case provides learning opportunities using available databases and/or the Internet to obtain contemporary information about the topics in advanced financial accounting. Note that the Internet is dynamic and the specific address of the website listed may change. In that case, use a good search engine to locate its current address.

#### Required

Access the Department of Treasury's website and scroll through until you locate the most recent "Financial Report of the United States Government" (http://fms.treas.gov/fr/index.html). Look over the report, especially the comptroller general's statement and the auditor's report, and then prepare a one- to two-page memo summarizing the major information items reported in the report.

## Becoming Familiar with a Local Government's Comprehensive Annual Financial Report (CAFR)

Analysis

Using the Internet, find the comprehensive annual financial report (CAFR) of a local government selected by your instructor. At a minimum, a CAFR includes (1) MD&A, (2) the basic financial statements—government-wide and fund-based financial statements, (3) notes to the basic financial statements, (4) RSI, and (5) the external auditor's opinion on the basic financial statements.

#### Required

Using the CAFR chosen by your instructor, answer the following questions that relate to the overall government and to the governmental funds:

- a. Read the section of the report that contains MD&A. Is your government a general-purpose government? If yes, what types of services does it provide?
- b. What type of opinion did the external auditor give on the basic financial statements? What responsibility did the auditor take with regard to MD&A and the other RSI?
- c. Examine the financial statements for the funds. List the fund types your government uses.
- d. From reading the notes that follow the government-wide and fund-based financial statements, what are the measurement focus and basis of accounting the governmental funds use?
- e. List the government's financial statements that use the economic resources measurement focus and the accrual basis of accounting.
- f. In addition to the general fund, list your government's other major governmental and proprietary funds.
- g. Examine the government-wide financial statements. List any component units over which your government has fiscal accountability.
- h. Examine the balance sheet of the governmental funds. What are the total assets and the total fund balance as of the most recent balance sheet date? How much of the total fund balance is assigned?
- i. Examine the statement of revenues, expenditures, and changes in fund balance for the most recent year. How much of the total revenue came from taxes?
- j. Examine the statement of revenues, expenditures, and changes in fund balance for the most recent year. How are expenditures classified?
- k. Examine the statement of revenues, expenditures, and changes in fund balance for the most recent year. How much of the other financing sources resulted from transfers in?
- l. Examine the statement of revenues, expenditures, and changes in fund balance for the most recent year. List any special items reported. What was the increase or decrease in fund balance for the year?

LO 18-11

C18-5 The GASB's Decision-Making Process

**Discovery** 

The Statements of Governmental Accounting Standards are the final step in the GASB's decisionmaking process. Standard setting has a number of specific steps with open and thorough study of the issues and public participation and input encouraged throughout the process.

#### Required

Access the GASB's website at www.gasb.org; click on the "Education" tab and then on "How Standards are Set." Then read through the process described in the links on this page and prepare a one-page memorandum summarizing the steps the GASB takes before adopting a new governmental accounting standard.

#### **Summarizing a Recent GASB Exposure Draft** C18-6

## **Discovery**

The Governmental Accounting Standards Board places exposure drafts (EDs) of proposed future standards on its website. These exposure drafts provide an early view of the GASB's consensus viewpoints on a project. Accountants wishing to remain current in governmental accounting and auditing need to be aware of proposed governmental standards and their potential impacts on the accounting and reporting of the governmental entities with which the accountants are associated.

#### Required

Access the GASB's website at www.gasb.org; locate the most recent exposure draft of a proposed statement. Read through the Summary presented at the front of the exposure draft and then prepare a one-page memorandum on the issues the proposed statement is addressing; why the GASB feels the proposed statement is needed; and the key provisions it proposes. Toward the bottom of your memorandum, place the expected effective date of the proposed statement and, if included in the ED, the proposed transition implementation from current standards to the new standard.

## Exercises

LO 18-11

#### Multiple-Choice Items on Government Financial Reporting E18-1

Select the correct response to each of the following.

- 1. The government-wide financial statements use the
  - a. Economic resources measurement focus and the accrual basis of accounting.
  - b. Current financial resources measurement focus and the accrual basis of accounting.
  - c. Economic resources measurement focus and the modified accrual basis of accounting.
  - d. Current financial resources measurement focus and the modified accrual basis of accounting.
- 2. The financial statements for the governmental funds use the
  - a. Economic resources measurement focus and the accrual basis of accounting.
  - b. Current financial resources measurement focus and the accrual basis of accounting.
  - c. Economic resources measurement focus and the modified accrual basis of accounting.
  - d. Current financial resources measurement focus and the modified accrual basis of accounting.
- 3. According to GASB 34, infrastructure fixed assets
  - a. Must be capitalized and depreciated.
  - b. Must be capitalized, but governments do *not* have to depreciate them.
  - c. May be capitalized and depreciated.
  - d. Must be reported using the modified approach.
- 4. On which of the following government-wide financial statements would you find all liabilities of a state or local government?
  - a. Statement of net assets.
  - b. Statement of financial condition.
  - c. Statement of activities.
  - d. Statement of financial position.
- 5. On which of the following financial statements would you find all of the capital assets of a local government?
  - a. Statement of net assets.
  - b. Statement of financial condition.
  - c. Statement of activities.
  - d. Statement of financial position.
- 6. For which fund category is a statement of cash flows prepared?
  - a. Governmental.
  - b. Proprietary.
  - c. Fiduciary.
  - d. None of the above.

(*Note:* Use the information below to answer questions 7 through 9.)

The Village of Hampton reported the following data for its governmental activities for the year ended June 30, 20X5:

| Item                     | Amount       |
|--------------------------|--------------|
| Cash & cash equivalents  | \$ 1,880,000 |
| Receivables .            | 459,000      |
| Capital assets           | 14,250,000   |
| Accumulated depreciation | 1,750,000    |
| Accounts payable         | 650,000      |
| Long-term liabilities    | 5,350,000    |

#### Additional data:

All of the long-term debt was used to acquire capital assets. Cash of \$654,000 is restricted for debt service.

- 7. On the statement of net assets prepared at June 30, 20X5, what amount should be reported for total net assets?
  - a. \$8,839,000.
  - b. \$7,804,000.
  - c. \$7,150,000.
  - d. \$8,189,000.
- 8. On the statement of net assets prepared at June 30, 20X5, what amount should be reported for net assets invested in capital assets net of related debt?
  - a. \$8,839,000.
  - b. \$7,804,000.
  - c. \$7,150,000.
  - d. \$8,189,000.
- 9. On the statement of net assets prepared at June 30, 20X5, what amount should be reported for net assets, unrestricted?
  - a. \$1,685,000.
  - b. \$1,689,000.
  - c. \$1,035,000.
  - d. \$1,031,000.
- 10. Which of the following funds can be major assuming they meet the appropriate tests?
  - a. The parking meter special revenue fund and the water utility enterprise fund.
  - b. The fire station capital projects fund and a property tax agency fund.
  - c. The fire station bonds debt service fund and the city teachers pension trust fund.
  - d. The local symphony permanent fund and the Edwina Williams private-purpose trust fund.
- 11. Where in the basic financial statements would you find a description of the measurement focus and the basis of accounting used in the government-wide financial statements?
  - a. In the statement of net assets.
  - b. In the statement of activities.
  - c. In MD&A.
  - d. In the notes to the financial statements.
- 12. Where in the financial section of a CAFR would you find an analysis of the balances and transactions of individual funds?
  - a. In the government-wide financial statements.
  - b. In the fund financial statements.
  - c. In MD&A.
  - d. In the notes to the financial statements.

#### LO 18-1, 18-3

#### E18-2 Multiple-Choice Items on Governmental Funds [AICPA Adapted]

Select the correct answer for each of the following.

- 1. On December 31, 20X1, Tiffin Township paid a contractor \$2,000,000 for the total cost of a new firehouse built in 20X1 on township-owned land. Financing was by means of a \$1,500,000 general obligation bond issue sold at face amount on December 31, 20X1, with the remaining \$500,000 transferred from the general fund. What should be reported on Tiffin's financial statements for the capital projects fund?
  - a. Revenue, \$1,500,000; Expenditures, \$1,500,000.
  - b. Revenue, \$1,500,000; Other Financing Sources, \$500,000; Expenditures, \$2,000,000.
  - c. Revenue, \$2,000,000; Expenditures, \$2,000,000.
  - d. Other Financing Sources, \$2,000,000; Expenditures, \$2,000,000.
- 2. A municipality's debt service fund is an example of which of the following types of funds?
  - a. Fiduciary.
  - b. Governmental.
  - c. Proprietary.
  - d. Internal service.
- 3. Revenue of a governmental unit's special revenue fund should be recognized in the period in which the
  - a. Revenue becomes available and measurable.
  - b. Revenue becomes available for appropriation.
  - c. Revenue is billable.
  - d. Cash is received.
- 4. Taxes collected and held by a municipality for a school district would be accounted for in a(n)
  - a. Enterprise fund.
  - b. Intragovernmental (internal) service fund.
  - c. Agency fund.
  - d. Special revenue fund.
- 5. Interest expense on bonds payable should be recorded in a debt service fund
  - a. At the end of the fiscal period if the interest due date does not coincide with the end of the fiscal period.
  - b. When issued.
  - c. When legally payable.
  - d. When paid.
- 6. Which of the following funds does *not* have a fund balance?
  - a. General fund.
  - b. Agency fund.
  - c. Special revenue fund.
  - d. Capital projects fund.

#### LO 18-6, 18-8

#### E18-3 Multiple-Choice Items on Proprietary Funds [AICPA Adapted]

Select the correct response for each of the following.

1. Which of the following accounts could be included in an enterprise fund's statement of net assets?

| Reserve for<br>Encumbrances |     | Revenue<br>Bonds Payable | Net<br>Assets |
|-----------------------------|-----|--------------------------|---------------|
| a.                          | No  | No                       | Yes           |
| b.                          | No  | Yes                      | Yes           |
| C.                          | Yes | Yes                      | No            |
| d.                          | No  | No                       | No            |

- 2. Customers' meter deposits that cannot be spent for normal operating purposes would most likely be classified as restricted cash in the balance sheet of which fund?
  - a. Internal service.
  - b. Private-purpose trust.
  - c. Agency.
  - d. Enterprise.
- 3. Which fund is *not* an expendable fund?
  - a. Capital projects.
  - b. General.
  - c. Special revenue.
  - d. Internal service.
- 4. If a governmental unit established a data processing center to service all agencies within the unit, the center should be accounted for as a(n)
  - a. Capital projects fund.
  - b. Internal service fund.
  - c. Agency fund.
  - d. Trust fund.
- 5. Recreational facilities run by a governmental unit and financed on a user-charge basis would be accounted for in which fund?
  - a. General.
  - b. Trust.
  - c. Enterprise.
  - d. Capital projects.
- 6. The Underwood Electric Utility Fund, which is an enterprise fund, had the following during its 20X1 fiscal year, ending at December 31, 20X1:

| Prepaid insurance paid in December 20X1 | \$ 43,000 |
|---|-----------|
| Depreciation for 20X1                   | 129,000   |

What amount should be reflected in the fund's statement of revenues, expenses, and changes in fund net assets for these items?

- a. \$(43,000).
- b. \$0.
- c. \$129,000.
- d. \$172,000.
- 7. Which of the following funds of a governmental unit uses the same basis of accounting as an enterprise fund?
  - a. Special revenue.
  - b. Internal service.
  - c. Permanent trust.
  - d. Capital projects.
- 8. Fixed assets utilized in a city-owned utility are accounted for in which of the following?

|    | <b>Enterprise Fund</b> | <b>General Fund</b> |
|----|------------------------|---------------------|
| a. | No                     | No                  |
| b. | No                     | Yes                 |
| C. | Yes                    | No                  |
| d. | Yes                    | Yes                 |
|    |                        |                     |

- 9. Which of the following funds of a governmental unit would account for long-term debt in the fund's accounts?
  - a. Special revenue.
  - b. Capital projects.
  - c. Internal service.
  - d. General.

#### LO 18-8, 18-10 **E18-4 Multiple-Choice Items on Various Funds**

(*Note:* Use the information below to answer questions 1 and 2.)

On August 1, 20X6, the City of Rockhaven received \$1,000,000 from a prominent citizen to establish a private-purpose trust fund. The donor stipulated that the cash be permanently invested and that the earnings from the investments be spent to support local artists. During the year ended June 30, 20X7, the fund received \$50,000 of dividends from stock investments and earned \$35,000 of interest from bond investments. At June 30, \$5,000 of the interest earned had not yet been received. During the year ended June 30, 20X7, the trust fund spent \$75,000 to support local

- 1. For the year ended June 30, 20X7, the trust fund should report investment earnings of
  - a. \$80,000.
  - b. \$50,000.
  - c. \$85,000.
  - d. \$35,000.
- 2. For the year ended June 30, 20X7, the trust fund should report the \$75,000 spent to support local artists as a
  - a. Deduction.
  - b. Contra contribution.
  - c. Transfer out.
  - d. Direct adjustment from fund balance.
- 3. Which of the following statements is (are) correct about agency funds?
  - I. Agency funds should report investment earnings only when they are both measurable and
  - II. Agency funds are reported on the proprietary funds' statement of cash flows.
  - a. I only.
  - b. II only.
  - c. I and II.
  - d. Neither I nor II.

(*Note:* Use the following information to answer questions 4 through 8.)

On July 2, 20X6, the Village of Westbury established an internal service fund to service the data processing needs of the other village departments. The internal service fund received a transfer of \$600,000 from the general fund and a \$100,000 long-term advance from the water utility enterprise fund to acquire computer equipment. During July 20X6, computer equipment costing \$650,000 was acquired. The following events occurred during the year ended June 30, 20X7:

| Charges for services to other departments for data     |           |
|--|-----------|
| processing services rendered                           | \$100,000 |
| Operating expenses (exclusive of depreciation expense) | 45,000    |
| Depreciation expense                                   | 40,000    |
| Interest expense on the advance                        | 5,000     |

At June 30, 20X7, all but \$7,000 of the billings had been collected, and all operating expenses and the interest expense except for \$3,000 of operating expenses had been paid.

- 4. For the year ended June 30, 20X7, what was the income of Westbury's internal service fund?
  - a. \$13,000.
  - b. \$6,000.
  - c. \$3,000.
  - d. \$10,000.
- 5. At June 30, 20X7, what total assets amount would appear on the internal service fund balance sheet?

  - b. \$710,000.
  - c. \$713,000.
  - d. \$708,000.
- 6. Assume that the mayor's office and the police department were billed \$55,000 for data processing work during the year ended June 30, 20X7. What account in the general fund should be debited to record these billings?
  - a. Other Financing Use—Transfers Out.
  - b. Expenditures.
  - c. Due to Internal Service Fund.
  - d. Operating Expenses.
- 7. Assume that the water utility, an enterprise fund, was billed \$25,000 for data processing work during the year ended June 30, 20X7. What account in the enterprise fund should be debited to record these billings?
  - a. Operating expenses.
  - b. Other Financing Use—Transfers Out.
  - c. Expenditures.
  - d. Due to Internal Service Fund.
- 8. Assume that the income for Westbury's internal service fund was \$10,000 for the year ended June 30, 20X7. What net assets should be reported on the internal service fund's statement of net assets at June 30, 20X7?
  - a. \$713,000.
  - b. \$610,000.
  - c. \$710,000.
  - d. \$613,000.

#### LO 18-11 Multiple-Choice Questions on Financial Reporting Issues for Government-wide E18-5 and Fund-Based Financial Statements

Select the correct answer for each of the following questions.

- 1. Which of the following statements is correct?
  - I. In the government-wide financial statements, internal service fund activities are reported in the Governmental Activities column.
  - II. The total balance for the governmental funds that is reported on the governmental funds balance sheet will not equal the total net assets of governmental activities that is reported on the government-wide statement of net assets.
  - a. I only.
  - b. II only.
  - c. I and II.
  - d. Neither I nor II.
- 2. For the year ended June 30, 20X5, Stanton Township's internal service funds reported an increase in net assets of \$300,000 and ending net assets of \$4,500,000 at June 30, 20X5. On the reconciliation of the balance sheet of the governmental funds to the statement of net assets, what amount should be added as of June 30, 20X5?
  - a. \$300,000.
  - b. \$4,200,000.

- c. \$4.500,000.
- d. \$4,800,000.
- 3. For the year ended June 30, 20X5, Stanton Township's enterprise funds reported an increase in net assets of \$300,000 and ending net assets of \$4,500,000 at June 30, 20X5. The enterprise fund also reported net assets—unrestricted of \$1,200,000 at June 30, 20X5, on its statement of net assets. On the reconciliation of the balance sheet of the governmental funds to the statement of net assets as of June 30, 20X5, what amount should be added?
  - a. \$4,200,000.
  - b. \$5,700,000.
  - c. \$4,800,000.
  - d. \$0.
- 4. Which of the following is true regarding permanent funds?
  - a. They use modified accrual accounting.
  - b. Their principal cannot be expended.
  - c. Dividend and interest income from their investments are used to benefit the government and its citizens.
  - d. All of the above.

(*Note:* Use the information below to answer questions 5 through 7.)

A water and sewer enterprise fund provided you the following information for the year ended June 30, 20X5:

| Customer receipts  | \$ 500,000 |
|--|------------|
| Dividends received from investments in common and preferred stock      | 25,000     |
| Proceeds from issuance of revenue bonds (used for plant construction)  | 1,000,000  |
| Proceeds of short-term notes (used to pay operating expenses)          | 30,000     |
| Capital grant received from state (used for wastewater plant addition) | 300,000    |
| Interest on revenue bonds paid   | 40,000     |
| Interest on short-term notes paid                                      | 1,000      |
| Proceeds from sale of Dell common stock received                       | 20,000     |
| Investments in corporate bonds acquired                                | 8,000      |
| Capital expenditures made  | 600,000    |
| Operating expenses paid  | 350,000    |
| Depreciation expense for period determined                             | 50,000     |
|  |            |

Answer the following questions about the amounts reported on the statement of cash flows for the water and sewer enterprise fund.

- 5. What amount should be reported for cash flows provided by operating activities?
  - a. \$150,000.
  - b. \$175,000.
  - c. \$134,000.
  - d. \$100,000.
- 6. What amount should be reported for cash flows provided by investing activities?
  - a. \$12,000.
  - b. \$45,000.
  - c. \$17,000.
  - d. \$37,000.
- 7. What amount should be reported for cash flows provided by capital and related financing activities?
  - a. \$700,000.
  - b. \$360,000.
  - c. \$660,000.
  - d. \$400,000.

- 8. Smith donated cash of \$1,000,000 to Elizabeth City with the stipulation that the contribution be invested and that the investment's earnings be spent for salaries for the city's symphony orchestra. The contribution was received on June 30, 20X4, and was invested in bonds on July 1, 20X4. The bonds were acquired at face value and pay interest at 6 percent on January 1 and July 1. At June 30, 20X5, the fair value of the bonds was \$995,000. During the year ended June 30, 20X5, \$20,000 was provided to the symphony orchestra to help pay salaries. On the statement of fiduciary net assets at June 30, 20X5, what would be the amount reported for net assets held in trust for the symphony orchestra?
  - a. \$1,060,000.
  - b. \$1,055,000.
  - c. \$1,025,000.
  - d. \$1,035,000.

#### LO 18-2

### **Capital Projects Fund Entries and Statement**

The City of Waterman established a capital projects fund for the construction of an access ramp from the parking garage to the city's office building to be used by individuals with disabilities. The estimated cost of the ramp is \$200,000. On January 1, 20X2, a 10 percent, \$150,000 bond issue was sold at 104.0 with the premium transferred to the debt service fund. At that date, the county board provided a \$50,000 grant. After a period of negotiation, the city council awarded a construction contract for \$182,000 on April 5, 20X2. The ramp was completed on August 8, 20X2; its actual cost was \$189,000. The city council approved payment of the total actual cost of \$189,000. In addition to the \$189,000, the ramp was carpeted with all-weather material at a cost of \$5,500. On November 3, 20X2, the city council gave the final approval to pay for the ramp and the carpeting. After all bills were paid, the remaining fund balance was transferred to the debt service fund.

#### Required

- a. Prepare entries for the capital projects fund for 20X2.
- b. Prepare a statement of revenues, expenditures, and changes in fund balance for the capital projects fund for 20X2.

#### F18-7 **Debt Service Fund Entries and Statement**

.com

The City of Waterman established a debt service fund to account for the financial resources used to service the bonds issued to finance the ramp (see Exercise 18-6). The 10 percent, \$150,000 bond issue was sold at 104.0 on January 1, 20X2. It is a 10-year serial bond issue. The resources to pay the interest and annual principal will be from a property tax levy.

#### **Additional Information**

- 1. The operating budget for 20X2 included estimated revenue of \$35,000. Budgeted appropriations included \$15,000 for principal, \$15,000 for interest, and \$4,000 for other items. The budget also included an estimated transfer in of \$5,000 from the capital projects fund.
- 2. The property tax levy was for \$40,000 and an allowance for uncollectibles of \$4,000 was established. Collections totaled \$35,000. The remaining taxes were reclassified as delinquent and the allowance was reduced to \$1,000. The bond premium was received from the capital projects fund.
- 3. The current portion of the serial bonds and the interest due this year were recorded and paid. Other expenses charged to the debt service fund totaled \$1,700, of which \$1,200 was paid.
- 4. The nominal accounts were closed.

#### Required

- a. Prepare entries for the debt service fund for 20X2.
- b. Prepare a balance sheet for the debt service fund as of December 31, 20X2.
- c. Prepare a statement of revenues, expenditures, and changes in fund balance for the debt service fund for 20X2.

#### LO 18-7

#### E18-8 **Enterprise Fund Entries and Statements**

Augusta has a municipal water and gas utility district (MUD). The trial balance on January 1, 20X1, follows:

|   | Debit     | Credit    |
|---|-----------|-----------|
| Cash  | \$ 92,000 |           |
| Accounts Receivable                             | 25,000    |           |
| Inventory of Supplies                           | 8,000     |           |
| Land  | 120,000   |           |
| Plant & Equipment                               | 480,000   |           |
| Accumulated Depreciation                        |           | \$ 80,000 |
| Vouchers Payable                                |           | 15,000    |
| Bonds Payable, 6%                               |           | 500,000   |
| Net Assets:                                     |           |           |
| Invested in Capital Assets, Net of Related Debt |           | 20,000    |
| Unrestricted                                    |           | 110,000   |
| Total   | \$725,000 | \$725,000 |

#### Additional Information for 20X1

- 1. Charges to customers for water and gas were \$420,000; collections were \$432,000.
- 2. A loan of \$30,000 for two years was received from the general fund.
- 3. The water and gas lines were extended to a new development at a cost of \$75,000. The contractor was paid.
- 4. Supplies were acquired from central stores (internal service fund) for \$12,400. Operating expenses were \$328,000, and interest expense was \$30,000. Payment was made for the interest and the payable to central stores, and \$325,000 of the vouchers were paid.
- 5. Adjusting entries were as follows: estimated uncollectible accounts receivable, \$6,300; depreciation expense, \$32,000; and supplies expense, \$15,200.

#### Required

- a. Prepare entries for the MUD enterprise fund for 20X1 and closing entries.
- b. Prepare a statement of net assets for the fund for December 31, 20X1.
- c. Prepare a statement of revenues, expenses, and changes in fund net assets for 20X1. Assume that the \$500,000 of the 6 percent bonds is related to the net capital assets of land and of plant and equipment.
- d. Prepare a statement of cash flows for 20X1.

#### LO 18-2

#### **Interfund Transfers and Transactions** E18-9

During 20X8, the following transfers and transactions between funds took place in the City of Matthew.

- 1. On March 1, a \$12,000 transfer was made from the general fund to establish a building maintenance internal service fund. Matthew uses transfer accounts for this type of transfer.
- 2. On April 1, the general fund made an \$8,000, six-month loan to the building maintenance service fund.
- 3. On April 15, \$2,400 was transferred from the general fund to the debt service fund to pay interest.
- 4. On May 5, Matthew's transportation service fund billed the general fund \$825 for April services.

#### Required

- a. Prepare journal entries for the general fund and the other fund involved at the time of each transfer or transaction.
- b. For each transfer or transaction, prepare the appropriate closing entries for the general fund and the other fund involved for the year ended June 30, 20X8.

#### **E18-10** Internal Service Fund Entries and Statements

Bellevue City's printing shop had the following trial balance on January 1, 20X2:

|   | Debit               | Credit              |
|---|---------------------|---------------------|
| Cash Due from Other Funds                                 | \$ 24,600<br>15,600 |                     |
| Inventory of Supplies Furniture & Equipment               | 9,800<br>260,000    |                     |
| Accumulated Depreciation Vouchers Payable Net Assets:     |                     | \$ 50,000<br>12,000 |
| Invested in Capital Assets (no related debt) Unrestricted |                     | 210,000<br>38,000   |
| Total   | <u>\$310,000</u>    | \$310,000           |

#### Additional Information for 20X2

- 1. During 20X2, the printing shop acquired supplies for \$96,000, furniture for \$1,500, and a copier for \$3,200.
- 2. Printing jobs billed to other funds amounted to \$292,000; cash received from other funds, \$287,300; costs of printing jobs, \$204,000, including \$84,000 of supplies; operating expenses, \$38,000, including \$8,400 of supplies; depreciation expense, \$23,000; and vouchers paid, \$243,000.

#### Required

- a. Prepare entries for the printing shop for 20X2, including closing entries.
- b. Prepare a statement of net assets for the fund on December 31, 20X2. No debt is related to the year-end amount of the fund's capital assets.
- c. Prepare a statement of revenues, expenses, and changes in fund net assets for 20X2.
- d. Prepare a statement of cash flows for 20X2.

#### LO 18-11

#### **E18-11** Multiple-Choice Questions on Government-wide Financial Statements

(Note: Items 1 and 2 are based on the following.)

Mountain View City is preparing its government-wide financial statements for the year. As of the year-end, the city has determined the following information for its capital assets, exclusive of its infrastructure assets:

| Cost of capital assets acquired by governmental funds | \$1,450,000 |
|---|-------------|
| Accumulated depreciation on the capital assets        | 120,000     |
| Outstanding debt related to the capital assets        | 780,000     |

- 1. On the government-wide statement of net assets for the year-end, what amount should be reported for capital assets in the Governmental Activities column?
  - a. \$550,000.
  - b. \$780,000.
  - *c.* \$1,330,000.
  - d. \$1,450,000.
- 2. On the government-wide statement of net assets for the year-end, what amount should be reported for the capital assets in the net assets section?
  - a. \$550,000.
  - *b.* \$780,000.
  - c. \$1,330,000.
  - d. \$1,450,000.

- 3. In accordance with GASB 34, "Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments," which of the following is correct regarding the reporting of internal service funds?
  - I. The internal service fund should be discretely presented as part of the government's businesstype activities.
  - II. The internal service fund should be blended into the governmental activities.
  - a. I only.
  - b. II only.
  - c. I and II.
  - d. Neither I nor II.

(*Note:* Items 4 and 5 are based on the following.)

During the year, the City of Vero Beach sold bonds in its capital projects fund. The 6 percent, \$500,000 par bonds were sold for 102. The effective interest rate was 5 percent.

- 4. How should the bonds be reported in the reconciliation schedule for the statement of revenues, expenditures, and changes in fund balance?
  - a. A decrease of \$500,000 for the par value of the bonds.
  - b. A decrease of \$30,000 for the interest paid on the bonds.
  - c. A decrease of \$510,000 for the selling price of the bonds.
  - d. Not shown in this reconciliation schedule.
- 5. How should an interest adjustment be shown in the reconciliation of the balance sheet of governmental funds to the statement of net assets for the year?
  - a. A decrease of \$30,000.
  - b. A decrease of \$25,000.
  - c. A decrease of \$5,000.
  - d. Not shown in this reconciliation schedule.
- 6. For which of the following should the accrual basis of accounting be used to measure financial performance?

|    | General Fund | Internal Service<br>Fund | Government-wide<br>Financial Statements |
|----|--------------|--------------------------|---|
| a. | Yes          | Yes                      | Yes                                     |
| b. | Yes          | No                       | Yes                                     |
| C. | No           | No                       | No                                      |
| d. | No           | Yes                      | Yes                                     |

- 7. The City of Hastings has a separately elected school board that administers the city's schools. The city council must approve the school district's budget and tax levy. It's financial results should be reported in Hastings's financial statements in which way?
  - a. Included only as schedules in the footnotes of Hastings's financial reports.
  - b. Blended into Hastings's financial reports.
  - c. Discretely presented in Hastings's financial reports.
  - d. Not required to be presented in Hastings's financial reports.
- 8. Glen Valley City has properly adopted the modified approach to account for its infrastructure assets. Which of the following statements is correct about accounting for these assets on the government-wide statement of activities?
  - I. Depreciation expense should be computed based on the assets' estimated useful lives and reported under the Governmental Activities column of the city's statement of activities.
  - II. The amount of the expenditures made for the infrastructure assets except for additions and improvements should be expensed in the period incurred.

- a. I only.
- b. II only.
- c. I and II.
- d. Neither I nor II.
- 9. For which of these funds is a statement of cash flows required

|    | General Fund | Internal Service<br>Fund | Government-wide<br>Entity |
|----|--------------|--------------------------|---------------------------|
| a. | Yes          | Yes                      | Yes                       |
| b. | No           | Yes                      | Yes                       |
| C. | No           | Yes                      | No                        |
| d. | Yes          | No                       | No                        |

- 10. Which of the following is reported as a restriction of net assets in the net assets section of the statement of net assets?
  - a. A reservation of the fund balance in the general fund for \$10,000 of encumbrances.
  - b. A requirement in the permanent funds that the \$100,000 principal of a bequest be maintained.
  - c. A governing board's decision that \$15,000 of general fund resources should be assigned for planning for a city park.
  - d. A governing board allocation of \$4,000 to establish an internal services fund.

LO 18-1

#### **Adjusting Entries for General Fund [AICPA Adapted]** P18-12

On June 30, 20X2, the end of the fiscal year, the Wadsworth Park District prepared the following trial balance for the general fund:

|                                      | Debit       | Credit      |
|--------------------------------------|-------------|-------------|
| Cash                                 | \$ 47,250   |             |
| Taxes Receivable—Current             | 31,800      |             |
| Allowance for Uncollectibles—Current |             | \$ 1,800    |
| Temporary Investments                | 11,300      |             |
| Inventory of Supplies                | 11,450      |             |
| Buildings                            | 1,300,000   |             |
| ESTIMATED REVENUES CONTROL           | 1,007,000   |             |
| APPROPRIATIONS CONTROL               |             | 1,000,000   |
| Revenue—State Grants                 |             | 300,000     |
| Bonds Payable                        |             | 1,000,000   |
| Vouchers Payable                     |             | 10,200      |
| Expenditures                         | 848,200     |             |
| Debt Service from Current Funds      | 130,000     |             |
| Capital Outlays (Equipment)          | 22,000      |             |
| Revenue—Taxes                        |             | 1,008,200   |
| Fund Balance—Unassigned              |             | 81,800      |
| BUDGETARY FUND                       |             |             |
| BALANCE—UNASSIGNED                   |             | 7,000       |
| Total                                | \$3,409,000 | \$3,409,000 |

An examination of the records disclosed the following information:

- 1. The recorded estimate of losses for the current year taxes receivable was considered to be adequate.
- 2. The local governmental unit gave the park district 20 acres of land to be used for a new community park. The unrecorded estimated value of the land was \$50,000. In addition, the unit received a state grant of \$300,000, and used the full amount in payment of contracts pertaining to the construction of the park buildings. Purchases of playground equipment costing \$22,000 were paid from general funds.
- 3. Five years ago, a 4 percent, 10-year sinking fund bond issue in the amount of \$1,000,000 for constructing park buildings was sold; it is still outstanding. Interest on the issue is payable at maturity. Budgetary requirements of a contribution of \$130,000 to the debt service fund were met. Of this amount, \$100,000 represents the fifth equal contribution for principal repayment.
- 4. Outstanding purchase orders not recorded in the accounts at year-end totaled \$2,800.
- 5. A physical inventory of supplies at year-end revealed \$6,500 of the supplies on hand.
- 6. Except where indicated to the contrary, all recordings were made in the general fund.

#### Required

Prepare the adjusting entries to correct the general fund records.

#### LO 18-2, 18-10 P18-13 **Entries for Funds [AICPA Adapted]**

Olivia Village was recently incorporated and began financial operations on July 1, 20X2, the beginning of its fiscal year. The following transactions occurred during this first fiscal year, July 1, 20X2, to June 30, 20X3:

- 1. The village council adopted a budget for general operations for the fiscal year ending June 30, 20X3. Revenue was estimated at \$400,000. Legal authorizations for budgeted expenditures totaled \$394,000.
- 2. Property taxes of \$390,000 were levied; 2 percent of this amount was estimated to be uncollectible. These taxes are available to finance current expenditures as of the date of levy.
- 3. During the year, a village resident donated marketable securities valued at \$50,000 to the village under the terms of a trust agreement that stipulated that the principal amount be kept intact. The use of revenue generated by the securities is restricted to financing college scholarships for needy students. Revenue earned and received on these marketable securities amounted to \$5,500 through June 30, 20X3.
- 4. A general fund transfer of \$5,000 was made to establish an internal service fund to provide for a permanent investment in inventory.
- 5. The village decided to install lighting in the village park financed through an authorized special assessment project at a cost of \$75,000. The city is obligated if the property owners default on their special assessments. The village issued special assessment bonds in the amount of \$72,000 and levied the first year's special assessment of \$24,000 against the village's property owners. The remaining \$3,000 for the project will be contributed from the village's general fund.
- 6. The special assessments for the lighting project are due over a three-year period, and the first year's assessments of \$24,000 were collected. The \$3,000 transfer from the village's general fund was received by the lighting capital projects fund.
- 7. A contract for \$75,000 was let for the lighting installation. The capital projects fund was encumbered for the contract. On June 30, 20X3, the contract was completed, and the contractor was paid.
- 8. During the year, the internal service fund purchased various supplies at a cost of \$1,900.

9. The general fund cash collections recorded during the year as follows:

| Current property taxes   | \$386,000 |
|--------------------------|-----------|
| Licenses and permit fees | 7,000     |

The allowance for estimated uncollectible taxes is adjusted to \$4,000.

- 10. The village council decided to build a village hall at an estimated cost of \$500,000 to replace space occupied in rented facilities. The village does not record project authorizations. The council decided to issue general obligation bonds bearing interest at 6 percent. On June 30, 20X3, the bonds were issued at face value of \$500,000, payable in 20 years. No contracts have been signed for this project, no expenditures have been made, nor has an annual operating budget been prepared.
- 11. The voucher for purchasing a fire truck for \$15,000 was approved and paid by the general fund. This expenditure previously had been encumbered for \$15,000.

#### Required

Prepare journal entries to record properly each of these transactions in the appropriate fund or funds of Olivia Village for the fiscal year ended June 30, 20X3.

Use the following funds: general fund, capital projects fund, internal service fund, and private-purpose trust fund. Each journal entry should be numbered to correspond to the transactions. Do not prepare closing entries for any fund. Your answer sheet should be organized using the following format:

| Fund Journal Entry |
|--------------------|
|--------------------|

#### LO 18-11

#### **Entries to Adjust Account Balances [AICPA Adapted]**

The town of Papillion has assigned you to examine its June 30, 20X1, balance sheet. You are the first CPA to be engaged by the town, and you find that acceptable methods of municipal accounting have not been employed. The town clerk stated that the books had not been closed and presented the following preclosing trial balance of the general fund as of June 30, 20X1:

|  | Debit            | Credit    |
|--|------------------|-----------|
| Cash                                       | \$150,000        |           |
| Taxes Receivable—Current Year              | 59,200           |           |
| Allowance for Uncollectibles—Current       |                  | \$ 18,000 |
| Taxes Receivable—Delinquent                | 8,000            |           |
| Allowance for Uncollectibles—Delinquent    |                  | 10,200    |
| ESTIMATED REVENUES CONTROL                 | 310,000          |           |
| APPROPRIATIONS CONTROL                     |                  | 348,000   |
| Donated Land                               | 27,000           |           |
| Expenditures—Building Addition Constructed | 50,000           |           |
| Expenditures—Serial Bonds Paid             | 16,000           |           |
| Other Expenditures                         | 280,000          |           |
| Special Assessment Bonds Payable           |                  | 100,000   |
| Revenue                                    |                  | 354,000   |
| Accounts Payable                           |                  | 26,000    |
| Fund Balance—Unassigned                    |                  | 82,000    |
| BUDGETARY FUND BALANCE—UNASSIGNED          | 38,000           |           |
| Total                                      | <u>\$938,200</u> | \$938,200 |

#### Additional Information

- 1. The estimated losses of \$18,000 for current year taxes receivable were determined to be a reasonable estimate. The delinquent taxes allowance account should be adjusted to \$8,000, the amount of the remaining delinquent taxes.
- 2. Included in the Revenue account is a credit of \$27,000, representing the value of land donated by the state as a grant-in-aid for construction of a municipal park.
- 3. Operating supplies ordered in the prior fiscal year and chargeable to that year had been received, recorded, and consumed in July 20X0. The outstanding purchase orders for these supplies, which had not been recorded in the accounts on June 30, 20X0, amounted to \$8,800. The vendors' invoices for these supplies totaled \$9,400. Appropriations lapse one year after the end of the fiscal year for which they are made.
- 4. Outstanding purchase orders for operating supplies totaled \$2,100 on June 30, 20X1. These purchase orders had not been recorded on the books.
- 5. The special assessment bonds were sold in June 20X1 to finance a street-paying project. No contracts have been signed for this project, and no expenditures have been made from the capital projects fund. The city is obligated for the bonds if the property owners default.
- 6. The balance in the Revenue account includes credits for \$20,000 for a note issued to a bank to obtain cash in anticipation of tax collections and for \$1,000 for the sale of scrap iron from the town's water plant. The note was still outstanding on June 30, 20X1. The operations of the water plant are accounted for in the water fund.
- 7. The Expenditures—Building Addition Constructed account balance is the cost of an addition to the town hall building constructed and completed in June 20X1. The general fund recorded the payment as authorized.
- 8. The Expenditures—Serial Bonds Paid account reflects the annual retirement of general obligation bonds issued to finance the construction of the town hall. Interest payments of \$7,000 for the bond issue are included in other expenditures.

#### Required

- a. Prepare the formal adjusting and closing journal entries for the general fund for the fiscal year ended June 30, 20X1.
- b. The preceding information disclosed by your examination was recorded only in the general fund even though other funds were involved. Prepare the formal adjusting journal entries for any other funds involved.

#### P18-15 **Capital Projects Fund Entries and Statements**

During the fiscal year ended June 30, 20X3, West City Council authorized construction of a new city hall building and the sale of serial bonds to finance the construction. The following transactions related to financing and constructing the city hall occurred during fiscal 20X3:

- 1. On August 1, 20X2, West issued \$5,000,000 of serial bonds for \$5,080,000. Interest is payable annually, and the first retirement of \$500,000 is due on July 31, 20X7. The premium is transferred to the debt service fund.
- 2. The old city hall, which had a recorded cost of \$650,000, was torn down. The cost of razing the old building was \$45,000, net of salvage value. This cost was included in the capital budget but was not encumbered. The cost is vouchered and paid.
- 3. West signed a contract with Roth Construction Company to build the city hall for \$4,500,000. The contract cost is to be encumbered. Construction is to be completed during fiscal 20X4.
- 4. Roth Construction Company bills West \$2,000,000 for construction completed during fiscal 20X3. Ten percent of the billings will be retained until final acceptance of the new city hall. The billing less the retainage had been paid during the fiscal year.

#### Required

- a. For each of these transactions, prepare the necessary journal entries for all funds involved. Indicate the fund in which the entry is made by giving its initials in the left margin: CPF (capital projects fund) or DSF (debt service fund). Give the closing entries for the capital projects fund.
- b. Prepare a balance sheet for the capital projects fund at June 30, 20X3.
- c. Prepare a statement of revenues, expenditures, and changes in fund balance for the capital projects fund for the fiscal year ended June 30, 20X3.

#### LO 18-2, 18-10 P18-16

#### **Recording Entries in Various Funds [AICPA Adapted]**

The following information relates to Vane City during the year ended December 31, 20X8:

- 1. On October 31, 20X8, to finance the construction of a city hall annex, Vane issued 8 percent, 10-year general obligation bonds at their face value of \$800,000. A contractor's bid of \$750,000 was accepted for the construction. By year-end, one-third of the contract had been completed at a cost of \$246,000, all of which was paid on January 5, 20X9.
- 2. Vane collected \$109,000 from hotel room taxes restricted for tourist promotion in a special revenue fund. The fund incurred and paid \$81,000 for general promotions and \$22,000 for a motor vehicle. Estimated revenues for 20X8 were \$112,000; appropriations were expected to be \$108,000.
- 3. General fund revenues of \$313,500 for 20X8 were transferred to a debt service fund and used to repay \$300,000 of 9 percent, 15-year term bonds, which matured in 20X8, and to repay \$13,500 of matured interest. The bond proceeds were used to construct a citizens'
- 4. At December 31, 20X8, Vane was responsible for \$83,000 of outstanding encumbrances in its general fund. The city uses the nonlapsing method to account for its outstanding
- 5. Vane uses the purchases method to account for supplies in the general fund. At December 31, 20X8, an inventory indicated that the supplies inventory was \$42,000. At December 31, 20X7, the supplies inventory was \$45,000.

#### Required

For each numbered item above, make all the journal entries in all funds affected for the year ended December 31, 20X8. Before each journal entry, identify the fund in which it is made. Do not make any adjusting/closing entries for items (1), (2), and (3).

#### LO 18-2, 18-10 P18-17

#### Matching Items Involving Various Funds

The numbered items on the left consist of a variety of transactions that occur in a municipality. The lettered items on the right consist of various ways to record the transactions. Select the appropriate method for recording each transaction. Some transactions have more than one correct answer. Lettered items may be used once, more than once, or not at all.

# **Transactions**

### **Recording of Transactions**

- 1. Term bond proceeds of \$100,000 were received by the capital projects fund.
- 2. Equipment costing \$50,000 was acquired by the water utility, an enterprise fund.
- 3. Land with a fair value of \$500,000 was donated to the city to be used as a municipal park.
- 4. Central stores, an internal service fund, received a transfer in of \$750,000 from the general fund.

- A. Debit Expenditures in the general fund
- B. Debit General Operating Expenses in the general fund
- C. Debit Equipment in the enterprise fund
- D. Debit Equipment in the general fund
- E. Debit Building in the capital projects fund
- F. Debit General Operating Expenses in the enterprise fund
- G. Debit Expenditures in the capital projects
- H. Credit building in the capital projects fund
- I. Debit Expenditures in the debt service fund

(continued)

- 5. General obligation serial bonds of \$250,000 matured and were paid by the debt service fund.
- 6. Expenditures of \$5,000,000 were incurred by the capital projects fund to construct a new city hall annex. The project was started and completed within the fiscal year.
- 7. The water utility, an enterprise fund, billed the mayor's office \$200 for water usage.
- 8. The mayor's office received the billing in item 7.
- 9. The tax agency fund received \$250,000 of tax revenues that are to be distributed to the school districts within the municipality.
- 10. Salaries and wages of \$25,000 were incurred by the water utility enterprise fund.

- J. Credit Revenue in the private-purpose trust fund
- K. Credit Revenue in the capital projects fund
- L. Credit Other Financing Sources in the capital projects fund
- M. Credit Transfers in the internal services fund
- N. Debit Revenue in the agency fund
- O. Credit Due to Other Governmental Units in the agency fund
- P. Credit Revenue in the agency fund
- Q. Credit Revenue in the enterprise fund
- R. Reported only on the government-wide financial statements

#### LO 18-2, 18-11 P18-18 **Questions on Fund Transactions [AICPA Adapted]**

The following information relates to Dane City during its fiscal year ended December 31, 20X2:

- 1. On October 31, 20X2, to finance the construction of a city hall annex, Dane issued 8 percent, 10-year general obligation bonds at their face value of \$600,000. Construction expenditures during the period equaled \$364,000.
- 2. Dane reported \$109,000 from hotel room taxes restricted for tourist promotion in a special revenue fund. The fund paid \$81,000 for general promotions and \$22,000 for a motor vehicle.
- 3. Dane transferred 20X2 general fund revenues of \$104,500 to a debt service fund and used them to repay \$100,000 of 9 percent, 15-year term bonds and to pay \$4,500 of interest. The bonds were used to acquire a citizens' center.
- 4. At December 31, 20X2, as a consequence of past services, city firefighters had accumulated entitlements for compensated absences of \$86,000. General fund resources available at December 31, 20X2, are expected to be used to settle \$17,000 of this amount, and \$69,000 is expected to be paid out of future general fund resources.
- 5. At December 31, 20X2, Dane was responsible for \$83,000 of outstanding general fund encumbrances, including the \$8,000 for supplies in the following table.
- 6. Dane uses the purchases method to account for supplies. The following information relates to supplies:

| Inventory—1/1/X2                                | \$ 39,000 |
|---|-----------|
| —12/31/X2                                       | 42,000    |
| Encumbrances outstanding—1/1/X2                 | 6,000     |
| —12/31/X2                                       | 8,000     |
| Purchase orders during 20X2                     | 190,000   |
| Amount credited to vouchers payable during 20X2 | 181,000   |

#### Required

For items 1 through 10, determine the amounts based solely on the preceding information.

- 1. What is the amount of 20X2 general fund transfers out?
- 2. How much should be reported in 20X2 as general fund liabilities from entitlements for compensated absences?
- 3. What is the 20X2 assigned amount of the general fund balance?

- 4. What is the 20X2 capital projects fund balance?
- 5. What is the 20X2 fund balance on the special revenue fund for tourist promotion?
- 6. What is the amount of 20X2 debt service fund expenditures?
- 7. What amount should be included in the government-wide financial statements for the cost of long-term assets acquired in 20X2?
- 8. What amount stemming from the 20X2 transactions and events decreased the long-term debt liabilities reported in the government-wide financial statements?
- 9. Using the purchases method, what is the amount of 20X2 supplies expenditures?
- 10. What was the total amount of 20X2 supplies encumbrances?

## LO 18-6, 18-8 P18-19

## Matching Items Involving the Statement of Cash Flows for a Proprietary Fund

The numbered items on the left consist of a variety of transactions that occurred in Jeffersen City's water utility enterprise fund for the year ended June 30, 20X9. Items A, B, C, and D on the right represent the four categories of cash flows that are reported on the statement of cash flows for proprietary funds. Item E is for transactions that are not reported on the statement of cash flows. Assume that the direct method is used for disclosing cash flows from operating activities. Select the appropriate letter to indicate where each transaction should be disclosed on the statement of cash flows or whether that item would not be reported on the statement of cash flows.

#### **Transactions**

- 1. Received \$5.000,000 from revenue bonds to be used for construction of water treatment plant.
- 2. Paid \$500,000 of salaries to employees of the water utility.
- 3. Received \$1,000,000 state grant restricted for construction of water treatment plant.
- 4. Collected \$2,500,000 of accounts receivable from households for use of city water.
- 5. Determined that depreciation expense for the year amounted to \$300,000.
- 6. Received \$75,000 state grant restricted to the maintenance of fixed assets.
- 7. Paid \$250,000 of interest on the revenue bonds issued in item 1.
- 8. Borrowed \$125,000 from a local bank on revenue anticipation notes payable.
- 9. Paid \$5,000 of interest on the notes payable in item 8.
- 10. Spent \$1,200,000 of the revenue bonds for construction of the water treatment plant.
- 11. Paid \$5,000 fire insurance premium on June 30, 20X9, for next year's insurance coverage.
- 12. Determined that uncollected accounts receivable amounted to \$135,000 on June 31, 20X9.
- 13. Acquired \$250,000 of state bonds as an investment of idle funds.
- 14. Received \$7,500 of interest on the state bonds in item 13.
- 15. Received a \$375,000 contribution from the city's general fund to be used for the construction of water treatment plant.

#### **Categories of Disclosure**

- A. Operating activities
- B. Noncapital financing activities
- C. Capital and related financing activities
- D. Investing activities
- E. Not reported on the statement of cash flows

## LO 18-2, 18-3 P18-20

## Matching Items Involving the Statement of Revenues, Expenditures, and Changes in Fund Balance for a Capital Projects Fund and a Debt Service Fund

The numbered items on the left consist of a variety of transactions and events that occurred in the capital projects and debt service funds of Walton City for the year ended June 30, 20X9. Items A, B, and C on the right represent three categories that are reported on the statement of revenues, expenditures, and changes in fund balance for capital projects and debt service funds. Item D is for transactions that are not reported on the statement of revenues, expenditures, and changes in fund balance for either debt service or capital projects funds. For each transaction, select the appropriate letter to indicate where that transaction should be reported on the statement of revenues, expenditures, and changes in fund balance or whether that item would not be reported on the statement.

#### Transactions/Events

## 1. The capital projects fund received the proceeds of general obligation bonds to be used for construction of a new

2. The capital projects fund accepted the lowest bid for the construction of the courthouse.

courthouse.

- 3. The capital projects fund received resources from the city's general fund to be used in the construction of the courthouse.
- 4. The bonds in item 1 were sold at a premium. The capital projects fund transferred the premium to the debt service fund. Indicate how the capital projects fund should report this transaction.
- 5. During the year ended June 30, 20X9, courthouse construction was completed.
- 6. In addition to the resources provided by the general obligation bonds and the general fund, the capital projects fund also received a state grant to construct the courthouse.
- 7. The city's general fund transferred a portion of the property tax collections to the debt service fund to be used to pay the principal and interest of the general obligation bonds issued in item 1.
- 8. The debt service fund acquired investments with part of the resources provided by the general fund.
- 9. The investments acquired in item 8 earned interest.
- 10. The debt service fund received the bond premium from the capital projects fund.
- 11. The debt service fund paid semiannual interest on the general obligation bonds on March 1, 20X9.
- 12. The debt service fund used a local bank to be its fiscal agent with regard to the recordkeeping activities related to the general obligation bonds issued in item 1. The bank charged a fee for this service.
- 13. As of June 30, 20X9, unmatured interest for four months was due on the general obligation bonds issued in item 1. Resources to pay this interest will be transferred to the debt service fund in the next fiscal year.

#### P18-22 **Major Fund Tests**

The City of Somerset has the following fund information:

| Fund                    | Assets      | Liabilities | Revenues    | Expenditures (Expenses) |
|-------------------------|-------------|-------------|-------------|-------------------------|
| General                 | \$1,320,400 | \$ 878,300  | \$4,620,000 | \$4,550,000             |
| Special revenue         | 27,000      | 19,000      | 327,000     | 328,000                 |
| Capital project—library | 450,000     | 38,000      | 460,000     | 418,000                 |
| Capital project—arena   | 28,000      | 16,000      | 41,000      | 55,800                  |
| Debt service            | 41,000      | 0           | 331,000     | 290,000                 |
| Permanent               | 246,000     | 0           | 11,000      | 18,000                  |
| Enterprise—electric     | 2,640,000   | 1,800,700   | 289,000     | 245,000                 |
| Enterprise—water        | 1,356,000   | 1,100,000   | 329,000     | 298,000                 |

## LO 18-5

#### Required

Apply the criteria specified in GASB 34 to determine which of these funds meets the major fund reporting criteria.

LO 18-12

#### P18-23 **Reconciliation Schedules**

The City of Sycamore is preparing its financial reports for the year and has requested that you prepare the reconciliation schedules to accompany its government-wide financial statements based on the following information:

- 1. The fund balances reported in the five governmental funds as of the end of the fiscal year total \$888,400. The fund balances in governmental funds at the beginning of the year totaled \$379,000.
- 2. The city has estimated its depreciation on capital assets to be \$187,000 for the period. The city expended a total of \$287,000 in capital outlays from the governmental funds. At yearend, the capital assets, net of depreciation, totaled \$4,329,000. The internal service fund reported \$18,000 of net capital assets. Total accumulated depreciation at year-end was \$1,208,000.
- 3. The internal service fund reports \$178,000 in total assets and \$141,000 in total liabilities. The internal service fund reported \$48,000 of revenues and \$39,000 of expenses during the year.
- 4. The debt service fund paid \$40,000 in interest during the year. The city sold bonds with a face value of \$500,000 and a coupon rate of 8 percent at the beginning of the year at \$460,000 for an effective interest rate of 10 percent. Interest is paid annually on the last day of the fiscal year. The bonds were sold to provide current financial resources for the governmental funds.
- 5. The permanent fund recorded interest received of \$4,000 under the modified accrual basis of measurement. If the accrual basis of measurement had been used in the fund, an additional \$1,000 of interest revenue would have been earned.

#### Required

- a. Prepare a reconciliation schedule of the balance sheet of the governmental funds to the statement
- b. Prepare a reconciliation schedule of the statement of revenues, expenditures, and changes in fund balance of governmental funds to the statement of activities.

LO 18-11, 18-12

#### P18-24 **True/False Statements**

- 1. The budgetary comparison schedule in the government-wide financial statements for the period requires only the final budget and the actual amounts.
- 2. The accrual basis of accounting is used in the government-wide financial statements.
- 3. A component unit of a primary government is a unit that is related to the primary government but is not financially accountable to it.
- 4. The statement of net assets in the government-wide financial statements requires the net assets to be segregated as follows: assigned net assets (for items such as encumbrances and inventories) and unassigned net assets.
- 5. A major governmental fund that must be separately disclosed in the government-wide financial statements would be a fund that composed 5 percent of the total of the governmental funds.
- 6. Permanent governmental funds account for resources that have a principal that must be maintained and whose earnings are available for any government program that benefits all
- 7. The governmental unit's infrastructure and other fixed assets are reported on the governmentwide statement of net assets.

- 8. The internal service fund is a proprietary fund and is not, therefore, shown in the Governmental Activities column of the government-wide statement of net assets.
- 9. In the reconciliation schedule for the statement of net assets, to reconcile from the net assets reported in the governmental funds to the net assets of governmental activities, capital assets used in governmental activities would be added.
- 10. In the reconciliation schedule for the statement of revenues, expenditures, and changes in fund balance, to reconcile from the net change in fund balances—governmental funds to the change in net assets of governmental activities, bond proceeds would be added back.
- 11. In the government-wide statement of activities, transfers between governmental and businesstype funds must be reported as part of the change in net assets.
- 12. In the government-wide statement of activities, depreciation of fixed assets would equal the amount of the expenditures for assets made in the governmental funds.
- 13. MD&A is a recommended but voluntary disclosure in the government-wide financial statements.
- 14. The government-wide statement of net assets includes the fiduciary funds of the governmental unit.
- 15. The format of the government-wide statement of activities is based on the governmental entity's programs rather than the type of its revenues.

#### LO 18-5 Determining Whether a Special Revenue Fund Is a Major Fund P18-25

The City of Elmtree is preparing its financial statements for the year ended December 31, 20X2, and has asked for your assistance in determining whether its special revenue fund is a major or a nonmajor fund for the financial statements of its governmental funds. The city has provided the following information:

| Items                 | Totals for<br>Governmental Funds | Totals for Governmental<br>and Enterprise Funds |
|-----------------------|----------------------------------|---|
| Assets                | \$50,000,000                     | \$80,000,000                                    |
| Liabilities           | 22,000,000                       | 37,000,000                                      |
| Revenues              | 70,000,000                       | 95,000,000                                      |
| Expenditures/expenses | 60,000,000                       | 82,000,000                                      |

The special revenue fund reported the following amounts at December 31, 20X2 (assets and liabilities), and for the year ended December 31, 20X2 (revenues and expenditures):

| Assets       | \$4,100,000 |
|--------------|-------------|
| Liabilities  | 3,900,000   |
| Revenues     | 6,700,000   |
| Expenditures | 6,500,000   |
|              |             |

#### Required

Determine whether Elmtree's special revenue fund is a major fund for the 20X2 financial statements of the city's governmental funds.

#### P18-26 Preparation of a Statement of Net Assets for a Governmental Entity

Gibson City reported the following items at December 31, 20X2. It has no component units and does not depreciate its infrastructure fixed assets. It issued all bonds—general obligation bonds and revenue—to acquire capital assets. As of December 31, 20X2, net assets of \$25,000 were restricted for road maintenance in special revenue funds, and net assets of \$30,000 were restricted for debt service. Cash of \$5,000 was restricted in business-type activities for plant maintenance.

LO 18-11

|                                  | Governmental<br>Activities | Business-Type<br>Activities |
|----------------------------------|----------------------------|-----------------------------|
| Assets:                          |                            |                             |
| Cash & cash equivalents          | \$ 68,000                  | \$28,000                    |
| Taxes receivable (net)           | 52,000                     |                             |
| Accounts receivable (net)        |                            | 12,000                      |
| Due from governmental activities |                            | 5,000                       |
| Inventories                      | 10,000                     | 7,000                       |
| Investments                      | 25,000                     | 15,000                      |
| Capital assets:                  |                            |                             |
| Land                             | 100,000                    | 50,000                      |
| Infrastructure                   | 60,000                     |                             |
| Other depreciable assets (net)   | 75,000                     | 45,000                      |
| Liabilities:                     |                            |                             |
| Vouchers payable                 | 32,000                     | 4,000                       |
| Accrued interest payable         | 1,500                      | 2,000                       |
| Due to business-type activities  | 5,000                      |                             |
| Revenue bonds payable            |                            | 80,000                      |
| General obligation bonds payable | 60,000                     |                             |

**Required**Using the information provided, prepare in good form a statement of net assets for Gibson City at December 31, 20X2.

### UNITED WAY WORLDWIDE

United Way traces its roots to an organization originally called "The Charity Organization Society," which began as a coordinated effort between many religious and community organizations in Denver, Colorado, in 1887. During the 20th century, more and more community service organizations continued to join together to form the American Association for Community Organizations. By 1963 many of these independent charitable organizations began using the name "United Way," but not until 1971 did the national organization officially adopt the title "United Way of America" and move its headquarters from New York City to Alexandria, Virginia. In 2009, United Way of America and United Way International merged to form United Way Worldwide with a network in more than 30 countries around the globe.

The stated mission of the United Way is "[t]o improve lives by mobilizing the caring power of communities around the world to advance the common good." Its work is focused in three main areas, which United Way calls "the building blocks for a good quality of life":

- 1. Education—Helping Children and Youth Achieve Their Potential.
- 2. Income—Promoting Financial Stability and Independence.
- 3. Health—Improving People's Health and Safety.

United Way's role is "to recruit the people and organizations who bring the passion, expertise and resources needed to get things done." Among its many collaborative activities, United Way has had an ongoing partnership with the National Football League since 1973. Both organizations benefit from the arrangement; the United Way has a viable platform for spreading awareness about youth health and fitness, and the NFL has the opportunity to serve its community while meeting one of its goals to help kids get more active.

United Way has become the largest privately funded charitable organization in the United States with more than \$4.2 billion in contributions during 2007. In 2009, it was named the largest privately funded charity in the world. It raised \$5.09 billion worldwide in 2010. With such large contributions and nearly 1,800 local United Way organizations, its accounting can be a daunting task. This chapter discusses the accounting and financial reporting principles used by both governmental (public) and nongovernmental (private) colleges and universities, health care providers such as hospitals and nursing homes, voluntary health and welfare organizations such as the Red Cross and United Way, and other not-for-profit organizations such as professional and fraternal associations.

Chapter 19 Not-for-Profit Entities 969

#### LEARNING OBJECTIVES

When you finish studying this chapter, you should be able to:

- LO 19-1 Understand financial reporting rules and make basic journal entries for private, not-for-profit entities.
- LO 19-2 Understand financial reporting rules and make basic journal entries for not-for-profit colleges and universities.
- Understand financial reporting rules and make basic journal entries for LO 19-3 not-for-profit health care providers.
- LO 19-4 Understand financial reporting rules and make basic journal entries for not-for-profit voluntary health and welfare organizations.
- Understand financial reporting rules and make basic journal entries for other LO 19-5 not-for-profit organizations.

## FINANCIAL REPORTING FOR PRIVATE, NOT-FOR-PROFIT ENTITIES

LO 19-1

Understand financial reporting rules and make basic journal entries for private, not-for-profit entities.

The Governmental Accounting Standards Board (GASB) controls the accounting and financial reporting for governmental, not-for-profit entities, and the Financial Accounting Standards Board (FASB) controls the accounting and financial reporting for nongovernmental, not-for-profit entities. Thus, it is important to determine the role the government has in not-for-profit organizations to determine which reporting standards apply.

Several FASB standards and statements are particularly relevant for private, not-for-profit entities. Private, not-for-profit entities must report their net assets in accordance with Financial Accounting Concepts Statement No. 6, "Elements of Financial Statements" (FAC 6). It specifies three mutually exclusive classes of net assets (assets less liabilities) as follows:

- 1. Unrestricted net assets. This class of net assets is not restricted by a donor and these assets are used for the entity's general operations. Unrestricted net assets include all assets and liabilities that do not have externally imposed restrictions on their use.
- 2. Temporarily restricted net assets. This net asset class reports net assets that have donor-imposed time or purpose restrictions, typically detailed in the contribution agreement between the donor and the organization. A time restriction means that the assets will not be available for use until after a specific time has passed. Term endowments that have limited lives are included in temporarily restricted net assets. A purpose restriction means that the resources may be used only for specified purposes. For example, the donor may specify that the contribution be used in a specific program or for specified building and equipment acquisitions.
- 3. Permanently restricted net assets. This class of net assets includes permanently restricted contributions such as regular endowments for which the principal must be preserved into perpetuity.

Properly accounting for and reporting each class of net assets is very important. Some not-for-profit entities use a fund structure to account for each type of net asset class because of the discipline that fund accounting provides. These entities would have funds such as the general fund, specific-purpose fund, building fund, endowment fund, and so on. Other not-for-profit entities maintain only an accounting record to show the amounts in each net asset class. The specific identification of any restricted asset must be made when the asset comes into the entity, generally by donation or bequest. The gifting agreement must be examined fully to determine whether the gift has any donor-imposed restrictions on its principal and/or the income it generates. The entity records revenue in only one net asset class when the contribution is made. Then, as restrictions are eliminated or met, the resources are released and transferred from the restricted net asset class to the unrestricted net asset class.

For example, if Charles Alt donates \$40,000 to a not-for-profit organization to be used specifically for a research program, it makes the following entry in the temporarily restricted class of net assets because of the donor-imposed use restriction:

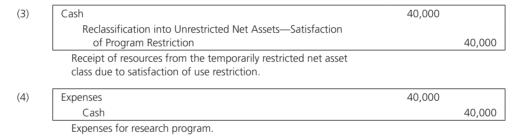

Receipt of \$40,000 donor-restricted contribution for a specified research program.

Note that the contribution revenue is recorded in the temporarily restricted net asset class when the not-for-profit receives the restricted contribution.

When the research program costs have been approved in the unrestricted net asset class, the organization makes a reclassification entry in the temporarily restricted net asset class to record the transfer of the resources to the unrestricted net asset class. Note that the reclassification entry is not an expense of the restricted class.

Reclassification of temporarily restricted resources to the unrestricted fund upon satisfaction of the use restriction.

The organization then makes entries in the unrestricted net asset class to show the receipt of the cash and reclassification to satisfy the program restriction. The reclassification is not a revenue in the unrestricted net asset class because the revenue from the contribution has already been recognized once in the temporarily restricted net asset class. A key concept is that the appropriate receiving net asset class should recognize revenue only once and only. The entries in the unrestricted net asset class follow:

Some not-for-profit entities use the term net assets released from restriction instead of reclassification. The purpose is the same; the resources are released from a restricted net asset class and assigned or transferred to another net asset class.

It is very important to note that the restricted net asset classes, either temporarily or permanently, do not report expenses on the organization's statement of activities. The (temporarily or permanently) restricted net asset classes report restricted contribution revenue and any restricted investment income/losses but cannot report any expenses. Expenses are reported *only* in the unrestricted net asset class. Thus, the reclassification entry records the transfer of the resources from a restricted to the unrestricted net asset class. The reclassification and transfer are made when appropriate evidence is provided to the restricted net asset class that the cash can be released because the temporary restriction has been satisfied or the permanent restriction is no longer valid. The reclassification entry ensures that the unrestricted net asset class is spending the resources according to the donor's wishes.

#### Important FASB Standards for Not-for-Profit Entities

ASC 958, "Accounting for Contributions Received and Contributions Made," provides guidance specific to not-for-profit entities. It covers five important accounting issues: (1) depreciation, (2) accounting for contributions, (3) accounting for investments, (4) financial display requirements, and (5) accounting for transfers of assets to a not-for-profit organization that raises or holds contributions for others.

#### Accounting for Depreciation

ASC 958 requires that private, not-for-profit entities must show depreciation for longlived tangible assets other than works of art or historical treasures that have cultural, aesthetic, or historical value worth preserving perpetually and whose holders have the ability to preserve that value and are doing so. The depreciation is reported as an expense for the period. ASC 958 also requires disclosure of (1) depreciation for the period, (2) the total of each of the major classes of depreciable assets, (3) the accumulated depreciation at the balance sheet date, and (4) the method used to compute depreciation for the major classes of depreciable assets.

#### Accounting for Contributions

ASC 958 establishes the guidelines for private, not-for-profit entities to account for contributions. They can be of cash, other assets, or a promise to give (a pledge). The general rule is that contributions received are measured at their fair value and are recognized as revenues or gains in the period received. The contributions are reported as unrestricted support or, if there are donor-imposed restrictions, as restricted support. A private, notfor-profit entity does not need to recognize contributions of works of art, historical treasures, and similar assets if the donated items are added to collections that (1) are held for public exhibition, education, or research, (2) are protected, cared for, and preserved, and (3) have an organizational policy that proceeds from the sales of collection items are to be used to acquire other items for collections.

Contributions of services are recognized as revenue with an equivalent amount recorded as an expenditure if the services received (1) create or enhance nonfinancial assets or (2) require specialized skills, are provided by individuals possessing those skills, and typically need to be purchased if not donated. Examples of contributed services are specialized skills provided by accountants, architects, doctors, teachers, and other professionals. Some religious-based colleges record revenue with an offsetting amount to an expense for the fair value of contributed lay teaching services. This recognition is made to report the full cost of the teaching mission of these private colleges.

#### Accounting for Investments

ASC 958 extends to not-for-profit organizations the basic standard of fair value for investments that is presented in ASC 320 on investments. ASC 958 specifies that fair value should be the measurement basis for investments in all debt securities and in equity securities that have readily determinable fair values other than those accounted for under the equity method in accordance with ASC 323 and 325. Note that ASC 958 requires that debt securities be valued at fair value. Investment income for the period includes interest or dividends and the changes in fair value. Changes in the fair value of investments in temporarily or permanently restricted net assets are recognized in accordance with donor specifications as to the income. Otherwise, investment income is reported as a change in unrestricted net assets.

#### Meeting Financial Display Requirements

ASC 958 specifies the financial display standards for private, not-for-profit entities. The three major financial statements are the (1) statement of financial position, (2) statement of activities, and (3) statement of cash flows. We identify the unique features of the statement of financial position and the statement of activities for not-for-profit organizations in more detail in the following discussions. Although ASC 958 allows some flexibility in the format of financial statements a major feature of the statement of financial position is the combined presentation of all assets and equities in a single, simplified statement. In addition, it separates the net assets into those that are (1) unrestricted, (2) temporarily restricted, and (3) permanently restricted.

# Accounting for Asset Transfers to a Not-for-Profit That Raises or Holds Others' Contributions

ASC 958 establishes the accounting for contributions made to foundations or other similar organizations that raise resources for not-for-profit entities. It defines three parties to the typical contribution process. The *donor* initially provides the resources. The *recipient* organization receives the assets from the donor. The beneficiary eventually receives the assets through the recipient organization as specified by the donor.

#### FYI

Some recipient organizations, such as United Way, fund-raise to benefit a number of not-for-profits. Donors may name the specific recipient of their gifts or they may give to United Way without a restriction as to how to use the gift. When the donor restricts a contribution to a specific beneficiary, United Way acts as an agent and recognizes an increase in its assets and records a liability to the specified beneficiary. The donor-specified organization records an increase in net assets, usually as a receivable, and records contribution revenue at the time of the donation. When transferring the assets to the specified beneficiaries, United Way decreases its liabilities and assets. For unrestricted donations for which United Way may determine their best uses, it records an increase in its assets and records unrestricted gifts as contribution revenue. When it distributes the assets, United Way records the expense and the decrease in its assets, and the beneficiary records contribution revenue for the fair value of the assets transferred.

Many not-for-profit, private colleges and universities have a foundation that is responsible for raising financial support from alumni and other donors. Typically, these foundations are institutionally related to the college or university and use its assets for the organization's benefit. In most cases, when the donor contributes the assets to the foundation (the recipient), it records an increase in assets and a contribution revenue for the fair value of the donation. Usually these assets are temporarily restricted until the foundation transfers them to the college or university. When the foundation does transfer the assets to the university (the beneficiary), the foundation records an expense and a decrease in its assets. The college or university normally has an interest in the foundation's net assets and at the time of the donation to the

foundation, recognizes the change in its interest in the university foundation, usually as a temporarily restricted net asset, unless the donor specified a permanent restriction on the donation. Then when the college or university actually receives the assets, it increases the specific assets received and decreases its interest in the net assets of the foundation. The institutionally related foundation recognizes the contribution revenue when it receives the donation.

Finally, ASC 958 states that in the case of nonfinancial assets such as artwork, the recipient organization (for example, the university foundation or United Way) may choose whether to record the fair value of these nonfinancial assets in its books. Typically, they will be transferred to the beneficiary, which must record all contributed financial assets at their fair values when received.

#### Mergers and Acquisitions of Not-for-Profit Organizations

ASC 958-805 provides guidance to not-for-profit entities for the initial accounting for a merger or acquisition of either another not-for-profit entity or a business. It also indicates that when two not-for-profit entities merge, the newly formed entity should account for the merger using the carryover method. Thus, the new not-for-profit entity measures the assets and liabilities in its financial statements on the merger date at the amounts reported in the merging entities' financial statements prepared in accordance with GAAP. The standard allows the new entity to adjust the amounts of those assets and liabilities as necessary to reflect a consistent method of accounting if the two merging entities previously used different ones. ASC 958-805-20 provides guidance for a not-for-profit entity's acquisition of another entity. It requires the recognition of identifiable assets acquired and liabilities assumed at their fair values at the date of the acquisition. Goodwill would be the excess of the sum of (1) value of the consideration transferred, (2) the fair value of

<sup>&</sup>lt;sup>1</sup> Certain exceptions to the fair value approach are applied to identifiable assets or liabilities for which other GAAP methods of valuation are required: certain inexhaustible collection items, conditional promises to give, operating leases, assets held for sale, deferred taxes, and pension and other postemployment benefits. Identifiable assets include intangible assets apart from goodwill.

any noncontrolling interest, and (3) any equity interest in the entity previously held over the net amount assigned to identifiable assets acquired and liabilities assumed.

ASC 958-805-35 requires that goodwill and intangible assets other than goodwill be assigned to reporting units that are acquired. Moreover, it specifies that an identifiable intangible asset that has a finite useful life be amortized over that useful life. An identifiable intangible asset that has an indefinite useful life must be tested at least annually for impairment by comparing its fair value with its carrying value.

# COLLEGES AND UNIVERSITIES<sup>2</sup>

#### LO 19-2

reporting rules and make basic journal entries for not-for-profit colleges and

The United States has more than 4,000 colleges and universities. Some offer two-year programs, some offer four-year programs, and others offer a wide selection of both undergraduate and graduate programs. Public and private institutions provide a large variety of liberal arts, science, and professional programs for our society. Public colleges and universities receive a significant portion of their operating resources from federal and state governments. Private, not-for-profit colleges and universities receive most of their resources from tuition and fees.

# Special Conventions of Revenue and Expenditure Recognition

Both public and private colleges and universities follow several conventions of recognizing revenue and expenses as follows:

1. Tuition and fee remissions/waivers and uncollectible accounts. Tuition and fees are important revenue sources for colleges and universities. In their account, they recognize the full amount of the standard rate for tuition and fees as revenue. The accounting for university-sponsored scholarships, fellowships, tuition and fee remissions, or waivers

In 2011, the University of Washington received 38.8 percent of its operating revenues from federal, state and local, and nongovernmental grants. Tuition and fees constituted 17.5 percent of its operating revenues.

depends on whether the recipient provides any services in exchange. For example, if a student receives a university-sponsored scholarship that does not require any employment-type work as a result, the university accounts for this as a deduction from revenue. On the other hand, if the student must provide employment-type work, the university accounts for the scholarship as an

expense. Another example is the tuition remission (reduction) often given to graduate students who accept teaching assistantships. The university records revenue for the graduate student's tuition at the standard rate and then records the tuition remission as an expense of the year in which the graduate student is a teaching assistant.

- 2. Tuition and fee reimbursements for withdrawals from coursework. Students withdrawing from classes after the beginning of the class term may be able to collect a reimbursement or return of some of the tuition and fees paid at the beginning of the term. Colleges and universities account for these reimbursements of tuition and fees as a reduction of revenue. When the check to the student is approved, the university debits revenue from tuition and fee reimbursements and credits cash or accounts payable.
- 3. Academic terms that span two fiscal periods. Some academic terms may begin in one fiscal year of the university and be completed in another. This is often true for summer school sessions. For example, many universities end their fiscal years on June 30 of each year. The 1994 College and University Audit Guide published by the AICPA recommended that colleges and universities account for the tuition fees as revenue in the fiscal year in which the term is predominantly conducted and all expenses incurred to finance that term. However, more recent practices by the National Association of College

<sup>&</sup>lt;sup>2</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

and University Business Officers (NACUBO) recommend the use of the accrual basis of accounting, which requires that the tuition revenue and costs be allocated proportionately to the two fiscal years based on the relative portions of the academic term. Many colleges and universities are electing to follow the NACUBO recommendation.

For example, if an institution collects tuition and fees at the beginning of summer school in which two weeks occur in the first fiscal year and the remaining six weeks fall in the second fiscal year, the AICPA audit guide's approach would result in recording the collections as a debit to Cash and a credit to Deferred Revenue for their entire amount. The institution would then recognize the deferred revenue and any deferred expenses as revenue and expenses of the next fiscal period in which most of the term is conducted. Under the NACUBO approach, the institution would recognize revenue in the first fiscal period for two-eighths of the tuition and fees and record the remaining six-eighths as a deferred revenue. The NACUBO method also would recognize the related expenses that correspond with the first two weeks of the summer session in the first fiscal period and the remaining six-eighths of the revenue and related expenses in the second fiscal period for the last six weeks of the summer session. NACUBO feels its approach follows the principles of accrual accounting.

# **Board-Designated Funds**

The governing board, sometimes termed regents or trustees, may designate unrestricted current fund resources for specific purposes in future periods. These board-designated funds are internal designations similar to appropriations of retained earnings for a commercial entity. The governing board may make any designation at its own volition. For example, it might designate \$50,000 of future spending in the unrestricted current fund for the development of a foreign student counseling office. Such designations are usually reported in the footnotes to the financial statements but also may be shown as allocations of part of the fund balance in the unrestricted current fund balance sheet. However, ASC 958 specifies that these board-designated funds may not be reported as restricted net assets because only external, donor-imposed restrictions can result in restricted net assets.

## **Public Colleges and Universities**

The GASB specifies the accounting and reporting for public colleges and universities. GASB Statement No. 35, "Basic Financial Statements—and Management's Discussion and Analysis—for Public Colleges and Universities" (GASB 35), issued in 1999, requires that these institutions follow the standards for governmental entities as specified in GASB 34. Most public institutions are special-purpose governmental entities engaged in only business-type activities because most do not have their own taxing authority. These special-purpose governmental entities present only the financial statements required for enterprise funds and then are included as the state government's component units. However, some community colleges do have their own taxing authority because they are special-purpose governmental entities engaged in both governmental and businesstype activities. These community colleges provide both fund-based and government-wide financial statements.

# **Private Colleges and Universities**

The FASB specifies the accounting and financial reporting standards for private colleges and universities. Although many of them are not-for-profit entities, some, such as the University of Phoenix, are profit seeking. Accounting for profit-seeking educational entities is similar to accounting for any commercial entity and is not covered in this chapter.

The three financial statements required for private, not-for-profit colleges and universities are the (1) statement of financial position, (2) statement of activities, and (3) statement of cash flows. Private colleges and universities are free to select any account structure that best serves their management and financial reporting needs, but some choose to use fund accounting similar to that of governmental entities. Fund accounting creates an accounting discipline and provides an accounting vehicle to track revenues and expenses related to specific programs (see Figure 19-1 for an overview of the accounting and financial reporting of colleges and universities.) We discussed the financial reporting for public, special-purpose governmental entities in Chapters 17 and 18 of this textbook.

The statement of financial position for Sol City College, a private, not-for-profit college (Figure 19–2) presents all assets and equities in a single statement. Note that the net assets are separated into three categories: (1) unrestricted, (2) temporarily restricted, and (3) permanently restricted. The unrestricted category includes all assets, including property, plant, and equipment whose use the provider or donor did not restrict. Temporarily restricted assets include those that the donor has designated for specific use or for use in subsequent periods. Term endowments and funds donated to support special activities and for unrestricted (or other) use in future periods are included as temporarily restricted net assets. Permanently restricted assets typically include only the principal balance of permanent endowments.

The statement of activities in Figure 19-3 presents separately the revenues and expenses of the unrestricted, temporarily restricted, and permanently restricted net asset categories. It also shows the transfer of assets among the three categories during the period. For example, contributions received in 20X1 and available for use in 20X2 are shown as a transfer from temporarily restricted to unrestricted net assets in the statement of activities for 20X2. Auxiliary enterprises include activities such as operating a student union bookstore, cafeterias, and residence halls.

The statement of cash flows in Figure 19-4 is similar to that used for commercial entities. Either the direct or indirect method may be used to compute cash flows from operating activities. Activities in the restricted funds are noted separately from those in the unrestricted funds.

## **HEALTH CARE PROVIDERS**

#### LO 19-3

Understand financial reporting rules and make basic journal entries for not-forprofit health care providers.

The health care environment is currently undergoing a revolution. Rapidly increasing costs of providing medical care are forcing hospitals to merge at an increasing rate in order to consolidate the types of services offered. The cost of new technology also is requiring health care providers to reevaluate their missions to the communities they serve.<sup>3</sup>

Although the major focus of this section is on hospitals, the accounting and financial reporting guidelines for them are the same as those used by all health care providers included within the scope of the AICPA's Audit and Accounting Guide for Health Care Organizations, 4 which applies to the following health care entities:

- 1. Clinics, medical group practices, individual practice associations, individual practitioners, emergency care facilities, laboratories, surgery centers, and other ambulatory care organizations.
- 2. Continuing-care retirement communities (CCRCs).
- 3. Health maintenance organizations (HMOs) and similar prepaid health care plans.
- 4. Home health agencies.
- 5. Hospitals.
- 6. Nursing homes that provide skilled, intermediate, and less intensive levels of health care.
- 7. Drug and alcohol rehabilitation centers and other rehabilitation facilities.

The AICPA audit guide serves as an important authoritative source in selecting accounting and financial reporting procedures for health care providers. The hospital financial statements illustrated in this chapter incorporate the disclosure standards of ASC 958 as presented and amplified in the AICPA's Audit and Accounting Guide for Health Care Organizations.

http://www.phillyburbs.com/my\_town/bristol/health-care-reform-encouraging-hospital-mergers/ article\_7ce257db-4bde-500f-a675-501cc87346e8.html.

<sup>&</sup>lt;sup>4</sup> The AICPA periodically revises its audit and accounting guides for specialized industries. It was most recently updated in 2011.

# **Hospital Accounting**

The United States has about 5,700 hospitals. Some are not-for-profit hospitals managed by charities, and government agencies manage a large number of them. For example, many universities operate an affiliated hospital. The federal government operates several hundred hospitals, including those offering health care to veterans. More than 1,000 hospitals are investor-owned, for-profit companies. The guidelines that each type follows are:

- 1. The not-for-profit hospitals use the FASB's accounting and reporting requirements for not-for-profit organizations.
- 2. The governmental hospitals follow the GASB's accounting and reporting requirements.
- 3. The investor-owned, for-profit hospitals follow the FASB's accounting and reporting requirements that are the same for other profit-seeking business entities.

Investor-owned hospitals seek additional financial resources by selling stocks and issuing large amounts of debt. These profit-seeking hospitals provide the same types of financial reports as commercial entities. Not-for-profit hospitals present their financial results using a specific format required by the FASB; they often affiliated with a religious group or a civic association. Governmental hospitals managed by or affiliated with a governmental unit follow the GASB's accounting and reporting requirements. They are considered special-purpose entities engaged in business-type activities. As such, they present financial statements that are required for enterprise funds as presented in Chapter 18 of this textbook. Governmental hospitals then are included in the governmental entity's government-wide financial statements.

|  |              |             |             |              |

Two professional associations, the American Hospital Association (AHA) and the Hospital Financial Management Association (HFMA), are active in developing and improving hospital management, accounting, and financial reporting. Publications of both organizations can be useful to individuals seeking additional information on hospital accounting and reporting practices.

In this chapter, we assume that the hospital is a separate, not-for-profit reporting entity, not a component unit of any government. This chapter's focus is not-for-profit hospitals because of the large number of such hospitals and their special accounting and financial reporting issues.

# Hospital Fund Structure

Although not required to do so, many hospitals have used a fund accounting structure for accounting purposes. In general, operating activities are carried on in the general fund, and a series of restricted funds can be used to account for assets whose use the donor has restricted. If separate funds are not maintained, all transactions are recorded in the general fund, and memorandum records show restricted amounts in the general fund.

The presentation of financial statement information under ASC 958 requires a distinction between net assets that are unrestricted, temporarily restricted, and permanently restricted. The following discussion of accounting and financial reporting for hospitals assumes that unrestricted net assets are accounted for in the general fund and that one or more separate funds are used to account for temporarily restricted and permanently restricted net assets.

All transactions involving the use of unrestricted net assets are recorded in the general fund. As such, it is the hospital's primary operating fund. Assets restricted as to the period of use or particular purposes are accounted for in restricted funds until the restriction is satisfied. When that happens, the hospital transfers (reclassifies) the assets from the restricted fund to the general (unrestricted) fund. It reports any expenses incurred in satisfying the restrictions as expenses in the general fund.

Restricted funds account for assets received from donors or other third parties who restricted their use. The restricted funds are often termed holding funds because they must hold the restricted assets and transfer expendable resources to the general fund for expenditure. See Figure 19-5 for an overview of the fund structure and the typical financial reporting for hospitals.

General Fund The general fund accounts for the resources received and expended in the hospital's primary health care mission using the accrual method to measure fully all expenses of providing services during the period. Depreciation is included in the operating expenses. Fixed assets are included in the fund based on the theory that the governing board may use these assets in any manner desired.

The governing board may establish board-designated resources within the general fund for such purposes as hospital expansion and debt retirement. Funds designated in this manner are considered to be part of the unrestricted funds, but this designation provides information on the intended use of the resources.

Donor-Restricted Funds All restricted funds account for resources whose use the donor restricts. For financial reporting purposes, a distinction is made between temporarily and permanently restricted funds. The major temporarily restricted funds are (1) specificpurpose funds, (2) time-restricted funds, and (3) plant replacement and expansion funds. Permanently restricted funds are assets that must be held into perpetuity and generally are included in an endowment fund. Hospitals also may have restricted loan funds and annuity and life income funds; however, few hospitals use them, and they are not discussed in this chapter.

FIGURE 19-5 **Overview of Hospital** Accounting and Reporting

|                            |         |  | Statement of Ch  | anges in Net Assets   |  |
|                            |         |  | Statement  | of Cash Flows   |  |

Specific-purpose funds are restricted for specific operating purposes. For example, a donor may specify that a \$25,000 donation be used for maternity care. The donation is held in the specific-purpose fund until the maternity expenditure is approved in the general fund. Once approved, the specific-purpose fund transfers the resources to the general fund.

Time-restricted funds account for assets received or pledged by donors for use in future periods. The passage of time satisfies the donor's restriction. A pledge received in 20X1 to contribute a stated amount in 20X2 for unrestricted purposes is included in the time-restricted fund in the balance sheet prepared at December 31, 20X1.

Plant replacement and expansion restricted funds account for contributions to be used only for additions to fixed assets. When the general fund approves or makes the appropriate expenditures for the fixed assets, the plant replacement and expansion fund transfers the resources to the general fund.

Endowment funds account for resources when the principal must be preserved. Their income is usually available for either a restricted or a general purpose. Endowments may be either permanent or term. Term endowments are for limited time periods, for example, 5 or 10 years, or until a specific event occurs, such as the donor's death. After the term expires, the governing board uses the principal of the fund in accordance with the gift agreement.

# Financial Statements for a Not-for-Profit Hospital

Separate, not-for-profit hospitals issue four basic financial statements: (1) balance sheet, (2) statement of operations, (3) statement of changes in net assets, and (4) statement of cash flows. Comparative data for prior fiscal periods are normally presented within each statement. Each of the four statements is demonstrated in the comprehensive illustration presented later in this chapter.

#### Balance Sheet

The balance sheet presents the total assets, liabilities, and net assets of the organization as a whole.

**Receivables** Receivables may include amounts due from patients, third-party payers, other insurers of health care, pledges or grants, and interfund transactions. Receivables should be reported at the anticipated realizable amount. Thus, these amounts may include reductions due to contractual agreements with third-party payers or provider practices, such as allowing courtesy discounts to medical staff members and employees. An allowance for uncollectibles is recognized for estimated bad debts. Note that not-for-profit hospitals recognize estimated uncollectibles from providing services as bad debts expense. Charity care occurs when hospitals provide health care services to a patient who has demonstrated in accordance with the hospital's established criteria an inability to pay. In these cases, charity care does not qualify for recognition as either receivables or revenue in the hospital's financial statements. The determination of a charity care case may not be possible when the patient is admitted, but before reducing the amount owed, the hospital must determine that the person does meet the necessary qualifications for charity care. Receivables from pledges of future contributions are reported in the period the pledge is made, net of an allowance for uncollectible amounts.

Investments Investments are initially recorded at cost if purchased or at fair value at the date of receipt if received as a gift. Subsequently, investor-owned, profit-seeking hospitals report equity and debt securities in accordance with ASC 320, which establishes three portfolios of investments: trading securities, available-for-sale securities, and held-to-maturity debt securities. The accounting and reporting of the investment differ according to the category. For nonprofit hospitals, equity securities with readily determinable fair values and all investments in debt securities are measured at fair value in accordance with ASC 958. The Audit and Accounting Guide for Health Care Organizations states that the investment return (including realized and unrealized gains and losses) not restricted by donors should be classified as changes in unrestricted net assets in the hospital's statement of operations. The investment return designated for current operations is included above the operation performance indicator line (Excess of Revenues, Gains, and Other Support over Expenses) reflecting operations; the investment return in excess of amounts designated for current operations is reported in the statement of operations below the operating performance indicator line. Investment returns restricted by donors or by law are reported as changes in net assets in the appropriate restricted funds. For governmental health care entities, GASB Statement No. 31, "Accounting and Financial Reporting for Certain Investments and for External Investment Pools" (GASB 31), specifies the general rule of fair value accounting for investments.

For these three types of hospitals, investments in stock accounted for under the equity method are reported in accordance with ASC 323 and 325. Some hospitals receive income from trusts that donors have established with fiduciaries such as banks. If the hospital does not own the trust or its investments, the independent trusts are not the hospital's assets and are not reported on its balance sheet. Footnote disclosure of major independent endowments or trust agreements that benefit the hospital may be made.

**Plant Assets** Property, plant, and equipment is reported with any accumulated depreciation. Depreciation is recorded in the general fund because the use of assets is part of the cost of providing medical services. The assets are reported in the general fund because they are available for use in any manner the governing board deems necessary.

Assets Whose Use Is Limited Separate disclosure should be made for assets whose donor has restricted their use or the board of directors has designated for special use. Such funds may come from a variety of sources. For example, grant monies received for cancer research are reported as funds restricted for specific purposes and classified as temporarily restricted until used in support of research. Funds contributed to assist in constructing a new children's wing of the hospital are reported as restricted for plant replacement and expansion and classified as temporarily restricted until used in construction. Funds received for permanent investment in the principal of an endowment fund are reported as permanently restricted. Only those donor-restricted funds are classified as restricted; thus, assets set aside for identified purposes by the governing board and over which the board retains control are not classified as restricted but are regarded as assets whose use is limited.

Long-Term Debt The hospital also must account for its long-term debt and pay the principal and interest as they become due. The debt is shown in the balance sheet. This practice differs from that used by most governmental entities that establish a separate debt service fund to service debt.

**Net Assets** The hospital segregates its net assets into (1) unrestricted net assets available for use at the discretion of the hospital staff and board of directors, (2) temporarily restricted net assets available for use when specific events established by the donor are satisfied, and (3) permanently restricted net assets whose donor has restricted their use.

### Statement of Operations

The results of not-for-profit hospitals' operations are reported in a statement of operations, also often termed the statement of activities. It includes the revenues, expenses, gains and losses, and other transactions affecting the unrestricted net assets during the period. Note that only those transactions in the general fund are reported on the statement of operations. Transactions affecting only the restricted funds are *not* shown on it but are reported on the statement of changes in net assets. Gains and losses from transactions that are peripheral or ancillary to the provision of health care services are reported separately from net patient service revenue. The statement of operations should report an operating *performance indicator* of the results of the hospital's operating activities for the period. This performance indicator should include both operating income (loss) for the period and other income available for current operations. ASC 958 requires that net assets released from restrictions for use in operations be included before the performance indicator line on the statement of activities, generally termed above the line. This is so because the transfer of net assets from the restricted group of assets for entity's operations in the unrestricted group of net assets can then be matched with the expenses incurred to fulfill the operating restriction. The title of the performance indicator should be descriptive, such as the "Excess of Operating Revenues, Gains, and Other Support over Operating Expenses."

Other changes in the unrestricted net assets during the period should be reported after the performance indicator, generally termed below the line. These changes include investment return in excess of amounts designated for current operations as defined by ASC 958. For example, a hospital's board of directors could reserve a portion of the investment return from the revaluation of investments for use in future periods, thus making them unavailable for current operations. The AICPA's audit guide for hospitals indicates that the investment return from other than trading securities should be presented below the operating performance indicator line, and the investment return from trading securities should be presented above it. However, an audit guide is lower than an FASB standard in the hierarchy of generally accepted accounting principles. Other changes reported below the operating performance indicator line include transfers from restricted net assets of resources used to purchase property and equipment. Note that the statement of operations must separately report those items related to the acquisition of property or equipment from those related to operating activities.

A separate, third statement, the statement of changes in net assets, reports items affecting the temporarily restricted and permanently restricted net assets. We cover this third statement in this chapter following discussion of the statement of operations.

Net Patient Service Revenue Net patient service revenue represents the hospital's revenue from inpatient and outpatient care excluding charity care and contractual adjustments. Net patient service revenue represents the billings for services provided and the hospital's earning capacity. Many hospitals are required to perform a certain amount of charity care for which they recognize no revenue. The charity cases are imposed by terms of certain federal medical care grant programs. Charity care helps ensure that indigent persons living in the region served by the hospital obtain adequate medical services. When a hospital provides charity care, it recognizes no revenue but presents disclosure of the estimated amount in the footnotes to the financial statements.

Contractual Adjustments Contractual adjustments constitute a major deduction from gross patient service revenue. They result from the involvement of third-party payers in the medical reimbursement process. Insurance companies or governmental units (especially the federal government) reimburse less than the full standard rate for medical services provided to patients covered by insurance or government-provided services such as Medicare. These third-party payers may stipulate limits on the amount of costs they will pay. A hospital may have a standard rate for a specific service but may contract with the third-party payer to accept a lower amount for that service. For example, Medicare establishes specific reimbursement rates for various services, termed a "diagnosis-related group" (DRG). The hospital makes a contractual adjustment from its normal service charge as a deduction from gross Patient Service Revenue.

Income from Ancillary Programs Income from ancillary programs represents the income earned from nonpatient sources such as a hospital's television rentals, sales in cafeterias and gift shops, parking fees, and tuition on hospital-provided educational programs. The income reported typically represents the net earnings from such operations rather than the gross receipts.

Interfund Transfers Holding assets in a restricted fund when the donor-specified requirements have been satisfied is not appropriate. For example, when contributions received to purchase plant and equipment have been used to purchase new assets or contributions received for use in educational programs have been used for their stated purposes, the funds should be transferred from the restricted fund to the general fund. For financial reporting purposes, this transfer is reported as Net Assets Released in the statement of operations and is shown as an addition to the general fund. If the interfund transfer to the general fund is to be used for operations, the general fund reports it above the operating performance indicator line in the statement of operations. If the interfund transfer to the general fund is to be used for acquiring long-term assets, the general fund reports it below the performance indicator line in the statement of operations.

General Fund Expenses The major expenses in the general fund are for nursing services, other professional services, depreciation, bad debts, and the general and administrative costs of the hospital. These costs are recognized on the accrual basis of accounting similar to their recognition by commercial entities. Hospitals that self-insure for such costs should recognize an expense and a liability for such costs in the period during which the incidents that give rise to the claims occur if it is probable that liabilities have been incurred and the amounts of the losses can be reasonably estimated. Any expenses related to fund-raising should be classified separately.

**Donations** Hospitals often receive a wide variety of services from volunteers. For example, retired physicians and pharmacists may voluntarily work part-time in their professional roles. In addition, the hospital may receive donations of supplies or equipment. The rules on accounting for donations and contributions to hospitals follow:

- 1. Donated services. Because placing a value on donated services is often difficult, their values are usually not recorded. However, if the following conditions exist, the estimated value of the donated services is reported as an expense and a corresponding amount is reported as contributions. ASC 958 specifies that a contribution of services should be recognized if the services received (a) create or enhance nonfinancial assets or (b) require specialized skills, are provided by individuals possessing those skills, and would typically be purchased if not donated.
- 2. Donated assets. Donated assets are reported at fair market value at the date of the contribution:
  - a. Donated assets are reported as contributions in the statement of operations if unrestricted. For example, a donation of medical supplies is recorded as a contribution in the general fund in the period received.
  - b. Donated assets that the donor restricts in use are recognized as contribution revenue in the temporarily restricted or permanently restricted fund upon receipt. Note that contribution revenue is recognized in the appropriate restricted fund when the restricted donation is received. When the restriction no longer applies, the hospital transfers donated assets to the general fund. For example, when the general fund purchases assets with resources restricted for that purpose, the transfer is made from the restricted fund as a debit to Net Assets Released from Restriction and a credit to Cash. The general fund accounts for the transfer of cash with a debit to Cash and a credit to Net Assets Released from Restriction, which is reported in the general fund's statement of operations.

If the hospital does not use a fund structure for restricted assets, it accounts for their contribution as a debit to Cash and a credit to Net Assets Restricted, which is reported on the hospital's balance sheet. However, the general fund's statement of operations reports the donated assets only after the restriction is no longer applicable and the assets have become available for use in the general fund. When the assets become available for use in the general fund, it reports their transfer for use in the hospital's operations on the general fund's statement of operations and reclassifies them from the restricted net asset class to the unrestricted net asset class.

Appropriate expense accounts are charged as the donated assets are consumed. For example, donated supplies such as medicines, linen, and disposable medical items are charged to an expense as used from inventory. For donated physical plant or equipment having an estimated economic life of more than one year, depreciation is charged to each period in which the plant or equipment is used.

# Statement of Changes in Net Assets

The third of the four financial statements for a not-for-profit hospital is the statement of changes in net assets. It presents the changes in all three categories of net assets: unrestricted, temporarily restricted, and permanently restricted. Donor-restricted contributions are reported in the appropriate category of restricted net assets. Net assets released from restrictions are shown as deductions from restricted net assets and as transfers to the unrestricted net assets. The reason for this release could be the completion of a time restriction, the fulfillment of a use restriction, or the satisfaction of any other donor-specified restriction.

## Statement of Cash Flows

The fourth, and final, financial statement for a not-for-profit hospital is the statement of cash flows. Its format is similar to that for commercial entities and is presented as part of the comprehensive illustration in the next section of this chapter.

# **Comprehensive Illustration of Hospital Accounting** and Financial Reporting

Sol City Community Hospital, a not-for-profit hospital operated by a community group, provides medical care for the surrounding region. The hospital has established the following funds: (1) general, (2) specific purpose, (3) time restricted, (4) plant replacement and expansion, and (5) endowment.

Entries to record transactions in each of the funds during the 20X2 fiscal year, ending December 31, 20X2, are provided in the next section. First we present the financial statements for the period and then the transactions from which these statements resulted. Note that the balance sheet for both the general and the restricted funds in Figure 19-6 is presented in what is generally termed an aggregated style rather than a columnar or layered style that would show each fund's financial position separately. The selection of display formats is the choice of the hospital's governing board, but the aggregated format for the entity as a whole is more in keeping with the recommendations of ASC 958. An analysis of the composition of the net assets held as temporarily and permanently restricted at December 31, 20X2 and 20X1, provides the following amounts:

|  | Dec. 31, 20X2 | Net Change          | Dec. 31, 20X1 |
|--|---------------|---------------------|---------------|
| Temporarily restricted: Plant replacement and expansion fund Cash Pledges receivable Investments | \$ 50,000     | \$(150,000)         | \$200,000     |
|  | 15,000        | (105,000)           | 120,000       |
|  |               | _122,000            | 18,000        |
| Net assets   | \$ 205,000    | <u>\$(133,000</u> ) | \$338,000     |
| Specific-Purpose fund Cash Investments Net assets  | \$ 3,000      | \$ 1,000            | \$ 2,000      |
|  | 20,000        | 0                   | 20,000        |
|  | \$ 23,000     | \$ 1,000            | \$ 22,000     |
| Time-Restricted fund Cash Contributions receivable Investments                                   | \$ 2,000      | \$ 0                | \$ 2,000      |
|  | 0             | (12,000)            | 12,000        |
|  | 196,000       | 0                   | 196,000       |
| Net assets   | \$ 198,000    | \$ (12,000)         | \$210,000     |
| Permanently restricted: Endowment fund Cash Investments Net assets                               | \$ 25,000     | \$ 15,000           | \$ 10,000     |
|  | 1,190,000     | 400,000             | 790,000       |
|  | \$1,215,000   | \$ 415,000          | \$800,000     |

The specific-purpose fund and the time-restricted fund contain resources that will be available for operations as the restrictions are met.

We present the statement of operations in Figure 19–7, the statement of changes in net assets in Figure 19-8, and the statement of cash flows in Figure 19-9 after we discuss the journal entries for 20X2 for Sol City Community Hospital.

#### General Fund

**Total Net Assets** 

Total Liabilities & Net Assets

The hospital presents the transactions in the general fund for 20X2 in accordance with their relative degree of importance in its operations. The first series of entries are for the period's revenues generated from patient care and associated operating expenses.

**FIGURE 19-6 Balance Sheet for a Not-for-Profit Hospital**

| Cash at the End of Year (unrestricted)  |                                    |   | \$ 295,000                       |

**Net Patient Care Revenue** The hospital provides patient services of \$2,600,000 measured by standard rates. From this amount, it deducts \$240,000 for contractual adjustments with third-party payers, which results in a net patient revenue of \$2,360,000. It does not recognize costs of Charity care as a revenue or

reduction in revenue but recognizes related costs as operating expenses. Although the hospital does not explicitly recognize charity care on the statement of operations, footnote disclosures in the financial reports should provide the amount of charity care.

| (5) | Accounts Receivable   | 2,600,000 |           |
|-----|---|-----------|-----------|
|     | Patient Services Revenue                                      |           | 2,600,000 |
|     | Gross charges at standard rates.                              |           |           |

| (6) | Patient Services Revenue                                      | 240,000   |           |
|     | Accounts Receivable   |           | 240,000   |
|     | Deduction from gross nations services revenue for contractual |           |           |

Deduction from gross patient services revenue for contractual adjustments.

**Revenue from Ancillary Programs** The hospital receives income in 20X2 from providing nonpatient services that include operating a cafeteria and gift shop and from vending machine commissions.

| (7) | Cash                                     | 30,000 |     |
|-----|--|--------|-----|
|     | Revenue from Cafeteria Sales             | 20,    | 000 |
|     | Revenue from Gift Shop Sales             | 4,     | 000 |
|     | Revenue from Vending Machine Commissions | 6,     | 000 |

Income from ancillary services.

Operating Expenses The hospital incurs \$2,600,000 in operating expenses for nursing and other professional care, general and administrative expenses, bad debts expense, and depreciation. Not-for-profit hospitals account for estimated uncollectibles from services provided as an operating expense. Fiscal Services Expense includes interest expense on the hospital's debt. The hospital recognized \$30,000 in estimated malpractice costs that are probable and reasonably estimated and made cash payments for \$2,125,000 of the total operating expenses, and the remainder is consumption of Prepaid Assets, Allowance for Uncollectibles, Depreciation, and increases in liabilities. The hospital receives donated services valued at \$10,000, which are recognized in entry (9):

| Nursing Services Expense                    | 800,000   |  |
|---|---|--|
| Other Professional Services Expense         | 620,000   |  |
| General Services Expense                    | 700,000   |  |
| Fiscal Services Expense                     | 100,000   |  |
| Administrative Services Expense             | 80,000  |  |
| Medical Malpractice Costs                   | 30,000  |  |
| Bad Debts Expense                           | 60,000  |  |
| Depreciation Expense                        | 200,000   |  |

Record operating expenses.

(9)Other Professional Services Expense 10,000 Donated Services—Revenue 10,000

Receive donated services.

Entry (9) records the fair value of donated services both as a debit for the operating expense and as a credit for operating revenue. Therefore, donated services do not affect the bottom line of the hospital's statement of revenue and expenses, but they do affect the amounts shown for the expenses and revenue sections.

Contribution Revenue During 20X2, Sol City Community Hospital received unrestricted cash gifts of \$63,000 and donated medicines and medical supplies with a market value of \$30,000:

| (10)  | Cash                                 | 63,000 |
|-------|--------------------------------------|--------|
|       | Contributions—Unrestricted           | 63,000 |

|      | Net Assets Released from Equipment Acquisition Restriction  |         | 200,000 |
|      | Transfer from temporarily restricted plant replacement and  |         |         |

Transfer from temporarily restricted plant replacement and expansion fund for use in acquiring plant assets.

| (17) | Property, Plant, and Equipment   | 25,000 |        |
|------|--|--------|--------|
|      | Net Assets Released from Equipment Acquisition Restriction             |        | 25,000 |
|      | Transfer from temporarily restricted plant replacement and             |        |        |
|      | expansion fund of donated assets placed in service.                    |        |        |
| (18) | Cash   | 12.000 |        |
| (10) |  | 12,000 |        |
|      | Net Assets Released from Passage of Time                               |        | 12,000 |
|      | Transfer from temporarily restricted funds restricted for use in 20X2. |        |        |

Each transfer from temporarily restricted funds involves one or more journal entries in those funds. These amounts are not included among 20X2 contributions or income in the unrestricted fund because they were recorded as contributions or income upon receipt in the temporarily restricted or permanently restricted funds. The transfer of donated equipment initially is recorded in the temporarily restricted plant fund until the hospital begins using the asset. When the assets are placed in service, the donated equipment's value is transferred to the unrestricted fund.

Other Transactions in the General Fund The remaining transactions during the 20X2 fiscal year affect the balance sheet accounts. Transactions affecting only the asset accounts include collecting receivables, acquiring inventory, selling an investment, and purchasing additional physical plant assets as follows:

| (19) | Cash   | 2,250,000 |           |
|------|--|-----------|-----------|
|      | Allowance for Uncollectibles   | 50,000    |           |
|      | Accounts Receivable  |           | 2,300,000 |
|      | Collect some receivables and write off \$50,000 as uncollectible   |           |           |
| (20) | Inventories  | 50,000    |           |
|      | Cash   |           | 50,000    |
|      | Acquire inventories.   |           |           |
| (21) | Cash   | 50,000    |           |
|      | Investments  |           | 50,000    |
|      | Sell investment at cost.   |           |           |
| (22) | Property, Plant, and Equipment   | 250,000   |           |
|      | Cash   |           | 250,000   |
|      | Purchase new plant with cash of \$50,000 from sale of investments and \$200,000 from transfer in from temporarily restricted plant |           |           |

Transactions affecting the current liability accounts include paying current liabilities and recording the receipt of cash in advance of billings from third parties. The hospital reclassified the portion of the long-term mortgage that is currently due and revalued the general fund's investment securities to fair value.

replacement and expansion fund.

ASC 958 requires that not-for-profit organizations value their investment securities other than equity investments accounted for under ASC 323 and 325 at fair value at each balance sheet date. The total investment income during a period is from dividends, interest, and realized and unrealized holding gains or losses. After the total investment income is determined, a not-for-profit hospital reports the portion of investment income designated for current operations above the operating performance indicator line on its statement of activities. The hospital separately reports on its statement of activities the investment return in excess of the amount designated for current operations below the operating performance indicator line its statement of activities. The not-for-profit's management is permitted to establish a policy as to the separation of total investment return for current operations or for other purposes that should be described in the footnotes to the financial statements. For our example, assume that Sol City Community Hospital's board of directors has a policy to set aside the recognition of unrealized holding gains of unrestricted investments for possible future operations. Therefore, the hospital recognizes the entire \$15,000 of unrealized holding gain on its year-end revaluation of its investment securities separately below the operating performance indicator line on its statement of activities.

| (23) | Notes Payable to Bank   | 5,000  |         |

| (25) | Mortgage Payable  | 50,000 |         |
|      | Current Portion of Long-Term Debt   |        | 50,000  |
|      | Reclassify current portion of long-term debt.   |        |         |
| (26) | Investments   | 15,000 |         |
|      | Unrealized Holding Gain on Investment Securities  |        | 15,000  |
|      | Revalue securities to fair value and report as not designated for                         |        |         |

We do not show closing entries, which are required for all nominal accounts, because the focus is on other aspects of hospital accounting and the closing process for hospitals is the same as for any other accounting entity. The statement of changes in net assets (Figure 19–8) includes a reconciliation of net assets between the beginning and end of

The statement of cash flows (Figure 19–9) is required. Either the direct or the indirect method may be used to display net cash flows from operations. The direct method presents the specific inflows and outflows from operations. Under the indirect method, the statement begins with the change in net assets as on the statement of changes in net assets and then presents the adjustments necessary to reconcile the net amount shown on the statement of changes in net assets with the cash flow provided by operating activities. Because of its popularity and wide use, we present the indirect method in Figure 19–9. The statement of cash flows is similar to that required of commercial, profit-seeking entities. The three categories of operating activities, investing activities, and financing activities are the same as for commercial entities. A not-for-profit hospital's statement of cash flows has an important feature, however; it reconciles to the change in cash and cash equivalents the hospital reports as a current asset on the hospital's balance sheet. This cash amount does not include the cash balances in the restricted accounts not available for operations (the plant fund and the endowment fund in the Sol City Community Hospital example). For example, the hospital received a \$415,000 cash contribution to the endowment fund in transaction (40) (presented later in this chapter). The \$415,000 must first be subtracted from the change in net assets in the operating section of the statement of cash flows because the endowment fund does not constitute operating activities. The \$415,000 is reported as an increase in financing activities on the statement of cash flows. Of the \$415,000, the hospital used \$400,000 to acquire investments (transaction [41] presented later in this chapter) and included this amount in the \$522,000 as an investing activity on the statement of cash flows. The \$15,000 of contributions not used to acquire investments in 20X2 is reported on the statement of cash flows as an investing activity, "Remainder of Contributions to Endowment Fund Restricted to Investing" because the amount of financing resources from the restricted endowment fund must equal the amount of investing resources from that restricted fund. Thus, the statement of cash flows reconciles only to the change in cash and cash equivalents shown as a current asset on the hospital's balance sheet.

In addition to the primary financial statements for the present fiscal period with comparatives for the prior period, hospitals are required to present extensive footnotes similar to those of a commercial entity. A specific footnote disclosure is required to report the estimated value of charity care services the hospital provided during the period.

# **Temporarily Restricted Funds**

Sol City Community Hospital uses three funds to account for temporarily restricted funds. The specific-purpose fund is for contributions designated for a particular use by the donor other than plant replacement and expansion. The time-restricted fund is for contributions pledged or received in advance that will be available for unrestricted use in the future. The plant replacement and expansion fund is for contributions to be used in acquiring additional land, buildings, and equipment.

### Specific-Purpose Fund

The specific-purpose fund is used to account for contributions for which a donorspecific use has been designated. For the most part, such contributions support particular hospital operating activities, such as educational or research programs, or provide a particular service to patients. The specific-purpose fund does not directly spend the resources; it holds the restricted resources until the general fund satisfies the terms of the restriction, usually by making the appropriate operating cost or by having the restricted cost approved by the governing board, upon which the specific-purpose fund transfers the resources to the general fund to pay for the operating cost.

The specific-purpose restricted fund typically invests its cash and receives interest or dividends from its investments. A variety of investment transactions can affect the fund balance. Nevertheless, the specific fund is only a holding fund for temporarily restricted resources until they are released for hospital use.

The following entries record the transactions in Sol City Community Hospital's specific-purpose fund during the 20X2 fiscal year and are reflected in the balance sheet in Figure 19-6 and the statement of changes in net assets in Figure 19-8.

Additions to Specific-Purpose Fund The specific-purpose fund receives \$6,000 of interest income from its investment of funds from a restricted gift to support the hospital's research activity. The fund receives restricted gifts of \$115,000 in response to a community fund-raising effort. The restricted gifts are allocated based on the donors' specifications. In addition, endowment fund earnings of \$60,000 were deposited directly in the temporarily restricted fund:

| (27) |  | 6.000   |        |
|------|--|---------|--------|
| (27) | Cash   | 6,000   |        |
|      | Investment Income—Research                                     |         | 6,000  |
|      | Interest on investment of research gift resources.             |         |        |
| (28) | Cash   | 115,000 |        |
|      | Contributions—Education  |         | 60,000 |
|      | Contributions—Research   |         | 55,000 |
|      | Receive restricted gifts.                                      |         |        |
| (29) | Cash   | 60,000  |        |
|      | Investment Income—Endowment Earnings                           |         | 60,000 |
|      | Earnings of endowment fund deposited in temporarily restricted |         |        |

Entry (29) shows the earnings generated by the permanently restricted endowment fund's investments as reported by the temporarily restricted fund. ASC 958 specifies that dividend, interest, and other investment income be reported in the period earned as increases in unrestricted net assets unless their use has donor-imposed restrictions. However, Sol City Community Hospital reports the earnings as investment income of the temporarily restricted fund because they have a donor-imposed restriction. After clearance is given,

funds until released for specified purposes.

the hospital then transfers the resources to the general fund to be expended for the donorspecified purposes. If permanently restricted, the investment income is reported in the permanently restricted net assets.

Gains or losses from valuation adjustments to fair value or from sales of securities also must be applied in accordance with any donor restrictions. For example, if the donor specifies that an investment be held for perpetuity, any valuation or sales transaction gain or loss on it is reported in the permanently restricted net asset class. The important point is to follow any restrictions imposed by the donor or applicable laws. If no restrictions are applicable, the investment income and gains or losses are reported in the unrestricted net asset class.

Deductions from Specific-Purpose Fund The specific-purpose fund is notified that the general fund fulfilled the terms of agreements for specific restricted grants totaling \$120,000. In addition to the \$120,000, the specific-purpose fund also transferred \$60,000 from endowment income to the general fund.

| (30) | Net Assets Released from Program Use Restriction—Research         | 61,000 |         |
|------|---|--------|---------|
|      | Net Assets Released from Program Use Restriction—Education        | 59,000 |         |
|      | Net Assets Released from Program Use Restriction—Endowment Income | 60,000 |         |
|      | Cash  |        | 180,000 |

Funds released from temporary restriction.

This interfund transaction also was recorded in the general fund (see entries [14] and [15] earlier in the chapter).

#### Time-Restricted Fund

ASC 958 changed procedures for recording contributions. Earlier recognition of contribution revenue generally is now required for most not-for-profit organizations, including hospitals. Because of the critical nature of contributions to the operations of voluntary health and welfare organizations, a thorough treatment of this topic is included later in the chapter as part of the discussion of these organizations. For purposes of illustration in the hospital setting, we assume that in 20X1, the hospital received pledges for \$12,000 to be collected in 20X2. During 20X2, this \$12,000 was collected and immediately transferred to the general fund for unrestricted use (see entry [18] earlier in the chapter).

| (31) | Cash                                       | 12,000 |
|------|--|--------|
|      | Pledges Receivable                         | 12,000 |
|      | Collection of prior period pledge.         |        |
| (32) | Net Assets Released from Time Restrictions | 12,000 |
|      | Cash                                       | 12,000 |

Funds released from time restrictions.

# Plant Replacement and Expansion Fund

Hospitals use the plant replacement and expansion fund, sometimes called the *plant fund*, to account for restricted resources given to them only for additions or major modifications to the physical plant. This is a holding fund until the governing board approves the transfer of the expenditures to the general fund.

A primary source of resources for the plant replacement and expansion fund is from fund-raising efforts in the communities the hospital serves. A hospital often asks potential donors to sign pledges specifying a giving level for a period of time, for example, \$100 per month for the next 12 months. The pledges become receivables of the fund and typically require a substantial allowance for uncollectibles. The fund records contribution revenue when the pledge is received.

The entries recorded in Sol City Community Hospital's plant replacement and expansion fund during 20X2 are presented next and are reflected in the balance sheet in Figure 19–6.

Additions to Plant Fund Increases in the plant replacement and expansion fund during the period are a donation of equipment with a fair value of \$25,000 that is recorded in the restricted plant fund until the equipment is placed into service; a donation of \$60,000 to acquire additional equipment; and the receipt of \$7,000 of interest on the plant fund's investments restricted to purchase plant assets. Entries to record these events follow:

| (33) | Property, Plant, and Equipment                         | 25,000 |        |
|------|--|--------|--------|
|      | Contributions—Plant                                    |        | 25,000 |
|      | Receive donated equipment with fair value of \$25,000. |        |        |
| (34) | Cash   | 60,000 |        |
|      | Contributions—Plant                                    |        | 60,000 |
|      | Receive restricted gifts for use to acquire equipment. |        |        |
| (35) | Cash   | 7,000  |        |
|      | Investment Income—Plant                                |        | 7,000  |
|      | Provide tales of a Water of contract                   |        |        |

Receive interest on fund's investments.

**Deductions from Plant Fund** Deductions from the plant fund during the year occur in two interfund transfers to the general fund. The first transfers \$25,000 of donated equipment in service, and the second transfers \$200,000 to the general fund for expenditures for fixed assets. These two interfund transfers also are recorded in the general fund (see entries [16] and [17] earlier in the chapter):

| (36) | Net Assets Released—Plant Acquisition   | 25,000  |         |
|------|---|---------|---------|
|      | Property, Plant, and Equipment  |         | 25,000  |
|      | Transfer donated equipment to general fund at time of placement into service. |         |         |
| (37) | Net Assets Released—Plant Acquisition   | 200,000 |         |
|      | Cash  |         | 200,000 |

Transfer cash to general fund for use in acquiring plant assets.

Other Transactions in Plant Fund Other transactions affecting only the plant fund's asset or liability accounts represent a collection of pledges made by individual donors during the last capital fund-raising drive as well as the acquisition of additional investments in the fund. Entries for these transactions follow:

| (38) | Cash                        | 105,000 |
|------|-----------------------------|---------|
|      | Pledges Receivable          | 105,000 |
|      | Collect pledges receivable. |         |
| (39) | Investments                 | 122,000 |
|      | Cash                        | 122,000 |
|      | Increase investments.       |         |

### Endowment Fund

An endowment fund is a collection of cash, securities, or other assets. The use of its assets may be permanently restricted, temporarily restricted, or unrestricted based on the donor's wishes. Generally, donors establish endowment funds to permanently restrict the capital of the donation and specify the use(s) of any income from those investments. The classification of an endowment fund is based, however, on the terms of the donor's contribution. If the fund is temporarily restricted for a stated period of time after which the principal becomes available for the specified uses, it is normally described as a term endowment. If permanently restricted into perpetuity, an endowment fund is normally described as a regular or permanent endowment.

Sol City Community Hospital has a permanently restricted endowment fund to account for resources whose donors have specified that the principal be maintained in perpetuity. The income from the investments in the endowment fund is recorded in the appropriate fund based on the donor's specifications. If the investment income is restricted, it is recorded in the appropriate restricted fund. If no donor-imposed restriction is present, the investment income should be recorded and reported in the unrestricted net asset fund.

The balance sheet in Figure 19–6 and the statement of changes in net assets in Figure 19–8 include the entries in Sol City Community Hospital's endowment fund for 20X2.

Additions to Endowment Fund The endowment fund earns \$60,000 interest and dividends from its permanent investments deposited directly in the temporarily restricted fund (see entry [29]). In addition, the hospital receives \$415,000 in new permanent endowments and uses \$400,000 from them to acquire additional investments:

| (40) | Cash                              | 415,000 |         |
|------|-----------------------------------|---------|---------|
|      | Contributions—Permanent Endowment |         | 415,000 |
|      | Receive additional endowments.    |         |         |
| (41) | Investments                       | 400,000 |         |
| (41) | Investments                       | 400,000 |         |
|      | Cash                              |         | 400,000 |
|      | Acquire additional investments.   |         |         |

# Summary of Hospital Accounting and Financial Reporting

A hospital's major operating activities take place in the general fund. Restricted funds are holding funds that transfer resources to the general fund for expenditures upon satisfaction of their respective restrictions. The general fund uses the accrual basis of accounting to fully measure the revenue and costs of providing health care and reports patient services revenue at gross amounts measured at standard billing rates. A deduction for contractual adjustments is then made to arrive at net patient services revenue. Other revenue is recognized for ongoing nonpatient services, such as sales of cafeteria food, television rentals, and donated supplies and medicines. A hospital presents charity care services only in the footnotes and recognizes no revenue for them. Operating expenses in the general fund include depreciation, bad debts, and the value of recognized donated services that support the hospital's basic services; however, it does not recognize all donated services. A hospital typically records donated property and equipment in a restricted fund, such as the plant fund, until placed into service when it transfers them to the general fund. Donated assets are recorded at their fair market values at the date of gift.

The financial statements of a hospital are the (1) balance sheet, (2) statement of operations, (3) statement of changes in net assets, and (4) statement of cash flows.

# **VOLUNTARY HEALTH AND WELFARE ORGANIZATIONS**

LO 19-4

Understand financial reporting rules and make basic journal entries for not-forprofit voluntary health and welfare organizations.

Voluntary health and welfare organizations (VHWOs) provide a variety of social services. Examples are United Way, the American Heart Association, the March of Dimes, the American Cancer Society, the Red Cross, and the Salvation Army. These organizations solicit funds from the community at large and typically provide their services for no fee, or they may charge a nominal fee to those with the ability to pay. The federal government normally provides tax-exempt status to these organizations.

ASC 958 summarizes the accounting and financial reporting principles for VHWOs. Additional information may be obtained from a variety of sources. The AICPA Audit and Accounting Guide for Not-for-Profit Organizations requires the use of generally accepted accounting principles for VHWOs. They are typically audited and make their audited financial statements available to contributors and others interested in knowing about the organization's financial condition and how it uses its resources. Another source for accounting and reporting guidelines for VHWOs is the Standards of Accounting and Financial Reporting for Voluntary Health and Welfare Organizations published by the combined group of the National Health Council, the National Assembly of National Voluntary Health and Social Welfare Organizations, and the United Way of America, The standards book, known as the "black book" for the color of its cover, represents an effort to incorporate in one manual accounting and financial reporting standards as well as the actual experiences of the largest VHWOs in the United States.

# **Accounting for a VHWO**

The accrual basis of accounting is required for a VHWO to measure fully the resources available to it. It reports depreciation as an operating expense each period because its omission would result in an understatement of the costs of providing the organization's services. Therefore, accounting for a VHWO is similar to that for other not-for-profit organizations except for special financial statements that report on a VHWO's important aspects. This section presents an overview of the accounting and financial reporting principles for a VHWO.

Even though not required to do so, VHWOs have been free to use fund accounting in their accounting and reporting processes. In the past, the typical VHWO has been portrayed as using a fund structure with (1) a current unrestricted fund, (2) a current restricted fund, (3) a land, building, and equipment fund, and (4) an endowment fund. Many VHWOs are considerably smaller in size and scope of activity than hospitals and may find it convenient to convert from the traditional fund structure to a single accounting entity or a fund structure that distinguishes between unrestricted, temporarily restricted, and permanently restricted assets. The journal entries for Voluntary Health and Welfare Service presented in this section assume the use of a single fund or accounting entity. When appropriate, designations have been added to the journal entry captions to show which of the three classes of assets (unrestricted, temporarily restricted, or permanently restricted) is affected. Thus, the entries could be used equally well if separate funds were established for each of the three asset classifications. Journal entries are presented in the following discussion for only a portion of the transactions of Voluntary Health and Welfare Service in 20X2.

# Financial Statements for a VHWO

ASC 958 requires that a VHWO provide the following financial statements: (1) statement of financial position, (2) statement of activities, (3) statement of cash flows, and (4) statement of functional expenses.

The financial statements are designed primarily for users interested in the organization as "outsiders," not management. These include contributors, beneficiaries of services, creditors and potential creditors, and related organizations. A clear distinction should be maintained between restricted resources and those resources available for expenditure for the organization's major missions. As outlined in FASB Concepts Statement No. 6, "Elements of Financial Statements" (FAC 6), a not-for-profit organization divides its net assets into three mutually exclusive classes: permanently restricted, temporarily restricted, and unrestricted. Restricted resources are subject to externally imposed constraints, not internal or board-designated decisions that may be changed by the VHWO's governing board. In addition, readers of the general-purpose financial statements should be able to clearly evaluate management's performance in accomplishing the VHWO's objectives.

### Statement of Financial Position for a VHWO

Refer to Figure 19–10 for a VHWO's statement of financial position. The format is similar to the one in the hospital illustration. Although not required by existing standards, the assets and liabilities are segregated into current and noncurrent classifications. The net assets section of a VHWO's statement of financial position must be segregated into unrestricted, temporarily restricted, and permanently restricted as illustrated. Major balance sheet accounts are as follows.

**FIGURF 19-10 Statement of Financial** Position for a **Voluntary Health and Welfare Organization** 

# **VOLUNTARY HEALTH AND WELFARE SERVICE Statement of Financial Position December 31, 20X2 and 20X1**

|                                      | 7 20/12 4114 20/11 |                  |

| Total Liabilities & Net Assets       | <u>\$710,500</u>   | <u>\$647,200</u> |
|                                      |                    |                  |

**Pledges from Donors** Pledges to give may be unconditional or conditional. Conditional promises, which depend on the occurrence of a specified future and uncertain event, are recognized only after the conditions on which they depend have been substantially met (i.e., when the conditional promise becomes unconditional). The pledges may be unrestricted, temporarily restricted, or permanently restricted based on the circumstances of the pledge and the donor's specifications.

For the VHWO example, the current unrestricted fund includes net pledges receivable of \$78,400 in 20X2. The accrual basis of accounting recognizes the receivable and associated revenue when the VHWO receives the unconditional pledge. If the contribution is available to support current period activities, there is no restriction. An adequate allowance for uncollectibles for the pledges receivable is recognized by a debit to Contributions as a direct reduction from the contribution revenue account and as a credit to Allowance for Uncollectible Pledges, which is a contra account to the pledges receivable asset account. Note that a VHWO does not have a bad debts expense account; it charges the revenue account directly for estimated uncollectible amounts. Pledges or other contributions applicable to future periods should be reported in temporarily restricted net assets as "Contributions—Temporarily Restricted" to show that these resources are not currently available for the entity's operations. Further accuracy could be attained by identifying the temporary restriction as "Contributions—Temporarily Restricted—Time Restrictions." Conditional pledges are not recognized until the conditions on which they depend have been substantially met.

The following illustrates the entries Voluntary Health and Welfare Service used in accounting for a portion of the pledges in 20X2. Note that this discussion is for only a part of the pledges, not all of those received in the year, nor does the following discussion attempt to reconcile to the \$78,400 balance in net pledges receivable at the end of the year. The discussion includes the accounting for the pledges from only one of the organization's several pledge campaigns during the year.

A special pledge campaign resulted in \$100,000 of new pledges. Of this total, \$5,000 is to be received in the current period but is to be held for use for unrestricted purposes in the following period. Experience shows that 20 percent of pledges to this organization are uncollectible. An allowance for uncollectibles is recognized in the amount of \$20,000. Note that both the current and deferred pledges are reported as contribution revenue in the period the unconditional pledges are received and that provisions for estimated uncollectibles are then recorded as reductions of contribution revenue.

| (42) | Pledges Receivable—Unrestricted                               | 95,000 |        |
|------|---|--------|--------|
|      | Pledges Receivable—Temporarily Restricted                     | 5,000  |        |
|      | Contributions—Unrestricted                                    |        | 95,000 |
|      | Contributions—Temporarily Restricted                          |        | 5,000  |
|      | Receive pledges and recognize receivables.                    |        |        |
| (43) | Contributions—Unrestricted                                    | 19,000 |        |
|      | Contributions—Temporarily Restricted                          | 1,000  |        |
|      | Allowance for Uncollectible Pledges—Unrestricted              |        | 19,000 |
|      | Allowance for Uncollectible Pledges—Restricted                |        | 1,000  |
|      | Provide for estimated uncollectible pledges as a reduction of |        |        |

Note that there is no separate bad debt expense recognition. Instead, the contributions accounts are reduced for the estimated amount of uncollectible pledges. ASC 958 states that unconditional promises to give that are expected to be collected in less than one year may be measured at net realizable value (net settlement value). Pledged contributions expected to be collected in the future beyond one year can be valued at the present value of their estimated future cash flows. Subsequent increases in the present value of the future cash flows due to the reduction of the present value discount are accounted for as contribution income in the fund for which the pledge was received.

contributions

All \$5,000 of the funds pledged for use the following year and \$85,000 of unrestricted pledges are collected in the current period, requiring an adjustment to both unrestricted and temporarily restricted contribution revenue. Temporarily restricted contribution revenue increased by \$1,000 to the full \$5,000 received, and \$9,000 is added to unrestricted contribution revenue due to collections of \$85,000 in pledges versus the initial estimate of \$76,000 (\$95,000  $\times$  0.80). Of the remaining balance, \$3,000 is written off as uncollectible, and the remainder is carried over to the following period:

| (44) | Cash—Unrestricted  | 85,000 |        |
|------|--|--------|--------|
|      | Cash—Temporarily Restricted                                      | 5,000  |        |
|      | Allowance for Uncollectible Pledges—Unrestricted                 | 9,000  |        |
|      | Allowance for Uncollectible Pledges—Restricted                   | 1,000  |        |
|      | Pledges Receivable—Unrestricted                                  |        | 85,000 |
|      | Pledges Receivable—Temporarily Restricted                        |        | 5,000  |
|      | Contribution Revenue—Unrestricted                                |        | 9,000  |
|      | Contribution Revenue—Temporarily Restricted                      |        | 1,000  |
|      | Collect pledges including \$10,000 above initial estimate of     |        |        |
|      | collectability.  |        |        |
| (45) | Allowance for Uncollectible Pledges—Unrestricted                 | 3,000  |        |
|      | Pledges Receivable—Unrestricted                                  |        | 3,000  |
|      | Write off uncollectible pledges in unrestricted net asset class. |        |        |

In the following period when the \$5,000 is available for unrestricted use, the balance is reclassified as unrestricted. Some organizations would use the terms net assets released instead of reclassification, but the terms are synonymous, and both are used in this chapter to show their equality.

| (46) | Cash—Unrestricted   | 5,000 |       |
|------|---|-------|-------|
|      | Reclassification of Contributions to Unrestricted             |       | 5,000 |
|      | Reclassify time-restricted funds to unrestricted.             |       |       |
| (47) | Reclassification of Contributions from Temporarily Restricted | 5,000 |       |
|      | Cash—Temporarily Restricted                                   |       | 5,000 |

Reclassify time-restricted funds from temporarily restricted.

ASC 958 also prescribes appropriate treatment for unconditional pledges to be received over a long period of time. In general, contribution revenue is recognized at the present value of future cash receipts. As is the normal practice in utilizing present value procedures in the corporate sector, the present value is used to record contributions to be received in following accounting periods. For example, if a donor agrees to contribute \$10,000 per year at the end of each of the next five years, the stream of the payments is discounted at an appropriate rate (e.g., 8 percent), and the present value is recognized when the pledge is received:

| (48) | Pledges Receivable—Temporarily Restricted | 39,927 |
|------|---|--------|
|      | Contributions—Temporarily Restricted      | 39,927 |
|      | Receipt of pledge                         |        |

At the end of the first year when the first payment of \$10,000 is received, that amount is reclassified from temporarily restricted to unrestricted, and the increase in present value of the contributions receivable is recognized as an increase in temporarily restricted contributions and contributions receivable:

| (49) | Cash—Unrestricted   | 10,000 |        |
|------|---|--------|--------|
|      | Reclassification of Contributions to Unrestricted             |        | 10,000 |
|      | Reclassify time-restricted funds to unrestricted.             |        |        |
|      |   |        |        |
| (50) | Reclassification of Contributions from Temporarily Restricted | 10,000 |        |
|      | Pledges Receivable—Temporarily Restricted                     |        | 10,000 |
|      | Reclassify time-restricted funds from temporarily restricted. |        |        |

Note that after the receipt of the first \$10,000 contribution, the balance in the Pledges Receivable—Temporarily Restricted account decreases from \$39,927 to \$29,927. However, recalculating the present value of the next four payments yields a present value of \$33,121. Thus, a \$3,194 adjustment must be made to the account to increase its balance to the new present value of future contributions receivable (\$33,121 - \$29,927 = \$3,194).

| (51) | Pledges Receivable—Temporarily Restricted | 3,194 |
|------|---|-------|
|      | Contributions—Temporarily Restricted      | 3,194 |

Increase in the present value of contributions receivable.

Investments The VHWO may obtain investments through purchase or donation and should record purchased investments at acquisition cost. The organization should record donated securities at their fair values at the dates of the gifts. Subsequently, it reports equity investments (other than ASC 323 and 325 equity investments) and all investments in bonds at fair value. The organization's statement of activity should separately identify appreciation gains (or reductions in value) as unrealized gains (losses) in accordance with **ASC 958.** Transfers of investments from one portfolio to another should be made at fair value with any gains or losses in valuation recorded.

The VHWO should report investment earnings or losses as unrestricted, temporarily restricted, or permanently restricted, depending on how they are to be used. For example, the donor of a restricted endowment fund may not specify any limitations on the uses of its income or losses. In that case, the income or losses on the investments are reported on the statement of activities as changes in unrestricted net assets. However, the stipulated treatment of the income or losses from a donor-restricted endowment fund must be implemented. In some cases, the donor may impose some time or dollar requirement on the earnings, such as requiring that the income for the first five years be added to the permanent endowment or that income only above some dollar amount be transferred to an unrestricted fund and the income below that amount be added to the permanent endowment's principal. The key point is that the VHWO must follow the donor's specifications as presented in the contribution agreement between it and the donor and any applicable law regarding a not-for-profit association's management of restricted resources.

Land, Buildings, and Equipment Land, buildings, and equipment; depreciation expense; and the accumulated depreciation on the fixed assets generally are reported as unrestricted unless donor restricted. The VHWO may have an accounting policy of retaining long-lived, restricted buildings and equipment in the restricted net asset class even though the assets are used in the entity's operations. As the VHWO uses the buildings and equipment in the operations, it reclassifies an allowance for depreciation from the restricted net asset class to the unrestricted net asset class. This provides for depreciation and maintains the net book value of the restricted buildings and equipment in the restricted net asset class. The basis of fixed assets is cost, and donated assets are recorded at their fair values at the dates of the gifts. Donations of fixed assets that the organization will sell in the near future are equivalent to other contributions and should be separately reported as unrestricted assets until sold. For example, assume that the VHWO receives land as a donation and plans to sell it and use the proceeds to support the entity's program services. It should record the land at fair value as an unrestricted asset and report it as land held for resale until sold.

A VHWO may use any one of the depreciation methods available to commercial entities. A not-for-profit entity is not required to depreciate assets such as works of art or other historically valuable assets when the entity has made a commitment to preserve the value of the art or historical assets and has shown the capacity to do so.

Liabilities The VHWO records liabilities in the normal manner under the accrual model. In most situations, it reports liabilities as part of the unrestricted net assets. For example, the mortgage payment made by Voluntary Health and Welfare Service in 20X2 was recorded as a \$2,000 debit to Mortgage Payable and a \$2,000 credit to Cash. In this illustration, the VHWO classifies property, plant, and equipment as an unrestricted asset. In some cases, the entity makes mortgage payments on assets classified as restricted from unrestricted funds. The following entries are needed in the latter case:

| (52) | Reclassification to Restricted Assets           | 2,000 |     |
|------|---|-------|-----|
|      | Cash (Unrestricted)                             | 2,    | 000 |
|      | Mortgage payment made from unrestricted assets. |       |     |
| (53) | Mortgage Payable—Restricted Assets              | 2,000 |     |
|      | Reclassification from Unrestricted Assets       | 2,    | 000 |
|      | Reduction of carrying value of mortgage.        |       |     |

Net Assets The VHWO should disclose separately the amounts of net assets designated as unrestricted, temporarily restricted, and permanently restricted. Its governing board also may show its intent to use unrestricted resources for specific needs in the future by creating one or more board-designated categories. For example, the \$498,200 of unrestricted net assets at December 31, 20X2, in Figure 19-10 could be separated into board designated and undesignated. Board-designated purposes might be for purchases of new equipment, research, construction of new facilities, or other asset acquisitions. Although the statement of financial position could reflect the designation of resources, the governing board may change it at any time.

# Statement of Activities

Refer to Figure 19-11 for Voluntary Health and Welfare Service's major operating statement for Voluntary Health and Welfare Service, the statement of activities. The statement's overall structure for VHWOs and other not-for-profit entities should be very similar as a result of ASC 958. A number of organizations have issued standards relating to VHWOs as they have for other types of not-for-profit entities (see the later discussion of other not-for-profit organizations [ONPOs]). Both the National Health Council's black book of standards for VHWOs and the AICPA Audit and Accounting Guide for Not-for-Profit Organizations contain recommendations for accounting for them. We discuss several unique aspects of VHWOs next.

**Public Support** Historically, a distinction has been made in the sources of funding VHWOs receive. Nonprofit organizations generally provide services to those who cannot afford to pay for the benefits received or support programs for which little compensation is received. The primary source of funds for VHWOs is likely to be contributions from individuals or organizations that do not derive any direct benefit from the VHWO for their gifts. The magnitude of funds received and the diversity of contributors are important in evaluating the effectiveness of VHWOs. Four sources of resources included in the 20X2 statement of activities for Voluntary Health and Welfare Service in Figure 19-11 are considered to fall in the category of support. They include contributions, legacies and bequests, collections through affiliates (other organizations in the same community or with similar goals), and contributions received from a federated (national or regional) organization's fund-raising efforts.

Under the guidelines of ASC 958, total proceeds from a sponsored event such as a dance gala or marathon are reported as support from special events, and the costs of sponsoring the event are reported as fund-raising costs. Even though many of the necessary items for such activities are contributed, the costs of sponsoring an event can be rather substantial. The frequency of such events undoubtedly was a factor in the change in the tax laws that now require not-for-profit organizations sponsoring a special event to provide participants a statement detailing the portion of the cost of a ticket or other contribution that may be treated as a charitable contribution for tax purposes.

**Revenues** Funds received in exchange for services provided or other activities are classified as revenues. Although the majority of a VHWO's resources come from public support, memberships, fees charged to program participants, sales of supplies and services, and investment income also provide funds.

Gains A VHWO may sell investments and other assets from time to time and incudes the difference between the sale price and the carrying value in its statement of activities as a gain or loss. Much of the time, the entity reinvests gains received from sales of investments in anticipation of future earnings; nevertheless, all gains and losses should be included in the period's statement of activities.

Donated Materials and Services A VHWO often relies heavily on donated materials and services. Donated materials are recorded at fair value when received. If a VHWO uses the donated materials in one of its program services, it should record their value as an expense in the period used. If the donated materials simply pass through the VHWO to its charitable beneficiaries, it is acting as an agent and does not record the materials as a contribution or an expense.

Donated services are essential to a VHWO. Because of the difficulty of valuing these services, they often are not recorded as contributions. However, if donated services are significant, the VHWO should recognize them if they (1) create or enhance nonfinancial assets or (2) require specialized skills, are provided by individuals possessing those skills,

FIGURE 19-11 Statement of Activities for a Voluntary Health and Welfare Organization

## **VOLUNTARY HEALTH AND WELFARE SERVICE Statement of Activities** For the Year Ended December 31, 20X2

|  | Unrestricted | Temporarily<br>Restricted | Permanently<br>Restricted | Total     |
|--|--------------|---------------------------|---------------------------|-----------|
| Revenues, Gains, & Other Support:            |              |                           |                           |           |
| Contributions                                | \$627,000    | \$42,300                  | \$ 9,900                  | \$679,200 |
| Legacies & Bequests                          | 15,000       |                           |                           | 15,000    |
| Collections through Affiliates               | 2,800        |                           |                           | 2,800     |
| Allocated from Federated Fund-Raising Effort | 45,300       |                           |                           | 45,300    |
| Memberships                                  | 6,100        |                           |                           | 6,100     |
| Program Fees                                 | 700          |                           |                           | 700       |
| Sale of Materials                            | 200          |                           |                           | 200       |
| Investment Income                            | 36,400       | 500                       |                           | 36,900    |
| Gain on Investments                          | 12,000       |                           | 1,000                     | 13,000    |
| Donated Services                             | 3,000        |                           |                           | 3,000     |
| Net Assets Released from Restriction:        |              |                           |                           |           |
| Program Use Restrictions                     | 25,000       | (25,000)                  |                           |           |
| Passage of Time                              | 8,100        | (8,100)                   |                           |           |
| Equipment Acquisition                        | 10,900       | (10,900)                  |                           |           |
| Endowment Transfers                          | 10,000       |                           | (10,000)                  |           |
| Total Revenues, Gains, & Other Support       | \$802,500    | \$ (1,200)                | \$ 900                    | \$802,200 |
| Program Services & Operating Costs:          |              |                           |                           |           |
| Research                                     | \$274,300    |                           |                           | \$274,300 |
| Public Health Education                      | 92,000       |                           |                           | 92,000    |
| Professional Training                        | 106,000      |                           |                           | 106,000   |
| Community Services                           | 98,600       |                           |                           | 98,600    |
| Management & General                         | 91,700       |                           |                           | 91,700    |
| Fund-Raising                                 | 64,500       |                           |                           | 64,500    |
| Payments to National Offices                 | 15,000       |                           |                           | 15,000    |
| Total Expenses                               | \$742,100    | \$ 0                      | \$ 0                      | \$742,100 |
| Change in Net Assets                         | \$ 60,400    | \$ (1,200)                | \$ 900                    | \$ 60,100 |
| Net Assets at Beginning of Year              | 437,800      | 24,100                    | 138,600                   | 600,500   |
| Net Assets at End of Year                    | \$498,200    | \$22,900                  | \$139,500                 | \$660,600 |

and typically need to be purchased if not donated. If these conditions are satisfied, the entity should report the value of donated services as part of public support and as an expense in the period in which it provides the services. As an example of donated services, assume that a CPA donates audit services with an estimated value of \$3,000. The VHWO makes the following entry in the current unrestricted fund to recognize the donated services:

Donated services that are directly related to restricted assets should be reported in the restricted net assets class. For example, an architect may donate services for planning the construction of a new building that is restricted for a specific purpose. In this case, the value of the donated services is capitalized to the construction in progress in the restricted net asset class and becomes part of the basis of the new building.

**Expenses** The statement of activities should contain information about the major costs of providing services to the public, fund-raising, and general and administrative costs to provide contributors and others useful information in assessing the VHWO's effectiveness. Those costs of providing goods and services to beneficiaries, customers, or members in fulfilling the primary VHWO mission are referred to as program service costs. A VHWO's statement of activities normally should include the total costs of providing each major class of program services. The primary activities for Voluntary Health and Welfare Service are research, public health education, professional training, and community services (Figure 19-11). ASC 958 requires that all not-for-profit entities report total entity expenses—even those financed by restricted fund resources—in the unrestricted fund. The restricted fund will report no expenses but a transfer out for the amount expended, and the unrestricted fund will report a transfer in.

The statement of activities also provides information on the costs of other activities needed for the organization to operate effectively but that may not be directly assignable to a particular program. These costs generally are reported either as management and general administrative costs or as fund-raising costs. Management and general activities include the costs of maintaining the general headquarters, recordkeeping, business management, and other management and administrative activities not directly assignable to program services or fund-raising activities. Fund-raising activities include the costs of special mailings, compiling potential donor lists, conducting campaigns through contacts with foundations and governmental agencies, and other similar costs. Those organizations whose membership contributions are important sources of funds separately disclose the costs of soliciting members and providing special benefits to current members.

Depreciation costs for 20X2 totaled \$9,500. An allocation is made to each program service and supporting service based on square footage used or some other reasonable basis. For example, an allocation of the \$9,500 of depreciation based on square footage occupied to each of the program and supporting services is recorded with the following entry:

| (55) | Research—Depreciation               | 4,300 |
|------|-------------------------------------|-------|
|      | Public Health—Depreciation          | 1,000 |
|      | Professional Training—Depreciation  | 2,000 |
|      | Community Services—Depreciation     | 1,200 |
|      | Management and General—Depreciation | 500   |
|      | Fund-Raising—Depreciation           | 500   |
|      | Accumulated Depreciation            | 9,500 |

Record depreciation for 20X2.

Costs of Informational Materials That Include a Fund-Raising Appeal Not-for-profit entities often prepare informational materials that include a direct or indirect message soliciting funds. The issue is how to record the cost of these materials. Should they be program or fund-raising expenses? Many VHWOs prefer to classify them as program rather than fund-raising costs to highlight the fulfillment of their basic service mission and to present a better ratio of program expenses to total expenses. Users of the generalpurpose financial statements are concerned with the amounts that VHWO organizations spend to solicit contributions as opposed to the amounts they spend for program services. If a not-for-profit entity cannot show that it conducted a program or management function in conjunction with the appeal for funds, it should report the entire cost of the informational materials or activities as a fund-raising expense. However, if it can demonstrate that it conducted a bona fide program or management function in conjunction with the appeal for funds, it should allocate the costs of informational materials between programs and fund-raising. Evidence of a bona fide program intent in a brochure would be an appeal designed to motivate its audience to action other than provide financial support to the organization. The informational content of a brochure might include a description of the symptoms of a disease and the actions an individual should take if one or more of the symptoms occur. Thus, the content of the message and the intended audience are significant factors.

### Statement of Cash Flows

The third required financial statement for VHWOs is the statement of cash flows (Figure 19-12). The statement's format is similar to that for hospitals discussed earlier in the chapter. Note that under the indirect approach, the statement begins with the change in net assets and reconciles to the net cash provided by operating activities.

### Statement of Functional Expenses

The fourth statement ASC 958 specifies for VHWOs is the statement of functional expenses that details the items reported in the expenses section of the statement of activities in Figure 19-11. Figure 19-13 is a standard format for the statement of functional expenses that presents the expense categories across the columns. The rows provide the specific nature of the items composing these expense categories from the various funds.

Bad Debts Expense is from estimated uncollectibles directly related to program services and operations, including membership fees. Note that any estimated uncollectible pledges are deducted directly from contribution revenue.

The statement of functional expenses includes depreciation of \$9,500 for the year allocated among the various programs and supporting services. Total expenses of \$742.100 in Figure 19-11 are analyzed and reconciled on the statement of functional expenses in Figure 19–13.

# **Summary of Accounting and Financial Reporting for VHWOs**

The accounting and financial reporting requirements for VHWOs are specified in ASC 958 and the AICPA Audit and Accounting Guide for Not-for-Profit Organizations. The accrual basis of accounting is used. The VHWO reports its primary activities in the unrestricted asset class. Donor-restricted resources for specific operating purposes or future periods are reported as temporarily restricted assets. Assets contributed by the donor with permanent restrictions are reported as permanently restricted assets.

A VHWO provides four financial statements: (1) statement of financial position, (2) statement of activities, (3) cash flow statement, and (4) statement of functional expenses. All VHWOs must provide an analysis of all of their expenses, including depreciation, on its statement of functional expenses. Expenses are separated into types, such as salaries, supplies, and travel, and are summarized by individual program services and individual supporting services.

# OTHER NOT-FOR-PROFIT ENTITIES

LO 19-5

Understand financial reporting rules and make basic iournal entries for other not-for-profit organizations.

There are many types of not-for-profit entities in addition to colleges and universities, hospitals, and voluntary health and welfare organizations. Our society depends heavily on such organizations for religious, educational, social, and recreational needs. Examples of other not-for-profit organizations (ONPOs) include the following:

Cemetery organizations Private and community foundations Civic organizations Private elementary and secondary schools Fraternal organizations Professional associations

Labor unions Public broadcasting stations Libraries Religious organizations

Research and scientific organizations Museums

Other cultural institutions Social and country clubs Performing arts organizations Trade associations

Political parties Zoological and botanical societies

# **Accounting for an ONPO**

The issuance of ASC 958 has done much to bring the financial reporting standards of hospitals, voluntary health and welfare organizations, and other not-for-profit organizations into agreement. In addition to the FASB standards, the AICPA Audit Guide for Not-for-Profit Organizations provides guidance for accounting and financial reporting standards for ONPOs.

Beta Alpha Psi with which many accounting students are familiar is an example of an other not-for-profit organization (ONPO). In 2012, this ONPO reported total unrestricted revenue and support of more than \$1.5 million and total expenses of almost \$1.3 million.

ONPOs vary significantly in size and scope. Although accrual accounting is required for all ONPOs, some small organizations operate on a cash basis during the year and convert to an accrual basis at year-end. Other ONPOs have thousands or even millions of members and hold assets worth substantial sums of money. From the viewpoint of asset management and

control procedures, such organizations may be virtually identical to a large business entity. The fact that they are not in business to earn profits from selling goods and services continues to distinguish some aspects of financial reporting for ONPOs from those of business entities, however.

#### Financial Statements of an ONPO

The principal purpose of an ONPO's financial statements is to explain how it has used available resources to carry out its activities. Therefore, the statements should disclose the nature and source of the resources acquired, any restrictions on the resources, and the principal programs and their costs; they also should provide information on the organization's ability to continue to carry out its objectives. ASC 958 requires that an ONPO provide the following financial statements: (1) statement of financial position, (2) statement of activities, and (3) statement of cash flows. Although the statement of functional expenses is not required, it may be appropriate for an ONPO to prepare a statement providing information on expenses by function for each major program when the entity is involved in a broad range of activities or conducts activities that are very distinct from one another.

### Statement of Financial Position for an ONPO

A statement of financial position for Ellwood Historical Society, a not-for-profit organization that renovates and preserves historical buildings in Sol City, appears in Figure 19–14. The society has its own governing board and is not associated with a government. The illustrated statement of financial position is a very simple one in light of the organization's well-defined mission.

Land, Buildings, and Equipment Land, buildings, and equipment owned by an ONPO and used in its activities generally are recorded at historical cost and depreciated in the normal manner. Donated operating assets should be recorded at fair market value at the date of contribution. Unless the donor restricts the asset's use, the ONPO should include land, buildings, and equipment in unrestricted net assets reported on the statement of financial position.

*Inexhaustible Collections* Libraries, museums, art galleries, and similar entities often hold collections of works of art or other historical items for public viewing or research. Some organizations recognize such works of art or other historical treasures as assets, but most do not. Moreover, when individual works of art or historical holdings are recorded, the Financial Accounting Standards Board in ASC 958 concludes that not-for-profit organizations are not required to record depreciation on those collections. ASC 958 discusses specific rules for disclosure of the costs of items purchased and funds generated from their sale.

| Net Assets at End of Year              | \$179,000    | \$ 48,000                 | \$102,000                 | \$329,000 |

### Statement of Activities

A statement of activities for Ellwood Historical Society presented in Figure 19–15 reports the support, revenue, expenses, transfers, and changes in fund balance during the fiscal period.

The format for the statement of activities is comparable to the statement of activities for a VHWO. For the Ellwood Historical Society, contributions are the primary source of support. However, both membership dues and admissions provide higher revenue than they do in the voluntary health and welfare setting. Memberships often provide free or reduced-rate admission to a museum, art gallery, or library. Thus, memberships and admissions may be interrelated in these organizations. Other types of organizations may have very different sources of funds and major expense categories. The financial statement categories and presentation should be adjusted to focus on these attributes in such cases.

As with VHWOs, depreciation charges for the period have been apportioned to the ONPO's primary programmatic activities and reported as expenses in the unrestricted assets section of the statement of activities. The ONPO's financial statements or the footnotes to them should disclose depreciation charges for the period and the balance of accumulated depreciation to assist financial statement readers in assessing the ONPO's operating effectiveness and financial position.

An ONPO shows assets released from restriction during the period as reclassifications in the statement of activities. Thus, a contribution of \$21,000 for research on Civil War activities would be included in the \$78,000 reported as temporarily restricted contributions in Figure 19–15. If the organization spends \$19,500 of the contribution during 20X2, that amount is part of the \$62,600 reclassified from temporarily restricted to unrestricted

| Net Cash Provided by Financing Activities Net Increase in Cash Cash at Beginning of Year Cash at End of Year   |   | 106,000<br>\$ 15,200<br>16,800<br>\$ 32,000 |

assets (net assets released from program use restrictions) in 20X2. The \$19,500 expense incurred in conducting the research is included in the \$24,200 total reported as research expense in 20X2.

### Statement of Cash Flows

The statement of cash flows for Ellwood Historical Society in Figure 19–16 begins with the net change in assets for the combined entity taken from the statement of activities. Adjustments are made for noncash revenues and expenses and changes in account balances to determine the amount of cash provided by operating activities. Net cash flows from investing activities and financing activities are added (deducted) to get the net increase (decrease) in cash for the period. The net cash flow for the period is added to the beginning cash balance in unrestricted assets to determine at the balance at the end of the period.

### Summary of Accounting and Financial Reporting for an ONPO

Accounting for an ONPO is similar to that for a VHWO. An ONPO uses the accrual basis of accounting for financial reporting purposes and must provide a statement of financial position, statement of activities, and statement of cash flows for financial reporting purposes. When a large number of programs or a number of very different types of programs are part of the operations of an ONPO, it may be desirable to prepare a statement of expenses by functional area or major program as well. As a result of **ASC 958**, an ONPO's reporting requirements are substantially the same as those for a VHWO.

# Summary of **Key Concepts**

Colleges and universities may be public or private. The GASB specifies the accounting and financial reporting standards for public (governmental) colleges and universities in GASB 34 and GASB 35. ASC 958 specifies accounting and reporting for private colleges and universities. This standard requires (1) charging depreciation to operations, (2) reporting the balance of net assets, (3) presenting the standards for accounting for contributions, displaying standards for not-for-profit entities, and specifying the accounting for investments held by not-for-profit entities. Private not-for-profit colleges and universities must provide three financial statements: (1) statement of financial position, (2) statement of activities, and (3) statement of cash flows. The net assets must be separated into three categories: (1) unrestricted, (2) temporarily restricted, and (3) permanently restricted based on restrictions imposed by donors, law, or contract.

Health care providers, voluntary health and welfare organizations (VHWOs), and other notfor-profit organizations (ONPOs) use the accrual basis of accounting and account for a majority of transactions in the unrestricted assets class. Health care providers and other not-for-profit entities report restricted funds as temporarily or permanently restricted, depending on the terms the donor established. Such funds are classified as restricted until the those conditions have been met and then are reclassified to the unrestricted net asset category. Hospitals deduct contractual adjustments from gross billings in arriving at net patient services revenue in the statement of operations. Hospitals include donated medical supplies and medicines as revenue in the period of receipt. Not-for-profit hospitals provide a statement of financial position, a statement of operations, a statement of changes in net assets, and a statement of cash flows. The statement of operations for a hospital must present a performance indicator, called something such as Excess of Revenues over Expenses, that includes both operating income and other income such as investments from trading securities in the general fund's investment portfolio. Below this operating indicator, hospitals present unrealized gains or losses on the general fund's other-than-trading securities, amounts for net assets released from restrictions used for purchase of property and equipment, and other nonoperating items.

VHWOs and ONPOs recognize contribution revenue, investment income, and gains and losses on investments for unrestricted, temporarily restricted, and permanently restricted asset classes. They report contributions in the unrestricted asset class unless the donor specifies their use in future periods or for a designated use, in which case they are included as contributions in the temporarily or permanently restricted asset classes. When donor-imposed temporarily restricted contributions have been satisfied, a reclassification to unrestricted assets is shown in the statement of activities, and any expenses associated with the release from restricted funds are included in expenses for unrestricted assets for the period. Earnings of permanently restricted funds available for temporarily restricted or unrestricted purposes are shown as income in those net asset classes in the statement of activities for the period as well.

VHWOs and ONPOs prepare a statement of financial position, statement of activities, and statement of cash flows. VHWOs also must prepare a statement of functional expenses. Because of differences in the types and scope of activities of the various organizations, the statements may have differences in account titles and items included.

# **Key Terms**

assets whose use is limited, 982 board-designated resources, 980 costs of informational materials, 1004 donated materials and services, 1002

general fund, 980 performance indicator, 982 permanently restricted net assets, 982 pledges receivable, 998 restricted funds, 980 specific operating purposes, 981

statement of functional expenses, 1005 temporarily restricted net assets, 982 unrestricted net assets, 982

## Questions

LO 19-2

Q19-1 How are tuition scholarships reported by a private college or university?

> Q19-2 What are the classifications of net assets reported in the statement of financial position by private colleges? Identify the types of assets assigned to each classification.

LO 19-1, 19-2 Q19-3 What are the major differences in financial reporting for a public university and a private university?

LO 19-3 Q19-4 What is the basis of accounting in a hospital's general fund? In its restricted funds?

| LO 19-3 | O19-5  | How does a hospital account for donated services, equipment, and medical supplies?  |
|---------|--------|---|
|         | •      |   |
| LO 19-3 | Q19-6  | A donor contributes \$15,000 to a hospital to use for operating costs in the intensive care unit. How does it account for this contribution? How does it account for the expenditure of the \$15,000?   |
| LO 19-3 | Q19-7  | What are the components of a hospital's net patient service revenue?  |
| LO 19-3 | Q19-8  | Where is a gain on the sale of hospital properties recorded by a hospital? How is the gain reported in the hospital's financial statements?   |
| LO 19-3 | Q19-9  | Is depreciation accounted for by a hospital? Why or why not?  |
| LO 19-4 | Q19-10 | What is a VHWO's basis of accounting for unrestricted assets and restricted assets?   |
| LO 19-4 | Q19-11 | Where does a VHWO record fixed assets? Does it record depreciation?   |
| LO 19-4 | Q19-12 | An individual contributes \$10,000 to a VHWO for restricted use in a public health education service. How does the VHWO account for this contribution and for the \$10,000 expenditure?                 |
| LO 19-4 | Q19-13 | How does a VHWO account for pledges from donors?  |
| LO 19-4 | Q19-14 | Why do VHWOs not report all pledges received in the period in the unrestricted assets section of the statement of activities? Identify what is not included.  |
| LO 19-4 | Q19-15 | How do VHWOs account for donated services?  |
| LO 19-4 | Q19-16 | Describe the statement of functional expenses. What organizations must prepare it?  |
| LO 19-5 | Q19-17 | An alumna of a sorority donates \$12,000 to it for restricted use in its community service activity. How does this ONPO account for the contribution? How does it account for the \$12,000 expenditure? |
| LO 19-5 | Q19-18 | Are donated services received by an ONPO accounted for in the same manner as those received by hospitals? Why or why not?   |
| LO 19-5 | Q19-19 | Should a rotary club, an ONPO, report depreciation expense? Why or why not?   |
| LO 19-5 | Q19-20 | Describe the statement of activities for an ONPO. How does it compare with a VHWO's statement of activities?  |
| LO 19-5 | Q19-21 | What are two examples of contributions to an ONPO that should be reported as temporarily restricted and two that should be reported as permanently restricted?  |

# Cases

### LO 19-3, 19-4

### C19-1 Accounting for Donations

Judgment

Hospitals, voluntary health and welfare organizations, and other not-for-profit organizations often rely heavily on donations of volunteers' time and equipment, supplies, or other assets.

### Required

- a. Specify the criteria to be used to determine the accounting for donated services to (1) hospitals, (2) VHWOs, and (3) ONPOs. Discuss the reasons for any differences in the accounting criteria.
- b. How are donations of capital assets such as equipment accounted for by hospitals? Is depreciation recorded on these donations? Why or why not?
- c. How are cash contributions accounted for by (1) hospitals, (2) VHWOs, and (3) ONPOs?

### LO 19-5 C19-2 Public Support to an Other Not-for-Profit Organization

# **Understanding**

Dawnes has just been elected treasurer of the local professional association of registered nurses. The association provides public health messages for the community as well as services for members. Dawnes is now preparing financial statements for the year and comes to you for advice on accounting for the proceeds from a major fund drive that occurred during the year. The nursing association received \$25,000 in unrestricted donations and \$15,000 in donations that are restricted to public health advertisements. A total of \$6,000 has been incurred for public health advertising since the restricted donations were received.

The former treasurer accounted for the \$40,000 of donations as revenue in the unrestricted fund, but Dawnes believes that this may not be correct because the association does not disclose the restricted nature of the donations for the advertisements.

### Required

- a. Discuss the accounting and financial statement disclosure to account for the \$25,000 of unrestricted donations to the professional association.
- b. How should the \$15,000 of restricted contributions have been accounted for at the time of the donation? How should it have been reported on this year's financial statements?

Analysis

## A Brief Analysis of the Financial Disclosures of United Way of America

Access the website for United Way of America (www.unitedway.org) and then look through the site until you locate the most recent consolidated financial statements and supplemental schedule and the Form 990. Review the statements and Form 990 and then prepare a two- to three-page memo presenting your summary of the following items that refer to consolidated amounts for the most recent year available:

- a. Briefly describe the reporting units that compose the consolidated entity of United Way of America. How are they operationally interrelated?
- b. Using the consolidated statement of financial position, identify and briefly explain the consolidation eliminations. Then describe the components and amounts of each of the major items composing the consolidated net assets and equity. Finally, using the statement of financial position information along with the footnote information, describe the components of the custodial funds asset and custodial funds liability in the consolidated columns.
- c. Using the consolidated statement of activities, what are the four largest revenue sources? What are the four largest expenses? What is the consolidated total of fund-raising expenses?
- d. Using the supplemental schedule, the statement of functional expenses, and the footnotes, describe the four largest program services categories. What are the three largest expense categories?
- e. Accessing the Form 990, briefly describe the major types of information required on this Internal Revenue Service form.

LO 19-5

### **Conditional Gift to a Not-for-Profit Organization** C19-4

Research

Gardner is the treasurer for the Central Illinois chapter of a national not-for-profit organization, the Alzheimer's Association. The chapter sends some of the money it raises to the national organization to support research into Alzheimer's disease. The chapter also provides information about the disease and sponsors support programs for families of patients within the community. The chapter has just received a significant pledge from a donor who has offered to contribute \$20,000 a year for the next five years on the condition that the chapter sponsor a series of annual educational programs about the disease. If it does not do so, the donor will direct future contributions elsewhere.

The donor has already contributed the first \$20,000, and the chapter has made the arrangements for the first educational workshop, which will take place in six weeks, shortly after the chapter's fiscal year-end.

Gardner is aware that the chapter intends to continue the educational workshops and has asked you, as a public accountant who volunteers to audit the chapter's financial statements each year, to research the appropriate accounting for the donor \$20,000 contribution and \$80,000 pledge in the chapter's financial statements for the current fiscal year.

### Required

Obtain the most current accounting standards for accounting for conditional gifts to not-for-profit organizations. You can obtain access to accounting standards through the Accounting Standards Codification®. Write a memo to Gardner reporting your research findings. Support your recommendations with citations and quotations from the authoritative financial reporting standards.

LO 19-4

### C19-5 Accounting for Contributions to and Activities of a Not-for-Profit Organization

Research

Finley, a manager in a public accounting firm, has volunteered to audit the financial statements of the Community Chest, a not-for-profit organization that raises funds to assist people in central Illinois who are homeless or have low incomes. In reviewing the statement of activities, Finley he notices the revenue item Auction Extravaganza. The Community Chest treasurer indicates that this amount is the net proceeds for this event, which is the organization's largest fund-raising event for the year.

The Auction Extravaganza combines a black-tie dinner, entertainment, and an auction of numerous donated items. Supporters buy tickets to the event and bid on the auction items. The treasurer informs Finley that the dollar amount reported in the statement of activities is the total raised from ticket sales and from the auction, net of the expenses incurred for the event. These expenses include advertising and part of the cost of the dinner. The expenses, however, are comparatively low because a local hotel donates the ballroom and part of the cost of the dinner. A local auctioneer volunteers her time for the auction, the state university's music department provides the entertainment, and local businesses donate all auction items.

### Required

Obtain the most current accounting standards for accounting for conditional gifts to not-for-profit organizations. You can obtain access to accounting standards through the Accounting Standards Codification. Finley has asked you, as a staff accountant in the public accounting firm, to research the appropriate accounting for the Auction Extravaganza. Write a memo reporting your research findings. Support your recommendations with citations and quotations from the authoritative financial reporting standards.

LO 19-4

### An Analysis of the Financial Statements for the American Red Cross, a Voluntary Health and Welfare Organization

Analysis

Answer the following questions by reading the most recent consolidated financial statements of the American Red Cross (ARC) at its website, www.redcross.org. (The financial statements may be accessed through the Publications link on the website's home page.)

- a. Why does the U.S. Army Audit Agency audit the ARC's financial statements?
- b. For the most recent year, what was the ratio of program services expenses to total expenses? According to the Better Business Bureau, a ratio of program expenses to total expenses of 60 percent is considered acceptable. How does the ratio for the ARC compare with this benchmark?
- c. What is the ARC's policy with respect to recognizing contribution revenue? Of the total contributions receivable at June 30 of the most recent year, what amount is temporarily restricted?
- d. What interest rate was used to determine the present value for contributions receivable in years after June 30 of the most recent year?
- e. For the most recent year ended June 30, what was the amount of net assets reclassified due to satisfaction of purpose and/or time restrictions?
- Of all program services provided, which one had the highest total cost for salaries, wages, and employee benefits?
- g. How does the ARC define temporarily restricted net assets?
- h. At June 30 of the most recent year, what was the amount of conditional contributions? Did the ARC report these contributions in revenue for that year?
- i. Of the total amount of unrestricted investment income reported for the most recent year, what amount came from dividends and interest?
- j. What does the ARC report when donor-imposed purpose restrictions are accomplished or donor-imposed time restrictions expire?
- k. Assume the ARC received a cash contribution during the most recent year that the donor restricted for disaster relief. Also assume that the ARC spent the amount donated in the year for disaster relief. Specify whether the ARC would report this donation on its statement of activities for the most recent year as (1) an increase in unrestricted net assets when the donation was received or (2) an increase in temporarily restricted net assets when the donation was received and as a reclassification of net assets from temporarily restricted to unrestricted when the donation was used.
- l. Assume the ARC received a donation of equipment in the most recent year from a donor who did not place any restrictions on the donated assets. Specify whether the ARC would report this donation in its statement of activities for the current year as (1) an increase in unrestricted net assets when the equipment was received or (2) an increase in temporarily restricted net assets when the equipment was received and as a reclassification of net assets from temporarily restricted to unrestricted when the equipment is depreciated.

# C19-7 An Analysis of the Financial Statements of the University of Notre Dame, a Private University

Analysis

Answer the following questions by reading the most recent annual report of the University of Notre Dame that can be accessed by going to www.nd.edu.

- a. For the most recent year, how much cash did donors contribute for the acquisition of buildings and equipment?
- b. On the statement of changes in unrestricted net assets, how does the university decide what information to disclose in the nonoperating section?
- c. On the statement of changes in unrestricted net assets for the most recent year, how much of the net assets released were for operations?
- d. What is the university's accounting policy for its art collection?
- e. What interest rate did the university use to determine the present value of multiyear pledges?
- On the statement of financial position at June 30 for the most recent year, how much of the amount reported for contributions receivable is unrestricted?
- At June 30 of the most recent year, what amount of unrestricted net assets is designated by the
- h. True or false: Operating expenses on the statement of changes in unrestricted net assets for the most recent year are reported by functional categories.
- i. True or false: Land, buildings, and equipment, net of accumulated depreciation, are reported in unrestricted net assets on the university's statement of financial position.
- j. For the most recent year, what was the total investment return on investments reported in all three net asset categories? How much of this amount represented an increase in unrestricted net
- k. On the statement of financial position at June 30 of the most recent year, what amount of investments in endowments is reported in the permanently restricted net asset class?

# Analysis

### **Profiles of Large Charitable Organizations**

The BBB Wise Giving Alliance is widely known for presenting profiles of nationally soliciting charitable organizations. The BBB Wise Giving Alliance website provides information to donors and to assist charities to operate responsibly.

### Reauired

Go to www.bbb.org/us/charity/ and provide answers for each of the following questions.

- a. Briefly describe the standards for charity accountability used by the BBB Wise Giving Alliance. Explain why a charity might seek to be recognized as a BBB accredited charity.
- b. Use the List of National BBB Wise Giving Reports to obtain information for the American Red Cross. Provide an overview of the types of information provided for it, including its governance and fund-raising.
- c. Select another charity from the same location. You can select one with its name beginning with the same letter as your last name or a charity of your interest. Provide an overview of the types of information provided for your selected charity, including its governance and fund-raising. How does your selected charity compare with the ARC?

### Exercises

LO 19-2

### E19-1 Multiple-Choice Items on Colleges and Universities [AICPA Adapted]

Select the correct response for each of the following.

- 1. For the summer session of 20X2, Pacific University assessed its students \$1,700,000 (net of refunds) covering tuition and fees for educational and general purposes. However, only \$1,500,000 was expected to be realized because scholarships totaling \$150,000 had been granted to students, and tuition remissions of \$50,000 had been allowed to faculty members' children attending Pacific. What amount should Pacific include as revenues from student tuition and fees?
  - a. \$1.500,000.
  - b. \$1,550,000.
  - c. \$1,650,000.
  - d. \$1,700,000.

2. Tuition remissions for graduate student teaching assistantships should be classified by a university as

|    | Revenue | Expenditures |
|----|---------|--------------|
| a. | No      | No           |
| b. | No      | Yes          |
| C. | Yes     | Yes          |
| d. | Yes     | No           |

3. For the fall semester of 20X1, Dover University assessed its students \$2,300,000 for tuition and fees. The net amount realized was only \$2,100,000 because of the following revenue reductions:

| Refunds occasioned by class cancellations and student withdrawals | \$ 50,000 |
|---|-----------|
| Tuition remissions granted to faculty members' families           | 10,000    |
| Scholarships and fellowships (for which no services are rendered) | 140,000   |

How much should Dover report for the period for revenue from tuition and fees?

- a. \$2,100,000.
- b. \$2,150,000.
- c. \$2,250,000.
- d. \$2,300,000.

(Note: Items 4 through 6 are based on the following information pertaining to Global University, a private institution, as of June 30, 20X1, and for the year then ended.)

Unrestricted net assets comprised \$7,500,000 of assets and \$4,500,000 of liabilities (including deferred revenues of \$150,000). Among the receipts recorded during the year were unrestricted gifts of \$550,000 and restricted grants totaling \$330,000, of which \$220,000 was expended during the year for current operations and \$110,000 remained unexpended at the close of the year.

Volunteers from the surrounding communities regularly contribute their services to Global, which normally purchases them; it pays the volunteers nominal amounts to cover their travel costs. During the year, the amount for travel paid to these volunteers aggregated to \$18,000. The gross value of services performed by them, determined by reference to equivalent wages available in that area for similar services, amounted to \$200,000. The university believes the contributed services enhance its assets.

- 4. At June 30, 20X1, Global's unrestricted net asset balance was
  - a. \$7,500,000.
  - b. \$3,150,000.
  - c. \$3,000,000.
  - d. \$2,850,000.
- 5. For the year ended June 30, 20X1, what amount should be included in Global's revenue for the unrestricted gifts and restricted grants?
  - a. \$550,000.
  - b. \$660,000.
  - c. \$770,000.
- 6. For the year ended June 30, 20X1, what amount should Global record as contribution revenue for the volunteers' services?
  - a. \$218,000.
  - b. \$200,000.
  - c. \$18,000.
  - d. \$0.

### E19-2 Multiple-Choice Items on Hospital Accounting [AICPA Adapted]

Select the correct response for each of the following.

(Note: The following data are for items 1 through 3.)

Under its established rate structure, Dodge Hospital would have earned patient service revenue of \$5,000,000 for the year ended December 31, 20X3. However, Dodge did not expect to collect this amount because of contractual adjustments of \$500,000 to third-party payers. In May 20X3, Dodge purchased bandages from Hunt Supply Company at a cost of \$1,000. However, Hunt notified Dodge that the invoice was being canceled and that the bandages were being donated. On December 31, 20X3, Dodge had board-designated assets consisting of \$40,000 in cash and investments of \$700,000.

- 1. For the year ended December 31, 20X3, how much should Dodge report as net patient service revenue?
  - a. \$4,500,000.
  - b. \$5,000,000.
  - c. \$5,500,000.
  - d. \$5,740,000.
- 2. For the year ended December 31, 20X3, Dodge should record the donation of bandages as
  - a. A \$1,000 reduction in operating expenses.
  - b. A decrease in net assets released from restrictions.
  - c. An increase in unrestricted revenue, gains, and other support.
  - d. A memorandum entry only.
- 3. How much of Dodge's board-designated assets should be included in unrestricted net assets?
  - a. \$0.
  - b. \$40,000.
  - c. \$700,000.
  - d. \$740,000.
- 4. Donated medicines that a hospital normally would purchase should be recorded at fair value and should be credited directly to
  - a. Unrestricted revenue.
  - b. Expense of medicines.
  - c. Fund balance.
  - d. Deferred revenue.
- 5. Which of the following would normally be included as revenue of a not-for-profit hospital?
  - a. Unrestricted interest income from an endowment fund.
  - b. An unrestricted gift.
  - c. Tuition received from an educational program.
  - d. All of the above.
- 6. An unrestricted gift pledge from an annual contributor to a not-for-profit hospital made in December 20X1 and paid in March 20X2 would generally be credited to
  - a. Contribution revenue in 20X1.
  - b. Contribution revenue in 20X2.
  - c. Other income in 20X1.
  - d. Other income in 20X2.
- 7. An organization of high school seniors assists patients at Lake Hospital. These student volunteers perform services that the hospital would not otherwise provide, such as wheeling patients in the park and reading to them. Lake has no employer-employee relationship with these volunteers, who donated 5,000 hours of service to Lake in 20X2. Assuming a minimum wage of \$7.50, these services would amount to \$18,750, and the estimated fair value of these services was \$25,000. In Lake's 20X2 statement of operations, what amount should it report as donated services?
  - a. \$25,000.
  - b. \$18,750.
  - c. \$6,250.
  - d. \$0.

- 8. Which of the following would be included in the unrestricted funds of a not-for-profit hospital?
  - a. Permanent endowments.
  - b. Term endowments.
  - c. Board-designated funds originating from previously accumulated income.
  - d. Funds designated by the donor for plant expansion and replacement funds.
- 9. During the year ended December 31, 20X1, Greenacre Hospital received the following donations stated at their respective fair values:

| Essential specialized employee-type services from members of a religious group Medical supplies restricted for indigent care from an association of physicians | \$100,000 |
|--|-----------|
| and used for such purpose in 20X1  | 30,000    |

How much total revenue from donations should Greenacre report in 20X1?

- a. \$0.
- b. \$30,000.
- c. \$100,000.
- d. \$130,000.
- 10. Johnson Hospital's property, plant, and equipment (net of depreciation) consists of the following:

| Land              | \$ | 500,000   |
|-------------------|----|-----------|
| Buildings         | 10 | 0,000,000 |
| Movable equipment | 2  | 2,000,000 |

What amount should it report as restricted assets?

- a. \$0.
- b. \$2,000,000.
- c. \$10,500,000.
- d. \$12,500,000.
- 11. Depreciation should be recognized in the financial statements of
  - a. Proprietary (for-profit) hospitals only.
  - b. Both proprietary and not-for-profit hospitals.
  - c. Both proprietary and not-for-profit hospitals only when they are affiliated with a college or university.
  - d. All hospitals, in a memorandum entry not affecting the statement of revenue and expenses.
- 12. On March 1, 20X1, Rowe established a \$100,000 endowment fund, the income from which is to be paid to Central Hospital for general operating purposes. Central does not control the fund's principal. The donor appointed Sycamore National Bank as trustee of this fund. What journal entry is required by Central to record the establishment of the endowment?

|    |                              | Debit   | Credit  |
|----|------------------------------|---------|---------|
| a. | Cash                         | 100,000 |         |
|    | Nonexpendable Endowment Fund |         | 100,000 |
| b. | Cash                         | 100,000 |         |
|    | Endowment Fund Balance       |         | 100,000 |
| C. | Nonexpendable Endowment Fund | 100,000 |         |
|    | Endowment Fund Balance       |         | 100,000 |
| d. | Memorandum entry only        | _       | _       |

LO 19-3

### E19-3 Entries for a Hospital's Unrestricted (General) Fund

The following are transactions and events of the general fund of Sycamore Hospital, a not-for-profit entity, for the 20X6 fiscal year ending December 31, 20X6.

- 1. Provided a total of \$6,200,000 in patient services.
- 2. Had total operating expenses of \$5,940,000, as follows:

| Nursing services            | \$2,070,000 |
|-----------------------------|-------------|
| Other professional expenses | 1,250,000   |
| Fiscal services             | 225,000     |
| General services            | 1,510,000   |
| Bad debts                   | 125,000     |
| Administration              | 260,000     |
| Depreciation                | 500,000     |
|                             |             |

Accounts credited for operating expenses other than depreciation:

| Cash                         | \$4,785,000 |
|------------------------------|-------------|
| Allowance for Uncollectibles | 125,000     |
| Accounts Payable             | 210,000     |
| Inventories                  | 240,000     |
| Donated Services             | 80,000      |
|                              |             |

- 3. Allowed contractual adjustments of \$220,000 as deductions from gross patient revenue.
- 4. Received a transfer of \$180,000 from specific-purpose funds for payment of approved operating costs in accordance with the terms of the restricted gift.
- 5. Received a transfer of \$200,000 from the temporarily restricted plant fund to purchase new equipment for the hospital.
- 6. Received \$155,000 of unrestricted gifts.
- 7. Collected accounts receivable except for \$75,000 written off.
- 8. Reported a \$70,000 increase in the market value of the investment securities portfolio of the general fund from the beginning of the period. The board designated this entire income for other than current operations.

### Required

- a. Prepare journal entries in the general fund for each of the transactions and events.
- b. Prepare the statement of operations for the general, unrestricted fund of Sycamore Hospital.

### LO 19-3

### E19-4 **Entries for Other Hospital Funds**

The following are selected transactions of the specific-purpose fund, the plant fund, and the endowment fund of Toddville Hospital, a not-for-profit entity:

- 1. Received in the endowment fund new permanent endowments totaling \$150,000 and new term endowments totaling \$120,000.
- 2. Received in the plant replacement and expansion fund pledges of \$1,500,000 for the new wing and estimated uncollectibles at 10 percent.
- 3. Received in the specific-purpose fund gifts of \$50,000 for research and \$30,000 for education.
- 4. Received the following interest and dividends on investments:

| Endowment fund (permanent)       | \$100,000 |
|----------------------------------|-----------|
| Plant fund                       | 45,000    |
| Specific-purpose fund (research) | 31,000    |

This year's interest and dividends in the endowment fund have a donor-imposed permanent restriction.

5. Notified that the specific-purpose fund in the general fund had fulfilled the agreements related to restricted gifts as follows:

| Research  | \$55,000 |
|-----------|----------|
| Education | 32,000   |

Transferred cash of \$70,000 to the general fund with the balance to be sent later.

6. Made the following investments:

| Endowment fund        | \$270,000 |
|-----------------------|-----------|
| Plant fund            | 160,000   |
| Specific-purpose fund | 75,000    |
|                       |           |

### Required

Prepare appropriate journal entries for the transactions in the specific-purpose fund, plant fund, and endowment fund.

### LO 19-4

### E19-5 Multiple-Choice Questions on Voluntary Health and Welfare Organization **Accounting [AICPA Adapted]**

Select the correct answer for each of the following questions.

- 1. Which basis of accounting should a voluntary health and welfare organization use?
  - a. Cash basis for all funds.
  - b. Modified accrual basis for all funds.
  - c. Accrual basis for all funds.
  - d. Accrual basis for some funds and modified accrual basis for other funds.

(*Note:* The following data are for questions 2 and 3.)

Town Service Center is a voluntary health and welfare organization funded by contributions from the general public. During 20X6, it received unrestricted pledges of \$800,000, half of which were payable in 20X6 with the other half payable in 20X7 for use in 20X7. It was estimated that 10 percent of these pledges would be uncollectible. In addition, Ladd, a social worker on Town's permanent staff earning \$30,000 annually for a normal workload of 1,500 hours, contributed an additional 600 hours of time to Town at no charge.

- 2. How much should Town report as unrestricted contribution revenue for 20X6 with respect to the pledges?
  - a. \$0.
  - b. \$360,000.
  - c. \$720,000.
  - d. \$800,000.
- 3. How much should Town record in 20X6 for contributed service expenses?
  - a. \$0.
  - b. \$1,200.
  - c. \$10,000.
  - d. \$12,000.
- 4. A voluntary health and welfare organization received a pledge in 20X1 from a donor specifying that the amount pledged be used in 20X3. The donor paid the pledge in cash in 20X2. For what amount should it be accounted?
  - a. Contribution revenue in 20X3.
  - b. Contribution revenue in 20X2.

- c. Contribution revenue in 20X1.
- d. Contribution revenue in the period in which the funds are spent.
- 5. Turner Fund, a voluntary health and welfare organization funded by contributions from the general public, received unrestricted pledges of \$300,000 during 20X4. It was estimated that 10 percent of these pledges would be uncollectible. By the end of 20X4, \$240,000 of them had been collected. It was expected that \$35,000 more would be collected in 20X5 and the balance of \$25,000 would be written off as uncollectible. What amount should Turner include as contribution revenue in 20X4?
  - a. \$300,000.
  - b. \$275,000.
  - c. \$270,000.
  - d. \$240,000.

(Note: The following data are for questions 6 through 9.)

On January 1, 20X2, State Center Health Agency, a voluntary health and welfare organization, received a bequest of a \$200,000 certificate of deposit maturing on December 31, 20X6. The contributor's only stipulations were that the certificate be held to maturity and the interest revenue received annually be used to purchase books for children in the preschool program run by the agency to read. Interest revenue each of the years was \$9,000, and the full \$9,000 was spent for books each year. When the certificate was redeemed, the board of trustees adopted a formal resolution designating \$150,000 of the proceeds for future purchase of playground equipment for the preschool program.

- 6. What should the temporarily restricted fund report in the 20X2 statement of activities?
  - a. Legacies and bequests of \$200,000.
  - b. Investment income of \$9,000.
  - c. Transfers to unrestricted fund of \$9,000.
  - d. All of the above.
- 7. What amounts should the 20X2 statement of activities for the unrestricted fund report?
  - a. Legacies and bequests of \$200,000.
  - b. Investment income of \$9,000.
  - c. Transfers from the restricted fund of \$9.000.
  - d. Contributions of \$209,000.
- 8. What should be reported for the unrestricted fund in the 20X6 statement of activities?
  - a. Transfers from restricted fund of \$209,000.
  - b. Board-designated funds of \$150,000.
  - c. Playground equipment of \$150,000.
  - d. Transfers to plant and equipment fund of \$150,000.
- 9. What should be reported for the unrestricted fund in the December 31, 20X6, statement of financial position?
  - a. Liability for purchase of playground equipment, \$150,000.
  - b. Due to plant and equipment fund, \$150,000.
  - c. Board-designated funds, \$150,000.
  - d. Temporarily restricted funds, \$200,000.

### **Entries for Voluntary Health and Welfare Organizations**

The following are the 20X2 transactions of the Midwest Heart Association, which has the following funds and fund balances on January 1, 20X2:

| Unrestricted net assets                       | \$281,000 |
|---|-----------|
| Temporarily restricted net assets             | 87,000    |
| Permanently restricted (endowment) net assets | 219,000   |

1. Had Unrestricted pledges totaling \$700,000, of which \$150,000 is for 20X3 and uncollectible pledges estimated at 8 percent.

LO 19-4

- 2. Had restricted use grants totaling \$150,000.
- 3. Collected a total of \$520,000 of current pledges and wrote off \$30,000 of remaining uncollected current pledges.
- 4. Purchased office equipment for \$15,000.
- 5. Used unrestricted funds to pay the \$3,000 mortgage payment due on the buildings.
- 6. Received interest and dividends of \$27,200 on unrestricted investments and \$5,400 on temporarily restricted investments. An endowment investment with a recorded value of \$5,000 was sold for \$6,000, resulting in a realized transaction gain of \$1,000. A donor-imposed restriction specified that gains on sales of endowment investments must be maintained in the permanently restricted endowment fund.
- 7. Recorded and allocated depreciation as follows:

| Community services         | \$12,000 |
|----------------------------|----------|
| Public health education    | 7,000    |
| Research                   | 10,000   |
| Fund-Raising               | 15,000   |
| General and administrative | 9,000    |
|                            |          |

8. Had other operating costs of the unrestricted current fund:

| Community services         | \$250,600 |
|----------------------------|-----------|
| Public health education    | 100,000   |
| Research                   | 81,000    |
| Fund-Raising               | 39,000    |
| General and administrative | 61,000    |

9. Received clerical services totaling \$2,400 donated during the fund drive. These are not part of the expenses reported in item 8. It has been determined that these donated services should be recorded.

### Required

- a. Prepare journal entries for the transactions in 20X2.
- b. Prepare a statement of activities for 20X2.

### E19-7 **Determination of Contribution Revenue**

Atwater Health Services, a voluntary health and welfare organization, has provided support for families with low income in the town of Atwater for approximately 20 years. In 20X6, it conducted a major funding campaign to help replace facilities that are no longer adequate and to generate operating and endowment funds.

The community of Atwater ran a number of special events, and the chamber of commerce made the fund-raising campaign a major activity for 20X6. In 20X6, Atwater Health Services received the following gifts and pledges:

- 1. The Plentiful family donated a lot adjacent to the current building for future use as a playground and parking lot. The family had purchased the lot for \$22,000 several years ago. It had a current value of \$42,000 at the date contributed.
- 2. A number of new pledges were received and many were partially or fully paid in 20X6. The following information was compiled:

| -  |           |
|--|-----------|
| Unrestricted pledges for use in 20X6   | \$120,000 |
| Unrestricted pledges for use in 20X7   | 70,000    |
| Pledges to support screening tests for children's hearing abilities            | 90,000    |
| Pledge to assist in construction of addition to building; donor agrees to make |           |
| eight annual payments of \$50,000 each   | 400,000   |
|  | \$680,000 |

### LO 19-4

3. Also during 20X6, \$45,000 was spent in providing free vision tests for all grade school children in the community. A total of \$38,000 collected in 20X4 and 20X5 for this purpose were used to help pay for the costs of providing the tests.

### Reauired

- a. Prepare the journal entries for 20X6 for these activities, including receipt of the first installment on the pledge for building construction, which was received at the end of 20X6. Atwater currently earns an 8 percent return on its investments. The present value of the seven future payments of \$50,000 is \$260,318.
- b. Prepare the journal entry or entries recorded at the end of 20X7 upon receipt of the second payment on the pledge for building construction.

### LO 19-4, 19-5

### Multiple-Choice Items on Other Not-for-Profit Organizations [AICPA Adapted] E19-8

Select the correct response for each of the following.

- 1. On January 2, 20X2, a not-for-profit botanical society received a gift of an exhaustible fixed asset with an estimated useful life of 10 years and no salvage value. The donor's cost of this asset was \$20,000, and its fair market value at the date of the gift was \$30,000. What amount of depreciation of this asset should the society recognize in its 20X2 financial statements?
  - a. \$3,000.
  - b. \$2,500.
  - c. \$2,000.
  - d. \$0.
- 2. In 20X1, a not-for-profit trade association enrolled five new member companies, each of which was obligated to pay nonrefundable initiation fees of \$1,000. The association received these fees in 20X1. Three of the new members paid the initiation fees in 20X1, and the other two paid them in 20X2. The association received from all members annual dues (excluding initiation fees) that have always covered the costs of services provided to members. Future dues can be reasonably expected to cover all costs of the organization's future services to members. Average membership duration is 10 years because of mergers, attrition, and economic factors. What amount of initiation fees from these five new members should the association recognize as revenue in 20X1?
  - a. \$5,000.
  - b. \$3,000.
  - c. \$500.
  - d. \$0.
- 3. Roberts Foundation received a nonexpendable endowment of \$500,000 in 20X3 from Multi Enterprise and invested it in publicly traded securities. Multi did not specify how gains and losses from dispositions of endowment assets were to be treated. No restrictions were placed on the use of dividends received and interest earned on fund resources. In 20X4, Roberts realized gains of \$50,000 on sales of fund investments and received total interest and dividends of \$40,000 on fund securities. The amount of these capital gains, interest, and dividends available for expenditure by Roberts's unrestricted current fund is
  - a. \$0.
  - b. \$40,000.
  - c. \$50,000.
  - d. \$90,000.
- 4. In July 20X2, Ross donated \$200,000 cash to a church with the stipulation that the revenue generated from this gift be paid to him during his lifetime. The conditions of this donation are that after Ross dies, the church may use the principal for any purpose voted on by its elders. The church received interest of \$16,000 on the \$200,000 for the year ended June 30, 20X3, and remitted the interest to Ross. In the church's June 30, 20X3, annual financial statements should support
  - a. \$200,000 as temporarily restricted net assets in the balance sheet.
  - b. \$184,000 as revenue in the activity statement.
  - c. \$216,000 as revenue in the activity statement.
  - d. Both a and c.

5. The following expenditures were among those a not-for-profit botanical society incurred during 20X4:

| Printing of annual report                               | \$15,000 |
|---|----------|
| Unsolicited merchandise sent to encourage contributions | 35,000   |

What amount should be classified as fund-raising costs in the society's activity statement?

- a. \$0.
- b. \$5,000.
- c. \$35,000.
- d. \$40,000.
- 6. Trees Forever, a community foundation, incurred \$5,000 in expenses during 20X3 putting on its annual fund-raising talent show. In its statement of activities, Trees Forever should report the \$5,000 as
  - a. A contra asset account.
  - b. A contra revenue account.
  - c. A reduction of fund-raising costs.
  - d. Part of fund-raising costs.
- 7. In 20X3, Burr Foundation's board of trustees designated \$100,000 from its current funds for college scholarships. Also in 20X3, the foundation received a bequest of \$200,000 from the estate of a benefactor who specified that it be used for hiring teachers to tutor students with disabilities. What amount should be accounted for as temporarily restricted funds?
  - a. \$0.
  - b. \$100,000.
  - c. \$200,000.
  - d. \$300,000.

(Note: The following information is for questions 8 through 10.)

United Together, a labor union, had the following receipts and expenses for the year ended December 31, 20X2:

| Receipts:  |           |
|--|-----------|
| Per capita dues  | \$680,000 |
| Initiation fees  | 90,000    |
| Sales of organizational supplies                                       | 60,000    |
| Nonexpendable gift restricted by donor for loan purposes for 10 years  | 30,000    |
| Nonexpendable gift restricted by donor for loan purposes in perpetuity | 25,000    |
| Expenses:  |           |
| Labor negotiations   | 500,000   |
| Fund-Raising   | 100,000   |
| Membership development   | 50,000    |
| Administrative and general   | 200,000   |

The union's constitution provides that 10 percent of the per capita dues be designated for the strike insurance fund to be distributed for strike relief at the discretion of the union's executive board.

- 8. In United Together's statement of activities for the year ended December 31, 20X2, what amount should it report under the classification of revenue from unrestricted funds?
  - a. \$740,000.
  - b. \$762,000.
  - c. \$770,000.
  - d. \$830,000.
- 9. In United Together's statement of activities for the year ended December 31, 20X2, what amount should it report under the classification of program services?
  - a. \$500,000.
  - b. \$550,000.
  - c. \$600,000.
  - d. \$850,000.

- 10. In United Together's statement of activities for the year ended December 31, 20X2, what amounts should it report under the classifications of temporarily and permanently restricted net assets?
  - a. \$0 and \$55,000, respectively.
  - b. \$55,000 and \$0, respectively.
  - c. \$30,000 and \$25,000, respectively.
  - d. \$25,000 and \$30,000, respectively.

### E19-9 Statement of Activities for an Other Not-for-Profit Organization

The following is a list of selected account balances in the unrestricted operating fund for Pleasant School:

|   | Debit       | Credit     |
|---|-------------|------------|
| Unrestricted Net Assets, July 1, 20X1       |             | \$ 420,000 |
| Tuition & Fees                              |             | 1,200,000  |
| Contributions                               |             | 165,000    |
| Auxiliary Activities Revenue                |             | 40,000     |
| Investment Income (for current operations)  |             | 32,000     |
| Other Revenue                               |             | 38,000     |
| Instruction                                 | \$1,050,000 |            |
| Auxiliary Activities Expenses               | 37,000      |            |
| Administration                              | 250,000     |            |
| Fund-Raising                                | 28,000      |            |
| Transfer from Temporarily Restricted Assets |             | 130,000    |
| Transfer from Permanently Restricted Assets |             | 12,000     |

### Required

Prepare a statement of activities for Pleasant School's unrestricted operating fund for the year ended June 30, 20X2.

### Financial Statements for a Private, Not-for-Profit College

Friendly College is a small, privately supported liberal arts college. The college uses a fund structure; however, it prepares its financial statements in conformance with ASC 958.

|   | Debit     | Credit    |
|---|-----------|-----------|
| Unrestricted Items:                                 |           |           |
| Cash  | \$210,000 |           |
| Accounts Receivable (student tuition and fees, less |           |           |
| allowance for doubtful accounts of \$9,000)         | 341,000   |           |
| State Appropriation Receivable                      | 75,000    |           |
| Accounts Payable                                    |           | \$ 45,000 |
| Deferred Revenue                                    |           | 66,000    |
| Unrestricted Net Assets                             |           | 515,000   |
| Restricted Items:                                   |           |           |
| Cash  | \$ 7,000  |           |
| Investments   | 60,000    |           |
| Temporarily Restricted Net Assets                   |           | \$ 67,000 |

Partial balance sheet information as of June 30, 20X2, follows:

The following transactions occurred during the fiscal year ended June 30, 20X3:

1. Received a gift of \$100,000 on July 7, 20X2, from an alumnus who stipulated that half the gift be restricted to purchase books for the university library and the remainder be used to establish an endowed scholarship fund. The alumnus further requested that the income generated by the scholarship fund be used annually to award a scholarship to a qualified disadvantaged student. On July 20, 20X2, the board of trustees resolved that the funds of the newly established scholarship endowment fund would be invested in savings certificates and purchased them on July 21, 20X2.

- 2. Collected \$1,900,000 of revenue from student tuition and fees applicable to the year ended June 30, 20X3. Of this amount, \$66,000 was collected in the prior year, and \$1,686,000 was collected during the year ended June 30, 20X3. In addition, on June 30, 20X3, the college had received cash of \$158,000 representing deferred revenue fees for the session beginning July 1, 20X3.
- 3. Collected \$349,000 of outstanding accounts receivable at the beginning of the year ended June 30, 20X3. The balance was determined to be uncollectible and was written off against the allowance account, which on June 30, 20X3, was increased by \$3,000 to \$11,000.
- 4. Earned and collected interest charges of \$6,000 on late student fee payments during the year.
- 5. Received the state appropriation during the year. The state made an additional unrestricted appropriation of \$50,000 but had not paid the college as of June 30, 20X3.
- 6. Received an unrestricted gift of \$25,000 cash from college alumni.
- 7. Sold restricted investments of \$21,000 for \$26,000 during the and received temporarily restricted investment interest income amounting to \$1,900.
- 8. Recorded unrestricted operating expenses of \$1,777,000 during the year, not including yearend accruals or transfers from other categories of net assets. On June 30, 20X3, \$59,000 of these expenses remained unpaid.
- 9. Had restricted current funds of \$13,000 released and spent them for authorized operating purposes during the year.
- 10. Paid the accounts payable on June 30, 20X2, during the year.
- 11. Earned and received during the \$7,000 interest on the savings certificates purchased in accordance with the board of trustees' resolutions as discussed in transaction 1.

### Required

- a. Prepare a comparative balance sheet for Friendly College as of June 30, 20X2, and June 30, 20X3.
- b. Prepare a statement of activities for Friendly College for the year ended June 30, 20X3.

### P19-11

LO 19-3

### **Balance Sheet for a Hospital**

Brookdale Hospital hired an inexperienced controller early in 20X4. Near the end of 20X4, the board of directors decided to conduct a major fund-raising campaign. They wished to have the December 31, 20X4, statement of financial position for Brookdale fully conform with current generally accepted principles for hospitals. The trial balance prepared by the controller at December 31, 20X4, follows:

|  | Debit |           |    | Credit    |  |  |
|--|-------|-----------|----|-----------|--|--|
| Cash   | \$    | 100,000   |    |           |  |  |
| Investment in Short-Term Marketable Securities |       | 200,000   |    |           |  |  |
| Investment in Long-Term Marketable Securities  |       | 300,000   |    |           |  |  |
| Interest Receivable                            |       | 15,000    |    |           |  |  |
| Accounts Receivable                            |       | 55,000    |    |           |  |  |
| Inventory                                      |       | 35,000    |    |           |  |  |
| Land   |       | 120,000   |    |           |  |  |
| Buildings & Equipment                          |       | 935,000   |    |           |  |  |
| Allowance for Depreciation                     |       |           | \$ | 260,000   |  |  |
| Accounts Payable                               |       |           |    | 40,000    |  |  |
| Mortgage Payable                               |       |           |    | 320,000   |  |  |
| Fund Balance                                   |       |           |    | 1,140,000 |  |  |
| Total  | \$1   | 1,760,000 | \$ | 1,760,000 |  |  |

### Additional Information

1. Your analysis of the contributions receivable as of December 31, 20X4, determined that there were unrecognized contributions for the following:

| Unrestricted use                           | \$<br>40,000  |
|--|---------------|
| Cancer research                            | 10,000        |
| Purchase of equipment                      | 20,000        |
| Permanently restricted endowment principal | 30,000        |
| Total                                      | \$<br>100,000 |

- 2. Short-term investments at year-end consist of \$150,000 of unrestricted funds and \$50,000 of funds restricted for future cancer research. All of the long-term investments are held in the permanently restricted endowment fund.
- 3. Land is carried at its current market value of \$120,000. The original owner purchased the land for \$70,000, and at the time of donation to the hospital, it had an appraised value of \$95,000.
- 4. Buildings purchased 11 years ago for \$600,000 had an estimated useful life of 30 years. Equipment costing \$150,000 was purchased 7 years ago and had an expected life of 10 years. The controller had improperly increased the reported values of the buildings and equipment to their current fair value of \$935,000 and had incorrectly computed the accumulated depreciation.
- 5. The board of directors voted on December 29, 20X4, to designate \$100,000 of unrestricted funds invested in short-term investments for developing a drug rehabilitation center.

Prepare in good form a balance sheet for Brookdale Hospital at December 31, 20X4.

### LO 19-4, 19-5 P19-12

### Entries and Statement of Activities for an Other Not-for-Profit Organization [AICPA Adapted]

A group of civic-minded merchants in Eldora organized the Committee of 100 for establishing the Community Sports Club, a not-for-profit sports organization for local youth. Each of the committee's 100 members contributed \$1,000 toward the club's capital and, in turn, received a participation certificate. In addition, each participant agreed to pay dues of \$200 a year for the club's operations. All dues have been collected in full by the end of each fiscal year ending March 31. Members who have discontinued their participation have been replaced by an equal number of new members through transfer of the participation certificates from the former members to the new ones. Following is the club's trial balance for April 1, 20X2:

|  | Debit     | Credit    |
|--|-----------|-----------|
| Cash   | \$ 9,000  |           |
| Investments (at market, equal to cost)           | 58,000    |           |
| Inventories                                      | 5,000     |           |
| Land   | 10,000    |           |
| Building   | 164,000   |           |
| Accumulated Depreciation—Building                |           | \$130,000 |
| Furniture & Equipment                            | 54,000    |           |
| Accumulated Depreciation—Furniture & Equipment   |           | 46,000    |
| Accounts Payable                                 |           | 12,000    |
| Participation Certificates (100 at \$1,000 each) |           | 100,000   |
| Cumulative Excess of Revenue over Expenses       |           | 12,000    |
| Total  | \$300,000 | \$300,000 |

Transactions for the year ended March 31, 20X3, follow:

| Collections from participants for dues                                       | \$20,000 |
|--|----------|
| Snack bar and soda fountain sales  | 28,000   |
| Interest and dividends received  | 6,000    |
| Additions to voucher register:   |          |
| House expenses   | 17,000   |
| Snack bar and soda fountain  | 26,000   |
| General and administrative   | 11,000   |
| Vouchers paid  | 55,000   |
| Assessments for capital improvements not yet incurred (assessed on March 20, | ŕ        |
| 20X3; none collected by March 31, 20X3; deemed 100% collectible during       |          |
| year ending March 31, 20X4)  | 10,000   |
| Unrestricted bequest received  | 5.000    |
| 1  | -,       |

# Adjustment Data

- 1. Investments are valued at market, which totaled \$65,000 on March 31, 20X3. There were no investment transactions during the year.
- 2. Depreciation for year:

| Building              | \$4,000 |
|-----------------------|---------|
| Furniture & equipment | 8,000   |

3. Allocation of depreciation:

| House expenses             | \$9,000 |
|----------------------------|---------|
| Snack bar & soda fountain  | 2,000   |
| General and administrative | 1,000   |
|                            |         |

4. Actual physical inventory on March 31, 20X3, was \$1,000 and pertains to the snack bar and soda fountain.

### Required

- a. Record the transactions and adjustments in journal entry form for the year ended March 31, 20X3. Omit explanations.
- b. Prepare the appropriate all-inclusive statement of activities for the year ended March 31, 20X3.

### P19-13 **Entries and Statements for General Fund of a Hospital**

The postclosing trial balance of the general fund of Serene Hospital, a not-for-profit entity, on December 31, 20X1, was as follows:

|                                | Debit       | Credit      |
|--------------------------------|-------------|-------------|
| Cash                           | \$ 125,000  |             |
| Accounts Receivable            | 400,000     |             |
| Allowance for Uncollectibles   |             | \$ 50,000   |
| Due from Specific-Purpose Fund | 40,000      |             |
| Inventories                    | 95,000      |             |
| Prepaid Expenses               | 20,000      |             |
| Investments                    | 900,000     |             |
| Property, Plant, & Equipment   | 6,100,000   |             |
| Accumulated Depreciation       |             | 1,500,000   |
| Accounts Payable               |             | 150,000     |
| Accrued Expenses               |             | 55,000      |
| Deferred Revenue—Reimbursement |             | 75,000      |
| Bonds Payable                  |             | 3,000,000   |
| Fund Balance—Unrestricted      |             | 2,850,000   |
| Total                          | \$7,680,000 | \$7,680,000 |

During 20X2 the following transactions occurred:

- 1. Provided the value of patient services, \$6,160,000.
- 2. Approved contractual adjustments of \$330,000 from patients' bills.
- 3. Had operating expenses totaling \$5,600,000 as follows:

| Nursing services            | \$1,800,000 |
|-----------------------------|-------------|
| Other professional services | 1,200,000   |
| Fiscal services             | 250,000     |
| General services            | 1,550,000   |
| Bad debts                   | 120,000     |
| Administration              | 280,000     |
| Depreciation                | 400,000     |
|                             |             |

Accounts credited for operating expenses other than depreciation:

| Cash             |               | \$4,580,000 |
|------------------|---------------|-------------|
| Allowance for Ur | ncollectibles | 120,000     |
| Accounts Payable | 9             | 170,000     |
| Accrued Expense  | S             | 35,000      |
| Inventories      |               | 195,000     |
| Prepaid Expenses |               | 30,000      |
| Donated Services | 5             | 70,000      |
|                  |               |             |

- 4. Received \$75,000 cash from specific-purpose fund for partial reimbursement of \$100,000 for operating expenditures made in accordance with a restricted gift. The receivable increased by the remaining \$25,000 to an ending balance of \$65,000.
- 5. Had payments for inventories and prepaid expenses of \$176,000 and \$24,000, respectively.
- 6. Received \$85,000 income from endowment fund investments.
- 7. Sold an X-ray machine that had cost \$30,000 and had accumulated depreciation of \$20,000 for \$17,000.
- 8. Collected \$5.800,000 in receivables and wrote off \$132,000.
- 9. Acquired investments amounting to \$60,000.
- 10. Had \$72,000 income from board-designated investments.
- 11. Paid the beginning balance in Accounts Payable and Accrued Expenses.
- 12. Had a \$20,000 increase in Deferred Revenue—Reimbursement.
- 13. Received \$140,000 from the plant replacement and expansion fund for acquiring fixed assets.
- 14. Had \$63,00 in net receipts from the cafeteria and gift shop.

### Required

- a. Prepare journal entries to record the transactions for the general fund. Omit explanations.
- b. Prepare comparative balance sheets for only the general fund for 20X2 and 20X1.
- c. Prepare a statement of operations for the unrestricted general fund for 20X2.
- d. Prepare a statement of cash flows for 20X2.

### P19-14 Statements for Current Funds of a Voluntary Health and Welfare Organization [AICPA Adapted]

Following are the adjusted current funds trial balances of Community Association for Children With Disabilities, a voluntary health and welfare organization, on June 30, 20X4:

### **COMMUNITY ASSOCIATION FOR CHILDREN WITH DISABILITIES Adjusted Current Funds Trial Balances** June 30, 20X4

|   | Unres     | Unrestricted |          | ricted   |
|---|-----------|--------------|----------|----------|
|   | Debit     | Credit       | Debit    | Credit   |

| Total   | \$478,000 | \$478,000    | \$39,000 | \$39,000 |

### Reauired

- a. Prepare a statement of activities for the year ended June 30, 20X4.
- b. Prepare a statement of financial position as of June 30, 20X4.

### LO 19-4

### P19-15 Comparative Journal Entries for a Governmental Entity and a Voluntary Health and Welfare Organization [AICPA Adapted]

Following are four independent transactions or events that relate to a local government and a voluntary health and welfare organization:

- 1. Made a disbursement of \$25,000 from the general fund unrestricted assets for the cash purchase of new equipment.
- 2. Received an unrestricted cash gift of \$100,000 from a donor.
- 3. Sold investments in common stocks with a total carrying value of \$50,000 of a permanently restricted endowment fund for \$55,000 before any dividends were earned on them. The donorrestricted is gain to remain in the permanently restricted fund.
- 4. Sold general obligation bonds payable with a face amount of \$1,000,000 at par with the proceeds required to be used for construction of a new building. This building was completed at a total cost of \$1,000,000, and the total amount of bond issue proceeds was disbursed toward this cost. Disregard interest capitalization.

### Required

- a. For each of these transactions or events, prepare journal entries without explanations, specifying the affected funds and showing how these transactions or events should be recorded by a local government whose debt is serviced by general tax revenue.
- b. For each of these transactions or events, prepare journal entries without explanations, specifying the affected funds and showing how a VHWO should record these transactions or events.

### P19-16 Matching Effects of Transactions on a Hospital's Financial Statements [AICPA Adapted]

DeKalb Hospital, a large not-for-profit organization, has adopted an accounting policy that does not imply a time restriction on gifts of long-lived assets.

For each of the six items presented, select the best match from the Match List.

| Transactions   | Match List   |

### P19-17 **Balance Sheet for a Hospital**

The following information is for funds used to account for the transactions of the Hospital of Havencrest, which is operated by a religious organization. The balances in the accounts are as of June 30, 20X8, the end of the hospital's fiscal year.

|                                | General<br>Fund | Specific-<br>Purpose<br>Fund | Plant Replacement<br>and Expansion<br>Fund | Endowment<br>Fund |
|--------------------------------|-----------------|------------------------------|--|-------------------|
| Cash                           | \$ 30,000       | \$32,000                     | \$140,000                                  | \$ 20,000         |
| Accounts Receivable            | 25,000          |                              |  |                   |
| Allowance for Uncollectibles   | (5,000)         |                              |  |                   |
| Inventories                    | 50,000          |                              |  |                   |
| Prepaid Expenses               | 10,000          |                              |  |                   |
| Long-Term Investments          | 100,000         |                              | 60,000                                     | 500,000           |
| Property, Plant, & Equipment   | 300,000         |                              |  |                   |
| Accumulated Depreciation       | (140,000)       |                              |  |                   |
| Accounts Payable               | 45,000          |                              |  |                   |
| Accrued Expenses               | 17,000          |                              |  |                   |
| Deferred Revenue               | 11,000          |                              |  |                   |
| Current Portion—Long-Term Debt | 24,000          |                              |  |                   |
| Mortgage Payable               | 125,000         |                              |  |                   |

### **Additional Information**

The \$32,000 in the specific-purpose fund is restricted for research activities to be conducted by the hospital.

### Required

Prepare a balance sheet for Havencrest at June 30, 20X8.

### P19-18 Matching Transactions to Effects on Statement of Changes in Net Assets for a Hospital

Match the transactions on the left with their effects on the statement of changes in net assets on the right for a private, not-for-profit hospital.

### **Effects of Transactions** on Statement of **Transactions Changes in Net Assets** 1. Billed patients for services rendered. A. Increases unrestricted net assets 2. Realized a gain from the sale of permanently invested securities. B. Decreases unrestricted net assets 3. Recorded depreciation expense for the year. 4. Designated assets for plant expansion. C. Increases temporarily restricted net assets 5. Received restricted contributions for research activities received. D. Decreases temporarily 6. Restricted contributions for equipment acquisition. restricted net assets 7. Acquired equipment with all contributions in item 6 received. E. Increases permanently 8. Earned endowment income. The donor placed no restricted net assets restrictions on the investment earnings. F. Decreases permanently 9. Expended 50 percent of the contributions in item 5 restricted net assets restricted for research. G. Does not affect the 10. Received cash contribution from donor who stipulated the statement of changes contribution be permanently invested. in net assets 11. Acquired investments with cash received in item 10. 12. Received tuition revenue from hospital nursing program

### LO 19-4

### P19-19 Matching Transactions to Effects on Statement of Activities for a Voluntary Health and Welfare Organization

Match the transactions on the left with their effects on the statement of activities on the right for a voluntary health and welfare organization. A transaction may have more than one effect.

### **Transactions**

and cash from sales of goods in the hospital gift shop.

- 1. Received cash contributions restricted by donors for research.
- 2. Incurred fund-raising costs.
- 3. Recorded depreciation expense for the year.
- 4. Designated assets for plant expansion.
- 5. Realized a gain from the sale of securities that were permanently restricted. The donor specified that any gains from sales of these securities be preserved and invested in other permanently restricted investments.
- 6. Earned endowment income. The donor specified that the income be used for community service.
- 7. Received a multiyear pledge with cash being received this year and for the next four years. Donors did not place any use restrictions on how the pledges were to be spent.
- 8. Earned income from investments of assets that the board designated in item 4.
- 9. Received pledges from donors who placed no time or use restrictions on how the pledges were to be spent.
- 10. Received cash contributions restricted by donors for equipment.
- 11. Acquired equipment with all of the contributions received in item 10.
- 12. Expended 75 percent of the contributions received in item 1 for research.

### **Effects of Transactions on Statement of Activities**

- A. Increases unrestricted net assets
- B. Decreases unrestricted net assets
- C. Increases temporarily restricted net assets
- D. Decreases temporarily restricted net assets
- E. Increases permanently restricted net assets
- F. Decreases permanently restricted net assets
- G. Is not reported on the statement of activities

### LO 19-1

### P19-20 Net Asset Identification for Transactions Involving a Private **Not-for-Profit University**

Buckwall University (BU), a private not-for-profit university, had the following transactions during the year ended June 30, 20X8:

- 1. Assessed students \$2,000,000 for tuition for the winter semester, starting in January 20X8.
- 2. Received \$1,000,000 from the federal government to be distributed to qualified students as loans and grants.
- 3. Recognized depreciation expense of \$200,000 on university buildings and equipment for the fiscal year.
- 4. Received \$1,500,000 in alumni contributions restricted to the construction of a new library building. Construction is expected to begin in September 20X8.
- 5. Invested the contributions received in item 4 in equity securities that had a market value of \$1,650,000 on June 30, 20X8.
- 6. Received \$75,000 of investment revenue from investments in a term endowment. The donor stipulated that the investment revenue be used to fund scholarships for qualified entering
- 7. Used \$60,000 of the investment revenue in item 6 to fund scholarships during the year ended June 30, 20X8.
- 8. Designated \$250,000 of cash for refurbishing the steam tunnels used for heating the university during the winter.
- 9. Received from an alumnus a contribution of artwork with a fair value of \$3,750,000. The donor has stipulated that the artwork be preserved, that it not be sold, and that it be on public view in the university museum. The university has a policy of recording donations of works of art and historical treasures.
- 10. Acquired debt securities at a cost of \$400,000 during the year that the governing board required to keep intact for the next five years and to use their interest revenue for funding summer research grants to faculty of BU.
- 11. Received during the year ended June 30, 20X8, interest revenue from the debt securities in item 10, which amounted to \$18,000, of which \$12,000 was used for research grants.

### Required

Indicate for each numbered transactions the net asset class it affected for the year ended June 30, 20X8. The three net asset classes are (1) unrestricted, (2) temporarily restricted, and (3) permanently restricted. Your answer also should specify the dollar amount and whether the asset class increased or decreased.

### LO 19-4

### P19-21 Items on Voluntary Health and Welfare Organization [AICPA Adapted]

Items 1 through 6 represent various transactions pertaining to Crest Haven, a voluntary health and welfare organization, for the year ended December 31, 20X2. The information presented includes a list of how transactions could affect the statement of activities (List A Effects) and the statement of cash flows (List B Effects). Crest Haven follows ASC 958.

# **Transactions**

- 1. Received pledges of \$500,000 made by various donors to acquire new equipment in 20X3.
- 2. Received donor-stipulated dividends and interest of \$40,000 from endowment investments whose earnings must be used for research in 20X3.
- 3. Received cash donations of \$350,000 with no information regarding how they are to be used.
- 4. Acquired donor-stipulated investments of \$250,000 from cash donated in 20X0 to be invested permanently.
- 5. Recorded Depreciation expense of \$75,000 for 20X2.
- 6. Received \$300,000 of the amount pledged in transaction 1.

### Required

Indicate how Crest Haven should report each transaction on the (1) statement of activities and (2) statement of cash flows prepared for the year ended December 31, 20X2. Crest Haven reports separate columns for changes in unrestricted, temporarily restricted, and permanently restricted net assets on its statement of activities. In addition, Crest Haven uses the direct method of reporting its cash flows from operation activities. The items in List A Effects and List B Effects may be used once, more than once, or not at all.

### **Example**

Cash paid to employees and suppliers: List A = D List B = I

| Statement of Activities List A Effects  | Statement of Cash Flows<br>List B Effects   |
|---|---|
| A. Increases unrestricted net assets B. Increases temporarily restricted net assets C. Increases permanently restricted net assets D. Decreases unrestricted net assets E. Decreases temporarily restricted net assets F. Decreases permanently restricted net assets G. Is not reported on the statement of activities | H. Increases cash flows from operating activities I. Decreases cash flows from operating activities J. Increases cash flows from investing activities K. Decreases cash flows from investing activities L. Increases cash flows from financing activities M. Decreases cash flows from financing activities N. Is not reported on the statement of cash flows |

### LO 19-3

### P19-22 Contributions to a Hospital [AICPA Adapted]

Alpha Hospital, a large not-for-profit organization, has adopted an accounting policy that does not imply a time restriction on gifts of long-lived assets.

### Required

For items 1 through 6, indicate the effect of the transaction on Alpha's financial statements by selecting the appropriate letter.

|    | Transactions   |    | Effect  |
|----|--|----|---|
| 1. | Received information that Alpha's board had designated \$1,000,000 to purchase investments whose income will be used for capital improvements. |    | Increase in unrestricted revenues, gains, and other support Decrease in expense |
| 2. | Received income from investments in item 1, which was not previously accrued.  |    | Increase in temporarily restricted net assets                                   |
| 3. | Received benefactor-provided funds for a building expansion.   | D. | Increase in permanently restricted net assets                                   |
| 4. | Used funds in item 3 to purchase a building in the fiscal period following the period they were received.                                      | E. | No required reportable event  |
| 5. | Received annual financial statements prepared by an accounting firm without charge.  |    |   |
| 6. | Received investments subject to the donor's requirement that investment income be used to pay for outpatient services.                         |    |   |

# LO 19-3 P19-23

### P19-23 Evaluating Items for a Hospital's Statement of Operations

Smallville Community Hospital, a not-for-profit hospital, needs to evaluate a number of items to determine their proper placement on its statement of operations (either above or below the performance measure of Excess of Revenues over Expenses.

### Items

- 1. Bad debts expense.
- 2. Donated supplies used in patient care.
- 3. Unrestricted investment interest income.
- 4. Gain on sale of hospital assets.
- 5. Net assets released from restriction for acquisition of equipment.
- 6. Net assets released from restriction for use in hospital operations.
- 7. Gain on sale of donor-required permanently restricted endowment investments.
- 8. Investment interest income that donor restricted for use in medical care education programs, which the hospital plans to begin next year.
- 9. Pledges for a new hospital building wing to be constructed next year.
- 10. Revenue from sales of cafeteria items.
- 11. Donations of specialized, professional-quality services.
- 12. Depreciation expense on hospital equipment.
- 13. Resources designated by the hospital board of directors to be set aside for the new hospital wing.
- 14. Gift of new heart-monitoring equipment.
- 15. Charity care provided by the hospital in accordance with its state charter.
- 16. Contractual adjustment to the normal service charge for persons covered by an insurance company's health insurance.
- 17. Proceeds of a bond issue for the new wing.
- 18. Purchase of new operating tables.
- 19. Recognition of unrealized holding gain for change in market value of investment securities. Income is in excess of amounts designated for current operations.

Required Select the proper letter from the Where Reported column to match each item in the left-hand column. If an item is presented in two or more places on the statement of operations, provide the correct answer for each placement. It is possible that an item need not be reported on the hospital's statement of operations.

### LO 19-1–19-5 P19-24

### True-False Questions about Not-for-Profit Accounting and Reporting

Determine whether each of the following is true or false. Assume that each organization is a private, not-for-profit entity. It is possible that an item need not be reported on the hospital's statement of operations.

- 1. A statement of functional expenses is required for a musical arts association.
- 2. Pledges received by a research organization should result in recording revenue net of estimated uncollectible pledges.
- 3. A college should account for a donor-restricted contribution to support student scholarships for the next three years as contribution revenue in its unrestricted net assets.
- 4. A hospital should record an insurance provider's contractual adjustment on a patient bill as an operating expense for the period in which the services were provided to the patient.
- 5. A university should account for its governing board's designation of resources for the development of a fine arts academic program as a transfer to a temporarily restricted net asset class.

### Where Reported

- A. Above the performance measure line
- B. Below the performance measure line
- C. Not reported on the statement of operations

- 6. An environmental watch organization received a donor-restricted donation for the purchase of equipment and it properly accounted for the donation when it was received. When it acquired the equipment, the organization should record net assets released from temporarily restricted net assets and an addition to unrestricted net assets.
- 7. A hospital that used donated supplies for its patient services during the year should not record the donation because it incurred no cost to obtain the supplies.
- 8. An organization earned investment income on its endowment fund that is permanently donor restricted for use in a specific organizational program. The investment income should be recorded directly into the temporarily restricted net asset class.
- 9. A hospital has a portfolio of securities that decreased in fair market value during the year. Because the securities were not sold during the year, their change in market value should not be recognized on the hospital's statement of operations.
- 10. A not-for-profit art museum receives for public display a donation of historical artifacts to care for and preserve. If any item in the collection is ever sold, the museum has agreed to use the proceeds for additional items for the collection. The museum is not required to record the contribution revenue and increase in collection assets.
- 11. All of a hospital's building and equipment should be recorded in its restricted building fund.
- 12. A local accountant donated significant professional services to a local fraternal organization, which should recognize their value as both a contribution revenue and an operating expense.
- 13. A hospital has estimated uncollectibles on patient accounts that should be reported as a reduction of net patient service revenue.
- 14. A college received a conditional pledge based on the occurrence of a future event and should record it at its fair value if the future event is determined to be possible.
- 15. A hospital that received a donation restricted for a cancer awareness education program properly recorded it as contribution revenue in the temporarily restricted net asset class. The cost of the program that the hospital offered should be recorded as an expense in the temporarily restricted net asset class to offset the contribution revenue for the program.
- 16. A voluntary health and welfare organization received a contribution that the donor specified could not be spent until the next year. Because the organization received it in this year, the donation should be recorded as a debit to Cash and a credit to Deferred Revenue in the unrestricted net asset class.
- 17. Hospitals are required to use fund accounting, that specifies which funds are unrestricted, which are temporarily restricted, and which are permanently restricted.
- 18. Hospitals are required to report a performance measure in their statement of operations to separate the operating income from the nonoperating income.
- 19. A hospital's building fund transfers resources to the general fund for the purchase of new equipment. The building fund should record this as an expense of the period of the transfer, and the general fund should record this as an income of the period of the transfer.
- 20. A voluntary health and welfare organization conducted a major fund-raising effort that involved significant expenses. Because they were incurred to obtain contribution revenue, the fund-raising costs should be accounted for as a direct reduction of contribution revenue to obtain the net contribution revenue reported on the organization's statement of activities.

### P19-25 Statement of Activities for a Voluntary Health and Welfare Organization

The following information pertains to United Ways, a private voluntary health and welfare organization, for the year ended December 31, 20X3.

| Balances in net assets at January 1, 20X3: |             |
|--|-------------|
| Unrestricted                               | \$3,000,000 |
| Temporarily restricted                     | 5,000,000   |
| Permanently restricted                     | 6.000.000   |

LO 19-4

The following transactions occurred during the year ended December 31, 20X3:

- 1. Received cash donations of \$500,000 from donors who did not place any time or purpose restrictions on them.
- 2. Received \$1,000,000 of pledges from donors to be received in 20X4; it was estimated that 5 percent of the pledges would not be collected. Donors did not place any restrictions on the use of their pledges.
- 3. Earned investment income of \$200,000 on endowment investments that donors permanently restricted for research activities.
- 4. Designated \$225,000 of the \$500,000 of cash donations received in 20X3 for computer acquisitions.
- 5. Spent \$150,000 of the \$200,000 of investment income earned on endowment investments on research during the year ended December 31, 20X3. (This amount is included in the \$250,000 for research expenses shown in the following table.)
- 6. Acquired \$100,000 of equipment from donations made in 20X2 that donors had restricted for that purchase. The governing board of United Ways reports acquisitions of capital assets as unrestricted.
- 7. Received donated audit services from the organization's accounting firm that would have cost \$15,000.
- 8. Learned that the fair value of endowment investments was \$600,000 higher at the end of 20X3 than at the beginning. United Ways did not acquire or sell any endowment investments during 20X3 and treats gains and losses on endowment investments as permanently restricted.
- 9. Incurred program and supporting services expenses during 20X3 as follows (depreciation expense for 20X3 has been properly allocated to the functional expenses):

| Research   | \$250,000 |
|--|-----------|
| Public health education  | 100,000   |
| Community services   | 150,000   |
| Management and general (does not include the audit that was donated) | 125,000   |
| Fund-Raising   | 115,000   |

### Required

Prepare a statement of activities in good form for United Ways for the year ended December 31, 20X3.

### LO 19-1

### P19-26 Reporting Transactions on the Statement of Cash Flows for Private, **Not-for-Profit Entities**

Following is a list of transactions and events that may occur in private, not-for-profit entities. Indicate where each transaction or event should be reported on the entity's statement of cash flows. Assume that the indirect method of reporting operating activities is used. If a transaction or event is reported as an adjustment to the change in net assets in the operating activities section, your answer should indicate whether the adjustment is added to or subtracted from the change in net assets. If a transaction or event is reported in more than one section on the statement of cash flows, you should include all sections in your answer.

### Sample Question

A hospital recorded depreciation expense for the year of \$50,000.

Report the depreciation expense of \$50,000 as an addition to the change in net assets in the operating activities section.

### Transactions and Events

- 1. A hospital's accounts receivable from patients increased \$100,000 during the year.
- 2. A college received a \$200,000 contribution that the donor restricted to acquiring fixed assets.

- 3. A voluntary health and welfare organization received \$25,000 from a donor who stipulated that the amount be invested permanently.
- 4. A hospital's accounts payable for the purchase of medical supplies increased \$20,000 during the year.
- 5. A botanical society borrowed \$70,000 from First National Bank on a long-term note payable.
- 6. A professional trade association invested \$50,000 to acquire investments in bonds that it intends to keep until their maturity.
- 7. A college received investment income of \$45,000 from endowment investments. The donor stipulated that the income be used for the acquisition of fixed assets.
- 8. A hospital spent \$850,000 to acquire equipment.
- 9. A college made loans of \$100,000 to students and faculty.
- 10. A zoological society made a payment of \$30,000 to a local bank to repay the principal of a short-term note payable.
- 11. A college's accrued interest receivable related to student and faculty loans increased \$5,000 during the year.
- 12. A performing arts organization had an increase of \$12,000 in deferred revenue for the year.
- 13. A college received \$100,000 for the repayment of principal on loans made to students and faculty.
- 14. A hospital's prepaid assets increased \$2,500 during the year.
- 15. A hospital's endowment investments increased in value by \$35,000 during the year.

Corporations in Financial Difficulty

### **GM IN FINANCIAL DISTRESS**

On June 1, 2009, General Motors Corporation (GM) filed for Chapter 11 bankruptcy protection in the Manhattan, New York, federal bankruptcy court. At its peak, GM employed roughly 266,000 people, operated manufacturing plants in 35 countries, and had more than \$200 billion in revenues. At the time of the filing, GM reported \$82.29 billion in assets and \$172.81 billion in debt, leading some to argue that it was "too big to fail."

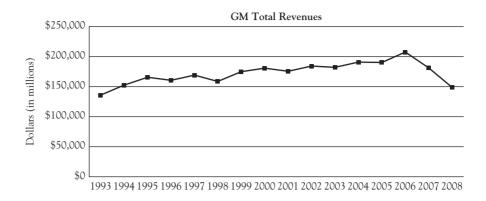

The business press often carries stories of companies in financial difficulty, including other well-known companies such as Kmart, United Airlines, Delta Airlines, Bethlehem Steel, Enron, and WorldCom. According to the American Bankruptcy Institute, approximately 50,000 businesses filed for bankruptcy in the United States during 2011. About 60 percent of these filed as Chapter 7 liquidations and the remaining 40 percent filed as Chapter 11 reorganizations. Each year, an untold number of other companies use alternate courses of action, such as debt restructuring agreements with creditors, to work through financial difficulty while avoiding filing for bankruptcy.

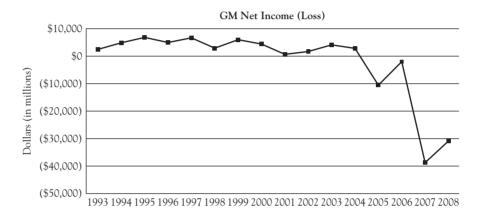

Companies find themselves in financial difficulty for a wide variety of reasons. For example, a company may have (1) continued to incur losses from operations, (2) overextended credit to customers, (3) had poor working capital management, (4) failed to react to changes in economic conditions, and (5) had inadequate financing as well as a host of other factors that lead to a weak economic position. A company's liquidity problems accumulate over time and the path to bankruptcy often follows a downward spiral. For example, failure to achieve a sufficient level of sales can lead to consecutive losses, which can prevent a company from obtaining adequate short-term financing. Inadequate sales also can lead to restricted cash flows, which can cause the company to miss debt payments, and the downward spiral of financial difficulty accelerates. At this point, outside creditors may decide to exercise their claims and demand payment of their receivables. The debtor company has a number of alternative courses of action available. It may try to reach an agreement with its creditors to postpone required payments, to turn its assets over to its creditors for liquidation, or to seek bankruptcy protection from its creditors.

Poor operating performance does not always lead to a bankruptcy filing. For example, two decades earlier in 1991, GM incurred a large net loss but was able to return to profitability the following year. However, in 2009, GM was out of options. As illustrated by the following graphs, although revenues trended upward, net income was headed in the opposite direction. Moreover, bankruptcy did not happen overnight.

In 2006, under financial pressure due to pension liabilities, GM attempted to obtain help first from the U.S. government, which failed, and then through alliances with Nissan and Renault, which also failed. In November 2008, the company announced that it anticipated running out of cash by mid-2009. GM again petitioned the U.S. government for help but Congress declined the proposal. Having exhausted all other options, GM filed for Chapter 11 protection.

Finally, the government did step up to help. As part of GM's reorganization, the U.S. government invested nearly \$50 billion for a 60 percent stake in the new GM.

The company also planned to sell its Hummer and Saturn brands. However, both sales fell through and GM instead decided to phase out both brands. It also decided to phase out the Pontiac brand. GM sold its SAAB brand to Spyker Cars in 2010. In addition, it laid off some 20,000 employees and completely reorganized its management.

This example illustrates the fact that dealing with financial difficulty can be a long and complicated process, especially for large corporations. Plans must be made and followed and a thorough understanding of accounting for these plans and their related transactions are keys to success. A company may petition the courts for bankruptcy for other reasons, such as to protect itself from an onslaught of legal suits. Several companies also have attempted to void union contracts by petitioning for bankruptcy. The courts are still defining the exact limits of bankruptcy, and each case must be decided individually.

*Insolvency* is defined as a condition in which a company is unable to meet debts as they mature. The insolvent company is unable to meet its liabilities. Before 1978, creditors had to show that the debtor was insolvent before they could force the debtor into bankruptcy. Because of changes in the bankruptcy law in 1978, insolvency is no longer a necessary precondition for bankruptcy. A company in financial difficulty has a large number of alternatives of which bankruptcy is only a final course. This chapter presents the range of major actions companies experiencing financial problems typically use.

### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 20-1 Understand the courses of action available to financially distressed firms.
- LO 20-2 Understand Chapter 11 reorganizations and be able to prepare financial statements for debtors-in-possession as well as a plan of recovery.
- Understand Chapter 7 liquidations and be able to prepare a statement LO 20-3 of affairs.
- Understand trustee accounting and reporting. LO 20-4

Chapter 20 Corporations in Financial Difficulty 1041

### **COURSES OF ACTION**

LO 20-1

Understand the courses of action available to financially distressed firms. Bankruptcy is the final step for a financially distressed business. Prior to that, however, management usually tries to work closely with the company's creditors to provide for their claims while attempting to ensure the firm's continuing existence. Various nonjudicial arrangements with creditors are available. If these fail, the company usually ends up in a judicial action under the direction of a bankruptcy court.

# **Nonjudicial Actions**

Formal agreements between the company and its creditors are legally binding but are not administered by a court.

### **Debt Restructuring Arrangements**

Arrangements between a debtor company and one or more of its creditors are common for companies in temporary financial difficulty. The debtor may solicit an extension of due dates of its debt, ask for a decrease of the interest rate on the debt, or ask for a modification of other terms of the debt contract. Creditors are usually willing to extend concessions to a debtor rather than risk the legal expense and ill will from legal action against a previously valuable debtor. Many banks, for example, prefer to continue to work with a customer who is in temporary financial difficulty rather than force it into bankruptcy. Experience has shown that banks eventually realize a larger portion of their receivables and continue to have a future customer if they assist the debtor with financial problems by restructuring the debt. ASC 310 and ASC 470 provide guidance for the debtors' accounting for these troubled debt restructurings as well as the creditors' accounting for impairments in the values of notes and loans involved in the restructurings. ASC 310 also provides guidance for creditor accounting for the income from impaired loans. We present examples of an impairment and a troubled debt restructuring as supplementary information on this text's website.

Another form of debt restructuring arrangement is the composition agreement. In this case, creditors agree to accept less than the face amount of their claims. The advantage to the creditors is that they receive an immediate cash payment and usually negotiate the timing of the remaining cash payments. Although creditors receive less than the full amount, they are assured of receiving most of their receivables. Composition agreements typically involve all creditors, although some may not be willing to agree to them. In some cases, the consenting group of creditors agrees to allow the dissenting creditors to be paid in full if it is highly probable the debtor can eventually return to profitable operations.

### Creditors' Committee Management

Under creditors' committee management, the creditors may agree to assist the debtor in managing the most efficient payment of its claims. Most creditors' committees advise and closely counsel the debtor because the creditors do not want to assume additional liabilities and problems of the debtor's actual operation. Forming a creditors' committee is a nonjudicial action usually initiated with a plan of settlement proposed by the debtor. The plan of settlement is a detailed document that includes a schedule of payments listing the specific debts and the anticipated payments. The creditors then work closely with the debtor to implement the plan.

In some extreme cases, creditors may decide to assume operating control of the debtor company by appointing a trustee who assumes the company's management responsibility. The trustee reports to the creditors with recommendations for the eventual settlement of claims and may attempt to work out a payment schedule or recommend bankruptcy as the best alternative. The advantage of the creditors' committee management in these extreme cases is that creditors have operating control of the debtor and receive a full report of its financial condition. The disadvantage of assuming operating control to the creditors is that they incur an increased risk if the debtor enters bankruptcy because, as managers before the bankruptcy, they may be held responsible. The advantage to the debtor is that the creditors are attempting to assist it to overcome its financial difficulty and may return operating control once the financial problems have been solved without resorting to legal action.

### Transfer of Assets

Some debtors in financial difficulty may transfer assets, such as receivables or other financial instruments, in an effort to obtain quick cash. For example, debtors that need cash may factor their trade receivables at a discount, and the contract may specify that the receivables be sold "with recourse" or "without recourse." The with recourse provision means that the debtor must accept the return of any uncollectible receivables that were initially transferred. The accounting issue is to determine whether these transfers should be accounted for as sales of the receivables or as a financing arrangement between the debtor company and the factor company ASC 860 provides the accounting and reporting guidelines for these transfers. It specifies that a transfer of financial assets is considered a sale only if the transferor (the debtor company) has surrendered control over the transferred assets. Surrendering control means that the transferred assets have been isolated from the transferor, that the transferee (i.e., recipient) obtains the right to pledge or exchange the these assets, and that the transferor does not maintain effective control over them such as through an agreement allowing the transferor to repurchase or redeem the transferred assets. ASC 860 requires that separately recognized servicing assets or liabilities in transactions such as these asset transfers be initially measured at fair value.

### **Judicial Actions**

Bankruptcy is a judicial action administered by bankruptcy courts and bankruptcy judges using the guidance provided in Title 11 of the U.S. Bankruptcy Code (Bankruptcy Code). This Bankruptcy Code provides the essential structure for bankruptcy proceedings, but periodically, U.S. Congress has amended it. For example, the Bankruptcy Reform Act of 1994 (Reform Act of 1994) attempts to improve the efficiency and administration of bankruptcy cases while increasing creditors' legal protections. The Reform Act of 1994 also created a National Bankruptcy Review Commission to periodically investigate, analyze, and review bankruptcy issues and to improve the Bankruptcy Code. The Bankruptcv Abuse Prevention and Consumer Protection Act of 2005 (Bankruptcv Reform Act of 2005) made several changes for business filings, but most of the act pertains to personal filings. For example, the Bankruptcy Reform Act of 2005 makes it more difficult for persons to file for bankruptcy under Chapter 7 liquidations, and it changed Chapter 11 for personal filings to require the payment of debts such as credit card balances and other common forms of consumer debt. Personal bankruptcy filings are beyond the scope of this chapter; however, individuals considering filing for bankruptcy should first seek appropriate legal guidance.

The Bankruptcy Code is composed of eight chapters, numbered as follows:

| Chapter 1  | General Provisions  |
|------------|---|
| Chapter 3  | Case Administration   |
| Chapter 5  | Creditors, the Debtor, and the Estate                             |
| Chapter 7  | Liquidation   |
| Chapter 9  | Adjustment of Debts of a Municipality                             |
| Chapter 11 | Reorganization  |
| Chapter 12 | Adjustment of Debts of a Family Farmer with Regular Annual Income |
| Chapter 13 | Adjustment of Debts of an Individual with Regular Income          |
|            |   |

Chapters 1, 3, and 5 present the definitions and operating provisions of the Bankruptcy Code. Chapters 7 and 11 deal with corporate bankruptcies. Chapter 9 covers municipal governments, and Chapters 12 and 13 provide guidance for individual bankruptcies.

Either the debtor or its creditors may decide that a judicial action is best in the individual circumstances. The debtor may file a voluntary petition seeking judicial protection in the form of an order of relief against the initiation or continuation of legal claims by the creditors against the debtor. Alternatively, creditors may file an involuntary petition against the debtor but first certain conditions must exist. The first condition is that the debtor has generally not been paying debts as they become due or within the last 120 days and has appointed a custodian to take possession of its assets or other creditors or some other agency has done so. Second, if more than 12 creditors exist, 3 or more must combine to file the petition and must have aggregate unsecured claims of at least \$5,000. The debtor is permitted to file an answer to an involuntary petition.

Once a petition has been filed, the bankruptcy court evaluates the company and determines whether present management should continue to manage it or should appoint a trustee. Appointments of trustees are common when creditors make allegations of management fraud or gross management incompetence.

The Bankruptcy Code provides two major alternatives under the bankruptcy court's protection. These two alternatives are often known by the chapters of the Bankruptcy Code. The first is *reorganization under Chapter 11*, which provides the debtor judicial protection for a rehabilitation period during which it can eliminate unprofitable operations, obtain new credit, develop a new company structure with sustainable operations, and work out agreements with its creditors. The second alternative is a liquidation under Chapter 7 of the Bankruptcy Code, which is often administered by a court-appointed trustee. The debtor's assets are sold and its liabilities extinguished as the business is liquidated. The major difference between a reorganization and a liquidation is that the debtor continues as a business after a reorganization whereas the business does not survive a liquidation. We illustrate both of these alternatives next.

### CHAPTER 11 REORGANIZATIONS

### LO 20-2

Understand Chapter 11 reorganizations and be able to prepare financial statements for debtors-in-possession as well as a plan of recovery.

Chapter 11 of the Bankruptcy Code allows for legal protection from creditors' actions during a time needed to reorganize the debtor company and return its operations to a profitable level. The bankruptcy court administers reorganizations and often appoints trustees to direct them. Reorganizations are typically described by four Ps. A company in financial distress petitions the bankruptcy court for protection from its creditors. If granted protection, the company receives an order of relief to suspend making any payments on its prepetition debt. The company continues to operate while it prepares a plan of reorganization, which serves as an operating guide during the reorganization. The proceeding includes the actions that take place from the time the petition is filed until the company completes the reorganization.

The petition must discuss the alternative of liquidating the debtor and distributing the expected receipts to creditors. The plan of reorganization is the essence of any reorganization and must include a complete description of the expected debtor actions during the reorganization period and the way these actions will be in the

On September 15, 2008, Lehman Brothers filed for Chapter 11 bankruptcy protection. With more than \$600 billion in assets, it was the largest bankruptcy filing in U.S. history.

best interest of the debtor and its creditors. A disclosure statement is transmitted to all creditors and other parties eligible to vote on the plan of reorganization. The disclosure statement includes information that would enable a reasonable investor or creditor to make

#### **FYI**

In fiscal 2011, GM earned its largest profit ever, \$6.7 billion. It is a vastly different company than it was prior to the bankruptcy. It is smaller, has less debt, and its contract with the United Auto Workers is less costly. But it took a \$49.5 billion government bailout and bankruptcy protection in 2009 to cut its bloated costs. Thus, GM's reorganization as part of its Chapter 11 bankruptcy filing appears to have helped the company to shed less productive assets and operations.

an informed judgment about the worthiness of the plan and how it will affect that person's financial interest in the debtor company. The bankruptcy court then evaluates the responses to the plan from creditors and other parties and either confirms or rejects the reorganization plan. Confirmation of the plan implies that the debtor, or an appointed trustee, will fully follow the plan. The reorganization period may be as short as a few months or as long as several years. Most reorganizations require more than

one year; however, the time span of the proceeding depends on the complexity of the reorganization.

ASC 852 provides guidance for financial reporting for companies in reorganization. The financial statements issued by a company during Chapter 11 proceedings should distinguish transactions and events directly associated with the reorganization from those associated with ongoing operations. Companies in reorganization are required to present balance sheets, income statements, and statements of cash flows, but ASC 852 requires these three statements to clearly reflect the unique circumstances related to the reorganization.

The balance sheet of a company in reorganization has the following special attributes:

- 1. Prepetition liabilities subject to compromise as part of the reorganization proceeding should be reported separately from liabilities not subject to compromise. Liabilities subject to compromise include unsecured debt and other payables that were incurred before the company entered reorganization. Liabilities that are not subject to change by the reorganization plan include fully secured liabilities incurred before reorganization and all liabilities incurred after the company enters its petition for reorganization relief.
- 2. The liabilities should be reported at the expected amount to be allowed by the bankruptcy court. If no reasonable estimation is possible, the claims should be disclosed in the footnotes.

The income statement of a company in reorganization has the following special requirements:

- 1. Amounts directly related to the reorganization, such as legal fees and losses on disposals of assets, should be reported separately as reorganization items in the period incurred. However, any gains or losses on discontinued operations or extraordinary items should be reported separately according to ASC 225.
- 2. Some of the interest income earned during reorganization is a result of not requiring the debtor to pay debt and thus investing the available resources in interest-bearing sources. Such interest income should be reported separately as a reorganization item. The extent to which reported interest expense differs from the contractual interest on the company's debt should be disclosed, either parenthetically on the face of the income statement or within the footnotes.
- 3. Earnings per share is disclosed as are any anticipated changes to the number of common shares or common stock equivalents outstanding as a result of the reorganization plan.

The statement of cash flows of a company in reorganization has the following special features:

1. ASC 852 prefers the direct method of presenting cash flows from operations, but if the indirect method is used, the company also must disclose separately the operating cash flows associated with the reorganization.

2. Cash flows related to the reorganization should be reported separately from those from regular operations. For example, excess net interest received as a result of the company's not paying its debts during reorganization should be reported separately.

#### Fresh Start Accounting

The basic view of a reorganization is that it is a fresh start for the company. However, it is difficult to determine whether a Chapter 11 reorganization results in a new entity for which fresh start accounting should be used or if it results in a continuation of the prior entity. ASC 852 states that fresh start reporting should be used as of the confirmation date of the plan of reorganization if both the following conditions occur:<sup>1</sup>

- 1. The reorganization value of the assets of the emerging entity immediately before the date of confirmation is less than the total of all postpetition liabilities and allowed claims.
- 2. Holders of existing voting shares immediately before confirmation receive less than 50 percent of the emerging entity's voting shares. This implies that the prior shareholders have lost control of the emerging company.

Fresh start accounting results in a new reporting entity. First, the company is required to compute the reorganization value of the emerging entity's assets. Reorganization value represents the fair value of the entity before considering liabilities and approximates the amount a willing buyer would pay for the entity's assets. The reorganization value is then allocated to the assets using the value method prescribed in ASC 805. A reorganization value in excess of amounts assignable to identifiable assets is reported as an intangible asset called Reorganization Value in Excess of Amounts Allocable to Identifiable Assets. This excess is then accounted for in conformity with ASC 350. The emerging company records its liabilities at the present values of the amounts to be paid. Any retained earnings or deficits are eliminated. A set of final operating statements is prepared just prior to emerging from reorganization. In essence, the company is a new reporting entity after reorganization.

#### Companies Not Qualifying for Fresh Start Accounting

Those companies not meeting the two conditions for fresh start accounting should determine whether their assets are impaired in value. In addition, they should report liabilities at the present values of the amounts to be paid with any gain or loss on the revaluation of the liabilities recorded in accordance with ASC 225 as to extraordinary or ordinary events.

Many companies decide to restructure their operations as part of the reorganization plan. Those companies not qualifying for fresh start accounting account for restructuring costs such as those for closing a plant and reducing the workforce and combining some of the remaining operations in accordance with ASC 420. This standard establishes the recognition of a liability for a cost associated with an exit or disposal activity when the liability is incurred, not at the earlier time the company makes a commitment to an exit plan.

The accounting for long-lived assets should be performed in accordance with ASC 360. The long-lived assets are divided between (1) those to be held and used and (2) those to be sold. An impairment loss on a long-lived asset to be held and used is recognized only if its carrying value is less than the asset's estimated undiscounted cash flows from operations over its estimated useful life. The amount of the impairment loss is the difference between the asset's carrying amount and its fair value. Goodwill is not considered part of long-lived assets to be tested for impairment under ASC 360. Note that ASC 350 guides the accounting for any impairment of goodwill.

<sup>&</sup>lt;sup>1</sup> ASC 852-10-45-19.

Individual long-lived assets that will be sold are revalued to their lower of carrying amount or fair value less the selling costs. In addition, once the use of a long-lived asset is discontinued and set aside for sale, depreciation is stopped. A management decision to dispose of a component of the entity is accounted for as a discontinued segment under **ASC 225.** 

ASC 310 and 470 do not apply to troubled debt restructurings in which debtors restate their liabilities generally under the purview of the bankruptcy court. ASC 310 and 470 apply only to specific debt restructuring transactions. This exception is not an issue in the immediate settlement of debt in which the debtor's gain or loss is the difference between the fair value of the consideration given and the carrying value of the debt. The gain or loss is the same under ASC 310 and 470 as under a general restatement of liabilities in a reorganization. However, in cases of modification of terms in a reorganization involving a general restatement of liabilities, the debtor's restructuring gain is computed as the difference between the debt's carrying value and the new principal after restructuring. The future cash flows from interest payments are not included in the computation of the new principal. Thus, in most cases of debt restructuring of companies in reorganization proceedings, the debtor's gain from the debt restructuring is higher than it would have been under ASC 310 and 470.

# Plan of Reorganization

The plan of reorganization is typically a detailed document with a full discussion of all major actions to be taken during the reorganization period. In addition to these major actions, management also continues to manufacture and sell products, collect receivables, and pursue other day-to-day operations. Most plans include detailed discussions of the following:

- 1. Disposing of unprofitable operations through either sale or liquidation.
- 2. Restructuring of debt with specific creditors.
- 3. Revaluation of assets and liabilities.
- 4. Reductions or eliminations of original stockholders' claims and issuances of new shares to creditors or others.

The plan of reorganization must be approved by at least half of all creditors, who must hold at least two-thirds of the dollar amount of the debtor's total outstanding debt, although the court may still confirm a plan that the necessary number of creditors do not approve provided the court finds that the plan is in the best interests of all parties and is equitable and fair to those groups not voting approval.

# Illustration of a Reorganization<sup>2</sup>

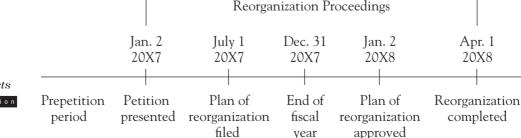

Figure 20–1 is a balance sheet for Peerless Products Corporation on December 31, 20X6. On January 2, 20X7, Peerless' management petitions the bankruptcy court for a Chapter 11 reorganization to obtain relief from debt payments and time to rehabilitate the company and return to profitable operations.

The bankruptcy court accepts the petition, and Peerless Products prepares its plan of reorganization. The plan is filed on July 1, 20X7, and the disclosure statement is sent to all creditors and other affected parties. On December 31, 20X7, the company presents its financial statements for the 20X7 fiscal period in which it was in Chapter 11 proceedings. The bankruptcy court approves the reorganization plan on January 2, 20X8, and the reorganization is completed by April 1, 20X8.

Peerless files the plan of reorganization in Figure 20-2 with audited financial statements and other disclosures requested by the bankruptcy court.

Prior to the approval of the plan of reorganization, Peerless continues to operate under the protection of the granted petition of relief. The company makes only court-approved payments on prepetition liabilities. The only court-approved payment on prepetition liabilities is a \$2,000 payment on the mortgage payable. On December 31, 20X7, the company issues financial statements for the fiscal year. ASC 852 prescribes the reporting guidelines for companies in reorganization proceedings. A most important reporting concern is that the reorganization amounts be reported separately from other operating amounts. Peerless Products prepares the following financial statements as of December 31, 20X7: balance sheet (Figure 20-3), income statement (Figure 20-4), and statement of cash flows (Figure 20-5). Note that Debtor-in-Possession indicates that Peerless continues to manage its own assets rather than have a court-appointed trustee manage them.

# PEERLESS PRODUCTS CORPORATION Plan of Reorganization under Chapter 11 of the Bankruptcy Code (Filed July 1, 20X7)

- a. The accounts payable of \$26,000 will be provided for as follows: (1) \$6,000 will be eliminated, (2) \$4,000 will be paid in cash, (3) \$12,000 of the payables will be exchanged for subordinated debt, and (4) \$4,000 of the payables are to be exchanged for 4,000 shares of newly issued common stock.
- b. The partially secured notes payable of \$10,000 will be provided for as follows: (1) \$2,000 will be paid in cash and (2) the remaining \$8,000 will be exchanged for senior debt secured by a lien on equipment.
- c. The unsecured notes payable of \$80,000 will be provided for as follows: (1) \$12,000 is to be eliminated, (2) \$14,000 is to be paid in cash, (3) \$49,000 is to be exchanged into senior debt secured by a lien against fixed assets, and (4) \$5,000 is to be exchanged into 5,000 shares of newly issued common stock.
- d. The accrued interest of \$3,000 will be provided as follows: (1) \$2,000 will be eliminated and (2) the remaining \$1,000 will be paid in cash.
- e. The accrued wages of \$14,000 will be provided as follows: (1) \$12,000 will be paid in cash and (2) the remaining \$2,000 will be exchanged into 2,000 shares of newly issued common stock.
- f. The preferred shareholders will receive 8,000 shares of newly issued common stock in exchange for their preferred stock.
- g. The present common stockholders will receive 1,000 shares of newly issued common stock in exchange for their present common stock

On January 2, 20X8, the bankruptcy court approves the plan of reorganization as filed. Peerless carries out the plan as shown in the recovery analysis in Figure 20–6.

An important concept for determining the appropriate accounting for entities in reorganization is calculating reorganization value. Reorganization value is the fair value of the entity's assets. Typical methods of determining reorganization value are discounting future cash flows or appraisals. After extensive analysis, a reorganization value of \$195,000 is

| Total                            | (180,000) | (15,000)        | (73,000)  | (33,000)                      | (57,000) | (12,000)     | 100%  | (20,000)     | (195,000)      |      |
|                                  |           |                 |   |                               |          |              |       |              |                |      |

Note: Parentheses indicate credit amount.

determined for Peerless' assets. Recall that fresh start accounting is appropriate only when both of the following conditions occur: (1) reorganization value is less than total postpetition liabilities and allowed claims and (2) holders of existing shares of voting stock immediately before the plan of reorganization is approved retain less than 50 percent of the voting shares of the emerging entity. To determine the first condition for Peerless, the following comparison approves the plan of reorganization:

| Postpetition liabilities                                | \$ 73,000        |
|---|------------------|
| Liabilities deferred pursuant to Chapter 11 proceedings | _133,000         |
| Total postpetition liabilities & allowed claims         | \$206,000        |
| Reorganization value                                    | (195,000)        |
| Excess of liabilities over reorganization value         | <u>\$ 11,000</u> |

Note that the first condition for fresh start accounting is present. The second condition for fresh start accounting also occurs as shown in Figure 20–6. Immediately before the plan of reorganization is approved, the common shareholders hold only 5 percent of the common stock of the emerging entity. Therefore, fresh start accounting is used for Peerless. If both conditions for fresh start accounting are not met, the emerging company is not a new reporting entity.

After intensive study of risk-equivalent companies, the profit potential of the emerging company, and the present value of future cash flows, the capital structure of the emerging company is established as follows:

| Postpetition current liabilities           | \$ 25,000        |
|--|------------------|
| Postpetition mortgage payable              | 48,000           |
| Senior debt                                | 57,000           |
| Subordinated debt                          | 12,000           |
| Common stock (new)                         | 20,000           |
| Total postreorganization capital structure | <u>\$162,000</u> |
|  |                  |

Note that for purposes of the illustration, the newly issued common stock is no-par stock; therefore, no additional paid-in capital is carried forward to the emerging entity. If the assigned value of the newly issued stock is higher than its par value, an additional paid-in capital account is credited for the excess. The \$162,000 of postreorganization capital is the reorganization value of \$195,000 less the \$33,000 paid for the prepetition liabilities as part of the plan of reorganization.

Peerless Products prepares entries to record the execution of the plan of reorganization as it transpires between January 1, 20X8, and April 1, 20X8. Figure 20-7 is a worksheet illustrating the effects of executing the plan of reorganization on Peerless' balance sheet accounts. The first journal entry (1) records the debt restructuring and the gain on the discharge of debt:

|     | January 1, 20X8–April 1, 20X8     |         |
|-----|-----------------------------------|---------|
| (1) | Liabilities Subject to Compromise | 133,000 |
|     | Cash                              | 33,000  |
|     | Senior Debt                       | 57,000  |
|     | Subordinated Debt                 | 12,000  |
|     | Common Stock (new)                | 11,000  |
|     | Gain on Debt Discharge            | 20,000  |

Record debt discharge.

The second journal entry (2) records the exchange of stock for stock. The prior preferred shareholders receive 8,000 shares of newly issued common stock. The prior common shareholders receive 1,000 shares of the newly issued common stock:

|     | January 1, 20X8–April 1, 20X8 |        |
|-----|-------------------------------|--------|
| (2) | Preferred Stock               | 40,000 |
|     | Common Stock (old)            | 10,000 |
|     | Common Stock (new)            | 9,000  |
|     | Additional Paid-In Capital    | 41,000 |

Record exchange of stock for stock.

The last journal entry (3) records the fresh start adjustments of the assigned values of the emerging entity's assets and the elimination of any retained earnings or deficit. A comparison between the company's book values and fair values follows. The fair values are determined according to the procedures in ASC 360. An impairment loss

Note: Parentheses indicate credit amount.

is measured by the amount that the carrying value of a long-lived asset (or asset group) exceeds its fair value. Note that Reorganization Value in Excess of Amounts Allocable to Identifiable Assets is debited for an amount not assignable to other assets. The reorganization value excess is reported as an intangible asset and accounted for according to ASC 350, which specifies that intangibles with finite useful lives should be amortized over their lives. However, for intangible assets determined to have an indefinite life, no amortization should be taken. Instead these indefinite life intangibles must be tested for impairment at least annually to determine whether they are impaired and a loss should be recognized for a reduction in their carrying amount.

Note that if prior to entering reorganization Peerless had goodwill that was judged to be impaired, it would recognize any impairment loss on the debtor-in-possession income statement. Typically, a company in reorganization proceedings is not expected to have goodwill because it is related to excess earnings potential. A case-by-case examination must be made, however, to determine whether the company's recognized goodwill was impaired.

|  | Book<br>Value      | Fair<br>Value      | Difference      |
|--|--------------------|--------------------|-----------------|
| Cash<br>Income tax refund receivable                                   | \$ 7,000<br>12,000 | \$ 7,000<br>12,000 | \$ 0            |

| allocable to identifiable assets                                       | 0                  | 10,000             | 10,000          |
| Totals   | <u>\$147,000</u>   | <u>\$162,000</u>   | <u>\$15,000</u> |

The entry to record the fresh start revaluation of assets and elimination of the deficit follows:

|     | April 1, 20X8   |        |        |
|-----|---|--------|--------|
| (3) | Marketable Securities   | 2,000  |        |
|     | Property, Plant, and Equipment  | 7,000  |        |
|     | Reorganization Value in Excess of Amounts<br>Allocable to Identifiable Assets | 10,000 |        |
|     | Gain on Debt Discharge  | 20,000 |        |
|     | Additional Paid-In Capital  | 41,000 |        |
|     | Inventory   |        | 4,000  |
|     | Retained Earnings—Deficit   |        | 76,000 |

Record fresh start accounting and eliminate deficit.

The last column in Figure 20–7 presents the postreorganization, new reporting entity's balance sheet.

Some reorganizations are unsuccessful, and the debtor must be liquidated. The major reason for unsuccessful reorganizations is continuing losses from operations and no reasonable likelihood of rehabilitation. Another common reason is the inability to consummate a reorganization plan because of the failure to dispose of an unprofitable subsidiary, a material default of the plan by either the debtor or a creditor, or the inability to effect part of the plan as a result of changes in the economic environment. The debtor company then moves from reorganization into liquidation; the latter is the topic of the next section of the chapter.

# **CHAPTER 7 LIQUIDATIONS**

#### LO 20-3

Understand Chapter 7 liquidations and be able to prepare a statement of affairs.

Bankruptcy courts administer liquidations in the interests of the corporation's creditors and shareholders. The intent in liquidation is to maximize the net dollar amount recovered from disposal of the debtor's assets. Bankruptcy courts appoint accountants, attorneys, or experienced business managers as trustees to administer the liquidation. The liquidation process is often completed within 6 to 12 months during which the trustees must

Circuit City initially filed for Chapter 11 bankruptcy in November 2008 in an effort to continue operating. However, the company ultimately converted to Chapter 7 bankruptcy and began liquidating its stores in January 2009.

make periodic reports to the bankruptcy court. The entire liquidation process is governed by the Bankruptcy Code, which describes the specific procedures to be followed and reports to be made. A very important aspect of liquidation is determining the legal rights of each creditor and establishing priorities for those rights.

#### CLASSES OF CREDITORS

The Bankruptcy Code specifies three classes of creditors whose claims have the following priorities: (1) secured creditors, (2) creditors with priority, and (3) general unsecured creditors. The priority of claims determines the order and source of payment to each creditor.

#### **Secured Creditors**

Secured creditors have liens, or security interests, on specific assets, often called collateral. A creditor with such a legal interest in a specific asset has the highest priority claim on that asset. For example, as noted in Figure 20-8, Peerless Products' \$50,000 mortgage payable is secured by the company's land and plant. On December 31, 20X6, the land and plant have a combined net book value of \$65,000 and a fair value of \$55,000. The mortgage holders have first claim to the proceeds from the sale of the land and plant. Therefore, when the land and plant are sold for \$55,000, \$50,000 of the proceeds is used to discharge the Mortgage Payable account and the remaining \$5,000 is available to the next-lower class of creditor.

#### **Creditors with Priority**

As defined by the Bankruptcy Code, *creditors with priority* are unsecured creditors—that is, those having no collateral claim against specific assets who have priority over other unsecured creditors. Creditors with priority are the first to be paid from any proceeds available to unsecured creditors. For businesses, the Bankruptcy Code presents the following as liabilities (listed in the order of their priority):

- 1. Costs of administering the bankruptcy, including accounting and legal costs for experts appointed by the bankruptcy court.
- 2. Liabilities arising in the ordinary course of business during the bankruptcy proceedings.
- 3. Wages, salaries, or commissions, including severance and sick pay earned within 180 days of the date the petition was filed but limited to \$10,000 for each individual.
- 4. Contributions to employee benefit plans for the last 180 days remaining after elimination of compensation in item 3 but constrained by the remainder of the limit of \$10,000 per individual.
- 5. Deposits of customers who made partial payments for the purchase or lease of goods or services that were not delivered. Priority is given to the first \$1,800 per individual; any excess deposit is added to the unsecured claims.
- 6. Unsecured tax claims of governmental units, including income taxes, property taxes, excise taxes, and other taxes.

| \$175,000                    |      | (Carry up to asset section)   |                                | \$110,000  |  |

These six groups of creditors are paid from assets available to unsecured creditors. Any remaining monies are then distributed to the general unsecured creditors.

#### **General Unsecured Creditors**

The lowest priority is given to claims by *general unsecured creditors* who are paid only after secured creditors and unsecured creditors with priority have been satisfied to the extent of any legal limits. Often the general unsecured creditors receive less than the full amount of their claim. The amounts to be paid to these creditors are usually stated as a percentage of the total claim, such as 55 cents on the dollar, or whatever the specific percentage is. The payment to general unsecured creditors is often termed a dividend. It is not uncommon for these dividends to be as low as 20 to 25 percent of the total remaining unsecured claims.

Preference payments made by the debtor to one creditor to the detriment of all other creditors within 90 days before the bankruptcy petition was filed may usually be recovered from the specific creditor and returned to the cash available for all creditors. Sometimes a member of the debtor's management may assure a creditor that the debtor will pay any claim to that specific creditor. This often occurs during the latter phases of financial difficulty, just before filing a petition for bankruptcy. These management assurances are not binding and do not increase the level of the legal claim against the debtor's assets. The priority of the claims is determined solely in accordance with the Bankruptcy Code.

#### **Statement of Affairs**

The accounting statement of affairs is the basic accounting report made at the beginning of the liquidation process to present the expected realizable amounts from disposal of the assets, the order of creditors' claims, and the expected amount that unsecured creditors will receive as a result of the liquidation. A different report, also entitled the statement of affairs, is a list of questions the debtor must answer as part of the bankruptcy petition. The following discussion is about the accounting report, not the legal questionnaire.

The statement of affairs is not a going-concern report; it is an important planning report for a company's anticipated liquidation. The statement of affairs presents the book values of the debtor company's balance sheet accounts, the estimated fair market values of the assets, the order of the claims, and the estimated deficiency to the general unsecured creditors. Common stockholders rarely receive any monies from a liquidating company. The statement of affairs is a planning instrument.

Assume that rather than reorganizing, Peerless decided on December 31, 20X6, to enter Chapter 7 bankruptcy on that date. The following illustration begins with the December 31, 20X6, statement of affairs for Peerless Products shown in Figure 20–8:

- 1. The report presents the balance sheet accounts in order of priority for liquidation. Current versus noncurrent accounts no longer have importance for Peerless.
- 2. The report presents estimated current fair values and expected gains or losses on the disposal of the assets. These are only estimates at the point the bankruptcy petition is filed. Actual gains or losses will be recorded as realized.
- 3. In this example, fully secured creditors are expected to have their entire claims of \$50,000 satisfied with the proceeds from the disposal of the secured asset. The mortgage payable is expected to be fully satisfied with the proceeds of \$55,000 from the sale of the land and plant. The remaining \$5,000 will then be available to satisfy unsecured claims.
- 4. The claims of partially secured creditors will not be completely satisfied from the sale of the collateral asset. Marketable securities having an estimated fair value of \$9,000 are used to secure notes payable of \$10,000. The first \$9,000 of the notes payable is satisfied; the remaining \$1,000 is added to the general unsecured liabilities.

- 5. Free assets are available to unsecured creditors. The first unsecured creditors are those with priority as defined by the Bankruptcy Code. Peerless has accrued wages of \$14,000 payable to its employees, none of whom has more than \$2,000 due. In addition, the company expects to incur \$4,000 of expenses to administer the liquidation.
- 6. All remaining claims are added to the general unsecured liabilities. The total of unsecured claims is \$110,000, but only \$45,000 is expected to be available to meet them. Therefore, the estimated dividend to general unsecured creditors is 41 cents on the dollar (\$45,000/\$110,000). The estimated deficiency to unsecured creditors is \$65,000.
- 7. The stockholders will not receive anything upon Peerless' liquidation. Stock is a residual claim to be settled only after all creditors' claims have been fully settled. Stockholders typically do not receive anything from a bankruptcy liquidation.

The statement of affairs is a planning instrument prepared only at the beginning of the bankruptcy process. It provides important information to creditors and the bankruptcy court as to the expected monies available to each class of creditors. Once the bankruptcy is under way, the debtor records the transactions on its accounting records as they occur.

#### ADDITIONAL CONSIDERATIONS

LO 20-4

Understand trustee account-

We now present the accounting and reporting practices for trustees who act as fiduciaries for the creditors' committee or for the bankruptcy court. Trustees' reports are different from the traditional financial statements because the trustees' legal rights and responsibilities differ from those of the debtor company's management.

# Trustee Accounting and Reporting

Bankruptcy courts appoint trustees to manage a company under Chapter 11 reorganization in cases of management fraud, dishonesty, incompetence, or gross mismanagement. The trustee then attempts to rehabilitate the business. In Chapter 7 liquidations, the trustee normally has the responsibility to expeditiously liquidate the bankrupt company and pay creditors in conformity with the legal status of their secured or unsecured interests. In some cases under Chapter 7, the court appoints a trustee to operate the company for a short time in an effort to obtain a better price for it in entirety rather than selling it

Trustees examine the proofs of all creditors' claims against the debtor's bankruptcy estate, that is, the debtor's net assets. Sometimes the trustee receives title to all assets as a receivership, becomes responsible for the debtor's actual management, and must direct a plan of reorganization or liquidation. A trustee who takes title to the debtor's assets in a liquidation must make a periodic financial report to the bankruptcy court on the progress of the liquidation and on the fiduciary relationship held. Upon accepting the assets, the trustee usually establishes a set of accounting records to account for the receivership. The trustee's accounting records include a liability of the trustee that is created to recognize the debtor's interest in the assets accepted by the trustee. This new account is credited for the book value of the assets accepted and is usually named for the debtor company in receivership. The trustee does not transfer the debtor's liabilities because these remain the debtor company's legal responsibility. The general form of the trustee's opening entry when accepting the assets of the debtor company follows:

| Assets                         | XXX |     |
|--------------------------------|-----|-----|
| Debtor Company—In Receivership |     | XXX |

The actual entry details the individual asset accounts and includes the debtor's company name.

#### Statement of Realization and Liquidation

Trustees prepare a monthly report, called a *statement of realization and liquidation*, for the bankruptcy court. It shows the results of the trustee's fiduciary actions beginning at the point the trustee accepts the debtor's assets. The statement has three major sections: assets, supplementary items, and liabilities. The debtor's liabilities are not transferred to the trustee, but the trustee may incur new liabilities that must be reported in the statement of realization and liquidation.

| Assets   |  |  |  |  |  |
|--|--|--|--|--|--|
| Assets to be realized<br>Assets acquired             | Assets realized<br>Assets not realized               |  |  |  |  |
| Supplementary Items                                  |  |  |  |  |  |
| Supplementary charges Supplementary credits          |  |  |  |  |  |
| Liabilities  |  |  |  |  |  |
| Liabilities liquidated<br>Liabilities not liquidated | Liabilities to be liquidated<br>Liabilities incurred |  |  |  |  |

**Assets:** The assets section of the statement is divided into the four groups shown above. The assets to be realized are those received from the debtor company. The assets acquired are those subsequently acquired by the trustee. The assets realized are those sold by the trustee; the assets not realized are those remaining under the trustee's responsibility as of the end of the period. Cash is usually not reported in the statement of realization and liquidation because a separate cash flow report is typically made.

**Supplementary Items:** The supplementary items section of the report consists of the two items shown above. Supplementary charges include the trustee's administration fees and any cash expenses paid by the trustee. Supplementary credits may include any unusual revenue items.

Liabilities: Although the trustee does not record the debtor's liabilities, the trustee settles some of the debtor's payables and may incur new payables during the receivership. The liabilities section of the statement is divided as shown above. The liabilities liquidated are creditors' claims settled during the period. The liabilities not liquidated are those outstanding at the end of the reporting period. The liabilities to be liquidated are those debts remaining on the books of the debtor company for whose liquidation the trustee is responsible as of the date of appointment. Finally, the liabilities incurred are new obligations the trustee incurred.

# Illustration of Trustee Accounting and Reporting

On December 31, 20X6, D. Able was appointed trustee in charge of liquidating Peerless Products Corporation. Able will be allowed to operate the company for a short period of time to determine whether it can be sold in entirety as opposed to piecemeal. During this time, the trustee must reduce Peerless' current short-term debts. If a sale in entirety is infeasible, Able is directed to liquidate the company. Able accepts the assets on December 31, 20X6, and makes several transactions during January 20X7. The transactions and the entries made on Peerless' books and on the trustee's books are presented in Figure 20–9 and discussed in the following pages.

1. Entry (4) records the transfer of assets from Peerless Products to D. Able. Able recognizes the assets at their book values as reported by Peerless. Accounts receivable are dated as "old" to note that these were part of the transferred assets. The credit for \$175,000 to Peerless Products Corporation—In Receivership is a liability

- of the trustee. On Peerless' books, the reciprocal account, D. Able—Receiver, is a receivable. Note that no liabilities are transferred but remain on Peerless' books because they are the corporation's legal responsibilities.
- 2. The trustee's transactions are recorded in the normal manner in entries (5) through (8). The only difference is the distinction between "old" accounts, which were part of the assets transferred, and "new" accounts, which result from the trustee's transactions.
- 3. The trustee pays \$20,000 of Peerless' accounts payable and \$10,000 for the partially secured note payable. In entry (9), the \$30,000 debit is made to the liability account Peerless Products Corporation—In Receivership, Peerless makes a corresponding entry to reduce its accounts payable and notes payable and to reduce the receivable, D. Able—Receiver.
- 4. The remaining entries (10) through (14) complete the transactions, adjust the books, and close the books at the end of the first period of receivership. Operations resulted in a net income of \$4,000 for the period. The closing entry transfers the net income to the receivership account on the trustee's books. A corresponding entry on Peerless' books increases the receiver's account and the retained earnings account.

The entries are the basis of the statement of realization and liquidation for the month of January 20X7. This statement is reported to the bankruptcy court to show the current state of the liquidation process and to report on the fiduciary responsibility of D. Able, the trustee. Figure 20-10 is the statement of realization and liquidation for Peerless Products Corporation as reported by Able.

|                          | ======================================= |                          | #303,000  |  |

Note the following observations concerning this statement:

- 1. The statement begins with an accounting of the assets received from Peerless and those acquired by the trustee. The assets realized section reports the proceeds of the sale of assets. For example, the marketable securities were sold for \$9,000, which is \$1,000 more than their book value. Sales of inventory are also reported for the amount of the total proceeds. This is the traditional approach used most often in practice, although an alternative sometimes found recognizes the disposal of the assets at their book values with the profit or gain element recognized as a supplementary credit. Either method—using gross proceeds or book value—is allowed in practice. The assets not realized section shows the ending book values of remaining assets as of January 31, 20X7. Cash is not included on the statement because it is already a realized asset. The trustee reports cash in a separate statement.
- 2. Supplementary items include \$13,000 of operating expenses paid, receiver's expenses of \$5,000, and the net gain of \$4,000 as a balancing item. It is important to note that cost allocations are not included in the supplementary items. For example, the trustee recognized depreciation expense of \$10,000, bad debt expense of \$3,000, and expiration of prepaid assets of \$1,000. These do not appear directly in the statement but are shown indirectly. For example, under assets to be realized, depreciable assets, net, are reported as \$101,000, and under the assets not realized, the depreciable assets, net, are shown as \$91,000. The \$10,000 difference is the depreciation expense for the period. Bad debts expense and prepaid expense are treated in a similar way.
- 3. The last part of the statement is a report on the liabilities. The trustee is responsible for liquidating the preexisting debts of \$183,000 and has incurred additional debt of \$20,000 during the month. A total of \$34,000 of debts has been liquidated, leaving \$169,000 still to be liquidated.
- 4. The statement balances at a total of \$503,000, indicating that all items have been reported.

The trustee provides a statement of realization and liquidation to the bankruptcy court on a monthly basis. In addition, a short cash flow statement that summarizes the cash receipts and cash disbursements during the period is provided.

The fact that various bankruptcy courts are accepting alternative forms of the statement of realization may create some consternation for accountants providing professional services in several judicial districts. For example, should assets realized be shown at their gross proceeds, or should a net amount be shown with the gain or loss in supplementary items? The report format presented in this chapter is the traditional approach accepted by a large majority of courts.

# Summary of **Key Concepts**

Various nonjudicial actions are available to companies in financial difficulty. A debtor may restructure its existing debt by agreeing to settle its obligation at less than current value or to modify some terms of the debt agreement. The debtor's payable may be settled with the transfer of equity or assets, or the terms of the debt may be modified. In some cases, creditors may form a committee to manage the debtor's business. In this nonjudicial action, the debtor agrees to comply with the creditors' decisions. The creditors' committee may attempt to rehabilitate the business or find that liquidation is the best course of action.

Two judicial remedies are available under the Bankruptcy Code. The first is Chapter 11 reorganization in which the debtor is given some relief from creditors' claims and can attempt to rehabilitate the business and return it to profitable operations. The bankruptcy court sometimes appoints a trustee to advise the debtor. ASC 852 requires that financial statements produced during reorganization proceedings clearly separate the reorganization items from operating items. In addition, ASC 852 prescribes the two conditions that must occur before firms emerging from reorganization proceedings may use fresh start accounting: (1) the postpetition liabilities plus prepetition liabilities allowed as claims by the court must be higher than the reorganization value assigned to the company's assets and (2) immediately prior to confirmation of the plan of reorganization, the holders of voting shares must have less than 50 percent of the voting shares of the emerging company. Fresh start accounting includes the revaluation of assets and the elimination of any retained earnings or deficit.

The second judicial remedy is a Chapter 7 liquidation. At the beginning of a judicial action, a statement of affairs is prepared as a planning document to show the expected amounts that will be realized on the liquidation of the business and the order of the creditors' claims against the debtor's assets. During liquidation, the debtor's assets are sold, and the creditors' claims are settled in the order of priority defined by the Bankruptcy Code. Secured claims are satisfied with proceeds of the sale of the corresponding collateral; unsecured claims with priority are then settled. Any remaining cash is distributed to the general unsecured creditors.

Bankruptcy courts sometimes appoint trustees to administer the reorganization or liquidation process. A trustee provides a statement of realization and liquidation to the bankruptcy court to report on the progress of the judicial action and the trustee's fiduciary actions. The statement presents the assets transferred to the trustee, the additional assets acquired by the trustee, and the ending balance of unrealized assets still to be converted into cash. The statement also reports the debtor's liabilities discharged by the trustee as well as the additional liabilities the trustee incurred. Some minor variations of the statement format are found in bankruptcy courts.

#### Cases

LO 20-1 **Creditors' Alternatives** C20-1

#### **Communication**

The creditors of Lost Hope Company have had several meetings with the company's management to discuss its financial difficulties. Lost Hope currently has a significant deficit in retained earnings and has defaulted on several of its debt issues. The options currently open to the creditors are to (1) form a creditors' committee, (2) work with the company in a Chapter 11 reorganization, or (3) go through a Chapter 7 liquidation. The creditors have come to you to seek your advice on the advantages and disadvantages of each of the three options from their viewpoint.

#### Required

Discuss the advantages and disadvantages of each of the three options available. Include a discussion of the probable recovery of each of the creditors' claims and the time period of that recovery.

#### C20-2 Research Related to Bankruptcy

Research

You are working on a report regarding bankruptcies. You need to locate more information and have heard that the U.S. bankruptcy courts have a website that would be useful. Locate the website using a search engine. (Hint: A helpful search term may be "U.S. Bankruptcy Courts.") Locate the following information, and incorporate it into a one- to two-page report.

- a. How are bankruptcy judges assigned to specific cases? (You might look under the frequently asked questions, FAQs, for guidance on this question.)
- b. (1) How can a business obtain the appropriate filing forms for a voluntary petition for bankruptcy?
  - (2) Briefly summarize the types of information required on the voluntary petition.
- c. Locate and summarize the following bankruptcy statistics:
  - (1) First determine total business filings and then determine the number of filings by type (e.g., Chapter 7, Chapter 11, and so on) for the most recent calendar year ending on December 31.
  - (2) Determine the number of filings by type for businesses in your specific federal judicial district. (Hint: Some circuits have several district courts, so select the one you feel is most appropriate based on the location of your educational institution.) Briefly discuss how the number of filings in your federal judicial district compares with those filed in other districts.

LO 20-4

#### C20-3 Selection of Bankruptcy Trustee and Trustee's Responsibilities

Research

The U.S. trustee in each of the federal judicial districts is an official appointed by the U.S. attorney general to oversee the administration of bankruptcy cases or private trustees in specific cases. You seek information on the selection of a trustee and the trustee's responsibilities in a Chapter 7 bankruptcy filing.

- a. Access Title 11 of the U.S. Bankruptcy Code and locate the material for a Chapter 7 filing. Summarize the procedure by which an interim trustee is appointed to a bankruptcy case. Then briefly summarize how the creditors may elect a trustee.
- b. Summarize the duties of the trustee under Chapter 7 of the Bankruptcy Code.

#### C20-4 The Bankruptcy of WorldCom

Analysis

WorldCom Inc. was one of the largest companies to file for bankruptcy. This case requires the analysis of WorldCom's December 31, 2002, 10-K filed with the Securities and Exchange Commission. The 10-K can be obtained through EDGAR (www.sec.gov) or some other publicly available source. (Note: After its emergence from bankruptcy, WorldCom was merged into MCI, Inc.; however, that did not affect WorldCom's financial reporting for periods prior to the merger.)

Provide responses to the following by referencing the section(s) of the 10-K where you found the information.

- a. At what date and under which chapter of the Bankruptcy Code did WorldCom file?
- b. Briefly discuss several reasons WorldCom filed for bankruptcy at that time.
- c. Describe WorldCom's major accounting irregularities prior to its bankruptcy.
- d. After the bankruptcy filing, WorldCom performed an extensive review and restatement of its consolidated financial statements for the two years prior to the bankruptcy. List the major categories and amounts of these restatements for each of the two years.
- e. Describe the company's financial accounting and reporting during the reorganization period. Include in your answer a brief discussion of the meaning of the title Debtors-in-Possession at the top of each of the company's financial statements during the reorganization period.
- f. Briefly discuss the form of accounting the company used as it emerged from bankruptcy.

Chapter 20 Corporations in Financial Difficulty 1065

#### Exercises

LO 20-1, 20-2

#### Multiple-Choice Items on Chapter 11 Reorganizations [AICPA Adapted] E20-1

Select the correct response for each of the following.

- 1. A client has joined other creditors of Jet Company in a composition agreement seeking to avoid a bankruptcy proceeding against Jet. Which statement describes the composition agreement?
  - a. It provides for the appointment of a receiver to take over and operate the debtor's business.
  - b. It must be approved by all creditors.
  - c. It provides that the creditors will receive less than the full amount of their claims.
  - d. It provides a temporary delay, not to exceed six months, in the debtor's obligation to repay the debts included in the composition.
- 2. Hardluck Inc. is insolvent. Its liabilities exceed its assets by \$13 million. Blank, its president, and other family members own Hardluck. Blank, whose assets are estimated at less than \$1 million, guaranteed the corporation's loans. A consortium of banks is the principal creditor of Hardluck, having lent it \$8 million, the bulk of which is unsecured. The banks have decided to seek reorganization of Hardluck, and Blank has agreed to cooperate. Regarding the proposed reorganization:
  - a. Blank's cooperation is necessary for signing the petition for a reorganization.
  - b. If a petition for bankruptcy is filed against Hardluck, Blank also will have personal bankruptcy status resolved and relief granted.
  - c. Only a duly constituted creditors' committee may file a plan of reorganization of Hardluck.
  - d. Hardluck will remain in possession of its assets unless a request is made to the court to appoint a trustee.
- 3. Among other provisions, a Chapter 11 plan of reorganization must
  - a. Rank claims according to their liquidation priorities.
  - b. Not impair claims of secured creditors.
  - c. Provide adequate means for the plan's execution.
  - d. Treat all claims alike.
- 4. A condition that must exist for filing an involuntary bankruptcy petition is
  - a. The debtor must have debts of at least \$10,000.
  - b. If the debtor has 12 or more creditors, a majority of them must sign the petition.
  - c. If the debtor has 12 or more creditors, only one need sign the petition, but that creditor must be owed at least \$5,000.
  - d. If the debtor has 12 or more creditors, the required number signing the petition must be owed at least \$5,000 in total.
- 5. The plan of reorganization must be approved by
  - a. At least one-third of all creditors who hold at least half of the total debt.
  - b. At least half of all creditors who hold at least half of the total debt.
  - c. At least half of all creditors who hold at least two-thirds of the total debt.
  - d. At least two-thirds of all creditors who hold at least two-thirds of the total debt.

#### LO 20-2

#### **Recovery Analysis for a Chapter 11 Reorganization** E20-2

The plan of reorganizing for Taylor Companies, Inc., was approved by the court, stockholders, and creditors on December 31, 20X1. The plan calls for a general restructuring of all of Taylor's debt. The company's liability and capital accounts on December 31, 20X1, are as follows:

| Accounts Payable (postpetition)    | \$ 30,000 |
|------------------------------------|-----------|
| Liabilities Subject to Compromise: |           |
| Accounts Payable                   | 80,000    |
| Notes Payable, 10%, unsecured      | 150,000   |
| Interest Payable                   | 40,000    |
| Bonds Payable, 12%                 | 200,000   |
| Common Stock, \$1 par              | 100,000   |
| Additional Paid-In Capital         | 200,000   |
| Retained Earnings (deficit)        | (178,000) |
| Total                              | \$622,000 |
|                                    |           |

A total of \$30,000 of accounts payable has been incurred since the company filed its petition for relief under Chapter 11. No other liabilities have been incurred since the petition was filed. No payments have been made on the liabilities subject to the compromise that existed on the petition date. Under the terms of the reorganization plan:

- 1. The accounts payable creditors existing at the date the petition was filed agree to accept \$72,000 of net accounts receivable in full settlement of their claims.
- 2. The holders of the 10 percent notes payable of \$150,000 plus \$16,000 of interest payable agree to accept land having a fair value of \$125,000 and a book value of \$85,000.
- 3. The holders of the 12 percent bonds payable of \$200,000 plus \$24,000 of interest payable agree to cancel accrued interest of \$18,000, accept cash payment of the remaining \$6,000 of interest, and accept a secured interest in the company's equipment in exchange for extending the term of the bonds for an additional year at no interest.
- 4. The common shareholders agree to reduce the deficit by changing the stock's par value to \$2 per share and eliminating any remaining deficit after recognition of all gains or losses from the debt restructuring transactions specified in the plan of reorganization. The deficit will be eliminated by reducing additional paid-in capital.

#### Required

- a. Prepare a recovery analysis for the plan of reorganization, concluding with the total recovery of each liability and capital component of Taylor Companies.
- b. Prepare the journal entries to account for the discharge of the debt and the restructuring of the common equity in fulfillment of the plan of reorganization.

LO 20-1, 20-3

#### E20-3 **Multiple-Choice Items on Chapter 7 Liquidations**

Select the correct response for each of the following.

- 1. Lear Company ceased doing business and is in bankruptcy. Among the claimants are employees seeking unpaid wages. The following statements describe the possible status of such claims in a bankruptcy proceeding. Which is the *incorrect* statement?
  - a. They are entitled to priority.
  - b. If a priority is afforded such claims, it cannot exceed \$5,000 per wage earner.
  - c. Such claims include wages earned within 180 days before the filing of the bankruptcy petition but not to exceed \$10,000 in amount per wage earner.
  - d. The amounts of excess wages not entitled to a priority are mere unsecured claims.
- 2. The highest priority for payment of unsecured claims in a bankruptcy proceeding is
  - a. Administrative expenses of the bankruptcy.
  - b. Unpaid federal income taxes.
  - c. Wages of each employee up to \$10,000 earned within 180 days before the petition.
  - d. Wages owed to an insolvent employee.
- 3. The order of payments for unsecured priority claims in a Chapter 7 bankruptcy case is such that
  - a. Tax claims of governmental units are paid before claims for administrative expenses incurred by the trustee.
  - b. Tax claims of governmental units are paid before claims of employees for wages.
  - c. Claims of employees for wages are paid before administrative expenses incurred by the trustee.
  - d. Claims incurred between the filing of an involuntary petition and appointment of a trustee are paid before the claims for contributions to employee benefit plans.
- 4. Narco is in serious financial difficulty and is unable to meet current unsecured obligations of \$30,000 to some 14 creditors who are demanding immediate payment. Narco owes Johnson \$5,000, and Johnson has decided to file an involuntary petition against Narco. Which of the following is necessary for Johnson to file validly?
  - a. Johnson must be joined by at least two other creditors.
  - b. Narco must have committed a fraudulent act within one year of the filing.

- c. Johnson must allege and subsequently establish that Narco's liabilities exceed its assets upon fair valuation.
- d. Johnson must be a secured creditor.
- 5. Your client is insolvent under the federal bankruptcy law. Under the circumstances
  - a. So long as the client can meet current debts or claims by its most aggressive creditors, a bankruptcy proceeding is not possible.
  - b. Your CPA firm need not disclose such information—that is, insolvency—in the financial statements so long as you are convinced that the problem is short-lived.
  - c. A transfer of assets to a creditor less than 90 days before filing a petition may be voidable.
  - d. Your client *cannot* file a voluntary petition for bankruptcy.

#### E20-4 Chapter 7 Liquidation

Penn Inc.'s assets have the carrying values and estimated fair values as follows:

#### Penn's debts follow:

| Accounts Payable                                     | \$ 95,000 |
|--|-----------|
| Wages Payable (all have priority)                    | 9,500     |
| Taxes Payable  | 14,000    |
| Notes Payable (secured by receivables and inventory) | 190,000   |
| Interest on Notes Payable                            | 5,000     |
| Bonds Payable (secured by land and building)         | 220,000   |
| Interest on Bonds Payable                            | 11,000    |
| Total  | \$544,500 |
|  |           |

#### Required

- a. Prepare a schedule to calculate the net estimated amount available for general unsecured creditors.
- b. Compute the percentage dividend to general unsecured creditors.
- c. Prepare a schedule showing the amount to be paid each of the creditor groups upon distribution of the \$471,000 estimated to be realizable.

#### E20-5 Statement of Realization and Liquidation

A trustee has been appointed for Pace Inc., which is being liquidated under Chapter 7 of the Bankruptcy Code. The following occurred after the assets were transferred to the trustee:

- 1. Sales on account by the trustee were \$75,000. Cost of goods sold were \$60,000, consisting of all inventory transferred from Pace.
- 2. The trustee sold all \$12,000 worth of marketable securities for \$10,500.
- 3. Receivables collected by the trustee:

Old: \$21,000 of the \$38,000 transferred \$47,000 New:

#### LO 20-4

- 4. Depreciation of \$16,000 on the plant assets of \$96,000 transferred from Pace recorded.
- 5. Disbursements by the trustee:

| Old current payables: | \$22,000 of the \$48,000 transferred |
|-----------------------|--------------------------------------|
| Trustee's expenses:   | \$4,300                              |

Prepare a statement of realization and liquidation according to the traditional approach illustrated in the chapter.

# **Problems**

LO 20-2

#### P20-6 **Chapter 11 Reorganization**

During the recent recession, Polydorous Inc. accumulated a deficit in retained earnings. Although still operating at a loss, the company posted better results during 20X1. Polydorous is having trouble paying suppliers on time and is paying interest when it is due. The company files for protection under Chapter 11 of the Bankruptcy Code and has the following liabilities and stockholders' equity accounts at the time the petition is filed:

| Accounts Payable              | \$160,000 |
|-------------------------------|-----------|
| Interest Payable              | 20,000    |
| Notes Payable, 10%, unsecured | 340,000   |
| Preferred Stock               | 100,000   |
| Common Stock, \$5 par         | 150,000   |
| Retained Earnings (deficit)   | (80,000)  |
| Total                         | \$690,000 |

A plan of reorganization is filed with the court, which approves it after review and obtaining creditor and investor votes. The plan of reorganization includes the following actions:

- 1. The prepetition accounts payable will be restructured according to the following: (a) \$40,000 will be paid in cash, (b) \$20,000 will be eliminated, and (c) the remaining \$100,000 will be exchanged for a five-year, secured note payable paying 12 percent interest.
- 2. The interest payable will be restructured as follows: elimination of \$10,000 of the interest and payment of the remaining \$10,000 in cash.
- 3. The 10 percent, unsecured notes payable will be restructured as follows: (a) \$60,000 of them will be eliminated, (b) \$10,000 of them will be paid in cash, (c) \$240,000 of them will be exchanged for a five-year, 12 percent secured note, and (d) the remaining \$30,000 will be exchanged for 3,000 shares of newly issued common stock having a par value of \$10.
- 4. The preferred shareholders will exchange their stock for 5,000 shares of newly issued \$10 par common stock.
- 5. The common shareholders will exchange their stock for 2,000 shares of newly issued \$10 par common stock.

After extensive analysis, the company's reorganization value is determined to be \$510,000 prior to any payments of cash required by the reorganization plan. An additional \$10,000 in current liabilities have been incurred since the petition was filed. After the reorganization is completed, the capital structure of the company will be as follows:

| Current liabilities (postpetition) Notes payable, 12%, secured | \$ 10,000<br>340,000 |
|--|----------------------|
| Common stock (\$10 par)  | 100,000              |
| Postreorganization capital structure                           | <u>\$450,000</u>     |

An evaluation of the assets' fair values was made after the company completed its reorganization, immediately prior to the point the company emerged from the proceedings. The following information is available:

|                                    | <b>Book Value</b> | Fair Value |
|------------------------------------|-------------------|------------|
| Cash                               | \$ 30,000         | \$ 30,000  |
| Accounts receivable (net)          | 140,000           | 110,000    |
| Inventory                          | 25,000            | 18,000     |
| Property, plant, & equipment (net) | 445,000           | 262,000    |
| Total                              | <u>\$640,000</u>  | \$420,000  |

- a. Prepare a plan of reorganization recovery analysis for the liability and stockholders' equity accounts of Polydorous Inc. on the day the plan of reorganization is approved. (Hint: The liabilities on the plan's approval day are \$530,000, which is \$520,000 from prepetition payables plus \$10,000 in additional accounts payable incurred postpetition.)
- b. Prepare an analysis showing whether the company qualifies for fresh start accounting as it emerges from the reorganization.
- c. Prepare journal entries for execution of the plan of reorganization with its general restructuring of debt and capital.
- d. Prepare the balance sheet for the company on completion of the plan of reorganization.

#### P20-7 **Chapter 7 Liquidation, Statement of Affairs**

Name Brand Company is to be liquidated under Chapter 7 of the Bankruptcy Code. The balance sheet on July 31, 20X1, follows:

| Assets                    |           |
|---------------------------|-----------|
| Cash                      | \$ 5,000  |
| Marketable Securities     | 30,000    |
| Accounts Receivable (net) | 105,000   |
| Inventory                 | 160,000   |
| Prepaid Insurance         | 7,000     |
| Land                      | 80,000    |
| Plant & Equipment (net)   | 412,000   |
| Franchises                | 72,000    |
| Total                     | \$871,000 |

| Liabilities and Equities    |                  |  |
|-----------------------------|------------------|--|
| Accounts Payable            | \$265,000        |  |
| Wages Payable               | 20,000           |  |
| Taxes Payable               | 12,000           |  |
| Interest Payable            | 37,000           |  |
| Notes Payable               | 280,000          |  |
| Mortgages Payable           | 220,000          |  |
| Common Stock (\$20 par)     | 240,000          |  |
| Retained Earnings (deficit) | (203,000)        |  |
| Total                       | <u>\$871,000</u> |  |
|                             |                  |  |

#### Additional Information

- 1. Marketable securities consist of 1,000 shares of Wooly Inc. common stock. The stock's market value per share is \$22. The stock was pledged against a \$28,000, 10 percent note payable that has accrued interest of \$1,400.
- 2. Accounts receivable of \$50,000 are collateral for a \$40,000, 12 percent note payable that has accrued interest of \$4,000.
- 3. Inventory with a book value of \$79,000 and a current value of \$75,000 is pledged against accounts payable of \$105,000. The appraised value of the remainder of the inventory is \$76,000.
- 4. Only \$1,500 will be recovered from prepaid insurance.

LO 20-3

- 5. Land is appraised at \$110,000 and plant and equipment at \$340,000.
- 6. It is estimated that the franchises can be sold for \$30,000.
- 7. All wages payable qualify for priority.
- 8. The mortgages are on the land and a building with a book value of \$162,000 and an appraised value of \$150,000. The accrued interest on the mortgages is \$14,600.
- 9. Estimated legal and accounting fees for the liquidation are \$13,000.

- a. Prepare a statement of affairs as of July 31, 20X1.
- b. Compute the estimated percentage settlement to unsecured creditors.

#### LO 20-3 Chapter 7 Liquidation, Statement of Affairs [AICPA Adapted] P20-8

Tower Inc. advises you that it is facing bankruptcy proceedings. As the company's CPA, you are aware of its condition. Tower's balance sheet on December 31, 20X1, and supplementary data follow:

| Assets                    |     |         |
|---------------------------|-----|---------|
| Cash                      | \$  | 2,000   |
| Accounts Receivable (net) |     | 70,000  |
| Inventory, Raw Materials  |     | 40,000  |
| Inventory, Finished Goods |     | 60,000  |
| Marketable Securities     |     | 20,000  |
| Land                      |     | 13,000  |
| Buildings (net)           |     | 90,000  |
| Machinery (net)           | •   | 140,000 |
| Prepaid Expenses          | _   | 5,000   |
| Total Assets              | \$4 | 140,000 |

| Liabilities and Capital     |           |  |
|-----------------------------|-----------|--|
| Accounts Payable            | \$ 80,000 |  |
| Notes Payable               | 135,000   |  |
| Wages                       | 15,000    |  |
| Mortgages Payable           | 130,000   |  |
| Common Stock                | 100,000   |  |
| Retained Earnings (deficit) | (20,000)  |  |
| Total Liabilities & Capital | \$440,000 |  |

#### Additional Information

- 1. Cash includes a \$500 travel advance that has been expended.
- 2. Accounts receivable of \$40,000 have been pledged in support of bank loans of \$30,000. Credit balances of \$5.000 are netted in the accounts receivable total.
- 3. Marketable securities consist of government bonds costing \$10,000 and 500 shares of Dawson Company stock. The market value of the bonds is \$10,000, and the stock is \$18 per share. The bonds have \$200 of accrued interest due. The securities are collateral for a \$20,000 bank loan.
- 4. Appraised value of raw materials and finished goods is \$30,000 and \$50,000, respectively. For an additional cost of \$10,000, the raw materials could realize \$70,000 as finished goods.
- 5. The appraised value of fixed assets is \$25,000 for land, \$110,000 for buildings, and \$75,000 for machinery.
- 6. Prepaid expenses will be exhausted during the liquidation period.
- 7. Accounts payable include \$15,000 of withheld payroll taxes and \$6,000 owed to creditors who have been reassured by the president of Tower that they will be paid. There are unrecorded employer's payroll taxes in the amount of \$500.
- 8. Wages payable are not subject to any limitations under bankruptcy laws.

- 9. Mortgages payable consist of \$100,000 on land and buildings and \$30,000 for a chattel mortgage on machinery. Total unrecorded accrued interest for these mortgages amounts to \$2,400.
- 10. Estimated legal fees and expenses in connection with the liquidation are \$10,000.
- 11. The probable judgment on a pending damage suit is \$50,000.
- 12. You have not rendered an invoice for \$5,000 for last year's audit, and you estimate a \$1,000 fee for liquidation work.

- a. Prepare a statement of affairs. (The Book Value column should reflect adjustments that properly should have been made as of December 31, 20X1, in the normal course of business.)
- b. Compute the estimated settlement per dollar of unsecured liabilities.

#### P20-9 Financial Statements for a Firm in Chapter 11 Proceedings

On January 2, 20X2, Hobbes Company files a petition for relief under Chapter 11 of the Bankruptcy Code. Hobbes had disastrous operating performance during the recent recession and needs time to reestablish profitable operations. The trial balance on January 2, 20X2, follows:

|                              | Debit     | Credit    |
|------------------------------|-----------|-----------|
| Cash                         | \$ 15,000 |           |
| Accounts Receivable (net)    | 65,000    |           |
| Inventory                    | 102,000   |           |
| Property, Plant, & Equipment | 620,000   |           |
| Accumulated Depreciation     |           | \$140,000 |
| Accounts Payable             |           | 138,000   |
| Notes Payable, 10%           |           | 170,000   |
| Bonds Payable, 12%           |           | 250,000   |
| Interest Payable             |           | 47,000    |
| Preferred Stock              |           | 50,000    |
| Common Stock, \$1 par        |           | 50,000    |
| Additional Paid-In Capital   |           | 75,000    |
| Retained Earnings (deficit)  | 118,000   |           |
| Total                        | \$920,000 | \$920,000 |

The following information applies to the 20X2 fiscal year ending December 31, 20X2. Hobbes is in reorganization proceedings for the entire year, and the plan of reorganization has not been approved as of December 31, 20X2. The debtor retained possession of the company during the year.

#### Income Data for 20X2

- 1. Sales revenue of \$246,000 is generated during the year.
- 2. Cost of goods sold is \$170,000 as a result of cost reduction programs implemented during
- 3. Selling, operating, and administrative expenses are \$50,000 for the year.
- 4. Interest expense is \$4,000. Contractual interest would have been \$51,000 for the year.
- 5. Reorganization items include \$15,000 in fees paid to professionals and \$3,000 of interest earned on cash accumulated as a result of the Chapter 11 proceedings.
- 6. The income tax of \$5,000 on operating income was paid during the year.
- 7. Discontinued operations included a \$16,000 loss on operations, net of tax, and a \$9,000 gain on the sale of assets, net of tax. The bankruptcy court administered the sale of the assets under the Chapter 11 proceedings.

#### Cash Flow Data for 20X2

- 1. A total of \$264,000 is received from customers. This includes \$18,000 received on the accounts receivable that were outstanding prior to filing the petition.
- 2. A total of \$206,000 is paid to suppliers, employees, and others for operations.

LO 20-2

- 3. The current interest expense of \$4,000 on postpetition debt is paid during the year.
- 4. Professional fees of \$15,000 are paid, and interest on cash accumulations of \$3,000 is received.
- 5. Net cash used by discontinued operations, excluding the sale of assets, is \$3,000.
- 6. The proceeds from the sale of the discontinued assets is \$18,000. The bankruptcy court administered this sale.
- 7. Hobbes borrowed \$10,000 in short-term debt as part of a financing plan administered by the
- 8. The court authorized a payment of \$10,000 on the bonds payable. The ending cash balance of \$72,000 represents an increase of \$57,000 during the year.

#### Other Data for 20X2

- 1. Careful working capital management reduced the ending inventory to \$88,000. Continued reduction is expected in 20X3.
- 2. The property, plant, and equipment, net of accumulated depreciation, at the end of 20X2 totaled \$460,000.
- 3. In addition to the \$10,000 short-term borrowings that are part of the court-approved financing plan, Hobbes has postpetition accounts payable of \$7,000.

#### Required

- a. Prepare the income statement for Hobbes for the year ending December 31, 20X2.
- b. Prepare the statement of cash flows for the company for the year ending December 31, 20X2.
- c. Prepare the balance sheet for the company as of December 31, 20X2.

Page numbers followed by n refer to notes. # Want studying to be as simple and interactive as keeping up with your friends online? We can help!

# McGraw-Hill Connect® Accounting

The next evolution in online homework management, *McGraw-Hill's Connect Accounting* is an **online assignment and assessment** solution that connects you with the tools and resources you'll need to achive success:

- Access end-of-chapter assignments for limitless practice and immediate feedback that reports directly to your instructor's grade book.
- Quickly access lectures, an eBook, study tools, and more.

With McGraw-Hill's Connect® Plus Accounting, you also will receive access to a searchable, integrated online version of the textbook to help you successfully complete your work whenever and wherever you choose. If your instructor chooses to use McGraw-Hill Connect Accounting with your course, you can purchase access from the Online Learning Center at www.mhhe.com/christensen10e.

# CourseSmart

#### **CourseSmart**

CourseSmart is a new way to find and buy eTextbooks.

At CourseSmart, you can save up to 55% of the cost of your printed textbook, reduce your impact on the environment, and gain access to powerful web tools for learning. You can **search**, **highlight**, **take notes**, and **share** with friends, as well as **print** the pages you need. Try a free chapter to see if it's right for you. Visit **www.CourseSmart.com** and search by title, author, or ISBN.

# Flexibility and Convenience for Instructors

McGraw-Hill Create™ is a self-service website that allows instructors to quickly and easily create custom course materials by drawing upon McGraw-Hill's comprehensive, cross-disciplinary content and other third-party resources.

- Select and arrange the content in a way that makes the most sense for your course.
- Combine materials from different sources and even upload your own content.
- Choose the best format for your students-print or eBook.
- Edit and update your course materials as often as you'd like.

#### **Learning Management System Integration**

McGraw-Hill Education and Blackboard have teamed up. Now you can access McGraw-Hill Connect and Create right from within your Blackboard course—all with one single sign-on. Say goodbye to the days of logging in to multiple applications. You also get deep integration of McGraw-Hill content and tools right in Blackboard, and when your students complete an integrated Connect assignment, the grade automatically (and instantly) feeds your instructor's Blackboard grade center. Visit www.domorenow.com to learn more.

Visit the Online Learning Center to access the textbook supplements:
