# Advanced Financial Accounting Tenth Edition

Christensen

Cottrell

Baker

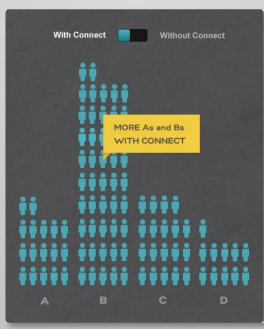

The integrated solutions for Christensen's Advanced Financial Accounting, 10e, have been proven to help you achieve your course goals of improving student readiness, enhancing student engagement, and increasing their comprehension of content. Known for its engaging style, the Christensen solution employs the use of current companies and instant feedback on practice problems to help students engage with course materials, comprehend the content, and achieve higher outcomes in the course.

Christensen's Advanced Financial Accounting, 10e, now includes algorithmic problems in Connect! Algorithmically generated numbers for selected problems are available with each chapter within Connect.

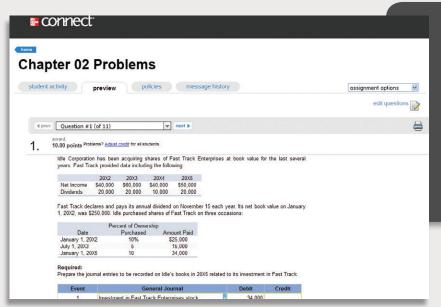

In addition, our new **Intelligent Response Technology**-based content offers students an intelligent homework experience that helps them stay focused on learning instead of navigating the technology.

# Get Connected.

### **FEATURES**

Connect Accounting's algorithmic problems provide students with an individualized problem and customized explanations of each calculation. Algorithmic problems allow instructors flexibility in creating homework assignments as the numbers automatically generate, causing a variety of different sets to choose from.

# Intelligent Response Technology

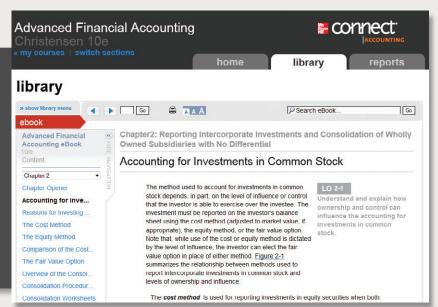

is Connect Accounting's new student interface for end-of-chapter assessment content. Intelligent Response Technology provides a general journal application that looks and feels more like what you would find in a general ledger software package, improves answer acceptance to reduce student frustration with formatting issues (such as rounding), and, for select questions, provides an expanded table that guides students through the process of solving the problem.

# Get Engaged.

## **eBooks**

Connect Plus includes a media-rich eBook that allows you to share your notes with your students. Your students can insert and review their own notes, highlight the text, search for specific information, and interact with media resources. Using an eBook with Connect Plus gives your students a complete digital solution that allows them to access their materials from any computer.

# Lecture Capture

Make your classes available anytime, anywhere. With simple, one-click recording, students can search for a word or phrase and be taken to the exact place in your lecture that they need to review.

# About the Authors

### Theodore E. Christensen

Ted Christensen has been a faculty member at Brigham Young University since 2000. Prior to coming to BYU, he was on the faculty at Case Western Reserve University for five years. He received a BS degree in accounting at San Jose State University, a MAcc degree in tax at Brigham Young University, and a PhD in accounting from the University of Georgia. Professor Christensen has authored and coauthored articles published in many journals including *The Accounting Review*, the *Journal of Accounting Research*, the *Journal of Accounting and Economics, Review of Accounting Studies, Contemporary Accounting Research, Accounting Organizations and Society*, the *Journal of Business Finance & Accounting, Accounting Horizons*, and *Issues in Accounting Education*. Professor Christensen has taught financial accounting at all levels, financial statement analysis, both introductory and intermediate managerial accounting, and corporate taxation. He is the recipient of numerous awards for both teaching and research. He has been active in serving on various committees of the American Accounting Association and is a CPA.

### David M. Cottrell

Professor Cottrell joined the faculty at Brigham Young University in 1991. He currently serves as the Associate Director of the School of Accountancy. Prior to coming to BYU he spent five years at The Ohio State University, where he earned his PhD. Before pursuing a career in academics he worked as an auditor and consultant for the firm of Ernst & Young in its San Francisco office. At BYU, Professor Cottrell has developed and taught courses in the School of Accountancy, the MBA program, and the Finance program. He has won numerous awards from the alumni and faculty for his teaching and curriculum development. He has received the Outstanding Professor Award in the college of business as selected by the students in the Finance Society; he has received the Outstanding Teaching Award as selected by the Marriott School of Management; and he is a four-time winner of the collegewide Teaching Excellence Award for Management Skills, which is selected by the Alumni Board of the Marriott School of Management at BYU. Professor Cottrell also has authored many articles about accounting and auditing issues. His articles have been published in Issues in Accounting Education, The Journal of Accounting Case Research, The Quarterly Review of Distance Education, Journal of Accountancy, The CPA Journal, Internal Auditor, The Tax Executive, and The Journal of International Taxation, among others.

### Richard E. Baker

Richard E. Baker was a member of the faculty of Northern Illinois University for 26 years. His academic recognitions include having been named the Ernst & Young Distinguished Professor of Accountancy at Northern Illinois University. In addition, he has been recognized as an inaugural University Presidential Teaching Professor, the highest teaching recognition of his university. He received his BS degree from the University of Wisconsin at River Falls and his MBA and PhD from the University of Wisconsin at Madison. His activities in the American Accounting Association have been continuous over many years and include service on the AAA's Executive Committee as the Director of Education of the AAA; as a member of the AAA's Council; as the Chair of the Teaching and Curriculum Section; and as the President of the Midwest Region. His lengthy service to the Federation of Schools of Accountancy (FSA) includes the offices of the President, the Vice President, and the Secretary. Many of his extensive professional and academic organization committee service efforts have involved research in assessing teaching and learning outcomes, designing innovative curriculum models, developing meaningful measurement criteria for evaluating accounting programs, and continually

### vi About the Authors

integrating new electronic technology into the accounting classroom. Professor Baker has received numerous teaching awards at both the undergraduate and graduate levels and has been selected as the Illinois CPA Society's Outstanding Accounting Educator. His most recent published research studies have concentrated on ways to make the learning/teaching experience as effective as possible.

# Preface

The Tenth Edition of Advanced Financial Accounting is an up-to-date, comprehensive, and highly illustrated presentation of the accounting and reporting principles and procedures used in a variety of business entities. Every day, the business press carries stories about the merger and acquisition mania, the complexities of modern business entities, new organizational structures for conducting business, accounting scandals related to complex business transactions, the foreign activities of multinational firms, the operations of governmental and not-for-profit entities, bankruptcies of major firms, and other topics typically included in advanced accounting. Accountants must understand and know how to deal with the accounting and reporting ramifications of these issues.

### **OVERVIEW**

The Tenth Edition of *Advanced Financial Accounting* continues to provide strong coverage of advanced accounting topics with clarity of presentation and integrated coverage based on continuous case examples. The text is highly illustrated with complete presentations of worksheets, schedules, and financial statements so that students can see the development of each topic. Inclusion of all recent FASB and GASB pronouncements and the continuing deliberations of the authoritative bodies provide a current and contemporary text for students preparing for the CPA examination and current practice. This has become especially important given the recent rapid pace of the authoritative bodies in dealing with major issues having far-reaching implications. An overview of the contents and organization for the Tenth Edition is illustrated below.

### **Multi-Corporate Entities**

### **Business Combinations**

1 Intercorporate Acquisitions and Investments in Other Entities

### **Consolidation Concepts and Procedures**

- 2 Reporting Intercorporate Investments and Consolidation of Wholly Owned Subsidiaries with No Differential
- 3 The Reporting Entity and the Consolidation of Less-than-Wholly-Owned Subsidiaries with No Differential
- 4 Consolidation of Wholly Owned Subsidiaries Acquired at More than Book Value
- 5 Consolidation of Less-than-Wholly-Owned Subsidiaries Acquired at More than Book Value

### **Intercompany Transfers**

- 6 Intercompany Inventory Transactions
- 7 Intercompany Transfers of Noncurrent Assets and Services
- 8 Intercompany Indebtedness

### **Additional Consolidation Issues**

- 9 Consolidation Ownership Issues
- 10 Additional Consolidation Reporting Issues

### **Multinational Entities**

### **Foreign Currency Transactions**

11 Multinational Accounting: Foreign Currency Transactions and Financial Instruments

### **Translation of Foreign Statements**

12 Multinational Accounting: Issues in Financial Reporting and Translation of Foreign Entity Statements

### **Reporting Requirements**

### **Segment and Interim Reporting**

13 Segment and Interim Reporting

### **SEC Reporting**

14 SEC Reporting

### **Partnerships**

### Formation, Operation, Changes

15 Partnerships: Formation, Operation, and Changes in Membership

### Liquidation

16 Partnerships: Liquidation

### **Governmental and Not-for-Profit Entities**

### **Governmental Entities**

17 Governmental Entities: Introduction and General Fund Accounting

### Special Funds

18 Governmental Entities: Special Funds and Government-wide Financial Statements

### **Not-for-Profit**

19 Not-for-Profit Entities

### **Corporations in Financial Difficulty**

20 Corporations in Financial Difficulty

### **NEW FEATURES ADDED IN THE TENTH EDITION**

- Callout boxes. We have added three types of "callout boxes" that appear in the left-hand margin to draw attention to important points throughout the chapters. The most common callout boxes in the tenth edition are the "FYI" boxes, which often illustrate how real-world companies or entities apply the principles discussed in the various chapters. The "Caution" boxes draw students' attention to common mistakes and explain how to avoid them. The "Stop & Think" boxes help students take a step back and think through the logic of difficult concepts. We believe these callout boxes will help students to better understand difficult concepts and make the textbook more interesting to read.
- New shading of consolidation worksheet entries. Feedback from textbook adopters prompted us to revise the shading of consolidation worksheet entries to clearly distinguish between the various types of entries. We have extended this shading not only to the worksheets but also to supporting schedules and calculation boxes so that numbers appearing in consolidation worksheet entries are uniformly shaded in all locations.
- **Presentation of intercompany transactions.** We have significantly revised the three chapters related to intercompany transactions. Based on feedback from instructors and students, we have extensively rewritten Chapters 6, 7, and 8 to better illustrate and explain some of the most difficult concepts covered in the consolidation area.
- New FASB codification. All authoritative citations to U.S. GAAP are now exclusively
  cited based on the new FASB codification.

### KEY FEATURES MAINTAINED IN THE TENTH EDITION

The key strengths of this text are the clear and readable discussions of concepts and their detailed demonstrations through illustrations and explanations. The many favorable responses to prior editions from both students and instructors confirm our belief that clear presentation and comprehensive illustrations are essential to learning the sophisticated topics in an advanced accounting course. Key features maintained in the Tenth Edition include:

• **Introductory vignettes.** Each chapter begins with a brief story of a well-known company to illustrate why topics covered in that chapter are relevant in current practice. Short descriptions of the vignettes and the featured companies are included in the Chapter-by-Chapter Changes section on page xvi.

- A building-block approach to consolidation. Virtually all advanced financial accounting classes cover consolidation topics. Although this topic is perhaps the most important to instructors, students frequently struggle to gain a firm grasp of consolidation principles. The Tenth Edition provides students a learning-friendly framework to consolidations by introducing consolidation concepts and procedures more gradually. This is accomplished by a building-block approach that introduces consolidations in Chapters 2 and 3 and continuing through chapter 5.
- IFRS comparisons. As the FASB and IASB work toward convergence to a single set of global accounting standards, the SEC is debating the wholesale introduction of international financial reporting standards (IFRS). The Tenth Edition summarizes key differences between current U.S. GAAP and IFRS to make students aware of changes that will likely occur if the SEC adopts IFRS in the near future.
- AdvancedStudyGuide.com. See page xiv for details.
- The use of a continuous case for each major subject-matter area. This textbook presents the complete story of a company, Peerless Products Corporation, from its beginning through its growth to a multinational consolidated entity and finally to its end. At each stage of the entity's development, including the acquisition of a subsidiary, Special Foods Inc., the text presents comprehensive examples and discussions of the accounting and financial reporting issues that accountants face. The discussions tied to the Peerless Products continuous case are easily identified by the company logos in the margin:

We use the comprehensive case of Peerless Products Corporation and its subsidiary, Special Foods Inc., throughout the for-profit chapters. For the governmental chapters, the Sol City case facilitates the development of governmental accounting and reporting concepts and procedures. Using a continuous case provides several benefits. First, students need become familiar with only one set of data and can then move more quickly through the subsequent discussion and illustrations without having to absorb a new set of data. Second, the case adds realism to the study of advanced accounting and permits students to see the effects of each successive step on an entity's financial reports. Finally, comparing and contrasting alternative methods using a continuous case allows students to evaluate different methods and outcomes more readily.

- Extensive illustrations of key concepts. The book is heavily illustrated with complete, not partial, workpapers, financial statements, and other computations and comparisons useful for demonstrating each topic. The illustrations are cross-referenced to the relevant text discussion. In the consolidations portion of the text, the focus is on the fully adjusted equity method of accounting for an investment in a subsidiary, but two other methods—the cost method and the modified equity method—are also discussed and illustrated in chapter appendixes.
- Comprehensive coverage with significant flexibility. The subject matter of advanced accounting is expanding at an unprecedented rate. New topics are being added, and traditional topics require more extensive coverage. Flexibility is therefore essential in an advanced accounting text. Most one-term courses are unable to cover all topics included in this text. In recognition of time constraints, this text is structured to provide the most efficient use of the time available. The self-contained units of subject matter allow for substantial flexibility in sequencing the course materials. In addition, individual chapters are organized to allow for going into more depth on some topics

- through the use of the "Additional Considerations" sections. Several chapters include appendixes containing discussions of alternative accounting procedures or illustrations of procedures or concepts that are of a supplemental nature.
- Extensive end-of-chapter materials. A large number of questions, cases, exercises, and problems at the end of each chapter provide the opportunity to solidify understanding of the chapter material and assess mastery of the subject matter. The end-ofchapter materials progress from simple focused exercises to more complex integrated problems. Cases provide opportunities for extending thought, gaining exposure to different sources of accounting-related information, and applying the course material to real-world situations. These cases include research cases that refer students to authoritative pronouncements and Kaplan CPA Review simulations. The American Institute of CPAs has identified five skills to be examined as part of the CPA exam: (a) analysis, (b) judgment, (c) communication, (d) research, and (e) understanding. The end-of-chapter materials provide abundant opportunities for students to enhance those skills with realistic and real-world applications of advanced financial accounting topics. Cases and exercises identified with a world globe icon provide special opportunities for students to access real-world data by using electronic databases, Internet search engines, or other inquiry processes to answer the questions presented on the topics in the chapters.

### MCGRAW-HILL'S CONNECT® ACCOUNTING

Less Managing. More Teaching. Greater Learning.

McGraw-Hill's *Connect® Accounting* is an online assignment and assessment solution that connects students with the tools and resources they'll need to achieve success.

McGraw-Hill's *Connect® Accounting* helps prepare students for their future by enabling faster learning, more efficient studying, and higher retention of knowledge.

### McGraw-Hill's Connect® Accounting Features

McGraw-Hill's *Connect® Accounting* offers a number of powerful tools and features to make managing assignments easier so faculty can spend more time teaching. With McGraw-Hill's *Connect® Accounting*, students can engage with their coursework anytime and anywhere, making the learning process more accessible and efficient. McGraw-Hill's *Connect® Accounting* offers you the features described below.

### Simple Assignment Management

With McGraw-Hill's *Connect® Accounting*, creating assignments is easier than ever, so you can spend more time teaching and less time managing. The assignment management function enables you to

- Create and deliver assignments easily with selectable end-of-chapter questions and test bank items.
- Streamline lesson planning, student progress reporting, and assignment grading to make classroom management more efficient than ever.
- Go paperless with the eBook and online submission and grading of student assignments.

### **Smart Grading**

When it comes to studying, time is precious. McGraw-Hill's *Connect® Accounting* helps students learn more efficiently by providing feedback and practice material when they need it, where they need it. When it comes to teaching, your time also is precious. The grading function enables you to

Use algorithmically generated numbers for selected problems. This feature allows
each student to complete an individualized problem with customized explanations of
each calculation.

- Have assignments scored automatically, giving students immediate feedback on their work and side-by-side comparisons with correct answers.
- Access and review each response; manually change grades or leave comments for students to review.
- Reinforce classroom concepts with practice tests and instant quizzes.

### Instructor Library

The McGraw-Hill's *Connect® Accounting* Instructor Library is your repository for additional resources to improve student engagement in and out of class. You can select and use any asset that enhances your lecture. The McGraw-Hill's *Connect® Accounting* Instructor Library includes

- eBook
- · Solutions Manual
- Instructor's Resource Manual
- Instructor PowerPoint® Presentations
- Test Bank

### Student Study Center

The McGraw-Hill's *Connect® Accounting* Student Study Library is the place for students to access additional resources. The Student Library

- Offers students quick access to lectures, practice materials, eBooks, and more.
- Provides instant practice material and study questions, easily accessible on the go.

### **Student Progress Tracking**

McGraw-Hill's *Connect® Accounting* keeps instructors informed about how each student, section, and class is performing, allowing for more productive use of lecture and office hours. The progress-tracking function enables you to

- View scored work immediately and track individual or group performance with assignment and grade reports.
- Access an instant view of student or class performance relative to learning objectives.
- Collect data and generate reports required by many accreditation organizations, such as AACSB and AICPA.

### McGraw-Hill's Connect® Plus Accounting

McGraw-Hill reinvents the textbook learning experience for the modern student with McGraw-Hill's *Connect® Plus Accounting*. A seamless integration of an eBook and McGraw-Hill's *Connect® Accounting*, McGraw-Hill's *Connect® Accounting* provides all of McGraw-Hill's *Connect® Accounting* features plus the following:

- An integrated eBook, allowing for anytime, anywhere access to the textbook.
- Dynamic links between the problems or questions you assign to your students and the location in the eBook where that problem or question is covered.
- A powerful search function to pinpoint and connect key concepts in a snap.

In short, McGraw-Hill's *Connect® Accounting* offers you and your students powerful tools and features that optimize your time and energies, enabling you to focus on course content, teaching, and student learning. McGraw-Hill's *Connect® Accounting* also offers a wealth of content resources for both instructors and students. This state-of-the-art, thoroughly tested system supports you in preparing students for the world that awaits.

For more information about McGraw-Hill's *Connect*® *Accounting*, go to **www.mcgrawhillconnect.com**, or contact your local McGraw-Hill sales representative.

### **TEGRITY CAMPUS: LECTURES 24/7**

Tegrity Campus is a service that makes class time available 24/7 by automatically capturing every lecture. With a simple one-click start-and-stop process, you capture all computer screens and corresponding audio in a format that is easily searchable, frame by frame. Students can replay any

part of any class with easy-to-use browser-based viewing on a PC or Mac, an iPod, or other mobile device.

Educators know that the more students can see, hear, and experience class resources, the better they learn. In fact, studies prove it. Tegrity Campus's unique search feature helps students efficiently find what they need, when they need it, across an entire semester of class recordings. Help turn your students' study time into learning moments immediately supported by your lecture. With Tegrity Campus, you also increase intent listening and class participation by easing students' concerns about note taking. Lecture Capture will make it more likely you will see students' faces, not the tops of their heads.

To learn more about Tegrity, watch a two-minute Flash demo at http://tegritycampus.mhhe.com.

### COURSESMART.COM

CourseSmart is a new way to find and buy eTextbooks. At CourseSmart, you can save up to 55 percent off the cost of a print textbook, reduce your impact on the environment, and gain access to powerful Web tools for learning. CourseSmart has the largest selection of eTextbooks available anywhere, offering thousands of the most commonly adopted textbooks from a wide variety of higher-education publishers. CourseSmart eTextbooks are available in one standard online reader with full-text search, notes and highlighting, and e-mail tools for sharing notes between classmates. Go to www.coursesmart.com to learn more.

### MCGRAW-HILL/IRWIN CARES

At McGraw-Hill, we understand that getting the most from new technology can be challenging. That's why our services don't stop after you purchase our products. You can contact our Technical Support Analysts 24 hours a day to get product training online. Or you can search our knowledge bank of Frequently Asked Questions on our support website. For Customer Support, call **800-331-5094** or visit **www.mhhe.com/support**. One of our Technical Support Analysts will be able to assist you in a timely fashion.

# MCGRAW-HILL HIGHER EDUCATION AND BLACKBOARD HAVE TEAMED UP. WHAT DOES THIS MEAN FOR YOU?

- **1. Your life, simplified.** Now you and your students can access McGraw-Hill's *Connect*® and Create<sup>TM</sup> right from within your Blackboard course—all with one single sign-on. Say good-bye to the days of logging in to multiple applications.
- **2. Deep integration of content and tools.** Not only do you get single sign-on with *Connect*® and Create<sup>TM</sup> but also you get deep integration of McGraw-Hill content and content engines right in Blackboard. Whether you're choosing a book for your course or building *Connect*® assignments, all the tools you need are right where you want them—inside of Blackboard.
- **3. Seamless gradebooks.** Are you tired of keeping multiple gradebooks and manually synchronizing grades into Blackboard? We thought so. When a student completes an integrated *Connect*® assignment, the grade for that assignment automatically (and instantly) feeds your Blackboard grade center.

**4. A solution for everyone.** Whether your institution is already using Blackboard or you just want to try Blackboard on your own, we have a solution for you. McGraw-Hill and Blackboard can now offer you easy access to industry-leading technology and content whether your campus hosts it or we do. Be sure to ask your local McGraw-Hill representative for details.

In addition to Blackboard integration, course cartridges for whatever online course management system you use (e.g., WebCT or eCollege) are available for *Advanced Financial Accounting*, Tenth Edition. Our cartridges are specifically designed to make it easy to navigate and access content online. They are easier than ever to install on the latest version of the course management system available today.

### SUPPLEMENTS FOR INSTRUCTORS

• Online Learning Center (OLC). We offer an Online Learning Center (OLC) that follows Advanced Financial Accounting chapter by chapter. It doesn't require any building or maintenance on your part. It's ready to go the moment you and your students type in the URL: www.mhhe.com/christensen10e.

The OLC includes

- PowerPoint® presentations
- Excel worksheets
- Check figures
- Test Bank
- New instructor resources. The authors have developed a new set of PowerPoint slides
  designed to accompany the Tenth Edition. These slides do much more than summarize the topics in each chapter. They illustrate key concepts and include group
  exercises and practice quiz questions to give students hands-on practice in class to
  better prepare them for future homework and assessment experiences. Instructors
  benefit from proven interactive class discussions and exercises fully annotated by the
  authors.
- *Solutions Manual.* The solutions manual, created by the authors, provides solutions for all questions, cases, exercises, and problems in the text. The solutions are carefully explained and logically presented. Answers for the multiple-choice questions include computations and explanations.
- *Test Bank*. Revised by the authors, this comprehensive collection of both conceptual and procedural test items has been updated for the new edition. Also new with this edition is a wide variety of Kaplan CPA questions. The material is organized by chapter and includes a large variety of multiple-choice questions, exercises, and problems that can be used to measure student achievement in the topics in each chapter. The test items are closely coordinated with the text to ensure consistency.
- *Instructors' Resource Manual*. The Instructor's Resource Manual includes chapter outlines, additional examples, teaching suggestions on how to use the PowerPoint slides, and other materials to assist instructors in making the most effective use of the text.
- *Instructor Updates*. This feature contains timely discussions and illustrations of major accounting or financial reporting issues under deliberation by standard-setting bodies. Instructors can choose to share them with their students.

### ASSURANCE OF LEARNING READY

Many educational institutions today focus on the notion of assurance of learning, an important element of some accreditation standards. Advanced Financial Accounting is designed specifically to support your assurance of learning initiatives with a simple yet powerful solution.

Each test bank question for *Advanced Financial Accounting* maps to a specific chapter learning outcome/objective listed in the text. You can use our test bank software,

EZ Test and EZ Test Online, or in McGraw-Hill's *Connect® Accounting* to easily query for learning outcomes/objectives that directly relate to the learning objectives for your course. You can then use the reporting features of EZ Test to aggregate student results in a similar fashion, making the collection and presentation of assurance of learning data simple and easy.

### **AACSB STATEMENT**

The McGraw-Hill Companies is a proud corporate member of AACSB International. Understanding the importance and value of AACSB accreditation, *Advanced Financial Accounting* Tenth Edition recognizes the curricula guidelines detailed in the AACSB standards for business accreditation by connecting selected questions in the text and the test bank to the six general knowledge and skill guidelines in the AACSB standards.

The statements contained in *Advanced Financial Accounting* Tenth Edition are provided only as a guide for the users of this textbook. The AACSB leaves content coverage and assessment within the purview of individual schools, the mission of the school, and the faculty. Although *Advanced Financial Accounting* Tenth Edition and the teaching package make no claim of any specific AACSB qualification or evaluation, we have within *Advanced Financial Accounting* Tenth Edition labeled selected questions according to the six general knowledge and skills areas.

### SUPPLEMENTS FOR STUDENTS

• McGraw-Hill's Connect® Plus Accounting

This integrates all of the text's multimedia resources. Students can obtain state-of-theart study aids, including an online version of the text.

McGraw-Hill's Connect® Accounting

This Web-based software duplicates problem structures directly from the end-of-chapter material in the textbook. It shows students where they made errors. All applicable exercises and problems are available with McGraw-Hill's *Connect® Accounting*.

### Available on the Online Learning Center at www.mhhe.com/christensen10e

- Excel Worksheets. The worksheets for use with Excel are provided to facilitate completion of problems requiring numerous mechanical computations.
- *Check Figures*. Prepared by the text authors, a list of answers is provided separately for many of the end-of-chapter materials in the text.
- Microsoft PowerPoint Slides®. These are available by chapter to facilitate note taking and review.

# HIGH TECH: THE TENTH EDITION ADDS KEY TECHNOLOGY RESOURCES TO BENEFIT BOTH STUDENTS AND INSTRUCTORS

The Tenth Edition of *Advanced Financial Accounting* introduces the most cutting-edge technology supplement ever delivered in the advanced accounting market. Advanced-StudyGuide.com is a product created exclusively by the text authors that represents a new generation in study resources available to students as well as a new direction and options in the resources instructors can use to help their students and elevate their classroom experiences.

Traditional study guides offer students a resource similar to the text itself—that is, more discussion like the text accompanied by more problems and exercises like the ones in the text at a fairly high price to give students the same type of materials that have they already received with the text.

At its core, AdvancedStudyGuide.com (ASG) offers materials that go beyond what a printed text can possibly deliver. The ASG contains dozens of narrated, animated discussions and explanations of materials aligned to key points in the chapter. Not only that,

the ASG also contains animated problems just like key problems in the exercises and problems at the end of each chapter. For the student who would like a little help with *Advanced Financial Accounting*, the ASG is like having private tutoring sessions from the authors who wrote the book (not a class TA) any time, day or night. This also can provide tremendous benefits for instructors, as outlined below.

### **For Students**

### The Questions

- Have you ever had to miss a class and were then confused about what the book was trying to say about a topic?
- Even when you were in class, do things sometimes not make as much sense when you are reviewing on your own?
- Do you ever feel stuck when it comes to doing homework problems even though you read the chapter?
- When the exam is a few weeks after you covered the material in class, do you ever wish someone could walk you through a few examples as you review for the exam?
- Have you ever purchased a study guide for a text and found it was very expensive and did not give the additional study help you needed?

### The ASG Answer

- The answer, at least in part, is the ASG: a new type of study guide designed for the way you like to study and the way that you learn best.
- It is our attempt as authors to really discuss the material in a way that a text-only approach cannot do.
- AND we can discuss your questions with you 24/7, anytime—day or night, at times when your regular instructor is not around.
- Through the ASG, we will bring you streaming media discussions by the authors of the book (not a class TA) to explain key points of each chapter.
- The ASG will also show, explain, and illustrate for you the approach to solving key homework problems in the text. These explanations are *Like Problems*; that is, they are problems "just like" some in the text that you were assigned for homework.

### The ASG Benefit

AdvancedStudyGuide.com brings you discussion and examples worked out in streaming video. Although traditional study guides can *Tell* you what to do, the ASG will *Show You What to Do AND HOW to Do It.* 

See the student page at AdvancedStudyGuide.com.

### **For Instructors**

### The Questions

- Have you ever had a student miss class and then come to your office and ask you to go over the topics that were discussed in class the day the student was absent?
- Even when a student is in class, does he or she sometimes come to your office and ask you to repeat the discussion?
- Even when you have discussed the chapter concepts, do you have students who still get stuck when it comes to doing homework problems?
- When exams are approaching, do students sometimes ask you to go back over material you taught days or weeks before?
- Would it be helpful to you if, on occasion, the authors of the text offered to hold "office hours" with your students for you?

### The ASG Answer

- The answer, at least in part, is the ASG: the authors' attempt to partner with you in helping to better serve students' needs in some of the common situations where questions arise, without using more of your scarce time.
- The ASG will allow you to refer to streaming media discussions where the authors explain key points of each chapter.
- The ASG will show, explain, and illustrate for students the approach to solving key homework problems in the text. These explanations are *Like Problems*; that is they are problems "just like" some in the text that you can assign for homework.

### The ASG Benefit

AdvancedStudyGuide.com is a great tool to let the authors of the text partner with you, the instructor, in helping students learn *Advanced Financial Accounting*. The ASG will (1) help your students learn more effectively, (2) improve your class discussions, and (3) make your student contact hours more efficient.

See the instructor page at AdvancedStudyGuide.com.

### CHAPTER-BY-CHAPTER CHANGES

Chapter 1 emphasizes the importance of business acquisitions and combinations. The
chapter has been completely revised and reorganized based on feedback from textbook
adopters to provide a clearer and more concise discussion of the accounting treatment
of mergers, acquisitions, and other intercorporate investments. We have added new
callout boxes to provide real-world examples of the topics discussed in the chapter,
some of which provide additional information about the Kraft Foods, Inc., acquisition of Cadbury PLC from the introductory vignette.

BERKSHIRE HATHAWAY INC.

• Chapter 2 summarizes the different types of intercorporate investments and introduces consolidation in the most straightforward scenario—where the parent company acquires full ownership of the subsidiary for an amount equal to the subsidiary's book value (i.e., no differential). This chapter introduces a new method of shading our consolidation worksheet entries to make them easily distinguishable by the reader. We have rewritten this chapter to provide a more streamlined coverage of topics traditionally included in this chapter. Finally, we have added new "callout boxes" to provide real-world examples of the topics discussed in the chapter, some of which provide additional information about Berkshire Hathaway's investments discussed in the introductory vignette.

• Chapter 3 explores how the basic consolidation process differs when a subsidiary is only partially owned. Moreover, it introduces the notion of special-purpose entities and accounting standards related to variable interest entities by discussing the well-known collapse of Enron Corporation. We have reorganized this chapter based on feedback from adopters to provide a better flow for the material. In addition, we have added new callout boxes to help students understand the intricacies associated with the consolidation of a partially owned subsidiary and dealing with variable interest entities.

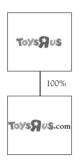

Chapter 4 gives a behind-the-scenes look at the work that goes into the consolidation process based on Disney Corporation. This chapter introduces consolidation of wholly owned subsidiaries with a differential, which results in situations in which the acquiring company pays more than the book value of the acquired company's net assets. This chapter adds a detailed explanation of the new shading of the consolidation

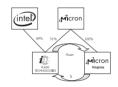

worksheet entries introduced in Chapter 2. Finally, we have included one new callout box illustrating a real-world example of one of the important topics discussed in the chapter.

• Chapter 5 discusses majority ownership of subsidiaries based on the 80 percent acquisition of Nuova Systems by Cisco Systems, Inc. We further the discussion of acquisitions with a differential that has the added complexity of noncontrolling interest shareholders when they purchase less than 100 percent of the outstanding common stock. We have streamlined this chapter by moving some of the tangential material to the appendix. Moreover, we have added a new callout box illustrating one of the more complex issues discussed in the chapter.

• Chapter 6 introduces intercompany inventory transfers based on Toys "R" Us and its 100 percent owned subsidiary Toysrus.com. The elimination of intercompany profits can become complicated. In fact, intercompany inventory transactions and the consolidated procedures associated with them represent one of the topics textbook adopters have found most difficult to teach to students. As a result, we have rewritten this chapter extensively. We have added an entire section explaining how to calculate unrealized intercompany profits. Our new approach substantially simplifies the process for students. We introduce many new graphics to carefully illustrate this new approach. In addition, we have added a series of new callout boxes to draw students' attention to the subtle complexities that our students have frequently struggled to understand.

• Chapter 7 presents a real fixed asset transfer between two of Micron's subsidiaries. This chapter explores the accounting for both depreciable and nondepreciable asset transfers among affiliated companies. Continuing the coverage of intercompany transfers from Chapter 6, Chapter 7 is one of the most difficult to teach for many adopters. Therefore, we have spent considerable time revising this chapter. We have reorganized some of the material and have added many new graphics and illustrations to ensure that this material is more accessible and easy to understand. In addition, we have added one new callout box to better explain the deferral of intercompany profits on the parent company's books.

• Chapter 8 explains how Ford Motor Credit Company was able to survive the economic turmoil of 2008–2009 by wisely using intercompany debt transactions to its advantage. Ford Motor Credit benefited by borrowing funds from its parent company rather than going directly to the capital markets. This chapter is the most extensively rewritten chapter in the Tenth Edition of the book. The original approach of introducing the accounting for debt transfers using the straight-line amortization of discounts and premiums is not representative of real-world accounting treatment. As a result, we have rewritten the chapter to illustrate the use of the effective interest method. However, because some adopters have long used the straight-line method, we have moved the majority of the original chapter (based on the straight-line method) to the appendix so that instructors can teach this chapter using whichever method they prefer. We provide a complete set of supplements (Solutions Manual, PowerPoint slides, Test Bank) for both methods.

BERKSHIRE HATHAWAY INC.

• Chapter 9 resumes the discussion of Berkshire Hathaway to demonstrate that, in practice, ownership situations can be complex. The discussion here provides a basic understanding of some of the consolidation problems arising from complex situations

commonly encountered in practice including but not limited to changes in the parent's ownership interest and multiple ownership levels. To streamline the chapter, we have removed the material on partnerships because partnerships are covered in Chapters 15 and 16. Moreover, we have added several new real-world examples in callout boxes to illustrate key topics in the chapter.

## Google®

Chapter 10 uses the example of the rapid growth of Google Inc. to explore four additional issues related to consolidated financial statements: the consolidated statement of cash flows, consolidation following an interim acquisition, consolidated tax considerations, and consolidated earnings per share. We have added several new callout boxes to illustrate key topics with real companies and to clarify difficult concepts.

Chapter 11 focuses on foreign currency transactions, financial instruments, and the
effects that changes in exchange rates can have on reported results. We have added
several new callout boxes to provide real-world examples of the topics discussed in
the chapter, some of which provide additional information regarding the introductory
vignette about Microsoft.

• Chapter 12 resumes the discussion of international accounting by looking at McDonald's global empire and how differences in accounting standards across countries and jurisdictions can cause significant difficulties for multinational firms. We have made significant revisions based on feedback from students on how the material could be presented in a more straightforward and easy-to-understand manner. As a result, we have added new illustrations and one new callout box to help students better understand the technical topics discussed in this chapter.

Chapter 13 examines segment reporting. We have made minor revisions to more
clearly discuss the accounting standards for reporting an entity's operating components, foreign operations, and major customers and have added several callout boxes
illustrating how real companies, including Walmart from the introductory vignette,
deal with segment reporting issues.

• Chapter 14 reviews the complex role of the Securities and Exchange Commission to regulate trades of securities and to determine the type of financial disclosures that a publicly held company must make. We have made light revisions to streamline this chapter and have added two new callout boxes to clarify and better illustrate regulatory reporting.

• Chapter 15 uses the example of PricewaterhouseCoopers to summarize the evolution of the original Big 8 accounting firms to today's Big 4 with an emphasis on partnerships. This chapter focuses on the formation and operation of partnerships, including accounting for the addition of new partners and the retirement of a present partner. We have made light revisions to the chapter to better explain partnership accounting (especially changes in ownership) and have added several callout boxes to better explain topics covered in the chapter.

LAVENTHOL & HORWATH

Chapter 16 illustrates the dissolution of partnerships with the example of Laventhol & Horwath, the seventh largest accounting firm in 1990. We have made light revisions and added a series of callout boxes to clarify some of the more difficult concepts

related to partnership liquidation. Note that we have made a slight change to the presentation of the statement of realization and liquidation. Instead of presenting the accounts as debits and credits (which sometimes become confusing for students), we simply use the accounting equation to present asset, liability, and capital account balances as positive numbers (except for deficit capital balances, which are presented as negative numbers). Additions to or subtractions from account balances (no longer shown as debits and credits) always sum to zero.

San Diego

• Chapter 17 introduces the topic of accounting for governmental entities. The chapter has two parts: the accounting and reporting requirements for state and local governmental units and a comprehensive illustration of accounting for a city's general fund. We have made light revisions to better explain some topics (including a new graphic to illustrate how encumbrances affect the remaining appropriating authority of a governmental unit). Moreover, we have added a series of callout boxes (most of which highlight specific examples related to the introductory vignette about San Diego, California) to clarify various topics.

• Chapter 18 resumes the discussion of accounting for governmental entities by specifically examining special funds and government-wide financial statements. We have lightly revised the chapter topics that are often misunderstood by students and have added some callout boxes (which highlight specific examples related to the introductory vignette about the state of Maryland).

• Chapter 19 introduces accounting for not-for-profit entities using the example of United Way, the largest charitable organization in the United States. We present the accounting and financial reporting principles used by both governmental and non-governmental colleges and universities, health care providers, voluntary health and welfare organizations, and other not-for-profit organizations such as professional and fraternal associations. We have added callout boxes illustrating the real-world application of topics discussed in the chapter by well-known not-for-profit entities.

• Chapter 20 introduces our final topic of corporations in financial difficulty by illustrating General Motors Corporation and its Chapter 11 bankruptcy protection granted in 2009. GM's experience illustrates that dealing with financial difficulty can be a long and complicated process, especially for large corporations. We present the range of major actions typically used by such a company. We have made minor revisions to the chapter content and have added callout boxes to highlight recent well-publicized bankruptcies.

# Acknowledgments

This text includes the thoughts and contributions of many individuals, and we wish to express our sincere appreciation to them. First and foremost, we thank all the students in our advanced accounting classes from whom we have learned so much. In many respects, this text is an outcome of the learning experiences we have shared with our students. Second, we wish to thank the many outstanding teachers we have had in our own educational programs from whom we learned the joy of learning. We are indebted to our colleagues in advanced accounting for helping us reach our goal of writing the best possible advanced financial accounting text. We appreciate the many valuable comments and suggestions from the faculty who used recent editions of the text. Their comments and suggestions have contributed to making this text a more effective learning tool. We especially wish to thank Morgan Fillmore, Kaid Gordon, Jacob Hager, Aaron Hamilton, Ben Jumper, Jeff Pooley, Cassy Budd, and Melissa Larson, all from Brigham Young University.

We express our sincere thanks to the following individuals who provided reviews on the Ninth Edition:

Jason Bergner

University of Central Missouri

Fatma Cebenoyan *Hunter College* 

Carlos Diaz

Johnson & Wales University

David Doyon

Southern New Hampshire University

Mark Holtzman Seton Hall University Charles Lewis

University of Houston-Downtown

Barbara Reeves Cleary University

Chantal Rowat

Bentley University

Mike Slaubaugh

Indiana University-Purdue University-Fort

Wayne

Hannah Wong

William Paterson University

We are grateful for the assistance and direction of the McGraw-Hill/Irwin team: Tim Vertovec, James Heine, Danielle Andries, Diane Nowaczyk, Dean Karampelas, Matt Baldwin, Brian Nacik, Debra Sylvester, and Alpana Jolly, who all worked hard to champion our book through the production process.

We have permission from the Institute of Certified Management Accountants of the Institute of Management Accountants to use questions and/or unofficial answers from past CMA examinations. We appreciate the cooperation of the American Institute of Certified Public Accountants for providing permission to adapt and use materials from past Uniform CPA Examinations. And we thank Kaplan CPA Review for providing its online framework for *Advanced Financial Accounting* students to gain important experience with the types of simulations that are included on the Uniform CPA Examination.

Above all, we extend our deepest appreciation to our families who continue to provide the encouragement and support necessary for this project.

Theodore E. Christensen
David M. Cottrell
Richard E. Baker

# **KRAFT'S ACQUISITION OF CADBURY**

In recent years as well as during the past several decades, the business world has witnessed many corporate acquisitions and combinations, often involving some of the world's largest and best-known companies. Some of these combinations have captured public attention because of the personalities involved, the daring strategies employed, and the huge sums of money at stake. On February 2, 2010, Kraft Foods Inc. finalized a deal to acquire Cadbury PLC for \$18.5 billion, forming the second-largest confectionery, food, and beverage company in the world. At the time of the acquisition, Cadbury's net assets were worth only around \$4.6 billion. This highly visible transaction was really the next step in more than a century of regular acquisitions.

In 1896, inspired in part by his time in the Kellogg brothers' Battle Creek Sanitarium, C.W. Post founded Postum Cereal Company, Ltd. The following year he introduced Grape-Nuts brand cereal. Within five years, Postum employed 2,500 people and its Battle Creek facility was the largest of its kind in the world.

In 1903, James L. Kraft started selling cheese door to door from the back of a horse-drawn wagon. Although not immediately successful, he continued operations and was eventually joined by four of his brothers in 1909. By 1914, Kraft & Bros. Company (later Kraft Foods Inc.) had opened its first cheese manufacturing plant and in 1916 patented a new process for pasteurizing cheese, making the cheese resistant to spoilage and allowing it to be transported over long distances.

These two start-up companies (Kraft and Postum) continued to grow independently. Postum went public in 1922, followed by Kraft in 1924. In 1929, Postum changed its name to General Foods Corporation and in 1930, Kraft was acquired by National Dairy Products. In 1937, Kraft launched its well-known macaroni and cheese dinners. By 1953, business was booming for General Foods, and it acquired Perkins Products, maker of Kool-Aid. In 1981, General Foods made another acquisition, this time acquiring Oscar Mayer & Co.

Philip Morris acquired General Foods in 1985 and Kraft in 1988. A year later, General Foods and Kraft were combined to form Kraft General Foods Inc., which was renamed Kraft Foods Inc. in 1995. In 2000, Philip Morris acquired Nabisco Holdings and began integrating Nabisco and Kraft. The story does not end here. In August 2008, the Post Cereal portion of Kraft was spun off and merged with Ralcorp Holdings. The remaining portion of Kraft Foods Inc. is the company that took part in the 2010 acquisition of Cadbury PLC.

Of course, this is only half of the story. Cadbury took its own journey. It took 104 years and dozens of mergers and acquisitions to finally end up with the companies that took part in this acquisition.

At the time of this writing, a mere eighteen months following the Cadbury acquisition, Kraft announced plans to spin off its \$32 billion snack business by the end of 2012. This spin-off would separate the high-growth snack business from the North American grocery business (\$16 billion in annual sales), which is focused in more mature markets. Analysts suggest that this spin-off will allow Kraft to separate two very distinct businesses that face different opportunities and challenges.

The business world is complex and frequent business combinations will continue to increase the complex nature of the business environment in the future. An understanding of the accounting treatment of mergers, acquisitions, and other intercorporate investments is an invaluable asset in our ever-changing markets. This chapter introduces the key concepts associated with business combinations.

# **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 1-1 Understand and explain the reasons for and different methods of business expansion, the types of organizational structures, and the types of acquisitions.
- Understand the history of the development of standards related to acquisition LO 1-2 accounting over time.
- LO 1-3 Make calculations and prepare journal entries for the creation and purchase of a business entity.
- LO 1-4 Understand and explain the differences between different forms of business combinations.
- LO 1-5 Make calculations and business combination journal entries in the presence of a differential, goodwill, or a bargain purchase element.
- LO 1-6 Understand additional considerations associated with business combinations.

# AN INTRODUCTION TO COMPLEX BUSINESS STRUCTURES

LO 1-1

Understand and explain the reasons for and different methods of business expansion, the types of organizational structures, and the types of acquisitions.

The business environment in the United States is perhaps the most dynamic and vibrant in the world, characterized by rapid change and exceptional complexity. In this environment, regulators and standard setters such as the Securities and Exchange Commission (SEC), the Financial Accounting Standards Board (FASB), and the Public Company Accounting Oversight Board (PCAOB) are scrambling to respond to the rapid-paced changes in a manner that ensures the continued usefulness of accounting reports to reflect economic reality. A number of accounting and reporting issues arise when two or more companies join under common ownership or a company creates a complex organizational structure involving any of a variety of forms of new financing or operating entities. The first 10 chapters of this text focus on a number of these issues. Chapter 1 lays the foundation by describing some of the factors that have led to corporate expansion and some of the types of complex organizational structures and relationships that have evolved. Then it describes the accounting and reporting issues related to formal business combinations. Chapter 2 focuses on investments in the common stock of other companies and on selected other types of investments in and relationships with other entities. Moreover, it introduces basic concepts associated with the preparation of *consolidated financial statements* that portray the related companies as if they were actually a single company. The next eight chapters systematically explain additional details related to the preparation and use of consolidated financial statements.

# **Enterprise Expansion**

Most business enterprises seek to expand over time in order to survive and become profitable. Both the owners and managers of a business enterprise have an interest in seeing a company grow in size. Increased size often allows economies of scale in both production and distribution. By expanding into new markets or acquiring other companies already in those markets, companies can develop new earning potential and those in cyclical industries can add greater stability to earnings through diversification. For example, in 1997, Boeing, a company very strong in commercial aviation, acquired McDonnell Douglas, a company weak in commercial aviation but very strong in military aviation and other defense and space applications. When orders for commercial airliners plummeted following a precipitous decline in air travel, increased defense spending, partially related to the war in Iraq, helped level out Boeing's earnings.

# **Business Objectives**

Complex organizational structures often evolve to help achieve a business's objectives, such as increasing profitability or reducing risk. For example, many companies establish subsidiaries to conduct certain business activities. A subsidiary is a corporation that another corporation, referred to as a *parent company*, controls, usually through majority ownership of its common stock. Because a subsidiary is a separate legal entity, the parent's risk associated with the subsidiary's activities is limited. There are many reasons for creating or acquiring a subsidiary. For example, companies often transfer their receivables to subsidiaries or special-purpose entities that use the receivables as collateral for bonds issued to other entities (securitization). External parties may hold partial or complete ownership of those entities, allowing the transferring company to share its risk associated with the receivables. In some situations, companies can realize tax benefits by conducting certain activities through a separate entity. Bank of America, for example, established a subsidiary to which it transferred bank-originated loans and was able to save \$418 million in quarterly taxes.1

# **Frequency of Business Combinations**

Very few major companies function as single legal entities in our modern business environment. Virtually all major companies have at least one subsidiary, with more than a few broadly diversified companies having several hundred subsidiaries. In some cases, subsidiaries are created to incorporate separately part of the ongoing operations previously conducted within the parent company. Other subsidiaries are acquired through business combinations.

Business combinations are a continuing and frequent part of the business environment. A merger boom occurred in the 1960s. This period was characterized by frantic and, in some cases, disorganized merger binges, resulting in creation of a large number of conglomerates, or companies operating in many different industries. Because many of the resulting companies lacked coherence in their operations, they often were less successful than anticipated, and many of the acquisitions of the 1960s have since been sold or abandoned. In the 1980s, the number of business combinations again increased. That period saw many leveraged buyouts (when an acquiring company borrows the funds to buy another company), but the resulting debt has plagued many of those companies over the years.

The number of business combinations through the 1990s dwarfed previous merger booms, with all records for merger activity shattered. This pace continued into the new century, with a record-setting \$3.3 trillion in deals closed in 2000.<sup>2</sup> However, with the

<sup>&</sup>lt;sup>1</sup> "PNC Shakes Up Banking Sector; Investors Exit," The Wall Street Journal, January 30, 2002, p. C2.

<sup>&</sup>lt;sup>2</sup> Dennis K. Berman and Jason Singer, "Big Mergers Are Making a Comeback as Companies, Investors Seek Growth," The Wall Street Journal, November 5, 2005, p. A1.

downturn in the economy in the early 2000s, the number of mergers declined significantly. Many companies put their expansion plans on hold, and a number of the mergers that did occur were aimed at survival. Toward the middle of 2003, merger activity again increased and accelerated significantly through the middle of the decade. During one period of less than 100 hours in 2006, "around \$110 billion in acquisition deals were sealed worldwide in sectors ranging from natural gas, to copper, to mouthwash to steel, linking investors and industrialists from India, to Canada, to Luxembourg to the U.S."

Through much of the 1990s, merger activity was fueled by a new phenomenon, the use of *private equity* money. Rather than the traditional merger activity that typically involves one publicly held company acquiring another, groups of investors—such as wealthy individuals, pension and endowment funds, and mutual funds—pooled their money to make acquisitions. Most of these acquisitions did not result in lasting ownership relationships, with the private equity companies usually attempting to realize a return by selling their investments in a relatively short time. This activity was slowed

*i* FYI

Historically, mergers have come in waves as indicated by the following summary:

| Period                 | Name                      | Facet  |
|------------------------|---------------------------|--|
| 1897–1904              | First Wave                | Horizontal mergers   |
| 1916–1929              | Second Wave               | Vertical mergers   |
| 1965–1969<br>1981–1989 | Third Wave<br>Fourth Wave | Diversified conglomerate mergers<br>Congeneric mergers; hostile takeovers;<br>corporate raiding, LBO |
| 1992–2000              | Fifth Wave                | Cross-border mergers   |
| 2003–2008              | Sixth Wave                | Shareholder activism, private equity, LBO  |

dramatically by the credit crunch of 2007–2008. Nevertheless, business combinations will continue to be an important business activity into the foreseeable future.

Aside from private-equity acquisitions, business combinations have been common in telecommunications, defense, banking and financial services, information technology, energy and natural resources, entertainment, pharmaceuticals, and manufacturing. Some of the world's largest companies and best-known names have been involved in recent major acquisitions, such as Procter & Gamble, Gillette, Citigroup, Bank of America, AT&T, Whirlpool, Sprint, Verizon, Adobe Systems, Chrysler, Daimler, ConocoPhillips, BP, and ExxonMobil.

# **Ethical Considerations**

Acquisitions can sometimes lead to ethical challenges for managers. Corporate managers are often rewarded with higher salaries as their companies increase in size. In addition, prestige frequently increases with the size of a company and with a reputation for the successful acquisition of other companies. As a result, corporate managers often find it personally advantageous to increase company size. For instance, Bernard Ebbers started his telecommunications career as the head of a small discount long-distance telephone service company and built it into one of the world's largest corporations, WorldCom. In the process, Ebbers became well known for his acquisition prowess and grew tremendously wealthy—until WorldCom was racked by accounting scandals and declared bankruptcy and Ebbers was sentenced to prison in 2003.

Acquisitions and complex organizational structures have sometimes been used to manipulate financial reporting with the aim of enhancing or enriching managers. Many major corporations, taking advantage of loopholes or laxness in financial reporting requirements, have used subsidiaries or other entities to borrow large amounts of money without reporting the debt on their balance sheets. Some companies have created special entities that have then been used to manipulate profits.

The term *special-purpose entity* has become well known in recent years because of the egregious abuse of these entities by companies such as Enron. A *special-purpose entity* (SPE) is, in general, a financing vehicle that is not a substantive operating entity, usually

<sup>&</sup>lt;sup>3</sup> Dennis K. Berman and Jason Singer, "Blizzard of Deals Heralds an Era of Megamergers," *The Wall Street Journal*, June 27, 2006, p. A1.

one created for a single specified purpose. An SPE may be in the form of a corporation. trust, or partnership. Enron Corp., one of the world's largest companies prior to its collapse in 2001, established many SPEs, at least some of which were intended to manipulate financial reporting. Some of Enron's SPEs apparently were created primarily to hide debt, and others were used to create fictional transactions or to convert borrowings into reported revenues.

Accounting for mergers and acquisitions also is an area that can lend itself to manipulation. Arthur Levitt, former chairman of the SEC, referred to some of the accounting practices that have been used in accounting for mergers and acquisitions as "creative acquisition accounting" or "merger magic." For example, an approach used by many companies in accounting for their acquisitions was to assign a large portion of the purchase price of an acquired company to its in-process research and development, immediately expensing the full amount and freeing financial reporting in future periods from the burden of those costs. The FASB has since eliminated this practice. However, the frequency and size of business combinations, the complexity of accounting, and the potential impact on financial statements of the accounting methods employed mean that the issues surrounding the accounting for business combinations are still of critical importance.

The scandals and massive accounting failures at companies such as Enron, WorldCom, and Tyco-leading creditors, investors, employees, and others to suffer heavy lossesfocused considerable attention on weaknesses in accounting and the accounting profession. In the past several years, Congress, the SEC, and the FASB have taken actions to strengthen the financial reporting process and to clarify the accounting rules relating to special entities and to acquisitions.

# BUSINESS EXPANSION AND FORMS OF ORGANIZATIONAL STRUCTURE

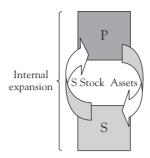

Historically, businesses have expanded by internal growth through new product development and expansion of existing product lines into new markets. In recent decades, however, many companies have chosen to expand by combining with or acquiring other companies. Either approach may lead to a change in organizational structure.

# **Internal Expansion: Creating a Business Entity**

As companies expand from within, they often find it advantageous to conduct their expanded operations through new subsidiaries or other entities such as partnerships, joint ventures, or special entities. In most of these situations, an identifiable segment of the company's existing assets is transferred to the new entity, and, in exchange, the transferring company receives equity ownership (as illustrated in the diagram on the next page).

Companies may be motivated to establish new subsidiaries or other entities for a variety of reasons. Broadly diversified companies may place unrelated operations in separate subsidiaries to establish clear lines of control and facilitate the evaluation of operating results. In some cases, an entity that specializes in a particular type of activity or has its operations in a particular country may qualify for special tax incentives. Of particular importance in some industries is the fact that a separate legal entity may be permitted to operate in a regulatory environment without subjecting the entire entity to regulatory control. Also, by creating a separate legal entity, a parent company may be able to protect itself from exposing the entire company's assets to legal liability that may stem from a new product line or entry into a higher-risk form of business activity.

Companies also might establish new subsidiaries or other entities, not as a means of expansion, but as a means of disposing of a portion of their existing operations through outright sale or a transfer of ownership to existing shareholders or others. In some cases, companies have used this approach in disposing of a segment of operations that no longer fits well with the overall mission of the company. In other cases, this

approach has been used as a means of disposing of unprofitable operations or to gain regulatory or shareholder approval of a proposed merger with another company. A *spin-off* occurs when the ownership of a newly created or existing subsidiary is distributed to the parent's stockholders without the stockholders surrendering any of their stock in the parent company. Thus, the company divests itself of the subsidiary because

As of this writing (March 2012), Kraft is planning to spin off its \$32 billion snack business, presumably as a means of allowing Kraft to focus on its grocery business and other strategic goals.

it is owned by the company's shareholders after the spin-off. A *split-off* occurs when the subsidiary's shares are exchanged for shares of the parent, thereby leading to a reduction in the parent company's outstanding shares. Although the two divestiture types are similar, the splitoff could result in one set of the former parent shareholders exchanging their shares for those

of the divested subsidiary. Although a transfer of ownership to one or more unrelated parties normally results in a taxable transaction, properly designed transfers of ownership to existing shareholders generally qualify as nontaxable exchanges.

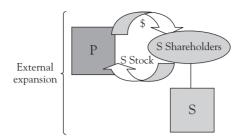

# **External Expansion: Business Combinations**

Many times companies find that entry into new product areas or geographic regions is more easily accomplished by acquiring or combining with other companies than through internal expansion. For example, SBC Communications, a major telecommunications company and one of the "Baby Bells," significantly increased its service area by combining with Pacific Telesis and Ameritech, later acquiring AT&T (and adopting its name), and subsequently combining with BellSouth. Similarly, because the state of Florida has traditionally been very reluctant to issue new bank charters, bank corporations wishing to establish operations in Florida have had to acquire an existing bank to obtain a charter in the state.

A *business combination* occurs when "... an acquirer obtains control of one or more businesses." The diagram on the next page illustrates a typical acquisition. The concept of *control* relates to the ability to direct policies and management. Traditionally, control over a company has been gained by acquiring a majority of the company's common stock. However, the diversity of financial and operating arrangements employed in recent years also raises the possibility of gaining control with less than majority ownership or, in some cases, with no ownership at all through other contractual arrangements.

The types of business combinations found in today's business environment and the terms of the combination agreements are as diverse as the firms involved. Companies enter into various types of formal and informal arrangements that may have at least some of the characteristics of a business combination. Most companies tend to avoid recording informal agreements on their books because of the potential difficulty of enforcing them. In fact, some types of informal arrangements, such as those aimed at fixing prices or apportioning potential customers, are illegal. Formal agreements generally are enforceable and are more likely to be recognized on the books of the participants.

<sup>&</sup>lt;sup>4</sup> ASC 805-10-65-1.

# Organizational Structure and Financial Reporting

When companies expand or change organizational structure by acquiring other companies or through internal division, the new structure must be examined to determine the appropriate financial reporting procedures. Several approaches are possible, depending on the circumstances:

- 1. **Merger** A merger is a business combination in which the acquired company's assets and liabilities are combined with those of the acquiring company. Thus, two companies are merged into a single entity. In essence, the acquiring company "swallows" the acquired company.
- 2. Controlling ownership A business combination in which the acquired company remains as a separate legal entity with a majority of its common stock owned by the purchasing company leads to a parent–subsidiary relationship. Accounting standards normally require that the financial statements of the parent and subsidiary be consolidated for general-purpose reporting so the companies appear as a single company. The treatment is the same if the subsidiary is created rather than purchased. The treatment is also the same when the other entity is unincorporated and the investor company has control and majority ownership.<sup>5</sup>
- 3. **Noncontrolling ownership** The purchase of a less-than-majority interest in another corporation does not usually result in a business combination or controlling situation. A similar situation arises when a company creates another entity and holds less than a controlling position in it or purchases a less-than-controlling interest in an existing partnership. In its financial statements, the investor company reports its interest in the investee as an investment with the specific method of accounting for the investment dictated by the circumstances.
- 4. Other beneficial interest One company may have a beneficial interest in another entity even without a direct ownership interest. The beneficial interest may be defined by the agreement establishing the entity or by an operating or financing agreement. When the beneficial interest is based on contractual arrangements instead of majority stock ownership, the reporting rules may be complex and depend on the circumstances. In general, a company that has the ability to make decisions significantly affecting the results of another entity's activities or is expected to receive a majority of the other entity's profits and losses is considered to be that entity's primary beneficiary. Normally, that entity's financial statements would be consolidated with those of the primary beneficiary.

These different situations, and the related accounting and reporting procedures, will be discussed throughout the first 10 chapters of the text. The primary focus will be on the first three situations, especially the purchase of all or part of another company's stock. The discussion of the fourth situation in Chapter 3 will be limited because of its complexity and the diversity of these contractual arrangements.

<sup>&</sup>lt;sup>5</sup> Majority ownership is generally a sufficient but not a necessary condition for the indicated treatment. Unlike the corporate case, percentage ownership does not fully describe the nature of a beneficial interest in a partnership. Investments in partnerships are discussed in later chapters.

# THE DEVELOPMENT OF ACCOUNTING FOR BUSINESS COMBINATIONS

LO 1-2

Understand the history of the development of standards related to acquisition accounting over time.

For more than half a century, accounting for business combinations remained largely unchanged. Two methods of accounting for business combinations, the purchase method and the pooling-of-interests method, were acceptable during that time. However, major changes in accounting for business combinations have occurred over the past decade. First, the FASB eliminated the pooling-of-interests method in 2001, leaving only a single method, purchase accounting. Then, in 2007, the FASB issued the revised standard (ASC 805) that replaced the purchase method with the acquisition method, which is now the only acceptable method of accounting for business combinations.

Although all business combinations must now be accounted for using the acquisition method, many companies' financial statements will continue to include the effects of previous business combinations recorded using the pooling-of-interests method. Thus, a general understanding of this method can be helpful.

The idea behind a pooling of interests was that no change in ownership had actually occurred in the business combination, often a questionable premise. Based on this idea, the book values of the combining companies were carried forward to the combined company and no revaluations to fair value were made. Managers often preferred pooling accounting because it did not result in asset write-ups or goodwill that might burden future earnings with additional depreciation or write-offs. Also, reporting practices often made acquisitions appear better than they would have appeared if purchase accounting had been used.

Purchase accounting treated the purchase of a business much like the purchase of any asset. The acquired company was recorded based on the purchase price that the acquirer paid. Individual assets and liabilities of the acquired company were valued at their fair values, and the difference between the total purchase price and the fair value of the net identifiable assets acquired was recorded as goodwill. All direct costs of bringing about and consummating the combination were included in the total purchase price.

Acquisition accounting is consistent with the FASB's intention to move accounting in general more toward recognizing fair values. Under acquisition accounting, the acquirer in a business combination, in effect, values the acquired company based on the fair value of the consideration given in the combination and the fair value of any noncontrolling interest not acquired by the acquirer.

# **ACCOUNTING FOR INTERNAL EXPANSION: CREATING BUSINESS ENTITIES**<sup>6</sup>

LO 1-3

Make calculations and prepare journal entries for the creation and purchase of a business entity.

Companies that choose to conduct a portion of their operations through separate business entities usually do so through corporate subsidiaries, corporate joint ventures, or partnerships. The ongoing accounting and reporting for investments in corporate joint ventures and subsidiaries are discussed in Chapters 2 through 10. This section discusses the origination of these entities when the parent or investor creates them rather than purchases an interest in an existing corporation or partnership.

When a company transfers assets or operations to another entity that it has created, a vast number of variations in the types of entities and the types of agreements between the creating company and the created entity are possible. Accordingly, it is impossible to establish a single set of rules and procedures that will suffice in all situations. We focus on the most straightforward and common cases in which the

<sup>&</sup>lt;sup>6</sup> To view a video explanation of this topic, visit advanced study guide.com.

transferring company creates a subsidiary or partnership that it owns and controls, including cases in which the company intends to transfer ownership to its stockholders through a spin-off or split-off. In simple cases, the company transfers assets, and perhaps liabilities, to an entity that the company has created and controls and in which it holds majority ownership. The company transfers assets and liabilities to the created entity at book value, and the transferring company recognizes an ownership interest in the newly created entity equal to the book value of the net assets transferred. Recognition of fair values of the assets transferred in excess of their carrying values on the books of the transferring company normally is not appropriate in the absence of an arm's-length transaction. Thus, no gains or losses are

An "arm's-length transaction" is one in which the parties are completely independent of one another so that they act in their personal best interests or to maximize their own wealth. Thus, there is no chance of collusion between them.

recognized on the transfer by the transferring company. However, if the value of an asset transferred to a newly created entity has been impaired prior to the transfer and its fair value is less than the carrying value on the transferring company's books, the transferring company should recognize an impairment loss and transfer the asset to the new entity at the lower fair value.

The created entity begins accounting for the transferred assets and liabilities in the normal manner based on their book values at the time of transfer. Subsequent financial reporting involves consolidating the created entity's financial statements with those of the parent company. Overall, the consolidated financial statements appear the same as if the transfer had not taken place.

As an illustration of a created entity, assume that Allen Company creates a subsidiary, Blaine Company, and transfers the following assets to Blaine in exchange for all 100,000 shares of Blaine's \$2 par common stock:

| Item      | Cost      | <b>Book Value</b> |
|-----------|-----------|-------------------|
| Cash      |           | \$ 70,000         |
| Inventory | \$ 50,000 | 50,000            |
| Land      | 75,000    | 75,000            |
| Building  | 100,000   | 80,000            |
| Equipment | 250,000   | 160,000           |
|           |           | \$435,000         |

Allen records the transfer with the following entry:<sup>7</sup>

| (1) | Investment in Blaine Company Common Stock | 435,000 |
|-----|---|---------|
|     | Accumulated Depreciation*                 | 110,000 |
|     | Cash                                      | 70,000  |
|     | Inventory                                 | 50,000  |
|     | Land                                      | 75,000  |
|     | Building                                  | 100,000 |
|     | Equipment                                 | 250,000 |

Record the creation of Blaine Company.

<sup>\*\$110,000 = (\$100,000 - \$80,000) + (\$250,000 - \$160,000)</sup> 

<sup>&</sup>lt;sup>7</sup> Journal entries used in the text to illustrate the various accounting procedures are numbered sequentially within individual chapters for easy reference. Each journal entry number appears only once in a chapter.

Blaine Company records the transfer of assets and the issuance of stock (at the book value of the assets) as follows:

| (2) | Cash                       | 70,000  |
|-----|----------------------------|---------|
|     | Inventory                  | 50,000  |
|     | Land                       | 75,000  |
|     | Building                   | 100,000 |
|     | Equipment                  | 250,000 |
|     | Accumulated Depreciation   | 110,000 |
|     | Common Stock, \$2 par      | 200,000 |
|     | Additional Paid-In Capital | 235,000 |

Record the receipt of assets and the issuance of \$2 par common stock.

# **ACCOUNTING FOR EXTERNAL EXPANSION: BUSINESS COMBINATIONS**

Understand and explain the differences between different forms of business

A business combination occurs when one party acquires control over one or more businesses. This usually involves two or more separate businesses being joined together under common control. The acquirer may obtain control by paying cash, transferring other assets, issuing debt, or issuing stock. In rare cases, the acquirer might obtain control by agreement or through other means without an exchange taking place. Business combinations can take one of several different forms and can be effected in different ways.

# **Forms of Business Combinations**

Figure 1–1 illustrates the three primary legal forms of business combinations. A *statutory* merger is a type of business combination in which only one of the combining companies survives and the other loses its separate identity. The acquired company's assets and liabilities are transferred to the acquiring company, and the acquired company is dissolved, or liquidated. The operations of the previously separate companies are carried on in a single legal entity following the merger.

A statutory consolidation is a business combination in which both combining companies are dissolved and the assets and liabilities of both companies are transferred to a newly created corporation. The operations of the previously separate companies are carried on in a single legal entity, and neither of the combining companies remains in existence after a statutory consolidation. In many situations, however, the resulting corporation is new in form only, and in substance it actually is one of the combining companies reincorporated with a new name.

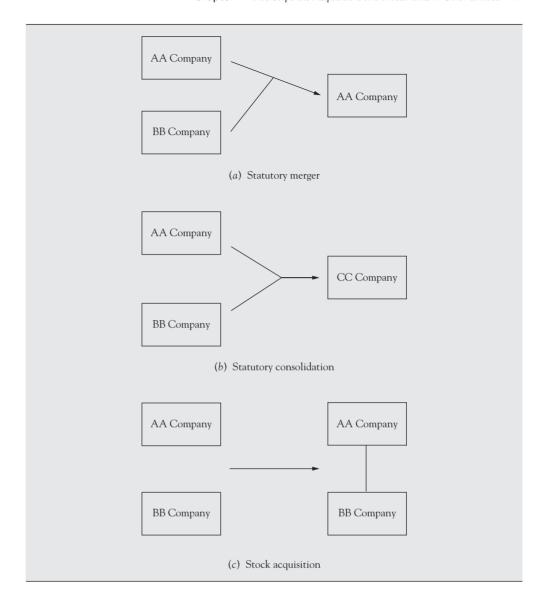

A stock acquisition occurs when one company acquires the voting shares of another company and the two companies continue to operate as separate, but related, legal entities. Because neither of the combining companies is liquidated, the acquiring company accounts for its ownership interest in the other company as an investment. In a stock acquisition, the acquiring company need not acquire all the other company's stock to gain control. The relationship that is created in a stock acquisition is referred to as a parent-subsidiary relationship. A parent company is one that controls another company, referred to as a subsidiary, usually through majority ownership of common stock. For general-purpose financial reporting, a parent company and its subsidiaries present consolidated financial statements that appear largely as if the companies had actually merged into one.

The legal form of a business combination, the substance of the combination agreement, and the circumstances surrounding the combination all affect how the combination is recorded initially and the accounting and reporting procedures used subsequent to the combination.

# **Methods of Effecting Business Combinations**

Business combinations can be characterized as either friendly or unfriendly. In a friendly combination, the managements of the companies involved come to agreement on the terms of the combination and recommend approval by the stockholders. Such combinations usually are effected in a single transaction involving an exchange of assets or voting

FIGURE 1-1 **Types of Business Combinations** 

shares. In an unfriendly combination, or "hostile takeover," the managements of the companies involved are unable to agree on the terms of a combination, and the management of one of the companies makes a tender offer directly to the shareholders of the other company to buy their stock at a specified price. A tender offer invites the shareholders of the other company to "tender," or exchange, their shares for securities or assets of the acquiring company. If sufficient shares are tendered, the acquiring company gains voting control of the other company and can install its own management by exercising its voting rights.

The specific procedures to be used in accounting for a business combination depend on whether the combination is effected through an acquisition of assets or an acquisition of stock.

# Acquisition of Assets

Sometimes one company acquires another company's assets through direct negotiations with its management. The agreement also may involve the acquiring company's assuming the other company's liabilities. Combinations of this sort normally take form (a) or form (b) in Figure 1–1. The selling company generally distributes to its stockholders the assets or securities received in the combination from the acquiring company and liquidates, leaving only the acquiring company as the surviving legal entity.

# **STOP & THINK**

Can you name the ten largest and best-known North American merger and acquisition transactions? They've all happened in your lifetime!

| Rank  | Year | Acquirer                | Target              | Transaction Value (in bil. USD) |
|---|------|-------------------------|---------------------|---------------------------------|
| 1   | 2000 | America Online Inc.     | Time Warner Inc.    | 164.7                           |
| 2   | 1999 | Pfizer Inc.             | Warner-Lambert Co.  | 89.2                            |
| 3   | 1998 | Exxon Corp.             | Mobil Corp.         | 78.9                            |
| 4   | 2006 | AT&T Inc.               | BellSouth Corp.     | 72.7                            |
| 5   | 1998 | Travelers Group Inc.    | Citicorp            | 72.6                            |
| 6   | 2001 | Comcast Corp.           | AT&T Broadband &    | 72.0                            |
|   |      |                         | Internet Services   |                                 |
| 7   | 2009 | Pfizer Inc.             | Wyeth Corp.         | 67.3                            |
| 8   | 1998 | SBC Communications Inc. | Ameritech Corp.     | 62.6                            |
| 9   | 1998 | NationsBank Corp.,      | BankAmerica Corp.   | 61.6                            |
|   |      | Charlotte, NC           |                     |                                 |
| 10  | 1999 | Vodafone Group PLC      | AirTouch            | 60.3                            |
|   |      |                         | Communications Inc. |                                 |
| Source: Institute of Mergers, Acquisitions and Alliances. |      |                         |                     |                                 |

The acquiring company accounts for the combination by recording each asset acquired, each liability assumed, and the consideration given in exchange at fair value.

# Acquisition of Stock

A business combination effected through a stock acquisition does not necessarily have to involve the acquisition of all of a company's outstanding voting shares. For one company to gain control over another through stock ownership, a majority (i.e., more than 50 percent) of the outstanding voting shares usually is required unless other factors lead to the acquirer's gaining control. The total of the shares of an acquired company not held by the controlling shareholder is called the noncontrolling interest. In the past, the

noncontrolling interest was referred to as the *minority interest*.

In those cases when control of another company is acquired and both companies remain in existence as separate legal entities following the business combination, the stock of the acquired company is recorded on the books of the acquiring company as an investment.

# Acquisition by Other Means

Occasionally, a business combination may be effected without an exchange of assets or equities and without a change in ownership. In some cases, control might be acquired through agreement alone.

# **Valuation of Business Entities**

All parties involved in a business combination must believe they have an opportunity to benefit before they will agree to participate. Determining whether a particular combination proposal is advantageous can be difficult. Both the value of a company's assets and its future earning potential are important in assessing the value of the company. Tax laws also influence investment decisions. For example, the existence of accumulated net operating losses that can be used under U.S. tax law to shelter future income from taxes increases the value of a potential acquiree.

# Value of Individual Assets and Liabilities

The value of a company's individual assets and liabilities is usually determined by appraisal. For some items, the value may be determined with relative ease, such as investments that are traded actively in the securities markets or short-term payables. For other items, the appraisal may be much more subjective, such as the value of land located in an area where few recent sales have occurred. In addition, certain intangibles typically are not reported on the balance sheet. For example, the costs of developing new ideas, new products, and new production methods normally are expensed as research and development costs in the period incurred.

Current liabilities are often viewed as having fair values equal to their book values because they will be paid at face amount within a short time. Long-term liabilities, however, must be valued based on current interest rates if different from the effective rates at the issue dates of the liabilities. For example, if \$100,000 of 10-year, 6 percent bonds, paying interest annually, had been issued at par three years ago, and the current market rate of interest for the same type of security is 10 percent, the value of the liability currently is computed as follows:

| Present value for 7 years at 10% of principal payment of \$100,000 | \$51,316 |
|--|----------|
| Present value at 10% of 7 interest payments of \$6,000             | _29,211  |
| Present value of bond  | \$80,527 |

Although accurate assessments of the value of assets and liabilities may be difficult, they form an important part of the overall determination of the value of an enterprise.

# Value of Potential Earnings

In many cases, assets operated together as a group have a value that exceeds the sum of their individual values (i.e., there is unrecorded goodwill). This "going-concern value" makes it desirable to operate the assets as an ongoing entity rather than sell them individually. A company's earning power as an ongoing enterprise is of obvious importance in valuing that company.

There are different approaches to measuring the value of a company's future earnings. Sometimes companies are valued based on a multiple of their current earnings. For example, if Bargain Company reports earnings of \$35,000 for the current year, the company's value based on a multiple of 10 times current earnings is \$350,000. The appropriate multiple to use is a matter of judgment and is based on factors such as the riskiness and variability of the earnings and the anticipated degree of growth.

Another method of valuing a company is to compute the present value of the anticipated future net cash flows generated by the company. This requires assessing the amount and timing of future cash flows and discounting them back to the present value at the discount rate determined to be appropriate for the type of enterprise. For example, if Bargain Company is expected to generate cash flows of \$35,000 for each of the next 25 years, the present value of the firm at a discount rate of 10 percent is \$317,696. Estimating the potential for future earnings requires numerous assumptions and estimates. Not surprisingly, the buyer and seller often have difficulty agreeing on the value of a company's expected earnings.

# Valuation of Consideration Exchanged

When one company acquires another, the acquiring company must place a value on the consideration given in the exchange. Little difficulty is encountered when the acquiring company gives cash in an acquisition, but valuation may be more difficult when the acquiring company gives securities, particularly new untraded securities or securities with unusual features. For example, General Motors completed an acquisition a number of years ago using a new Series B common stock that paid dividends based on subsequent earnings of the acquired company rather than on the earnings of General Motors as a whole. Some companies have used non-interest-bearing bonds (zero coupon bonds), which have a fair value sufficiently below par value to compensate the holder for interest. Other companies have used various types of convertible securities. Unless these securities, or others that are considered equivalent, are being traded in the market, estimates of their value must be made. The approach generally followed is to use the value of some similar security with a determinable market value and adjust for the estimated value of the differences in the features of the two securities.

# **ACQUISITION ACCOUNTING**

LO 1-5

Make calculations and business combination journal entries in the presence of a differential, goodwill, or a bargain purchase element.

As of the end of 2007, the FASB significantly changed the method of accounting for business combinations, requiring the use of the acquisition method. Under the acquisition method, the acquirer recognizes all assets acquired and liabilities assumed in a business combination and measures them at their acquisition-date fair values. If less than 100 percent of the acquiree is acquired, the noncontrolling interest also is measured at its acquisition-date fair value. Note that a business combination does not affect the amounts at which the assets and liabilities of the acquirer are valued.

# Fair Value Measurements

Because accounting for business combinations is now based on fair values, the measurement of fair values takes on added importance. The acquirer must value at fair value (1) the consideration it exchanges in a business combination, (2) each of the individual identifiable assets and liabilities acquired, and (3) any noncontrolling interest in the acquiree. Normally, a business combination involves an arm's-length exchange between two unrelated parties. The value of the consideration given in the exchange is usually the best measure of the value received and, therefore, reflects the value of the acquirer's interest in the acquiree. However, the FASB decided in ASC 805 to focus directly on the value of the consideration given rather than just using it to impute a fair value for the acquiree as a whole. In some cases, the value of the consideration given may be difficult to determine, or there may be no exchange, and valuation is better based on the value of the acquirer's interest in the acquiree or other valuation techniques. ASC 820 provides a framework for applying fair value measurements in accounting.

# **Applying the Acquisition Method**

For all business combinations, an acquirer must be identified, and that party is the one gaining control over the other. In addition, an acquisition date must be determined. That date is usually the closing date when the exchange transaction actually occurs. However, in rare cases control may be acquired on a different date or without an exchange, so the circumstances must be examined to determine precisely when the acquirer gains control.

Under the acquisition method, the full acquisition-date fair values of the individual assets acquired, both tangible and intangible, and liabilities assumed in a business combination are recognized. This is true regardless of the percentage ownership acquired by the controlling entity. If the acquirer acquires all of the assets and liabilities of the acquiree in a merger, these assets and liabilities are recorded on the books of the acquiring company at their acquisitiondate fair values. If the acquiring company acquires partial ownership of the acquiree in a stock acquisition, the assets acquired and liabilities assumed appear at their full acquisitiondate fair values in a consolidated balance sheet prepared immediately after the combination.

All indirect costs of bringing about and consummating a business combination are charged to an acquisition expense as incurred. Examples of traceable, indirect costs include finders' fees, consulting fees, travel costs, and so on. The costs of issuing equity securities used to acquire the acquiree are treated in the same manner as stock issues costs are normally treated, as a reduction in the paid-in capital associated with the securities.

# Goodwill

Conceptually, goodwill as it relates to business combinations consists of all those intangible factors that allow a business to earn above-average profits. From an accounting perspective, the FASB has stated that *goodwill* "is an asset representing the future economic benefits arising from other assets acquired in a business combination that are not individually identified and separately recognized" (ASC 805-10-65-1). An asset is considered to be identifiable, and therefore must be separately recognized, if it is separable (can be separated from the business) or arises from a contractual or other right.

Under the acquisition method, an acquirer measures and recognizes goodwill from a busi-

Kraft's \$19.4 billion acquisition of Cadbury mentioned at the beginning of the chapter resulted in Kraft recording \$9.53 billion in goodwill.

ness combination based on the difference between the total fair value of the acquired company and the fair value of its net identifiable assets. However, the FASB decided, for several reasons, not to focus directly on the total fair value of the acquiree, but rather on the components that provide an indication of that fair value. The FASB identified three components that should be measured and summed for the total amount to be used in determining the amount of goodwill recognized in a business combination:

- 1. The fair value of the consideration given by the acquirer.
- 2. The fair value of any interest in the acquiree already held by the acquirer, if any.
- 3. The fair value of the noncontrolling interest in the acquiree, if any.

The total of these three amounts, all measured at the acquisition date, is then compared with the acquisition-date fair value of the acquiree's net identifiable assets, and any excess is goodwill.

As an example of the computation of goodwill, assume that Albert Company acquires all of the assets of Zanfor Company for \$400,000 when the fair value of Zanfor's net identifiable assets is \$380,000. Goodwill is recognized for the \$20,000 difference between the total consideration given and the fair value of the net identifiable assets acquired. If, instead of an acquisition of assets, Albert acquires 75 percent of the common stock of Zanfor for \$300,000, and the fair value of the noncontrolling interest is \$100,000, goodwill is computed as follows:

|   | air value of consideration given by Albert<br>- Fair value of noncontrolling interest | \$300,000<br>          |
|---|---|------------------------|
|   | otal fair value of Zanfor Company<br>Fair value of net identifiable assets acquired   | \$400,000<br>(380,000) |
| C | Goodwill  | \$ 20,000              |

Note that the total amount of goodwill is not affected by whether 100 percent of the acquiree or less than that is acquired. However, the fair value of the noncontrolling interest does have an effect on the amount of goodwill recognized. In the example given, the fair values of the controlling and noncontrolling interests are proportional (each is valued at an amount equal to its proportionate ownership share of the total) and imply a total fair value of the acquired company of \$400,000. This is frequently the case and will always be assumed throughout the text unless indicated otherwise. However, that may not always be the case in practice. Situations might arise in a stock acquisition, for example, where the per-share value of the controlling interest is higher than that of the noncontrolling interest because of a premium associated with gaining control.

# Combination Effected through the Acquisition of Net Assets

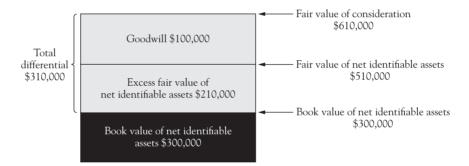

When one company acquires all the net assets of another in a business combination, the acquirer records on its books the individual assets acquired and liabilities assumed in the combination and the consideration given in exchange. Each identifiable asset and liability acquired is recorded by the acquirer at its acquisition-date fair value. The acquiring company records any excess of the fair value of the consideration exchanged over the fair value of the acquiree's net identifiable assets as goodwill.

To illustrate the application of the acquisition method of accounting to a business combination effected through the acquisition of the acquiree's net assets, assume that Point Corporation acquires all of the assets and assumes all of the liabilities of Sharp Company in a statutory merger by issuing 10,000 shares of \$10 par common stock to Sharp. The shares issued have a total market value of \$610,000. Point incurs legal and appraisal fees of \$40,000 in connection with the combination and stock issue costs of \$25,000. Figure 1–2 shows the book values and fair values of Sharp's individual assets and liabilities on the date of combination.

FIGURE 1-2 **Sharp Company Balance Sheet** Information, December 31, 20X0

| Assets, Liabilities and Equities | Book Value | Fair Value       |
|----------------------------------|------------|------------------|
| Cash & Receivables               | \$ 45,000  | \$ 45,000        |
| Inventory                        | 65,000     | 75,000           |
| Land                             | 40,000     | 70,000           |
| Buildings & Equipment            | 400,000    | 350,000          |
| Accumulated Depreciation         | (150,000)  |                  |
| Patent                           |            | 80,000           |
| Total Assets                     | \$400,000  | \$620,000        |
| Current Liabilities              | \$100,000  | 110,000          |
| Common Stock (\$5 par)           | 100,000    |                  |
| Additional Paid-In Capital       | 50,000     |                  |
| Retained Earnings                | 150,000    |                  |
| Total Liabilities & Equities     | \$400,000  |                  |
| Fair Value of Net Assets         |            | <u>\$510,000</u> |

The relationships among the fair value of the consideration exchanged, the fair value of Sharp's net assets, and the book value of Sharp's net assets are illustrated in the following diagram:

The total difference at the acquisition date between the fair value of the consideration exchanged and the book value of the net identifiable assets acquired is referred to as the differential. In more complex situations, the differential is equal to the difference between (1) the acquisition-date fair value of the consideration transferred by the acquirer, plus the acquisition-date fair value of any equity interest in the acquiree previously held by the acquirer, plus the fair value of any noncontrolling interest in the acquiree and (2) the acquisition-date book values of the identifiable assets acquired and liabilities assumed.

In the Point/Sharp merger, the total differential of \$310,000 reflects the difference between the total fair value of the shares issued by Point and the carrying amount of Sharp's net assets reflected on its books at the date of combination. A portion of that difference (\$210,000) is attributable to the increased value of Sharp's net assets over book value. The remainder of the difference (\$100,000) is considered to be goodwill.

The \$40,000 of acquisition costs incurred by Point in carrying out the acquisition are expensed as incurred:

| (3) | Acquisition Expense | 40,000 |
|-----|---------------------|--------|
|     | Cash                | 40,000 |

Record costs related to acquisition of Sharp Company.

Portions of the \$25,000 of stock issue costs related to the shares issued to acquire Sharp may be incurred at various times. To facilitate accumulating these amounts before recording the combination, Point may record them in a separate temporary "suspense" account as incurred:

| (4) | Deferred Stock Issue Costs | 25,000 |
|-----|----------------------------|--------|
|     | Cash                       | 25,000 |

Record costs related to issuance of common stock.

On the date of combination, Point records the acquisition of Sharp with the following entry:

| (5) | Cash and Receivables       | 45,000  |   |
|-----|----------------------------|---------|---|
|     | Inventory                  | 75,000  |   |
|     | Land                       | 70,000  |   |
|     | Buildings and Equipment    | 350,000 |   |
|     | Patent                     | 80,000  |   |
|     | Goodwill                   | 100,000 |   |
|     | Current Liabilities        | 110,00  | 0 |
|     | Common Stock               | 100,00  | 0 |
|     | Additional Paid-In Capital | 485,00  | 0 |
|     | Deferred Stock Issue Costs | 25,00   | 0 |

Record acquisition of Sharp Company.

Entry (5) records all of Sharp's individual assets and liabilities, both tangible and intangible, on Point's books at their fair values on the date of combination. The fair value of Sharp's net assets recorded is \$510,000 (\$620,000 - \$110,000). The \$100,000 difference between the fair value of the shares given by Point (\$610,000) and the fair value of Sharp's net assets is recorded as goodwill.

In recording the business combination, Sharp's book values are not relevant to Point; only the fair values are recorded. Because a change in ownership has occurred, the basis of accounting used by the acquired company is not relevant to the acquirer. Consistent with this view, accumulated depreciation recorded by Sharp on its buildings and equipment is not relevant to Point and is not recorded.

The stock issue costs are treated as a reduction in the proceeds received from the issuance of the stock. Thus, these costs are transferred from the temporary account to Additional Paid-In Capital as a reduction. Point records the \$610,000 of stock issued at its value minus the stock issue costs, or \$585,000. Of this amount, the \$100,000 par value is recorded in the Common Stock account and the remainder in Additional Paid-In Capital.

# Entries Recorded by Acquired Company

On the date of the combination, Sharp records the following entry to recognize receipt of the Point shares and the transfer of all individual assets and liabilities to Point:

| (6) | Investment in Point Stock  | 610,000 |
|-----|----------------------------|---------|
|     | Current Liabilities        | 100,000 |
|     | Accumulated Depreciation   | 150,000 |
|     | Cash and Receivables       | 45,000  |
|     | Inventory                  | 65,000  |
|     | Land                       | 40,000  |
|     | Buildings and Equipment    | 400,000 |
|     | Gain on Sale of Net Assets | 310,000 |

Record transfer of assets to Point Corporation.

Sharp recognizes the fair value of Point Corporation shares at the time of the exchange and records a gain of \$310,000. The distribution of Point shares to Sharp shareholders and the liquidation of Sharp are recorded on Sharp's books with the following entry:

| (7) | Common Stock               | 100,000 |
|-----|----------------------------|---------|
|     | Additional Paid-In Capital | 50,000  |
|     | Retained Earnings          | 150,000 |
|     | Gain on Sale of Net Assets | 310,000 |
|     | Investment in Point Stock  | 610,000 |

Record distribution of Point Corporation stock.

# Subsequent Accounting for Goodwill by Acquirer

The acquirer records goodwill arising in a merger for the difference between the fair value of the consideration exchanged and the fair value of the identifiable net assets acquired, as illustrated in entry (5). Once the acquirer records goodwill, it must be accounted for in accordance with ASC 350. Goodwill is carried forward at the originally recorded amount unless it becomes impaired. Goodwill must be reported as a separate line item in the balance sheet. A goodwill impairment loss that occurs subsequent to recording goodwill must be reported as a separate line item within income from continuing operations in the income statement unless the loss relates to discontinued operations, in which case the loss is reported within the discontinued operations section.

Goodwill must be tested for impairment at least annually, at the same time each year, and more frequently if events that are likely to impair the value of the goodwill occur. The process of testing goodwill for impairment is complex. It involves examining potential goodwill impairment by each of the company's reporting units, where a reporting unit is an operating segment or a component of an operating segment that is a business for which management regularly reviews financial information from that component. When goodwill arises in a business combination, it must be assigned to individual reporting units. The goodwill is assigned to units that are expected to benefit from the combination, even if no other assets or liabilities of the acquired company are assigned to those units. To test for the impairment of goodwill, the fair value of the reporting unit is compared with its carrying amount. If the fair value of the reporting unit exceeds its carrying amount, the goodwill of that reporting unit is considered unimpaired. On the other hand, if the carrying amount of the reporting unit exceeds its fair value, an impairment of the reporting unit's goodwill is implied.<sup>9</sup>

The amount of the reporting unit's goodwill impairment is measured as the excess of the carrying amount of the unit's goodwill over the implied value of its goodwill. The implied value of its goodwill is determined as the excess of the fair value of the reporting unit over the fair value of its net assets excluding goodwill. Goodwill impairment losses are recognized in income from continuing operations or included in gain/loss from discontinued operations, if related.

As an example of goodwill impairment, assume that Reporting Unit A is assigned \$100,000 of goodwill arising from a recent business combination. The following assets and liabilities are assigned to Reporting Unit A:

<sup>&</sup>lt;sup>8</sup> An operating segment is defined in **ASC 280-10-50**. Whereas U.S. GAAP assigns goodwill to reporting units, IFRS assigns goodwill to cash-generating units (GCU).

<sup>&</sup>lt;sup>9</sup> The one-step impairment test for goodwill under IFRS is slightly different. The recoverable amount of the cash-generating unit (GCU) is compared with its carrying amount. Any impairment loss is recognized in operating results as the excess of the carrying amount over the recoverable amount. Impairment losses are recognized in operating results. If the impairment loss exceeds the book value of goodwill, the loss is allocated first to goodwill and then on a pro rata basis to the other assets of the CGU.

| Item   | Carrying Amount                           | Fair Value                         |
|--|---|------------------------------------|
| Cash and receivables<br>Inventory<br>Equipment<br>Goodwill | \$ 50,000<br>80,000<br>120,000<br>100,000 | \$ 50,000<br>90,000<br>150,000     |
| Total assets<br>Current payables<br>Net assets             | \$350,000<br>(10,000)<br>\$340,000        | \$290,000<br>(10,000)<br>\$280,000 |

By summing the carrying amounts of the assets and subtracting the carrying amount of the payables, the carrying amount of the reporting unit, including the goodwill, is determined to be \$340,000. If the fair value of the reporting unit is estimated to be \$360,000, no impairment of goodwill is indicated. On the other hand, if the fair value of the reporting unit is estimated to be \$320,000, a second comparison must be made to determine the amount of any impairment loss. The implied value of Reporting Unit A's goodwill is determined by deducting the \$280,000 fair value of the net assets, excluding goodwill, from the unit's \$320,000 fair value. The \$40,000 difference (\$320,000 - \$280,000) represents Reporting Unit A's implied goodwill. The impairment loss is measured as the excess of the carrying amount of the unit's goodwill (\$100,000) over the implied value of the goodwill (\$40,000), or \$60,000. This goodwill impairment loss is combined with any impairment losses from other reporting units to determine the total impairment loss to be reported by the company as a whole. Goodwill is written down by the amount of the impairment loss. Once written down, goodwill may not be written up for recoveries.

# Bargain Purchase

Occasionally, the fair value of the consideration given in a business combination, along with the fair value of any equity interest in the acquiree already held and the fair value of any noncontrolling interest in the acquiree, may be less than the fair value of the acquiree's net identifiable assets, resulting in a bargain purchase. This might occur, for example, with a forced sale.

When a bargain purchase occurs (rarely), the acquirer must take steps to ensure that all acquisition-date valuations are appropriate. If they are, the acquirer recognizes a gain at the date of acquisition for the excess of the amount of the net identifiable assets acquired and liabilities assumed as valued under ASC 805, usually at fair value, over the sum of the fair value of the consideration given in the exchange, the fair value of any equity interest in the acquiree held by the acquirer at the date of acquisition, and the fair value of any noncontrolling interest. Along with the amount of the gain, companies must disclose the operating segment where the gain is reported and the factors that led to the gain.

To illustrate accounting for a bargain purchase, assume that in the previous example of Point and Sharp, Point is able to acquire Sharp for \$500,000 cash even though the fair value of Sharp's net identifiable assets is estimated to be \$510,000. In this simple bargain-purchase case without an equity interest already held or a noncontrolling interest, the fair value of Sharp's net identifiable assets exceeds the consideration exchanged by Point, and, accordingly, a \$10,000 gain attributable to Point is recognized.

In accounting for the bargain purchase (for cash) on Point's books, the following entry replaces previous entry (5):

| (8) | Cash and Receivables                      | 45,000  |         |
|-----|---|---------|---------|
|     | Inventory                                 | 75,000  |         |
|     | Land                                      | 70,000  |         |
|     | Buildings and Equipment                   | 350,000 |         |
|     | Patent                                    | 80,000  |         |
|     | Cash                                      |         | 500,000 |
|     | Current Liabilities                       |         | 110,000 |
|     | Gain on Bargain Purchase of Sharp Company |         | 10,000  |

Record acquisition of Sharp Company.

ASC 805 does not state a treatment for the situation opposite to that of a bargain purchase, that is, an overpayment. Acquirers do not knowingly overpay for an acquisition. Any overpayment presumably would be the result of misinformation, and the overpayment would not be discovered until a later time. The FASB avoided this issue by basing the computation of goodwill on the consideration given by the acquirer rather than the acquiree's total fair value. Thus, any overpayment would be included in goodwill and presumably eliminated in future periods by testing for goodwill impairment.

# **Combination Effected through Acquisition of Stock**

Many business combinations are effected by acquiring the voting stock of another company rather than by acquiring its net assets. In such a situation, the acquired company continues to exist, and the acquirer records an investment in the common stock of the acquiree rather than its individual assets and liabilities. The acquirer records its investment in the acquiree's common stock at the total fair value of the consideration given in exchange. For example, if Point Corporation (a) exchanges 10,000 shares of its stock with a total market value of \$610,000 for all of Sharp Company's shares and (b) incurs merger costs of \$40,000 and stock issue costs of \$25,000. Point records the following entries upon receipt of the Sharp stock:

| (9)  | Acquisition Expense  | 40,000        |         |
|------|--|---------------|---------|
|      | Deferred Stock Issue Costs                                       | 25,000        |         |
|      | Cash   |               | 65,000  |
|      | Record merger and stock issue costs related to acquisition of Sh | narp Company. |         |
| (10) | Investment in Sharp Stock  | 610,000       |         |
|      | Common Stock   |               | 100,000 |
|      | Additional Paid-In Capital                                       |               | 485,000 |
|      | Deferred Stock Issue Costs                                       |               | 25,000  |
|      | Record acquisition of Sharp Company stock.                       |               |         |

When a business combination is effected through a stock acquisition, the acquiree may continue to operate as a separate company or it may lose its separate identity and be merged into the acquiring company. The accounting and reporting procedures for intercorporate investments in common stock when the acquiree continues in existence are discussed in the next nine chapters. If the acquired company is liquidated and its assets and liabilities are transferred to the acquirer, the dollar amounts recorded are identical to those in entry (5).

# Financial Reporting Subsequent to a Business Combination

Financial statements prepared subsequent to a business combination reflect the combined entity beginning on the date of combination going forward to the end of the fiscal period. When a combination occurs during a fiscal period, income earned by the acquiree prior to the combination is not reported in the income of the combined enterprise. If the combined company presents comparative financial statements that include statements for periods before the combination, those statements include only the activities and financial position of the acquiring company, not those of the acquiree.

To illustrate financial reporting subsequent to a business combination, assume the following information for Point Corporation and Sharp Company:

|  | 20X0                | 20X1                |
|--|---------------------|---------------------|
| Point Corporation: Separate income (excluding any income from Sharp) Shares outstanding, December 31 | \$300,000<br>30,000 | \$300,000<br>40,000 |
| Sharp Company:<br>Net income   | \$ 60,000           | \$ 60,000           |

Point Corporation acquires all of Sharp Company's stock at book value on January 1, 20X1, by issuing 10,000 shares of common stock. Subsequently, Point Corporation presents comparative financial statements for the years 20X0 and 20X1. The net income and earnings per share that Point presents in its comparative financial statements for the two years are as follows:

| 20X0:<br>Net Income<br>Earnings per Share (\$300,000/30,000 shares)                        | \$300,000<br>\$10.00 |
|--|----------------------|
| 20X1:<br>Net Income (\$300,000 + \$60,000)<br>Earnings per Share (\$360,000/40,000 shares) | \$360,000<br>\$9.00  |

If Point Corporation had acquired Sharp Company in the middle of 20X1 instead of at the beginning, Point would include only Sharp's earnings subsequent to acquisition in its 20X1 income statement. If Sharp earned \$25,000 in 20X1 before acquisition by Point and \$35,000 after the combination, Point would report total net income for 20X1 of \$335,000 (\$300,000 + \$35,000). Note that if the shares are issued in the middle of the year, the weighted-average shares used in the EPS calculation would change as well.

# ADDITIONAL CONSIDERATIONS IN ACCOUNTING FOR BUSINESS COMBINATIONS

Understand additional considerations associated with ASC 805 includes a number of requirements relating to specific items or aspects encountered in business combinations. A discussion of the more common situations follows.

# **Uncertainty in Business Combinations**

Uncertainty affects much of accounting measurement but is especially prevalent in business combinations. Although uncertainty relates to many aspects of business combinations, three aspects of accounting for business combinations deserve particular attention: the measurement period, contingent consideration, and acquiree contingencies.

# Measurement Period

One type of uncertainty in business combinations arises from the requirement to value at acquisition-date fair value the assets and liabilities acquired in a business combination, the acquirer's interest in the acquiree, any noncontrolling interest, and the consideration given. Because the acquirer may not have sufficient information available immediately to properly ascertain fair values, ASC 805 allows for a period of time, called the measurement period, to acquire the necessary information. The measurement period ends once the acquirer obtains the necessary information about the facts as of the acquisition date, but may not exceed one year beyond the acquisition date.

Assets that have been provisionally recorded as of the acquisition date are retrospectively adjusted in value during the measurement period for new information that clarifies the acquisition-date value. Usually, the offsetting entry is to goodwill. Retrospective adjustments may not be made for changes in value that occur subsequent to the acquisition date.

As an illustration, assume that Baine Company acquires land in a business combination and provisionally records the land at its estimated fair value of \$100,000. During the measurement period, Baine receives a reliable appraisal that the land was worth \$110,000 at the acquisition date. Subsequently, during the same accounting period, a change in the zoning of a neighboring parcel of land reduces the value of the land acquired by Baine to \$75,000. Baine records the clarification of the acquisition-date fair value of the land and the subsequent impairment of value with the following entries:

| (11) | Land  | 10,000 |        |
|------|---|--------|--------|
|      | Goodwill  |        | 10,000 |
|      | Adjust acquisition-date value of land acquired in business combination. |        |        |
| (12) | Impairment Loss   | 35,000 |        |
|      | Land  |        | 35,000 |

Recognize decline in value of land held.

# **Contingent Consideration**

Sometimes the consideration exchanged by the acquirer in a business combination is not fixed in amount, but rather is contingent on future events. For example, the acquiree and acquirer may enter into a contingent-share agreement whereby, in addition to an initial issuance of shares, the acquirer may agree to issue a certain number of additional shares for each percentage point by which the earnings number exceeds a set amount over the next five years. Thus, total consideration exchanged in the business combination is not known within the measurement period because the number of shares to be issued is dependent on future events.

ASC 805 requires contingent consideration in a business combination to be valued at fair value as of the acquisition date and classified as either a liability or equity. The right to require the return of consideration given that it is dependent on future events is classified as an asset. Contingent consideration classified as an asset or liability is remeasured each period to fair value and the change is recognized in income. <sup>10</sup> Contingent consideration classified as equity is not remeasured.

# Acquiree Contingencies

Certain contingencies may relate to an acquiree in a business combination, such as pending lawsuits or loan guarantees made by the acquiree. Certainly, the acquirer considers such contingencies when entering into an acquisition agreement, and the accounting must also consider such contingencies. Under ASC 805, the acquirer must recognize all contingencies that arise from contractual rights or obligations and other contingencies if it is more likely than not that they meet the definition of an asset or liability at the acquisition date. The acquirer records these contingencies at acquisition-date fair value.

For all acquired contingencies, the acquirer should provide a description of each, disclose the amount recognized at the acquisition date, and describe the estimated range of possible undiscounted outcomes. Subsequently, the acquirer should disclose changes in the amounts recognized and in the range of possible outcomes.

# **In-Process Research and Development**

In normal operations, research and development costs are required to be expensed as incurred except under certain limited conditions. When a company acquires valuable ongoing research and development projects from an acquiree in a business combination, a question arises as to whether these should be recorded as assets. The FASB concluded in ASC 805 that these projects are assets and should be recorded at their acquisitiondate fair values, even if they have no alternative use. These projects should be classified as having indefinite lives and, therefore, should not be amortized until completed or abandoned. They should be tested for impairment in accordance with current standards. Subsequent expenditures for the previously acquired research and development projects would normally be expensed as incurred.

<sup>&</sup>lt;sup>10</sup> The treatment of contingent consideration under IFRS is slightly different. Although contingent consideration classified as an asset or liability will likely be a financial instrument measured at fair value with gains or losses recognized in profit or loss, if the asset or liability is not a financial instrument, it is accounted for in accordance with the standard provisions for that class of asset or liability (i.e., not necessarily at fair value).

# **Noncontrolling Equity Held Prior to Combination**

In some cases, an acquirer may hold an equity interest in an acquiree prior to obtaining control through a business combination. The total amount of the acquirer's investment in the acquiree subsequent to the combination is equal to the acquisition-date fair value of the equity interest previously held and the fair value of the consideration given in the business combination. For example, if Lemon Company held 10 percent of Aide Company's stock with a fair value of \$500,000 and Lemon acquired the remaining shares of Aide for \$4,500,000 cash, Lemon's total investment is considered to be \$5,000,000.

An acquirer that held an equity position in an acquiree immediately prior to the acquisition date must revalue that equity position to its fair value at the acquisition date and recognize a gain or loss on the revaluation. Suppose that Lemon's 10 percent investment in Aide has a book value of \$300,000 and fair value of \$500,000 at the date Lemon acquires the remaining 90 percent of Aide's stock. Lemon revalues its original investment in Aide to its \$500,000 fair value and recognizes a \$200,000 gain on the revaluation at the date it acquires the remaining shares of Aide. Lemon records the following entries on its books in connection with the acquisition of Aide:

| (13) | Investment in Aide Company Stock  | 200,000   |           |
|------|---|-----------|-----------|
|      | Gain on revaluation of Aide Company Stock                                 |           | 200,000   |
|      | Revalue Aide Company stock to fair value at date of business combination. |           |           |
| (14) | Investment in Aide Company Stock  | 4,500,000 |           |
|      | Cash  |           | 4,500,000 |
|      | Acquire controlling interest in Aide Company.                             |           |           |

# Summary of **Key Concepts**

Business combinations and complex organizational structures are an important part of the global business scene. Many companies add organizational components by creating new corporations or partnerships through which to carry out a portion of their operations. In other cases, companies may enter into business combinations to acquire other companies through which to further their objectives.

When a company creates another corporation or a partnership through a transfer of assets, the book values of those assets are transferred to the new entity and no gain or loss is recognized. The creating company and the new entity will combine their financial statements for general-purpose financial reporting to appear as if they were a single company as long as the creating company continues to control the new entity.

Over the decades, business combinations have been occurring with increasing frequency. A business combination occurs when an acquirer obtains control of one or more other businesses. The three types of business combination that are commonly found are (a) statutory mergers in which the acquiree loses its separate identity and the acquirer continues with the assets and liabilities of both companies; (b) statutory consolidations in which both combining companies join to form a new company; and (c) stock acquisitions in which both combining companies maintain their separate identities, with the acquirer owning the stock of the acquiree.

ASC 805 requires that the acquisition method be used to account for business combinations. Under the acquisition method, all of the assets acquired and liabilities assumed by the acquirer in a business combination are valued at their fair values. The excess of the sum of the fair value of the acquirer's consideration transferred, the fair value of any equity interest in the acquiree already held, and the fair value of any noncontrolling interest in the acquiree over the fair value of the net identifiable assets acquired is goodwill. In subsequent financial statements, goodwill must be reported separately. Goodwill is not amortized, but it must be tested for impairment at least annually. If goodwill is impaired, it is written down to its new fair value and a loss recognized for the amount of the impairment. If the fair value of the consideration transferred by the acquirer in a business combination, along with the fair value of an equity interest already held, and the noncontrolling interest is less than the fair value of the acquiree's net identifiable assets, a situation referred to as a bargain purchase, the difference is recognized as a gain attributable to the acquirer.

All costs associated with a business combination are expensed as incurred. Any stock issue costs incurred in connection with a business combination are treated as a reduction in paid-in capital. A business combination is given effect as of the acquisition date for subsequent financial reporting.

| Questions   |       |   |
|-------------|-------|---|
| LO 1-1      | Q1-1  | What types of circumstances would encourage management to establish a complex organizational structure?   |
| LO 1-1      | Q1-2  | How would the decision to dispose of a segment of operations using a split-off rather than a spin-off impact the financial statements of the company making the distribution?   |
| LO 1-1      | Q1-3  | Why did companies such as Enron find the use of special-purpose entities to be advantageous?  |
| LO 1-4      | Q1-4  | Describe each of the three legal forms that a business combination might take.  |
| LO 1-1      | Q1-5  | When does a noncontrolling interest arise in a business combination?  |
| LO 1-5      | Q1-6  | How is the amount reported as goodwill determined under the acquisition method?   |
| LO 1-5      | Q1-7  | What impact does the level of ownership have on the amount of goodwill reported under the acquisition method?   |
| LO 1-5      | Q1-8  | What is a differential?   |
| LO 1-2, 1-5 | Q1-9  | When a business combination occurs after the beginning of the year, the income earned by the acquired company between the beginning of the year and the date of combination is excluded from the net income reported by the combined entity for the year. Why?      |
| LO 1-5      | Q1-10 | What is the maximum balance in retained earnings that can be reported by the combined entity immediately following a business combination?  |
| LO 1-5      | Q1-11 | How is the amount of additional paid-in capital determined when recording a business combination?   |
| LO 1-5      | Q1-12 | Which of the costs incurred in completing a business combination are capitalized under the acquisition method?  |
| LO 1-5      | Q1-13 | Which of the costs incurred in completing a business combination should be treated as a reduction of additional paid-in capital?  |
| LO 1-5      | Q1-14 | When is goodwill considered impaired following a business combination?  |
| LO 1-5      | Q1-15 | When does a bargain purchase occur?   |
| LO 1-6      | Q1-16 | Within the measurement period following a business combination, the acquisition-date fair value of buildings acquired is determined to be less than initially recorded. How is the reduction in value recognized?   |
| LO 1-6      | Q1-17 | P Company reports its 10,000 shares of S Company at \$40 per share. P Company then purchases an additional 60,000 shares of S Company for \$65 each and gains control of S Company. What must be done with respect to the valuation of the shares previously owned? |

# Cases

LO 1-2, 1-5 C1-1 Assignment of Acquisition Costs

Research

Troy Company notified Kline Company's shareholders that it was interested in purchasing controlling ownership of Kline and offered to exchange one share of Troy's common stock for each share of Kline Company submitted by July 31, 20X7. At the time of the offer, Troy's shares were trading for \$35 per share and Kline's shares were trading at \$28. Troy acquired all of the shares of Kline

prior to December 31, 20X7, and transferred Kline's assets and liabilities to its books. In addition to issuing its shares, Troy paid a finder's fee of \$200,000, stock registration and audit fees of \$60,000, legal fees of \$90,000 for transferring Kline's assets and liabilities to Troy, and \$370,000 in legal fees to settle litigation brought by Kline's shareholders who alleged that the offering price was below the per-share fair value of Kline's net assets.

# Required

Troy Company's vice president of finance has asked you to review the current accounting literature, including authoritative pronouncements, and prepare a memo reporting the required treatment of the additional costs at the time Kline Company was acquired. Support your recommendations with citations and quotations from the authoritative financial reporting standards or other literature.

# **Evaluation of Merger**

Research

One company may acquire another for a number of different reasons. The acquisition often has a significant impact on the financial statements. In 2005, 3M Corporation acquired CUNO Incorporated. Obtain a copy of the 3M 10-K filing for 2005. The 10-K reports the annual results for a company and is often available on the Investor Relations section of a company's website. It is also available on the SEC's website at www.SEC.gov.

Use the 10-K for 2005 to find the answers to the following questions about 3M's acquisition of CUNO Inc. (Hint: You can search for the term CUNO once you have accessed the 10-K online.)

- a. Provide at least one reason why 3M acquired CUNO.
- b. How was the acquisition funded?
- c. What was the impact of the CUNO acquisition on net accounts receivable?
- d. What was the impact of the CUNO acquisition on inventories?

LO 1-4

# **Business Combinations**

**Analysis** 

A merger boom comparable to those of the 1960s and mid-1980s occurred in the 1990s and into the new century. The merger activity of the 1960s was associated with increasing stock prices and heavy use of pooling-of-interests accounting. The mid-1980s activity was associated with a number of leveraged buyouts and acquisitions involving junk bonds. Merger activity in the early 1990s, on the other hand, appeared to involve primarily purchases with cash and standard debt instruments. By the mid-1990s, however, many business combinations were being effected through exchanges of stock. In the first decade of the new century, the nature of many business acquisitions changed, and by late 2008, the merger boom had slowed dramatically.

- a. Which factors do you believe were the most prominent in encouraging business combinations in the 1990s? Which of these was the most important? Explain why.
- b. Why were so many of the business combinations in the middle and late 1990s effected through exchanges of stock?
- c. What factors had a heavy influence on mergers during the mid-2000s? How did many of the business combinations of this period differ from earlier combinations? Why did the merger boom slow so dramatically late in 2008 and in 2009?
- d. If a major review of the tax laws were undertaken, would it be wise or unwise public policy to establish greater tax incentives for corporate mergers? Propose three incentives that might be used.
- e. If the FASB were interested in encouraging more mergers, what action should it take with regard to revising or eliminating existing accounting standards? Explain.

### C1-4 **Determination of Goodwill Impairment**

# Research

Plush Corporation purchased 100 percent of Common Corporation's common stock on January 1, 20X3, and paid \$450,000. The fair value of Common's identifiable net assets at that date was \$430,000. By the end of 20X5, the fair value of Common, which Plush considers to be a reporting unit, had increased to \$485,000; however, Plush's external auditor made a passing comment to the company's chief accountant that Plush might need to recognize impairment of goodwill on one or more of its investments.

# Required

Prepare a memo to Plush's chief accountant indicating the tests used in determining whether goodwill has been impaired. Include in your discussion one or more possible conditions under which Plush might be required to recognize impairment of goodwill on its investment in Common Corporation. In preparing your memo, review the current accounting literature, including authoritative pronouncements of the FASB and other appropriate bodies. Support your discussion with citations and quotations from the applicable literature.

### C1-5 **Risks Associated with Acquisitions**

Analysis

Not all business combinations are successful, and many entail substantial risk. Acquiring another company may involve a number of different types of risk. Obtain a copy of the 10-K report for Google, Inc., for the year ended December 31, 2006, available at the SEC's website (www.sec. gov). The report also can be accessed through Yahoo! Finance or the company's Investor Relations page.

# Required

On page 21 of the 10-K report, Google provides information to investors about its motivation for acquiring companies and the possible risks associated with such acquisitions. Briefly discuss the risks that Google sees inherent in potential acquisitions.

LO 1-1

### C1-6 **Numbers Game**

# **Communication**

Arthur Levitt's speech, "The Numbers Game," is available on the SEC's website at www.sec.gov/ news/speech/speecharchive/1998/spch220.txt. Read the speech, and then answer the following questions.

# Required

- a. Briefly explain what motivations Levitt discusses for earnings management.
- b. What specific techniques for earnings management does Levitt discuss?
- c. According to Levitt, why is the issue of earnings management important?

LO 1-1, 1-4

### C1-7 MCI: A Succession of Mergers

Research

MCI WorldCom, Inc. (later MCI), was known as a high-flying company, having had its roots in a small local company and rising to one of the world's largest communications giants. The company's spectacular growth was accomplished through a string of business combinations. However, not all went as planned, and MCI is no longer an independent company.

# Required

Provide a brief history of, and indicate subsequent events related to, MCI WorldCom. Include in your discussion the following:

- a. Trace the major acquisitions leading to MCI WorldCom and indicate the type of consideration used in the acquisitions.
- b. Who is Bernard Ebbers, and where is he now?
- c. What happened to MCI WorldCom, and where is it now?

LO 1-4

### C1-8 **Leveraged Buyouts**

Analysis

A type of acquisition that was not discussed in the chapter is the leveraged buyout. Many experts argue that a leveraged buyout (LBO) is not a type of business combination but rather just a restructuring of ownership. Yet some would see an LBO as having many of the characteristics of a business combination. The number of LBOs in recent years has grown dramatically and, therefore, accounting for these transactions is of increased importance.

# Required

- a. What is a leveraged buyout? How does an LBO compare with a management buyout (MBO)?
- b. What authoritative pronouncements, if any, deal with leveraged buyouts?
- c. Is a leveraged buyout a type of business combination? Explain.
- d. What is the major issue in determining the proper basis for an interest in a company purchased through a leveraged buyout?

# Exercises

LO 1-1, 1-3, 1-5 **E1-1** 

# **Multiple-Choice Questions on Complex Organizations**

Select the correct answer for each of the following questions.

- 1. Growth in the complexity of the U.S. business environment
  - a. Has led to increased use of partnerships to avoid legal liability.
  - b. Has led to increasingly complex organizational structures as management has attempted to achieve its business objectives.
  - c. Has encouraged companies to reduce the number of operating divisions and product lines so they may better control those they retain.
  - d. Has had no particular impact on the organizational structures or the way in which companies are managed.
- 2. Which of the following is *not* an appropriate reason for establishing a subsidiary?
  - a. The parent wishes to protect existing operations by shifting new activities with greater risk to a newly created subsidiary.
  - b. The parent wishes to avoid subjecting all of its operations to regulatory control by establishing a subsidiary that focuses its operations in regulated industries.
  - c. The parent wishes to reduce its taxes by establishing a subsidiary that focuses its operations in areas where special tax benefits are available.
  - d. The parent wishes to be able to increase its reported sales by transferring products to the subsidiary at the end of the fiscal year.
- 3. Which of the following actions is likely to result in recording goodwill on Randolph Company's books?
  - a. Randolph acquires Penn Corporation in a business combination recorded as a merger.
  - b. Randolph acquires a majority of Penn's common stock in a business combination and continues to operate it as a subsidiary.
  - c. Randolph distributes ownership of a newly created subsidiary in a distribution considered to be a spin-off.
  - d. Randolph distributes ownership of a newly created subsidiary in a distribution considered to be a split-off.
- 4. When an existing company creates a new subsidiary and transfers a portion of its assets and liabilities to the new entity
  - a. The new entity records both the assets and liabilities it received at fair values.
  - b. The new entity records both the assets and liabilities it received at the carrying values of the original company.
  - c. The original company records a gain or loss on the difference between its carrying values and the fair values of the assets transferred to the new entity.
  - d. The original company records the difference between the carrying values and the fair values of the assets transferred to the new entity as goodwill.
- 5. When a company assigns goodwill to a reporting unit acquired in a business combination, it must record an impairment loss if
  - a. The fair value of the net identifiable assets held by a reporting unit decreases.
  - b. The fair value of the reporting unit decreases.
  - c. The carrying value of the reporting unit is less than the fair value of the reporting unit.
  - d. The fair value of the reporting unit is less than its carrying value and the carrying value of goodwill is more than the implied value of its goodwill.

# E1-2 Multiple-Choice Questions on Recording Business Combinations [AICPA Adapted] Select the correct answer for each of the following questions.

- 1. Goodwill represents the excess of the sum of the fair value of the (1) consideration given, (2) shares already owned, and (3) the noncontrolling interest over the
  - a. Sum of the fair values assigned to identifiable assets acquired less liabilities assumed.
  - b. Sum of the fair values assigned to tangible assets acquired less liabilities assumed.
  - c. Sum of the fair values assigned to intangible assets acquired less liabilities assumed.
  - d. Book value of an acquired company.

- 2. In a business combination, costs of registering equity securities to be issued by the acquiring company are a(n)
  - a. Expense of the combined company for the period in which the costs were incurred.
  - b. Direct addition to stockholders' equity of the combined company.
  - c. Reduction of the recorded value of the securities.
  - d. Addition to goodwill.
- 3. Which of the following is the appropriate basis for valuing fixed assets acquired in a business combination carried out by exchanging cash for common stock?
  - a. Historical cost.
  - b. Book value.
  - c. Cost plus any excess of purchase price over book value of assets acquired.
  - d. Fair value.
- 4. In a business combination in which an acquiring company purchases 100 percent of the outstanding common stock of another company, if the fair value of the net identifiable assets acquired exceeds the fair value of the consideration given. The excess should be reported as a
  - a. Deferred credit.
  - b. Reduction of the values assigned to current assets and a deferred credit for any unallocated portion.
  - c. Pro rata reduction of the values assigned to current and noncurrent assets and a deferred credit for any unallocated portion.
  - d. No answer listed is correct.
- 5. A and B Companies have been operating separately for five years. Each company has a minimal amount of liabilities and a simple capital structure consisting solely of voting common stock. In exchange for 40 percent of its voting stock A Company, acquires 80 percent of the common stock of B Company. This is a "tax-free" stock-for-stock exchange for tax purposes. B Company's identifiable assets have a total net fair market value of \$800,000 and a total net book value of \$580,000. The fair market value of the A stock used in the exchange is \$700,000, and the fair value of the noncontrolling interest is \$175,000. The goodwill reported following the acquisition would be
  - a. Zero.
  - b. \$60,000.
  - c. \$75,000.
  - d. \$295,000.

# Multiple-Choice Questions on Reported Balances [AICPA Adapted]

Select the correct answer for each of the following questions.

1. On December 31, 20X3, Saxe Corporation was merged into Poe Corporation. In the business combination, Poe issued 200,000 shares of its \$10 par common stock, with a market price of \$18 a share, for all of Saxe's common stock. The stockholders' equity section of each company's balance sheet immediately before the combination was:

|                            | Poe         | Saxe        |
|----------------------------|-------------|-------------|
| Common Stock               | \$3,000,000 | \$1,500,000 |
| Additional Paid-In Capital | 1,300,000   | 150,000     |
| Retained Earnings          | 2,500,000   | 850,000     |
|                            | \$6,800,000 | \$2,500,000 |

In the December 31, 20X3, consolidated balance sheet, additional paid-in capital should be reported at

- a. \$950,000.
- b. \$1,300,000.
- c. \$1,450,000.
- d. \$2,900,000.
- 2. On January 1, 20X1, Rolan Corporation issued 10,000 shares of common stock in exchange for all of Sandin Corporation's outstanding stock. Condensed balance sheets of Rolan and Sandin immediately before the combination follow:

| <b>Rolan</b> \$1,000,000         | <b>Sandin</b><br>\$500,000       |
|----------------------------------|----------------------------------|
| \$1,000,000                      | \$500,000                        |
|                                  | <del>\$300,000</del>             |
| \$ 300,000<br>200,000<br>500,000 | \$150,000<br>100,000<br>250,000  |
| \$1,000,000                      | \$500,000                        |
|                                  | \$ 300,000<br>200,000<br>500,000 |

Rolan's common stock had a market price of \$60 per share on January 1, 20X1. The market price of Sandin's stock was not readily determinable. The fair value of Sandin's net identifiable assets was determined to be \$570,000. Rolan's investment in Sandin's stock will be stated in Rolan's balance sheet immediately after the combination in the amount of

- a. \$350,000.
- b. \$500,000.
- c. \$570,000.
- d. \$600,000.
- 3. On April 1, 20X2, Jack Company paid \$800,000 for all of Ann Corporation's issued and outstanding common stock. Ann's recorded assets and liabilities on April 1, 20X2, were as follows:

| Cash  | \$ 80,000 |
|---|-----------|
| Inventory   | 240,000   |
| Property & equipment (net of accumulated depreciation of \$320,000) | 480,000   |
| Liabilities   | (180,000) |

On April 1, 20X2, Ann's inventory was determined to have a fair value of \$190,000, and the property and equipment had a fair value of \$560,000. What is the amount of goodwill resulting from the business combination?

- a. \$0.
- b. \$50,000.
- c. \$150,000.
- d. \$180,000.
- 4. Action Corporation issued nonvoting preferred stock with a fair market value of \$4,000,000 in exchange for all the outstanding common stock of Master Corporation. On the date of the exchange, Master had tangible net assets with a book value of \$2,000,000 and a fair value of \$2,500,000. In addition, Action issued preferred stock valued at \$400,000 to an individual as a finder's fee in arranging the transaction. As a result of this transaction, Action should record an increase in net assets of
  - a. \$2,000,000.
  - b. \$2,500,000.
  - c. \$4,000,000.
  - d. \$4,400,000.

### **Multiple-Choice Questions Involving Account Balances** LO 1-2, 1-5

Select the correct answer for each of the following questions.

- 1. Topper Company established a subsidiary and transferred equipment with a fair value of \$72,000 to the subsidiary. Topper had purchased the equipment with ten-year expected life of four years earlier for \$100,000 and has used straight-line depreciation with no expected residual value. At the time of the transfer, the subsidiary should record
  - a. Equipment at \$72,000 and no accumulated depreciation.
  - b. Equipment at \$60,000 and no accumulated depreciation.
  - c. Equipment at \$100,000 and accumulated depreciation of \$40,000.
  - d. Equipment at \$120,000 and accumulated depreciation of \$48,000.
- 2. Lead Corporation established a new subsidiary and transferred to it assets with a cost of \$90,000 and a book value of \$75,000. The assets had a fair value of \$100,000 at the time of transfer. The transfer will result in
  - a. A reduction of net assets reported by Lead Corporation of \$90,000.
  - b. A reduction of net assets reported by Lead Corporation of \$75,000.
  - c. No change in the reported net assets of Lead Corporation.
  - d. An increase in the net assets reported by Lead Corporation of \$25,000.
- 3. Tear Company, a newly established subsidiary of Stern Corporation, received assets with an original cost of \$260,000, a fair value of \$200,000, and a book value of \$140,000 from the parent in exchange for 7,000 shares of Tear's \$8 par value common stock. Tear should record
  - a. Additional paid-in capital of \$0.
  - b. Additional paid-in capital of \$84,000.
  - c. Additional paid-in capital of \$144,000.
  - d. Additional paid-in capital of \$204,000.
- 4. Grout Company reports assets with a carrying value of \$420,000 (including goodwill with a carrying value of \$35,000) assigned to an identifiable reporting unit purchased at the end of the prior year. The fair value of the net assets held by the reporting unit is currently \$350,000, and the fair value of the reporting unit is \$395,000. At the end of the current period, Grout should report goodwill of
  - a. \$45,000.
  - b. \$35,000.
  - c. \$25,000.
  - d. \$10,000.
- 5. Twill Company has a reporting unit with the fair value of its net identifiable assets of \$500,000. The carrying value of the reporting unit's net assets on Twill's books is \$575,000, which includes \$90,000 of goodwill. The fair value of the reporting unit is \$560,000. Twill should report impairment of goodwill of
  - a. \$60,000.
  - b. \$30,000.
  - c. \$15,000.
  - d. \$0.

### LO 1-3 **Asset Transfer to Subsidiary**

Pale Company was established on January 1, 20X1. Along with other assets, it immediately purchased land for \$80,000, a building for \$240,000, and equipment for \$90,000. On January 1, 20X5, Pale transferred these assets, cash of \$21,000, and inventory costing \$37,000 to a newly created subsidiary, Bright Company, in exchange for 10,000 shares of Bright's \$6 par value stock. Pale uses straight-line depreciation and useful lives of 40 years and 10 years for the building and equipment, respectively, with no estimated residual values.

- a. Give the journal entry that Pale recorded when it transferred the assets to Bright.
- b. Give the journal entry that Bright recorded for the receipt of assets and issuance of common stock to Pale.

# **E1-6** Creation of New Subsidiary

Lester Company transferred the following assets to a newly created subsidiary, Mumby Corporation, in exchange for 40,000 shares of its \$3 par value stock:

|                     | Cost      | Book Value |
|---------------------|-----------|------------|
| Cash                | \$ 40,000 | \$ 40,000  |
| Accounts Receivable | 75,000    | 68,000     |
| Inventory           | 50,000    | 50,000     |
| Land                | 35,000    | 35,000     |
| Buildings           | 160,000   | 125,000    |
| Equipment           | 240,000   | 180,000    |
|                     |           |            |

# Required

- a. Give the journal entry in which Lester recorded the transfer of assets to Mumby Corporation.
- b. Give the journal entry in which Mumby recorded the receipt of assets and issuance of common stock to Lester.

### E1-7 **Balance Sheet Totals of Parent Company**

Foster Corporation established Kline Company as a wholly owned subsidiary. Foster reported the following balance sheet amounts immediately before and after it transferred assets and accounts payable to Kline Company in exchange for 4,000 shares of \$12 par value common stock:

|                                | Amount Reported |           |           |           |
|--------------------------------|-----------------|-----------|-----------|-----------|
|                                | Before '        | Transfer  | After T   | ransfer   |
| Cash                           |                 | \$ 40,000 |           | \$ 25,000 |
| Accounts Receivable            |                 | 65,000    |           | 41,000    |
| Inventory                      |                 | 30,000    |           | 21,000    |
| Investment in Kline Company    |                 |           |           | 66,000    |
| Land                           |                 | 15,000    |           | 12,000    |
| Depreciable Assets             | \$180,000       |           | \$115,000 |           |
| Accumulated Depreciation       | 75,000          | 105,000   | 47,000    | 68,000    |
| Total Assets                   |                 | \$255,000 |           | \$233,000 |
| Accounts Payable               |                 | \$ 40,000 |           | \$ 18,000 |
| Bonds Payable                  |                 | 80,000    |           | 80,000    |
| Common Stock                   |                 | 60,000    |           | 60,000    |
| Retained Earnings              |                 | 75,000    |           | 75,000    |
| Total Liabilities and Equities |                 | \$255,000 |           | \$233,000 |

# Required

- a. Give the journal entry that Foster recorded when it transferred its assets and accounts payable to
- b. Give the journal entry that Kline recorded upon receipt of the assets and accounts payable from Foster.

# LO 1-2, 1-5

### **Acquisition of Net Assets** E1-8

Sun Corporation concluded the fair value of Tender Company was \$60,000 and paid that amount to acquire its net assets. Tender reported assets with a book value of \$55,000 and fair value of \$71,000 and liabilities with a book value and fair value of \$20,000 on the date of combination. Sun also paid \$4,000 to a search firm for finder's fees related to the acquisition.

# Required

Give the journal entries to be made by Sun to record its investment in Tender and its payment of the finder's fees.

# E1-9 Reporting Goodwill

Samper Company reported the book value of its net assets at \$160,000 when Public Corporation acquired 100 percent of its voting stock for cash. The fair value of Samper's net assets was determined to be \$190,000 on that date.

# Required

Determine the amount of goodwill to be reported in consolidated financial statements presented immediately following the combination and the amount at which Public will record its investment in Samper if the amount paid by Public is

- a. \$310,000.
- b. \$196,000.
- c. \$150,000.

# LO 1-5 E1-10 Stock Acquisition

McDermott Corporation has been in the midst of a major expansion program. Much of its growth had been internal, but in 20X1 McDermott decided to continue its expansion through the acquisition of other companies. The first company acquired was Tippy Inc., a small manufacturer of inertial guidance systems for aircraft and missiles. On June 10, 20X1, McDermott issued 17,000 shares of its \$25 par common stock for all 40,000 of Tippy's \$10 par common shares. At the date of combination, Tippy reported additional paid-in capital of \$100,000 and retained earnings of \$350,000. McDermott's stock was selling for \$58 per share immediately prior to the combination. Subsequent to the combination, Tippy operated as a subsidiary of McDermott.

# Required

Present the journal entry or entries that McDermott would make to record the business combination with Tippy.

# LO 1-5 E1-11 Balances Reported Following Combination

Elm Corporation and Maple Company have announced terms of an exchange agreement under which Elm will issue 8,000 shares of its \$10 par value common stock to acquire all of Maple Company's assets. Elm shares currently are trading at \$50, and Maple \$5 par value shares are trading at \$18 each. Historical cost and fair value balance sheet data on January 1, 20X2, are as follows:

|   | Elm Corp                                    | oration                         | Maple Company                               |                                |
|---|---|---------------------------------|---|--------------------------------|
| Balance Sheet Item  | Book Value                                  | Fair Value                      | Book Value                                  | Fair Value                     |

# Required

What amount will be reported immediately following the business combination for each of the following items in the combined company's balance sheet?

- a. Common Stock.
- b. Cash and Receivables.
- c. Land.
- d. Buildings and Equipment (net).

- e. Goodwill.
- f. Additional Paid-In Capital.
- g. Retained Earnings.

# **Goodwill Recognition**

Spur Corporation reported the following balance sheet amounts on December 31, 20X1:

| Balance Sheet Item             | Historical Cost | Fair Value |
|--------------------------------|-----------------|------------|
| Cash & Receivables             | \$ 50,000       | \$ 40,000  |
| Inventory                      | 100,000         | 150,000    |
| Land                           | 40,000          | 30,000     |
| Plant & Equipment              | 400,000         | 350,000    |
| Less: Accumulated Depreciation | (150,000)       |            |
| Patent                         |                 | 130,000    |
| Total Assets                   | \$440,000       | \$700,000  |
| Accounts Payable               | \$ 80,000       | \$ 85,000  |
| Common Stock                   | 200,000         |            |
| Additional Paid-In Capital     | 20,000          |            |
| Retained Earnings              | 140,000         |            |
| Total Liabilities & Equities   | \$440,000       |            |

# Required

Blanket acquired Spur Corporation's assets and liabilities for \$670,000 cash on December 31, 20X1. Give the entry that Blanket made to record the purchase.

# **E1-13** Acquisition Using Debentures

Fortune Corporation used debentures with a par value of \$625,000 to acquire 100 percent of Sorden Company's net assets on January 1, 20X2. On that date, the fair value of the bonds issued by Fortune was \$608,000. The following balance sheet data were reported by Sorden:

| Balance Sheet Item             | <b>Historical Cost</b> | Fair Value |
|--------------------------------|------------------------|------------|
| Cash & Receivables             | \$ 55,000              | \$ 50,000  |
| Inventory                      | 105,000                | 200,000    |
| Land                           | 60,000                 | 100,000    |
| Plant & Equipment              | 400,000                | 300,000    |
| Less: Accumulated Depreciation | (150,000)              |            |
| Goodwill                       | 10,000                 |            |
| Total Assets                   | \$480,000              | \$650,000  |
| Accounts Payable               | \$ 50,000              | \$ 50,000  |
| Common Stock                   | 100,000                |            |
| Additional Paid-In Capital     | 60,000                 |            |
| Retained Earnings              | 270,000                |            |
| Total Liabilities & Equities   | \$480,000              |            |

# Required

Give the journal entry that Fortune recorded at the time of exchange.

### **Bargain Purchase** E1-14

Using the data presented in E1-13, determine the amount Fortune Corporation would record as a gain on bargain purchase and prepare the journal entry Fortune would record at the time of the exchange if Fortune issued bonds with a par value of \$580,000 and a fair value of \$564,000 in completing the acquisition of Sorden.

# E1-15 Impairment of Goodwill

Mesa Corporation purchased Kwick Company's net assets and assigned goodwill of \$80,000 to Reporting Division K. The following assets and liabilities are assigned to Reporting Division K:

|                  | <b>Carrying Amount</b> | Fair Value |
|------------------|------------------------|------------|
| Cash             | \$ 14,000              | \$ 14,000  |
| Inventory        | 56,000                 | 71,000     |
| Equipment        | 170,000                | 190,000    |
| Goodwill         | 80,000                 |            |
| Accounts Payable | 30,000                 | 30,000     |

# Required

Determine the amount of goodwill to be reported for Division K and the amount of goodwill impairment to be recognized, if any, if Division K's fair value is determined to be

- a. \$340,000.
- b. \$280,000.
- c. \$260,000.

# LO 1-5

# E1-16 Assignment of Goodwill

Double Corporation acquired all of the common stock of Simple Company for \$450,000 on January 1, 20X4. On that date, Simple's identifiable net assets had a fair value of \$390,000. The assets acquired in the purchase of Simple are considered to be a separate reporting unit of Double. The carrying value of Double's investment at December 31, 20X4, is \$500,000.

# Required

Determine the amount of goodwill impairment, if any, that should be recognized at December 31, 20X4, if the fair value of the net assets (excluding goodwill) at that date is \$440,000 and the fair value of the reporting unit is determined to be

- a. \$530,000.
- b. \$485,000.
- c. \$450,000.

# LO 1-5

# **E1-17 Goodwill Assigned to Reporting Units**

Groft Company purchased Strobe Company's net assets and assigned them to four separate reporting units. Total goodwill of \$186,000 is assigned to the reporting units as indicated:

|  | Reporting Unit      |                     |                     |                     |
|--|---------------------|---------------------|---------------------|---------------------|
|  | Α                   | В                   | C                   | D                   |
| Carrying value of investment<br>Goodwill included in carrying value<br>Fair value of net identifiable assets | \$700,000<br>60,000 | \$330,000<br>48,000 | \$380,000<br>28,000 | \$520,000<br>50,000 |
| at year-end<br>Fair value of reporting unit at year-end  | 600,000<br>690,000  | 300,000<br>335,000  | 400,000<br>370,000  | 500,000<br>585,000  |

# Required

Determine the amount of goodwill that Groft should report at year-end. Show how you computed it.

### E1-18 **Goodwill Measurement**

Washer Company has a reporting unit resulting from an earlier business combination. The reporting unit's current assets and liabilities are

|               | Carrying Amount | Fair Value |
|---------------|-----------------|------------|
| Cash          | \$ 30,000       | \$ 30,000  |
| Inventory     | 70,000          | 100,000    |
| Land          | 30,000          | 60,000     |
| Buildings     | 210,000         | 230,000    |
| Equipment     | 160,000         | 170,000    |
| Goodwill      | 150,000         |            |
| Notes Payable | 100,000         | 100,000    |

# Required

Determine the amount of goodwill to be reported and the amount of goodwill impairment, if any, if the fair value of the reporting unit is determined to be

- a. \$580,000.
- b. \$540,000.
- c. \$500,000.
- d. \$460,000.

## LO 1-5

### E1-19 Computation of Fair Value

Grant Company acquired all of Bedford Corporation's assets and liabilities on January 1, 20X2, in a business combination. At that date, Bedford reported assets with a book value of \$624,000 and liabilities of \$356,000. Grant noted that Bedford had \$40,000 of capitalized research and development costs on its books at the acquisition date that did not appear to be of value. Grant also determined that patents developed by Bedford had a fair value of \$120,000 but had not been recorded by Bedford. Except for buildings and equipment, Grant determined the fair value of all other assets and liabilities reported by Bedford approximated the recorded amounts. In recording the transfer of assets and liabilities to its books, Grant recorded goodwill of \$93,000. Grant paid \$517,000 to acquire Bedford's assets and liabilities. If the book value of Bedford's buildings and equipment was \$341,000 at the date of acquisition, what was their fair value?

### E1-20 Computation of Shares Issued and Goodwill

Dunyain Company acquired Allsap Corporation on January 1, 20X1, through an exchange of common shares. All of Allsap's assets and liabilities were immediately transferred to Dunyain, which reported total par value of shares outstanding of \$218,400 and \$327,600 and additional paid-in capital of \$370,000 and \$650,800 immediately before and after the business combination, respectively.

# Required

- a. Assuming that Dunyain's common stock had a market value of \$25 per share at the time of exchange, what number of shares was issued?
- b. What is the par value per share of Dunyain's common stock?
- c. Assuming that Allsap's identifiable assets had a fair value of \$476,000 and its liabilities had a fair value of \$120,000, what amount of goodwill did Dunyain record at the time of the business combination?

### **Combined Balance Sheet** E1-21

The following balance sheets were prepared for Adam Corporation and Best Company on January 1, 20X2, just before they entered into a business combination:

|  | Adam Corporation                |                                 | Best Co                        | mpany                           |
|--|---------------------------------|---------------------------------|--------------------------------|---------------------------------|
| Item   | Book Value                      | Fair Value                      | Book Value                     | Fair Value                      |
| Cash & Receivables<br>Inventory<br>Buildings & Equipment | \$150,000<br>300,000<br>600,000 | \$150,000<br>380,000<br>430,000 | \$ 90,000<br>70,000<br>250,000 | \$ 90,000<br>160,000<br>240,000 |
| Less: Accumulated Depreciation                           | (250,000)                       |                                 | (80,000)                       |                                 |
| Total Assets   | \$800,000                       | \$960,000                       | \$330,000                      | \$490,000                       |
| Accounts Payable<br>Notes Payable<br>Common Stock:       | \$ 75,000<br>200,000            | \$ 75,000<br>215,000            | \$ 50,000<br>30,000            | \$ 50,000<br>35,000             |
| \$8 par value<br>\$6 par value                           | 180,000                         |                                 | 90,000                         |                                 |
| Additional Paid-In Capital<br>Retained Earnings          | 140,000<br>205,000              |                                 | 55,000<br>105,000              |                                 |
| Total Liabilities & Equities                             | \$800,000                       |                                 | \$330,000                      |                                 |

Adam acquired all of Best Company's assets and liabilities on January 1, 20X2, in exchange for its common shares. Adam issued 8,000 shares of stock to complete the business combination.

## Required

Prepare a balance sheet of the combined company immediately following the acquisition, assuming Adam's shares were trading at \$60 each.

## LO 1-5

#### E1-22 **Recording a Business Combination**

The following financial statement information was prepared for Blue Corporation and Sparse Company at December 31, 20X2:

| Balance Sheets December 31, 20X2   |   |  |   |   |
|--|---|--|---|---|
|  | Blue Corp                                     | poration   | Sparse C                                      | ompany  |
| Cash Accounts Receivable Inventory Land Buildings & Equipment Less: Accumulated Depreciation                                       | \$ 680,000<br>(320,000)                       | \$ 140,000<br>170,000<br>250,000<br>80,000                           | \$ 450,000<br>(230,000)                       | \$ 70,000<br>110,000<br>180,000<br>100,000                                  |
| Goodwill<br>Total Assets   | <u>, , , , , , , , , , , , , , , , , , , </u> | 70,000<br>\$1,070,000  | <u>, , , , , , , , , , , , , , , , , , , </u> | 20,000<br>\$700,000   |
| Accounts Payable Bonds Payable Bond Premium Common Stock Additional Paid-In Capital Retained Earnings Total Liabilities & Equities |   | \$ 70,000<br>320,000<br>120,000<br>170,000<br>390,000<br>\$1,070,000 |   | \$195,000<br>100,000<br>10,000<br>150,000<br>60,000<br>185,000<br>\$700,000 |

Blue and Sparse agreed to combine as of January 1, 20X3. To effect the merger, Blue paid finder's fees of \$30,000 and legal fees of \$24,000. Blue also paid \$15,000 of audit fees related to the issuance of stock, stock registration fees of \$8,000, and stock listing application fees of \$6,000.

At January 1, 20X3, book values of Sparse Company's assets and liabilities approximated market value except for inventory with a market value of \$200,000, buildings and equipment with a market value of \$350,000, and bonds payable with a market value of \$105,000. All assets and liabilities were immediately recorded on Blue's books.

#### Required

Give all journal entries that Blue recorded assuming Blue issued 40,000 shares of \$8 par value common stock to acquire all of Sparse's assets and liabilities in a business combination. Blue common stock was trading at \$14 per share on January 1, 20X3.

#### LO 1-5

#### E1-23 **Reporting Income**

On July 1, 20X2, Alan Enterprises merged with Cherry Corporation through an exchange of stock and the subsequent liquidation of Cherry. Alan issued 200,000 shares of its stock to effect the combination. The book values of Cherry's assets and liabilities were equal to their fair values at the date of combination, and the value of the shares exchanged was equal to Cherry's book value. Information relating to income for the companies is as follows:

|                    | 20X1        | Jan. 1–June 30, 20X2 | July 1–Dec. 31, 20X2 |
|--------------------|-------------|----------------------|----------------------|
| Net Income:        | £4.450.000  | ta 500 000           | <b>#2.520.000</b>    |
| Alan Enterprises   | \$4,460,000 | \$2,500,000          | \$3,528,000          |
| Cherry Corporation | 1,300,000   | 692,000              | <del>-</del>         |

Alan Enterprises had 1,000,000 shares of stock outstanding prior to the combination. Remember that when calculating earnings per share (EPS) for the year of the combination, the shares issued in the combination were not outstanding for the entire year.

#### Required

Compute the net income and earnings-per-share amounts that would be reported in Alan's 20X2 comparative income statements for both 20X2 and 20X1.

## **Problems**

#### **Assets and Accounts Payable Transferred to Subsidiary** P1-24

Tab Corporation decided to establish Collon Company as a wholly owned subsidiary by transferring some of its existing assets and liabilities to the new entity. In exchange, Collon issued Tab 30,000 shares of \$6 par value common stock. The following information is provided on the assets and accounts payable transferred:

|                  | Cost      | Book Value | Fair Value |
|------------------|-----------|------------|------------|
| Cash             | \$ 25,000 | \$ 25,000  | \$ 25,000  |
| Inventory        | 70,000    | 70,000     | 70,000     |
| Land             | 60,000    | 60,000     | 90,000     |
| Buildings        | 170,000   | 130,000    | 240,000    |
| Equipment        | 90,000    | 80,000     | 105,000    |
| Accounts Payable | 45,000    | 45,000     | 45,000     |
|                  |           |            |            |

## Required

- a. Give the journal entry that Tab recorded for the transfer of assets and accounts payable to Collon.
- b. Give the journal entry that Collon recorded for the receipt of assets and accounts payable from Tab.

#### LO 1-3

#### **Creation of New Subsidiary**

Eagle Corporation established a subsidiary to enter into a new line of business considered to be substantially more risky than Eagle's current business. Eagle transferred the following assets and accounts payable to Sand Corporation in exchange for 5,000 shares of \$10 par value stock of Sand:

|                       | Cost      | Book Value |
|-----------------------|-----------|------------|
| Cash                  | \$ 30,000 | \$ 30,000  |
| Accounts Receivable   | 45,000    | 40,000     |
| Inventory             | 60,000    | 60,000     |
| Land                  | 20,000    | 20,000     |
| Buildings & Equipment | 300,000   | 260,000    |
| Accounts Payable      | 10,000    | 10,000     |

#### Required

- a. Give the journal entry that Eagle recorded for the transfer of assets and accounts payable to
- b. Give the journal entry that Sand recorded for receipt of the assets and accounts payable from Eagle.

#### LO 1-3 P1-26 **Incomplete Data on Creation of Subsidiary**

Thumb Company created New Company as a wholly owned subsidiary by transferring assets and accounts payable to New in exchange for its common stock. New recorded the following entry when it received the assets and accounts payable:

| Cash                               | 3,000  |        |
|------------------------------------|--------|--------|
| Accounts Receivable                | 16,000 |        |
| Inventory                          | 27,000 |        |
| Land                               | 9,000  |        |
| Buildings                          | 70,000 |        |
| Equipment                          | 60,000 |        |
| Accounts Payable                   |        | 14,000 |
| Accumulated Depreciation—Buildings |        | 21,000 |
| Accumulated Depreciation—Equipment |        | 12,000 |
| Common Stock                       |        | 40,000 |
| Additional Paid-In Capital         |        | 98,000 |

#### Required

- a. What was Thumb's book value of the total assets (not net assets) transferred to New Company?
- b. What amount did Thumb report as its investment in New after the transfer?
- c. What number of shares of \$5 par value stock did New issue to Thumb?
- d. What impact did the transfer of assets and accounts payable have on the amount reported by Thumb as total assets?
- e. What impact did the transfer of assets and accounts payable have on the amount that Thumb and the consolidated entity reported as shares outstanding?

#### LO 1-5 P1-27 **Acquisition in Multiple Steps**

Deal Corporation issued 4,000 shares of its \$10 par value stock with a market value of \$85,000 to acquire 85 percent ownership of Mead Company on August 31, 20X3. Mead's fair value was determined to be \$100,000 on that date. Deal had earlier purchased 15 percent of Mead's shares for \$9,000 and used the cost method in accounting for its investment in Mead. Deal later paid appraisal fees of \$3,500 and stock issue costs of \$2,000 incurred in completing the acquisition of the additional shares.

#### Required

Give the journal entries to be recorded by Deal in completing the acquisition of the additional shares of Mead.

#### LO 1-5 Journal Entries to Record a Business Combination P1-28

On January 1, 20X2, Frost Company acquired all of TKK Corporation's assets and liabilities by issuing 24,000 shares of its \$4 par value common stock. At that date, Frost shares were

selling at \$22 per share. Historical cost and fair value balance sheet data for TKK at the time of acquisition were as follows:

| Balance Sheet Item   | Historical Cost                           | Fair Value           |
|--|---|----------------------|
| Cash & Receivables Inventory   | \$ 28,000<br>94,000                       | \$ 28,000<br>122,000 |
| Buildings & Equipment<br>Less: Accumulated Depreciation                        | 600,000<br>(240,000)                      | 470,000              |
| Total Assets   | <u>\$ 482,000</u>                         | \$620,000            |
| Accounts Payable Notes Payable Common Stock (\$10 par value) Retained Earnings | \$ 41,000<br>65,000<br>160,000<br>216,000 | \$ 41,000<br>63,000  |
| Total Liabilities & Equities   | <u>\$482,000</u>                          |                      |

Frost paid legal fees for the transfer of assets and liabilities of \$14,000. Frost also paid audit fees of \$21,000 and listing application fees of \$7,000, both related to the issuance of new shares.

Prepare the journal entries made by Frost to record the business combination.

#### LO 1-5 **Recording Business Combinations** P1-29

Flint Corporation exchanged shares of its \$2 par common stock for all of Mark Company's assets and liabilities in a planned merger. Immediately prior to the combination, Mark's assets and liabilities were as follows:

| Assets                       |             |  |
|------------------------------|-------------|--|
| Cash & Equivalents           | \$ 41,000   |  |
| Accounts Receivable          | 73,000      |  |
| Inventory                    | 144,000     |  |
| Land                         | 200,000     |  |
| Buildings                    | 1,520,000   |  |
| Equipment                    | 638,000     |  |
| Accumulated Depreciation     | (431,000)   |  |
| Total Assets                 | \$2,185,000 |  |
| Liabilities and Equities     |             |  |
| Accounts Payable             | \$ 35,000   |  |
| Short-Term Notes Payable     | 50,000      |  |
| Bonds Payable                | 500,000     |  |
| Common Stock (\$10 par)      | 1,000,000   |  |
| Additional Paid-In Capital   | 325,000     |  |
| Retained Earnings            | 275,000     |  |
| Total Liabilities & Equities | \$2,185,000 |  |

Immediately prior to the combination, Flint reported \$250,000 additional paid-in capital and \$1,350,000 retained earnings. The fair values of Mark's assets and liabilities were equal to their book values on the date of combination except that Mark's buildings were worth \$1,500,000 and its equipment was worth \$300,000. Costs associated with planning and completing the business combination totaled \$38,000, and stock issue costs totaled \$22,000. The market value of Flint's stock at the date of combination was \$4 per share.

#### Required

Prepare the journal entries that would appear on Flint's books to record the combination if Flint issued 450,000 shares.

#### P1-30 **Business Combination with Goodwill**

Anchor Corporation paid cash of \$178,000 to acquire Zink Company's net assets on February 1, 20X3. The balance sheet data for the two companies and fair value information for Zink immediately before the business combination were:

|                                | <b>Anchor Corporation</b> | Zink Co    | mpany      |
|--------------------------------|---------------------------|------------|------------|
| Balance Sheet Item             | Book Value                | Book Value | Fair Value |
| Cash                           | \$ 240,000                | \$ 20,000  | \$ 20,000  |
| Accounts Receivable            | 140,000                   | 35,000     | 35,000     |
| Inventory                      | 170,000                   | 30,000     | 50,000     |
| Patents                        | 80,000                    | 40,000     | 60,000     |
| Buildings & Equipment          | 380,000                   | 310,000    | 150,000    |
| Less: Accumulated Depreciation | (190,000)                 | (200,000)  |            |
| Total Assets                   | \$ 820,000                | \$ 235,000 | \$315,000  |
| Accounts Payable               | \$ 85,000                 | \$ 55,000  | \$ 55,000  |
| Notes Payable                  | 150,000                   | 120,000    | 120,000    |
| Common Stock:                  |                           |            |            |
| \$10 par value                 | 200,000                   |            |            |
| \$6 par value                  |                           | 18,000     |            |
| Additional Paid-In Capital     | 160,000                   | 10,000     |            |
| Retained Earnings              | 225,000                   | 32,000     |            |
| Total Liabilities & Equities   | \$ 820,000                | \$ 235,000 |            |

#### Required

- a. Give the journal entry recorded by Anchor Corporation when it acquired Zink's net assets.
- b. Prepare a balance sheet for Anchor immediately following the acquisition.
- c. Give the journal entry to be recorded by Anchor if it acquires all of Zink's common stock (instead of Zink's net assets) for \$178,000.

#### P1-31 **Bargain Purchase**

Bower Company purchased Lark Corporation's net assets on January 3, 20X2, for \$625,000 cash. In addition, Bower incurred \$5,000 of direct costs in consummating the combination. At the time of acquisition, Lark reported the following historical cost and current market data:

| Balance Sheet Item  | <b>Book Value</b>                                      | Fair Value                                 |
|---|--|--|
| Cash & Receivables<br>Inventory<br>Buildings & Equipment (net)<br>Patent  | \$ 50,000<br>100,000<br>200,000<br>—                   | \$ 50,000<br>150,000<br>300,000<br>200,000 |
| Total Assets  | \$350,000  | \$700,000                                  |
| Accounts Payable<br>Common Stock<br>Additional Paid-In Capital<br>Retained Earnings<br>Total Liabilities & Equities | \$ 30,000<br>100,000<br>80,000<br>140,000<br>\$350,000 | \$ 30,000                                  |

#### Required

Give the journal entry or entries with which Bower recorded its acquisition of Lark's net assets.

### LO 1-5

#### P1-32 **Computation of Account Balances**

Aspro Division is considered to be an individual reporting unit of Tabor Company. Tabor acquired the division by issuing 100,000 shares of its common stock with a market price of \$7.60 each. Tabor management was able to identify assets with fair values of \$810,000 and liabilities of \$190,000 at the date of acquisition. At the end of the first year, the reporting unit had assets with a fair value of \$950,000, and the fair value of the reporting entity was \$930,000. Tabor's accountants concluded it must recognize impairment of goodwill in the amount of \$30,000 at the end of the first year.

#### Required

- a. Determine the fair value of the reporting unit's liabilities at the end of the first year. Show your computation.
- b. If the reporting unit's liabilities at the end of the period had been \$70,000, what would the fair value of the reporting unit have to have been to avoid recognizing an impairment of goodwill? Show your computation.

#### **Goodwill Assigned to Multiple Reporting Units** P1-33

The fair values of assets and liabilities held by three reporting units and other information related to the reporting units owned by Rover Company are as follows:

|                                     | Reporting Unit |           |           |
|-------------------------------------|----------------|-----------|-----------|
|                                     | Α              | В         | С         |
| Cash & Receivables                  | \$ 30,000      | \$ 80,000 | \$ 20,000 |
| Inventory                           | 60,000         | 100,000   | 40,000    |
| Land                                | 20,000         | 30,000    | 10,000    |
| Buildings                           | 100,000        | 150,000   | 80,000    |
| Equipment                           | 140,000        | 90,000    | 50,000    |
| Accounts Payable                    | 40,000         | 60,000    | 10,000    |
| Fair Value of Reporting Unit        | 400,000        | 440,000   | 265,000   |
| Carrying Value of Investment        | 420,000        | 500,000   | 290,000   |
| Goodwill Included in Carrying Value | 70,000         | 80,000    | 40,000    |
|                                     |                |           |           |

#### Required

- a. Determine the amount of goodwill that Rover should report in its current financial statements.
- b. Determine the amount, if any, that Rover should report as impairment of goodwill for the current period.

#### P1-34 **Journal Entries**

On January 1, 20X3, PURE Products Corporation issued 12,000 shares of its \$10 par value stock to acquire the net assets of Light Steel Company. Underlying book value and fair value information for the balance sheet items of Light Steel at the time of acquisition follow:

| Balance Sheet Item  | Book Value   | Fair Value   |
|---|--|--|
| Cash Accounts Receivable Inventory (LIFO basis) Land Buildings & Equipment Less: Accumulated Depreciation | \$ 60,000<br>100,000<br>60,000<br>50,000<br>400,000<br>(150,000) | \$ 60,000<br>100,000<br>115,000<br>70,000<br>350,000 |
| Total Assets  | \$ 520,000   | \$695,000  |
| Accounts Payable Bonds Payable Common Stock (\$5 par value) Additional Paid-In Capital Retained Earnings  | \$ 10,000<br>200,000<br>150,000<br>70,000<br>90,000              | \$ 10,000<br>180,000                                 |
| Total Liabilities & Equities  | \$ 520,000   |  |

Light Steel shares were selling at \$18 and PURE Products shares were selling at \$50 just before the merger announcement. Additional cash payments made by PURE Products in completing the acquisition were

| Finder's fee paid to firm that located Light Steel     | \$10,000 |
|--|----------|
| Audit fee for stock issued by PURE Products            | 3,000    |
| Stock registration fee for new shares of PURE Products | 5,000    |
| Legal fees paid to assist in transfer of net assets    | 9,000    |
| Cost of SEC registration of PURE Products shares       | 1,000    |

### Required

Prepare all journal entries to record the business combination on PURE Products' books.

#### P1-35 LO 1-5 **Purchase at More than Book Value**

Ramrod Manufacturing acquired all the assets and liabilities of Stafford Industries on January 1, 20X2, in exchange for 4,000 shares of Ramrod's \$20 par value common stock. Balance sheet data for both companies just before the merger are given as follows:

|                                | Ramrod Manufacturing |             | Stafford In | dustries   |
|--------------------------------|----------------------|-------------|-------------|------------|
| <b>Balance Sheet Items</b>     | Book Value           | Fair Value  | Book Value  | Fair Value |

#### **TOOT-TOOT TUBA COMPANY Balance Sheet** December 31, 20X5

| Assets                               |           | Liabilities & Equities       |           |
|--------------------------------------|-----------|------------------------------|-----------|
| Cash                                 | \$ 300    | Accounts Payable             | \$ 8,200  |
| Accounts Receivable                  | 17,000    | Notes Payable                | 10,000    |
| Allowance for Uncollectible Accounts | (600)     | Mortgage Payable             | 50,000    |
| Inventory                            | 78,500    | Bonds Payable                | 100,000   |
| Plant & Equipment                    | 451,000   | Capital Stock (\$50 par)     | 100,000   |
| Accumulated Depreciation             | (225,000) | Premium on Capital Stock     | 150,000   |
| Other Assets                         | 25,800    | Retained Earnings            | (71,200)  |
| Total Assets                         | \$347,000 | Total Liabilities & Equities | \$347,000 |

In preparation for a possible business combination, a team of experts from Boogie Musical made a thorough examination and audit of Toot-Toot Tuba. They found that Toot-Toot's assets and liabilities were correctly stated except that they estimated uncollectible accounts at \$1,400. The experts also estimated the market value of the inventory at \$35,000 and the market value of the plant and equipment at \$500,000. The business combination took place on January 1, 20X6, and on that date Boogie Musical acquired all the assets and liabilities of Toot-Toot Tuba. On that date, Boogie's common stock was selling for \$55 per share.

#### Required

Record the combination on Boogie's books assuming that Boogie issued 9,000 of its \$10 par common shares in exchange for Toot-Toot's assets and liabilities.

#### **Combined Balance Sheet** P1-37

Bilge Pumpworks and Seaworthy Rope Company agreed to merge on January 1, 20X3. On the date of the merger agreement, the companies reported the following data:

| B<br>Pum  |   | e<br>vorks  | Seaworthy<br>Rope Company   |   |
|---|---|---|---|---|
| <b>Balance Sheet Items</b>  | <b>Book Value</b>   | Fair Value  | Book Value  | Fair Value  |
| Cash & Receivables Inventory Land Plant & Equipment Less: Accumulated Depreciation Total Assets                 | \$ 90,000<br>100,000<br>100,000<br>400,000<br>(150,000)<br>\$ 540,000 | \$ 90,000<br>150,000<br>140,000<br>300,000<br>\$680,000 | \$ 20,000<br>30,000<br>10,000<br>200,000<br>(80,000)<br>\$180,000 | \$ 20,000<br>42,000<br>15,000<br>140,000<br>\$217,000 |
| Current Liabilities Capital Stock Capital in Excess of Par Value Retained Earnings Total Liabilities & Equities | \$ 80,000<br>200,000<br>20,000<br>240,000<br>\$ 540,000               | \$ 80,000   | \$ 20,000<br>20,000<br>5,000<br>135,000<br>\$180,000              | \$ 20,000   |

Bilge Pumpworks has 10,000 shares of its \$20 par value shares outstanding on January 1, 20X3, and Seaworthy has 4,000 shares of \$5 par value stock outstanding. The market values of the shares are \$300 and \$50, respectively.

- a. Bilge issues 700 shares of stock in exchange for all of Seaworthy's net assets. Prepare a balance sheet for the combined entity immediately following the merger.
- b. Prepare the stockholders' equity section of the combined company's balance sheet, assuming Bilge acquires all of Seaworthy's net assets by issuing:
  - 1. 1,100 shares of common.
  - 2. 1,800 shares of common.
  - 3. 3.000 shares of common.

#### LO 1-5 P1-38 **Incomplete Data**

On January 1, 20X2, End Corporation acquired all of Cork Corporation's assets and liabilities by issuing shares of its common stock. Partial balance sheet data for the companies prior to the business combination and immediately following the combination are as follows:

|                              | End Corp.         | Cork Corp.        |                        |
|------------------------------|-------------------|-------------------|------------------------|
|                              | <b>Book Value</b> | <b>Book Value</b> | <b>Combined Entity</b> |
| Cash                         | \$ 40,000         | \$ 10,000         | \$ 50,000              |
| Accounts Receivable          | 60,000            | 30,000            | 88,000                 |
| Inventory                    | 50,000            | 35,000            | 96,000                 |
| Buildings & Equipment (net)  | 300,000           | 110,000           | 430,000                |
| Goodwill                     |                   |                   | ?                      |
| Total Assets                 | \$450,000         | \$185,000         | \$ ?                   |
| Accounts Payable             | \$ 32,000         | \$ 14,000         | \$ 46,000              |
| Bonds Payable                | 150,000           | 70,000            | 220,000                |
| Bond Premium                 | 6,000             |                   | 6,000                  |
| Common Stock, \$5 par        | 100,000           | 40,000            | 126,000                |
| Additional Paid-In Capital   | 65,000            | 28,000            | 247,000                |
| Retained Earnings            | 97,000            | 33,000            | ?                      |
| Total Liabilities & Equities | \$450,000         | \$185,000         | \$ ?                   |

#### Required

- a. What number of shares did End issue to acquire Cork's assets and liabilities?
- b. What was the total market value of the shares issued by End?
- c. What was the fair value of the inventory held by Cork at the date of combination?
- d. What was the fair value of the identifiable net assets held by Cork at the date of combination?
- e. What amount of goodwill, if any, will be reported by the combined entity immediately following the combination?
- What balance in retained earnings will the combined entity report immediately following the combination?
- g. If the depreciable assets held by Cork had an average remaining life of 10 years at the date of acquisition, what amount of depreciation expense will be reported on those assets in 20X2?

#### **Incomplete Data Following Purchase** P1-39

On January 1, 20X1, Alpha Corporation acquired all of Bravo Company's assets and liabilities by issuing shares of its \$3 par value stock to the owners of Bravo Company in a business combination. Alpha also made a cash payment to Banker Corporation for stock issue costs. Partial balance sheet data for Alpha and Bravo, before the cash payment and issuance of shares, and a combined balance sheet following the business combination are as follows:

LO 1-5

| Total Liabilities & Equities | \$780,000            | \$345,000        | \$142,000  | \$ ?                   |

#### Required

LO 1-5

- a. What number of its \$5 par value shares did Bravo have outstanding at January 1, 20X1?
- b. Assuming that all of Bravo's shares were issued when the company was started, what was the price per share received at the time of issue?
- c. How many shares of Alpha were issued at the date of combination?
- d. What amount of cash did Alpha pay as stock issue costs?
- e. What was the total market value of Alpha's shares issued at the date of combination?
- f. What was the fair value of Bravo's inventory at the date of combination?
- g. What was the fair value of Bravo's net assets at the date of combination?
- h. What amount of goodwill, if any, will be reported in the combined balance sheet following the combination?

#### P1-40 **Comprehensive Business Combination**

Bigtime Industries Inc. entered into a business combination agreement with Hydrolized Chemical Corporation (HCC) to ensure an uninterrupted supply of key raw materials and to realize certain economies from combining the operating processes and the marketing efforts of the two companies. Under the terms of the agreement, Bigtime issued 180,000 shares of its \$1 par common stock in exchange for all of HCC's assets and liabilities. The Bigtime shares then were distributed to HCC's shareholders, and HCC was liquidated.

Immediately prior to the combination, HCC's balance sheet appeared as follows, with fair values also indicated:

|                                | Book Values | Fair Values |
|--------------------------------|-------------|-------------|
| Assets                         |             |             |
| Cash                           | \$ 28,000   | \$ 28,000   |
| Accounts Receivable            | 258,000     | 251,500     |
| Less: Allowance for Bad Debts  | (6,500)     |             |
| Inventory                      | 381,000     | 395,000     |
| Long-Term Investments          | 150,000     | 175,000     |
| Land                           | 55,000      | 100,000     |
| Rolling Stock                  | 130,000     | 63,000      |
| Plant & Equipment              | 2,425,000   | 2,500,000   |
| Less: Accumulated Depreciation | (614,000)   |             |
| Patents                        | 125,000     | 500,000     |
| Special Licenses               | 95,800      | 100,000     |
| Total Assets                   | \$3,027,300 | \$4,112,500 |
|                                |             | (continued) |

|  | <b>Book Values</b> | Fair Values |
|--|--------------------|-------------|
| Liabilities                                  |                    |             |
| Current Payables                             | \$ 137,200         | \$ 137,200  |
| Mortgages Payable                            | 500,000            | 520,000     |
| Equipment Trust Notes                        | 100,000            | 95,000      |
| Debentures Payable                           | 1,000,000          | 950,000     |
| Less: Discount on Debentures                 | (40,000)           |             |
| Total Liabilities                            | \$1,697,200        | \$1,702,200 |
| Stockholders' Equity                         |                    |             |
| Common Stock (\$5 par)                       | 600,000            |             |
| Additional Paid-In Capital from Common Stock | 500,000            |             |
| Additional Paid-In Capital from              |                    |             |
| Retirement of Preferred Stock                | 22,000             |             |
| Retained Earnings                            | 220,100            |             |
| Less: Treasury Stock (1,500 shares)          | (12,000)           |             |
| Total Liabilities & Equity                   | \$3,027,300        |             |

Immediately prior to the combination, Bigtime's common stock was selling for \$14 per share. Bigtime incurred direct costs of \$135,000 in arranging the business combination and \$42,000 of costs associated with registering and issuing the common stock used in the combination.

## Required

- a. Prepare all journal entries that Bigtime should have entered on its books to record the business combination.
- b. Present all journal entries that should have been entered on HCC's books to record the combination and the distribution of the stock received.

## BERKSHIRE HATHAWAY'S MANY INVESTMENTS

As of this writing (March 2012), Warren Buffett is the third richest man in the world, worth a staggering \$44 billion. He is also the chairman, CEO, and primary shareholder of Berkshire Hathaway Inc. Over the past 46 years, Berkshire has grown at an average rate of 20.3 percent annually. Warren Buffett has achieved this success through his unparalleled business sense regarding investments and acquisitions of other companies.

Berkshire Hathaway was originally a textile manufacturing company. In 1962, Warren Buffett and his partners began buying large blocks of Berkshire stock. Within five years, Buffett began expanding into the insurance industry, and in 1985 the last of Berkshire's textile operations was shut down. In the late 1970s, Berkshire began acquiring stock in GEICO insurance and in January 1996 bought GEICO outright. While Berkshire has extensive insurance holdings, it has not focused its investment activities solely on insurance. Since Buffett took the helm in the 1960s, Berkshire has made many acquisitions. Look at the list of selected Berkshire holdings as of the end of 2011 (on the next page). Do you recognize any of these companies?

Each item in Berkshire's portfolio has to be accounted for individually. For example, Comdisco Holdings and The Washington Post Company are accounted for as equity method investments, while Walmart and American Express are classified as available-for-sale investments. Berkshire consolidates the fully owned companies such as Wesco Financial and See's Candies. In addition, companies like GEICO have many subsidiaries of their own. As you can imagine, accounting for investments at Berkshire can be very complex. This chapter focuses on issues related to the accounting for investments.

BERKSHIRE HATHAWAY INC.

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 2-1 Understand and explain how ownership and control can influence the accounting for investments in common stock.
- LO 2-2 Prepare journal entries using the cost method for accounting for investments.
- LO 2-3 Prepare journal entries using the equity method for accounting for investments.
- LO 2-4 Understand and explain differences between the cost and equity methods.
- LO 2-5 Prepare journal entries using the fair value option.
- LO 2-6 Make calculations and prepare basic elimination entries for a simple consolidation.
- LO 2-7 Prepare a consolidation worksheet.

## ACCOUNTING FOR INVESTMENTS IN COMMON STOCK

LO 2-1

Understand and explain how ownership and control can influence the accounting for investments in common stock.

Companies acquire ownership interests in other companies for a variety of reasons. For example, some companies invest in other companies simply to earn a favorable return by taking advantage of the future earnings potential of their investees. Other reasons for acquiring interests in other entities include (1) gaining voting control, (2) entering new product markets by purchasing companies already established in those areas, (3) ensuring a supply of raw materials or other production inputs, (4) ensuring a customer for production output, (5) gaining economies associated with greater size, (6) diversifying operations, (7) obtaining new technology, (8) lessening competition, and (9) limiting risk.

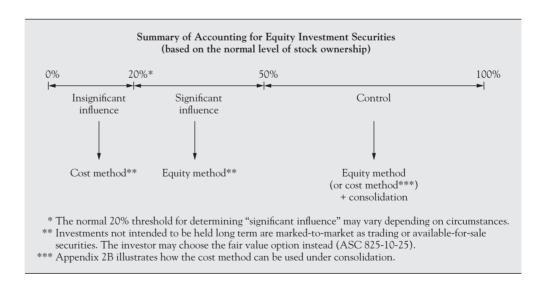

The method used to account for investments in common stock depends, in part, on the level of influence or control that the investor is able to exercise over the investee. The investment must be reported on the investor's balance sheet using the cost method (adjusted to market value, if appropriate), the equity method, or the fair value option. Note that, while use of the cost or equity method is dictated by the level of influence, the investor can elect the fair value option in place of either method. Figure 2–1 summarizes the relationship between methods used to report intercorporate investments in common stock and levels of ownership and influence.

The *cost method* is used for reporting investments in equity securities when both consolidation and equity-method reporting are inappropriate. If cost-method equity securities have readily determinable fair values, they must be adjusted to market value at year-end under ASC 320-10-30-2. Under the cost method, the investor recognizes income from the investment when the income is distributed by the investee as dividends.

The equity method is used for external reporting when the investor exercises significant influence over the operating and financial policies of the investee and consolidation is not appropriate. This method is used most often when one company holds 20 percent or more of another company's common stock. Under the equity method, the investor recognizes income from the investment as the investee earns the income. Instead of combining the individual assets, liabilities, revenues, and expenses of the investee with those of the investor, as in consolidation, the investment is reported as one line in the investor's balance sheet, and income recognized from the investee is reported as one line in the investor's income statement. The investment represents the investor's share of the investee's net assets, and the income recognized is the investor's share of the investee's net income.

For financial reporting, consolidated financial statements that include both the investor and the investee must be presented if the investor can exercise *control* over the investee. Consolidation involves combining for financial reporting the individual assets, liabilities, revenues, and expenses of two or more related companies as if they were part of a single company. This process includes the elimination of all intercompany ownership and activities. Consolidation normally is appropriate when one company, referred to as the *parent*, controls another company, referred to as a *subsidiary*. We discuss the specific requirements

FIGURE 2-1 **Financial Reporting** Basis by Level of **Common Stock Ownership** 

<sup>&</sup>lt;sup>1</sup> Because the provisions of **ASC 320-10-30-2** are normally discussed in Intermediate Accounting, detailed coverage is not provided here. Note, however, that equity investments accounted for using the cost method are accounted for as discussed in this chapter, with the provisions of ASC 320-10-30-2 applied as end-of-period adjustments. ASC 320-10-30-2 is not applicable to equity-method investments.

for consolidation later in this chapter. A subsidiary that is not consolidated with the parent is referred to as an unconsolidated subsidiary and is shown as an investment on the parent's balance sheet. Under current accounting standards, most subsidiaries are consolidated. When intercorporate investments are consolidated for financial reporting, the investment and related income accounts are eliminated in preparing the consolidated financial statements. Nevertheless, the parent must still account for the investments on its books. Parent companies normally account for investments in consolidated subsidiaries on their books using the equity method.<sup>2</sup>

Under the fair value option (ASC 825-10-25), companies have the choice of using traditional methods, such as the cost and equity methods, to report financial assets and liabilities, or they can elect to report some or all of their financial assets and liabilities at fair value. Under the fair value option, intercorporate investments in common stock are remeasured to fair value at the end of each period, and the unrealized gain or loss is recognized in income. The fair value option does not apply to intercorporate investments that must be consolidated.

This chapter follows Figure 2–1 in summarizing the accounting for investments in other companies. It first discusses the cost and equity methods for accounting for investments. It then summarizes the fair value option. Finally, it introduces the preparation of consolidated financial statements using the most simple consolidation scenario (when a subsidiary is wholly owned and it is either created or purchased for an amount exactly equal to the book value of the subsidiary's net assets). Since consolidation is a major topic of this textbook, we use a building block approach to our coverage of consolidation in Chapters 2 through 5. Chapter 3 explains how the basic consolidation process changes when the parent company owns less than 100 percent of the subsidiary. Chapter 4 shows how the consolidation process differs when the parent company acquires the subsidiary for an amount greater (or less) than the book value of the subsidiary's net assets. Finally, Chapter 5 presents the most complex consolidation scenario (where the parent owns less than 100 percent of the subsidiary's outstanding voting stock and the acquisition price is not equal to the book value of the subsidiary's net assets). Chapters 6 through 10 delve into asset transfers among members of the same consolidated group of companies and additional details related to consolidation.

Wholly Owned Partially Owned Subsidiary Subsidiary Investment = Book value Chapter 2 Chapter 3 Investment > Book value Chapter 4 Chapter 5

Summary of Consolidation Coverage in Chapters 2-5

## THE COST METHOD

LO 2-2

Prepare journal entries using the cost method for accounting for investments.

Intercorporate investments reported on the balance sheet using the cost method are carried by the investor at historical cost. Income is recorded by the investor as dividends are declared by the investee. The cost method is used when the investor lacks the ability either to control or to exercise significant influence over the investee. The inability of an investor

<sup>&</sup>lt;sup>2</sup> The cost method is also allowed for consolidated investments since (as explained later in this chapter) the investment account is eliminated in the consolidated financial statements

to exercise either control or significant influence over an investee may result from the size of the investment, usually at common stock ownership levels of less than 20 percent. In some situations, other factors, such as the bankruptcy of the investee, prevent the investor from exercising control or significant influence regardless of the size of the investment. (See Appendix 2A for a discussion of additional factors that may influence the use of the cost or equity methods.)

## Accounting Procedures under the Cost Method

The cost method is consistent with the treatment normally accorded noncurrent assets. At the time of purchase, the investor records its investment in common stock at the total cost incurred in making the purchase. Subsequently, the carrying amount of the investment remains unchanged under the cost method; the investment continues to be carried at its original cost until the time of sale. Income from the investment is recognized by the investor as dividends are declared by the investee. Once the investee declares a dividend, the investor has a legal claim against the investee for a proportionate share of the dividend, and realization of the income is considered certain enough to be recognized. Recognition of investment income before a dividend declaration is considered inappropriate because the investee's income is not available to the owners until a dividend is declared.

To illustrate the cost method, assume that ABC Company purchases 20 percent of XYZ Company's common stock for \$100,000 at the beginning of the year but does not gain significant influence over XYZ. During the year, XYZ has net income of \$60,000 and declares dividends of \$20,000. Assuming the dividend is paid later, ABC Company records the following entries relating to its investment in XYZ:

| (1) | Investment in XYZ Company Stock                                    | 100,000 |         |
|-----|--|---------|---------|
|     | Cash   |         | 100,000 |
|     | Record purchase of XYZ Company stock.                              |         |         |
| (2) | Dividends Receivable   | 4,000   |         |
|     | Dividend Income  |         | 4,000   |
|     | Record dividend declared by XYZ Company ( $$20,000 \times 0.20$ ). |         |         |

Note that ABC records only its share of XYZ's distributed earnings and makes no entry for the undistributed portion. The carrying amount of the investment is still the original cost of \$100,000.

## Declaration of Dividends in Excess of Earnings since Acquisition

A special treatment is required under the cost method in situations in which an investor holds common stock in a company that declares dividends in excess of the cumulative income it has earned since the investor acquired its stock. The dividends received are viewed first as representing earnings of the investee from the purchase date of the investment to the dividend declaration date. All dividends declared by the investee in excess of its earnings since acquisition by the investor are viewed by the investor as *liquidating* dividends. The investor's share of these liquidating dividends is treated as a return of capital, and the investment account balance is reduced by that amount. Blocks of an investee's stock acquired at different times should be treated separately for purposes of computing liquidating dividends.

#### Liquidating Dividends Example

To illustrate the computation of liquidating dividends received by the investor, assume that Investor Company purchases 10 percent of the common stock of Investee Company on January 2, 20X1. The annual income and dividends of Investee, the amount of dividend income recognized by Investor each year under the cost method, and the reduction of the carrying amount of Investor's investment in Investee when appropriate are as follows:

|      | Inve          | estee Compa | Inv                                   | estor Comp       | any                |                               |
|------|---------------|-------------|---------------------------------------|------------------|--------------------|-------------------------------|
| Year | Net<br>Income | Dividends   | Cumulative<br>Undistributed<br>Income | Cash<br>Received | Dividend<br>Income | Reduction<br>of<br>Investment |
| 20X1 | \$100,000     | \$ 70,000   | \$30,000                              | \$ 7,000         | \$ 7,000           |                               |
| 20X2 | 100,000       | 120,000     | 10,000                                | 12,000           | 12,000             |                               |
| 20X3 | 100,000       | 120,000     | 0                                     | 12,000           | 11,000             | \$1,000                       |
| 20X4 | 100,000       | 120,000     | 0                                     | 12,000           | 10,000             | 2,000                         |
| 20X5 | 100,000       | 70,000      | 30,000                                | 7,000            | 7,000              |                               |

Investor Company records its 10 percent share of Investee's dividend as income in 20X1 because the income of Investee exceeds its dividend. In 20X2, Investee's dividend exceeds earnings for the year, but the cumulative dividends declared since January 2, 20X1, the date Investor acquired Investee's stock, do not exceed Investee's earnings since that date. Hence, Investor again records its 10 percent share of the dividend as income. By the end of 20X3, dividends declared by Investee since January 2, 20X1, total \$310,000 while Investee's income since that date totals only \$300,000. Thus, from Investor's point of view, \$10,000 of the 20X3 dividend represents a return of capital while the remaining \$110,000 represents a distribution of earnings. Investor's share of each amount is 10 percent. The entry to record the 20X3 dividend on Investor's books is:

| (3) | Cash                   | 12,000 |
|-----|------------------------|--------|
|     | Investment in Investee | 1,000  |
|     | Dividend Income        | 11,000 |

Record receipt of 20X3 dividend from Investee.

 $$12.000 = $120.000 \times 0.10$ 

 $$1,000 = ($310,000 - $300,000) \times 0.10.$ 

 $$11,000 = ($120,000 - $10,000) \times 0.10.$ 

Once the investor has recorded a liquidating dividend, the comparison in future periods between cumulative earnings and dividends of the investee should be based on the date of the last liquidating dividend rather than the date the investor acquired the investee's stock. In this example, Investor Company records liquidating dividends in 20X3 and 20X4. In years after 20X4, Investor compares earnings and dividends of Investee from the date of the most recent liquidating dividend in 20X4 rather than comparing from January 2, 20X1. Investor considers the entire dividend paid in 20X5 to be a distribution of earnings.

#### Liquidating Dividends following Switch from Equity Method

If the investor previously carried the investment using the equity method and, because of the sale of a portion of the investment, switches to the cost method, the date of the switch in methods replaces the date of acquisition as the reference date for distinguishing liquidating dividends. From that point forward, the investor should compare earnings and dividends of the investee starting at the date of the switch to the cost method.

#### **Acquisition at Interim Date**

The acquisition of an investment at other than the beginning or end of a fiscal period generally does not create any major problems when the cost method is used to account for the investment. The only potential difficulty involves determining whether some part of the payment received by the investor is a liquidating dividend when the investee declares a dividend soon after the investor purchases stock in the investee. In this situation, the investor must estimate the amount of the investee's earnings for the portion of the period during which the investor held the investee's stock and may record dividend income only on that portion.

## Changes in the Number of Shares Held

Changes in the number of investment shares resulting from stock dividends, stock splits, or reverse splits receive no formal recognition in the accounts of the investor. The carrying value of the investment before the stock dividend or split becomes the carrying amount of the new, higher or lower number of shares. Purchases and sales of shares, of course, do require journal entries but do not result in any unusual difficulties under the cost method.

## Purchases of Additional Shares

The purchase of additional shares of a company already held is recorded at cost in the same way as an initial purchase of shares. The investor's new percentage ownership of the investee then is calculated, and other evidence, if available, is evaluated to determine whether the total investment still should be carried at cost or if the investor should switch to the equity method. When the additional shares give the investor the ability to exercise significant influence over the investee, the equity method should be applied retroactively from the date of the original investment, as illustrated later in this chapter.

## Sales of Shares

If a company sells all or part of an intercorporate investment in stock, the transaction is accounted for in the same manner as the sale of any other noncurrent asset. A gain or loss on the sale is recognized for the difference between the proceeds received and the carrying amount of the investment sold.

If shares of the stock have been purchased at more than one price, a determination must be made at the time of sale as to which of the shares have been sold. The specific shares sold may be identified through segregation, numbered stock certificates, or other means. When specific identification is impractical, either a FIFO or weighted-average cost flow assumption may be used. However, the weighted-average method seldom is used in practice because it is not acceptable for tax purposes.

# THE EQUITY METHOD

LO 2-3

Prepare journal entries using the equity method for accounting for investments.

The equity method of accounting for intercorporate investments in common stock is intended to reflect the investor's changing equity or interest in the investee. This method is a rather curious one in that the balance in the investment account generally does not reflect either cost or market value, and it does not necessarily represent a pro rata share of the investee's book value. Instead, the investment is recorded at the initial purchase price and adjusted each period for the investor's share of the investee's profits or losses and the dividends declared by the investee.

## Use of the Equity Method

ASC 323-10-30 requires that the equity method be used for reporting investments in common stock of the following:

- 1. Corporate joint ventures. A corporate joint venture is a corporation owned and operated by a small group of businesses, none of which owns a majority of the joint venture's common stock.
- 2. Companies in which the investor's voting stock interest gives the investor the "ability to exercise significant influence over operating and financial policies" of that company.

The second condition is the broader of the two and establishes the "significant influence" criterion. Because assessing the degree of influence may be difficult in some cases, **ASC 323-10-15** establishes a 20 percent rule. In the absence of evidence to the contrary, an investor holding 20 percent or more of an investee's voting stock is presumed to have the ability to exercise significant influence over the investee. On the other hand, an investor holding less than 20 percent of an investee's voting stock is presumed not to have the ability to exercise significant influence in the absence of evidence to the contrary.

In most cases, an investment of 20 percent or more in another company's voting stock is reported under the equity method. Notice, however, that the 20 percent rule does not apply if other evidence is available that provides a better indication of the ability or inability of the investor to significantly influence the investee.

Regardless of the level of ownership, the equity method is not appropriate if the investor's influence is limited by circumstances other than stock ownership, such as bankruptcy of the investee or severe restrictions placed on the availability of a foreign investee's earnings or assets by a foreign government.

### Investor's Equity in the Investee

Under the equity method, the investor records its investment at the original cost. This amount is adjusted periodically for changes in the investee's stockholders' equity occasioned by the investee's profits, losses, and dividend declarations. The effect of the investee's income, losses, and dividends on the investor's investment account and other accounts can be summarized as follows:

| Reported by Investee | Effect on Investor's Accounts                                    |
|----------------------|--|
| Net income           | Record income from investment<br>Increase investment account     |
| Net loss             | Record loss from investment<br>Decrease investment account       |
| Dividend declaration | Record asset (cash or receivable)<br>Decrease investment account |

#### **Recognition of Income**

Under the equity method, the investor's income statement includes the investor's proportionate share of the investee's income or loss each period. The carrying amount of the investment is adjusted by the same amount to reflect the change in the net assets of the investee resulting from the investee's income.

To illustrate, assume that ABC Company acquires significant influence over XYZ Company by purchasing 20 percent of XYZ's common stock for \$100,000 at the beginning of the year.

| (4) | Investment in XYZ Company Stock       | 100,000 |
|-----|---------------------------------------|---------|
|     | Cash                                  | 100,000 |
|     | Record purchase of XYZ Company stock. |         |

XYZ reports income of \$60,000 for the year. ABC records its 20 percent share of XYZ's income (\$12,000) in an account called "Income from XYZ Company" as follows:

| (5) | Investment in XYZ Company Stock | 12,000 |  |
|-----|---------------------------------|--------|--|
|     | Income from XYZ Company         | 12,000 |  |

Record income from XYZ Company ( $$60,000 \times 0.20$ ).

This entry may be referred to as the *equity accrual* and normally is made as an adjusting entry at the end of the period. If the investee reports a loss for the period, the investor recognizes its share of the loss and reduces the carrying amount of the investment by that amount.

Because of the ability to exercise significant influence over the policies of the investee, realization of income from the investment is considered to be sufficiently ensured to warrant recognition by the investor as the investee earns the income. This differs from the case in which the investor does not have the ability to significantly influence the investee and the investment must be reported using the cost method; in that case, income from the investment is recognized only upon declaration of a dividend by the investee.

## Recognition of Dividends

Dividends from an investment are not recognized as income under the equity method because the investor's share of the investee's income is recognized as the investee earns it. Instead, the investee's dividends are viewed as distributions of previously recognized income that already has been capitalized in the carrying amount of the investment. The investor must consider investee dividends declared as a reduction in its equity in the investee and, accordingly, reduce the carrying amount of its investment. In effect, all dividends from the investee are treated as liquidating dividends under the equity method. Thus, if ABC Company owns 20 percent of XYZ Company's common stock and XYZ declares a \$20,000 dividend, the following entry is recorded on ABC's books to record its share of the dividend:

| (6) | Dividends Receivable            | 4,000 |       |
|-----|---------------------------------|-------|-------|
|     | Investment in XYZ Company Stock |       | 4,000 |
|     | D                               |       |       |

Record dividend from XYZ Company ( $$20,000 \times 0.20$ ).

The following T-accounts summarize all of the normal equity method entries (journal entries 4–6) on the investor company's books:

|                       | Investm<br>XYZ Co |       |                 | Incom<br>XYZ Co | e from<br>ompany |                |
|-----------------------|-------------------|-------|-----------------|-----------------|------------------|----------------|
| Purchase<br>20% of NI | 100,000<br>12,000 | 4,000 | 20% of Dividend |                 | 12,000           | 20% of NI      |
| Ending Balance        | 108,000           |       | •               |                 | 12,000           | Ending Balance |

While the "Investment in XYZ Company" account summarizes ABC's ownership of the net assets of XYZ Company, the "Income from XYZ" account summarizes ABC's share of XYZ Company's income.

## Comparison of the Carrying Amount of the Investment and Investment Income under the Cost and Equity Methods

Because the investment account on the investor's books under the equity method is adjusted for the investor's share of the investee's income or losses and dividends, the carrying amount of the investment usually is not the same as the original cost to the investor. Only if the investee pays dividends in the exact amount of its earnings will the carrying amount of the investment subsequent to acquisition be equal to its original cost.

To compare the change in the carrying amount of the investment under the equity method relative to the cost method, assume the same facts listed previously for ABC's 20 percent acquisition of XYZ's common stock. The carrying amount of the investment using the equity method at the end of the period is \$108,000 (\$100,000 + \$12,000 - \$4,000), compared to the original acquisition price of \$100,000 under the cost method.

Investment income under the equity method (the balance in the "Income from XYZ" account) is \$12,000 while investment income under the cost method is equal to dividend income, \$4,000.

## **Acquisition at Interim Date**

When a company purchases an investment, the investor begins accruing income from the investee under the equity method at the date of acquisition. The investor may not accrue income earned by the investee before the acquisition date of the investment. When the purchase occurs between balance sheet dates, the amount of income earned by the investee from the date of acquisition to the end of the fiscal period may need to be estimated by the investor in recording the equity accrual.

To illustrate, assume that ABC acquires 20 percent of XYZ's common stock on October 1 for \$100,000. XYZ earns income of \$60,000 uniformly throughout the year and declares dividends of \$20,000 on December 20 (paid on December 31). The carrying amount of the investment is increased by \$3,000, which represents ABC's share of XYZ's net income earned between October 1 and December 31 (1/4 of the year), and is decreased by \$4,000 as a result of dividends declared at year-end (resulting in a net decrease of \$1,000 since the time of the stock purchase).<sup>3</sup>

## Changes in the Number of Shares Held

Some changes in the number of common shares held by an investor are handled easily under the equity method, but others require a bit more attention. A change resulting from a stock dividend, split, or reverse split is treated in the same way as under the cost method. No formal accounting recognition is required on the books of the investor. On the other hand, purchases and sales of shares do require formal recognition.

Figure 2-1 indicates that once a company owns more than 50% of the outstanding voting stock of an investee company, the parent company can account for the investment using the cost method on its own books because the investment account is eliminated in the consolidation process. Berkshire Hathaway's 2010 Form 10-K indicates: "As a result of our acquisition of the remaining outstanding stock of BNSF on February 12, 2010, we discontinued the use of the equity method and since that date, BNSF's accounts have been consolidated in our financial statements."

## Purchases of Additional Shares

A purchase of additional shares of a common stock already held by an investor and accounted for using the equity method simply involves adding the cost of the new shares to the investment account and applying the equity method in the normal manner from the date of acquisition forward. The new and old investments in the same stock are combined for financial reporting purposes. Income accruing to the new shares can be recognized by the investor only from the date of acquisition forward.

To illustrate, assume that ABC Company purchases 20 percent of XYZ Company's common stock on January 2, 20X1, for \$100,000, and another 10 percent on July 1, 20X1, for \$50,000, and that the stock purchases represent 20 percent and 10 percent, respectively, of the book value of XYZ's net assets. If XYZ earns income of \$25,000 from January 2 to June 30 and earns \$35,000 from July 1 to December 31, the total income recognized in 20X1 by ABC from its investment in XYZ is \$15,500, computed as follows:

 $<sup>^{3}</sup>$  Note that we assume the entire dividend (\$20,000) was declared and paid at the end of the year. If dividends had been declared and paid quarterly, we would record dividends declared only after ABC's acquisition of the XYZ shares.

| Income, January 2 to June 30: $$25,000 \times 0.20$   | \$ 5,000        |
|---|-----------------|
| Income, July 1 to December 31: $\$35,000 \times 0.30$ | _10,500         |
| Investment Income, 20X1                               | <u>\$15,500</u> |

If XYZ declares and pays a \$10,000 dividend on January 15 and again on July 15, ABC reduces its investment account by \$2,000 ( $$10,000 \times 0.20$ ) on January 15 and by \$3,000  $(\$10.000 \times 0.30)$  on July 15. Thus, the ending balance in the investment account at the end of the year is \$160,500, computed as follows:

|                                   | Investm<br>XYZ Co |       |                   | Incom<br>XYZ Co | e from<br>ompany |                 |
|-----------------------------------|-------------------|-------|-------------------|-----------------|------------------|-----------------|
| 1/2/X1 Purchase<br>20% NI to 6/30 | 100,000<br>5,000  | 2,000 | 20% Div. to 6/30  |                 | 5,000            | 20% NI to 6/30  |
| 7/1/X1 Purchase                   | 50,000            |       |                   |                 |                  |                 |
| 30% NI from 7/1                   | 10,500            | 3,000 | 30% Div. from 7/1 |                 | 10,500           | 30% NI from 7/1 |
| Ending Balance                    | 160,500           |       |                   |                 | 15,500           | Ending Balance  |

When an investment in common stock is carried using the cost method and purchases of additional shares give the investor the ability to significantly influence the investee, a retroactive switch from the cost method to the equity method is required. This change to the equity method must be applied retroactively to the date of the first acquisition of the investee's stock.

To illustrate a change to the equity method, assume that Aron Corporation purchases 15 percent of Zenon Company's common stock on January 2, 20X1, and another 10 percent on January 2, 20X4. Furthermore, assume that Aron switches to the equity method on January 2, 20X4, because it gains the ability to significantly influence Zenon. Given the following income and dividend data for Zenon, and assuming that the purchases of stock are at book value, the investment income figures reported by Aron originally and as restated are as follows:

|                      | Zenon                                    |  | Aron's Reported                             | Investment Income                     |
|----------------------|--|--|---|---------------------------------------|
| Year                 | Net<br>Income                            | Dividends                                | Originally under<br>Cost <sup>a</sup>       | Restated under<br>Equity <sup>b</sup> |
| 20X1<br>20X2<br>20X3 | \$15,000<br>18,000<br>22,000<br>\$55,000 | \$10,000<br>10,000<br>10,000<br>\$30,000 | \$1,500<br>1,500<br>1,500<br><u>\$4,500</u> | \$2,250<br>2,700<br>3,300<br>\$8,250  |

<sup>&</sup>lt;sup>a</sup>15 percent of Zenon's dividends for the year.

Thus, in Aron's 20X4 financial report, the comparative statements for 20X1, 20X2, and 20X3 are restated to include Aron's 15 percent share of Zenon's profit and to exclude from income Aron's share of dividends recognized under the cost method. In addition, Aron's investment account and retained earnings are restated as if the equity method had been applied from the date of the original acquisition. This restatement is accomplished on Aron's books with the following journal entry on January 2, 20X4:

| (7) | Investment in Zenon Company Stock | 3,750 |
|-----|-----------------------------------|-------|
|     | Retained Earnings                 | 3,750 |

Restate investment account from cost to equity method: \$8,250 - \$4,500.

<sup>&</sup>lt;sup>b</sup>15 percent of Zenon's net income for the year.

In 20X4, if Zenon reports net income of \$30,000, Aron's investment income is \$7,500 (25 percent of Zenon's net income).

The summary of Berkshire Hathaway's holdings at the beginning of the chapter lists its stake in Moody's at 12.8%. Its holdings had previously exceeded 20%. However, Berkshire's 2009 10-K indicates: "As a result of a reduction in our ownership of Moody's in July of 2009, we discontinued the use of the equity method as of the beginning of the third quarter of 2009."

#### Sales of Shares

The sale of all or part of an investment in common stock carried using the equity method is treated the same as the sale of any noncurrent asset. First, the investment account is adjusted to the date of sale for the investor's share of the investee's current earnings. Then a gain or loss is recognized for the difference between the proceeds received and the carrying amount of the shares sold.

If only part of the investment is sold, the investor must decide whether to continue using the equity method to account for the remaining shares or to change to the cost method. The choice is based on evidence available after the sale as to whether the investor still is able to exercise significant influence over the investee. If the equity method no longer is appropriate after the date of sale, the carrying value of the remaining investment is treated as the cost of that investment, and the cost method is applied in the normal manner from the date of sale forward. No retroactive restatement of the investment to actual cost is made.

# COMPARISON OF THE COST AND EQUITY METHODS<sup>4</sup>

LO 2-4

Understand and explain differences between the cost and equity methods.

FIGURE 2-2 **Summary Comparison** of the Cost and Equity Methods

Figure 2-2 summarizes some of the key features of the cost and equity methods of accounting for intercorporate investments. The cost method is consistent with the historical cost basis for most other assets. This method is subject to the usual criticisms leveled against historical cost. In particular, questions arise as to the relevance of reporting the purchase price of an investment acquired some years earlier. The cost method conforms more closely to the traditional accounting and legal views of the realization of income in that the investee's earnings are not available to the investor until transferred as dividends. However, income based on dividend distributions can sometimes be manipulated. The significant influence criterion required for the equity method considers that the declaration of dividends by the investee can be influenced by the investor. Recognizing equity-method income from the investee without regard to

| Item   | Cost Method  | <b>Equity Method</b>  |
|--|--|---|
| Recorded amount of invest-<br>ment at date of acquisition              | Original cost  | Original cost   |
| Usual carrying amount of investment subsequent to acquisition          | Original cost  | Original cost increased (decreased) by investor's share of investee's income (loss) and decreased by investor's share of investee's dividends |
| Income recognition by investor   | Investor's share of<br>investee's dividends<br>declared from earnings<br>since acquisition | Investor's share of investee's earnings since acquisition, whether distributed or not   |
| Investee dividends from earnings since acquisition by investor         | Income   | Reduction of investment   |
| Investee dividends in excess of earnings since acquisition by investor | Reduction of investment  | Reduction of investment   |

<sup>&</sup>lt;sup>4</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

investee dividends provides protection against manipulating the investor's net income by influencing investee dividend declarations. On the other hand, the equity method is sometimes criticized because the asset valuation departs from historical cost but stops short of a market value approach. Instead, the carrying amount of the investment is composed of a number of components and is not similar to the valuation of any other assets.

Over the years, there has been considerable criticism of the use of the equity method as a substitute for the consolidation of certain types of subsidiaries. Although the equity method has been viewed as a *one-line consolidation*, the amount of detail reported is considerably different under the equity method than with consolidation. For example, an investor would report the same equity-method income from the following two investees even though their income statements are quite different in composition:

|                         | Investee 1 | Investee 2  |
|-------------------------|------------|-------------|
| Sales                   | \$ 50,000  | \$ 500,000  |
| Operating Expenses      | (30,000)   | (620,000)   |
| Operating Income (Loss) | \$ 20,000  | \$(120,000) |
| Gain on Sale of Land    |            | 140,000     |
| Net Income              | \$20,000   | \$ 20,000   |

Similarly, an investment in the stock of another company is reported under the equity method as a single amount in the investor's balance sheet regardless of the investee's asset and capital structure. In the past, some companies borrowed heavily through unconsolidated subsidiaries and reported their investments in the subsidiaries using the equity method. Because the debt was not reported in these situations, concerns were raised over the use of the equity method to facilitate "off-balance sheet" financing.

As a result of these concerns, the Financial Accounting Standards Board eliminated the use of the equity method for reporting investments in subsidiaries by requiring the consolidation of virtually all majority-owned subsidiaries.

## THE FAIR VALUE OPTION

LO 2-5

Prepare journal entries using the fair value option. ASC 825-10-45 permits, but does not require, companies to measure many financial assets and liabilities at fair value. Companies holding investments in the common stock of other companies have this option for investments that are not required to be consolidated. Thus, rather than using the cost or equity method to report nonsubsidiary investments in common stock, investors may report those investments at fair value.

Under the fair value option, the investor remeasures the investment to its fair value at the end of each period. The change in value is then recognized in income for the period. Although the FASB does not specify how to account for dividends received from the investment, normally the investor recognizes dividend income in the same manner as under the cost method.

To illustrate the use of the fair value method, assume that Ajax Corporation purchases 40 percent of Barclay Company's common stock on January 1, 20X1, for \$200,000. Ajax prepares financial statements at the end of each calendar quarter. On March 1, 20X1, Ajax receives a cash dividend of \$1,500 from Barclay. On March 31, 20X1, Ajax determines the fair value of its investment in Barclay to be \$207,000. During the first quarter of 20X1, Ajax records the following entries on its books in relation to its investment in Barclay:

| (8) | Investment in Barclay Stock | 200,000 |
|-----|-----------------------------|---------|
|     | Cash                        | 200,000 |

Record purchase of Barclay Company stock.

| (9)  | Cash   | 1,500 |       |
|------|--|-------|-------|
|      | Dividend Income                              |       | 1,500 |
|      | Record dividend income from Barclay Company. |       |       |
| (10) | Investment in Barclay Stock                  | 7,000 |       |
|      | Unrealized Gain on Barclay Stock             |       | 7,000 |

Record increase in fair value of Barclay stock.

## **OVERVIEW OF THE CONSOLIDATION PROCESS**

LO 2-6

Make calculations and prepare basic elimination entries for a simple

The consolidation process adds together the financial statements of two or more legally separate companies, creating a single set of financial statements. Chapters 2 through 5 discuss the specific procedures used to produce consolidated financial statements in considerable detail. An understanding of the procedures is important because they facilitate the accurate and efficient preparation of consolidated statements. However, the focus should continue to be on the end product—the financial statements. The procedures are intended to produce financial statements that appear as if the consolidated companies are actually a single company.

The separate financial statements of the companies involved serve as the starting point each time consolidated statements are prepared. These separate statements are added together, after some adjustments and eliminations, to generate consolidated financial statements. The adjustments and eliminations relate to intercompany transactions and holdings. Although the individual companies within a consolidated entity may legitimately report sales and receivables or payables to one another, the consolidated entity as a whole must report transactions only with parties outside the consolidated entity and receivables from or payables to external parties. Thus, the adjustments and eliminations required as part of the consolidation process aim at ensuring that the consolidated financial statements are presented as if they were the statements of a single enterprise.

## CONSOLIDATION PROCEDURES FOR WHOLLY OWNED SUBSIDIARIES THAT ARE CREATED OR PURCHASED AT BOOK VALUE

We begin preparing consolidated financial statements with the books of the individual companies that are to be consolidated. Because the consolidated entity has no books, all amounts in the consolidated financial statements originate on the books of the parent or a subsidiary or in the consolidation worksheet.

The term *subsidiary* has been defined as "an entity . . . in which another entity, known as its *parent*, holds a controlling financial interest (ASC 810-10-20)." A parent company may hold all or less than all of a corporate subsidiary's common stock, but at least majority ownership is normally required for the presentation of consolidated financial statements. Most, but not all, corporate subsidiaries are wholly owned by their parents.

Because most subsidiaries are wholly owned, this chapter begins the in-depth examination of consolidation procedures for wholly owned subsidiaries. Moreover, we begin with the most basic consolidation scenario when the subsidiary is either created by the parent or purchased for an amount exactly equal to the book value of the subsidiary's net assets. This assumption simplifies the consolidation because there is no differential. We start with basic consolidation procedures applied to the preparation of a consolidated balance sheet immediately following the establishment of a parent-subsidiary relationship, either through creation or acquisition of the subsidiary. Then we introduce the use of a simple consolidation worksheet for the balance sheet only. The chapter then moves to the preparation of a full set of consolidated financial statements in subsequent periods and the use of a three-part worksheet designed to facilitate the preparation of a consolidated income statement, retained earnings statement, and balance sheet.

#### CONSOLIDATION WORKSHEETS

LO 2-7

Prepare a consolidation worksheet.

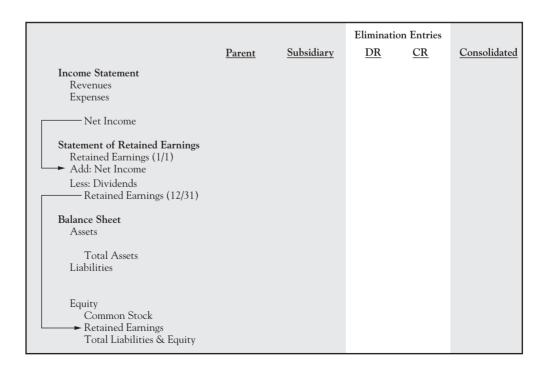

The consolidation worksheet provides a mechanism for efficiently combining the accounts of the separate companies involved in the consolidation and for adjusting the combined balances to the amounts that would be reported if all consolidating companies were actually a single company. When consolidated financial statements are prepared, the account balances are taken from the separate books of the parent and each subsidiary and placed in the consolidation worksheet. The consolidated statements are prepared, after adjustments and eliminations, from the amounts in the consolidation worksheet.

#### Worksheet Format

In practice, companies use several different worksheet formats for preparing consolidated financial statements. One of the most widely used formats is the three-part worksheet, consisting of one part for each of three financial statements: (1) the income statement, (2) the statement of retained earnings, and (3) the balance sheet. In recent years, the retained earnings statement has been dropped by many companies in favor of the statement of changes in stockholders' equity. Nevertheless, the information normally found in a retained earnings statement is included in the statement of stockholders' equity, along with additional information, and so the three-part worksheet still provides a useful format. Figure 2–3 presents the format for the comprehensive threepart consolidation worksheet. Specifically, Figure 2-3 illustrates the basic form of a consolidation worksheet. The titles of the accounts of the consolidating companies are listed in the first column of the worksheet. The account balances from the books or trial balances of the individual companies are listed in the next set of columns, with a separate column for each company included in the consolidation. Entries are made in the columns labeled *Elimination Entries* to adjust or eliminate balances so that the resulting amounts are those that would appear in the financial statements if all the consolidating companies actually formed a single company. The balances in the last column are obtained by summing all amounts algebraically across the worksheet by account. These are the balances that appear in the consolidated financial statements.

The top portion of the worksheet is used in preparing the consolidated income statement. All income statement accounts are listed in the order they normally appear in an income

FIGURE 2-3 **Format for** Consolidation Worksheet

statement. When the income statement portion of the worksheet is completed, a total for each column is entered at the bottom of the income statement portion of the worksheet. The bottom line in this part of the worksheet shows the parent's net income, the subsidiary's net income, the totals of the debit and credit eliminations for this section of the worksheet, and consolidated net income. The entire bottom line is carried down to the "net income" line in the retained earnings statement portion of the worksheet immediately below the income statement.

The retained earnings statement section of the worksheet is in the same format as a retained earnings statement, or the retained earnings section of a statement of stockholders' equity. Net income and the other column totals from the bottom line of the income statement portion of the worksheet are brought down from the income statement above. Similarly, the final line in the retained earnings statement section of the worksheet is carried down in its entirety to the retained earnings line in the balance sheet section.

#### **CAUTION**

The most common error students commit in preparing the worksheet is forgetting to carry down the adjustments when they carry down net income from the income statement to the statement of retained earnings and when they carry down the retained earnings ending balance in the statement of retained earnings to the balance sheet.

The bottom portion of the worksheet reflects the balance sheet amounts at the end of the period. 6 The retained earnings amounts appearing in the balance sheet section of the worksheet are the totals carried forward from the bottom line of the retained earnings statement section. The examples in the following sections of this chapter demonstrate the use of the comprehensive three-part consolidation worksheet.

#### **Nature of Elimination Entries**

Elimination entries are used in the consolidation worksheet to adjust the totals of the individual account balances of the separate consolidating companies to reflect the amounts that would appear if the legally separate companies were actually a single company. Elimination entries appear only in the consolidation worksheet and do not affect the books of the separate companies. These worksheet entries are sometimes called "elimination" entries or simply "consolidation" entries.

For the most part, companies that are to be consolidated record their transactions during the period without regard to the consolidated entity. Transactions with related companies tend to be recorded in the same manner as those with unrelated parties, although intercompany transactions may be recorded in separate accounts or other records may be kept to facilitate the later elimination of intercompany transactions. Each of the consolidating companies also prepares its adjusting and closing entries at the end of the period in the normal manner. The resulting balances are entered in the consolidation worksheet and combined to arrive at the consolidated totals. Elimination entries are used in the worksheet to increase or decrease the combined totals for individual accounts so that only transactions with external parties are reflected in the consolidated amounts.

Some elimination entries are required at the end of one period but not at the end of subsequent periods. For example, a loan from a parent to a subsidiary in December 20X1, repaid in February 20X2, requires an entry to eliminate the intercompany receivable and payable on December 31, 20X1, but not at the end of 20X2. Some other elimination entries need to be placed in the consolidation worksheets each time consolidated statements are prepared for a period of years. For example, if a parent company sells land to a subsidiary for \$5,000 above the original cost to the parent, a worksheet entry is needed to reduce the basis of the land by \$5,000 each time consolidated statements are prepared for as long as an **affiliate** (an affiliated company) holds the land. It is important to remember that because elimination entries are not made on the books of any company, they do not carry over from period to period.

<sup>&</sup>lt;sup>5</sup> An optional format lists accounts with credit balance accounts first and those having debit balances listed

<sup>&</sup>lt;sup>6</sup> Optionally, accounts can be separated and listed with debits first and then credits.

<sup>&</sup>lt;sup>7</sup> An affiliated company is one that is related to the company in question. For example, two corporations controlled by the same parent company would be considered affiliates.

### CONSOLIDATED BALANCE SHEET WITH WHOLLY OWNED SUBSIDIARY

The simplest consolidation setting occurs when the financial statements of related companies are consolidated immediately after a parent-subsidiary relationship is established through a business combination or the creation of a new subsidiary. We present a series of examples to illustrate the preparation of a consolidated balance sheet. Consolidation procedures are the same whether a subsidiary is created or acquired. We use the case of an acquired subsidiary to illustrate the consolidation procedures in the examples that follow. In each example, Peerless Products Corporation purchases all of the common stock of Special Foods Inc. on January 1, 20X1, and immediately prepares a consolidated balance sheet. Figure 2–4 presents the separate balance sheets of the two companies immediately before the combination.

In the discussion that follows, we discuss all journal entries and worksheet elimination entries in the text of the chapter. To avoid confusing the elimination entries with journal entries that appear on the separate books of the parent or subsidiary, all worksheet elimination entries appearing in the text are shaded; journal entries recorded in the books of the parent company are not shaded.

## 100 Percent Ownership Acquired at Book Value

In the first example, Peerless acquires all of Special Foods' outstanding common stock for \$300,000, an amount equal to the fair value of Special Foods as a whole. On the date of combination, the fair values of Special Foods' individual assets and liabilities are equal to their book values shown in Figure 2-4. Because Peerless acquires all of Special Foods' common stock and because Special Foods has only the one class of stock outstanding, the total book value of the shares acquired equals the total stockholders' equity of Special Foods (\$200,000 + \$100,000). The \$300,000 of consideration exchanged is equal to the book value of the shares acquired. This ownership situation can be characterized as follows:

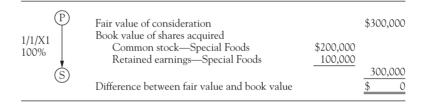

FIGURE 2-4 **Balance Sheets of Peerless Products and Special Foods, January** 1, 20X1, Immediately before Combination

|                                    | Peerless Products  | Special Foods    |
|------------------------------------|--------------------|------------------|
| Assets                             |                    |                  |
| Cash                               | \$ 350,000         | \$ 50,000        |
| Accounts Receivable                | 75,000             | 50,000           |
| Inventory                          | 100,000            | 60,000           |
| Land                               | 175,000            | 40,000           |
| Buildings & Equipment              | 800,000            | 600,000          |
| Accumulated Depreciation           | (400,000)          | (300,000)        |
| Total Assets                       | <u>\$1,100,000</u> | <u>\$500,000</u> |
| Liabilities & Stockholders' Equity |                    |                  |
| Accounts Payable                   | \$ 100,000         | \$100,000        |
| Bonds Payable                      | 200,000            | 100,000          |
| Common Stock                       | 500,000            | 200,000          |
| Retained Earnings                  | 300,000            | 100,000          |
| Total Liabilities & Equity         | \$1,100,000        | \$500,000        |

Peerless records the stock acquisition on its books with the following entry on the combination date:

Record the purchase of Special Foods stock.

Figure 2–5 presents the separate financial statements of Peerless and Special Foods immediately after the combination. Special Foods' balance sheet in Figure 2-5 is the same as in Figure 2-4, but Peerless' balance sheet has changed to reflect the \$300,000 reduction in cash and the recording of the investment in Special Foods stock for the same amount. Note that the \$300,000 of cash was paid to the former stockholders of Special Foods, not to the company itself. Accordingly, that cash is no longer in the consolidated entity. Instead, Peerless' balance sheet now reflects a \$300,000 Investment in Special Foods Stock account.

#### **Basic Elimination Entry**

Figure 2–6 presents a basic example of a consolidation worksheet. The only elimination entry in the worksheet in Figure 2-6 removes the Investment in Special Foods Stock account and the subsidiary's stockholders' equity accounts. Although this elimination entry is very simple, to be consistent with the discussion of more complicated examples later in the chapter, we illustrate the thought process in developing the worksheet entry.

In this example, Peerless' investment is exactly equal to the book value of equity of Special Foods. Therefore, no goodwill is recorded and all assets and liabilities are simply combined from Special Foods' financial statements at their current book values. In Chapters 4 and 5, we will explore situations in which the acquiring company pays more than the book value of the acquired company's net assets (i.e., when there is a positive differential). However, in Chapters 2 and 3, the excess value of identifiable net assets and goodwill will always be equal to zero. To maintain a consistent approach through all four chapters, we always illustrate the components of the acquiring company's investment, even though it will always be exactly equal to its share of the book value of net assets in Chapters 2 and 3. Therefore, the relationship between the fair value of the consideration given to acquire Special Foods, the fair value of

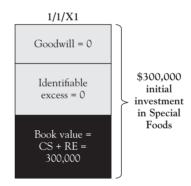

FIGURE 2-5 **Balance Sheets of Peerless Products and** Special Foods, **January 1, 20X1,** Immediately after Combination

|                                    | Peerless Products | Special Foods |
|------------------------------------|-------------------|---------------|
| Assets                             |                   |               |
| Cash                               | \$ 50,000         | \$ 50,000     |
| Accounts Receivable                | 75,000            | 50,000        |
| Inventory                          | 100,000           | 60,000        |
| Land                               | 175,000           | 40,000        |
| Buildings & Equipment              | 800,000           | 600,000       |
| Accumulated Depreciation           | (400,000)         | (300,000)     |
| Investment in Special Foods Stock  | 300,000           |               |
| Total Assets                       | \$1,100,000       | \$500,000     |
| Liabilities & Stockholders' Equity |                   |               |

| Less: Accumulated Depreciation | (400,000)   | (300,000) | 300,000    |             | (400,000)    |
| Total Assets                   | \$1,100,000 | \$500,000 | \$300,000  | \$600,000   | \$1,300,000  |
| Accounts Payable               | 100,000     | 100,000   |            |             | 200,000      |
| Bonds Payable                  | 200,000     | 100,000   |            |             | 300,000      |
| Common Stock                   | 500,000     | 200,000   | 200,000    |             | 500,000      |
| Retained Earnings              | 300,000     | 100,000   | 100,000    |             | 300,000      |
| Total Liabilities & Equity     | \$1,100,000 | \$500,000 | \$300,000  | <u>\$ 0</u> | \$1,300,000  |

Special Foods' net assets, and the book value of Special Foods' net assets can be illustrated as follows:

The book value of Special Foods' equity as of the acquisition date is equal to the sum of common stock and retained earnings:

#### **Book Value Calculations:**

Therefore, the elimination entry simply credits the Investment in Special Foods Stock account (for the acquisition price, \$300,000) from Peerless' balance sheet. In this and all future examples, we use blue lettering to highlight the numbers from the book value analysis that appear in the basic elimination entry:

The corresponding debits eliminate the beginning balances in the equity accounts of Special Foods:

#### **Basic Elimination Entry:**

Remember that this entry is made in the consolidation worksheet, not on the books of either the parent or the subsidiary, and is presented here in general journal form only for instructional purposes.

The investment account must be eliminated because, from a single entity viewpoint, a company cannot hold an investment in itself. The subsidiary's stock and the related stockholders' equity accounts must be eliminated because the subsidiary's stock is held entirely within the consolidated entity and none represents claims by outsiders.

From a somewhat different viewpoint, the investment account on the parent's books can be thought of as a single account representing the parent's investment in the net assets of the subsidiary, a so-called *one-line consolidation*. In a full consolidation, the subsidiary's individual assets and liabilities are combined with those of the parent. Including both the net assets of the subsidiary, as represented by the balance in the investment account, and the subsidiary's individual assets and liabilities would double-count the same set of assets. Therefore, the investment account is eliminated and not carried to the consolidated balance sheet.

In this example, the acquisition price of the stock acquired by Peerless is equal to the fair value of Special Foods as a whole. This reflects the normal situation in which the acquisition price paid by the parent is equal to the fair value of its proportionate share of the subsidiary. In addition, this example assumes that the subsidiary's fair value is equal to its book value, a generally unrealistic assumption. Given this assumption, however, the balance of Peerless' investment account is equal to Special Foods' stockholders' equity accounts, so this worksheet entry fully eliminates Peerless' investment account against Special Foods' stockholders' equity accounts.

#### The Optional Accumulation Elimination Entry

We now introduce a second elimination entry that is optional but that provides for a more "correct" consolidation. When the parent company acquires the subsidiary, the consolidated financial statements should appear as if all of the subsidiary's assets and liabilities were acquired at fair value as of the acquisition date. For example, if the acquisition were to be exercised as an acquisition of the assets instead of the stock of the company, the acquiring company would record each individual asset with a new basis equal to its fair value (and zero accumulated depreciation) on that date. The old book value and accumulated depreciation numbers from the seller would be disregarded. In the same way, when a company's stock is acquired in an acquisition, the consolidated financial statements should appear with all assets and liabilities recorded at their current fair market values. Thus, eliminating the old accumulated depreciation of the subsidiary as of the acquisition date and netting it out against the historical cost gives the appearance that the depreciable assets have been newly recorded at their fair value as of the acquisition date. In this example, the fair value of Special Foods' buildings and equipment is equal to their current book values. Special Foods' books indicate accumulated depreciation on the acquisition date of \$300,000. Thus, the following elimination entry nets this accumulated depreciation against the cost of the building and equipment (which is equal to the fair value of these assets).

As explained previously, we repeat the accumulated depreciation entry in each succeeding period for as long as the subsidiary owns these assets. The purpose of this entry is to appropriately present these assets in the consolidated financial statements as if they had been purchased on the date the subsidiary was acquired at their acquisition date fair values.

#### **Optional Accumulated Depreciation Elimination Entry:**

Note that this worksheet elimination entry does not change the net buildings and equipment balance. Netting the preacquisition accumulated depreciation against the cost basis of the corresponding assets merely causes the buildings and equipment to appear in the consolidated financial statements as if they had been revalued to their fair values on the acquisition date. This same entry would be included in each succeeding consolidation as long as the assets remain on Special Foods' books (always based on the acquisition date accumulated depreciation balance).

#### Consolidation Worksheet

We present the worksheet for the preparation of a consolidated balance sheet immediately following the acquisition in Figure 2-6. The first two columns of the worksheet in Figure 2–6 are the account balances taken from the books of Peerless and Special Foods, as shown in Figure 2–5. The balances of like accounts are placed side by side so that they may be added together. If more than two companies were to be consolidated, a separate column would be included in the worksheet for each additional subsidiary.

The accounts are placed in the worksheet in the order they would normally appear in the companies' financial statements. The two columns labeled Elimination Entries in Figure 2–6 are used to adjust the amounts reported by the individual companies to the amounts appropriate for the consolidated statement. All eliminations made in the worksheets are made in double-entry form. Thus, when the worksheet is completed, total debits entered in the Debit Eliminations column must equal total credits entered in the Credit Eliminations column. We highlight all parts of each elimination entry with the same color so that the reader can identify the individual elimination entries in the worksheet. After the appropriate elimination entries have been entered in the Elimination Entries columns, summing algebraically across the individual accounts provides the consolidated totals.

The consolidated balance sheet presented in Figure 2-7 comes directly from the last column of the consolidation worksheet in Figure 2–6. Because no operations occurred between the date of combination and the preparation of the consolidated balance sheet, the stockholders' equity section of the consolidated balance sheet is identical to that of Peerless in Figure 2–5.

Consolidated Balance Sheet, January 1, 20X1, Date of Combination; 100 Percent Acquisition at Book Value

## CONSOLIDATION SUBSEQUENT TO ACQUISITION

The preceding section introduced the procedures used to prepare a consolidated balance sheet as of the acquisition date. However, more than a consolidated balance sheet is needed to provide a comprehensive picture of the consolidated entity's activities following acquisition. As with a single company, the set of basic financial statements for a consolidated entity consists of a balance sheet, an income statement, a statement of changes in retained earnings, and a statement of cash flows.

This section of the chapter presents the procedures used to prepare an income statement, statement of retained earnings, and consolidated balance sheet subsequent to the acquisition date. We discuss the preparation of a consolidated statement of cash flows in Chapter 10.

The discussion that follows first deals with the important concepts of consolidated net income and consolidated retained earnings, followed by a description of the worksheet format used to facilitate the preparation of a full set of consolidated financial statements. We then discuss the specific procedures used to prepare consolidated financial statements subsequent to the date of combination.

This and subsequent chapters focus on procedures for consolidation when the parent company accounts for its investment in subsidiary stock using the equity method. If the parent accounts for its investment using the cost method, the general approach to the preparation of consolidated financial statements is the same, but the specific elimination entries differ. Appendix 2B summarizes consolidation procedures using the cost method. Regardless of the method the parent uses to account for its subsidiary investment, the consolidated statements will be the same because the investment and related accounts are eliminated in the consolidation process.

The approach followed to prepare a complete set of consolidated financial statements subsequent to a business combination is quite similar to that used to prepare a consolidated balance sheet as of the date of combination. However, in addition to the assets and liabilities, the consolidating companies' revenues and expenses must be combined. As the accounts are combined, eliminations must be made in the consolidation worksheet so that the consolidated financial statements appear as if they are the financial statements of a single company.

When a full set of consolidated financial statements is prepared subsequent to the date of combination, two of the important concepts affecting the statements are those of consolidated net income and consolidated retained earnings.

#### **Consolidated Net Income**

All revenues and expenses of the individual consolidating companies arising from transactions with unaffiliated companies are included in the consolidated financial statements. The consolidated income statement includes 100 percent of the revenues and expenses regardless of the parent's percentage ownership. Similar to singlecompany financial statements, where the difference between revenues and expenses equals net income, revenues minus expenses in the consolidated financial statements equal consolidated net income. Consolidated net income is equal to the parent's income from its own operations, excluding any investment income from consolidated subsidiaries, plus the net income from each of the consolidated subsidiaries, adjusted for any differential write-off (which is zero in this chapter). Intercorporate investment income from consolidated subsidiaries included in the parent's net income under either the cost or equity method must be eliminated in computing consolidated net income to avoid double-counting.

Consolidated net income and consolidated net income attributable to the controlling interest are the same when all consolidated subsidiaries are wholly owned. For example, assume that Push Corporation purchases all of the stock of Shove Company at an amount equal to its book value. During 20X1, Shove reports net income of \$25,000 while Push reports net income of \$125,000, including equity-method income from Shove of \$25,000. Consolidated net income for 20X1 is computed as follows:

| Push's net income                     | \$125,000 |
|---------------------------------------|-----------|
| Less: Equity-method income from Shove | (25,000)  |
| Shove's net income                    | 25,000    |
| Consolidated net income               | \$125,000 |

Note that when the parent company properly applies the equity method, consolidated net income is always equal to the parent's equity-method net income.

## **Consolidated Retained Earnings**

Consolidated retained earnings, as it appears in the consolidated balance sheet, is that portion of the consolidated enterprise's undistributed earnings accruing to the parent company shareholders. Consolidated retained earnings at the end of the period is equal to the beginning consolidated retained earnings balance, plus consolidated net income attributable to the controlling interest, less dividends declared by the parent company.

#### Computing Consolidated Retained Earnings

Consolidated retained earnings is computed by adding together the parent's retained earnings from its own operations (excluding any income from consolidated subsidiaries recognized by the parent) and the parent's proportionate share of the net income of each subsidiary since the date of acquisition, adjusted for differential write-off and goodwill impairment. Consolidated retained earnings should be equal to the parent's equitymethod retained earnings.

If the parent accounts for subsidiaries using the equity method on its books, the retained earnings of each subsidiary is completely eliminated when the subsidiary is consolidated. This is necessary because (1) retained earnings cannot be purchased, and so subsidiary retained earnings at the date of a business combination cannot be included in the combined company's retained earnings; (2) the parent's share of the subsidiary's income since acquisition is already included in the parent's equity-method retained earnings; and (3) the noncontrolling interest's share (if any) of the subsidiary's retained earnings is not included in consolidated retained earnings.

In the simple example given previously, assume that on the date of combination, January 1, 20X1, Push's retained earnings balance is \$400,000 and Shove's is \$250,000. During 20X1, Shove reports \$25,000 of net income and declares \$10,000 of dividends. Push reports \$100,000 of separate operating earnings plus \$25,000 of equity-method income from its 100 percent interest in Shove; Push declares dividends of \$30,000. Based on this information, the retained earnings balances for Push and Shove on December 31, 20X1, are computed as follows:

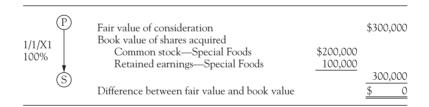

|  | Push                             | Shove                           |
|--|----------------------------------|---------------------------------|
| Balance, January 1, 20X1<br>Net income, 20X1<br>Dividends declared in 20X1 | \$400,000<br>125,000<br>(30,000) | \$250,000<br>25,000<br>(10,000) |
| Balance, December 31, 20X1   | <u>\$495,000</u>                 | \$265,000                       |

Consolidated retained earnings is computed by first determining the parent's retained earnings from its own operations. This computation involves removing from the parent's retained earnings the \$25,000 of subsidiary income since acquisition recognized by the parent, leaving \$470,000 (\$495,000 - \$25,000) of retained earnings resulting from the parent's own operations. The parent's 100 percent share of the subsidiary's net income since the date of acquisition is then added to this number, resulting in consolidated retained earnings of \$495,000. We note that because this is the first year since the acquisition, the net income since the date of acquisition is just this year's income. Subsequent examples will illustrate how this calculation differs in later years. We also emphasize that since Push uses the *fully adjusted equity method*, this number is the same as the parent's equity-method retained earnings.

# CONSOLIDATED FINANCIAL STATEMENTS—100 PERCENT OWNERSHIP, **CREATED OR ACQUIRED AT BOOK VALUE**

Each of the consolidated financial statements is prepared as if it is taken from a single set of books that is being used to account for the overall consolidated entity. There is, of course, no set of books for the consolidated entity, and as in the preparation of the consolidated balance sheet, the consolidation process starts with the data recorded on the books of the individual consolidating companies. The account balances from the books of the individual companies are placed in the three-part worksheet, and entries are made to eliminate the effects of intercorporate ownership and transactions. The consolidation approach and procedures are the same whether the subsidiary being consolidated was acquired or created.

To understand the process of consolidation subsequent to the start of a parentsubsidiary relationship, assume that on January 1, 20X1, Peerless Products Corporation acquires all of the common stock of Special Foods Inc. for \$300,000, an amount equal to Special Foods' book value on that date. At that time, Special Foods has \$200,000 of common stock outstanding and retained earnings of \$100,000, summarized as follows:

Peerless accounts for its investment in Special Foods stock using the equity method. Information about Peerless and Special Foods as of the date of combination and for the years 20X1 and 20X2 appears in Figure 2–8.

FIGURE 2-8 **Selected Information** about Peerless **Products and Special** Foods on January 1, 20X1, and for the Years 20X1 and 20X2

|  | Peerless<br>Products | Special<br>Foods |
|--|----------------------|------------------|
| Common Stock, January 1, 20X1                                    | \$500,000            | \$200,000        |
| Retained Earnings, January 1, 20X1 <b>20X1</b> :                 | 300,000              | 100,000          |
| Separate Operating Income, Peerless<br>Net Income, Special Foods | 140,000              | 50,000           |
| Dividends 20X2:  | 60,000               | 30,000           |
| Separate Operating Income, Peerless<br>Net Income, Special Foods | 160,000              | 75,000           |
| Dividends  | 60,000               | 40,000           |

## **Initial Year of Ownership**

On January 1, 20X1, Peerless records its purchase of Special Foods common stock with the following entry:

Record the purchase of Special Foods stock.

During 20X1, Peerless records operating earnings of \$140,000, excluding its income from investing in Special Foods, and declares dividends of \$60,000. Special Foods reports 20X1 net income of \$50,000 and declares dividends of \$30,000.

#### Parent Company Entries

Peerless records its 20X1 income and dividends from Special Foods under the equity method as follows:

| (13) | Investment in Special Foods                                | 50,000 |        |
|------|--|--------|--------|
|      | Income from Special Foods                                  |        | 50,000 |
|      | Record Peerless' 100% share of Special Foods' 20X1 income. |        |        |
| (14) | Cash   | 30,000 |        |
|      | Investment in Special Foods                                |        | 30,000 |

Record Peerless' 100% share of Special Foods' 20X1 dividend.

#### Consolidation Worksheet—Initial Year of Ownership

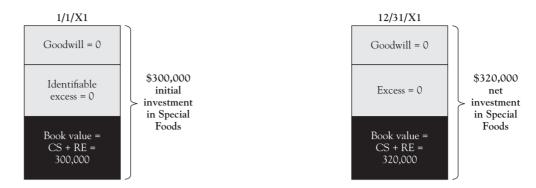

After all appropriate entries have been made on the books of Peerless and Special Foods, including year-end adjustments, a consolidation worksheet is prepared as in Figure 2–9. The adjusted account balances from the books of Peerless and Special Foods are placed in the first two columns of the worksheet. Then all amounts that reflect intercorporate transactions or ownership are eliminated in the consolidation

The distinction between journal entries recorded on the books of the individual companies and the elimination entries recorded only on the consolidation worksheet is an important one. Book entries affect balances on the books and the amounts that are carried to the consolidation worksheet; worksheet elimination entries affect only those balances carried to the consolidated financial statements in the period. As mentioned previously, the elimination entries presented in this text are shaded both when presented in journal entry form in the text and in the worksheet.

In this example, the accounts that must be eliminated because of intercorporate ownership are the stockholders' equity accounts of Special Foods, including dividends declared, Peerless' investment in Special Foods stock, and Peerless' income from Special Foods. However, unlike previous examples, the book value portion of Peerless' investment has changed because earnings and dividends have adjusted the investment account balance. The book value portion of the investment account can be summarized as follows:

#### Pook Value Calculations

| BOOK Value Calculations.    |                  |   |              |                     |  |
|-----------------------------|------------------|---|--------------|---------------------|--|
|                             | Total Investment | = | Common Stock | + Retained Earnings |  |
| Original book value         | 300,000          |   | 200,000      | 100,000             |  |
| + Net income                | 50,000           |   |              | 50,000              |  |
| <ul><li>Dividends</li></ul> | (30,000)         |   |              | (30,000)            |  |
| Ending book value           | 320,000          |   | 200,000      | 120,000             |  |

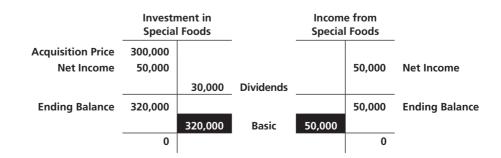

Under the equity method, Peerless recognizes its share (100 percent) of Special Foods' reported income. In the consolidated income statement, however, Special Foods' individual revenue and expense accounts are combined with Peerless' accounts. Peerless' equity method income from Special Foods, therefore, must be eliminated to avoid double-counting. Special Foods' dividends paid to Peerless must be eliminated when consolidated statements are prepared (because the dividend is really just an intercompany cash transfer, not a transfer of wealth to external shareholders) so that only dividend declarations related to the parent's shareholders are reported as dividends of the consolidated entity. Thus, the basic elimination entry removes both the equity method Income from Special Foods and also all dividends declared by Special Foods during the period:

#### **Basic Elimination Entry:**

The book value calculations in the chart on the previous page help to facilitate preparation of the basic elimination entry. Thus, the basic elimination entry removes (1) Special Foods' equity accounts, (2) Special Foods' dividends declared, (3) Peerless' Income from Special Foods account, and (4) Peerless' Investment in Special Foods account. Note that we use blue shading in the numbers in the book value analysis that appear in the basic elimination entry. Because there is no differential in this example, the basic elimination entry completely eliminates the balance in Peerless' investment account on the balance sheet as well as the Income from Special Foods account on the income statement in the worksheet. Additional elimination entries will be necessary when there is a differential as illustrated in Chapters 4 and 5.

#### Worksheet Relationships

Both of the elimination entries are entered in Figure 2-9 and the amounts are totaled across each row and down each column to complete the worksheet. Some specific points to recognize with respect to the full worksheet are as follows:

- 1. Because of the normal articulation among the financial statements, the bottom-line number from each of the first two sections of the worksheet carries down to the next financial statement in a logical progression. As part of the normal accounting cycle, net income is closed to retained earnings, and retained earnings is reflected in the balance sheet. Therefore, in the consolidation worksheet, the net income is carried down to the retained earnings statement section of the worksheet, and the ending retained earnings line is carried down to the balance sheet section of the worksheet. Note that in both cases the entire line, including total eliminations, is carried forward.
- 2. Double-entry bookkeeping requires total debits to equal total credits for any single elimination entry and for the worksheet as a whole. Because some elimination entries extend to more than one section of the worksheet, however, the totals of the debit and credit eliminations are not likely to be equal in either of the first two sections of the worksheet. The totals of all debits and credits at the bottom of the balance sheet section are equal because the cumulative balances from the two upper sections are carried forward to the balance sheet section.

| Less: Accumulated Depreciation  | (450,000) | (320,000) | 300,000             |         | (470,000)    |
| Total Assets                    | 1,230,000 | 520,000   | 300,000             | 620,000 | 1,430,000    |
| Accounts Payable                | 100,000   | 100,000   |                     |         | 200,000      |
| Bonds Payable                   | 200,000   | 100,000   |                     |         | 300,000      |
| Common Stock                    | 500,000   | 200,000   | 200,000             |         | 500,000      |
| Retained Earnings               | 430,000   | 120,000   | 150,000             | 30,000  | 430,000      |
| Total Liabilities & Equity      | 1,230,000 | 520,000   | 350,000             | 30,000  | 1,430,000    |

- 3. In the balance sheet portion of the worksheet, total debit balances must equal total credit balances for each company and the consolidated entity.
- 4. When the parent uses the full equity method of accounting for the investment, consolidated net income should equal the parent's net income, and consolidated retained earnings should equal the parent's retained earnings. This means the existing balance in subsidiary retained earnings must be eliminated to avoid double-counting.
- 5. Certain other clerical safeguards are incorporated into the worksheet. The amounts reflected in the bottom line of the income statement section, when summed (algebraically) across, must equal the number reported as consolidated net income. Similarly, the amounts in the last line of the retained earnings statement section must equal consolidated retained earnings when summed across.

# Second and Subsequent Years of Ownership

The consolidation procedures employed at the end of the second and subsequent years are basically the same as those used at the end of the first year. Adjusted trial balance data of the individual companies are used as the starting point each time consolidated statements are prepared because no separate books are kept for the consolidated entity. An additional check is needed in each period following acquisition to ensure that the beginning balance of consolidated retained earnings shown in the completed worksheet after elimination entries equals the balance reported at the end of the prior period. In all other respects, the elimination entries and worksheet are comparable with those shown for the first year.

#### Parent Company Entries

We illustrate consolidation after two years of ownership by continuing the example of Peerless Products and Special Foods, based on the data in Figure 2–8. Peerless' separate income from its own operations for 20X2 is \$160,000, and its dividends total \$60,000. Special Foods reports net income of \$75,000 in 20X2 and pays dividends of \$40,000. Peerless records the following equity-method entries in 20X2:

| (15) | Investment in Special Foods                                  | 75,000 |        |
|------|--|--------|--------|
|      | Income from Special Foods                                    |        | 75,000 |
|      | Record Peerless' 100% share of Special Foods' 20X2 income.   |        |        |
| (16) | Cash   | 40,000 |        |
|      | Investment in Special Foods                                  |        | 40,000 |
|      | Record Peerless' 100% share of Special Foods' 20X2 dividend. |        |        |

The balance in the investment account reported by Peerless increases from \$320,000 on January 1, 20X2, to \$355,000 on December 31, 20X2, and reported net income of Peer-

#### Consolidation Worksheet—Second Year of Ownership

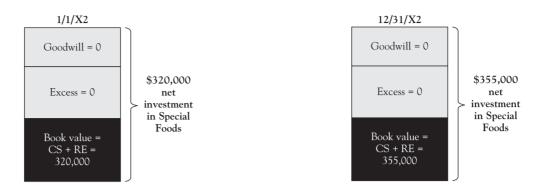

less totals \$235,000 (\$160,000 + \$75,000).

Figure 2–10 on page 76 illustrates the worksheet to prepare consolidated statements for 20X2. The book value of Peerless' investment in Special Foods (which is equal to the book value of Special Foods' equity accounts) can be analyzed and summarized as follows:

# **Book Value Calculations:**

|                             | Total Investment | = | Common Stock - | - Retained Earnings |
|-----------------------------|------------------|---|----------------|---------------------|
| Beginning book value        | 320,000          |   | 200,000        | 120,000             |
| + Net income                | 75,000           |   |                | 75,000              |
| <ul><li>Dividends</li></ul> | (40,000)         |   |                | (40,000)            |
| Ending book value           | 355,000          |   | 200,000        | 155,000             |

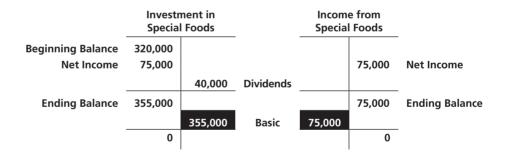

Again, the basic elimination entry removes (1) Special Foods' equity accounts, (2) Special Foods' dividends declared, (3) Peerless' Income from Special Foods account, and (4) Peerless' Investment in Special Foods account:

#### **Basic Elimination Entry:**

Note that the beginning balance in retained earnings in 20X2, \$75,000, is different than the balance in 20X1 because of income earned and dividends declared during 20X1. As explained previously, since there is no differential in this example, the basic elimination entry completely eliminates the balance in Peerless' investment account on the balance sheet as well as the Income from Special Foods account on the income statement in the worksheet.

In this example, Special Foods had accumulated depreciation of \$300,000 on the acquisition date. Thus, we repeat the same accumulated depreciation elimination entry this year (and every year as long as Special Foods owns the assets) that we used in the initial year.

# **Optional Accumulated Depreciation Elimination Entry:**

After placing the two elimination entries in the consolidation worksheet, it is completed in the normal manner as illustrated in Figure 2–10. All worksheet relationships discussed in conjunction with Figure 2–9 continue in the second year as well. The beginning

FIGURE 2–10 December 31, 20X2, Equity-Method Worksheet for Consolidated Financial Statements, Second Year of Ownership; 100 Percent Acquisition at Book Value

|                                | Peerless  | Special   | Eliminatio | n Entries |              |

| Cash                           | 245,000   | 85,000    |            |           | 330,000      |
| Accounts Receivable            | 150,000   | 80,000    |            |           | 230,000      |
| Inventory                      | 180,000   | 90,000    |            |           | 270,000      |
| Investment in Special Foods    | 355,000   |           |            | 355,000   | 0            |
| Land                           | 175,000   | 40,000    |            |           | 215,000      |
| Buildings & Equipment          | 800,000   | 600,000   |            | 300,000   | 1,100,000    |
| Less: Accumulated Depreciation | (500,000) | (340,000) | 300,000    |           | (540,000)    |
| Total Assets                   | 1,405,000 | 555,000   | 300,000    | 655,000   | 1,605,000    |
| Accounts Payable               | 100,000   | 100,000   |            |           | 200,000      |
| Bonds Payable                  | 200,000   | 100,000   |            |           | 300,000      |
| Common Stock                   | 500,000   | 200,000   | 200,000    |           | 500,000      |
| Retained Earnings              | 605,000   | 155,000   | 195,000    | 40,000    | 605,000      |
| Total Liabilities & Equity     | 1,405,000 | 555,000   | 395,000    | 40,000    | 1,605,000    |

consolidated retained earnings balance for 20X2, as shown in Figure 2–10, should be compared with the ending consolidated retained earnings balance for 20X1, as shown in Figure 2–9, to ensure that they are the same.

# **Consolidated Net Income and Retained Earnings**

In the consolidation worksheets illustrated in Figures 2–9 and 2–10, consolidated net income for 20X1 and 20X2 appear as the last numbers in the income statement section of the worksheets in the Consolidated column on the far right. The numbers can be computed as follows:

|  | 20X1      | 20X2      |
|--|-----------|-----------|
| Peerless' net income                       | \$190,000 | \$235,000 |
| Peerless' equity income from Special Foods | (50,000)  | (75,000)  |
| Special Foods' net income                  | 50,000    | 75,000    |
| Consolidated net income                    | \$190,000 | \$235,000 |

In this simple illustration, consolidated net income is the same as Peerless' equity-method net income.

In Figures 2–9 and 2–10, the ending consolidated retained earnings number is equal to the beginning balance of consolidated retained earnings plus consolidated net income, less dividends declared on the parent's common stock. It also can be computed as follows:

|  | 20X1             | 20X2      |
|--|------------------|-----------|
| Peerless' beginning retained earnings from its own operations      | \$300,000        | \$380,000 |
| Peerless' income from its own operations                           | 140,000          | 160,000   |
| Peerless' income from Special Foods since acquisition (cumulative) | 50,000           | 125,000   |
| Peerless' dividends declared                                       | (60,000)         | (60,000)  |
| Consolidated retained earnings                                     | <u>\$430,000</u> | \$605,000 |

#### **STOP & THINK**

Note that Peerless' beginning retained earnings from its own operations in 20X2, \$380,000, is calculated as the beginning balance for 20X1 plus Peerless' income from its own operations in 20X1, \$140,000, minus its dividends declared in 20X1, \$60,000.

As with income, consolidated retained earnings is the same as the parent's equity-method retained earnings if the parent company uses the equity method. We note that the second year of this calculation illustrates how cumulative income from Special Foods (since the acquisition date) can be used to calculate ending retained earnings.

# Summary of **Key Concepts**

Companies owning investments in the common stock of other companies generally report those investments by consolidating them or reporting them using the cost method (adjusted to market, if appropriate) or equity method, depending on the circumstances. Consolidation generally is appropriate if one entity controls the investee, usually through majority ownership of the investee's voting stock. The equity method is required when an investor has sufficient stock ownership in an investee to significantly influence the operating and financial policies of the investee but owns less than a majority of the investee's stock. In the absence of other evidence, ownership of 20 percent or more of an investee's voting stock is viewed as giving the investor the ability to exercise significant influence over the investee. The cost method is used when consolidation and the equity method are not appropriate, usually when the investor is unable to exercise significant influence over the investee.

The cost method is similar to the approach used in accounting for other noncurrent assets. The investment is carried at its original cost to the investor. Consistent with the realization concept, income from the investment is recognized when distributed by the investee in the form of dividends.

The equity method is unique in that the carrying value of the investment is adjusted periodically to reflect the investor's changing equity in the underlying investee. Income from the investment is recognized by the investor under the equity method as the investee reports the income rather than when it is distributed.

Companies also have the choice of reporting nonconsolidated investments using the fair value option instead of the cost or equity method. Under the fair value option, the investment is remeasured to fair value at the end of each reporting period and the change in value recognized as an unrealized gain or loss in income.

Consolidated financial statements present the financial position and results of operations of two or more separate legal entities as if they were a single company. A consolidated balance sheet prepared on the date a parent acquires a subsidiary appears the same as if the acquired company had been merged into the parent.

A consolidation worksheet provides a means of efficiently developing the data needed to prepare consolidated financial statements. The worksheet includes a separate column for the trial balance data of each of the consolidating companies, a debit and a credit column for the elimination entries, and a column for the consolidated totals that appear in the consolidated financial statements. A three-part consolidation worksheet facilitates preparation of a consolidated income statement, retained earnings statement, and balance sheet, and it includes a section for each statement. Elimination entries are needed in the worksheet to remove the effects of intercompany ownership and intercompany transactions so the consolidated financial statements appear as if the separate companies are actually one.

# Appendix **2A** Additional Considerations Relating to the Equity Method

# **Determination of Significant Influence**

The general rule established in ASC 323-10-15 is that the equity method is appropriate when the investor, by virtue of its common stock interest in an investee, is able to exercise significant influence over the operating and financial policies of the investee. In the absence of other evidence, common stock ownership of 20 percent or more is viewed as indicating that the investor is able to exercise significant influence over the investee. However, the APB also stated a number of factors that could constitute other evidence of the ability to exercise significant influence:

- 1. Representation on board of directors.
- 2. Participation in policy making.
- 3. Material intercompany transactions.
- 4. Interchange of managerial personnel.
- 5. Technological dependency.
- 6. Size of investment in relation to concentration of other shareholdings.

Conversely, the FASB provides in ASC 323-10-15-10 some examples of evidence where an investor is unable to exercise significant influence over an investee. These situations include legal or regulatory challenges to the investor's influence by the investee, agreement by the investor to give up important shareholder rights, concentration of majority ownership among a small group of owners who disregard the views of the investor, and unsuccessful attempts by the investor to obtain information from the investee or to obtain representation on the investee's board of directors.

# Alternative Versions of the Equity Method of Accounting for Investments in Subsidiaries

Companies are free to adopt whatever procedures they wish in accounting for investments in controlled subsidiaries on their books. Because investments in consolidated subsidiaries are eliminated when consolidated statements are prepared, the consolidated statements are not affected by the procedures used to account for the investments on the parent's books.

In practice, companies follow three different approaches in accounting for their consolidated subsidiaries:

- 1. Cost method.
- 2. Fully adjusted equity method.
- 3. Modified version of the equity method.

Several modified versions of the equity method are found in practice, and all are usually referred to as the modified equity method. Some companies apply the equity method without making adjustments for unrealized intercompany profits and the amortization of the differential. Others adjust for the amortization of the differential but omit the adjustments for unrealized intercompany profits. While modified versions of the equity method are not acceptable for financial reporting purposes, they may provide some clerical savings for the parent if used on the books when consolidation of the subsidiary is required.

# **Unrealized Intercompany Profits**

The equity method as applied under ASC 323-10-45-1 often is referred to as a one-line consolidation because (a) the investor's income and stockholders' equity are the same as if the investee were consolidated and (b) all equity method adjustments are made through the investment and related income accounts, which are reported in only a single line in the balance sheet and a single line in the income statement.<sup>8</sup> The view currently taken in consolidation is that intercompany sales do not result in the realization of income until the intercompany profit is confirmed in some way, usually through a transaction with an unrelated third party. For example, if a parent company sells inventory to a subsidiary at a profit, that profit cannot be recognized in the consolidated financial statements until it is confirmed by resale of the inventory to an external party. Because profits from sales to related companies are viewed from a consolidated perspective as being unrealized until there is a resale to unrelated parties, such profits must be eliminated when preparing consolidated financial statements.

The consolidated financial statements are not the only ones affected, however, because ASC 323-10-45-1 requires that the income of an investor that reports an investment using the equity method must be the same as if the investee were consolidated. Therefore, the investor's equity-method income from the investee must be adjusted for unconfirmed profits on intercompany sales as well. The term for the application of the equity method that includes the adjustment for unrealized profit on sales to affiliates is fully adjusted equity method.

#### Adjusting for Unrealized Intercompany Profits

An intercompany sale normally is recorded on the books of the selling affiliate in the same manner as any other sale, including the recognition of profit. In applying the equity method, any intercompany profit remaining unrealized at the end of the period must be deducted from the amount of income that otherwise would be reported.

Under the one-line consolidation approach, the income recognized from the investment and the carrying amount of the investment are reduced to remove the effects of the unrealized intercompany profits. In future periods when the intercompany profit actually is realized, the entry is reversed.

#### Unrealized Profit Adjustments Illustrated

To illustrate the adjustment for unrealized intercompany profits under the equity method, assume that Palit Corporation owns 40 percent of the common stock of Label Manufacturing. During 20X1, Palit sells inventory to Label for \$10,000; the inventory originally cost Palit \$7,000. Label resells one-third of the inventory to outsiders during 20X1 and retains the other two-thirds in its ending inventory. The amount of unrealized profit is computed as follows:

| Total intercompany profit | \$10,000 - \$7,000 = \$3,000 |
|---------------------------|------------------------------|
| Unrealized portion        | $$3,000 \times 2/3 = $2,000$ |

Assuming that Label reports net income of \$60,000 for 20X1 and declares no dividends, the following entries are recorded on Palit's books at the end of 20X1:

| (17) | Investment in Label Manufacturing                     | 24,000 |        |
|------|---|--------|--------|
|      | Income from Label Manufacturing                       |        | 24,000 |
|      | Record equity-method income: $\$60,000 \times 0.40$ . |        |        |
| (18) | Income from Label Manufacturing                       | 2,000  |        |
|      | Investment in Label Manufacturing                     |        | 2,000  |
|      | Remove unrealized intercompany profit                 |        |        |

<sup>&</sup>lt;sup>8</sup> Although ASC 323-10-45-1 established the requirement for an equity-method investor's income and stockholders' equity to be the same as if the investee were consolidated, the FASB's recent decision not to permit the write-off of equity-method goodwill may lead to differences in situations in which such goodwill has been impaired.

If all the remaining inventory is sold in 20X2, the following entry is made on Palit's books at the end of 20X2 to record the realization of the previously unrealized intercompany profit:

(19)Investment in Label Manufacturing Stock 2.000 Income from Label Manufacturing 2,000

Recognize realized intercompany profit.

# **Additional Requirements of ASC 323-10**

ASC 323-10, the main authoritative guidance on equity-method reporting, includes several additional requirements:

- 1. The investor's share of the investee's extraordinary items and prior-period adjustments should be reported as such by the investor, if material.
- 2. If an investor's share of investee losses exceeds the carrying amount of the investment, the equity method should be discontinued once the investment has been reduced to zero. No further losses are to be recognized by the investor unless the investor is committed to provide further financial support for the investee or unless the investee's imminent return to profitability appears assured. If, after the equity method has been suspended, the investee reports net income, the investor again should apply the equity method, but only after the investor's share of net income equals its share of losses not previously recognized.
- 3. Preferred dividends of the investee should be deducted from the investee's net income if declared or, whether declared or not, if the preferred stock is cumulative, before the investor computes its share of investee earnings.

ASC 323-10-50-3 includes a number of required financial statement disclosures. When using the equity method, the investor must disclose<sup>9</sup> the following:

- 1. The name and percentage ownership of each investee.
- 2. The investor's accounting policies with respect to its investments in common stock, including the reasons for any departures from the 20 percent criterion established by ASC 323-10-15.
- 3. The amount and accounting treatment of any differential.
- 4. The aggregate market value of each identified nonsubsidiary investment where a quoted market price is available.
- 5. Either separate statements for or summarized information as to assets, liabilities, and results of operations of corporate joint ventures of the investor, if material in the aggregate.

### **Investor's Share of Other Comprehensive Income**

When an investor uses the equity method to account for its investment in another company, the investor's comprehensive income should include its proportionate share of each of the amounts reported as "Other Comprehensive Income" by the investee. For example, assume that Ajax Corporation purchases 40 percent of the common stock of Barclay Company on January 1, 20X1. For the year 20X1, Barclay reports net income of \$80,000 and comprehensive income of \$115,000, which includes other comprehensive income (in addition to net income) of \$35,000. This other comprehensive income (OCI) reflects an unrealized \$35,000 gain (net of tax) resulting from an increase in the fair value of an investment in stock classified as available-for-sale under the criteria established by ASC 320-10-35-1. In addition to recording the normal equity-method entries, Ajax recognizes its proportionate share of the unrealized gain on available-for-sale securities reported by Barclay during 20X1 with the following entry:

(20)Investment in Barclay Stock 14,000 Unrealized Gain on Investee AFS Investments 14,000

> Recognize share of investee's unrealized gain on available-for-sale securities.

<sup>&</sup>lt;sup>9</sup> ASC 825-10-45 requires most of the same disclosures for investments in common stock reported under the fair value option that otherwise would have been reported using the equity method.

Entry (20) has no effect on Ajax's net income for 20X1, but it does increase Ajax's other comprehensive income, and thus its total comprehensive income, by \$14,000. Ajax will make a similar entry at the end of each period for its proportionate share of any increase or decrease in Barclay's accumulated unrealized holding gain on the available-for-sale securities.

#### Appendix 2B Consolidation and the Cost Method

Not all parent companies use the equity method to account for their subsidiary investments that are to be consolidated. The choice of the cost or equity method has no effect on the consolidated financial statements. This is true because the balance in the parent's investment account, the parent's income from the subsidiary, and related items are eliminated in preparing the consolidated statements. Thus, the parent is free to use either the cost method or some version of the equity method on its separate books in accounting for investments in subsidiaries that are to be consolidated.

Because the cost method uses different parent company entries than the equity method, it also requires different elimination entries in preparing the consolidation worksheet. Keep in mind that the consolidated financial statements appear the same regardless of whether the parent uses the cost or the equity method on its separate books.

#### CONSOLIDATION—YEAR OF COMBINATION

To illustrate the preparation of consolidated financial statements when the parent company carries its subsidiary investment using the cost method, refer again to the Peerless Products and Special Foods example. Assume that Peerless purchases 100 percent of the common stock of Special Foods on January 1, 20X1, for \$300,000. At that date, the book value of Special Foods as a whole is \$300,000. All other data are the same as presented in Figures 2-4 and 2-5.

# **Parent Company Cost-Method Entries**

When the parent company uses the cost method, Peerless records only two journal entries during 20X1 related to its investment in Special Foods. Entry (21) records Peerless' purchase of Special Foods stock; entry (22) recognizes dividend income based on the \$30,000  $(\$30,000 \times 100\%)$  of dividends received during the period:

| (21)  | Investment in Special Foods                                  | 300,000 |         |
|-------|--|---------|---------|
|       | Cash   |         | 300,000 |
|       | Record the initial investment in Special Foods.              |         |         |
| (0.0) |  | 20.000  |         |
| (22)  | Cash   | 30,000  |         |
|       | Dividend Income  |         | 30,000  |
|       | Record Peerless' 100% share of Special Foods' 20X1 dividend. |         |         |

No entries are made on the parent's books with respect to Special Foods income in 20X1, as would be done under the equity method.

#### Consolidation Worksheet—Year of Combination

Figure 2-11 illustrates the worksheet to prepare consolidated financial statements for December 31, 20X1, using the cost method. The trial balance data for Peerless and Special Foods included in the worksheet in Figure 2–11 differ from those presented in Figure 2–9 only by the effects of using the cost method rather than the equity method on Peerless' books. Note that all of the amounts in the Consolidated column are the same as in Figure 2-9 because the method used by the parent to account for its subsidiary investment on its books has no effect on the consolidated financial statements.

When a company uses the cost method, the basic elimination entry can be divided into two parts. The first eliminates the investment account. The investment elimination entry eliminates the balances in the stockholders' equity accounts of Special Foods and the balance in Peerless' investment account as of the date of combination. This elimination entry is the same each year (assuming there is no impairment of the investment account) because it relates to the original acquisition price and the original balances in Special Foods' equity accounts.

FIGURE 2–11 December 31, 20X1, Cost-Method Worksheet for Consolidated Financial Statements, Initial Year of Ownership; 100 Percent Acquisition at Book Value

|                                | Elimination Entries |           |            |           |              |
|--------------------------------|---------------------|-----------|------------|-----------|--------------|
|                                | Peerless            | Special   | Eliminatio | n Entries |              |
|                                | Products            | Foods     | DR         | CR        | Consolidated |
| Income Statement               |                     |           |            |           |              |
| Sales                          | 400,000             | 200,000   |            |           | 600,000      |
| Less: COGS                     | (170,000)           | (115,000) |            |           | (285,000)    |
| Less: Depreciation Expense     | (50,000)            | (20,000)  |            |           | (70,000)     |
| Less: Other Expenses           | (40,000)            | (15,000)  |            |           | (55,000)     |
| Dividend Income                | 30,000              |           | 30,000     |           | 0            |
| Net Income                     | 170,000             | 50,000    | 30,000     | 0         | 190,000      |
| Statement of Retained Earnings |                     |           |            |           |              |
| Beginning Balance              | 300,000             | 100,000   | 100,000    |           | 300,000      |
| Net Income                     | 170,000             | 50,000    | 30,000     | 0         | 190,000      |
| Less: Dividends Declared       | (60,000)            | (30,000)  |            | 30,000    | (60,000)     |
| Ending Balance                 | 410,000             | 120,000   | 130,000    | 30,000    | 430,000      |
| Balance Sheet                  |                     |           |            |           |              |
| Cash                           | 210,000             | 75,000    |            |           | 285,000      |
| Accounts Receivable            | 75,000              | 50,000    |            |           | 125,000      |
| Inventory                      | 100,000             | 75,000    |            |           | 175,000      |
| Investment in Special Foods    | 300,000             |           |            | 300,000   | 0            |
| Land                           | 175,000             | 40,000    |            |           | 215,000      |
| Buildings & Equipment          | 800,000             | 600,000   |            | 300,000   | 1,100,000    |
| Less: Accumulated Depreciation | (450,000)           | (320,000) | 300,000    |           | (470,000)    |
| Total Assets                   | 1,210,000           | 520,000   | 300,000    | 600,000   | 1,430,000    |
| Accounts Payable               | 100,000             | 100,000   |            |           | 200,000      |
| Bonds Payable                  | 200,000             | 100,000   |            |           | 300,000      |
| Common Stock                   | 500,000             | 200,000   | 200,000    |           | 500,000      |
| Retained Earnings              | 410,000             | 120,000   | 130,000    | 30,000    | 430,000      |
| Total Liabilities & Equity     | 1,210,000           | 520,000   | 330,000    | 30,000    | 1,430,000    |

#### **Investment Elimination Entry:**

| Common stock                | 200,000 |         |
|-----------------------------|---------|---------|
| Retained earnings           | 100,000 |         |
| Investment in Special Foods |         | 300,000 |

The dividend elimination entry eliminates the dividend income recorded by Peerless during the period along with Special Foods' dividend declaration related to the stockholdings of Peerless.

#### **Dividend Elimination Entry:**

| Dividend income    | 30,000 |        |
|--------------------|--------|--------|
| Dividends declared |        | 30,000 |

Finally, the accumulated depreciation elimination entry is the same as under the equity method.

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 |         |
|--------------------------|---------|---------|
| Building and equipment   |         | 300,000 |

As mentioned previously, the amounts in the Consolidated column of the worksheet in Figure 2–11 are the same as those in Figure 2–9 because the method used on the parent's books to account for the subsidiary investment does not affect the consolidated financial statements.

# CONSOLIDATION—SECOND YEAR OF OWNERSHIP

Consolidation differences between cost-method accounting and equity-method accounting tend to be more evident in the second year of ownership simply because the equity method entries change every year while the cost-method entries are generally the same (with the exception of recording the initial investment).

# Parent Company Cost-Method Entry

Peerless only records a single entry on its books in 20X2 related to its investment in Special Foods:

(23)40.000 Dividend Income 40.000

Record Peerless' 100% share of Special Foods' 20X2 dividend.

# Consolidation Worksheet—Second Year Following Combination

The worksheet elimination entries are identical to those used in the first year except that the amount of dividends declared by Special Foods in the second year is \$40,000 instead of \$30,000.

#### Investment Elimination Entry:

200,000 **Common stock** 100,000 **Retained earnings** 300,000 **Investment in Special Foods** 

#### **Dividend Elimination Entry:**

Dividend income 40,000 **Dividends declared** 40,000

#### **Optional Accumulated Depreciation Elimination Entry:**

Accumulated depreciation 300,000 **Building and equipment** 300,000

Under the cost method, Peerless has not recognized any portion of the undistributed earnings of Special Foods on its parent company books. Therefore, Peerless' retained earnings at the beginning of the second year are less than consolidated retained earnings. Also, Peerless' Investment in Special Foods account balance is less than its 100 percent share of Special Foods' net assets at that date. The consolidation worksheet in Figure 2-12 demonstrates how the worksheet entries eliminate the balances reported by Peerless under the cost method.

Note that while the Consolidated column yields identical numbers to those found in Figure 2–10, the cost method does not maintain the favorable properties that exist when the equity method is employed. Specifically, the parent's net income no longer equals consolidated net income, and the parent's retained earnings no longer equals consolidated retained earnings balance. Hence, although the procedures used under the cost method require less work, the parent company does not enjoy some of the favorable relationships among parent and consolidated numbers that exist under the equity method.

# Questions

Q2-1 What types of investments in common stock normally are accounted for using (a) the equity method and (b) the cost method?

LO 2-1

**Q2-2A** How is the ability to significantly influence the operating and financial policies of a company normally demonstrated?

"A" and "B" indicate that the item relates to Appendix 2A and Appendix 2B, respectively.

FIGURE 2-12 December 31, 20X1, Cost-Method Worksheet for Consolidated Financial Statements, Second Year of Ownership; 100 Percent Acquisition at Book Value

| Elimination Entries            |           |           | n Entries |         |              |
|--------------------------------|-----------|-----------|-----------|---------|--------------|
|                                | Peerless  | Special   |           |         |              |
|                                | Products  | Foods     | DR        | CR      | Consolidated |
| Income Statement               |           |           |           |         |              |
| Sales                          | 450,000   | 300,000   |           |         | 750,000      |
| Less: COGS                     | (180,000) | (160,000) |           |         | (340,000)    |
| Less: Depreciation Expense     | (50,000)  | (20,000)  |           |         | (70,000)     |
| Less: Other Expenses           | (60,000)  | (45,000)  |           |         | (105,000)    |
| Income from Special Foods      | 40,000    |           | 40,000    |         | 0            |

| LO 2-7      | Q2-22 | Why is the beginning retained earnings balance for each company entered in the three-part consolidation worksheet rather than just the ending balance? |

#### Cases

LO 2-2, 2-3

#### C2-1A Choice of Accounting Method

#### **Understanding**

Slanted Building Supplies purchased 32 percent of the voting shares of Flat Flooring Company in March 20X3. On December 31, 20X3, the officers of Slanted Building Supplies indicated they needed advice on whether to use the equity method or cost method in reporting their ownership in Flat Flooring.

#### Required

- a. What factors should be considered in determining whether equity-method reporting is appropriate?
- b. Which of the two methods is likely to show the larger reported contribution to Slanted's earnings in 20X4? Explain.
- c. Why might the use of the equity method become more appropriate as the percentage of ownership increases?

#### LO 2-2, 2-3

#### **C2-2** Intercorporate Ownership

#### Research

Most Company purchased 90 percent of the voting common stock of Port Company on January 1, 20X4, and 15 percent of the voting common stock of Adams Company on July 1, 20X4. In preparing the financial statements for Most Company at December 31, 20X4, you discover that Port Company purchased 10 percent of the common stock of Adams Company in 20X2 and continues to hold those shares. Adams Company reported net income of \$200,000 for 20X4 and paid a dividend of \$70,000 on December 20, 20X4.

#### Required

Most Company's chief accountant instructs you to review the Accounting Standards Codification and prepare a memo discussing whether the cost or equity method should be used in reporting the investment in Adams Company in Most's consolidated statements prepared at December 31, 20X4. Support your recommendations with citations and quotations from the authoritative financial reporting standards or other literature.

#### LO 2-2, 2-3

#### C2-3A **Application of the Equity Method**

#### Research

Forth Company owned 85,000 of Brown Company's 100,000 shares of common stock until January 1, 20X2, at which time it sold 70,000 of the shares to a group of seven investors, each of whom purchased 10,000 shares. On December 3, 20X2, Forth received a dividend of \$9,000 from Brown. Forth continues to purchase a substantial portion of Brown's output under a contract that runs until the end of 20X9. Because of this arrangement, Forth is permitted to place two of its employees on Brown's board of directors.

Forth Company's controller is not sure whether the company should use the cost or equity method in accounting for its investment in Brown Company. The controller asked you to review the relevant accounting literature and prepare a memo containing your recommendations. Support your recommendations with citations and quotations from the Accounting Standards Codification.

#### LO 2-6, 2-7

#### **Need for Consolidation Process**

#### Communication

At a recent staff meeting, the vice president of marketing appeared confused. The controller had assured him that the parent company and each of the subsidiary companies had properly accounted for all transactions during the year. After several other questions, he finally asked, "If it has been done properly, then why must you spend so much time and make so many changes to the amounts reported by the individual companies when you prepare the consolidated financial statements each month? You should be able to just add the reported balances together."

#### Required

Prepare an appropriate response to help the controller answer the marketing vice president's question.

#### LO 2-1

#### **Account Presentation** C2-5

#### Research

Prime Company has been expanding rapidly and is now an extremely diversified company for its size. It currently owns three companies with manufacturing facilities, two companies primarily in retail sales, a consumer finance company, and two natural gas pipeline companies. This has led to some conflict between the company's chief accountant and its treasurer. The treasurer advocates presenting no more than five assets and three liabilities on its balance sheet. The chief accountant has resisted combining balances from substantially different subsidiaries and has asked for your assistance.

#### Required

Research the Accounting Standards Codification to see what guidance is provided and prepare a memo to the chief accountant with your findings. Include citations to and quotations from the most relevant references. Include in your memo at least two examples of situations in which it may be inappropriate to combine similar-appearing accounts of two subsidiaries.

#### LO 2-6, 2-7

#### Consolidating an Unprofitable Subsidiary

#### Research

Amazing Chemical Corporation's president had always wanted his own yacht and crew and concluded that Amazing Chemical should diversify its investments by purchasing an existing boatyard and repair facility on the lakeshore near his summer home. He could then purchase a yacht and have a convenient place to store it and have it repaired. Although the board of directors was never formally asked to approve this new venture, the president moved forward with optimism and a rather substantial amount of corporate money to purchase full ownership of the boatyard, which had lost rather significant amounts of money each of the five prior years and had never reported a profit for the original owners.

Not surprisingly, the boatyard continued to lose money after Amazing Chemical purchased it, and the losses grew larger each month. Amazing Chemical, a very profitable chemical company, reported net income of \$780,000 in 20X2 and \$850,000 in 20X3 even though the boatyard reported net losses of \$160,000 in 20X2 and \$210,000 in 20X3 and was fully consolidated.

#### Required

Amazing Chemical's chief accountant has become concerned that members of the board of directors or company shareholders will accuse him of improperly preparing the consolidated statements. The president does not plan to tell anyone about the losses, which do not show up in the consolidated income statement that the chief accountant prepared. You have been asked to prepare a memo to the chief accountant indicating the way to include subsidiaries in the consolidated income statement and to provide citations to or quotations from the Accounting Standards Codification that would assist the chief accountant in dealing with this matter. You have also been asked to search the accounting literature to see whether any reporting requirements require disclosure of the boatyard in notes to the financial statements or in management's discussion and analysis.

#### Exercises

LO 2-2, 2-3

#### E2-1 Multiple-Choice Questions on Use of Cost and Equity Methods [AICPA Adapted]

Select the correct answer for each of the following questions.

1. Peel Company received a cash dividend from a common stock investment. Should Peel report an increase in the investment account if it uses the cost method or equity method of accounting?

|    | Cost | Equity |
|----|------|--------|
| a. | No   | No     |
| b. | Yes  | Yes    |
| С. | Yes  | No     |
| d. | No   | Yes    |

- 2. In 20X0, Neil Company held the following investments in common stock:
  - 25,000 shares of B&K Inc.'s 100,000 outstanding shares. Neil's level of ownership gives it the ability to exercise significant influence over the financial and operating policies
  - 6,000 shares of Amal Corporation's 309,000 outstanding shares.

During 20X0, Neil received the following distributions from its common stock investments:

| November 6    | \$30.000 cash dividend from B&K                      |
|---------------|--|
| 140VCIIIDCI O | 1 - 1  |
| November 11   | \$1,500 cash dividend from Amal                      |
| Movelliber 11 | \$1,500 cash dividend from Afrian                    |
| December 26   | 3 percent common stock dividend from Amal            |
|               | The closing price of this stock was \$115 per share. |

What amount of dividend revenue should Neil report for 20X0?

- a. \$1,500.
- b. \$4,200.
- c. \$31,500.
- d. \$34,200.
- 3. An investor uses the equity method to account for an investment in common stock. Assume that (1) the investor owns more than 50 percent of the outstanding common stock of the investee, (2) the investee company reports net income and declares dividends during the year, and (3) the investee's net income is more than the dividends it declares. How would the investor's investment in the common stock of the investee company under the equity method differ at year-end from what it would have been if the investor had accounted for the investment under the cost method?
  - a. The balance under the equity method is higher than it would have been under the cost method.
  - b. The balance under the equity method is lower than it would have been under the cost method.
  - c. The balance under the equity method is higher than it would have been under the cost method, but only if the investee company actually paid the dividends before year-end.
  - d. The balance under the equity method is lower than it would have been under the cost method, but only if the investee company actually paid the dividends before year-end.
- 4. A corporation exercises significant influence over an affiliate in which it holds a 40 percent common stock interest. If its affiliate completed a fiscal year profitably but paid no dividends, how would this affect the investor corporation?
  - a. Result in an increased current ratio.
  - b. Result in increased earnings per share.
  - c. Increase asset turnover ratios.
  - d. Decrease book value per share.

5. An investor in common stock received dividends in excess of the investor's share of investee's earnings subsequent to the date of the investment. How will the investor's investment account be affected by those dividends under each of the following methods?

|    | <b>Cost Method</b> | <b>Equity Method</b> |
|----|--------------------|----------------------|
| a. | No effect          | No effect            |
| b. | Decrease           | No effect            |
| с. | No effect          | Decrease             |
| d. | Decrease           | Decrease             |

- 6. An investor uses the cost method to account for an investment in common stock. A portion of the dividends received this year was in excess of the investor's share of the investee's earnings subsequent to the date of investment. The amount of dividend revenue that should be reported in the investor's income statement for this year would be
  - a. Zero.
  - b. The total amount of dividends received this year.
  - c. The portion of the dividends received this year that was in excess of the investor's share of investee's earnings subsequent to the date of investment.
  - d. The portion of the dividends received this year that was not in excess of the investor's share of the investee's earnings subsequent to the date of investment.

#### LO 2-4 **Multiple-Choice Questions on Intercorporate Investments**

Select the correct answer for each of the following questions.

- 1. Companies often acquire ownership in other companies using a variety of ownership arrangements. The investor should use equity-method reporting whenever
  - a. The investor purchases voting common stock of the investee.
  - b. The investor has significant influence over the operating and financing decisions of the
  - c. The investor purchases goods and services from the investee.
  - d. The carrying value of the investment is less than the market value of the investee's shares held by the investor.
- 2. The carrying amount of an investment in stock correctly accounted for under the equity method is equal to
  - a. The original price paid to purchase the investment.
  - b. The original price paid to purchase the investment plus cumulative net income plus cumulative dividends declared by the investee since the date the investment was acquired.
  - c. The original price paid to purchase the investment plus cumulative net income minus cumulative dividends declared by the investee since the date the investment was acquired.
  - d. The original price paid to purchase the investment minus cumulative net income minus cumulative dividends declared by the investee since the date the investment was acquired.

#### E2-3 Multiple-Choice Questions on Applying Equity Method [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. On January 2, 20X3, Kean Company purchased a 30 percent interest in Pod Company for \$250,000. Pod reported net income of \$100,000 for 20X3 and declared and paid a dividend of \$10,000. Kean accounts for this investment using the equity method. In its December 31, 20X3, balance sheet, what amount should Kean report as its investment in Pod?
  - a. \$160,000.
  - b. \$223,000.
  - c. \$340,000.
  - d. \$277,000.

LO 2-3

2. On January 1, 20X8, Mega Corporation acquired 10 percent of the outstanding voting stock of Penny Inc. On January 2, 20X9, Mega gained the ability to exercise significant influence over Penny's financial and operating decisions by acquiring an additional 20 percent of Penny's outstanding stock. The two purchases were made at prices proportionate to the value assigned to Penny's net assets, which equaled their carrying amounts. For the years ended December 31, 20X8 and 20X9, Penny reported the following:

|                | 20X8      | 20X9      |
|----------------|-----------|-----------|
| Dividends Paid | \$200,000 | \$300,000 |
| Net Income     | 600,000   | 650,000   |

In 20X9, what amounts should Mega report as current year investment income and as an adjustment, before income taxes, to 20X8 investment income?

|    | 20X9 Investment Income | Adjustment to 20X8<br>Investment Income |
|----|------------------------|---|
| a. | \$195,000              | \$160,000                               |
| b. | \$195,000              | \$100,000                               |
| с. | \$195,000              | \$ 40,000                               |
| d. | \$105,000              | \$ 40,000                               |

- 3. Investor Inc. owns 40 percent of Alimand Corporation. During the calendar year 20X5, Alimand had net earnings of \$100,000 and paid dividends of \$10,000. Investor mistakenly recorded these transactions using the cost method rather than the equity method of accounting. What effect would this have on the investment account, net earnings, and retained earnings, respectively?
  - a. Understate, overstate, overstate.
  - b. Overstate, understate, understate.
  - c. Overstate, overstate, overstate.
  - d. Understate, understate, understate.
- 4. A corporation using the equity method of accounting for its investment in a 40 percent-owned investee, which earned \$20,000 and paid \$5,000 in dividends, made the following entries:

| Investment in Investee | 8,000 |
|------------------------|-------|
| Income from Investee   | 8,000 |
| C. I                   | 2.000 |
| Cash                   | 2,000 |
| Dividend Revenue       | 2,000 |

What effect will these entries have on the investor's statement of financial position?

- a. Financial position will be fairly stated.
- b. Investment in the investee will be overstated, retained earnings understated.
- c. Investment in the investee will be understated, retained earnings understated.
- d. Investment in the investee will be overstated, retained earnings overstated.

#### **E2-4** Cost versus Equity Reporting

LO 2-4

Winston Corporation purchased 40 percent of the stock of Fullbright Company on January 1, 20X2, at underlying book value. The companies reported the following operating results and dividend payments during the first three years of intercorporate ownership:

|      | Winston Corporation |           | Fullbright ( | Company   |
|------|---------------------|-----------|--------------|-----------|
| Year | Operating Income    | Dividends | Net Income   | Dividends |
| 20X2 | \$100,000           | \$ 40,000 | \$70,000     | \$30,000  |
| 20X3 | 60,000              | 80,000    | 40,000       | 60,000    |
| 20X4 | 250,000             | 120,000   | 25,000       | 50,000    |

Compute the net income reported by Winston for each of the three years, assuming it accounts for its investment in Fullbright using (a) the cost method and (b) the equity method.

#### LO 2-2, 2-3

#### **Acquisition Price** E2-5

Phillips Company bought 40 percent ownership in Jones Bag Company on January 1, 20X1, at underlying book value. In 20X1, 20X2, and 20X3, Jones Bag reported the following:

| Year | Net Income | Dividends |
|------|------------|-----------|
| 20X1 | \$ 8,000   | \$15,000  |
| 20X2 | 12,000     | 10,000    |
| 20X3 | 20,000     | 10,000    |

The balance in Phillips Company's investment account on December 31, 20X3, was \$54,000.

#### Required

In each of the following independent cases, determine the amount that Phillips paid for its investment in Jones Bag stock assuming that Phillips accounted for its investment using the (a) cost method and (b) equity method.

#### LO 2-2, 2-3

#### **E2-6 Investment Income**

Ravine Corporation purchased 30 percent ownership of Valley Industries for \$90,000 on January 1, 20X6, when Valley had capital stock of \$240,000 and retained earnings of \$60,000. The following data were reported by the companies for the years 20X6 through 20X9:

|      | Operating Income,  | Net Income,       | <b>Dividends Declared</b> |          |
|------|--------------------|-------------------|---------------------------|----------|
| Year | Ravine Corporation | Valley Industries | Ravine                    | Valley   |
| 20X6 | \$140,000          | \$30,000          | \$ 70,000                 | \$20,000 |
| 20X7 | 80,000             | 50,000            | 70,000                    | 40,000   |
| 20X8 | 220,000            | 10,000            | 90,000                    | 40,000   |
| 20X9 | 160,000            | 40,000            | 100,000                   | 20,000   |

#### Required

- a. What net income would Ravine Corporation have reported for each of the years, assuming Ravine accounts for the intercorporate investment using (1) the cost method and (2) the equity
- b. Give all appropriate journal entries for 20X8 that Ravine made under both the cost and the equity methods.

#### LO 2-3

#### E2-7 **Investment Value**

Port Company purchased 30,000 of the 100,000 outstanding shares of Sund Company common stock on January 1, 20X2, for \$180,000. The purchase price was equal to the book value of the shares purchased. Sund reported the following:

| Year | Net Income | Dividends |
|------|------------|-----------|
| 20X2 | \$40,000   | \$25,000  |
| 20X3 | 30,000     |           |
| 20X4 | 5,000      |           |

Compute the amounts Port Company should report as the carrying values of its investment in Sund Company at December 31, 20X2, 20X3, and 20X4.

#### LO 2-2. 2-3 E2-8A **Income Reporting**

Grandview Company purchased 40 percent of the stock of Spinet Corporation on January 1, 20X8, at underlying book value. Spinet recorded the following income for 20X9:

| Income before Extraordinary Gain Extraordinary Gain | \$60,000<br>30,000 |
|---|--------------------|
| Net Income  | \$90,000           |

#### Required

Prepare all journal entries on Grandview's books for 20X9 to account for its investment in Spinet.

#### LO 2-4, 2-5 E2-9 Fair Value Method

Small Company reported 20X7 net income of \$40,000 and paid dividends of \$15,000 during the year. Mock Corporation acquired 20 percent of Small's shares on January 1, 20X7, for \$105,000. At December 31, 20X7, Mock determined the fair value of the shares of Small to be \$121,000. Mock reported operating income of \$90,000 for 20X7.

#### Reauired

Compute Mock's net income for 20X7 assuming it uses

- a. The cost method in accounting for its investment in Small.
- b. The equity method in accounting for its investment in Small.
- c. The fair value method in accounting for its investment in Small.

#### LO 2-3, 2-5 E2-10 Fair Value Recognition

Kent Company purchased 35 percent ownership of Lomm Company on January 1, 20X8, for \$140,000. Lomm reported 20X8 net income of \$80,000 and paid dividends of \$20,000. At December 31, 20X8, Kent determined the fair value of its investment in Lomm to be \$174,000.

#### Required

Give all journal entries recorded by Kent with respect to its investment in Lomm in 20X8 assuming

- a. The equity method.
- b. The fair value method.

#### **Investee with Preferred Stock Outstanding** LO 2-3, 2-5 E2-11A

Reden Corporation purchased 45 percent of Montgomery Company's common stock on January 1, 20X9, at underlying book value of \$288,000. Montgomery's balance sheet contained the following stockholders' equity balances:

| Preferred Stock (\$5 par value, 50,000 shares issued and outstanding) | \$250,000 |
|---|-----------|
| Common Stock (\$1 par value, 150,000 shares issued and outstanding)   | 150,000   |
| Additional Paid-In Capital  | 180,000   |
| Retained Earnings   | 310,000   |
| Total Stockholders' Equity  | \$890,000 |

Montgomery's preferred stock is cumulative and pays a 10 percent annual dividend. Montgomery reported net income of \$95,000 for 20X9 and paid total dividends of \$40,000.

Give the journal entries recorded by Reden Corporation for 20X9 related to its investment in Montgomery Company common stock.

#### LO 2-2, 2-3

#### Other Comprehensive Income Reported by Investee E2-12A

Callas Corporation paid \$380,000 to acquire 40 percent ownership of Thinbill Company on January 1, 20X9. The amount paid was equal to Thinbill's underlying book value. During 20X9, Thinbill reported operating income of \$45,000 and an increase of \$20,000 in the market value of available-for-sale securities held for the year. Thinbill paid dividends of \$9,000 on December 10, 20X9.

#### Required

Give all journal entries that Callas Corporation recorded in 20X9, including closing entries at December 31, 20X9, associated with its investment in Thinbill Company.

#### LO 2-2, 2-3

#### E2-13A Other Comprehensive Income Reported by Investee

Baldwin Corporation purchased 25 percent of Gwin Company's common stock on January 1, 20X8, at underlying book value. In 20X8, Gwin reported a net loss of \$20,000 and paid dividends of \$10,000, and in 20X9, The company reported net income of \$68,000 and paid dividends of \$16,000. Gwin also purchased marketable securities classified as available-for-sale on February 8, 20X9, and reported an increase of \$12,000 in their fair value at December 31, 20X9. Baldwin reported a balance of \$67,000 in its investment in Gwin at December 31, 20X9.

#### Required

Compute the amount paid by Baldwin Corporation to purchase the shares of Gwin Company.

#### LO 2-7

#### E2-14 **Basic Elimination Entry**

On December 31, 20X3, Broadway Corporation reported common stock outstanding of \$200,000, additional paid-in capital of \$300,000, and retained earnings of \$100,000. On January 1, 20X4, Johe Company acquired control of Broadway in a business combination.

#### Required

Give the elimination entry that would be needed in preparing a consolidated balance sheet immediately following the combination if Johe acquired all of Broadway's outstanding common stock for \$600,000.

#### LO 2-6, 2-7

#### **Balance Sheet Worksheet** E2-15

Blank Corporation acquired 100 percent of Faith Corporation's common stock on December 31, 20X2, for \$150,000. Data from the balance sheets of the two companies included the following amounts as of the date of acquisition:

| Item                                     | Blank<br>Corporation | Faith<br>Corporation |
|--|----------------------|----------------------|
| Cash                                     | \$ 65,000            | \$ 18,000            |
| Accounts Receivable                      | 87,000               | 37,000               |
| Inventory                                | 110,000              | 60,000               |
| Buildings & Equipment (net)              | 220,000              | 150,000              |
| Investment in Faith Corporation Stock    | 150,000              |                      |
| Total Assets                             | <u>\$632,000</u>     | \$265,000            |
| Accounts Payable                         | \$ 92,000            | \$ 35,000            |
| Notes Payable                            | 150,000              | 80,000               |
| Common Stock                             | 100,000              | 60,000               |
| Retained Earnings                        | 290,000              | 90,000               |
| Total Liabilities & Stockholders' Equity | \$632,000            | \$265,000            |

At the date of the business combination, the book values of Faith's net assets and liabilities approximated fair value. Assume that Faith Corporation's accumulated depreciation on buildings and equipment on the acquisition date was \$30,000.

- a. Give the elimination entry or entries needed to prepare a consolidated balance sheet immediately following the business combination.
- b. Prepare a consolidated balance sheet worksheet.

#### LO 2-3, 2-7 **E2-16** Consolidation Entries for Wholly Owned Subsidiary

Trim Corporation acquired 100 percent of Round Corporation's voting common stock on January 1, 20X2, for \$400,000. At that date, the book values and fair values of Round's assets and liabilities were equal. Round reported the following summarized balance sheet data:

| Assets | \$700,000        | Accounts Payable  | \$100,000        |
|--------|------------------|-------------------|------------------|
|        |                  | Bonds Payable     | 200,000          |
|        |                  | Common Stock      | 120,000          |
|        |                  | Retained Earnings | 280,000          |
| Total  | <u>\$700,000</u> | Total             | <u>\$700,000</u> |

Round reported net income of \$80,000 for 20X2 and paid dividends of \$25,000.

#### Required

- a. Give the journal entries recorded by Trim Corporation during 20X2 on its books if Trim accounts for its investment in Round using the equity method.
- b. Give the elimination entries needed at December 31, 20X2, to prepare consolidated financial statements.

#### LO 2-3, 2-7 E2-17 **Basic Consolidation Entries for Fully Owned Subsidiary**

Amber Corporation reported the following summarized balance sheet data on December 31, 20X6:

| Assets | \$600,000        | Liabilities                       | \$100,000          |
|--------|------------------|-----------------------------------|--------------------|
|        |                  | Common Stock<br>Retained Earnings | 300,000<br>200,000 |
| Total  | <u>\$600,000</u> | Total                             | \$600,000          |

On January 1, 20X7, Purple Company acquired 100 percent of Amber's stock for \$500,000. At the acquisition date, the book values and fair values of Amber's assets and liabilities were equal. Amber reported net income of \$50,000 for 20X7 and paid dividends of \$20,000.

#### Required

- a. Give the journal entries recorded by Purple on its books during 20X7 if it accounts for its investment in Amber using the equity method.
- b. Give the elimination entries needed on December 31, 20X7, to prepare consolidated financial statements.

#### **Problems**

LO 2-2, 2-3

#### P2-18 **Retroactive Recognition**

Idle Corporation has been acquiring shares of Fast Track Enterprises at book value for the last several years. Fast Track provided data including the following:

|            | 20X2     | 20X3     | 20X4     | 20X5     |
|------------|----------|----------|----------|----------|
| Net Income | \$40,000 | \$60,000 | \$40,000 | \$50,000 |
| Dividends  | 20,000   | 20,000   | 10,000   | 20,000   |

Fast Track declares and pays its annual dividend on November 15 each year. Its net book value on January 1, 20X2, was \$250,000. Idle purchased shares of Fast Track on three occasions:

| Date            | Percent of Ownership<br>Purchased | Amount<br>Paid |
|-----------------|-----------------------------------|----------------|
| January 1, 20X2 | 10%                               | \$25,000       |
| July 1, 20X3    | 5                                 | 15,000         |
| January 1, 20X5 | 10                                | 34,000         |

#### Required

Give the journal entries to be recorded on Idle's books in 20X5 related to its investment in Fast

#### LO 2-4, 2-5

#### P2-19 **Fair Value Method**

Gant Company purchased 20 percent of the outstanding shares of Temp Company for \$70,000 on January 1, 20X6. The following results are reported for Temp Company:

|                                    | 20X6     | 20X7     | 20X8     |
|------------------------------------|----------|----------|----------|
| Net income                         | \$40,000 | \$35,000 | \$60,000 |
| Dividends paid                     | 15,000   | 30,000   | 20,000   |
| Fair value of shares held by Gant: |          |          |          |
| January 1                          | 70,000   | 89,000   | 86,000   |
| December 31                        | 89,000   | 86,000   | 97,000   |
|                                    |          |          |          |

#### Required

Determine the amounts reported by Gant as income from its investment in Temp for each year and the balance in Gant's investment in Temp at the end of each year assuming that Gant uses the following methods in accounting for its investment in Temp:

- a. Cost method.
- b. Equity method
- c. Fair value method.

#### **Fair Value Journal Entries** P2-20

Marlow Company acquired 40 percent of the voting shares of Brown Company on January 1, 20X8, for \$85,000. The following results are reported for Brown Company:

|                                      | 20X8     | 20X9     |
|--------------------------------------|----------|----------|
| Net income                           | \$20,000 | \$30,000 |
| Dividends paid                       | 10,000   | 15,000   |
| Fair value of shares held by Marlow: |          |          |
| January 1                            | 85,000   | 97,000   |
| December 31                          | 97,000   | 92,000   |

#### Required

Give all journal entries recorded by Marlow for 20X8 and 20X9 assuming that it uses the fair value method in accounting for its investment in Brown.

# LO 2-5

#### P2-21A Other Comprehensive Income Reported by Investee

Dewey Corporation owns 30 percent of the common stock of Jimm Company, which it purchased at underlying book value on January 1, 20X5. Dewey reported a balance of \$245,000 for its investment in Jimm Company on January 1, 20X5, and \$276,800 at December 31, 20X5. During 20X5, Dewey and Jimm Company reported operating income of \$340,000 and \$70,000, respectively. Jimm received dividends from investments in marketable equity securities in the amount of \$7,000 during 20X5. It also reported an increase of \$18,000 in the market value of its portfolio of trading securities and an increase in the value of its portfolio of securities classified as available-for-sale. Jimm paid dividends of \$20,000 in 20X5. Ignore income taxes in determining your solution.

#### Required

- a. Assuming that Dewey uses the equity method in accounting for its investment in Jimm, compute the amount of income from Jimm recorded by Dewey in 20X5.
- b. Compute the amount reported by Jimm as other comprehensive income in 20X5.
- c. If all of Jimm's other comprehensive income arose solely from its investment in available-forsale securities purchased on March 10, 20X5, for \$130,000, what was the market value of those securities at December 31, 20X5?

#### **Equity-Method Income Statement** P2-22A

Wealthy Manufacturing Company purchased 40 percent of the voting shares of Diversified Products Corporation on March 23, 20X4. On December 31, 20X8, Wealthy Manufacturing's controller attempted to prepare income statements and retained earnings statements for the two companies using the following summarized 20X8 data:

|                           | Wealthy<br>Manufacturing | Diversified<br>Products |
|---------------------------|--------------------------|-------------------------|
| Net Sales                 | \$850,000                | \$400,000               |
| Cost of Goods Sold        | 670,000                  | 320,000                 |
| Other Expenses            | 90,000                   | 25,000                  |
| Dividends Declared & Paid | 30,000                   | 10,000                  |
| Retained Earnings, 1/1/X8 | 420,000                  | 260,000                 |

Wealthy Manufacturing uses the equity method in accounting for its investment in Diversified Products. The controller was also aware of the following specific transactions for Diversified Products in 20X8, which were not included in the preceding data:

- 1. On June 30, 20X8, Diversified incurred a \$5,000 extraordinary loss from a volcanic eruption near its Greenland facility.
- 2. Diversified sold its entire Health Technologies division on September 30, 20X8, for \$375,000. The book value of Health Technologies division's net assets on that date was \$331,000. The division incurred an operating loss of \$15,000 in the first nine months of 20X8.
- 3. During 20X8, Diversified sold one of its delivery trucks after it was involved in an accident and recorded a gain of \$10,000.

#### Required

- a. Prepare an income statement and retained earnings statement for Diversified Products for 20X8.
- b. Prepare an income statement and retained earnings statement for Wealthy Manufacturing for 20X8.

#### LO 2-3, 2-6, 2-7 **P2-23** Consolidated Worksheet at End of the First Year of Ownership (Equity Method)

Peanut Company acquired 100 percent of Snoopy Company's outstanding common stock for \$300,000 on January 1, 20X8, when the book value of Snoopy's net assets was equal to \$300,000. Peanut uses the equity method to account for investments. Trial balance data for Peanut and Snoopy as of December 31, 20X8, are as follows:

LO 2-3, 2-7

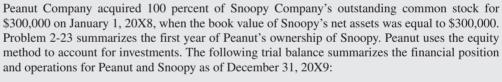

|   | Peanut C              | Company                      | Snoopy              | Company                 |

# THE COLLAPSE OF ENRON AND THE BIRTH OF A NEW PARADIGM

In February 2001, *Fortune* magazine named Enron the most innovative company in America for the sixth year in a row. Ten months later on December 2, 2001, Enron filed for bankruptcy, making it, at that time, the largest bankruptcy in history. What was the cause of this drastic turnaround? Did Enron just throw in the towel after six years of "innovation" and decide to call it quits? Sadly, this was not the case; something much more serious caused Enron's historic fall.

Enron came into being in 1985 when InterNorth acquired Houston Natural Gas. Originally, the company was headquartered in Omaha, but shortly after Kenneth Lay took over as CEO of the company, he moved its headquarters to Houston. Enron was originally in the business of transmitting electricity and natural gas throughout the United States, which it accomplished through its extensive network of pipelines and power plants. These types of services made up the bulk of Enron's revenues until management decided to branch out. In 1990, Enron began to serve as an intermediary for gas contracts.

Energy and gas prices have traditionally been extremely volatile. Companies didn't want to sign long-term contracts because of the large fluctuations in these prices. Enron would buy 30-day gas contracts from a variety of suppliers and then bundle these contracts to offer long-term prices to local utility companies. Basically, Enron accepted the price risk in exchange for a fee. Over time, the wholesale trading of energy contracts became an increasingly important part of Enron's business, as illustrated in the figure on the next page. For the 2000 fiscal year, Enron reported revenues of \$93 billion from these "wholesale" activities and only \$2.7 billion from its traditional piping business.

Even with these extreme revenues, Enron was forced to file for bankruptcy at the end of 2001. How did this happen? Enron used two clever accounting tricks to inflate its performance. First, managers used special-purpose entities (SPEs) to hide losses and move liabilities and impaired assets off Enron's books. We discuss SPEs in detail in this chapter. Second, Enron "grossed" up its revenues to make its performance look better than it actually was. That is, Enron reported the total value of the trades it facilitated, not just its fee for its wholesale services.

As a result of Enron's bankruptcy and the demise of its auditor, Arthur Andersen, more than 100,000 jobs were lost along with billions of dollars of investors' money. Accounting policies can have a significant influence on the economy. As Enron showed, careful manipulation of even a few simple rules can have catastrophic effects on individuals and on the global economy. This chapter introduces new accounting rules (resulting from this and other accounting scandals) for determining when a business entity must be consolidated. It also explores how the basic consolidation process differs when a subsidiary is only partially owned instead of wholly owned as discussed in Chapter 2.

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 3-1 Understand and explain the usefulness and limitations of consolidated financial statements.
- LO 3-2 Understand and explain how direct and indirect control influence the consolidation of a subsidiary.
- LO 3-3 Understand and explain differences in the consolidation process when the subsidiary is not wholly owned.
- LO 3-4 Make calculations and prepare basic elimination entries for the consolidation of a less-than-wholly-owned subsidiary.
- LO 3-5 Prepare a consolidation worksheet for a less-than-wholly-owned subsidiary.
- LO 3-6 Understand and explain the purpose of combined financial statements and how they differ from consolidated financial statements.
- LO 3-7 Understand and explain rules related to the consolidation of variable interest entities.
- LO 3-8 Understand and explain differences in consolidation rules under U.S. GAAP and IFRS.

#### THE USEFULNESS OF CONSOLIDATED FINANCIAL STATEMENTS

LO 3-1

Understand and explain the usefulness and limitations of consolidated financial statements

Chapter 2 provides a basic introduction to the consolidation process and introduces an example of a basic consolidation. This chapter expands the discussion by exploring more complex situations in which the parent company does not have complete ownership of the subsidiary. Companies provide consolidated financial statements primarily for parties having a long-run interest in the parent company, including the parent's shareholders, creditors, and other resource providers. Consolidated statements often provide the only means of obtaining a clear picture of the total resources of the combined entity that are under the parent's control and the results of employing those resources. Especially when the number of related companies is substantial, consolidated statements are the only way to conveniently summarize the vast amount of information relating to the individual companies and how the financial positions and operations of these companies affect the overall consolidated entity.

Current and prospective stockholders of the parent company are usually more interested in the consolidated financial statements than those of the individual companies because the well-being of the parent company is affected by its subsidiaries' operations. When subsidiaries are profitable, profits accrue to the parent. However, the parent cannot escape the ill effects of unprofitable subsidiaries. By examining the consolidated statements, owners and potential owners are better able to assess how effectively management employs all the resources under its control.

The parent's long-term creditors also find the consolidated statements useful because the effects of subsidiary operations on the overall health and future of the parent are relevant to their decisions. In addition, although the parent and its subsidiaries are separate companies, the parent's creditors have an indirect claim on the subsidiaries' assets. The parent's short-term creditors, however, even though they also have an indirect claim on the subsidiaries' assets, are usually more interested in the parent's immediate solvency rather than its long-term profitability. Accordingly, they tend to rely more on the parent's separate financial statements, especially the balance sheet.

The parent company's management has a continuing need for current information about the combined operations of the consolidated entity in addition to details about the individual companies forming the consolidated entity. For example, some of the individual subsidiaries might have substantial volatility in their operations. As a result, the manager may not be able to fully understand the overall impact of the activities for the period until the operating results and balance sheets are combined into consolidated financial statements. On the other hand, information about individual companies within the consolidated entity also may be useful. For example, it may allow a manager to offset a cash shortfall in one subsidiary with excess cash from another without resorting to costly outside borrowing. The parent company's management may be particularly concerned with the consolidated financial statements because top management generally is evaluated, and sometimes compensated, based on the overall performance of the entity as reflected in the consolidated statements.

#### LIMITATIONS OF CONSOLIDATED FINANCIAL STATEMENTS

Although consolidated financial statements are useful, their limitations also must be kept in mind. Some information is lost any time data sets are aggregated; this is particularly true when the information involves an aggregation across companies that have substantially different operating characteristics. Some of the more important limitations of consolidated financial statements are:

1. The masking of poor performance: Because the operating results and financial position of individual companies included in the consolidation are not disclosed, the poor performance or financial position of one or more companies may be hidden by the good performance and financial position of others.

- 2. Limited availability of resources: Not all of the consolidated retained earnings balance is necessarily available for dividends of the parent because a portion may represent the parent's share of undistributed subsidiary earnings. Similarly, because the consolidated statements include the subsidiary's assets, not all assets shown are available for dividend distributions of the parent company.
- 3. Unrepresentative combined financial ratios: Because financial ratios based on the consolidated statements are calculated on aggregated information, they are not necessarily representative of any single company in the consolidation, including the parent.
- 4. A lack of uniformity: Similar accounts of different companies that are combined in the consolidation may not be entirely comparable. For example, the length of operating cycles of different companies may vary, causing receivables of similar length to be classified differently.
- 5. The lack of detailed disclosures: Additional information about individual companies or groups of companies included in the consolidation often is necessary for a fair presentation; such additional disclosures may require voluminous footnotes.

# SUBSIDIARY FINANCIAL STATEMENTS

Some financial statement users may be interested in the separate financial statements of individual subsidiaries, either instead of or in addition to consolidated financial statements. Although the parent company's management is concerned with the entire consolidated entity as well as individual subsidiaries, the creditors, preferred stockholders, and noncontrolling common stockholders of subsidiary companies are most interested in the separate financial statements of the subsidiaries in which they have an interest. Because subsidiaries are legally separate from their parents, a subsidiary's creditors and stockholders generally have no claim on the parent and the subsidiary's stockholders do not share in the parent's profits unless the parent has provided guarantees or entered into other arrangements for the benefit of the subsidiaries. Therefore, consolidated financial statements usually are of little use to those interested in obtaining information about the assets, capital, or income of individual subsidiaries.

#### CONSOLIDATED FINANCIAL STATEMENTS: CONCEPTS AND STANDARDS

LO 3-2

Understand and explain how direct and indirect control influence the consolidation of a subsidiary.

Consolidated financial statements are intended to provide a meaningful representation of the overall financial position and activities of a single economic entity comprising a number of related companies. Under current standards, subsidiaries must be consolidated unless the parent is precluded from exercising control. When it is not appropriate to consolidate a subsidiary, it is reported as an intercompany investment (ASC 810-10-10, 15, 25). Under current standards, subsidiaries must be consolidated unless the parent is precluded from exercising control. When it is not appropriate to consolidate a subsidiary, it is reported as an intercorporate investment.

# **Traditional View of Control**

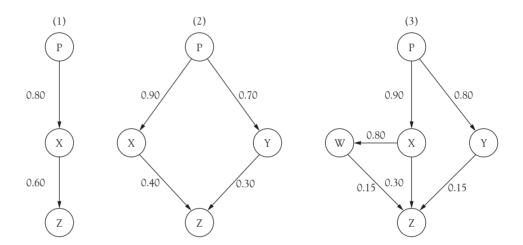

Over the years, the concept of control has been the single most important criterion for determining when an individual subsidiary should be consolidated. ASC 810-10-10-10 indicates that consolidated financial statements normally are appropriate for a group of companies when one company "has a controlling financial interest in the other companies." It also states that "the usual condition for a controlling financial interest is ownership of a majority voting interest. . . ." In practice, control has been determined by the proportion of voting shares of a company's stock owned directly or indirectly by another company. This criterion was formalized by ASC 810-10-15, which requires consolidation of all majority-owned subsidiaries unless the parent is unable to exercise control.

Although majority ownership is the most common means of acquiring control, a company may be able to direct the operating and financing policies of another with less than majority ownership, such as when the remainder of the stock is widely held. ASC 810-10-15 does not preclude consolidation with less than majority ownership, but the consolidation of less-than-majority-owned subsidiaries is very rare in practice. More directly, ASC 810-10-55 indicates that control can be obtained without majority ownership of a company's common stock.

# Indirect Control<sup>1</sup>

The traditional view of control includes both direct and indirect control. Direct control typically occurs when one company owns a majority of another company's common stock. *Indirect control* or pyramiding occurs when a company's common stock is owned by one or more other companies that are all under common control. In each of the following examples, P Company controls Z Company. However, in each case, P Company does not own a direct interest in Z. Instead, P controls Z indirectly through the ownership of other companies.

# **FYI**

In 2005, consumer products giant Procter & Gamble completed one of its largest acquisitions in company history when it acquired Gillette for \$57 billion. As a result, Procter & Gamble also gained indirect control over the subsidiaries controlled by Gillette, such as Braun.

In (1), P owns 80 percent of X, which owns 60 percent of Z. Because P controls X and X controls Z, P indirectly controls Z. In (2), P owns 90 percent of X and 70 percent of Y; X owns 40 percent of Z; Y owns 30 percent of Z. Because P controls both X and Y and they, in turn, jointly control Z (with a combined ownership of 70 percent), P effectively controls

Z through its two subsidiaries. In (3), P owns 90 percent of X and 80 percent of Y; X owns 80 percent of W and 30 percent of Z; Y owns 15 percent of Z; W owns 15 percent of Z. Because P controls both X and Y and they, in turn, jointly control Z (with a combined control of 60 percent—15 percent of which comes through X's subsidiary W), P effectively controls Z through its two subsidiaries. In each case, P controls Z through its subsidiaries.

#### **Ability to Exercise Control**

Under certain circumstances, a subsidiary's majority stockholders may not be able to exercise control even though they hold more than 50 percent of its outstanding voting stock. This might occur, for instance, if the subsidiary was in legal reorganization or in bankruptcy; although the parent might hold majority ownership, control would rest

<sup>&</sup>lt;sup>1</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

with the courts or a court-appointed trustee. Similarly, if the subsidiary were located in a foreign country and that country had placed restrictions on the subsidiary that prevented the remittance of profits or assets back to the parent company, consolidation of that subsidiary would not be appropriate because of the parent's inability to control important aspects of the subsidiary's operations.

#### **Differences in Fiscal Periods**

A difference in the fiscal periods of a parent and subsidiary should not preclude consolidation of that subsidiary. Often the subsidiary's fiscal period, if different from the parent's, is changed to coincide with that of the parent. Another alternative is to adjust the financial statement data of the subsidiary each period to place the data on a basis consistent with the parent's fiscal period. Both the Securities and Exchange Commission and current accounting standards permit the consolidation of a subsidiary's financial statements without adjusting the fiscal period of the subsidiary if that period does not differ from the parent's by more than three months and if recognition is given to intervening events that have a material effect on financial position or results of operations.

# Changing Concept of the Reporting Entity

For nearly three decades beginning in the 1960s, little change was observed in the authoritative literature governing consolidation policies. However, since that time, many changes occurred in the business environment, including widespread diversification of companies and the increased emphasis on financial services by manufacturing and merchandising companies (such as General Electric and Harley-Davidson).

In addition, the criteria used in determining whether to consolidate specific subsidiaries were subject to varying interpretations. Companies exercised great latitude in selecting which subsidiaries to consolidate and which to report as intercorporate investments. The lack of consistency in consolidation policy became of increasing concern as many manufacturing and merchandising companies engaged in "off-balance sheet financing" by borrowing heavily through finance subsidiaries and then excluding those subsidiaries from consolidation.

In 1982, the FASB began a project aimed at developing a comprehensive consolidation policy. The guidance in ASC 810-10-15 was developed in 1987, requiring the consolidation of all majority-owned subsidiaries. The intent was to eliminate the inconsistencies found in practice until a more comprehensive standard could be issued. Unfortunately, the issues have been more difficult to resolve than anticipated. After grappling with these issues for more than two decades, the FASB has still been unable to provide a comprehensive consolidation policy.

# **CAUTION**

On December 13, 2011, the FASB released another update regarding the comprehensive consolidation policies and procedures. In this release, the FASB addressed additional issues specifically related to the deconsolidation of a subsidiary and overall changes in ownership of a subsidiary. According to its Current Technical Plan (12/13/11), the FASB plans to submit a Final Conceptual Framework chapter regarding consolidation in the second half of 2012 (visit www.fasb.org for more information).

Completion of the FASB's consolidation project has been hampered by, among other things, the inability to resolve issues related to two important concepts: (1) control and (2) the reporting entity. Regarding the first issue, the FASB has attempted to move beyond the traditional notion of control based on majority ownership of common stock to requiring consolidation of entities under effective control. This idea reflects the ability to direct the policies of another entity even though majority ownership is lacking. Adopting the concept of effective

control can lead to the consolidation of companies in which little or even no ownership is held and to the consolidation of entities other than corporations, such as partnerships and trusts. Although the FASB has indicated in ASC 805-10-55 that control can be achieved without majority ownership, a comprehensive consolidation policy has yet to be achieved.

With respect to the second issue, defining the accounting entity would go a long way toward resolving the issue of when to prepare consolidated financial statements and what entities should be included. Unfortunately, the FASB has found both the entity and control issues so complex that they are not easily resolved and require further study. Accordingly, the FASB issued guidance dealing (ASC 810) with selected issues related to consolidated financial statements, leaving a comprehensive consolidation policy until a later time.

# NONCONTROLLING INTEREST

LO 3-3

Understand and explain differences in the consolidation process when the subsidiary is not wholly owned.

A parent company does not always own 100 percent of a subsidiary's outstanding common stock. The parent may have acquired less than 100 percent of a company's stock in a business combination, or it may originally have held 100 percent but sold or awarded some shares to others. For the parent to consolidate the subsidiary, only a controlling interest is needed. Those shareholders of the subsidiary other than the parent are referred to as "noncontrolling" or "minority" shareholders. The claim of these shareholders on the income and net assets of the subsidiary is referred to as the noncontrolling interest or the *minority interest*.<sup>2</sup> Throughout this chapter and in subsequent chapters, whenever the acquired company is less-than-wholly-owned, we will frequently refer to the noncontrolling interest shareholders as the "NCI shareholders." The NCI shareholders clearly have a claim on the subsidiary's assets and earnings through their stock ownership. Because 100 percent of a subsidiary's assets, liabilities, and earnings is included in the consolidated financial statements, regardless of the parent's percentage ownership, the NCI shareholders' claim on these items must be reported.

# Computation and Presentation of Noncontrolling Interest

In uncomplicated situations, the noncontrolling interest's share of consolidated net income is a simple proportionate share of the subsidiary's net income. For example, if a subsidiary has net income of \$150,000 and the NCI shareholders own 10 percent of the subsidiary's common stock, their share of income is \$15,000 ( $$150,000 \times 0.10$ ).

The NCI shareholders' claim on the net assets of the subsidiary is based on the acquisition-date fair value of the noncontrolling interest, adjusted over time for a proportionate share of the subsidiary's income and dividends. We discuss the noncontrolling interest in more detail in Chapter 5.

Historically, the portion of the subsidiary's net income assigned to the noncontrolling interest normally has been deducted from the combined earnings of the entire entity (including both the parent and subsidiary) to arrive at consolidated net income in the consolidated income statement. The label "consolidated net income" has sometimes been used in the past to refer to the parent's share of the consolidated entity's income. Even though income assigned to the noncontrolling interest does not meet the definition of an expense, it normally has been accorded this expense-type treatment.

The FASB's new standard on reporting noncontrolling interests, ASC 810-10-50, requires that the term "consolidated net income" be applied to the income available to all stockholders, with the allocation of that income between the controlling and noncontrolling stockholders included in the consolidated income statement. For example, assume that Parent Company owns 90 percent of Sub Company's stock, acquired without a differential, and that the two companies report revenues and expenses as follows:

|          | Parent    | Sub       |
|----------|-----------|-----------|
| Revenues | \$300,000 | \$100,000 |
| Expenses | 225,000   | 65,000    |

<sup>&</sup>lt;sup>2</sup> Although the term "minority interest" was commonly used in the past, **ASC 805-10-20** replaces this term with "noncontrolling interest." The FASB's intent is that the term "noncontrolling interest" be used going forward. Thus, we use this term consistently throughout this and future chapters.

An abbreviated consolidated income statement for Parent and its subsidiary would appear as follows:

| Revenues                                    | \$400,000 |
|---|-----------|
| Expenses                                    | (290,000) |
| Consolidated net income                     | \$110,000 |
| Less: Consolidated net income attributable  |           |
| to the noncontrolling interest in Sub       |           |
| Company                                     | (3,500)   |
| Consolidated net income attributable to the |           |
| controlling interest in Sub Company         | \$106,500 |

The noncontrolling interest's claim on the net assets of the subsidiary was previously reported in the balance sheet most frequently in the "mezzanine" between liabilities and stockholders' equity. Some companies reported the noncontrolling interest as a liability, although it clearly did not meet the definition of a liability. ASC 810-10-55 makes clear that the noncontrolling interest's claim on net assets is an element of equity, not a liability. It requires reporting the noncontrolling interest in equity in the following manner:

| Controlling interest:                  |           |
|--|-----------|
| Common stock                           | \$700,000 |
| Additional paid-in capital             | 50,000    |
| Retained earnings                      | 80,000    |
| Total controlling interest             | \$830,000 |
| Noncontrolling interest in Sub Company | 75,000    |
| Total stockholders' equity             | \$905,000 |
|  |           |

In Berkshire Hathaway's 2011 consolidated income statement, the company reported total consolidated net income of \$10.75 billion, which included \$492 million in earnings attributable to noncontrolling interests. Additionally, Berkshire's 2011 consolidated balance sheet reported total noncontrolling interests in net assets of \$4.1 billion.

Several different consolidation theories that affect the computation and treatment of the noncontrolling interest have been proposed. These theories are discussed briefly in Appendix 3B.

# THE EFFECT OF A NONCONTROLLING INTEREST

#### LO 3-4

Make calculations and prepare basic elimination entries for the consolidation of a less-than-whollyowned subsidiary.

When a subsidiary is less than wholly owned, the general approach to consolidation is the same as discussed in Chapter 2, but the consolidation procedures must be modified slightly to recognize the noncontrolling interest. Thus, the difference between the consolidation procedures illustrated in Chapter 2 and what we will demonstrate here is that we now have to account for the NCI shareholders' ownership in the income and net assets of the acquired company. The following two-by-two matrix indicates that the only difference in consolidation in Chapter 3 relative to Chapter 2 is the separate recognition of the NCI shareholder share of income and net assets.

Before examining the specific procedures used in consolidating a less-than-whollyowned subsidiary, we discuss the computation of consolidated net income, consolidated retained earnings, and the noncontrolling interest's claim on income and net assets. We also discuss modifications to the consolidation worksheet.

|                         | Wholly owned subsidiary | Partially owned subsidiary |
|-------------------------|-------------------------|----------------------------|
| Investment = Book value | Chapter 2               | Chapter 3                  |
| Investment > Book value | Chapter 4               | Chapter 5                  |
|                         | No NCI<br>shareholders  | NCI<br>shareholders        |

### **Consolidated Net Income**

Consolidated net income, as it appears in the consolidated income statement, is the difference between consolidated revenues and expenses. In the absence of transactions between companies included in the consolidation, consolidated net income is equal to the parent's income from its own operations, excluding any investment income from consolidated subsidiaries, plus the net income from each of the consolidated subsidiaries.

When all subsidiaries are wholly owned, all of the consolidated net income accrues to the parent company, or the controlling interest. If one or more of the consolidated subsidiaries is less than wholly owned, a portion of the consolidated net income accrues to the NCI shareholders. In that case, the income attributable to the subsidiary's noncontrolling interest is deducted from consolidated net income on the face of the income statement to arrive at consolidated net income attributable to the controlling interest.

Income attributable to a noncontrolling interest in a subsidiary is based on a proportionate share of that subsidiary's net income. The subsidiary's net income available to common shareholders is divided between the parent and noncontrolling stockholders based on their relative common stock ownership of the subsidiary. Note that the NCI shareholders in a particular subsidiary have a proportionate claim only on the income of that subsidiary and not on the income of the parent or any other subsidiary.

As an example of the computation and allocation of consolidated net income, assume that Push Corporation purchases 80 percent of the stock of Shove Company for an amount equal to 80 percent of Shove's total book value. During 20X1, Shove reports net income of \$25,000, while Push reports net income of \$120,000, including equity-method income from Shove of \$20,000 (\$25,000  $\times$  0.80). Consolidated net income for 20X1 is computed and allocated as follows:

| Push's net income<br>Less: Equity-method income from Shove<br>Shove's net income | \$120,000<br>(20,000)<br>25,000 |
|--|---------------------------------|
|  | <u></u> _                       |
| Consolidated net income  | \$125,000                       |
| Income attributable to noncontrolling interest                                   | (5,000)                         |
| Income attributable to controlling interest                                      | <u>\$120,000</u>                |

Consolidated net income is equal to the separate income of Push from its own operations (\$100,000) plus Shove's net income (\$25,000). The \$20,000 of equity-method income from Shove that had been recognized by Push must be excluded from the computation to avoid double-counting the same income. Consolidated net income is allocated to the noncontrolling stockholders based on their 20 percent share of Shove's net income. The amount of income allocated to the controlling interest is equal to the parent's income from its own operations (\$100,000) and the parent's 80 percent share of Shove's income (\$20,000).

### **Consolidated Retained Earnings**

The retained earnings figure reported in the consolidated balance sheet is not entirely consistent with the computation of consolidated net income. Retained earnings in the consolidated balance sheet is that portion of the consolidated entity's undistributed earnings accruing to the parent's stockholders. Assuming that the parent company correctly uses the fully adjusted equity method to account for its investments, consolidated retained earnings should equal the parent's retained earnings. It is calculated by adding the parent's share of subsidiary cumulative net income since acquisition to the parent's retained earnings from its own operations (excluding any income from the subsidiary included in the parent's retained earnings) and subtracting the parent's share of any differential write-off. Any retained earnings related to subsidiary NCI shareholders is included in the Noncontrolling Interest in Net Assets of Subsidiary amount reported in the equity section of the consolidated balance sheet.

To illustrate the computation of consolidated retained earnings when a noncontrolling interest exists, assume that Push purchases 80 percent of Shove's stock on January 1, 20X1, and accounts for the investment using the equity method. Assume net income and dividends as follows during the two years following the acquisition:

|                                      | Push      | Shove     |
|--------------------------------------|-----------|-----------|
| Retained earnings, January 1, 20X1   | \$400,000 | \$250,000 |
| Net income, 20X1                     | 120,000   | 25,000    |
| Dividends, 20X1                      | (30,000)  | (10,000)  |
| Retained earnings, December 31, 20X1 | \$490,000 | \$265,000 |
| Net income, 20X2                     | 148,000   | 35,000    |
| Dividends, 20X2                      | (30,000)  | (10,000)  |
| Retained earnings, December 31, 20X2 | \$608,000 | \$290,000 |

Consolidated retained earnings at two years after the date of combination is computed as follows:

| Push's retained earnings, December 31, 20X2 Equity accrual from Shove since acquisition ( $$25,000 + $35,000$ ) $\times$ 0.80                      | \$608,000<br>(48,000) |
|--|-----------------------|
| Push's retained earnings from its own operations, December 31, 20X2 Push's share of Shove's net income since acquisition ( $$60,000 \times 0.80$ ) | \$560,000<br>48,000   |
| Consolidated retained earnings, December 31, 20X2  | \$608,000             |

We note several important points from the example. First, the subsidiary's retained earnings are not combined with the parent's retained earnings. Only the parent's share of the subsidiary's cumulative net income since the date of combination is included. Second, consolidated retained earnings are equal to the parent's retained earnings because the parent uses the equity method to account for its investment in the subsidiary. If the parent accounted for the investment using the cost method, the parent's retained earnings and consolidated retained earnings would differ. Finally, the cumulative income from the subsidiary recognized by the parent on its books must be removed from the parent's retained earnings to arrive at retained earnings from the parent's own operations so that all or part (depending on whether the equity or cost method is used) of the same income will not be included twice.

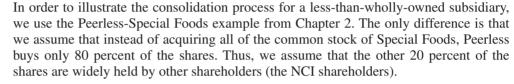

### **Worksheet Format**

The same three-part worksheet described in Chapter 2 can be used when consolidating less-than-wholly-owned subsidiaries, with only minor modifications. The worksheet must allow for including the noncontrolling interest's claim on the income and net assets of the subsidiaries. The noncontrolling interest's claim on the income of a subsidiary is deducted from consolidated net income at the bottom of the worksheet's income statement section in the Consolidated column to arrive at consolidated net income attributable to the controlling interest. The noncontrolling interest's claim on the subsidiary's net assets is placed at the bottom of the worksheet's balance sheet section. The noncontrolling interest's claims on both income and net assets are entered in the worksheet through elimination entries and then carried over to the Consolidated column. As discussed in Chapter 2, the amounts in the Consolidated column are used to prepare the consolidated financial statements.

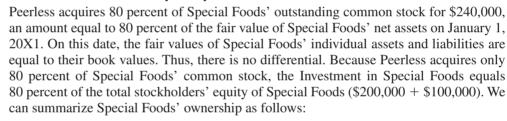

## **CONSOLIDATED BALANCE SHEET WITH A** LESS-THAN-WHOLLY-OWNED SUBSIDIARY

LO 3-5

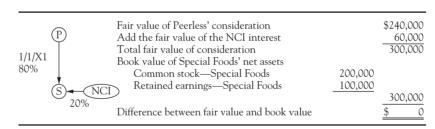

Prepare a consolidation worksheet for a less-thanwholly-owned subsidiary.

### 80 Percent Ownership Acquired at Book Value

Peerless records the 80 percent stock acquisition on its books with the following entry on January 1, 20X1:

| (1) | Investment in Special Foods | 240,000 |
|-----|-----------------------------|---------|
|     | Cash                        | 240,000 |

Record purchase of Special Foods stock.

# The Basic Investment Elimination Entry

StudyGuide .com

The basic elimination on the date of acquisition would be the same as the one illustrated in Chapter 2 except that the \$300,000 book value of net assets is now jointly owned by Peerless (80 percent) and the NCI shareholders (20 percent). Thus, the original \$300,000 credit to the Investment in Special Foods account from the wholly owned example in Chapter 2 is now "shared" with the NCI shareholders as shown in the breakdown of the book value of Special Foods:

### **Book Value Calculations:**

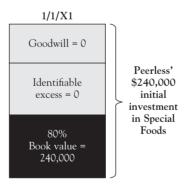

Because the fair value of Special Foods' net assets on the acquisition date is equal to their book value, there is no differential. Thus, the only required elimination entry (the basic elimination entry) in the worksheet removes the Investment in Special Foods Stock account and Special Foods' stockholders' equity accounts and records the \$60,000 NCI interest in the net assets of Special Foods.

### **Basic Elimination Entry:**

In this example, Peerless' investment is exactly equal to its 80 percent share of the book value of Special Foods' net assets. Therefore, no goodwill is recorded and all assets and liabilities are simply combined from Special Foods' financial statements at their current book values. Again, in Chapters 4 and 5, we will explore situations in which the acquiring company pays more than the book value of the acquired company's net assets. However, in Chapters 2 and 3, the excess value of identifiable net assets and goodwill will always be equal to zero. To maintain a consistent approach through all four chapters, we always illustrate the components of the acquiring company's investment, even though the acquiring company's investment will always be exactly equal to its share of the book value of net assets in this chapter. Thus, the relationship between the fair value of the consideration given to acquire Special Foods, the fair value of Special Foods' net assets, and the book value of Special Foods' net assets can be illustrated as follows:

The elimination entry simply credits the Investment in Special Foods Stock account (for the original acquisition price, \$240,000), eliminating this account from Peerless' balance sheet.

Remember that this entry is made in the consolidation worksheet, not on the books of either the parent or the subsidiary, and is presented here in T-account form for instructional purposes only. The investment account must be eliminated in the consolidation process because, as explained in Chapter 2, from a single-entity viewpoint, a company cannot hold an investment in itself. Stated differently, since the Investment in Special Foods account already summarizes Special Foods' entire balance sheet, adding the individual line items on Special Foods' balance sheet together with Peerless' balance sheet items would be equivalent to double counting Special Foods' balance sheet.

As explained in Chapter 2, when the parent company acquires the subsidiary, the consolidated financial statements should appear as if all of the subsidiary's assets and liabilities were acquired at fair value as of the acquisition date. If Peerless had purchased Special Foods' assets instead of its stock, the book value and accumulated depreciation amounts would have been ignored and the assets would have been recorded in Peerless' books at their current fair values as of the acquisition date (as if they were new assets with zero accumulated depreciation). Following this logic, because Peerless did acquire Special Foods' stock, the consolidated financial statements should present all of Special Foods' assets and liabilities as if they had been recorded at their current market values on the acquisition date and then depreciated from that date forward. Thus, eliminating the old accumulated depreciation of the subsidiary as of the acquisition date and netting it out against the historical cost gives the appearance that the depreciable assets have been newly recorded at their fair values as of the acquisition date. In this example, Special Foods had accumulated depreciation on the acquisition date of \$300,000. Thus, as explained in Chapter 2, the following elimination entry nets this accumulated depreciation out against the cost of the building and equipment.

### **Optional Accumulated Depreciation Elimination Entry:**

Also as explained in Chapter 2, this worksheet elimination entry does not change the net buildings and equipment balance. Netting the preacquisition accumulated depreciation out against the cost basis of the corresponding assets merely causes the buildings and equipment to appear in the consolidated financial statements as if they had been revalued to their fair values on the acquisition date. We say "fair values" here because, in this chapter and in Chapter 2, we assume that the fair values of all assets and liabilities are equal to their book values on the acquisition date. This same entry would be included in each succeeding consolidation as long as the assets remain on Special Foods' books (always based on the accumulated depreciation balance as of the acquisition date).

### Consolidation Worksheet

Figure 3–1 presents the consolidation worksheet. As explained previously in Chapter 2, the investment account on the parent's books can be thought of as a single account representing the parent's investment in the net assets of the subsidiary, a *one-line consolidation*. In a full consolidation, the subsidiary's individual assets and liabilities are combined with those of the parent. Including both the net assets of the subsidiary, as represented by the balance in the investment account, and the subsidiary's individual assets and liabilities would double-count the same set of assets. Therefore, the investment account is eliminated, not carried to the consolidated balance sheet.

Figure 3–2 presents the consolidated balance sheet, prepared from the consolidation worksheet, as of the acquisition date. Because no operations occurred between the date of combination and the preparation of the consolidated balance sheet, there is no income statement or statement of retained earnings.

FIGURE 3-1 Worksheet for Consolidated Balance Sheet, January 1, 20X1, Date of Combination; 80 Percent **Acquisition at Book Value** 

|                                | Peerless  | Special   | Eliminatio | n Entries |              |

# CONSOLIDATION SUBSEQUENT TO ACQUISITION— 80 PERCENT OWNERSHIP ACQUIRED AT BOOK VALUE

Chapter 2 explains the procedures used to prepare a consolidated balance sheet as of the acquisition date. More than a consolidated balance sheet, however, is needed to provide a comprehensive picture of the consolidated entity's activities following acquisition. As with a single company, the set of basic financial statements for a consolidated entity consists of an income statement, a statement of changes in retained earnings, a balance sheet, and a statement of cash flows. Each of the consolidated financial statements is prepared as if it is taken from a single set of books that is being used to account for the overall consolidated entity. There is, of course, no set of books for the consolidated entity. Therefore, as in the preparation of the consolidated balance sheet, the consolidation process starts with the data recorded on the books of the individual consolidating companies. The account balances from the books of the individual companies are placed in the three-part worksheet, and entries are made to eliminate the effects of intercorporate ownership and transactions. The consolidation approach and procedures are the same whether the subsidiary being consolidated was acquired or created.

### **Initial Year of Ownership**

Assume that Peerless already recorded the acquisition on January 1, 20X1, and that during 20X1, Peerless records operating earnings of \$140,000, excluding its income from investing in Special Foods, and declares dividends of \$60,000. Special Foods reports 20X1 net income of \$50,000 and declares dividends of \$30,000.

### Parent Company Entries

Peerless records its 20X1 income and dividends from Special Foods under the equity method as follows:

| (2) | Investment in Special Foods                               | 40,000 |        |
|-----|---|--------|--------|
|     | Income from Special Foods                                 |        | 40,000 |
|     | Record Peerless' 80% share of Special Foods' 20X1 income. |        |        |
| (3) | Cash  | 24.000 |        |
| . , | Investment in Special Foods                               | ,      | 24,000 |

Record Peerless' 80% share of Special Foods' 20X1 dividend.

### Consolidation Worksheet—Initial Year of Ownership

After all appropriate equity method entries have been recorded on Peerless' books, the company can prepare a consolidation worksheet. Peerless begins the worksheet by placing the adjusted account balances from both Peerless' and Special Foods' books in the first two columns of the worksheet. Then all amounts that reflect intercorporate transactions or ownership are eliminated in the consolidation process.

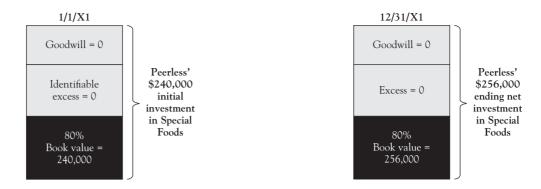

The distinction between journal entries recorded on the books of the individual companies and the elimination entries recorded only on the consolidation worksheet is an important one. Book entries affect balances on the books and the amounts that are carried to the consolidation worksheet; worksheet elimination entries affect only those balances carried to the consolidated financial statements in the period. As mentioned previously, the elimination entries presented in this text are shaded when presented both in journal entry form in the text and in the worksheet.

In this example, the accounts that must be eliminated because of intercorporate ownership are the stockholders' equity accounts of Special Foods, including dividends declared, Peerless' investment in Special Foods stock, and Peerless' income from Special Foods. However, the book value portion of Peerless' investment has changed since the January 1 acquisition date because under the equity method, Peerless has adjusted the investment account balance for its share of earnings and dividends (entries 2 and 3). The book value portion of the investment account can be summarized as follows:

### **Book Value Calculations:**

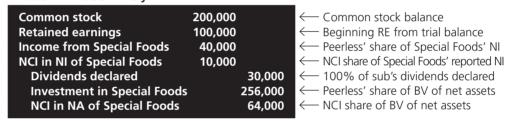

|                             | NCI 20% | + Peerless 80% = | Common Stock | + Retained Earnings |
|-----------------------------|---------|------------------|--------------|---------------------|
| Beginning book value        | 60,000  | 240,000          | 200,000      | 100,000             |
| + Net income                | 10,000  | 40,000           |              | 50,000              |
| <ul><li>Dividends</li></ul> | (6,000) | (24,000)         |              | (30,000)            |
| Ending book value           | 64,000  | 256,000          | 200,000      | 120,000             |

Note that we use dark shading with a white drop-out font for the amounts in the book value analysis that appear in the basic elimination entry.

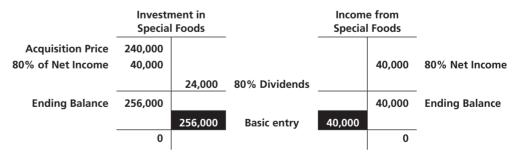

Under the equity method, the parent recognized its share (80 percent) of the subsidiary's income on its separate books. In the consolidated income statement, however, the individual revenue and expense accounts of the subsidiary are combined with those of the parent. Income recognized by the parent from all consolidated subsidiaries, therefore, must be eliminated to avoid double-counting. The subsidiary's dividends must be eliminated when consolidated statements are prepared so that only dividend declarations related to the parent's shareholders are treated as dividends of the consolidated entity. Thus, the basic elimination entry removes both the investment income reflected in the parent's income statement and any dividends declared by the subsidiary during the period:

### **Basic Elimination Entry:**

Because there is no differential in this example, the basic elimination entry completely eliminates the balance in Peerless' investment account on the balance sheet as well as the Income from Special Foods account on the income statement. Note again that the parent's investment in the stock of a consolidated subsidiary never appears in the consolidated balance sheet and the income from subsidiary account never appears on the consolidated income statement.

As explained previously, we repeat the accumulated depreciation entry in each succeeding period for as long as the subsidiary owns these assets. The purpose of this entry is to appropriately present these assets in the consolidated financial statements as if they had been purchased on the date the subsidiary was acquired at their acquisition date fair values.

### **Optional Accumulated Depreciation Elimination Entry:**

### CAUTION

Note that the \$10,000 debit to NCI in Net Income in the Elimination Entries column of Figure 3-3 is added to the \$40,000 Consolidated Net Income debit subtotal to arrive at the total debit adjustments in the Controlling Interest in the Net Income row. Students sometimes forget that the Elimination Entries columns simply add total debit and credit adjustments (ignoring the "formula" used in the income calculation). The reason the \$10,000 NCI in Net Income is listed with brackets in the Consolidated column is because a debit decreases income.

We note that the only two changes on the worksheet when the subsidiary is only partially owned are that the income statement first calculates the consolidated net income (\$190,000 in this example) and then deducts the portion attributable to the NCI shareholders to arrive at the portion attributable to the parent (controlling interest) as demonstrated in Figure 3-3. In this example, the final line of the income statement presents Peerless' share of the consolidated net income, \$180,000. This amount should always equal the parent's net income in

the first column of the worksheet if the parent properly accounts for the investment in the subsidiary using the equity method on its own books.<sup>3</sup>

### Second and Subsequent Years of Ownership

The consolidation procedures employed at the end of the second and subsequent years are basically the same as those used at the end of the first year. Adjusted trial balance data of the individual companies are used as the starting point each time consolidated statements are prepared because no separate books are kept for the consolidated entity. An additional check is needed in each period following acquisition to ensure that the beginning balance of consolidated retained earnings shown in the completed worksheet equals the balance reported at the end of the prior period. In all other respects, the elimination entries and worksheet are comparable with those shown for the first year.

### Parent Company Entries

Consolidation after two years of ownership is illustrated by continuing the example of Peerless Products and Special Foods, Peerless' separate income from its own operations for 20X2 is \$160,000, and its dividends total \$60,000. Special Foods reports net income of \$75,000 in 20X2 and pays dividends of \$40,000. Equity-method entries recorded by Peerless in 20X2 are as follows:

| (4) | Investment in Special Foods                                 | 60,000 |        |
|-----|---|--------|--------|
|     | Income from Special Foods                                   |        | 60,000 |
|     | Record Peerless' 80% share of Special Foods' 20X2 income.   |        |        |
| (5) | Cash  | 32.000 |        |
| (5) | Casii   | 32,000 |        |
|     | Investment in Special Foods                                 |        | 32,000 |
|     | Record Peerless' 80% share of Special Foods' 20X2 dividend. |        |        |

Peerless' reported net income totals \$220,000 (\$160,000 from separate operations + \$60,000 from Special Foods).

<sup>&</sup>lt;sup>3</sup> Note that the "Consolidated Net Income" line properly adds Peerless' reported net income, \$180,000, to Special Foods' net income, \$50,000, and eliminates Peerless' share of Special Foods' net income such that the total consolidated net income is equal to Peerless' income from separate operations (\$140,000) plus Special Foods' reported net income (\$50,000). On the other hand, the "Controlling Interest in Net Income" line indicates that Peerless' true income can be calculated in two ways. Either start with total "Consolidated Net Income" and deduct the portion that belongs to the NCI shareholders in the far right column or simply use Peerless' correctly calculated equity method net income, \$180,000, which is its income from separate operations (\$140,000), plus its share of Special Foods' net income (\$40,000). The controlling interest in the Net Income line starts with this correctly calculated number from Peerless' income statement (in the first column) and adds it to Special Foods' reported income (in the second column), but then eliminates Special Foods' reported income in the Eliminations column. Thus, the controlling interest in net income in the Consolidation column equals Peerless' reported net income under the equity method.

| Investment in Special Foods        | 256,000   |           |            | 256,000    | 0            |
| Land                               | 175,000   | 40,000    |            |            | 215,000      |
| Buildings & Equipment              | 800,000   | 600,000   |            | 300,000    | 1,100,000    |
| Less: Accumulated Depreciation     | (450,000) | (320,000) | 300,000    |            | (470,000)    |
| Total Assets                       | 1,220,000 | 520,000   | 300,000    | 556,000    | 1,484,000    |
| Accounts Payable                   | 100,000   | 100,000   |            |            | 200,000      |
| Bonds Payable                      | 200,000   | 100,000   |            |            | 300,000      |
| Common Stock                       | 500,000   | 200,000   | 200,000    |            | 500,000      |
| Retained Earnings                  | 420,000   | 120,000   | 150,000    | 30,000     | 420,000      |
| NCI in NA of Special Foods         |           |           |            | 64,000     | 64,000       |
| Total Liabilities & Equity         | 1,220,000 | 520,000   | 350,000    | 94,000     | 1,484,000    |

### Consolidation Worksheet—Second Year of Ownership

In order to complete the worksheet, Peerless must calculate the worksheet elimination entries using the following process. The book value of equity can be analyzed and summarized as follows:

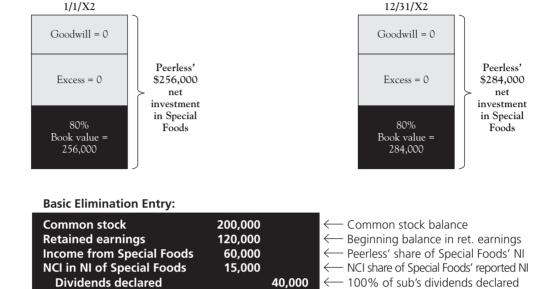

### **Book Value Calculations:**

|                      | NCI 20% + | Peerless 80% | = Common Stock + | Retained Earnings |
|----------------------|-----------|--------------|------------------|-------------------|
| Beginning book value | 64,000    | 256,000      | 200,000          | 120,000           |
| + Net income         | 15,000    | 60,000       |                  | 75,000            |
| - Dividends          | (8,000)   | (32,000)     |                  | (40,000)          |
| Ending book value    | 71,000    | 284,000      | 200,000          | 155,000           |

The book value calculations indicate that the balance in Peerless' Investment in Special Foods account increases from \$256,000 to \$284,000 in 20X2. Recall that the numbers **Investment in Special Foods** 

**NCI in NA of Special Foods** 

in the lighter font from the book value calculations appear in the basic elimination entry. This elimination entry removes both the investment income reflected in the parent's income statement and any dividends declared by the subsidiary during the period:

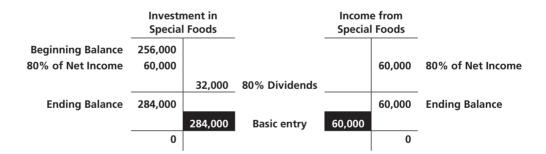

Because there is no differential in this example, the basic elimination entry completely eliminates the balance in Peerless' investment account on the balance sheet as well as the Income from Special Foods account on the income statement.

284,000

71,000

← Peerless' share of BV of net assets

← NCI share of BV of net assets

In this example, Special Foods had accumulated depreciation on the acquisition date of \$300,000. Thus, we repeat the same accumulated depreciation elimination entry this year (and every year as long as Special Foods owns the assets) that we used in the initial year.

### **Optional Accumulated Depreciation Elimination Entry:**

After placement of the two elimination entries in the consolidation worksheet, the worksheet is completed in the normal manner as shown in Figure 3–4.

### **COMBINED FINANCIAL STATEMENTS**

LO 3-6

Understand and explain the purpose of combined financial statements and how they differ from consolidated financial statements.

Financial statements are sometimes prepared for a group of companies when no one company in the group owns a majority of the common stock of any other company in the group. Financial statements that include a group of related companies without including the parent company or other owner are referred to as combined financial statements.

Combined financial statements are commonly prepared when an individual, rather than a corporation, owns or controls a number of companies and wishes to include them all in a single set of financial statements. In some cases, a parent company may prepare financial statements that include only its subsidiaries, not the parent. In other cases, a parent may prepare financial statements for its subsidiaries by operating group, with all the subsidiaries engaged in a particular type of operation, or those located in a particular geographical region, reported together.

The procedures used to prepare combined financial statements are essentially the same as those used in preparing consolidated financial statements. All intercompany receivables and payables, intercompany transactions, and unrealized intercompany profits and losses must be eliminated in the same manner as in the preparation of consolidated statements. Although no parent company is included in the reporting entity, any intercompany ownership, and the associated portion of stockholders' equity, must be eliminated in the same way as the parent's investment in a subsidiary is eliminated in preparing consolidated financial statements. The remaining stockholders' equity of the companies in the reporting entity is divided into the portions accruing to the controlling and noncontrolling interests.

### SPECIAL-PURPOSE AND VARIABLE INTEREST ENTITIES

Understand and explain rules related to the consolidation of variable interest

Although consolidation standards pertaining to related corporations have at times lacked clarity and needed updating, consolidation standards relating to partnerships or other types of entities such as trusts have been virtually nonexistent. Even corporate consolidation standards have not been adequate in situations in which other relationships such as guarantees and operating agreements overshadow the lack of a significant ownership element. As a result, companies such as Enron have taken advantage of the lack of standards to avoid reporting debt or losses by hiding them in special entities that were not consolidated. Although many companies have used special entities for legitimate purposes, financial reporting has not always captured the economic substance of the relationships. Only in the past few years have consolidation standards for these special entities started to provide some uniformity in the financial reporting for corporations having relationships with such entities.

**ASC 810-10-10** establishes consolidation standards in terms of one company controlling another and sets majority voting interest as the usual condition leading to consolidation. Similarly, ASC 810-10-15 requires consolidation for majority-owned subsidiaries. In recent years, however, new types of relationships have been established between corporations and other entities that often are difficult to characterize in terms of voting, controlling, or ownership interests. Such entities often are structured to provide financing and/or control through forms other than those used by traditional operating companies. Some entities have no governing boards, or they may have boards or managers with only a limited ability to direct the entity's activities. Such entities may be governed instead by their incorporation or partnership documents, or by other agreements or documents. Some entities may have little equity investment, and the equity investors may have little or no control over the entity. For these special types of entities, ASC 810-10-10 does not provide a clear basis for

These special types of entities have generally been referred to as special-purpose entities (SPEs). In general, SPEs are corporations, trusts, or partnerships created for a single specified purpose. They usually have no substantive operations and are used only for financing purposes. SPEs have been used for several decades for asset securitization, risk sharing, and taking advantage of tax statutes. Prior to 2003, no comprehensive reporting framework had been established for SPEs. Several different pronouncements from various bodies dealt with selected issues or types of SPEs, but the guidance provided by these issuances was incomplete, vague, and not always correctly interpreted in practice.

### **Off-Balance Sheet Financing**

Imagine that Genergy, Inc., needs \$1 billion to finance building a gas pipeline in central Asia. Potential investors may want their risk/reward exposure limited to the pipeline without other aspects of Genergy's business. They might also want the pipeline to be a self-supporting independent entity with cash flows that are separate from Genergy's other business activities, and they may want to eliminate the possibility that Genergy will sell the pipeline. These objectives might be achieved by forming an SPE, or what the FASB refers to as a variable interest entity (VIE), with a charter that specifies these limited operating activities.

Once the VIE has been established, the pipeline assets and the debt used to finance the pipeline may, under certain circumstances, be excluded from Genergy's balance sheet. In this manner, Genergy has achieved off-balance sheet financing of the pipeline. As long as the VIE is not consolidated, Genergy's financial statements will not reflect the assets, liabilities, cash flows, revenues, and expenses associated with owning and operating the pipeline. Furthermore, any transactions between Genergy and the pipeline entity are not eliminated in preparing Genergy's financial statements.

Some estimates suggest that well over half of U.S. companies use some type of offbalance sheet financing, involving perhaps trillions of dollars. These transactions are often facilitated by the use of some type of special entity, such as a VIE. There is concern that VIEs can be motivated either by a genuine business purpose, such as risk sharing among investors and isolation of project risk from company risk, or by a desire to meet specific financial reporting goals that may or may not be supported by the underlying economic substance of the transactions.

Companies might prefer to keep debt and the related assets financed by that debt off the balance sheet for a number of reasons, but the main one often has to do with making the company appear better to investors. One effect is to reduce the company's leverage and debt/equity ratios. Net income also may be increased as neither the interest on the debt nor the depreciation on the related assets is included in expenses. Furthermore, the smaller asset base, because the assets are not shown on the balance sheet, combined with the higher net income produces a higher calculated return on assets.

Several means of keeping debt and related assets off a company's balance sheet have become common in practice. A company may lease assets from a third party, such as a VIE, which borrows the money to buy the assets. Careful engineering of the lease terms so that it qualifies for treatment as an operating rather than a capital lease avoids recognition of the asset and lease obligation. Another possibility is for a company to sell assets such as accounts receivable outright rather than borrowing against them. A third option found with increasing frequency is for a company to create a new VIE and transfer both assets and liabilities to it. Not only does this allow the sponsoring corporation to remove the asset and related debt from its balance sheet, but the company also may be able to recognize a gain on the disposal of the asset.

Complex organizational structures increase the need for accounting standards aimed at ensuring that financial statements reflect the economic substance of those structures and the related transactions. However, the very complexity of these organizational structures makes the development of these standards a challenging endeavor.

### Variable Interest Entities

In January 2003, the FASB issued guidance on variable interest entities (ASC 810-10-25) and updated this guidance later the same year (ASC 810-10-38C). For clarification, the interpretation uses the term variable interest entities to encompass SPEs and any other entities falling within its conditions.

A variable interest entity (VIE) is a legal structure used for business purposes, usually a corporation, trust, or partnership, that either (1) does not have equity investors that have voting rights and share in all of the entity's profits and losses or (2) has equity investors that do not provide sufficient financial resources to support the entity's activities. In a variable interest entity, specific agreements may limit the extent to which the equity investors, if any, share in the entity's profits or losses, and the agreements may limit the control that equity investors have over the entity's activities. For the equity investment to be considered sufficient financial support for the entity's activities (condition 2), it must be able to absorb the entity's expected future losses. A total equity investment that is less than 10 percent of the entity's total assets is, in general, considered to be insufficient by itself to allow the entity to finance its activities, and an investment of more than 10 percent might be needed, depending on the

A corporation might create (or sponsor) a typical variable interest entity for a particular purpose, such as purchasing the sponsoring company's receivables or leasing facilities to the sponsoring company. The sponsoring company may acquire little or no stock in the VIE. Instead, the sponsoring company may enlist another party to purchase most or all of the common stock. The majority of the VIE's capital, however, normally comes from borrowing. Because lenders may be reluctant to lend (at least at reasonable interest rates) to an entity with only a small amount of equity, the sponsoring company often guarantees the VIE's loans. Thus, the sponsoring company may have little or no equity investment in the VIE, but the loan guarantees represent a type of interest in the VIE.

A corporation having an interest in a VIE cannot simply rely on its percentage stock ownership, if any, to determine whether to consolidate the entity. Instead each party having a variable interest in the VIE must determine the extent to which it shares in the VIE's expected profits and losses. ASC 810-10-20 defines a variable interest in a VIE as a contractual ownership (with or without voting rights), or other money-related interest in an entity that changes with changes in the fair value of the entity's net assets exclusive of variable interests. In other words, variable interests increase with the VIE's profits and decrease with its losses. The VIE's variable interests will absorb portions of the losses, if they occur, or receive portions of the

There are several different types of variable interests, some of which can be summarized as follows:

| Type of Interest   | Variable Interest?                 |
|--|------------------------------------|
| Common stock, with no special features or provisions<br>Common stock, with loss protection or other provisions<br>Senior debt<br>Subordinated debt | Yes<br>Maybe<br>Usually not<br>Yes |
| Loan or asset guarantees   | Yes                                |

### **STOP & THINK**

The following "red flags" often indicate a variable interest:

- · Subordinated loans to a VIE.
- Equity interests in a VIE (50% or less).
- Guarantees to a VIE's lenders or equity holders.
- Guarantees of asset recovery values.
- Written put options on a VIE's assets held by a VIE or its lenders or equity holders.
- Forward contracts on purchases and sales.

Common stock that places the owners' investment at risk is a variable interest. In some cases, common stock may have, by agreement, special provisions that protect the investor against losses or provide a fixed return. These special types of shares may not involve significant risk on the part of the investor and might, depending on the provisions, result in an interest that is not a variable interest. Senior debt usually carries a fixed return and is protected against loss by subordinated interests. Subordinated debt represents a

variable interest because, if the entity's cash flows are insufficient to pay off the subordinated debt, the holders of that debt will sustain losses. They do not have the same protection against loss that holders of the senior debt have. Parties that guarantee the value of assets or liabilities can sustain losses if they are called on to make good on their guarantees, and, therefore, the guarantees represent variable interests.

The nature of each party's variable interest determines whether consolidation by that party is appropriate. An enterprise that will absorb a majority of the VIE's expected

### **CAUTION**

A pending FASB rule change regarding the determination of the primary beneficiary will involve a more qualitative approach requiring both of the following (810-10-25-38A): a) The power to direct the activities of a VIE that most significantly impact the VIE's economic performance and b) The obligation to absorb losses of the VIE that could potentially be significant to the VIE or the right to receive benefits from the VIE that could potentially be significant to the VIE.

losses, receive a majority of the VIE's expected residual returns, or both, is called the *primary* beneficiary of the variable interest entity. The primary beneficiary must consolidate the VIE. If the entity's profits and losses are divided differently, the enterprise absorbing a majority of the losses will consolidate the VIE.

As an example of the financial reporting determinations of parties with an interest in a VIE, suppose that Young Company and Zebra Corporation, both financially stable companies, create

YZ Corporation to lease equipment to Young and other companies. Zebra purchases all of YZ's common stock. Young guarantees Zebra a 7 percent dividend on its stock, agrees to absorb all of YZ's losses, and guarantees fixed-rate bank loans that are made to YZ. All profits in excess of the 7 percent payout to Zebra are split evenly between Young and Zebra.

In this case, the bank loans are not variable interests because they carry a fixed interest rate and are guaranteed by Young, a company capable of honoring the guarantee. Common stock of a VIE is a variable interest if the investment is at risk. In this case, Zebra's investment is not at risk, but it does share in the profits of YZ, and the amount of profits is not fixed. Therefore, the common stock is a variable interest. However, Zebra will not consolidate YZ because Zebra does not share in the losses, all of which Young will bear. Young will consolidate YZ because Young's guarantees represent a variable interest, and it will absorb a majority (all) of the losses.

If consolidation of a VIE is appropriate, the amounts to be consolidated with those of the primary beneficiary are based on fair values at the date the enterprise first becomes the primary beneficiary. However, assets and liabilities transferred to a VIE by its primary beneficiary are valued at their book values, with no gain or loss recognized on the transfer. Subsequent to the initial determination of consolidation values, a VIE is accounted for in consolidated financial statements in accordance with ASC 810-10-10 in the same manner as if it were consolidated based on voting interests. Intercompany balances and transactions are eliminated so the resulting consolidated financial statements appear as if there were just a single entity. These procedures are consistent with those used when consolidating parent and subsidiary corporations. Appendix 3A at the end of the chapter presents a simple illustration of the consolidation of a VIE.

### LO 3-8

Understand and explain differences in consolidation rules under U.S. GAAP and IFRS.

### IFRS Differences in Determining Control of VIEs and SPEs

Although rules under international financial reporting standards (IFRS) for consolidation are generally very similar to those under U.S. GAAP, there are some important differences. The SEC's February 2010 working plan toward convergence in global accounting standards suggests that U.S. registrants could potentially be required to begin reporting under IFRS as early as 2015 or 2016. Therefore, understanding these differences is very important because students beginning their careers in the accounting profession will likely face this transition in the near future. In the meantime, the

Disney controls Euro Disney and Hong Kong Disneyland as variable interest entities. Disney adopted ASC 810-10-10 by fully consolidating the financial statements of Euro Disney and Hong Kong Disneyland as of March 31, 2004.

FASB and the IASB are working toward convergence of differences in existing rules within the consolidation area. While the proposed standard will remove many of these differences related to VIEs and SPEs, there are differences under the current standards. Figure 3-5 provides a summary of the main differences in current standards.

# Summary of Key Concepts

Consolidated financial statements present the financial position and operating results of a parent and one or more subsidiaries as if they were actually a single company. As a result, the consolidated financial statements portray a group of legally separate companies as a single economic entity. All indications of intercorporate ownership and the effects of all intercompany transactions are excluded from the consolidated statements. The basic approach to the preparation of consolidated financial statements is to combine the separate financial statements of the individual consolidating companies and then to eliminate or adjust those items that would not appear, or that would appear differently, if the companies actually were one.

Current consolidation standards require that the consolidated financial statements include all companies under common control unless control is questionable. Consolidated financial statements are prepared primarily for those with a long-run interest in the parent company, especially the parent's stockholders and long-term creditors. While consolidated financial statements allow interested parties to view a group of related companies as a single economic entity, such statements have some limitations. In particular, information about the characteristics and operations of the individual companies within the consolidated entity is lost in the process of combining financial statements.

New types of business arrangements have proved troublesome for financial reporting. In particular, special types of entities, called special-purpose entities and variable interest entities, have been used to hide or transform various types of transactions, in addition to being used for many legitimate purposes such as risk sharing. Often these entities were disclosed only through vague notes to the financial statements. Reporting standards now require that the party that is the primary beneficiary of a variable interest entity consolidate that entity.

### Appendix 3A Consolidation of Variable Interest Entities

The standards for determining whether a party with an interest in a variable interest entity (VIE) should consolidate the VIE were discussed earlier in the chapter. Once a party has determined that it must consolidate a VIE, the consolidation procedures are similar to those used when consolidating a subsidiary. As an illustration, assume that Ignition Petroleum Company joins with Mammoth Financial Corporation to create a special corporation, Exploration Equipment Company, that would lease equipment to Ignition and other companies. Ignition purchases 10 percent of Exploration's stock for \$1,000,000, and Mammoth purchases the other 90 percent for \$9,000,000. Profits are to be split equally between the two owners, but Ignition agrees to absorb the first \$500,000 of annual losses. Immediately after incorporation, Exploration borrows \$120,000,000 from a syndicate of banks, and Ignition guarantees the loan. Exploration then purchases plant, equipment, and supplies for its own use and equipment for lease to others. The balance sheets of Ignition and Exploration appear as follows just prior to the start of Exploration's operations:

| Item                                    | Ignition      | Exploration          |
|---|---------------|----------------------|
| Cash and Receivables                    | \$100,000,000 | \$ 23,500,000        |
| Inventory and Supplies                  | 50,000,000    | 200,000              |
| Equipment Held for Lease                |               | 105,000,000          |
| Investment in Exploration Equipment Co. | 1,000,000     |                      |

| Noncontrolling Interest Total Stockholders' Equity Total Liabilities & Stockholders' Equity                           | 9,000,000   | 309,100,000<br>\$460,050,000                              |  |

Both Ignition and Mammoth hold variable interests in Exploration. Ignition's variable interests include both its common stock and its guarantees. Ignition is the primary beneficiary of Exploration because it shares equally in the profits with Mammoth but must absorb a larger share of the expected losses than Mammoth through both its profit-and-loss-sharing agreement with Mammoth and its loan guarantee. Accordingly, Ignition must consolidate Exploration.

Ignition's consolidated balance sheet that includes Exploration appears as in Figure 3–6. The balances in Exploration's asset and liability accounts are added to the balances of Ignition's like accounts. Ignition's \$1,000,000 investment in Exploration is eliminated against the common stock of Exploration, and Exploration's remaining \$9,000,000 of common stock (owned by Mammoth) is labeled as noncontrolling interest and reported within the equity section of the consolidated balance sheet.

# Appendix 3B Additional Considerations

Several different accounting theories have been suggested that might serve as a basis for preparing consolidated financial statements. The choice of theory can have a significant impact on the consolidated financial statements in cases when the parent company owns less than 100 percent of the subsidiary's common stock. This discussion focuses on three alternative theories of consolidation: (1) proprietary, (2) parent company, and (3) entity. The proprietary and entity theories may be viewed as falling near opposite ends of a spectrum, with the parent company theory falling somewhere in between. Until recently, the accounting profession had not adopted any of the three theories in its entirety, although practice was most closely aligned with the parent company approach. However, the FASB ultimately adopted the entity theory (ASC 810-10).

### THEORIES OF CONSOLIDATION

The *proprietary theory* of accounting views the firm as an extension of its owners. The firm's assets, liabilities, revenues, and expenses are viewed as those of the owners themselves. When applied to consolidated financial statements, the proprietary concept results in a *pro rata consolidation* in which the parent company consolidates only its proportionate share of a less-than-wholly-owned subsidiary's assets, liabilities, revenues, and expenses.

The *parent company theory* is perhaps better suited to the modern corporation and the preparation of consolidated financial statements than is the proprietary approach. The parent company theory recognizes that the parent has the ability to effectively control all of the assets and liabilities of a majority-owned subsidiary, not just a proportionate share, even though the parent does not

actually own the subsidiary's assets or have any obligation for its liabilities. The consolidated financial statements include all of the subsidiary's assets, liabilities, revenues, and expenses. Separate recognition is given in the consolidated balance sheet to the noncontrolling interest's claim on the subsidiary's net assets and in the consolidated income statement to the earnings assigned to the NCI shareholders.

As a general ownership theory, the entity theory focuses on the firm as a separate economic entity rather than on the ownership rights of the shareholders. Emphasis under the entity approach is on the consolidated entity itself, with the controlling and NCI shareholders viewed as two separate groups, each having an equity interest in the consolidated entity. Neither of the two groups is emphasized over the other or over the consolidated entity. Accordingly, all of the assets, liabilities, revenues, and expenses of a less-than-wholly-owned subsidiary are included in the consolidated financial statements, with no special treatment accorded either the controlling or noncontrolling interest.

### COMPARISON OF ALTERNATIVE THEORIES

Figure 3-7 provides a comparison of the amounts included in a consolidated balance sheet (lined areas) for a parent and less-than-wholly-owned subsidiary under the different approaches to consolidation. With the proprietary theory, only the parent's share of a subsidiary's assets and liabilities is included in the consolidated balance sheet, with the amount based on the fair values of those assets and liabilities on the date that majority ownership in the subsidiary is acquired. Goodwill is included for the excess of the purchase price over the fair value of the parent's share of the subsidiary's net identifiable assets. The portion of the subsidiary's identifiable assets and liabilities claimed by the noncontrolling interest is excluded from the consolidated balance sheet, as is any implied goodwill assignable to the noncontrolling interest.

The parent company approach includes all of the subsidiary's assets and liabilities in the consolidated balance sheet, as can be seen from the lined areas in Figure 3–7. However, only the parent's share of any fair value increment and goodwill is included. As a result, subsidiary assets are included at their full fair values only when the parent purchases full ownership of the subsidiary. The noncontrolling shareholders' claim is reported in the consolidated balance sheet based on a proportionate share of the book value of the subsidiary's net assets.

FIGURE 3-7 Recognition of **Subsidiary Net Assets** 

| Element                                    |  | Theory   |  |
|--|--|--|--|
|  | Proprietary                                    | Parent Company                                 | Entity   |
|  | Parent's Noncontrolling share interest's share | Parent's Noncontrolling share interest's share | Parent's Noncontrolling share interest's share |
| Goodwill  Fair value increment  Book value |  |  |  |

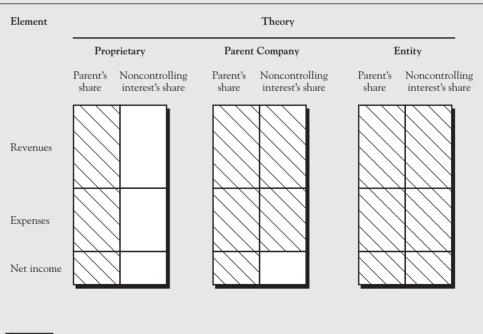

Portion included in consolidated financial statements.

All subsidiary assets and liabilities are also included in the consolidated balance sheet under the entity approach. However, the amounts included are based on the full fair values at the date of combination, and the full amount of any goodwill is included regardless of the percentage ownership held by the parent. The amount of noncontrolling interest reported in the consolidated balance sheet is based on a proportionate share of the total amount of subsidiary net assets, including goodwill.

Figure 3–8 provides a comparison of amounts included in the consolidated income statement under the different approaches when a less-than-wholly-owned subsidiary is consolidated. In general, the income statement treatment is consistent with the balance sheet treatment shown in Figure 3–7 under each theory. As can be seen from the lined areas, the proprietary theory results in consolidation of just the parent's share of the revenues, expenses, and net income of the subsidiary. On the other hand, both the parent company and entity theories result in consolidation of all of the subsidiary's revenues and expenses, regardless of degree of majority ownership. Under the parent company theory, however, the noncontrolling interest's share of income is deducted to arrive at consolidated net income.

Figure 3–9 provides a numerical comparison of the different consolidation approaches. The example assumes that P Company acquires 80 percent of the stock of S Company on January 1, 20X1, for \$96,000. On that date, S Company has a total fair value of \$120,000, and the 20 percent noncontrolling interest has a fair value of \$24,000. S Company holds net assets with a book value of \$100,000 and fair value of \$120,000. The \$20,000 fair value increment relates entirely to S Company's buildings and equipment, with a remaining life of 10 years. Straight-line depreciation is used. For the year 20X1, P Company reports income of \$200,000 from its own operations, and S Company reports net income of \$30,000. The example assumes the income includes no unrealized profits from intercompany sales.

### **CURRENT PRACTICE**

ASC 805-50-30 has significantly changed the preparation of consolidated financial statements subsequent to the acquisition of less-than-wholly-owned subsidiaries. In the past, only the parent's share of a subsidiary's fair value increment and goodwill at the date of combination was recognized, consistent with a parent company approach. Now, under ASC 805-50-50, consolidation follows largely an entity-theory approach. Accordingly, the full entity fair value increment and the full amount of goodwill are recognized.

Current practice follows the entity approach in most important aspects, but it does deviate in certain respects. In the income statement, consolidated net income refers to the income of the consolidated entity as a whole, rather than just the parent's share as in the past. Still, more emphasis continues to be placed on the parent's share of consolidated net income than on the noncontrolling interest's share. For example, only the parent's portion of consolidated net income is included in the computation of consolidated earnings per share. In addition, the only retained earnings figure reported in the consolidated balance sheet is that related to the controlling interest, with all amounts relating to the noncontrolling interest's share of equity reported in a single figure. If a strict entity approach were followed, the emphasis would be on the entire entity without emphasizing either the controlling or noncontrolling interest over the other. Nevertheless, the current approach clearly follows the entity theory with minor modifications aimed at the practical reality that consolidated financial statements are used primarily by those having a long-run interest in the parent company.

What is meant by parent company? When is a company considered to be a parent? Q3-4

 $<sup>^{</sup>b}$ \$228,000 = \$200,000 + \$30,000 - \$2,000\*

 $<sup>^{</sup>c}$ \$6,000 = \$30,000 × 0.20

 $<sup>^{</sup>d}$ \$5,600 = (\$30,000 - \$2,000) × 0.20

### Cases

LO 3-5

### **C3-1** Computation of Total Asset Values

A reader of Gigantic Company's consolidated financial statements received from another source copies of the financial statements of the individual companies included in the consolidation. The person is confused by the fact that the total assets in the consolidated balance sheet differ rather substantially from the sum of the asset totals reported by the individual companies.

### Required

Will this relationship always be true? What factors may cause this difference to occur?

### LO 3-3, 3-7 C3-2 Accounting Entity [AICPA Adapted]

The concept of the accounting entity often is considered to be the most fundamental of accounting concepts, one that pervades all of accounting. For each of the following, indicate whether the entity concept is applicable; discuss and give illustrations.

### Required

- a. A unit created by or under law.
- b. The product-line segment of an enterprise.
- c. A combination of legal units.
- d. All the activities of an owner or a group of owners.
- e. The economy of the United States.

### C3-3 Joint Venture Investment

Research

Dell Computer Corp. and CIT Group, Inc., established Dell Financial Services L.P. (DFS) as a joint venture to provide financing services for Dell customers. Dell originally purchased 70 percent of

<sup>&</sup>quot;A" indicates that the item relates to Appendix 3A.

the equity of DFS and CIT purchased 30 percent. In the initial agreement, losses were allocated entirely to CIT, although CIT would recoup any losses before any future income was allocated. At the time the joint venture was formed, both Dell and CIT indicated that they had no plans to consolidate DFS.

### Required

- a. How could both Dell and CIT avoid consolidating DFS?
- b. Does Dell currently employ off-balance sheet financing? Explain.

### What Company Is That?

**Analysis** 

Many well-known products and names come from companies that may be less well known or may be known for other reasons. In some cases, an obscure parent company may have wellknown subsidiaries, and often familiar but diverse products may be produced under common ownership.

### Required

- a. Viacom is not necessarily a common name easily identified because it operates through numerous subsidiaries, but its brand names are seen every day. What are some of the well-known brand names from Viacom's subsidiaries? What changes occurred in its organizational structure in 2006? Who is Sumner Redstone?
- b. ConAgra Foods, Inc., is one of the world's largest food processors and distributors. Although it produces many products with familiar names, the company's name generally is not well known. What are some of ConAgra's brand names?
- c. What type of company is Yum! Brands, Inc.? What are some of its well-known brands? What is the origin of the company, and what was its previous name?

#### C3-5 **Subsidiaries and Core Businesses**

**Analysis** 

During previous merger booms, a number of companies acquired many subsidiaries that often were in businesses unrelated to the acquiring company's central operations. In many cases, the acquiring company's management was unable to manage effectively the many diverse types of operations found in the numerous subsidiaries. More recently, many of these subsidiaries have been sold or, in a few cases, liquidated so the parent companies could concentrate on their core businesses.

### Required

- a. In 1986, General Electric acquired nearly all of the common stock of the large brokerage firm Kidder, Peabody Inc. Unfortunately, the newly acquired subsidiary's performance was very poor. What ultimately happened to this General Electric subsidiary?
- b. What major business has Sears Holdings Corporation been in for many decades? What other businesses was it in during the 1980s and early 1990s? What were some of its best-known subsidiaries during that time? Does Sears still own those subsidiaries? What additional acquisitions have occurred?
- c. PepsiCo is best known as a soft-drink company. What well-known subsidiaries did PepsiCo own during the mid-1990s? Does PepsiCo still own them?
- d. When a parent company and its subsidiaries are in businesses that are considerably different in nature, such as retailing and financial services, how meaningful are their consolidated financial statements in your opinion? Explain. How might financial reporting be improved in such situations?

LO 3-8

### International Consolidation Issues

### Research

The International Accounting Standards Board (IASB) is charged with developing a set of highquality standards and encouraging their adoption globally. Standards promulgated by the IASB are called International Financial Reporting Standards (IFRS). The European Union (EU) requires statements prepared using IFRS for all companies that list on the EU stock exchanges. Although the United States does not yet accept IFRS, the SEC has indicated that it is working toward allowing international companies that list on U.S. exchanges to use IFRS for financial reporting in the United States.

The differences between U.S. GAAP and IFRS are described in many different publications. For example, PricewaterhouseCoopers has a publication available for download on its website (http://www. pwc.com/us/en/issues/ifrs-reporting/publications/ifrs-and-us-gaap-similarities-and-differences.jhtml) entitled "IFRS and U.S. GAAP: Similarities and Differences" that provides a topic-based comparison. Based on the information in this publication or others, answer the following questions about the preparation of consolidated financial statements.

### Required

- a. Under U.S. GAAP, a two-tiered consolidation model is applied, one focused on voting rights and the second based on a party's exposure to risks and rewards associated with the entity's activities (the VIE model). Upon what is the IFRS framework based?
- b. U.S. GAAP requires a two-step process to evaluate goodwill for potential impairment (as discussed in Chapter 1). What is required by IFRS with respect to goodwill impairment?
- c. Under U.S. GAAP, noncontrolling interests are measured at fair value. What is required by IFRS?

### LO 3-7

### Off-Balance Sheet Financing and VIEs

### **Understanding**

A variable interest entity (VIE) is a structure frequently used for off-balance sheet financing. VIEs have become quite numerous in recent years and have been the subject of some controversy.

### Required

- a. Briefly explain what is meant by off-balance sheet financing.
- b. What are three techniques used to keep debt off the balance sheet?
- c. What are some legitimate uses of VIEs?
- d. How can VIEs be used to manage earnings to meet financial reporting goals? How does this relate to the importance of following the intent of the guidelines for consolidations?

### **Consolidation Differences among Major Companies**

Research

A variety of organizational structures are used by major companies, and different approaches to consolidation are sometimes found. Two large and familiar U.S. corporations are Union Pacific and Exxon Mobil.

### Required

- a. Many large companies have tens or even hundreds of subsidiaries. List the significant subsidiaries of Union Pacific Corporation.
- b. Exxon Mobil Corporation is a major energy company. Does Exxon Mobil consolidate all of its majority-owned subsidiaries? Explain. Does Exxon Mobil consolidate any entities in which it does not hold majority ownership? Explain. What methods does Exxon Mobil use to account for investments in the common stock of companies in which it holds less than majority ownership?

### **Exercises**

LO 3-1, 3-2

### E3-1 Multiple-Choice Questions on Consolidation Overview [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. When a parent-subsidiary relationship exists, consolidated financial statements are prepared in recognition of the accounting concept of
  - a. Reliability.
  - b. Materiality.
  - c. Legal entity.
  - d. Economic entity.
- 2. Consolidated financial statements are typically prepared when one company has a controlling interest in another unless
  - a. The subsidiary is a finance company.
  - b. The fiscal year-ends of the two companies are more than three months apart.
  - c. Circumstances prevent the exercise of control.
  - d. The two companies are in unrelated industries, such as real estate and manufacturing.

- 3. Penn Inc., a manufacturing company, owns 75 percent of the common stock of Sell Inc., an investment company. Sell owns 60 percent of the common stock of Vane Inc., an insurance company. In Penn's consolidated financial statements, should Sell and Vane be consolidated or reported as equity method investments (assuming there are no side agreements)?
  - a. Consolidation used for Sell and equity method used for Vane.
  - b. Consolidation used for both Sell and Vane.
  - c. Equity method used for Sell and consolidation used for Vane.
  - d. Equity method used for both Sell and Vane.
- 4. Which of the following is the best theoretical justification for consolidated financial statements?
  - a. In form, the companies are one entity; in substance, they are separate.
  - b. In form, the companies are separate; in substance, they are one entity.
  - c. In form and substance, the companies are one entity.
  - d. In form and substance, the companies are separate.

#### LO 3-7 Multiple-Choice Questions on Variable Interest Entities

Select the correct answer for each of the following questions.

- 1. Special-purpose entities generally
  - a. Have a much larger portion of assets financed by equity shareholders than do companies such as General Motors.
  - b. Have relatively large amounts of preferred stock and convertible securities outstanding.
  - c. Have a much smaller portion of their assets financed by equity shareholders than do companies such as General Motors.
  - d. Pay out a relatively high percentage of their earnings as dividends to facilitate the sale of additional shares.
- 2. Variable interest entities may be established as
  - a. Corporations.
  - b. Trusts.
  - c. Partnerships.
  - d. All of the above.
- 3. An enterprise that will absorb a majority of a variable interest entity's expected losses is called the
  - a. Primary beneficiary.
  - b. Qualified owner.
  - c. Major facilitator.
  - d. Critical management director.
- 4. In determining whether or not a variable interest entity is to be consolidated, the FASB focused on
  - a. Legal control.

LO 3-5

- b. Share of profits and obligation to absorb losses.
- c. Frequency of intercompany transfers.
- d. Proportionate size of the two entities.

#### Multiple-Choice Questions on Consolidated Balances [AICPA Adapted] E3-3

Select the correct answer for each of the following questions.

Items 1 and 2 are based on the following:

On January 2, 20X8, Pare Company acquired 75 percent of Kidd Company's outstanding common stock at an amount equal to its underlying book value. Selected balance sheet data at December 31, 20X8, are as follows:

|  | Pare Company                    | Kidd Company                  |
|--|---------------------------------|-------------------------------|
| Total Assets                                     | \$420,000                       | \$180,000                     |
| Liabilities<br>Common Stock<br>Retained Earnings | \$120,000<br>100,000<br>200,000 | \$ 60,000<br>50,000<br>70,000 |
| etaea Eariiiigs                                  | \$420,000                       | \$180,000                     |

- 1. In Pare's December 31, 20X8, consolidated balance sheet, what amount should be reported as minority interest in net assets?
  - a. \$0.
  - b. \$30,000.
  - c. \$45,000.
  - d. \$105,000.
- 2. In its consolidated balance sheet at December 31, 20X8, what amount should Pare report as common stock outstanding?
  - a. \$50,000.
  - b. \$100,000.
  - c. \$137,500.
  - d. \$150,000.
- 3. Consolidated statements are proper for Neely Inc., Randle Inc., and Walker Inc., if
  - a. Neely owns 80 percent of the outstanding common stock of Randle and 40 percent of Walker; Randle owns 30 percent of Walker.
  - b. Neely owns 100 percent of the outstanding common stock of Randle and 90 percent of Walker; Neely bought the Walker stock one month before the foreign country in which Walker is based imposed restrictions preventing Walker from remitting profits to Neely.
  - c. Neely owns 100 percent of the outstanding common stock of Randle and Walker; Walker is in legal reorganization.
  - d. Neely owns 80 percent of the outstanding common stock of Randle and 40 percent of Walker; Reeves Inc. owns 55 percent of Walker.

### LO 3-2, 3-3

### Multiple-Choice Questions on Consolidation Overview [AICPA Adapted] E3-4

Select the correct answer for each of the following questions.

- 1. Consolidated financial statements are typically prepared when one company has
  - a. Accounted for its investment in another company by the equity method.
  - b. Accounted for its investment in another company by the cost method.
  - c. Significant influence over the operating and financial policies of another company.
  - d. The controlling financial interest in another company.
- 2. Aaron Inc. owns 80 percent of the outstanding stock of Belle Inc. Compare the total consolidated net earnings of Aaron and Belle (X) and Aaron's operating earnings before considering the income from Belle (Y). Assume that neither company incurs a net loss during the period.
  - a. X is more than Y.
  - b. X is equal to Y.
  - c. X is less than Y.
  - d. Cannot be determined.
- 3. On October 1, X Company acquired for cash all of Y Company's outstanding common stock. Both companies have a December 31 year-end and have been in business for many years. Consolidated net income for the year ended December 31 should include net income of
  - a. X Company for three months and Y Company for three months.
  - b. X Company for 12 months and Y Company for 3 months.

- c. X Company for 12 months and Y Company for 12 months.
- d. X Company for 12 months, but no income from Y Company until Y Company distributes a dividend.
- 4. Ownership of 51 percent of the outstanding voting stock of a company would usually result in
  - a. The use of the cost method.
  - b. The use of the lower-of-cost-or-market method.
  - c. The use of the equity method.
  - d. A consolidation.

#### LO 3-5 E3-5 Balance Sheet Consolidation

On January 1, 20X3, Guild Corporation reported total assets of \$470,000, liabilities of \$270,000, and stockholders' equity of \$200,000. At that date, Bristol Corporation reported total assets of \$190,000, liabilities of \$135,000, and stockholders' equity of \$55,000. Following lengthy negotiations, Guild paid Bristol's existing shareholders \$44,000 in cash for 80 percent of the voting common shares of Bristol.

### Required

Immediately after Guild purchased the Bristol shares

- a. What amount of total assets did Guild report in its individual balance sheet?
- b. What amount of total assets was reported in the consolidated balance sheet?
- c. What amount of total liabilities was reported in the consolidated balance sheet?
- d. What amount of stockholders' equity was reported in the consolidated balance sheet?

### **Balance Sheet Consolidation with Intercompany Transfer** E3-6

Potter Company acquired 90 percent of the voting common shares of Stately Corporation by issuing bonds with a par value and fair value of \$121,500 to Stately's existing shareholders. Immediately prior to the acquisition, Potter reported total assets of \$510,000, liabilities of \$320,000, and stockholders' equity of \$190,000. At that date, Stately reported total assets of \$350,000, liabilities of \$215,000, and stockholders' equity of \$135,000.

### Required

Immediately after Potter acquired Stately's shares

- a. What amount of total assets did Potter report in its individual balance sheet?
- b. What amount of total assets was reported in the consolidated balance sheet?
- c. What amount of total liabilities was reported in the consolidated balance sheet?
- d. What amount of stockholders' equity was reported in the consolidated balance sheet?

#### LO 3-5 E3-7 **Subsidiary Acquired for Cash**

Fineline Pencil Company acquired 80 percent of Smudge Eraser Corporation's stock on January 2, 20X3, for \$72,000 cash. Summarized balance sheet data for the companies on December 31, 20X2, are as follows:

|   | Fineline Pencil<br>Company                   |                      | Smudge<br>Corpoi                           |                      |
|---|--|----------------------|--|----------------------|
|   | <b>Book Value</b>                            | Fair Value           | <b>Book Value</b>                          | Fair Value           |
| Cash<br>Other Assets  | \$200,000<br>400,000                         | \$200,000<br>400,000 | \$ 50,000<br>120,000                       | \$ 50,000<br>120,000 |
| Total Debits  | \$600,000                                    |                      | \$170,000                                  |                      |
| Current Liabilities<br>Common Stock<br>Retained Earnings<br>Total Credits | \$100,000<br>300,000<br>200,000<br>\$600,000 | 100,000              | \$ 80,000<br>50,000<br>40,000<br>\$170,000 | 80,000               |

Prepare a consolidated balance sheet immediately following the acquisition.

### LO 3-5 E3-8 Subsidiary Acquired with Bonds

Byte Computer Corporation acquired 75 percent of Nofail Software Company's stock on January 2, 20X3, by issuing bonds with a par value of \$50,000 and a fair value of \$67,500 in exchange for the shares. Summarized balance sheet data presented for the companies just before the acquisition are as follows:

|   | Byte Computer<br>Corporation                 |                      | Nofail Se<br>Com                                  |                      |
|---|--|----------------------|---|----------------------|
|   | Book Value                                   | Fair Value           | Book Value  | Fair Value           |
| Cash<br>Other Assets  | \$200,000<br>400,000                         | \$200,000<br>400,000 | \$ 50,000<br>120,000                              | \$ 50,000<br>120,000 |
| Total Debits  | \$600,000                                    |                      | \$170,000   |                      |
| Current Liabilities<br>Common Stock<br>Retained Earnings<br>Total Credits | \$100,000<br>300,000<br>200,000<br>\$600,000 | 100,000              | \$ 80,000<br>50,000<br>40,000<br><u>\$170,000</u> | 80,000               |

### Required

Prepare a consolidated balance sheet immediately following the acquisition.

### E3-9 Subsidiary Acquired by Issuing Preferred Stock

Byte Computer Corporation acquired 90 percent of Nofail Software Company's common stock on January 2, 20X3, by issuing preferred stock with a par value of \$6 per share and a market value of \$8.10 per share. A total of 10,000 shares of preferred stock was issued. Balance sheet data for the two companies immediately before the business combination are presented in E3-8.

### Required

Prepare a consolidated balance sheet for the companies immediately after Byte obtains ownership of Nofail by issuing the preferred stock.

### LO 3-4, 3-7 E3-10 Reporting for a Variable Interest Entity

Gamble Company convinced Conservative Corporation that the two companies should establish Simpletown Corporation to build a new gambling casino in Simpletown Corner. Although chances for the casino's success were relatively low, a local bank loaned \$140,000,000 to the new corporation, which built the casino at a cost of \$130,000,000. Conservative purchased 100 percent of the initial capital stock offering for \$5,600,000, and Gamble agreed to supply 100 percent of the management and guarantee the bank loan. Gamble also guaranteed a 20 percent return to Conservative on its investment for the first 10 years. Gamble will receive all profits in excess of the 20 percent return to Conservative. Immediately after the casino's construction, Gamble reported the following amounts:

| Cash                     | \$ 3,000,000 |
|--------------------------|--------------|
| Buildings & Equipment    | 240,600,000  |
| Accumulated Depreciation | 10,100,000   |
| Accounts Payable         | 5,000,000    |
| Bonds Payable            | 20,300,000   |
| Common Stock             | 103,000,000  |
| Retained Earnings        | 105,200,000  |
|                          |              |

The only disclosure that Gamble currently provides in its financial reports about its relationships to Conservative and Simpletown is a brief footnote indicating that a contingent liability exists on its guarantee of Simpletown Corporation's debt.

### Required

Prepare a consolidated balance sheet in good form for Gamble immediately following the casino's construction.

LO 3-5

### LO 3-4, 3-7

### **Consolidation of a Variable Interest Entity**

Teal Corporation is the primary beneficiary of a variable interest entity with total assets of \$500,000, liabilities of \$470,000, and owners' equity of \$30,000. Because Teal owns 25 percent of the VIE's voting stock, it reported a \$7,500 investment in the VIE in its balance sheet. Teal reported total assets of \$190,000 (including its investment in the VIE), liabilities of \$80,000, common stock of \$15,000, and retained earnings of \$95,000 in its balance sheet.

### Required

Prepare a consolidated balance sheet in good form for Teal, taking into consideration that it is the primary beneficiary of the variable interest entity.

### LO 3-3

#### E3-12 **Computation of Subsidiary Net Income**

Frazer Corporation owns 70 percent of Messer Company's stock. In the 20X9 consolidated income statement, the noncontrolling interest was assigned \$18,000 of income. There was no differential in the acquisition.

### Required

What amount of net income did Messer Company report for 20X9?

### LO 3-3, 3-4

### E3-13 **Incomplete Consolidation**

Belchfire Motors' accountant was called away after completing only half of the consolidated statements at the end of 20X4. The data left behind included the following:

| Item   | Belchfire<br>Motors             | Premium<br>Body Shop          | Consolidated                    |
|--|---------------------------------|-------------------------------|---------------------------------|
| Cash<br>Accounts Receivable<br>Inventory                       | \$ 40,000<br>180,000<br>220,000 | \$ 20,000<br>30,000<br>50,000 | \$ 60,000<br>200,000<br>270,000 |
| Buildings & Equipment (net)<br>Investment in Premium Body Shop | 300,000<br>150,000              | 290,000                       | 590,000                         |
| Total Debits Accounts Payable                                  | \$890,000<br>\$ 30,000          | \$390,000<br>\$ 40,000        | \$1,120,000                     |
| Bonds Payable<br>Common Stock<br>Retained Earnings             | 400,000<br>200,000<br>260,000   | 200,000<br>100,000<br>50,000  |                                 |
| Total Credits  | \$890,000                       | \$390,000                     |                                 |

### Required

- a. Belchfire Motors acquired shares of Premium Body Shop at underlying book value on January 1, 20X1. What portion of the ownership of Premium Body Shop does Belchfire apparently hold?
- b. Compute the consolidated totals for each of the remaining balance sheet items.

### LO 3-3, 3-4

### E3-14 Noncontrolling Interest

Sanderson Corporation acquired 70 percent of Kline Corporation's common stock on January 1, 20X7, for \$294,000 in cash. At the acquisition date, the book values and fair values of Kline's assets and liabilities were equal, and the fair value of the noncontrolling interest was equal to 30 percent of the total book value of Kline. The stockholders' equity accounts of the two companies at the date of purchase are:

|                               | Sanderson<br>Corporation | Kline<br>Corporation |
|-------------------------------|--------------------------|----------------------|
| Common Stock (\$10 par value) | \$400,000                | \$180,000            |
| Additional Paid-In Capital    | 222,000                  | 65,000               |
| Retained Earnings             | _358,000                 | 175,000              |
| Total Stockholders' Equity    | <u>\$980,000</u>         | \$420,000            |

### Required

- a. What amount will be assigned to the noncontrolling interest on January 1, 20X7, in the consolidated balance sheet?
- b. Prepare the stockholders' equity section of Sanderson and Kline's consolidated balance sheet as of January 1, 20X7.
- c. Sanderson acquired ownership of Kline to ensure a constant supply of electronic switches, which it purchases regularly from Kline. Why might Sanderson not feel compelled to purchase all of Kline's shares?

### E3-15 Computation of Consolidated Net Income

Ambrose Corporation owns 75 percent of Kroop Company's common stock, acquired at underlying book value on January 1, 20X4. At the acquisition date, the book values and fair values of Kroop's assets and liabilities were equal, and the fair value of the noncontrolling interest was equal to 25 percent of the total book value of Kroop. The income statements for Ambrose and Kroop for 20X4 include the following amounts:

|  | Ambrose<br>Corporation        | Kroop<br>Company              |
|--|-------------------------------|-------------------------------|
| Sales<br>Dividend Income   | \$528,000<br>9,000            | \$150,000                     |
| Total Income   | \$537,000                     | \$150,000                     |
| Less: Cost of Goods Sold<br>Depreciation Expense<br>Other Expenses | \$380,000<br>32,000<br>66,000 | \$ 87,000<br>20,000<br>23,000 |
| Total Expenses   | \$478,000                     | \$130,000                     |
| Net Income   | \$ 59,000                     | \$ 20,000                     |

Ambrose uses the cost method in accounting for its ownership of Kroop. Kroop paid dividends of \$12,000 in 20X4.

### Required

- a. What amount should Ambrose report in its income statement as income from its investment in Kroop using equity-method accounting?
- b. What amount of income should be assigned to noncontrolling interest in the consolidated income statement for 20X4?
- c. What amount should Ambrose report as consolidated net income for 20X4?
- d. Why should Ambrose not report consolidated net income of \$79,000 (\$59,000 + \$20,000) for 20X4?

### **Computation of Subsidiary Balances**

Tall Corporation acquired 75 percent of Light Corporation's voting common stock on January 1, 20X2, at underlying book value. At the acquisition date, the book values and fair values of Light's assets and liabilities were equal, and the fair value of the noncontrolling interest was equal to 25 percent of the total book value of Light. Noncontrolling interest was assigned income of \$8,000 in Tall's consolidated income statement for 20X2 and a balance of \$65,500 in Tall's consolidated balance sheet at December 31, 20X2. Light reported retained earnings of \$70,000 and additional paid-in capital of \$40,000 on January 1, 20X2. Light did not pay dividends or issue stock in 20X2.

### Required

- a. Compute the amount of net income reported by Light for 20X2.
- b. Prepare the stockholders' equity section of Light's balance sheet at December 31, 20X2.

### LO 3-4, 3-5

### **Subsidiary Acquired at Net Book Value**

On December 31, 20X8, Banner Corporation acquired 80 percent of Dwyer Company's common stock for \$136,000. At the acquisition date, the book values and fair values of all of Dwyer's assets and liabilities were equal. Banner uses the equity method in accounting for its investment. Balance sheet information provided by the companies at December 31, 20X8, immediately following the acquisition is as follows:

|                                   | Banner<br>Corporation | Dwyer<br>Company |
|-----------------------------------|-----------------------|------------------|
| Cash                              | \$ 74,000             | \$ 20,000        |
| Accounts Receivable               | 120,000               | 70,000           |
| Inventory                         | 180,000               | 90,000           |
| Fixed Assets (net)                | 350,000               | 240,000          |
| Investment in Dwyer Company Stock | 136,000               |                  |
| Total Debits                      | \$860,000             | \$420,000        |
| Accounts Payable                  | \$ 65,000             | \$ 30,000        |
| Notes Payable                     | 350,000               | 220,000          |
| Common Stock                      | 150,000               | 90,000           |
| Retained Earnings                 | 295,000               | 80,000           |
| Total Credits                     | \$860,000             | \$420,000        |

### Reauired

Prepare a consolidated balance sheet for Banner at December 31, 20X8.

### E3-18 Acquisition of Majority Ownership

Lang Company reports net assets with a book value and fair value of \$200,000 Pace Corporation acquires 75 percent ownership for \$150,000. Pace reports net assets with a book value of \$520,000 and a fair value of \$640,000 at that time, excluding its investment in Lang.

### Required

For each of the following, compute the amounts that would be reported immediately after the combination under current accounting practice:

- a. Consolidated net identifiable assets.
- b. Noncontrolling interest.

#### E3-19B Measurement of Goodwill

Rank Corporation acquired 60 percent of Fresh Company's stock on December 31, 20X4. In preparing the consolidated financial statements at December 31, 20X4, goodwill of \$240,000 was reported. The goodwill is attributable to Rank's purchase of Fresh shares, and the parent company approach was used in determining the amount of goodwill reported.

### Reauired

Determine the amount of goodwill to be reported under each of the following consolidation alternatives:

- a. Proprietary theory.
- b. Entity theory.
- c. Current accounting practice.

#### E3-20B **Assets under Alternative Accounting Theories**

Garwood Corporation acquired 75 percent of Zorn Company's voting common stock on January 1, 20X4. At the time of acquisition, Zorn reported buildings and equipment at book value of \$240,000; however, an appraisal indicated a fair value of \$290,000.

### Required

If consolidated statements are prepared, determine the amount at which buildings and equipment will be reported using the following consolidation alternatives:

- a. Entity theory.
- b. Parent company theory.

LO 3-4

- c. Proprietary theory.
- d. Current accounting practice.

### **Reported Income under Alternative Accounting Theories**

Placer Corporation acquired 80 percent of Billings Company's voting common stock on January 1, 20X4. Placer and Billings reported total revenue of \$410,000 and \$200,000 and total expenses of \$320,000 and \$150,000, respectively, for the year ended December 31, 20X4.

### Required

Determine the amount of total revenue, total expense, and net income to be reported in the consolidated income statement for 20X4 under the following consolidation alternatives:

- a. Entity theory.
- b. Parent company theory.
- c. Proprietary theory.
- d. Current accounting practice.

#### E3-22B **Applying Alternative Accounting Theories**

Noway Manufacturing owns 75 percent of Positive Piston Corporation's stock. During 20X9, Noway and Positive Piston reported sales of \$400,000 and \$200,000 and expenses of \$280,000 and \$160,000, respectively.

### Required

Compute the amount of total revenue, total expenses, and net income to be reported in the 20X9 consolidated income statement under the following alternative approaches:

- a. Proprietary theory.
- b. Parent company theory.
- c. Entity theory.
- d. Current accounting practice.

## **Problems**

LO 3-4, 3-6

### P3-23 Multiple-Choice Questions on Consolidated and Combined Financial Statements [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. What is the theoretically preferred method of presenting a noncontrolling interest in a consolidated balance sheet?
  - a. As a separate item within the liability section.
  - b. As a deduction from (contra to) goodwill from consolidation, if any.
  - c. By means of notes or footnotes to the balance sheet.
  - d. As a separate item within the stockholders' equity section.
- 2. A subsidiary, acquired for cash in a business combination, owned equipment with a market value in excess of book value as of the date of combination. A consolidated balance sheet prepared immediately after the acquisition would treat this excess as
  - a. Goodwill.
  - b. Plant and equipment.
  - c. Retained earnings.
  - d. Deferred credit.
- 3. Mr. Cord owns four corporations. Combined financial statements are being prepared for these corporations, which have intercompany loans of \$200,000 and intercompany profits of \$500,000. What amount of these intercompany loans and profits should be included in the combined financial statements?

|            | Intercompany |        |        |     |
|------------|--------------|--------|--------|-----|
|            | Loans        |        | Prof   | its |
| <i>a</i> . | \$200,000    | )<br>) | \$     | 0   |
| b.         | \$200,000    | С      | \$500, | 000 |
| c.         | \$ (         | С      | \$     | 0   |
| d.         | \$ (         | С      | \$500, | 000 |

#### LO 3-4 P3-24 **Determining Net Income of Parent Company**

Tally Corporation and its subsidiary reported consolidated net income of \$164,300 for 20X2. Tally owns 60 percent of the common shares of its subsidiary, acquired at book value. Noncontrolling interest was assigned income of \$15,200 in the consolidated income statement for 20X2.

### Reauired

Determine the amount of separate operating income reported by Tally for 20X2.

#### LO 3-4 P3-25 **Reported Balances**

Roof Corporation acquired 80 percent of the stock of Gable Company by issuing shares of its common stock with a fair value of \$192,000. At that time, the fair value of the noncontrolling interest was estimated to be \$48,000, and the fair values of Gable's identifiable assets and liabilities were \$310,000 and \$95,000, respectively. Gable's assets and liabilities had book values of \$220,000 and \$95,000, respectively.

### Required

Compute the following amounts to be reported immediately after the combination

- a. Investment in Gable reported by Roof.
- b. Goodwill for the combined entity.
- c. Noncontrolling interest reported in the consolidated balance sheet.

#### P3-26 **Acquisition Price**

Darwin Company holds assets with a fair value of \$120,000 and a book value of \$90,000 and liabilities with a book value and fair value of \$25,000.

Compute the following amounts if Brad Corporation acquires 60 percent ownership of Darwin:

- a. What amount did Brad pay for the shares if no goodwill and no gain on a bargain purchase are reported?
- b. What amount did Brad pay for the shares if the fair value of the noncontrolling interest at acquisition is \$54,000 and goodwill of \$40,000 is reported?
- c. What balance will be assigned to the noncontrolling interest in the consolidated balance sheet if Brad pays \$73,200 to acquire its ownership and goodwill of \$27,000 is reported?

#### P3-27 **Consolidation of a Variable Interest Entity**

On December 28, 20X3, Stern Corporation and Ram Company established S&R Partnership, with cash contributions of \$10,000 and \$40,000, respectively. The partnership's purpose is to purchase from Stern accounts receivable that have an average collection period of 80 days and hold them to collection. The partnership borrows cash from Midtown Bank and purchases the receivables without recourse but at an amount equal to the expected percent to be collected, less a financing fee of 3 percent of the gross receivables. Stern and Ram hold 20 percent and 80 percent of the ownership of the partnership, respectively, and Stern guarantees both the bank loan made to the partnership and a 15 percent annual return on the investment made by Ram. Stern receives any income in excess of the 15 percent return guaranteed to Ram. The partnership agreement provides Stern total control over the partnership's activities. On December 31, 20X3, Stern sold \$8,000,000 of accounts receivable to the partnership. The partnership immediately borrowed \$7,500,000 from the bank and paid Stern \$7,360,000. Prior to the sale, Stern had established a \$400,000 allowance for uncollectibles on the receivables sold to the partnership. LO 3-7

The balance sheets of Stern and S&R immediately after the sale of receivables to the partnership contained the following:

|                                      | Stern<br>Corporation | S&R<br>Partnership |
|--------------------------------------|----------------------|--------------------|
| Cash                                 | \$7,960,000          | \$ 190,000         |
| Accounts Receivable                  | 4,200,000            | 8,000,000          |
| Allowance for Uncollectible Accounts | (210,000)            | (400,000)          |
| Other Assets                         | 5,400,000            |                    |
| Prepaid Finance Charges              | 240,000              |                    |
| Investment in S&R Partnership        | 10,000               |                    |
| Accounts Payable                     | 950,000              |                    |
| Deferred Revenue                     |                      | 240,000            |
| Bank Notes Payable                   |                      | 7,500,000          |
| Bonds Payable                        | 9,800,000            |                    |
| Common Stock                         | 700,000              |                    |
| Retained Earnings                    | 6,150,000            |                    |
| Capital, Stern Corporation           |                      | 10,000             |
| Capital, Ram Company                 |                      | 40,000             |

### Required

Assuming that Stern is S&R's primary beneficiary, prepare a consolidated balance sheet in good form for Stern at January 1, 20X4.

#### P3-28 **Reporting for Variable Interest Entities**

Purified Oil Company and Midwest Pipeline Corporation established Venture Company to conduct oil exploration activities in North America to reduce their dependence on imported crude oil. Midwest Pipeline purchased all 20,000 shares of the newly created company for \$10 each. Purified Oil agreed to purchase all of Venture's output at market price, guarantee up to \$5,000,000 of debt for Venture, and absorb all losses if the company proved unsuccessful. Purified and Midwest agreed to share equally the profits up to \$80,000 per year and to allocate 70 percent of those in excess of \$80,000 to Purified and 30 percent to Midwest.

Venture immediately borrowed \$3,000,000 from Second National Bank and purchased land, drilling equipment, and supplies to start its operations. Following these asset purchases, Venture and Purified Oil reported the following balances:

|                        | Venture<br>Company    | Purified Oil<br>Company |
|------------------------|-----------------------|-------------------------|
| Cash Drilling Supplies | \$ 230,000<br>420,000 | \$ 410,000              |
| Accounts Receivable    |                       | 640,000                 |
| Equipment (net)        | 1,800,000             | 6,700,000               |
| Land                   | 900,000               | 4,200,000               |
| Accounts Payable       | 150,000               | 440,000                 |
| Bank Loans Payable     | 3,000,000             | 8,800,000               |
| Common Stock           | 200,000               | 560,000                 |
| Retained Earnings      |                       | 2,150,000               |

The only disclosure that Purified Oil currently provides in its financial statements with respect to its relationship with Midwest Pipeline and Venture is a brief note indicating that a contingent liability exists on the guarantee of Venture Company debt.

### Required

Assuming that Venture is considered to be a variable interest entity and Purified Oil is the primary beneficiary, prepare a balance sheet in good form for Purified Oil.

LO 3-4

#### P3-29 **Consolidated Income Statement Data**

Master Products acquired 80 percent ownership of LoCal Bakeries on January 1, 20X3, when the fair value of LoCal's depreciable assets was equal to book value.

|                                      | Master    | Products   | LoCal E   | Bakeries  |
|--------------------------------------|-----------|------------|-----------|-----------|
| Sales                                |           | \$ 300,000 |           | \$200,000 |
| Cost of Goods Sold                   | \$200,000 |            | \$130,000 |           |
| Depreciation Expense                 | 40,000    | (240,000)  | 30,000    | (160,000) |
| Income before Income from Subsidiary |           | \$ 60,000  |           |           |
| Net Income                           |           |            |           | \$ 40,000 |

During 20X3, Master Products purchased a special imported yeast for \$35,000 and resold it to LoCal for \$50,000. LoCal did not resell any of the yeast before year-end.

### Required

Determine the amounts to be reported for each of the following items in the consolidated income statement for 20X3:

- a. Sales.
- b. Investment income from LoCal Bakeries.
- c. Cost of goods sold.
- d. Depreciation expense.

LO 3-4

#### P3-30 **Parent Company and Consolidated Amounts**

Quoton Corporation acquired 80 percent of Tempro Company's common stock on December 31, 20X5, at underlying book value. The book values and fair values of Tempro's assets and liabilities were equal, and the fair value of the noncontrolling interest was equal to 20 percent of the total book value of Tempro. Tempro provided the following trial balance data at December 31, 20X5:

|                               | Debit     | Credit    |
|-------------------------------|-----------|-----------|
| Cash                          | \$ 28,000 |           |
| Accounts Receivable           | 65,000    |           |
| Inventory                     | 90,000    |           |
| Buildings and Equipment (net) | 210,000   |           |
| Cost of Goods Sold            | 105,000   |           |
| Depreciation Expense          | 24,000    |           |
| Other Operating Expenses      | 31,000    |           |
| Dividends Declared            | 15,000    |           |
| Accounts Payable              |           | \$ 33,000 |
| Notes Payable                 |           | 120,000   |
| Common Stock                  |           | 90,000    |
| Retained Earnings             |           | 130,000   |
| Sales                         |           | 195,000   |
| Total                         | \$568,000 | \$568,000 |

### Required

- a. How much did Quoton pay to purchase its shares of Tempro?
- b. If consolidated financial statements are prepared at December 31, 20X5, what amount will be assigned to the noncontrolling interest in the consolidated balance sheet?
- c. If Quoton reported income of \$143,000 from its separate operations for 20X5, what amount of consolidated net income will be reported for 20X5?
- d. If Quoton had purchased its ownership of Tempro on January 1, 20X5, at underlying book value and Quoton reported income of \$143,000 from its separate operations for 20X5, what amount of consolidated net income would be reported for 20X5?

LO 3-4

#### P3-31 Parent Company and Consolidated Balances

Exacto Company reported the following net income and dividends for the years indicated:

| Net Income | Dividends          |
|------------|--------------------|
| \$35,000   | \$12,000           |
| 45,000     | 20,000             |
| 30,000     | 14,000             |
|            | \$35,000<br>45,000 |

True Corporation acquired 75 percent of Exacto's common stock on January 1, 20X5. On that date, the fair value of Exacto's net assets was equal to the book value. True uses the equity method in accounting for its ownership in Exacto and reported a balance of \$259,800 in its investment account on December 31, 20X7.

#### Required

- a. What amount did True pay when it purchased Exacto's shares?
- b. What was the fair value of Exacto's net assets on January 1, 20X5?
- c. What amount was assigned to the NCI shareholders on January 1, 20X5?
- d. What amount will be assigned to the NCI shareholders in the consolidated balance sheet prepared at December 31, 20X7?

LO 3-2, 3-4

## P3-32 Indirect Ownership

Purple Corporation recently attempted to expand by acquiring ownership in Green Company. The following ownership structure was reported on December 31, 20X9:

| Investor           | Investee           | Percentage of<br>Ownership Held |
|--------------------|--------------------|---------------------------------|
| Purple Corporation | Green Company      | 70                              |
| Green Company      | Orange Corporation | 10                              |
| Orange Corporation | Blue Company       | 60                              |
| Green Company      | Yellow Company     | 40                              |

The following income from operations (excluding investment income) and dividend payments were reported by the companies during 20X9:

| Company            | Operating Income | Dividends<br>Paid |
|--------------------|------------------|-------------------|
| Purple Corporation | \$ 90,000        | \$60,000          |
| Green Company      | 20,000           | 10,000            |
| Orange Corporation | 40,000           | 30,000            |
| Blue Company       | 100,000          | 80,000            |
| Yellow Company     | 60,000           | 40,000            |

#### Required

Compute the amount reported as consolidated net income for 20X9.

LO 3-4, 3-5

## P3-33 Consolidated Worksheet and Balance Sheet on the Acquisition Date (Equity Method)

Peanut Company acquired 90 percent of Snoopy Company's outstanding common stock for \$270,000 on January 1, 20X8, when the book value of Snoopy's net assets was equal to \$300,000.

Peanut uses the equity method to account for investments. Trial balance data for Peanut and Snoopy as of January 1, 20X8, are as follows:

|                                    | Peanut<br>Company | Snoopy<br>Company |
|------------------------------------|-------------------|-------------------|
| Assets                             |                   |                   |

| Sales                            |           | 880,000   |           | 355,000 |
| Income from Scissor              |           | 85,600    |           | 0       |
| Total                            | 2,935,000 | 2,935,000 | 981,000   | 981,000 |

#### Required

- a. Prepare any equity method journal entry(ies) related to the investment in Scissor Company during 20X9.
- b. Prepare a consolidation worksheet for 20X9 in good form.

#### P3-39B **Balance Sheet Amounts under Alternative Accounting Theories**

Parsons Corporation purchased 75 percent ownership of Tumble Company on December 31, 20X7, for \$210,000. Summarized balance sheet amounts for the companies on December 31, 20X7, prior to the purchase, were as follows:

|  | Parsons     | Tumble Company |            |  |
|--|-------------|----------------|------------|--|
|  | Corporation | Book Value     | Fair Value |  |
| Cash & Inventory                         | \$300,000   | \$ 80,000      | \$ 80,000  |  |
| Buildings & Equipment (net)              | 400,000     | 120,000        | 180,000    |  |
| Total Assets                             | \$700,000   | \$200,000      | \$260,000  |  |
| Common Stock                             | \$380,000   | \$ 90,000      |            |  |
| Retained Earnings                        | 320,000     | 110,000        |            |  |
| Total Liabilities & Stockholders' Equity | \$700,000   | \$200,000      |            |  |

#### Required

If consolidated financial statements are prepared, determine the amounts that would be reported as cash and inventory, buildings and equipment (net), and goodwill using the following consolidation alternatives:

- a. Proprietary theory.
- b. Parent company theory.
- c. Entity theory.
- d. Current accounting practice.

# HOW MUCH WORK DOES IT REALLY TAKE TO CONSOLIDATE? ASK THE PEOPLE WHO DO IT AT DISNEY

The Walt Disney Company, whose history goes back to 1923, is parent company to some of the most well-known businesses in the world. Best known for Walt Disney Studios, its world famous parks and resorts, its media operations, like the Disney Channel, and its consumer products, Disney is a widely diversified company. For example, did you know that Disney owns the ABC Television Network and is the majority owner of ESPN? While the consolidation examples you're working in class usually involve a parent company and a single subsidiary, Disney employs a dedicated staff at its Burbank, California, headquarters each quarter to complete the consolidation of its five segments, each comprised of many subsidiaries, in preparation for its quarterly 10-Q and annual 10-K filings with the SEC. Preparation for the actual consolidation begins before the end of the fiscal period, and soon after the end of the period, each segment closes its books, including performing its own subsidiary consolidations, works with the independent auditors, and prepares for the roll-up to the overall company consolidation. The work continues as the finance and accounting staff of approximately 100 men and women at the corporate offices review and analyze the results from the individual segments and work with segment financial staff to prepare what becomes the publicly disclosed set of consolidated financial statements.

However, the work doesn't all take place at the end of the fiscal period. The accounting system also tracks intercompany transactions throughout the period. The consolidation process requires the elimination of intercompany sales and asset transfers among others cost allocations (as discussed in Chapters 6 and 7). Tracking these transactions involves ongoing efforts throughout the period.

One of the reasons Disney has grown and become so diversified over the years is that it frequently acquires other companies. Two of the more notable acquisitions in recent years are the Marvel Entertainment acquisition in 2009 and its acquisition of Pixar Animation Studios in 2006. In these and other well-known acquisitions, Disney paid more than the book value of each acquired company's net assets to acquire them. Acquisition accounting rules require Disney to account for the full acquisition price—even though the acquired companies may continue to report their assets and liabilities on their separate

books at their historical book values. Thus, acquisition accounting requires Disney to essentially revalue the balance sheets of these companies to their amortized fair values in the consolidation process each period. We provide more details on the Pixar acquisition later in the chapter.

The bottom line is that preparation of Disney's publicly disclosed financial statements is the culmination of a lot of work by the segment and corporate accounting and finance staff. The issues mentioned here illustrate the complexity of a process that requires substantial teamwork and effort to produce audited financial statements that are valuable to an investor or interested accounting student. You'll learn in this chapter about the activities during the consolidation process performed by the accounting staff at any well-known public company. This chapter also introduces differences in the consolidation process when there is a differential (i.e., the acquiring company pays more than the book value of the acquired company's net assets).

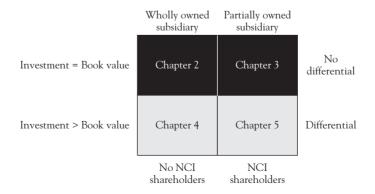

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 4-1 Understand and make equity-method journal entries related to the differential.
- LO 4-2 Understand and explain how consolidation procedures differ when there is a differential.
- LO 4-3 Make calculations and prepare elimination entries for the consolidation of a wholly owned subsidiary when there is a complex positive differential at the acquisition date.
- LO 4-4 Make calculations and prepare elimination entries for the consolidation of a wholly owned subsidiary when there is a complex bargain-purchase
- LO 4-5 Prepare equity-method journal entries, elimination entries, and the consolidation worksheet for a wholly owned subsidiary when there is a complex positive differential.
- LO 4-6 Understand and explain the elimination of basic intercompany transactions.
- LO 4-7 Understand and explain the basics of push-down accounting.

## **DEALING WITH THE DIFFERENTIAL**

This chapter continues to build upon the foundation established in Chapters 2 and 3 related to the consolidation of majority-owned subsidiaries. In Chapters 2 and 3, we focus on relatively simple situations when the acquisition price is exactly equal to the parent's share of the book value of the subsidiary's net assets. In Chapter 4, we relax this assumption and allow the acquisition price to differ from book value. As explained in Chapter 1, this allows for a "differential."

## The Difference between Acquisition Price and Underlying Book Value

When an investor purchases the common stock of another company, the purchase price normally is based on the market value of the shares acquired rather than the book value of the investee's assets and liabilities. Not surprisingly, the acquisition price is usually different from the book value of the investor's proportionate share of the investee's net assets. This difference is referred to as a differential. The differential is frequently positive, meaning the acquiring company pays more than its share of the book value of the subsidiary's net assets. Note that in the case of an equity-method investment, the differential on the parent's books relates only to the parent's share of any difference between total investee's fair value and book value. The differential in the case of an equity-method investment is implicit in the investment account on the parent's books and is not recorded separately.

In 2009, Bank of America reported one of the largest goodwill balances of all time, \$86.3 billion. However, due to large goodwill impairment charges in 2010 and 2011, its 2011 goodwill balance decreased to \$69.967 billion.

The cost of an investment might exceed the book value of the underlying net assets, giving rise to a positive differential, for any of several reasons. One reason is that the investee's assets may be worth more than their book values. Another reason could be the existence of unrecorded goodwill associated with the excess earning power of the investee. In either case, the portion of the dif-

ferential pertaining to each asset of the investee, including goodwill, must be ascertained. When the parent company uses the equity method, for reporting purposes (i.e., the subsidiary remains unconsolidated) that portion pertaining to limited-life assets of the investee, including identifiable intangibles, must be amortized over the remaining economic lives of those assets. Any portion of the differential that represents goodwill (referred to as equitymethod goodwill or implicit goodwill) is not amortized or separately tested for impairment. However, an impairment loss on the investment itself should be recognized if it suffers a material decline in value that is other than temporary (ASC 323-10-35-32).

## Amortization or Write-Off of the Differential<sup>1</sup>

When the equity method is used, each portion of the differential must be treated in the same manner as the investee treats the assets or liabilities to which the differential relates. Thus, any portion of the differential related to depreciable or amortizable assets of the investee should be amortized over the remaining time that the cost of the asset is being allocated by the investee. Amortization of the differential associated with depreciable or amortizable assets of the investee is necessary on the investor's books to reflect the decline in the future benefits the investor expects from that portion of the investment cost associated with those assets. The investee recognizes the reduction in service potential of assets with limited lives as depreciation or amortization expense based on the amount it has invested in those assets. This reduction, in turn, is recognized by the investor through its share of the investee's net income. When the acquisition price of the investor's interest in the investee's assets is higher than the investee's cost (as reflected in a positive differential), the additional cost must be amortized.

The approach to amortizing the differential that is most consistent with the idea of reflecting all aspects of the investment in just one line on the balance sheet and one line on the income statement is to reduce the income recognized by the investor from the investee and the balance of the investment account:

Income from Investee XXXX Investment in Common Stock of Investee XXX

Understand and make equity-method journal entries related to the

StudyGuide .com

<sup>&</sup>lt;sup>1</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

The differential represents the amount paid by the investor company in excess of the book value of the net assets of the investee company and is included in the original acquisition price. Hence, the amortization or reduction of the differential involves the reduction of the investment account. At the same time, the investor's net income must be reduced by an equal amount to recognize that a portion of the amount paid for the investment has expired.

#### Treatment of the Differential Illustrated

To illustrate how to apply the equity method when the cost of the investment exceeds the book value of the underlying net assets, assume that Ajax Corporation purchases 40 percent of the common stock of Barclay Company on January 1, 20X1, for \$200,000. Barclay has net assets on that date with a book value of \$400,000 and fair value of \$465,000. The total differential is equal to the market value of Barclay's common stock, \$500,000, minus the book value of its net assets, \$400,000. Thus, the entire differential is \$100,000.

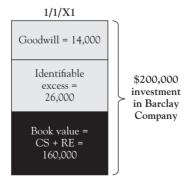

Ajax's share of the book value of Barclay's net assets at acquisition is \$160,000  $(\$400,000 \times 0.40)$ . Thus, Ajax's 40 percent share of the differential is computed as follows:

| Cost of Ajax's investment in Barclay's stock       | \$200,000 |
|--|-----------|
| Book value of Ajax's share of Barclay's net assets | (160,000) |
| Ajax's share of the differential                   | \$ 40,000 |

The portion of the total differential that can be directly traced to specific assets that are undervalued on Barclay's books is the \$65,000 excess of the fair value over the book value of Barclay's net assets (\$465,000 - \$400,000). An appraisal of Barclay's assets indicates that its land is worth \$15,000 more than the recorded value on its books and its equipment is worth \$50,000 more than its current book value. Ajax's 40 percent share of the unrecorded increase in the value of Barclay's assets is as follows:

|           | Total Increase  | Ajax's 40% Share |
|-----------|-----------------|------------------|
| Land      | \$15,000        | 6,000            |
| Equipment | _50,000         | _20,000          |
|           | <u>\$65,000</u> | <u>\$26,000</u>  |

Thus, \$26,000 of Ajax's share of the differential is assigned to land and equipment, with the remaining \$14,000 attributed to goodwill. The allocation of Ajax's share of the differential can be illustrated as shown in the diagram below.

Although the differential relates to Barclay's assets the additional cost incurred by Ajax to acquire a claim on Barclay's assets is reflected in Ajax's investment in Barclay. No separate differential account is established, and no separate accounts are recorded on Ajax's books to reflect the apportionment of the differential to specific assets. Similarly, no separate expense account is established on Ajax's books. Amortization or write-off of the differential is accomplished by reducing Ajax's investment account and the income Ajax recognizes from its investment in Barclay.

Because land has an unlimited economic life, the portion of the differential related to land is not amortized. Ajax's \$20,000 portion of the differential related to Barclay's equipment is amortized over the equipment's remaining life. If the equipment's remaining life is five years, Ajax's annual amortization of the differential is \$4,000 (\$20,000  $\div$  5) (assuming straight-line depreciation).

Beginning in 1970, financial reporting standards required that goodwill be amortized over its useful life, not to exceed 40 years. In 2001, however, the FASB issued a new standard under which equity-method goodwill is no longer amortized nor is it separately tested for impairment when the equity method is used for reporting purposes. Instead, the entire investment is tested for impairment (ASC 323-10-35-32). In this example, the only amortization of the differential is the \$4,000 related to Barclay's equipment.

Barclay reports net income of \$80,000 at year end and declares dividends of \$20,000 during 20X1. Using the equity-method, Ajax records the following entries on its books during 20X1:

| (1) | Investment in Barclay Stock                           | 200,000 |         |
|-----|---|---------|---------|
|     | Cash  |         | 200,000 |
|     | Record purchase of Barclay stock.                     |         |         |
| (2) | Investment in Barclay Stock                           | 32,000  |         |
|     | Income from Barclay Company                           |         | 32,000  |
|     | Record equity-method income: $\$80,000 \times 0.40$ . |         |         |
| (3) | Cash  | 8,000   |         |
|     | Investment in Barclay Stock                           |         | 8,000   |
|     | Record dividend from Barclay: $$20,000 \times 0.40$ . |         | ,       |
| (4) | Income from Barclay Company                           | 4,000   |         |
|     | Investment in Barclay Stock                           |         | 4,000   |
|     | Amortize differential related to equipment.           |         |         |

With these entries, Ajax recognizes \$28,000 of income from Barclay and adjusts its investment in Barclay to an ending balance of \$220,000.

The amortization on Ajax's books of the portion of the differential related to Barclay's equipment is the same (\$4,000) for each of the first five years (20X1 through 20X5). This amortization stops after 20X5 because this portion of the differential is fully amortized after five years.

Notice that no special accounts are established on Ajax's books with regard to the differential or the amortization of the differential. The only two accounts involved are "Income from Barclay Company" and "Investment in Barclay Company Stock." As the Investment in Barclay Company Stock account is amortized, the differential between the carrying amount of the investment and the book value of the underlying net assets decreases.

#### Disposal of Differential-Related Assets

Although the differential is included on the books of the investor as part of the investment account, it relates to specific assets of the investee. Thus, if the investee disposes of any asset to which the differential relates, that portion of the differential must be removed from the investment account on the investor's books. When this is done, the investor's share of the investee's gain or loss on disposal of the asset must be adjusted to reflect the fact that the investor paid more for its proportionate share of that asset than did the investee. For example, if in the previous illustration Barclay Company sells the land to which \$6,000 of Ajax's differential relates, Ajax does not recognize a full 40 percent of the gain or loss on the sale. Assume that Barclay originally had purchased the land in 20X0 for \$75,000 and sells the land in 20X2 for \$125,000. Barclay recognizes a gain on the sale of \$50,000, and Ajax's share of that gain is 40 percent, or \$20,000. The portion of the gain actually recognized by Ajax, however, must be adjusted as follows because of the amount in excess of book value paid by Ajax for its investment in Barclay:

| Ajax's share of Barclay's reported gain            | \$20,000 |
|--|----------|
| Portion of Ajax's differential related to the land | (6,000)  |
| Gain to be recognized by Ajax                      | \$14,000 |

Thus, if Barclay reports net income (including the gain on the sale of land) of \$150,000 for 20X2, Ajax records the following entries (disregarding dividends and amortization of the differential relating to equipment):

| (5) | Investment in Barclay Company                         | 60,000 |        |
|-----|---|--------|--------|
|     | Income from Barclay Company                           |        | 60,000 |
|     | Record equity-method income: $$150,000 \times 0.40$ . |        |        |
|     |   |        |        |
| (6) | Income from Barclay Company                           | 6,000  |        |
|     | Investment in Barclay Stock                           |        | 6,000  |

Remove differential related to Barclay's land that was sold.

The same approach applies when dealing with a limited-life asset. The unamortized portion of the original differential relating to the asset sold is removed from the investment account, and the investor's share of the investee's income is adjusted by that amount.

Note that the investor does not separately report its share of ordinary gains or losses included in the investee's net income, such as the gain on the sale of the fixed asset or the write-off of the unamortized differential. Consistent with the idea of using only a single line in the income statement to report the impact of the investee's activities on the investor, all such items are included in the Income from Investee account. Current standards do require the investor to report its share of an investee's extraordinary gains and losses, prior-period adjustments, and elements of other comprehensive income, if material to the investor, as separate items in the same manner as the investor reports its own.

#### Impairment of Investment Value

As with many assets, accounting standards require that equity-method investments be written down if their value is impaired. If the market value of the investment declines materially below its equity-method carrying amount, and the decline in value is considered other than temporary, the carrying amount of the investment should be written down to the market value and a loss should be recognized. The new lower value serves as a starting point for continued application of the equity-method. Subsequent recoveries in the value of the investment may not be recognized.

#### ADDITIONAL CONSIDERATIONS

## Pixar Acquisition Details from the 2006 Disney 10-K Acquisition of Pixar

On May 5, 2006 (the Closing Date), the Company completed an all stock acquisition of Pixar, a digital animation studio (the Acquisition). Disney believes that the creation of high quality feature animation is a key driver of success across many of its businesses

and provides content useful across a variety of traditional and new platforms throughout the world. The acquisition of Pixar is intended to support the Company's strategic priorities of creating the finest content, embracing leading-edge technologies, and strengthening its global presence. The results of Pixar's operations have been included in the Company's consolidated financial statements since the Closing Date.

To purchase Pixar, Disney exchanged 2.3 shares of its common stock for each share of Pixar common stock, resulting in the issuance of 279 million shares of Disney common stock, and converted previously issued vested and unvested Pixar equity-based awards into approximately 45 million Disney equity-based awards.

The Acquisition purchase price was \$7.5 billion (\$6.4 billion, net of Pixar's cash and investments of approximately \$1.1 billion). The value of the stock issued was calculated based on the market value of the Company's common stock using the average stock price for the five-day period beginning two days before the acquisition announcement date on January 24, 2006. The fair value of the vested equity-based awards issued at the Closing Date was estimated using the Black-Scholes option pricing model, as the information required to use a binomial valuation model was not reasonably available.

In connection with the Acquisition, the Company recorded a non-cash, non-taxable gain from the deemed termination of the existing Pixar distribution agreement. Under our previously existing distribution agreement with Pixar, the Company earned a distribution fee that, based on current market rates at the Closing Date, was favorable to the Company. In accordance with EITF 04-1, Accounting for Pre-Existing Relationships between the Parties to a Business Combination (EITF 04-1), the Company recognized a \$48 million gain, representing the net present value of the favorable portion of the distribution fee over the remaining life of the distribution agreement. In addition, the Company abandoned the Pixar sequel projects commenced by the Company prior to the acquisition and recorded a pre-tax impairment charge totaling \$26 million, which represents the costs of these projects incurred through the abandonment date. These two items are classified in "Restructuring and impairment (charges) and other credits, net" in the Consolidated Statement of Income.

The Company allocated the purchase price to the tangible and identifiable intangible assets acquired and liabilities assumed based on their fair values, which were determined primarily through third-party appraisals. The excess of the purchase price over those fair values was recorded as goodwill, which is not amortizable for tax purposes. The fair values set forth below are subject to adjustment if additional information is obtained prior to the one-year anniversary of the Acquisition that would change the fair value allocation as of the acquisition date. The following table summarizes the allocation of the purchase price:

|                           | Estimated<br>Fair Value | Weighted Average<br>Useful Lives (years) |
|---------------------------|-------------------------|--|
| Cash and cash equivalents | \$ 11                   |  |
| Investments               | 1,073                   |  |
| Prepaid and other assets  | 45                      |  |
| Film costs                | 538                     | 12                                       |
| Buildings & equipment     | 225                     | 16                                       |
| Intangibles               | 233                     | 17                                       |
| Goodwill                  | 5,557                   |  |
| Total assets acquired     | \$ 7,682                |  |
| Liabilities               | 64                      |  |
| Deferred income taxes     | 123                     |  |
| Total liabilities assumed | \$ 187                  |  |
| Net assets acquired       | \$ 7,495                |  |

The weighted average useful life determination for intangibles excludes \$164 million of indefinite-lived Pixar trademarks and trade names. Goodwill of \$4.8 billion, \$0.6 billion, and \$0.2 billion was allocated to the Studio Entertainment, Consumer Products, and Parks and Resorts operating segments, respectively.

The following table presents unaudited pro forma results of Disney as though Pixar had been acquired as of the beginning of the respective periods presented. These pro forma results do not necessarily represent what would have occurred if the Acquisition had taken place on the dates presented and does not represent the results that may occur in the future. The pro forma amounts represent the historical operating results of Disney and Pixar with adjustments for purchase accounting. The \$48 million non-cash gain pursuant to EITF 04-1 has been included in net income in fiscal year 2006.

|  | Fiscal Year 2006<br>(unaudited) | Fiscal Year 2005<br>(unaudited) |
|--|---------------------------------|---------------------------------|
| Revenues   | \$34,299                        | \$31,973                        |
| Income before cumulative effect of accounting change | 3,395                           | 2,682                           |
| Net income<br>Earnings per share:                    | 3,395                           | 2,646                           |
| Diluted  | \$ 1.52                         | \$ 1.12                         |
| Basic  | \$ 1.56                         | \$ 1.15                         |

## CONSOLIDATION PROCEDURES FOR WHOLLY OWNED SUBSIDIARIES ACQUIRED AT MORE THAN BOOK VALUE

LO 4-2

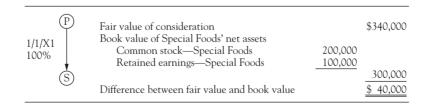

Understand and explain how consolidation procedures differ when there is a

Many factors have an effect on the fair value of a company and its stock price, including its asset values, its earning power, and general market conditions. When one company acquires another, the acquiree's fair value usually differs from its book value, and so the consideration given by the acquirer does as well. As discussed in Chapter 1, this difference between the fair value of the consideration given and the book value of the acquiree's net identifiable assets is referred to as a differential.

The process of preparing a consolidated balance sheet immediately after a business combination is complicated only slightly when 100 percent of a company's stock is acquired at a price that differs from the acquiree's book value. To illustrate the acquisition of a subsidiary when the consideration given is greater than the book value of the net assets of the acquiree, we use the Peerless-Special Foods example from Chapter 2. We assume that Peerless Products acquires all of Special Foods' outstanding stock on January 1, 20X1, by paying \$340,000 cash, an amount equal to Special Foods' fair value as a whole. The consideration given by Peerless is \$40,000 in excess of Special Foods' book value of \$300,000. The resulting ownership situation can be viewed as follows:

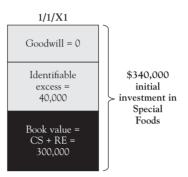

Peerless records the stock acquisition with the following entry:

| (7) | Investment in Special Foods | 340,000 |
|-----|-----------------------------|---------|
|     | Cash                        | 340,000 |

Record purchase of Special Foods stock.

In a business combination, and therefore in a consolidation following a business combination, the full amount of the consideration given by the acquirer must be assigned to the individual assets and liabilities acquired and to goodwill. In this example, the fair value of consideration given (the acquisition price) includes an extra \$40,000 for appreciation in the value of the land since it was originally acquired by Special Foods. The relationship between the fair value of the consideration given for Special Foods, the fair value of Special Foods' net assets, and the book value of Special Foods' net assets can be illustrated as follows:

Assume that Peerless prepares a consolidated balance sheet on the date it acquires Special Foods. The consolidation worksheet procedures used in adjusting to the proper consolidated amounts follow a consistent pattern. The first worksheet entry (often referred to as the "basic" elimination entry) eliminates the book value portion of the parent's investment account and each of the subsidiary's stockholders' equity accounts. It is useful to analyze the investment account and the subsidiary's equity accounts as follows:

#### **Book Value Calculations:**

| Book value at | Total Investment = | Common Stock + | Retained Earnings |
|---------------|--------------------|----------------|-------------------|
| acquisition   | 300,000            | 200,000        | 100,000           |

The worksheet entry to eliminate the book value portion of Peerless' investment account and the stockholders' equity accounts of Special Foods is as follows:

#### **Basic Elimination Entry:**

When the acquisition-date fair value of the consideration is more than the acquiree's book value at that date, the second elimination entry reclassifies the excess acquisition price to the specific accounts on the balance sheet for which the book values are not the same as their fair values on the acquisition date.<sup>2</sup> The differential represents (in simple situations involving a 100 percent acquisition) the total difference between the acquisition-date fair value of the consideration given by the acquirer and the acquiree's

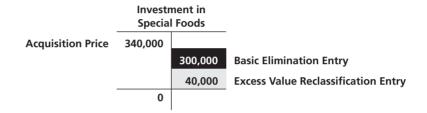

<sup>&</sup>lt;sup>2</sup> Alternatively, a separate clearing account titled Excess of Acquisition Consideration over Acquiree Book Value, or just Differential can be debited for this excess amount. A subsequent entry can be used to reclassify the differential to the various accounts on the balance sheet that need to be revalued to their acquisition date amounts. Note that the Differential account is simply a worksheet clearing account and is not found on the books of the parent or subsidiary and does not appear in the consolidated financial statements

book value. In this example, the differential is the additional \$40,000 Peerless paid to acquire Special Foods because its land was worth \$40,000 more than its book value as of the acquisition date. In preparing a consolidated balance sheet immediately after acquisition (on January 1, 20X1), the second elimination entry appearing in the consolidation worksheet simply reassigns this \$40,000 from the investment account to the land account so that: (a) the Land account fully reflects the fair value of this asset as of the acquisition date and (b) the investment account is fully eliminated from Peerless' books:

#### **Excess Value Reclassification Entry:**

| Land                        | 40,000 |        | ← Excess value assigned to land                  |
|-----------------------------|--------|--------|--|
| Investment in Special Foods |        | 40,000 | $\leftarrow$ Reclassify excess acquisition price |

Thus, these two elimination entries completely eliminate the balance in Peerless' investment account and the second entry assigns the differential to the land account.

In more complicated examples when the fair values of various balance sheet accounts differ from book values, the excess value reclassification entry reassigns the differential to adjust various account balances to reflect the fair values of the subsidiary's assets and liabilities at the time the parent acquired the subsidiary and to establish goodwill, if appropriate.

Figure 4–1 illustrates the consolidation worksheet reflecting the elimination of Special Foods' equity accounts and the allocation of the differential to the subsidiary's land. As explained previously, the combination of these two worksheet entries also eliminates the investment account.

FIGURE 4-1 Worksheet for Consolidated Balance Sheet, January 1, 20X1, Date of Combination; 100 Percent Acquisition at More than Book Value

|                                | Peerless  | Special   | Eliminatio | n Entries |              |
|--------------------------------|-----------|-----------|------------|-----------|--------------|
|                                | Products  | Foods     | DR         | CR        | Consolidated |
| Balance Sheet                  |           |           |            |           |              |
| Cash                           | 10,000    | 50,000    |            |           | 60,000       |
| Accounts Receivable            | 75,000    | 50,000    |            |           | 125,000      |
| Inventory                      | 100,000   | 60,000    |            |           | 160,000      |
| Investment in Special Foods    | 340,000   |           |            | 300,000   | 0            |
| ·                              |           |           |            | 40,000    |              |
| Land                           | 175,000   | 40,000    | 40,000     |           | 255,000      |
| Buildings & Equipment          | 800,000   | 600,000   |            | 300,000   | 1,100,000    |
| Less: Accumulated Depreciation | (400,000) | (300,000) | 300,000    |           | (400,000)    |
| Total Assets                   | 1,100,000 | 500,000   | \$340,000  | \$640,000 | 1,300,000    |
| Accounts Payable               | 100,000   | 100,000   |            |           | 200,000      |
| Bonds Payable                  | 200,000   | 100,000   |            |           | 300,000      |
| Common Stock                   | 500,000   | 200,000   | 200,000    |           | 500,000      |
| Retained Earnings              | 300,000   | 100,000   | 100,000    |           | 300,000      |
| Total Liabilities & Equity     | 1,100,000 | 500,000   | 300,000    | 0         | 1,300,000    |

As usual, we eliminate Special Foods' acquisition date accumulated depreciation against the Buildings and Equipment account balance so that, combined with the excess value reclassification entry it will appear as if these fixed assets were recorded at their acquisition date fair values.

#### **Optional Accumulated Depreciation Elimination Entry:**

Accumulated depreciation 300,000 Accumulated depreciation at the time **Building & equipment** 300,000 of the acquisition netted against cost

The amounts reported in the consolidated balance sheet are those in the Consolidated column of the worksheet in Figure 4-1. Land would be included in the consolidated balance sheet at \$255,000, the amount carried on Peerless' books (\$175,000) plus the amount carried on Special Foods' books (\$40,000) plus the differential reflecting the increased value of Special Foods' land (\$40,000).

This example is sufficiently simple that the assignment of the differential to land could be made directly in the basic elimination entry rather than through the use of a separate entry. In practice, however, the differential often relates to more than a single asset, and the allocation of the differential may be considerably more complex than in this example. The possibilities for clerical errors are reduced in complex situations by making two separate entries rather than one complicated entry.

#### Treatment of a Positive Differential

The fair value, and hence acquisition price, of a subsidiary might exceed the book value for several reasons, such as the following:

- 1. Errors or omissions on the subsidiary's books.
- 2. Excess of fair value over the book value of the subsidiary's net identifiable assets.
- 3. Existence of goodwill.

#### Errors or Omissions on the Books of the Subsidiary

An examination of an acquired company's books may reveal material errors. In some cases, the acquired company may have expensed rather than capitalized assets or, for other reasons, omitted them from the books. An acquired company that previously had been closely held may not have followed generally accepted accounting principles in maintaining its accounting records. In some cases, the recordkeeping may have simply been inadequate.

Where errors or omissions occur, corrections should be made directly on the subsidiary's books as of the date of acquisition. These corrections are treated as prior-period adjustments in accordance with ASC 250-10-60. Once the subsidiary's books are stated in accordance with generally accepted accounting principles, that portion of the differential attributable to errors or omissions will no longer exist.

#### Excess of Fair Value over Book Value of Subsidiary's Net Identifiable Assets

The fair value of a company's assets is an important factor in the overall determination of the company's fair value. In many cases, the fair value of an acquired company's net assets exceeds the book value. Consequently, the consideration given by an acquirer may exceed the acquiree's book value. The procedures used in preparing the consolidated balance sheet should lead to reporting all of the acquired company's assets and liabilities based on their fair values on the date of combination. This valuation may be accomplished in one of two ways: (1) the subsidiary's assets and liabilities may be revalued directly on the books of the subsidiary or (2) the accounting basis of the subsidiary may be maintained and the revaluations made each period in the consolidation worksheet.

Revaluing the assets and liabilities on the subsidiary's books generally is the simplest approach if all of the subsidiary's common stock is acquired. On the other hand, it generally is not appropriate to revalue the assets and liabilities on the subsidiary's books if there is a significant noncontrolling interest in that subsidiary. From a noncontrolling shareholder's point of view, the subsidiary is a continuing company, and the basis of accounting should not change. More difficult to resolve is the situation in which the parent acquires all of the subsidiary's common stock but continues to issue separate financial statements of the subsidiary to holders of the subsidiary's bonds or preferred stock. Revaluing the assets and liabilities of the subsidiary directly on its books is referred to as *push-down accounting*. It is discussed later in this chapter and is illustrated in Appendix 4A.

When the assets and liabilities are revalued directly on the subsidiary's books, that portion of the differential then no longer exists. However, if the assets and liabilities are not revalued on the subsidiary's books, an entry to revalue those assets and allocate the differential is needed in the consolidation worksheet each time consolidated financial statements are prepared for as long as the related assets are held.

#### Existence of Goodwill

If the acquisition-date fair value of the consideration exchanged for an acquired subsidiary is higher than the total fair value of the subsidiary's net identifiable assets, the difference is considered to be related to the future economic benefits associated with other assets of the subsidiary that are not separately identified and recognized and is referred to as goodwill. Thus, once a subsidiary's identifiable assets and liabilities are revalued to their fair values, any remaining debit differential is normally allocated to goodwill. For example, assuming that in the Peerless Products and Special Foods illustration, the acquisition-date fair values of Special Foods' assets and liabilities are equal to their book values, then the \$40,000 difference between the \$340,000 consideration exchanged and the \$300,000 fair value of the subsidiary's net identifiable assets should be attributed to goodwill. The following entry to assign the differential is needed in the consolidation worksheet prepared immediately after the combination:

#### **Excess Value Reclassification Entry:**

| Goodwill                    | 40,000 |        | ← Excess value assigned to goodwill |
|-----------------------------|--------|--------|-------------------------------------|
| Investment in Special Foods |        | 40,000 | ← Reassign excess acquisition price |

The consolidation worksheet is similar to Figure 4–1 except that the debit in the excess value reclassification worksheet entry would be to goodwill instead of land. Goodwill, which does not appear on the books of either Peerless or Special Foods, would appear at \$40,000 in the consolidated balance sheet prepared immediately after acquisition.

In the past, some companies have included the fair-value increment related to certain identifiable assets of the subsidiary in goodwill rather than separately recognizing those assets. This treatment is not acceptable, and any fair-value increment related to an intangible asset that arises from a contractual or legal right or that is separable from the entity must be allocated to that asset.

#### Illustration of Treatment of a Complex Differential

In many situations, the differential relates to a number of different assets and liabilities. As a means of illustrating the allocation of the differential to various assets and liabilities, assume that the acquisition-date book values and fair values of Special Foods' assets and liabilities are as shown in Figure 4–2. The inventory and land have fair values in excess of their book values, although the buildings and equipment are worth less than their book values.

Bond prices fluctuate as interest rates change. In this example, the value of Special Foods' bonds payable is higher than the book value. This indicates that the nominal interest rate on the bonds is higher than the current market interest rate and, therefore, investors

LO 4-3

Make calculations and prepare elimination entries for the consolidation of a wholly owned subsidiary when there is a complex positive differential at the acquisition date.

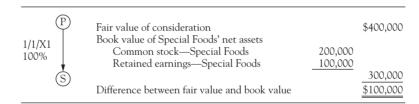

FIGURF 4-2 Differences between **Book and Fair Values** of Special Foods **Identifiable Assets** and Liabilities as of January 1, 20X1, the **Date of Combination** 

|                             |           | Book<br>Value       | Fair<br>Value       | Difference<br>between Fair<br>Value and<br>Book Value |
|-----------------------------|-----------|---------------------|---------------------|---|
| Cash<br>Accounts Receivable |           | \$ 50,000<br>50,000 | \$ 50,000<br>50,000 | ***   |

| Buildings & Equipment       | 600,000   |                     |                     |   |
| Accumulated Depreciation    | (300,000) | 300,000             | 290,000             | (10,000)  |
|                             |           | \$500,000           | \$565,000           |   |
| Accounts Payable            |           | \$100,000           | \$100,000           |   |
| Bonds Payable               |           | 100,000             | 135,000             | (35,000)  |
| Common Stock                |           | 200,000             |                     |   |
| Retained Earnings           |           | 100,000             |                     |   |
|                             |           | \$500,000           | <u>\$235,000</u>    | <u>\$30,000</u>                                       |

are willing to pay a price higher than par for the bonds. In determining the value of Special Foods, Peerless must recognize that it is assuming a liability that pays an interest rate higher than the current market rate. Accordingly, Special Foods' value will be less than if the liability carried a lower interest rate. The resulting consolidated financial statements must recognize the acquisition-date fair values of Special Foods' liabilities as well as its assets.

Assume that Peerless Products acquires all of Special Foods' capital stock for \$400,000 on January 1, 20X1, by issuing \$100,000 of 9 percent bonds, with a fair value of \$100,000, and paying cash of \$300,000. The resulting ownership situation can be pictured as follows with a \$100,000 differential:

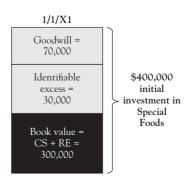

Peerless records the investment on its books with the following entry:

| (8) | Investment in Special Foods | 400,000 |
|-----|-----------------------------|---------|
|     | Bonds Payable               | 100,000 |
|     | Cash                        | 300,000 |

Record purchase of Special Foods stock.

The fair value of the consideration that Peerless gave to acquire Special Foods' stock (\$400,000) can be divided between the fair value of Special Foods' identifiable net assets (\$330,000) and goodwill (\$70,000), illustrated as follows:

The total \$400,000 consideration exceeds the book value of Special Foods' net assets by \$100,000 (assets of \$500,000 less liabilities of \$200,000). Thus, the total differential is \$100,000. The total fair value of the net identifiable assets acquired in the combination is \$330,000 (\$565,000 - \$235,000), based on the data in Figure 4–2. The amount by which the total consideration of \$400,000 exceeds the \$330,000 fair value of the net identifiable assets is \$70,000, and that amount is assigned to goodwill in the consolidated balance sheet. Assume that Peerless decides to prepare a consolidated balance sheet as of the date it acquired Special Foods.

The book value portion of the acquisition price is \$300,000:

#### **Book Value Calculations:**

| Book value at | Total Investment | = | Common Stock | + | Retained Earnings |
|---------------|------------------|---|--------------|---|-------------------|
| acquisition   | 300,000          |   | 200,000      |   | 100,000           |

Thus, the basic elimination entry is as follows:

#### **Basic Elimination Entry:**

The reclassification of the differential to the various accounts that are either over- or undervalued on Special Foods' balance sheet as of the acquisition date is more complicated than in the previous example. Thus, it is helpful to analyze the differential as follows:

#### **Excess Value (Differential) Calculations:**

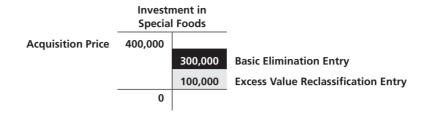

| Total Differential = | Inventory + | Land   | + Goodwill - | + Building · | + Bonds Payable |
|----------------------|-------------|--------|--------------|--------------|-----------------|
| 100,000              | 15,000      | 60,000 | 70,000       | (10,000)     | (35,000)        |

This analysis leads to the following reclassification entry to assign the \$100,000 differential to the specific accounts that need to be "revalued" to reflect their fair values as of the acquisition date. Moreover, this entry completes the elimination of the investment account from Peerless' books.

#### **Excess Value (Differential) Reclassification Entry:**

| Inventory 15,0              | 000     | ← Excess value assigned to inventory         |
|-----------------------------|---------|--|
| Land 60,0                   | 000     | ← Excess value assigned to land              |
| Goodwill 70,0               | 000     | ← Excess value assigned to goodwill          |
| Building                    | 10,000  | ← Building revalued down to fair value       |
| Bonds Payable               | 35,000  | ← Excess liability associated with the bonds |
| Investment in Special Foods | 100,000 | ← Reassign excess acquisition price          |

In summary, these two elimination entries completely eliminate the balance in Peerless' investment account and the second entry assigns the differential to various balance sheet accounts. As in previous examples, it is helpful to visualize how the two elimination entries "zero out" the investment account:

As usual, we eliminate Special Foods' acquisition date accumulated depreciation against the Buildings and Equipment account balance so that, combined with the excess value reclassification entry it will appear as if these fixed assets were recorded at their acquisition date fair values.

#### **Optional Accumulated Depreciation Elimination Entry:**

These entries are reflected in the worksheet in Figure 4-3. Although the reclassification entry is somewhat more complex than in the previous example, the differential allocation is conceptually the same in both cases. In each case, the end result is a consolidated balance sheet with the subsidiary's assets and liabilities valued at their fair values at the date of combination.

FIGURE 4-3 Worksheet for Consolidated Balance Sheet, January 1, 20X1, Date of Combination; 100 Percent Acquisition at More than Book Value

|                                | Peerless  | Special   | Eliminatio | on Entries |              |
|--------------------------------|-----------|-----------|------------|------------|--------------|
|                                | Products  | Foods     | DR         | CR         | Consolidated |
| Balance Sheet                  |           |           |            |            |              |
| Cash                           | 50,000    | 50,000    |            |            | 100,000      |
| Accounts Receivable            | 75,000    | 50,000    |            |            | 125,000      |
| Inventory                      | 100,000   | 60,000    | 15,000     |            | 175,000      |
| Investment in Special Foods    | 400,000   |           |            | 300,000    | 0            |
|                                |           |           |            | 100,000    |              |
| Land                           | 175,000   | 40,000    | 60,000     |            | 275,000      |
| Buildings & Equipment          | 800,000   | 600,000   |            | 10,000     | 1,090,000    |
|                                |           |           |            | 300,000    |              |
| Less: Accumulated Depreciation | (400,000) | (300,000) | 300,000    |            | (400,000)    |
| Goodwill                       |           |           | 70,000     |            | 70,000       |
| Total Assets                   | 1,200,000 | 500,000   | \$445,000  | \$710,000  | 1,435,000    |
| Accounts Payable               | 100,000   | 100,000   |            |            | 200,000      |
| Bonds Payable                  | 300,000   | 100,000   |            |            | 400,000      |
| Premium on Bonds Payable       |           |           |            | 35,000     | 35,000       |
| Common Stock                   | 500,000   | 200,000   | 200,000    |            | 500,000      |
| Retained Earnings              | 300,000   | 100,000   | 100,000    |            | 300,000      |
| Total Liabilities & Equity     | 1,200,000 | 500,000   | 300,000    | 35,000     | 1,435,000    |

#### LO 4-4

Make calculations and prepare elimination entries for the consolidation of a wholly owned subsidiary when there is a complex bargain-purchase differential.

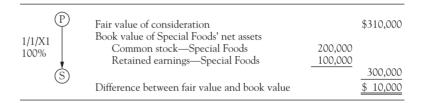

## 100 Percent Ownership Acquired at Less than Fair Value of Net Assets

It is not uncommon for companies' stock to trade at prices that are lower than the fair value of their net assets. These companies are often singled out as prime acquisition targets. The acquisition price of an acquired company may be less than the fair value of its net assets because some of the acquiree's assets or liabilities may have been incorrectly specified or because the transaction reflects a forced sale where the seller was required to sell quickly and was unable to fully market the sale.

Obviously, if assets or liabilities acquired in a business combination have been incorrectly specified, the errors must be corrected and the assets and liabilities valued at their fair values. Once this is done, if the fair value of the consideration given is still less than the fair value of the net assets acquired, a gain attributable to the acquirer is recognized for the difference. In general, as discussed in Chapter 1, a business combination in which (1) the sum of the acquisition-date fair values of the consideration given, any equity interest already held by the acquirer, and any noncontrolling interest is less than (2) the amounts at which the identifiable net assets must be valued at the acquisition date as specified by ASC 805-10-20 (usually fair values) is considered a bargain purchase, and a gain attributable to the acquirer is recognized for the difference.

## Illustration of Treatment of Bargain-Purchase Differential

Using the example of Peerless Products and Special Foods, assume that the acquisitiondate book values and fair values of Special Foods' assets and liabilities are equal except that the fair value of Special Foods' land is \$40,000 more than its book value. On January 1, 20X1, Peerless acquires all of Special Foods' common stock for \$310,000, resulting in a bargain purchase. The resulting ownership situation is as follows:

Peerless records its investment in Special Foods with the following entry on its books:

| (9) Inve | estment in Special Foods | 340,000 |         |
|----------|--------------------------|---------|---------|
|          | Cash                     |         | 310,000 |
|          | Gain on Bargain Purchase |         | 30,000  |

Record purchase of Special Foods stock.

In this example, the acquisition-date fair value of Special Foods' net assets is higher than their book value by \$40,000. However, the purchase price exceeds Special Foods' book value by only \$10,000 and, thus, is less than the fair value of the net identifiable assets acquired. This business combination, therefore, represents a bargain purchase. All of the acquiree's assets and liabilities must be valued at fair value, which in this case requires only Special Foods' land to be revalued. This revaluation is accomplished in the consolidation worksheet. Assuming Peerless wants to prepare a consolidated balance sheet on the acquisition date, the book value portion of the acquisition price is \$300,000:

#### **Book Value Calculations:**

| Book value at | Total Investment | = | Common Stock | + | Retained Earnings |
|---------------|------------------|---|--------------|---|-------------------|
| acquisition   | 300,000          |   | 200,000      |   | 100,000           |

Thus, the basic elimination entry is the same as in previous examples:

#### **Basic Elimination Entry:**

In this example, the total differential relates to the fair value of Special Foods' land, which is \$40,000 more than its book value at acquisition. The reclassification of this total differential can be summarized as follows:

#### **Excess Value (Differential) Calculations:**

| Total Differential | = | Land   |
|--------------------|---|--------|
| 40,000             |   | 40,000 |

This analysis leads to the following reclassification entry to assign the \$40,000 net differential to the Land.

#### **Excess Value (Differential) Reclassification Entry:**

In summary, these two elimination entries effectively eliminate the balance in Peerless' investment account and assign the total differential to the Land account. As in previous examples, it is helpful to visualize how the two elimination entries "zero out" the investment account:

When the consolidation worksheet is prepared at the end of the year, the notion of recognizing a gain for the \$30,000 excess of the \$340,000 fair value of Special Foods' net assets over the \$310,000 fair value of the consideration given by Peerless in the exchange is correct. However, assuming a consolidation worksheet is also prepared on the acquisition date (January 1, 20X1), the gain will already be recorded in the parent's retained earnings account because an income statement is not prepared on the acquisition date, only a balance sheet (because it is the first day of the year).

If the consideration given in the exchange had been less than the book value of Special Foods, the same procedures would be followed except that the differential would have a credit balance.

When an investor company accounts for an investment using the equity method, as illustrated in Chapter 2, it records the amount of differential viewed as expiring during the

period as a reduction of the income recognized from the investee. In consolidation, the

differential is assigned to the appropriate asset and liability balances, and consolidated

income is adjusted for the amounts expiring during the period by assigning them to the

## CONSOLIDATED FINANCIAL STATEMENTS—100 PERCENT OWNERSHIP ACQUIRED AT MORE THAN BOOK VALUE

Prepare equity-method journal entries, elimination entries, and the consolidation worksheet for a wholly owned subsidiary when there is a complex positive

As an illustration of the acquisition of 100 percent ownership acquired at an amount higher than book value, assume that Peerless Products acquires all of Special Foods' common stock on January 1, 20X1, for \$387,500, an amount \$87,500 in excess of the book value. The acquisition price includes cash of \$300,000 and a 60-day note for \$87,500 (paid at maturity during 20X1). At the date of combination, Special Foods holds the assets and liabilities shown in Figure 4–2. The resulting ownership situation is as follows:

| P              | Fair value of consideration<br>Book value of Special Foods' net assets |                    | \$387,500                   |
|----------------|--|--------------------|-----------------------------|
| 1/1/X1<br>100% | Common stock—Special Foods Retained earnings—Special Foods             | 200,000<br>100,000 |                             |
| Ś              | Difference between fair value and book value                           |                    | 300,000<br><u>\$ 87,500</u> |

On the acquisition date, all of Special Foods' assets and liabilities have fair values equal to their book values, except as follows:

|  | Book  | Fair  | Fair Value                               |
|--|---|---|--|
|  | Value                                       | Value                                       | Increment                                |
| Inventory<br>Land<br>Buildings & Equipment | \$ 60,000<br>40,000<br>300,000<br>\$400,000 | \$ 65,000<br>50,000<br>360,000<br>\$475,000 | \$ 5,000<br>10,000<br>60,000<br>\$75,000 |

Of the \$87,500 total differential, \$75,000 relates to identifiable assets of Special Foods. The remaining \$12,500 is attributable to goodwill. The apportionment of the differential appears as follows: The entire amount of inventory to which the differential relates is sold during 20X1; none is left in ending inventory. The buildings and equipment have a remaining economic life of 10 years from the date of combination, and Special Foods uses straight-line depreciation. At the end of 20X1, in evaluating the Investment in Special Foods account for impairment, Peerless' management determines that the goodwill acquired in the combination with Special Foods has been impaired. Management determines that a \$3,000 goodwill impairment loss should be recognized in the consolidated income statement.

For the first year immediately after the date of combination, 20X1, Peerless Products earns income from its own separate operations of \$140,000 and pays dividends of \$60,000. Special Foods reports net income of \$50,000 and pays dividends of \$30,000.

#### Parent Company Entries

During 20X1, Peerless makes the normal equity-method entries on its books to record its purchase of Special Foods stock and its income and dividends from Special Foods:

| (10) | Investment in Special Foods                                | 387,500 |         |
|------|--|---------|---------|
|      | Cash   |         | 300,000 |
|      | Notes Payable  |         | 87,500  |
|      | Record the initial investment in Special Foods.            |         |         |
| (11) | Investment in Special Foods                                | 50,000  |         |
|      | Income from Special Foods                                  |         | 50,000  |
|      | Record Peerless' 100% share of Special Foods' 20X1 income. |         |         |
| (12) | Cash   | 30,000  |         |
|      | Investment in Special Foods                                |         | 30,000  |

Record Peerless' 100% share of Special Foods' 20X1 dividend.

In this case, Peerless paid an amount for its investment that was \$87,500 in excess of the book value of the shares acquired. As discussed previously, this difference is a differential that is implicit in the amount recorded in the investment account on Peerless' books. Because Peerless acquired 100 percent of Special Foods' stock, Peerless' differential included in its investment account is equal to the total differential arising from the business combination. However, although the differential arising from the business combination must be allocated to specific assets and liabilities in consolidation, the differential on Peerless' books does not appear separate from the Investment in Special Foods account. A portion of the differential (\$5,000) in the investment account on Peerless' books relates to a portion of Special Foods' inventory that is sold during 20X1. Because Special Foods no longer holds the asset to which that portion of the differential relates at year-end, that portion of the differential is written off by reducing the investment account and Peerless' income from Special Foods. An additional \$60,000 of the differential is attributable to the excess of the acquisition-date fair value over book value of Special Foods' buildings and equipment. As the service potential of the underlying assets expires, Peerless must amortize the additional cost it incurred because of the higher fair value of those assets. This is accomplished through annual amortization of \$6,000 (\$60,000 ÷ 10) over the remaining 10-year life beginning in 20X1. Finally, the goodwill is deemed to be impaired by \$3,000 and is also adjusted on Peerless' books. Thus, the differential must be written off on Peerless' books to recognize the cost expiration related to the service expiration of Special Foods' assets to which it relates. Under the equity method, the differential is written off periodically from the investment account to Income from Special Foods to reflect these changes in the differential (\$5,000 inventory + \$6,000 depreciation + \$3,000 goodwill impairment = \$14,000):

| (13) | Income from Special Foods   | 14,000 |
|------|-----------------------------|--------|
|      | Investment in Special Foods | 14,000 |

Record amortization of excess acquisition price.

#### Consolidation Worksheet—Year of Combination

The following diagrams illustrate the breakdown of the book value and excess value components of the investment account at the beginning and end of the year.

Because a year has passed since the acquisition date, the book value of Special Foods' net assets has changed because it has earned income and declared dividends. The book value component can be summarized as follows:

#### **Book Value Calculations:**

|                         | Total Investment | = | Common Stock | + | Retained Earnings |
|-------------------------|------------------|---|--------------|---|-------------------|
| Beginning book<br>value | 300,000          |   | 200,000      |   | 100,000           |
| + Net Income            | 50,000           |   |              |   | 50,000            |
| - Dividends             | (30,000)         |   |              |   | (30,000)          |
| Ending book value       | 320,000          |   | 200,000      |   | 120,000           |

This chart leads to the basic elimination entry. Note that we use a lighter font to distinguish the numbers that appear in the elimination entry to help the reader see how it should be constructed.

#### **Basic Elimination Entry:**

We then analyze the differential and its changes during the period:

#### Excess Value (Differential) Calculations:

|                              | Total              | = Inventory +    | - Land + | Building - | Acc. Depr.   | + Goodwill        |  |  |  |
|------------------------------|--------------------|------------------|----------|------------|--------------|-------------------|--|--|--|
| Beginning balance  – Changes | 87,500<br>(14,000) | 5,000<br>(5,000) | 10,000   | 60,000     | 0<br>(6,000) | 12,500<br>(3,000) |  |  |  |
| Ending balance               | 73,500             | 0                | 10,000   | 60,000     | (6,000)      | 9,500             |  |  |  |

The entire differential amount assigned to the inventory already passed through cost of goods sold during the year. The only other amortization item—the excess value assigned to the building—is amortized over a 10-year period ( $$60,000 \div 10 = $6,000 \text{ per year}$ ). Finally, the goodwill is deemed to be impaired and worth only \$9,500. Because the amortization of the differential has already been written off on Peerless' books from the investment account against the Income from Special Foods account, the amortized excess value reclassification entry simply reclassifies these changes in the differential during the period from the Income from the Special Foods account to the various income statement accounts to which they apply:

#### **Amortized Excess Value Reclassification Entry:**

| Cost of goods sold        | 5,000  | ← Extra cost of goods sold              |
|---------------------------|--------|---|
| Depreciation expense      | 6,000  | ← Depreciation of excess building value |
| Goodwill impairment loss  | 3,000  | ← Goodwill impairment                   |
| Income from Special Foods | 14,000 | ← See calculation above                 |
| •                         |        |   |

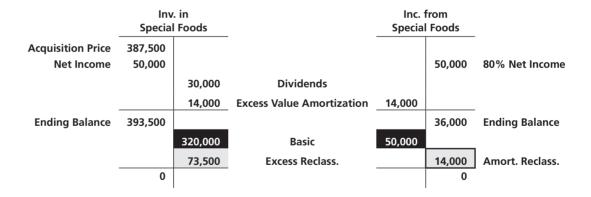

Finally, the remaining unamortized differential of \$73,500 is reclassified to the correct accounts based on the ending balances (the bottom row) in the chart above:

#### **Excess Value (Differential) Reclassification Entry:**

| Land<br>Building<br>Goodwill | 10,000<br>60,000<br>9,500 | <ul> <li>Excess value at acquisition</li> <li>Excess value at acquisition</li> <li>Calculated value postimpairment</li> </ul> |
|------------------------------|---------------------------|---|
| Accumulated depreciation     | 6,000                     | ← = 60,000 ÷ 10 years   |
| Investment in Special Foods  | 73,500                    | ← Remaining balance in differential   |

Recall that Special Foods reports its balance sheet based on the book values of the various accounts. This elimination entry essentially reclassifies the differential from the Investment in Special Foods account to the individual accounts that need to be revalued to their amortized fair values as of the balance sheet date.

In sum, these worksheet entries (1) eliminate the balances in the Investment in Special Foods and Income from Special Foods accounts, (2) reclassify the amortization of excess

value to the proper income statement accounts, and (3) reclassify the remaining differential to the appropriate balance sheet accounts as of the end of the period.

As usual, we eliminate Special Foods' acquisition date accumulated depreciation against the Buildings and Equipment account balance so that, combined with the excess value reclassification entry and the amortized excess value reclassification entry, it will appear as if these fixed assets were recorded at their acquisition date fair values.

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation 300,000 |         | , Accumulated depreciation at the time |
|----------------------------------|---------|--|
| Building & equipment             | 300,000 | of the acquisition netted against cost |

The following T-accounts illustrate how the excess value reclassification entry combined with the accumulated depreciation elimination entry make the consolidated balances for the Buildings and Equipment and Accumulated Depreciation accounts appear as if these assets had been purchased at the beginning of the year for their acquisition date fair values (\$360,000) and that these "new" assets had then been depreciated \$26,000 during the first year of their use by the newly purchased company.

After the subsidiary income accruals are entered on Peerless' books, the adjusted trial balance data of the consolidating companies are entered in the three-part consolidation worksheet as shown in Figure 4-4. We note that because all inventory on hand on the date of combination has been sold during the year, the \$5,000 of differential applicable

FIGURE 4-4 December 31, 20X1, Equity-Method Worksheet for Consolidated Financial Statements, Initial Year of Ownership; 100 Percent Acquisition at More than Book Value

| Bonds Payable                  | 200,000   | 100,000   |            |            | 300,000      |  |
| Common Stock                   | 500,000   | 200,000   | 200,000    |            | 500,000      |  |
| Retained Earnings              | 416,000   | 120,000   | 164,000    | 44,000     | 416,000      |  |
| Total Liabilities & Equity     | 1,216,000 | 520,000   | 364,000    | 44,000     | 1,416,000    |  |

to inventory is allocated directly to cost of goods sold. The cost of goods sold recorded on Special Foods' books is correct for that company's separate financial statements. However, the cost of the inventory to the consolidated entity is viewed as being \$5,000 higher, and this additional cost must be included in consolidated cost of goods sold. No worksheet entry is needed in future periods with respect to the inventory because it has been expensed and no longer is on the subsidiary's books. The portion of the differential related to the inventory no longer exists on Peerless' books after 20X1 because the second elimination entry removed it from the investment account.

The differential assigned to depreciable assets must be charged to depreciation expense over the remaining lives of those assets. From a consolidated viewpoint, the acquisitiondate fair value increment associated with the depreciable assets acquired becomes part of the assets' depreciation base. Depreciation already is recorded on the subsidiary's books based on the original cost of the assets to the subsidiary, and these amounts are carried to the consolidation worksheet as depreciation expense.

The difference between the \$387,500 fair value of the consideration exchanged and the \$375,000 fair value of Special Foods' net identifiable assets is assumed to be related to the excess earning power of Special Foods. This difference is entered in the worksheet in Figure 4–4. A distinction must be made between journal entries recorded on the parent's books under equity-method reporting and the elimination entries needed in the worksheet to prepare the consolidated financial statements. Again, we distinguish between actual equity-method journal entries on the parent's books (not shaded) and worksheet elimination entries (shaded).

#### Consolidated Net Income and Retained Earnings

As can be seen from the worksheet in Figure 4–4, consolidated net income for 20X1 is \$176,000 and consolidated retained earnings on December 31, 20X1, is \$416,000. These amounts can be computed as shown in Figure 4–5.

## **Second Year of Ownership**

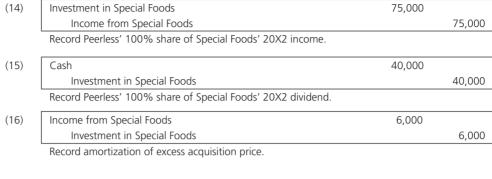

The consolidation procedures employed at the end of the second year, and in periods thereafter, are basically the same as those used at the end of the first year. Consolidation two years after acquisition is illustrated by continuing the example used for 20X1. During 20X2, Peerless Products earns income of \$160,000 from its own separate operations and pays dividends of \$60,000; Special Foods reports net income of \$75,000 and pays dividends of \$40,000. No further impairment of the goodwill from the business combination occurs during 20X2.

FIGURE 4-5 **Consolidated Net Income and Retained Earnings, 20X1; 100** Percent Acquisition at More than Book Value

| Consolidated net income, 20X1: Peerless' separate operating income Special Foods' net income Write-off of differential related to inventory sold during 20X1 Amortization of differential related to buildings & equipment in 20X1 Goodwill impairment loss   | \$140,000<br>50,000<br>(5,000)<br>(6,000)<br>(3,000)                                     |
|---|--|
| Consolidated net income, 20X1   | \$176,000  |
| Consolidated retained earnings, December 31, 20X1: Peerless' retained earnings on date of combination, January 1, 20X1 Peerless' separate operating income, 20X1 Special Foods' 20X1 net income Write-off of differential related to inventory sold during 20X1 Amortization of differential related to buildings & equipment in 20X1 Goodwill impairment loss Dividends declared by Peerless, 20X1 Consolidated retained earnings, December 31, 20X1 | \$300,000<br>140,000<br>50,000<br>(5,000)<br>(6,000)<br>(3,000)<br>(60,000)<br>\$416,000 |

#### Parent Company Entries

Peerless Products records the following entries on its separate books during 20X2:

The book value component can be summarized as follows:

#### **Book Value Calculations:**

| Beginning book    | Total Investment<br>320,000 | = | Common Stock<br>200,000 | + | Retained Earnings |
|-------------------|-----------------------------|---|-------------------------|---|-------------------|
| + Net Income      | 75,000                      |   |                         |   | 75,000            |
| – Dividends       | (40,000)                    |   |                         |   | (40,000)          |
| Ending book value | 355,000                     |   | 200,000                 |   | 155,000           |

The numbers in this chart in the lighter font determine the basic elimination entry:

#### **Basic Elimination Entry:**

The entire differential amount assigned to the inventory already passed through cost of goods sold during the prior year period. The only other amortization item is the excess value assigned to the building, which continues to be written off over a 10-year period  $(\$60,000 \div 10 = \$6,000)$  as illustrated in the following chart. Again, the goodwill is deemed not to be further impaired this year.

#### **Excess Value (Differential) Calculations:**

|                   | Total   | = | Land + | Building | + | Acc. Depr. | + Goodwill |
|-------------------|---------|---|--------|----------|---|------------|------------|
| Beginning balance | 73,500  |   | 10,000 | 60,000   |   | (6,000)    | 9,500      |
| Changes           | (6,000) |   |        |          |   | (6,000)    |            |
| Ending balance    | 67,500  |   | 10,000 | 60,000   |   | (12,000)   | 9,500      |

Because the amortization of the differential was already written off from the investment account against the Income from Special Foods account, the change to the differential (i.e., the middle row of the chart) is simply reclassified from the Income from Special Foods account to the income statement account to which it applies during the consolidation process. Then, the remaining amount of the differential at year end (i.e., the bottom row of the chart) is reclassified to the various balance sheet accounts to which they apply:

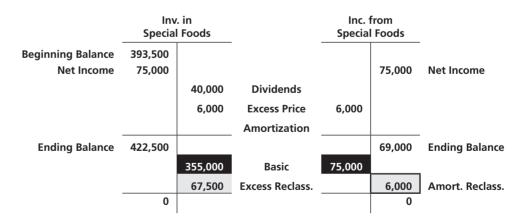

#### **Amortized Excess Value Reclassification Entry:**

| Depreciation expense      | 6,000 |       | $\leftarrow$ | Extra depreciation expense |
|---------------------------|-------|-------|--------------|----------------------------|
| Income from Special Foods |       | 6,000 | $\leftarrow$ | See calculation above.     |

#### **Excess Value (Differential) Reclassification Entry:**

| Land                        | 10,000 |        | ← Excess value at acquisition                       |
|-----------------------------|--------|--------|---|
| Building                    | 60,000 |        | ← Excess value at acquisition                       |
| Goodwill                    | 9,500  |        | ← Calculated value from acquisition.                |
| Accumulated depreciation    |        | 12,000 | $\leftarrow$ = (60,000 ÷ 10 years) $\times$ 2 years |
| Investment in Special Foods |        | 67,500 | ← Remaining balance in differential                 |

These elimination entries (1) eliminate the balances in the Investment in Special Foods and Income from Special Foods accounts, (2) reclassify the amortization of excess value to the proper income statement accounts, and (3) reclassify the remaining differential to the appropriate balance sheet accounts as of the end of the accounting period. The following T-accounts illustrate how the three elimination entries "zero out" the equity-method investment and income accounts:

Again, we repeat the same accumulated depreciation elimination entry this year (and every year as long as Special Foods owns the assets) that we used in the initial year.

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation 300,000 | 300,000 | Accumulated depreciation at the time   |
|----------------------------------|---------|--|
| Building and equipment           | 300,000 | of the acquisition netted against cost |

## Consolidation Worksheet—Second Year Following Combination

The worksheet for the second year, 20X2, completes the two-year cycle as illustrated in Figure 4-6. Moreover, as can be seen from the worksheet, consolidated net income for 20X2 is \$229,000 and consolidated retained earnings on December 31, 20X2, is \$585,000 as illustrated in Figure 4–7.

FIGURE 4-7 **Consolidated Net Income and Retained** Earnings, 20X2; 100 Percent Acquisition at More than Book Value

#### INTERCOMPANY RECEIVABLES AND PAYABLES

LO 4-6

Understand and explain the elimination of basic intercompany transactions.

All forms of intercompany receivables and payables need to be eliminated when consolidated financial statements are prepared. From a single-company viewpoint, a company cannot owe itself money. If a company owes an affiliate \$1,000 on account, one company carries a \$1,000 receivable on its separate books and the other has a payable for the same amount. When consolidated financial statements are prepared, the following elimination entry is needed in the consolidation worksheet:

1,000 Accounts Payable 1,000 Accounts Receivable

Eliminate intercompany receivable/payable.

If no elimination entry is made, both the consolidated assets and liabilities are overstated by an equal amount.

If the intercompany receivable/payable bears interest, all accounts related to the intercompany claim must be eliminated in the preparation of consolidated statements, including the receivable/payable, interest income, interest expense, and any accrued interest on the intercompany claim. Other forms of intercorporate claims, such as bonds, are discussed in subsequent chapters. In all cases, failure to eliminate these claims can distort consolidated balances, As a result, the magnitude of debt of the combined entity may appear to be greater than it is, working capital ratios may be incorrect, and other types of comparisons may be distorted.

#### PUSH-DOWN ACCOUNTING

LO 4-7

Understand and explain the basics of push-down accounting.

The term *push-down accounting* refers to the practice of revaluing an acquired subsidiary's assets and liabilities to their fair values directly on that subsidiary's books at the date of acquisition. If this practice is followed, the revaluations are recorded once on the subsidiary's books at the date of acquisition and, therefore, are not made in the consolidation worksheets each time consolidated statements are prepared.

Those who favor push-down accounting argue that the change in the subsidiary's ownership in an acquisition is reason for adopting a new basis of accounting for the subsidiary's assets and liabilities, and this new basis of accounting should be reflected directly on the subsidiary's books. This argument is most persuasive when the subsidiary is wholly owned, is consolidated, or has its separate financial statements included with the parent's statements.

On the other hand, when a subsidiary has a significant noncontrolling interest or the subsidiary has bonds or preferred stock held by the public, push-down accounting may be inappropriate. Its use in the financial statements issued to the noncontrolling shareholders or to those holding bonds or preferred stock results in a new basis of accounting even though, from the perspective of those statement users, the entity has not changed. From their viewpoint, push-down accounting results in the revaluation of the assets and liabilities of a continuing enterprise, a practice that normally is not acceptable.

ASC 805-50-S99-2 requires push-down accounting whenever a business combination results in the acquired subsidiary becoming substantially wholly owned (but only if it issues separate financial statements). It encourages but does not require the use of pushdown accounting in situations in which the subsidiary is less than wholly owned or the subsidiary has outstanding debt or preferred stock held by the public.

The revaluation of assets and liabilities on a subsidiary's books involves making an entry to debit or credit each asset and liability account to be revalued, with the balancing entry to a revaluation capital account. The revaluation capital account is part of the subsidiary's stockholders' equity. Once the revaluations are made on the books of the subsidiary, the new book values of the subsidiary's assets, including goodwill, are equal to the acquisition cost of the subsidiary. Thus, no differential arises in the consolidation process. The investment elimination entry in a consolidation worksheet prepared immediately after acquisition of a subsidiary and revaluation of its assets on its books might appear as follows:

Eliminate investment balance.

Note that the Revaluation Capital account, as part of the subsidiary's stockholders' equity, is eliminated in preparing consolidated statements. We provide a more detailed example of push-down accounting in Appendix 4A.

## Summary of **Key Concepts**

Worksheet elimination entries are needed to remove the effects of intercompany ownership and intercompany transactions so the consolidated financial statements appear as if the separate companies are actually one. These worksheet entries are needed to (1) eliminate the book value portion of the parent's subsidiary investment and the subsidiary's stockholders' equity accounts, (2) reclassify the amortization of excess value from the parent's income from subsidiary account to the correct income statement line items, (3) assign any remaining differential to specific assets and liabilities, and (4) net the subsidiary's accumulated depreciation as of the acquisition date against the historical cost of property, plant, and equipment.

Consolidated net income is computed in simple cases for a parent and a wholly owned subsidiary as the total of the parent's income from its own operations and the subsidiary's net income, adjusted for the write-off of differential, if appropriate. In this situation, consolidated retained earnings is computed as the total of the parent's retained earnings, excluding any income from the subsidiary, plus the subsidiary's cumulative net income since acquisition adjusted for the differential amount.

When a subsidiary is acquired for an amount higher than its book value, some parent companies may prefer to assign the differential to individual assets and liabilities directly on the subsidiary's books at the time of acquisition, thereby eliminating the need for revaluation entries in the consolidation worksheet each period. This procedure is called push-down accounting.

**Key Terms** 

bargain purchase, 164 differential, 156

goodwill, 160

push-down accounting, 160,175

#### Appendix **4A** Push-Down Accounting Illustrated

When a subsidiary is acquired in a business combination, its assets and liabilities must be revalued to their fair values as of the date of combination for consolidated reporting. If push-down accounting is employed, the revaluations are made as of the date of combination directly on the books of the subsidiary and no elimination entries related to the differential are needed in the worksheets.

The following example illustrates the consolidation process when assets and liabilities are revalued directly on a subsidiary's books rather than using consolidation worksheet entries to accomplish the revaluation. Assume that Peerless Products purchases all of Special Foods' common stock on January 1, 20X1, for \$370,000 cash. The purchase price is \$70,000 in excess of Special Foods' book value. Of the \$70,000 total differential, \$10,000 is related to land held by Special Foods and \$60,000 is related to buildings and equipment having a 10-year remaining life. Peerless accounts for its investment in Special Foods stock using the equity method.

Peerless records the acquisition of stock on its books with the following entry:

(17)Investment in Special Foods 370,000 370,000 Cash

Record the initial investment in Special Foods.

In contrast to a worksheet revaluation, the use of push-down accounting involves the revaluation of the assets on the separate books of Special Foods and alleviates the need for revaluation entries in the consolidation worksheet each period. If push-down accounting is used to revalue Special Foods' assets, the following entry is made directly on its books:

| (18) | Land                    | 10,000 |
|------|-------------------------|--------|
|      | Buildings and Equipment | 60,000 |
|      | Revaluation Capital     | 70,000 |

Record the increase in fair value of land and buildings.

This entry increases the amount at which the land and the buildings and equipment are shown in Special Foods' separate financial statements and gives rise to a revaluation capital account that is shown in the stockholders' equity section of Special Foods' balance sheet. Special Foods records \$6,000 additional depreciation on its books to reflect the amortization over 10 years of the \$60,000 write-up of buildings and equipment. This additional depreciation decreases Special Foods' reported net income for 20X1 from \$50,000 to \$44,000.

Entry (19) removes the accumulated depreciation on the acquisition date so that the buildings an equipment appear at their current fair value with zero accumulated depreciation.

| (19) | Accumulated Depreciation | 300,000 |
|------|--------------------------|---------|
|      | Building & Equipment     | 300,000 |

Peerless records its income and dividends from Special Foods on its parent-company books:

| (20) | Investment in Special Foods                                | 44,000 |        |
|------|--|--------|--------|
|      | Income from Special Foods                                  |        | 44,000 |
|      | Record Peerless' 100% share of Special Foods' 20X1 income. |        |        |

| (21) | Cash                        | 30,000 |        |
|------|-----------------------------|--------|--------|
|      | Investment in Special Foods |        | 30,000 |

Record Peerless' 100% share of Special Foods' 20X1 dividend.

The equity-method income recorded by Peerless is less than had push-down accounting not been employed because Special Foods' income is reduced by the additional depreciation on the write-up of the buildings and equipment recorded on Special Foods' books. Because the revaluation is recorded on the subsidiary's books, Special Foods' book value is then equal to the fair value of the consideration given in the combination. Therefore, no differential exists, and Peerless need not record any amortization associated with the investment. The net amount of income from Special Foods recorded by Peerless is the same regardless of whether or not push-down accounting is employed. The book value portion of the investment account can be summarized as follows:

#### **Book Value Calculations:**

|                      | Total<br>Investment | = | Common<br>Stock | + | Retained<br>Earnings | + | Revaluation<br>Capital |
|----------------------|---------------------|---|-----------------|---|----------------------|---|------------------------|
| Beginning book value | 370,000             |   | 200,000         |   | 100,000              |   | 70,000                 |
| + Net Income         | 44,000              |   |                 |   | 44,000               |   |                        |
| – Dividends          | (30,000)            |   |                 |   | (30,000)             |   |                        |
| Ending book value    | 384,000             |   | 200,000         |   | 114,000              |   | 70,000                 |

The basic elimination entry is very similar to the original example presented previously except that it must also eliminate Special Foods' revaluation capital account and the income from Special Foods is \$6,000 lower due to the extra depreciation on the revalued building:

#### **Basic Elimination Entry:**

| - ····                      |         |   |
|-----------------------------|---------|---|
| Common stock                | 200,000 |   |
| Retained earnings           | 100,000 |   |
| Revaluation capital         | 70,000  |   |
| Income from Special Foods   | 44,000  |   |
| Dividends declared          | 30,00   | 0 |
| Investment in Special Foods | 384,00  | 0 |
|                             |         |   |

Again, because there is no differential with push-down accounting, the basic elimination entry completely eliminates the balance in Peerless' investment account on the balance sheet as well as the Income from Special Foods account on the income statement.

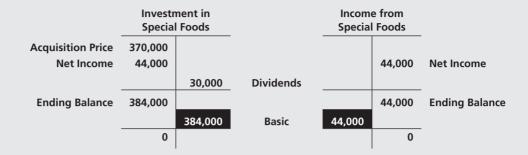

Figure 4-8 shows the consolidation worksheet prepared at the end of 20X1 and includes the effects of revaluing Special Foods' assets. Note that Special Foods' Land and Buildings and Equipment have been increased by \$10,000 and \$60,000, respectively. Also note the Revaluation Capital account in Special Foods' stockholders' equity. Because the revaluation was accomplished directly on the books of Special Foods, only the basic elimination entry is needed in the worksheet illustrated in Figure 4–8.

FIGURE 4-8 December 31, 20X1, Equity-Method Worksheet for Consolidated Financial Statements, Initial Year of Ownership; 100 Percent Acquisition at More than Book Value; Push-Down Accounting

| Questions   |       |  |
|-------------|-------|--|
| LO 4-1      | Q4-1  | When is the carrying value of the investment account reduced under equity-method reporting?  |
| LO 4-1      | Q4-2  | What is a differential? How is a differential treated by an investor in computing income from an investee under (a) cost-method and (b) equity-method reporting?   |
| LO 4-1      | Q4-3  | Turner Manufacturing Corporation owns 100 percent of the common shares of Straight Lace Company. If Straight Lace reports net income of \$100,000 for 20X5, what factors may cause Turner to report less than \$100,000 of income from the investee? |
| LO 4-1      | Q4-4  | What is the term differential used to indicate?  |
| LO 4-1      | Q4-5  | What conditions must exist for a negative differential to occur?   |
| LO 4-2      | Q4-6  | What portion of the book value of the net assets held by a subsidiary at acquisition is included in the consolidated balance sheet?  |
| LO 4-2      | Q4-7  | What portion of the fair value of a subsidiary's net assets normally is included in the consolidated balance sheet following a business combination?   |
| LO 4-3      | Q4-8  | What happens to the differential in the consolidation worksheet prepared as of the date of combination? How is it reestablished so that the proper balances can be reported the following year?  |
| LO 4-2      | Q4-9  | Explain why consolidated financial statements become increasingly important when the differential is very large.   |
| LO 4-3      | Q4-10 | Give a definition of consolidated net income.  |
| LO 4-5      | Q4-11 | When Ajax was preparing its consolidation worksheet, the differential was properly assigned to buildings and equipment. What additional entry generally must be made in the worksheet?   |
| LO 4-3, 4-4 | Q4-12 | What determines whether the balance assigned to the differential remains constant or decreases each period?  |
| LO 4-7      | Q4-13 | What does the term push-down accounting mean?  |
| LO 4-7      | Q4-14 | Under what conditions is push-down accounting considered appropriate?  |
| LO 4-7      | Q4-15 | What happens to the differential when push-down accounting is used following a business combination?   |

#### Cases

LO 4-1

#### C4-1 **Reporting Significant Investments in Common Stock**

**Analysis** 

The reporting treatment for investments in common stock depends on the level of ownership and the ability to influence the investee's policies. The reporting treatment may even change over time as ownership levels or other factors change. When investees are not consolidated, the investments typically are reported in the Investments section of the investor's balance sheet. However, the investor's income from those investments is not always easy to find in the investor's income statement.

## Required

- a. Harley-Davidson, Inc., holds an investment in the common stock of Buell Motorcycle Company. How did Harley-Davidson report this investment before 1998? How does it report the investment now? Why did Harley change its method of reporting its investment in Buell?
- b. How does Chevron Corporation account for its investments in affiliated companies? How does the company account for issuances of additional stock by affiliates that change the company's proportionate dollar share of the affiliates' equity? How does Chevron treat a differential associated with an equity-method investment? How does Chevron account for the impairment of an equity investment?
- c. Does Sears have any investments in companies that it accounts for using the equity method? Where are these investments reported in the balance sheet, and where is the income from these investments reported in the income statement?

#### LO 4-2

## **Assigning an Acquisition Differential**

### Analysis

Ball Corporation's owners recently offered to sell 100 percent of their ownership to Timber Corporation for \$450,000. Timber's business manager was told that Ball's book value was \$300,000, and she estimates the fair value of its net assets at approximately \$600,000. Ball has relatively old equipment and manufacturing facilities and uses a LIFO basis for inventory valuation of some items and a FIFO basis for others.

#### Required

If Timber accepts the offer and acquires a controlling interest in Ball, what difficulties are likely to be encountered in assigning the differential?

#### LO 4-2, 4-3

#### C4-3 **Negative Retained Earnings**

## **Understanding**

Although Sloan Company had good earnings reports in 20X5 and 20X6, it had a negative retained earnings balance on December 31, 20X6. Jacobs Corporation purchased 100 percent of Sloan's common stock on January 1, 20X7.

### Required

- a. Explain how Sloan's negative retained earnings balance is reflected in the consolidated balance sheet immediately following the acquisition.
- b. Explain how the existence of negative retained earnings changes the consolidation worksheet entries.
- c. Can goodwill be recorded if Jacobs pays more than book value for Sloan's shares? Explain.

#### LO 4-1, 4-3

#### **Balance Sheet Reporting Issues**

## Judgment

Crumple Car Rentals is planning to expand into the western part of the United States and needs to acquire approximately 400 additional automobiles for rental purposes. Because Crumple's cash reserves were substantially depleted in replacing the bumpers on existing automobiles with new "fashion plate" bumpers, the expansion funds must be acquired through other means. Crumple's management has identified two options:

- 1. Issue additional debt.
- 2. Create a wholly owned leasing subsidiary that would borrow the money with a guarantee for payment from Crumple. The subsidiary would then lease the cars to the parent.

The acquisition price of the cars is approximately the same under both alternatives.

#### Required

- a. You have been asked to compare and contrast the two alternatives from the perspective of
  - (1) The impact on Crumple's consolidated balance sheet.
  - (2) Their legal ramifications.
  - (3) The ability to control the maintenance, repair, and replacement of automobiles.
- b. What other alternatives might be used in acquiring the required automobiles?
- c. Select your preferred alternative and show why it is the better choice.

#### **Subsidiary Ownership: AMR Corporation and International Lease** C4-5

Research

Most subsidiaries are wholly owned, although only majority ownership is usually all that is required for consolidation. The parent's ownership may be direct or indirect. Frequently, a parent's direct subsidiaries have subsidiaries of their own, thus providing the parent with indirect ownership of the subsidiary's subsidiaries.

#### Required

International Lease Finance Corporation is a very large leasing company. It leases equipment that everyone is familiar with and many have used.

- (1) Specifically, what is the principal business of International Lease Finance Corporation?
- (2) Who are the direct owners of International Lease?
- (3) In what city is International Lease headquartered?

- (4) In what state is International Lease incorporated?
- (5) Where is International Lease's common stock traded?
- (6) What company is the parent in the consolidated financial statements in which International Lease is included, and what is that company's principal business?

## Exercises

#### E4-1 Cost versus Equity Reporting

Roller Corporation purchased 100 percent ownership of Steam Company on January 1, 20X5, for \$270,000. On that date, the book value of Steam's reported net assets was \$200,000. The excess over book value paid is attributable to depreciable assets with a remaining useful life of 10 years. Net income and dividend payments of Steam in the following periods were

| Year | Net Income | Dividends |
|------|------------|-----------|
| 20X5 | \$20,000   | \$ 5,000  |
| 20X6 | 40,000     | 15,000    |
| 20X7 | 20,000     | 35,000    |
|      |            |           |

#### Required

Prepare journal entries on Roller Corporation's books relating to its investment in Steam Company for each of the three years, assuming it accounts for the investment using (a) the cost method and (b) the equity method.

LO 4-1

## **E4-2** Differential Assigned to Patents

Power Corporation purchased 100 percent of the common stock of Snow Corporation on January 1, 20X2, by issuing 45,000 shares of its \$6 par value common stock. The market price of Power's shares at the date of issue was \$24. Snow reported net assets with a book value of \$980,000 on that date. The amount paid in excess of the book value of Snow's net assets was attributed to the increased value of patents held by Snow with a remaining useful life of eight years. Snow reported net income of \$56,000 and paid dividends of \$20,000 in 20X2 and reported a net loss of \$44,000 and paid dividends of \$10,000 in 20X3.

#### Required

Assuming that Power Corporation uses the equity method in accounting for its investment in Snow Corporation, prepare all journal entries for Power for 20X2 and 20X3.

LO 4-1

#### E4-3 **Differential Assigned to Copyrights**

Best Corporation acquired 100 percent of the voting common stock of Flair Company on January 1, 20X7, by issuing bonds with a par value and fair value of \$670,000 and making a cash payment of \$24,000. At the date of acquisition, Flair reported assets of \$740,000 and liabilities of \$140,000. The book values and fair values of Flair's net assets were equal except for land and copyrights. Flair's land had a fair value \$16,000 higher than its book value. All of the remaining purchase price was attributable to the increased value of Flair's copyrights with a remaining useful life of eight years. Flair Company reported a loss of \$88,000 in 20X7 and net income of \$120,000 in 20X8. Flair paid dividends of \$24,000 each year.

#### Required

Assuming that Best Corporation uses the equity method in accounting for its investment in Flair Company, prepare all journal entries for Best for 20X7 and 20X8.

LO 4-1

#### E4-4 **Differential Attributable to Depreciable Assets**

Capital Corporation purchased 100 percent of Cook Company's stock on January 1, 20X4, for \$340,000. On that date, Cook reported net assets with a historical cost of \$300,000 and a fair value of \$340,000. The difference was due to the increased value of buildings with a remaining life of 10 years. During 20X4 and 20X5 Cook reported net income of \$10,000 and \$20,000 and paid dividends of \$6,000 and \$9,000, respectively.

Assuming that Capital Corporation uses (a) the equity method and (b) the cost method in accounting for its ownership of Cook Company, give the journal entries that Capital recorded in 20X4 and 20X5.

#### LO 4-1 E4-5 Investment Income

Brindle Company purchased 100 percent of Monroe Company's voting common stock for \$648,000 on January 1, 20X4. At that date, Monroe reported assets of \$690,000 and liabilities of \$230,000. The book values and fair values of Monroe's assets were equal except for land, which had a fair value \$108,000 more than book value, and equipment, which had a fair value \$80,000 more than book value. The remaining economic life of all depreciable assets at January 1, 20X4, was five years. Monroe reported net income of \$68,000 and paid dividends of \$34,000 in 20X4.

#### Required

Compute the amount of investment income to be reported by Brindle for 20X4.

## **E4-6** Determination of Purchase Price

Branch Corporation purchased 100 percent of Hardy Company's common stock on January 1, 20X5, and paid \$28,000 above book value. The full amount of the additional payment was attributed to amortizable assets with a life of eight years remaining at January 1, 20X5. During 20X5 and 20X6, Hardy reported net income of \$33,000 and \$6,000 and paid dividends of \$15,000 and \$12,000, respectively. Branch uses the equity method in accounting for its investment in Hardy and reported a balance in its investment account of \$161,000 on December 31, 20X6.

#### Required

Compute the amount paid by Branch to purchase Hardy shares.

## LO 4-1, 4-2 E4-7 Correction of Error

LO 4-1

LO 4-1

During review of the adjusting entries to be recorded on December 31, 20X8, Grand Corporation discovered that it had inappropriately been using the cost method in accounting for its investment in Case Products Corporation. Grand purchased 100 percent ownership of Case Products on January 1, 20X6, for \$56,000, at which time Case Products reported retained earnings of \$10,000 and capital stock outstanding of \$30,000. The differential was attributable to patents with a life of eight years. Income and dividends of Case Products were:

| Year | Net Income | Dividends |
|------|------------|-----------|
| 20X6 | \$16,000   | \$6,000   |
| 20X7 | 24,000     | 8,000     |
| 20X8 | 32,000     | 8,000     |

#### Required

Give the correcting entry required on December 31, 20X8, to properly report the investment under the equity method, assuming the books have not been closed. Case Products' dividends were declared in early November and paid in early December each year.

#### E4-8 Differential Assigned to Land and Equipment

Rod Corporation purchased 100 percent ownership of Stafford Corporation on January 1, 20X4, for \$65,000, which was \$10,000 above the underlying book value. Half the additional amount was attributable to an increase in the value of land held by Stafford, and half was due to an increase in the value of equipment. The equipment had a remaining economic life of five years on January 1, 20X4. During 20X4, Stafford reported net income of \$12,000 and paid dividends of \$4,500.

#### Required

Give the journal entries that Rod Corporation recorded during 20X4 related to its investment in Stafford Corporation, assuming Rod uses the equity method in accounting for its investment.

LO 4-1, 4-2

#### E4-9 **Equity Entries with Goodwill**

Turner Corporation reported the following balances at January 1, 20X9:

| Item   | Book Value                                | Fair Value |
|--|---|------------|
| Cash   | \$ 45,000                                 | \$ 45,000  |
| Accounts Receivable  | 60,000                                    | 60,000     |
| Inventory  | 120,000                                   | 130,000    |
| Buildings & Equipment  | 300,000                                   | 240,000    |
| Less: Accumulated Depreciation   | (150,000)                                 |            |
| Total Assets   | \$375,000                                 | \$475,000  |
| Accounts Payable<br>Common Stock (\$10 par value)<br>Additional Paid-In Capital<br>Retained Earnings | \$ 75,000<br>100,000<br>30,000<br>170,000 | \$ 75,000  |
| Total Liabilities & Equities   | <u>\$375,000</u>                          |            |

On January 1, 20X9, Gross Corporation purchased 100 percent of Turner's stock. All tangible assets had a remaining economic life of 10 years at January 1, 20X9. Both companies use the FIFO inventory method. Turner reported net income of \$16,000 in 20X9 and paid dividends of \$3,200. Gross uses the equity method in accounting for its investment in Turner.

#### Required

Give all journal entries that Gross recorded during 20X9 with respect to its investment assuming Gross paid \$437,500 for the ownership of Turner on January 1, 20X9. The amount of the differential assigned to goodwill is not impaired.

LO 4-1, 4-2,

#### **Multiple-Choice Questions on Consolidation Process** E4-10

Select the most appropriate answer for each of the following questions.

- 1. Goodwill is
  - a. Seldom reported because it is too difficult to measure.
  - b. Reported when more than book value is paid in purchasing another company.
  - c. Reported when the fair value of the acquiree is higher than the fair value of the net identifiable assets acquired.
  - d. Generally smaller for small companies and increases in amount as the companies acquired increase in size.
- 2. [AICPA Adapted] Wright Corporation includes several subsidiaries in its consolidated financial statements. In its December 31, 20X2, trial balance, Wright had the following intercompany balances before eliminations:

|   | Debit                         | Credit               |
|---|-------------------------------|----------------------|
| Current receivable due from Main Company<br>Noncurrent receivable from Main Company<br>Cash advance to Corn Corporation | \$ 32,000<br>114,000<br>6,000 |                      |
| Cash advance from King Company<br>Intercompany payable to King Company  | 2,222                         | \$ 15,000<br>101,000 |

In its December 31, 20X2, consolidated balance sheet, what amount should Wright report as intercompany receivables?

- a. \$152,000.
- b. \$146,000.
- c. \$36,000.
- d. \$0.

3. Beni Corporation acquired 100 percent of Carr Corporation's outstanding capital stock for \$430,000 cash. Immediately before the purchase, the balance sheets of both corporations reported the following:

|                                    | Beni               | Carr             |
|------------------------------------|--------------------|------------------|
| Assets                             | \$2,000,000        | \$750,000        |
| Liabilities                        | \$ 750,000         | \$400,000        |
| Common Stock                       | 1,000,000          | 310,000          |
| Retained Earnings                  | 250,000            | 40,000           |
| Liabilities & Stockholders' Equity | <u>\$2,000,000</u> | <u>\$750,000</u> |

At the date of purchase, the fair value of Carr's assets was \$50,000 more than the aggregate carrying amounts. In the consolidated balance sheet prepared immediately after the purchase, the consolidated stockholders' equity should amount to

- a. \$1,680,000.
- b. \$1,650,000.
- c. \$1,600,000.
- d. \$1,250,000.

*Note:* Questions 4 and 5 are based on the following information:

Nugget Company's balance sheet on December 31, 20X6, was as follows:

| Assets                             |             | Liabilities and Stockholders' Equity     |             |
|------------------------------------|-------------|--|-------------|
| Cash                               | \$ 100,000  | Current Liabilities                      | \$ 300,000  |
| Accounts Receivable                | 200,000     | Long-Term Debt                           | 500,000     |
| Inventories                        | 500,000     | Common Stock (par \$1 per share)         | 100,000     |
| Property, Plant, & Equipment (net) | 900,000     | Additional Paid-In Capital               | 200,000     |
|                                    |             | Retained Earnings                        | 600,000     |
| Total Assets                       | \$1,700,000 | Total Liabilities & Stockholders' Equity | \$1,700,000 |

On December 31, 20X6, Gold Company acquired all of Nugget's outstanding common stock for \$1,500,000 cash. On that date, the fair (market) value of Nugget's inventories was \$450,000, and the fair value of Nugget's property, plant, and equipment was \$1,000,000. The fair values of all other assets and liabilities of Nugget were equal to their book values.

- 4. As a result of Gold's acquisition of Nugget, the consolidated balance sheet of Gold and Nugget should reflect goodwill in the amount of
  - a. \$500,000.
  - b. \$550,000.
  - c. \$600,000.
  - d. \$650,000.
- 5. Assuming Gold uses the equity method to account for investments and that Gold's (unconsolidated) balance sheet on December 31, 20X6, reflected retained earnings of \$2,000,000, what amount of retained earnings should be shown in the December 31, 20X6, consolidated balance sheet of Gold and its new subsidiary, Nugget?
  - a. \$2,000,000.
  - b. \$2,600,000.
  - c. \$2,800,000.
  - d. \$3,150,000.

#### E4-11 Multiple-Choice Questions on Consolidation [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. On January 1, 20X1, Prim Inc. acquired all of Scrap Inc.'s outstanding common shares for cash equal to the stock's book value. The carrying amounts of Scrap's assets and liabilities approximated their fair values, except that the carrying amount of its building was more than fair value. In preparing Prim's 20X1 consolidated income statement, which of the following adjustments would be made?
  - a. Decrease depreciation expense and recognize goodwill amortization.
  - b. Increase depreciation expense and recognize goodwill amortization.
  - c. Decrease depreciation expense and recognize no goodwill amortization.
  - d. Increase depreciation expense and recognize no goodwill amortization.
- 2. The first examination of Rudd Corporation's financial statements was made for the year ended December 31, 20X8. The auditor found that Rudd had acquired another company on January 1, 20X8, and had recorded goodwill of \$100,000 in connection with this acquisition. Although a friend of the auditor believes the goodwill will last no more than five years, Rudd's management has found no impairment of goodwill during 20X8. In its 20X8 financial statements, Rudd should report

| Exp   | ense        | Go  | odwill                                     |
|-------|-------------|---|--|
| \$    | 0           | \$10  | 00,000                                     |
| \$100 | 0,000       | \$  | 0  |
| \$ 20 | 0,000       | \$ 8  | 30,000                                     |
| \$    | 0           | \$  | 0  |
|       | \$<br>\$100 | ### Amortization Expense    \$ 0   \$100,000   \$ 20,000   \$ 0 | \$ 0 \$10<br>\$100,000 \$<br>\$20,000 \$ 8 |

3. Consolidated financial statements are being prepared for a parent and its four subsidiaries that have intercompany loans of \$100,000 and intercompany profits of \$300,000. How much of these intercompany loans and profits should be eliminated?

|    | Intercompany |       |       |      |
|----|--------------|-------|-------|------|
|    | Loa          | ans   | Pro   | fits |
| a. | \$           | 0     | \$    | 0    |
| b. | \$           | 0     | \$300 | ,000 |
| С. |              | 0,000 | \$    | 0    |
| d. | \$100        | 0,000 | \$300 | ,000 |
|    |              |       |       |      |

4. On April 1, 20X8, Plum Inc. paid \$1,700,000 for all of Long Corp.'s issued and outstanding common stock. On that date, the costs and fair values of Long's recorded assets and liabilities were as follows:

|                                   | Cost        | Fair Value  |
|-----------------------------------|-------------|-------------|
| Cash                              | \$ 160,000  | \$ 160,000  |
| Inventory                         | 480,000     | 460,000     |
| Property, plant & equipment (net) | 980,000     | 1,040,000   |
| Liabilities                       | (360,000)   | (360,000)   |
| Net assets                        | \$1,260,000 | \$1,300,000 |

In Plum's March 31, 20X9, consolidated balance sheet, what amount of goodwill should be reported as a result of this business combination?

- a. \$360,000.
- b. \$396,000.
- c. \$400,000.
- d. \$440,000.

#### **Elimination Entries with Differential**

On June 10, 20X8, Tower Corporation acquired 100 percent of Brown Company's common stock. Summarized balance sheet data for the two companies immediately after the stock acquisition are as follows:

|                             | Tower Corp. | Brown C    | ompany     |
|-----------------------------|-------------|------------|------------|
| Item                        |             | Book Value | Fair Value |
| Cash                        | \$ 15,000   | \$ 5,000   | \$ 5,000   |
| Accounts Receivable         | 30,000      | 10,000     | 10,000     |
| Inventory                   | 80,000      | 20,000     | 25,000     |
| Buildings & Equipment (net) | 120,000     | 50,000     | 70,000     |
| Investment in Brown Stock   | 100,000     | ·          |            |
| Total                       | \$345,000   | \$85,000   | \$110,000  |
| Accounts Payable            | \$ 25,000   | \$ 3,000   | \$ 3,000   |
| Bonds Payable               | 150,000     | 25,000     | 25,000     |
| Common Stock                | 55,000      | 20,000     | ,          |
| Retained Earnings           | 115,000     | 37,000     |            |
| Total                       | \$345,000   | \$85,000   | \$ 28,000  |

#### Required

- a. Give the elimination entries required to prepare a consolidated balance sheet immediately after the acquisition of Brown Company shares.
- b. Explain how elimination entries differ from other types of journal entries recorded in the normal course of business.

#### **Balance Sheet Consolidation** E4-13

Reed Corporation acquired 100 percent of Thorne Corporation's voting common stock on December 31, 20X4, for \$395,000. At the date of combination, Thorne reported the following:

| Cash            | \$120,000 | Current Liabilities   | \$ 80,000 |
|-----------------|-----------|-----------------------|-----------|
| Inventory       | 100,000   | Long-Term Liabilities | 200,000   |
| Buildings (net) | 420,000   | Common Stock          | 120,000   |
|                 |           | Retained Earnings     | 240,000   |
| Total           | \$640,000 | Total                 | \$640,000 |

At December 31, 20X4, the book values of Thorne's net assets and liabilities approximated their fair values, except for buildings, which had a fair value of \$20,000 less than book value, and inventories, which had a fair value \$36,000 more than book value.

#### Required

Reed Corporation wishes to prepare a consolidated balance sheet immediately following the business combination. Give the elimination entry or entries needed to prepare a consolidated balance sheet at December 31, 20X4.

## LO 4-2, 4-3

#### E4-14 **Acquisition with Differential**

Road Corporation acquired all of Conger Corporation's voting shares on January 1, 20X2, for \$470,000. At that time Conger reported common stock outstanding of \$80,000 and retained earnings of \$130,000. The book values of Conger's assets and liabilities approximated fair values, except for land, which had a book value of \$80,000 and a fair value of \$100,000, and buildings, which had a book value of \$220,000 and a fair value of \$400,000. Land and buildings are the only noncurrent assets that Conger holds.

#### Required

- a. Compute the amount of goodwill at the date of acquisition.
- b. Give the elimination entry or entries required immediately following the acquisition to prepare a consolidated balance sheet.

#### LO 4-5 E4-15 **Balance Sheet Worksheet with Differential**

Blank Corporation acquired 100 percent of Faith Corporation's common stock on December 31, 20X2, for \$189,000. Data from the balance sheets of the two companies included the following amounts as of the date of acquisition:

| Item   | Blank<br>Corporation                                    | Faith<br>Corporation                                 |
|--|---|--|
| Cash Accounts Receivable Inventory Buildings & Equipment (net) Investment in Faith Corporation Stock               | \$ 26,000<br>87,000<br>110,000<br>220,000<br>189,000    | \$ 18,000<br>37,000<br>60,000<br>150,000             |
| Total Assets   | \$632,000   | \$265,000  |
| Accounts Payable<br>Notes Payable<br>Common Stock<br>Retained Earnings<br>Total Liabilities & Stockholders' Equity | \$ 92,000<br>150,000<br>100,000<br>290,000<br>\$632,000 | \$ 35,000<br>80,000<br>60,000<br>90,000<br>\$265,000 |

At the date of the business combination, Faith's net assets and liabilities approximated fair value except for inventory, which had a fair value of \$84,000, and buildings and equipment (net), which had a fair value of \$165,000.

#### Required

- a. Give the elimination entry or entries needed to prepare a consolidated balance sheet immediately following the business combination.
- b. Prepare a consolidation balance sheet worksheet.

#### **Worksheet for Wholly Owned Subsidiary** E4-16

Gold Enterprises acquired 100 percent of Premium Builders' stock on December 31, 20X4. Balance sheet data for Gold and Premium on January 1, 20X5, are as follows:

|  | Gold<br>Enterprises                                     | Premium<br>Builders                                    |
|--|---|--|
| Cash & Receivables Inventory Buildings & Equipment (net) Investment in Premium Stock                       | \$ 80,000<br>150,000<br>430,000<br>167,000              | \$ 30,000<br>350,000<br>80,000                         |
| Total Assets   | \$827,000   | \$460,000  |
| Current Liabilities Long-Term Debt Common Stock Retained Earnings Total Liabilities & Stockholders' Equity | \$100,000<br>400,000<br>200,000<br>127,000<br>\$827,000 | \$110,000<br>200,000<br>140,000<br>10,000<br>\$460,000 |

At the date of the business combination, Premium's cash and receivables had a fair value of \$28,000, inventory had a fair value of \$357,000, and buildings and equipment had a fair value of \$92,000.

#### Required

- a. Give all elimination entries needed to prepare a consolidated balance sheet on January 1, 20X5.
- b. Complete a consolidated balance sheet worksheet.
- c. Prepare a consolidated balance sheet in good form.

LO 4-5

#### LO 4-3, 4-5

#### **Computation of Consolidated Balances**

Astor Corporation's balance sheet at January 1, 20X7, reflected the following balances:

| Cash & Receivables          | \$ 80,000 | Accounts Payable                         | \$ 40,000 |
|-----------------------------|-----------|--|-----------|
| Inventory                   | 120,000   | Income Taxes Payable                     | 60,000    |
| Land                        | 70,000    | Bonds Payable                            | 200,000   |
| Buildings & Equipment (net) | 480,000   | Common Stock                             | 250,000   |
|                             |           | Retained Earnings                        | 200,000   |
| Total Assets                | \$750,000 | Total Liabilities & Stockholders' Equity | \$750,000 |

Phel Corporation, which had just entered into an active acquisition program, acquired 100 percent of Astor's common stock on January 2, 20X7, for \$576,000. A careful review of the fair value of Astor's assets and liabilities indicated the following:

|                             | Book Value          | Fair Value          |
|-----------------------------|---------------------|---------------------|
| Inventory<br>Land           | \$120,000<br>70.000 | \$140,000<br>60.000 |
| Buildings & Equipment (net) | 480,000             | 550,000             |

Assume the book values of Phel's Inventory, Land, and Buildings and Equipment accounts are \$300,000, \$85,000, and \$1,200,000, respectively.

#### Required

Compute the appropriate amount to be included in the consolidated balance sheet immediately following the acquisition for each of the following items:

- a. Inventory.
- b. Land.
- c. Buildings and Equipment (net).
- d. Goodwill.
- e. Investment in Astor Corporation.

## LO 4-3

#### **Multiple-Choice Questions on Balance Sheet Consolidation** E4-18

Top Corporation acquired 100 percent of Sun Corporation's common stock on December 31, 20X2. Balance sheet data for the two companies immediately following the acquisition follow:

| Item                                     | Top<br>Corporation | Sun<br>Corporation |
|--|--------------------|--------------------|
| Cash                                     | \$ 49,000          | \$ 30,000          |
| Accounts Receivable                      | 110,000            | 45,000             |
| Inventory                                | 130,000            | 70,000             |
| Land                                     | 80,000             | 25,000             |

| Less: Accumulated Depreciation           | (223,000)          | (165,000)          |
| Investment in Sun Corporation Stock      | 198,000            |                    |
| Total Assets                             | <u>\$844,000</u>   | \$405,000          |
| Accounts Payable                         | \$ 61,500          | \$ 28,000          |
| Taxes Payable                            | 95,000             | 37,000             |
| Bonds Payable                            | 280,000            | 200,000            |
| Common Stock                             | 150,000            | 50,000             |
| Retained Earnings                        | 257,500            | 90,000             |
| Total Liabilities & Stockholders' Equity | \$844,000          | \$405,000          |

At the date of the business combination, the book values of Sun's net assets and liabilities approximated fair value except for inventory, which had a fair value of \$85,000, and land, which had a fair value of \$45,000.

#### Required

For each question, indicate the appropriate total that should appear in the consolidated balance sheet prepared immediately after the business combination.

- 1. What amount of inventory will be reported?
  - a. \$70,000.
  - b. \$130,000.
  - c. \$200,000.
  - d. \$215,000.
- 2. What amount of goodwill will be reported?
  - a. \$0.
  - b. \$23,000.
  - c. \$43,000.
  - d. \$58,000.
- 3. What amount of total assets will be reported?
  - a. \$84,400.
  - b. \$1,051,000.
  - c. \$1,109,000.
  - d. \$1,249,000.
- 4. What amount of total liabilities will be reported?
  - a. \$265,000.
  - b. \$436,500.
  - c. \$701,500.
  - d. \$1,249,000.
- 5. What amount of consolidated retained earnings will be reported?
  - a. \$547,500.
  - b. \$397,500.
  - c. \$347,500.
  - d. \$257,500.
- 6. What amount of total stockholders' equity will be reported?
  - a. \$407,500.
  - b. \$547,500.
  - c. \$844,000.
  - d. \$1,249,000.

#### Wholly Owned Subsidiary with Differential

Canton Corporation is a wholly owned subsidiary of Winston Corporation. Winston acquired ownership of Canton on January 1, 20X3, for \$28,000 above Canton's reported net assets. At that date, Canton reported common stock outstanding of \$60,000 and retained earnings of \$90,000. The differential is assigned to equipment with an economic life of seven years at the date of the business combination. Canton reported net income of \$30,000 and paid dividends of \$12,000 in 20X3.

#### Required

- a. Give the journal entries recorded by Winston Corporation during 20X3 on its books if Winston accounts for its investment in Canton using the equity method.
- b. Give the elimination entries needed at December 31, 20X3, to prepare consolidated financial statements.

LO 4-5

## Required

- a. Give all elimination entries required on December 31, 20X4, to prepare consolidated financial statements.
- b. Prepare a three-part consolidation worksheet as of December 31, 20X4.

#### LO 4-7 **Push-Down Accounting** E4-24

Jefferson Company acquired all of Louis Corporation's common shares on January 2, 20X3, for \$789,000. At the date of combination, Louis's balance sheet appeared as follows:

| Assets             |           | Liabilities          |                  |
|--------------------|-----------|----------------------|------------------|
| Cash & Receivables | \$ 34,000 | Current Payables     | \$ 25,000        |
| Inventory          | 165,000   | Notes Payable        | 100,000          |
| Land               | 60,000    | Stockholders' Equity |                  |
| Buildings (net)    | 250,000   | Common Stock         | 200,000          |
| Equipment (net)    | 320,000   | Additional Capital   | 425,000          |
|                    |           | Retained Earnings    | 79,000           |
| Total              | \$829,000 | Total                | <u>\$829,000</u> |

The fair values of all of Louis's assets and liabilities were equal to their book values except for its fixed assets. Louis's land had a fair value of \$75,000; the buildings, a fair value of \$300,000; and the equipment, a fair value of \$340,000.

Jefferson Company decided to employ push-down accounting for the acquisition of Louis Corporation. Subsequent to the combination, Louis continued to operate as a separate company.

#### Required

- a. Record the acquisition of Louis's stock on Jefferson's books.
- b. Present any entries that would be made on Louis's books related to the business combination, assuming push-down accounting is used.
- c. Present, in general journal form, all elimination entries that would appear in a consolidation worksheet for Jefferson and its subsidiary prepared immediately following the combination.

## **Problems**

LO 4-5

#### P4-25 **Assignment of Differential in Worksheet**

Teresa Corporation acquired all the voting shares of Sally Enterprises on January 1, 20X4. Balance sheet amounts for the companies on the date of acquisition were as follows:

|   | Teresa<br>Corporation   | Sally<br>Enterprises                         |
|---|---|--|
| Cash & Receivables Inventory Land Buildings & Equipment Investment in Sally Enterprises                             | \$ 40,000<br>95,000<br>80,000<br>400,000<br>290,000               | \$ 20,000<br>40,000<br>90,000<br>230,000     |
| Total Debits  | \$905,000   | \$380,000                                    |
| Accumulated Depreciation<br>Accounts Payable<br>Notes Payable<br>Common Stock<br>Retained Earnings<br>Total Credits | \$175,000<br>60,000<br>100,000<br>300,000<br>270,000<br>\$905,000 | \$ 65,000<br>15,000<br>50,000<br>100,000<br> |

Sally Enterprises' buildings and equipment were estimated to have a market value of \$175,000 on January 1, 20X4. All other items appeared to have market values approximating current book values.

#### Required

- a. Complete a consolidated balance sheet worksheet for January 1, 20X4.
- b. Prepare a consolidated balance sheet in good form.

#### P4-26 **Computation of Consolidated Balances** LO 4-3

Retail Records Inc. acquired all of Decibel Studios' voting shares on January 1, 20X2, for \$280,000. Retail's balance sheet immediately after the combination contained the following balances:

| RETAIL RECORDS INC.<br>Balance Sheet<br>January 1, 20X2 |                  |  |           |  |
|---|------------------|--|-----------|--|
| Cash & Receivables                                      | \$120,000        | Accounts Payable                         | \$ 75,000 |  |
| Inventory   | 110,000          | Taxes Payable                            | 50,000    |  |
| Land  | 70,000           | Notes Payable                            | 300,000   |  |
| Buildings & Equipment (net)                             | 350,000          | Common Stock                             | 400,000   |  |
| Investment in Decibel Stock                             | 280,000          | Retained Earnings                        | 105,000   |  |
| Total Assets  | <u>\$930,000</u> | Total Liabilities & Stockholders' Equity | \$930,000 |  |

Decibel's balance sheet at acquisition contained the following balances:

| DECIBEL STUDIOS  Balance Sheet  January 1, 20X2 |           |  |           |  |  |
|---|-----------|--|-----------|--|--|
| Cash & Receivables                              | \$ 40,000 | Accounts Payable                         | \$ 90,000 |  |  |
| Inventory                                       | 180,000   | Notes Payable                            | 250,000   |  |  |
| Buildings & Equipment (net)                     | 350,000   | Common Stock                             | 100,000   |  |  |
| Goodwill  | 30,000    | Additional Paid-In Capital               | 200,000   |  |  |
|   |           | Retained Earnings                        | (40,000)  |  |  |
| Total Assets                                    | \$600,000 | Total Liabilities & Stockholders' Equity | \$600,000 |  |  |

On the date of combination, the inventory held by Decibel had a fair value of \$170,000, and its buildings and recording equipment had a fair value of \$375,000. Goodwill reported by Decibel resulted from a purchase of Sound Stage Enterprises in 20X1. Sound Stage was liquidated and its assets and liabilities were brought onto Decibel's books.

#### Required

Compute the balances to be reported in the consolidated balance sheet immediately after the acquisition for:

- a. Inventory.
- b. Buildings and Equipment (net).
- c. Investment in Decibel Stock.
- d. Goodwill.
- e. Common Stock.
- f. Retained Earnings.

#### P4-27 **Balance Sheet Consolidation [AICPA Adapted]**

Case Inc. acquired all Frey Inc.'s outstanding \$25 par common stock on December 31, 20X3, in exchange for 40,000 shares of its \$25 par common stock. Case's common stock closed at

LO 4-5

\$56.50 per share on a national stock exchange on December 31, 20X3. Both corporations continued to operate as separate businesses maintaining separate accounting records with years ending December 31.

On December 31, 20X4, after year-end adjustments and the closing of nominal accounts, the companies had condensed balance sheet accounts (below).

## **Additional Information**

- 1. Case uses the equity method of accounting for its investment in Frey.
- 2. On December 31, 20X3, Frey's assets and liabilities had fair values equal to the book balances with the exception of land, which had a fair value of \$550,000. Frey had no land transactions in
- 3. On June 15, 20X4, Frey paid a cash dividend of \$4 per share on its common stock.
- 4. On December 10, 20X4, Case paid a cash dividend totaling \$256,000 on its common stock.
- 5. On December 31, 20X3, immediately before the combination, the stockholders' equity balance was:

|                            | Case Inc.   | Frey Inc.   |
|----------------------------|-------------|-------------|
| Common Stock               | \$2,200,000 | \$1,000,000 |
| Additional Paid-In Capital | 1,660,000   | 190,000     |
| Retained Earnings          | 3,166,000   | 820,000     |
|                            | \$7,026,000 | \$2,010,000 |

6. The 20X4 net income amounts according to the separate books of Case and Frey were \$890,000 (exclusive of equity in Frey's earnings) and \$580,000, respectively.

|  | Case Inc.    | Frey Inc.   |
|--|--------------|-------------|
| Assets                                       |              |             |
| Cash   | \$ 825,000   | \$ 330,000  |
| Accounts & Other Receivables                 | 2,140,000    | 835,000     |
| Inventories                                  | 2,310,000    | 1,045,000   |

| Additional Paid-In Capital                   | 2,100,000    | 190,000     |
| Retained Earnings                            | 4,380,000    | 1,240,000   |
| Total Liabilities & Stockholders' Equity     | \$14,045,000 | \$4,875,000 |

Prepare a consolidated balance sheet worksheet for Case and its subsidiary, Frey, for December 31, 20X4. A formal consolidated balance sheet is not required.

#### LO 4-5

#### P4-28 **Consolidated Balance Sheet**

Thompson Company spent \$240,000 to acquire all of Lake Corporation's stock on January 1, 20X2. The balance sheets of the two companies on December 31, 20X3, showed the following amounts:

|                                | Thompson<br>Company | Lake<br>Corporation |
|--------------------------------|---------------------|---------------------|
| Cash                           | \$ 30,000           | \$ 20,000           |
| Accounts Receivable            | 100,000             | 40,000              |
| Land                           | 60,000              | 50,000              |
| Buildings & Equipment          | 500,000             | 350,000             |
| Less: Accumulated Depreciation | (230,000)           | (75,000)            |
| Investment in Lake Corporation | 252,000             |                     |
|                                | \$712,000           | \$385,000           |
| Accounts Payable               | \$ 80,000           | \$ 10,000           |
| Taxes Payable                  | 40,000              | 70,000              |
| Notes Payable                  | 100,000             | 85,000              |
| Common Stock                   | 200,000             | 100,000             |
| Retained Earnings              | 292,000             | 120,000             |
|                                | \$712,000           | \$385,000           |

Lake reported retained earnings of \$100,000 at the date of acquisition. The difference between the acquisition price and underlying book value is assigned to buildings and equipment with a remaining economic life of 10 years from the date of acquisition. Assume Lake's accumulated depreciation on the acquisition date was \$25,000.

#### Required

- a. Give the appropriate elimination entry or entries needed to prepare a consolidated balance sheet as of December 31, 20X3.
- b. Prepare a consolidated balance sheet worksheet as of December 31, 20X3.

#### P4-29 **Comprehensive Problem: Consolidation in Subsequent Period**

Thompson Company spent \$240,000 to acquire all of Lake Corporation's stock on January 1, 20X2. On December 31, 20X4, the trial balances of the two companies were as follows:

|                                      | Thompson Company |         |     | mpany     | Lake Co   | rporation |
|--------------------------------------|------------------|---------|-----|-----------|-----------|-----------|
| Item                                 | ı                | Debit   |     | Credit    | Debit     | Credit    |
| Cash                                 | \$               | 74,000  |     |           | \$ 42,000 |           |

| Dividends Declared                   |                  | 30,000  |     |           | 12,000    |           |
| Accumulated Depreciation             |                  |         | \$  | 265,000   |           | \$ 93,000 |
| Accounts Payable                     |                  |         |     | 71,000    |           | 17,000    |
| Taxes Payable                        |                  |         |     | 58,000    |           | 60,000    |
| Notes Payable                        |                  |         |     | 100,000   |           | 85,000    |
| Common Stock                         |                  |         |     | 200,000   |           | 100,000   |
| Retained Earnings                    |                  |         |     | 292,000   |           | 120,000   |
| Service Revenue                      |                  |         |     | 610,000   |           | 240,000   |
| Income from Subsidiary               |                  |         | _   | 28,000    |           |           |
|                                      | \$1,             | 624,000 | \$1 | 1,624,000 | \$715,000 | \$715,000 |

Lake Corporation reported retained earnings of \$100,000 at the date of acquisition. The difference between the acquisition price and underlying book value is assigned to buildings and equipment with a remaining economic life of 10 years from the date of acquisition. At December 31, 20X4, Lake owed Thompson \$2,500 for services provided.

#### Required

- a. Give all journal entries recorded by Thompson with regard to its investment in Lake during 20X4.
- b. Give all elimination entries required on December 31, 20X4, to prepare consolidated financial statements.
- c. Prepare a three-part consolidation worksheet as of December 31, 20X4.

#### LO 4-3, 4-4

#### **Acquisition at Other than Fair Value of Net Assets** P4-30

Mason Corporation acquired 100 percent ownership of Best Company on February 12, 20X9. At the date of acquisition, Best Company reported assets and liabilities with book values of \$420,000 and \$165,000, respectively, common stock outstanding of \$80,000, and retained earnings of \$175,000. The book values and fair values of Best's assets and liabilities were identical except for land, which had increased in value by \$20,000, and inventories, which had decreased by \$7,000. The estimated fair value of Best as a whole at the date of acquisition was \$295,000.

#### Required

Give the elimination entries required to prepare a consolidated balance sheet immediately after the business combination assuming Mason acquired its ownership of Best for:

- a. \$280,000.
- b. \$251,000.

#### LO 4-5, 4-6

#### P4-31 **Intercorporate Receivables and Payables**

Kim Corporation acquired 100 percent of Normal Company's outstanding shares on January 1, 20X7. Balance sheet data for the two companies immediately after the purchase follow:

|                                    | Kim<br>Corporation | Normal<br>Company |
|------------------------------------|--------------------|-------------------|
| Cash                               | \$ 70,000          | \$ 35,000         |
| Accounts Receivable                | 90,000             | 65,000            |
| Inventory                          | 84,000             | 80,000            |
| Buildings & Equipment              | 400,000            | 300,000           |
| Less: Accumulated Depreciation     | (160,000)          | (75,000)          |
| Investment in Normal Company Stock | 305,000            |                   |
| Investment in Normal Company Bonds | 50,000             |                   |
| Total Assets                       | \$839,000          | <u>\$405,000</u>  |
| Accounts Payable                   | \$ 50,000          | \$ 20,000         |
| Bonds Payable                      | 200,000            | 100,000           |
| Common Stock                       | 300,000            | 150,000           |
| Capital in Excess of Par           |                    | 140,000           |
| Retained Earnings                  | _289,000           | (5,000)           |
| Total Liabilities & Equities       | <u>\$839,000</u>   | <u>\$405,000</u>  |

As indicated in the parent company balance sheet, Kim purchased \$50,000 of Normal's bonds from the subsidiary immediately after it acquired the stock. An analysis of intercompany receivables and payables also indicates that the subsidiary owes the parent \$10,000. On the date of combination, the book values and fair values of Normal's assets and liabilities were the same.

#### Required

- a. Give all elimination entries needed to prepare a consolidated balance sheet for January 1,
- b. Complete a consolidated balance sheet worksheet.
- c. Prepare a consolidated balance sheet in good form.

#### LO 4-5

#### **Balance Sheet Consolidation** P4-32

On January 2, 20X8, Primary Corporation acquired 100 percent of Street Company's outstanding common stock. In exchange for Street's stock, Primary issued bonds payable with a par and fair value of \$650,000 directly to the selling stockholders of Street. The two companies continued to operate as separate entities subsequent to combination.

|   | Primary Co   | rporation                    | Street Co  | ompany                                |

Immediately prior to the combination, the book values and fair values of the companies' assets and liabilities were as follows:

At the date of combination, Street owed Primary \$6,000 plus accrued interest of \$500 on a short-term note. Both companies have properly recorded these amounts.

#### Required

- a. Record the business combination on the books of Primary Corporation.
- b. Present in general journal form all elimination entries needed in a worksheet to prepare a consolidated balance sheet immediately following the business combination on January 2, 20X8.
- c. Prepare and complete a consolidated balance sheet worksheet as of January 2, 20X8, immediately following the business combination.
- d. Present a consolidated balance sheet for Primary and its subsidiary as of January 2, 20X8.

## LO 4-5

#### P4-33 Consolidation Worksheet at End of First Year of Ownership

Corporation acquired 100 percent ownership of Roller Company on January 1, 20X8, for \$128,000. At that date, the fair value of Roller's buildings and equipment was \$20,000 more than the book value. Buildings and equipment are depreciated on a 10-year basis. Although goodwill is not amortized, Mill's management concluded at December 31, 20X8, that goodwill involved in its acquisition of Roller shares had been impaired and the correct carrying value was \$2,500.

Trial balance data for Mill and Roller on December 31, 20X8, are as follows:

|                                | Mill Cor  | poration     | Roller C  | ompany    |

#### Required

- a. Give all elimination entries needed to prepare a three-part consolidation worksheet as of December 31, 20X9.
- b. Prepare a three-part consolidation worksheet for 20X9 in good form.
- c. Prepare a consolidated balance sheet, income statement, and retained earnings statement for 20X9.

#### **Comprehensive Problem: Wholly Owned Subsidiary** P4-35

Power Corporation acquired 100 percent ownership of Upland Products Company on January 1, 20X1, for \$200,000. On that date, Upland reported retained earnings of \$50,000 and had \$100,000 of common stock outstanding. Power has used the equity method in accounting for its investment in Upland. The trial balances for the two companies on December 31, 20X5 appear below.

#### Additional Information

- 1. On the date of combination (five years ago), the fair value of Upland's depreciable assets was \$50,000 more than the book value. The differential assigned to depreciable assets should be written off over the following 10-year period.
- 2. There was \$10,000 of intercorporate receivables and payables at the end of 20X5.

- a. Give all journal entries that Power recorded during 20X5 related to its investment in Upland.
- b. Give all elimination entries needed to prepare consolidated statements for 20X5.
- c. Prepare a three-part worksheet as of December 31, 20X5.

|                                  | \$1                | 1,772,000 | \$1 | ,772,000 | \$710,000 | \$710,000 |

#### Additional Information

- 1. On January 1, 20X7, Lime reported net assets with a book value of \$150,000. A total of \$20,000 of the acquisition price is applied to goodwill, which was not impaired in 20X7.
- 2. Lime's depreciable assets had an estimated economic life of 11 years on the date of combination. The difference between fair value and book value of tangible assets is related entirely to buildings and equipment.
- 3. Jersey used the equity method in accounting for its investment in Lime.
- 4. Detailed analysis of receivables and payables showed that Lime owed Jersey \$16,000 on December 31, 20X7.

## Required

- a. Give all journal entries recorded by Jersey with regard to its investment in Lime during 20X7.
- b. Give all elimination entries needed to prepare a full set of consolidated financial statements for 20X7.
- c. Prepare a three-part consolidation worksheet as of December 31, 20X7.

## P4-37A Push-Down Accounting

On December 31, 20X6, Greenly Corporation and Lindy Company entered into a business combination in which Greenly acquired all of Lindy's common stock for \$935,000. At the date of combination, Lindy had common stock outstanding with a par value of \$100,000, additional paidin capital of \$400,000, and retained earnings of \$175,000. The fair values and book values of all Lindy's assets and liabilities were equal at the date of combination, except for the following:

| <b>Book Value</b> | Fair Value                     |
|-------------------|--------------------------------|
| \$ 50,000         | \$ 55,000                      |
| 75,000            | 160,000                        |
| 400,000           | 500,000                        |
| 500,000           | 570,000                        |
|                   | \$ 50,000<br>75,000<br>400,000 |

<sup>&</sup>quot;A" indicates that the item relates to Appendix 4A.

LO 4-7

The buildings had a remaining life of 20 years, and the equipment was expected to last another 10 years. In accounting for the business combination, Greenly decided to use push-down accounting on Lindy's books.

During 20X7, Lindy earned net income of \$88,000 and paid a dividend of \$50,000. All of the inventory on hand at the end of 20X6 was sold during 20X7. During 20X8, Lindy earned net income of \$90,000 and paid a dividend of \$50,000.

#### Required

- a. Record the acquisition of Lindy's stock on Greenly's books on December 31, 20X6.
- b. Record any entries that would be made on December 31, 20X6, on Lindy's books related to the business combination if push-down accounting is employed.
- c. Present all elimination entries that would appear in the worksheet to prepare a consolidated balance sheet immediately after the combination.
- d. Present all entries that Greenly would record during 20X7 related to its investment in Lindy if Greenly uses the equity method of accounting for its investment.
- e. Present all elimination entries that would appear in the worksheet to prepare a full set of consolidated financial statements for the year 20X7.
- f. Present all elimination entries that would appear in the worksheet to prepare a full set of consolidated financial statements for the year 20X8.

## CISCO ACQUIRES A CONTROLLING INTEREST IN NUOVA

In many of the examples of corporate acquisitions discussed so far, the acquiring company has purchased 100 percent of the outstanding stock of the acquired company. However, the buyer doesn't always acquire 100 percent ownership of the target company. For example, in 2006 Cisco Systems Inc. acquired 80 percent of Nuova Systems in order to take advantage of Nuova's innovative data center technology. Individual investors still held the remaining 20 percent of the company. Cisco's initial investment in Nuova was \$50 million. Accounting for this type of investment can be very complicated. First, Cisco's \$50 million investment was not intended solely to purchase Nuova's tangible assets. Cisco also paid for Nuova's potential future earnings capability, for its innovation, and for the fair value (FV) of assets in excess of their book values as of the acquisition date. Because Cisco did not purchase 100 percent of Nuova, the Cisco consolidated financial statements in future years would have to account for the portion of the company owned by the noncontrolling interest (NCI) shareholders. This chapter explores the consolidation of less-than-wholly-owned subsidiaries when there is a positive differential.

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

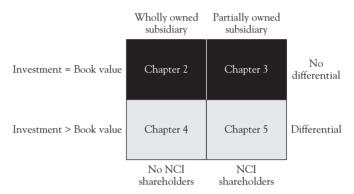

- LO 5-1 Understand and explain how the consolidation process differs when the subsidiary is less-than-wholly owned and there is a differential.
- LO 5-2 Make calculations and prepare elimination entries for the consolidation of a partially owned subsidiary when there is a complex positive differential.

- LO 5-3 Understand and explain what happens when a parent company ceases to consolidate a subsidiary.
- LO 5-4 Make calculations and prepare elimination entries for the consolidation of a partially owned subsidiary when there is a complex positive differential and other comprehensive income.

## A NONCONTROLLING INTEREST IN CONJUNCTION WITH A DIFFERENTIAL

LO 5-1

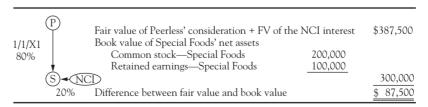

Understand and explain how the consolidation process differs when the subsidiary is less-thanwholly owned and there is a This chapter continues to build upon the foundation established in Chapters 2 through 4 related to the consolidation of majority-owned subsidiaries. In fact, Chapter 5 represents the culmination of our learning process related to procedures associated with the consolidation process. Chapter 5 combines the complexities introduced in Chapters 3 and 4. Specifically, Chapter 5 examines situations in which the acquiring company purchases less than 100 percent of the outstanding stock of the acquired company (similar to Chapter 3) and pays an amount higher than its proportionate share of the book value of net assets (resulting in a differential as introduced in Chapter 4). Once you master Chapter 5, you can handle virtually any consolidation problem!

## CONSOLIDATED BALANCE SHEET WITH MAJORITY-OWNED SUBSIDIARY

The consolidation process for a less-than-wholly-owned subsidiary with a differential is the same as the process for a wholly owned subsidiary with a differential except that the claims of the noncontrolling interest must be considered. The example of Peerless Products Corporation and Special Foods Inc. from Chapter 4 will serve as a basis for illustrating consolidation procedures when the parent has less than full ownership of a subsidiary. Assume that on January 1, 20X1, Peerless acquires 80 percent of the common stock of Special Foods for \$310,000. At that date, the fair value of the noncontrolling interest is estimated to be \$77,500. The ownership situation can be viewed as follows, when Special Foods' total fair value is equal to the sum of the fair value of the consideration given and the fair value of the noncontrolling interest:

Peerless records the acquisition on its books with the following entry:

(1) Investment in Special Foods 310,000 310,000

Record purchase of Special Foods stock.

FIGURE 5–1 Balance Sheets of Peerless Products and Special Foods, January 1, 20X1, Immediately after Combination

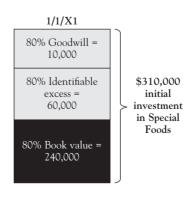

|                                      | Peerless<br>Products | Special<br>Foods |
|--------------------------------------|----------------------|------------------|
| Assets                               |                      |                  |
| Cash                                 | \$ 40,000            | \$ 50,000        |
| Accounts Receivable                  | 75,000               | 50,000           |
| Inventory                            | 100,000              | 60,000           |
| Land                                 | 175,000              | 40,000           |
| Buildings and Equipment              | 800,000              | 600,000          |

| Investment in Special Foods Stock    | 310,000              |                  |
| Total Assets                         | \$1,100,000          | \$500,000        |
| Liabilities and Stockholders' Equity |                      |                  |
| Accounts Payable                     | \$ 100,000           | \$100,000        |
| Bonds Payable                        | 200,000              | 100,000          |
| Common Stock                         | 500,000              | 200,000          |
| Retained Earnings                    | 300,000              | 100,000          |
| Total Liabilities and Equity         | \$1,100,000          | \$500,000        |

FIGURE 5–2 Values of Select Assets of Special Foods

|                         | Book Value | Fair Value       | Fair Value<br>Increment |
|-------------------------|------------|------------------|-------------------------|
| Inventory               | \$ 60,000  | \$ 65,000        | \$ 5,000                |
| Land                    | 40,000     | 50,000           | 10,000                  |
| Buildings and Equipment | 300,000    | 360,000          | 60,000                  |
|                         | \$400,000  | <u>\$475,000</u> | \$75,000                |

The balance sheets of Peerless and Special Foods appear immediately after acquisition in Figure 5–1. On the acquisition date, the fair values of all of Special Foods' assets and liabilities are equal to their book values except as shown in Figure 5–2.

The excess of the \$387,500 total fair value of the consideration given and the noncontrolling interest on the date of combination over the \$300,000 book value of Special Foods is \$87,500. Of this total \$87,500 differential, \$75,000 relates to the excess of the acquisition-date fair value over the book value of Special Foods' net identifiable assets, as shown in Figure 5–2. The remaining \$12,500 of the differential, the excess of the consideration given and the noncontrolling interest over the fair value of Special Foods' net identifiable assets, is assigned to goodwill. Because Peerless acquires only 80 percent of Special Foods' outstanding common stock, Peerless' share of the total differential is \$70,000 (\$87,500  $\times$  0.80). Specifically, Peerless' share of the excess fair value over book value of identifiable net assets (NA) is \$60,000 (\$75,000  $\times$  0.80) and its share of the goodwill is \$10,000 (\$12,500  $\times$  0.80). Peerless' share of the book value of Special Foods' net assets is \$240,000 (0.80  $\times$  [CS \$200,000 + RE \$100,000]). As a result, Peerless' acquisition price of \$310,000 applies to the book value and differential components of Special Foods' fair value as follows:

Assuming that Peerless decides to prepare a consolidated balance sheet on the acquisition date, the book value component of the acquisition price is divided between Peerless and the noncontrolling interest as follows:

#### **Book Value Calculations:**

|                           | NCI 20% + | Peerless 80% = | Common Stock | + Retained Earnings |
|---------------------------|-----------|----------------|--------------|---------------------|
| Book value at acquisition | 60,000    | 240,000        | 200,000      | 100,000             |

This analysis leads to the following basic elimination entry:

## Basic Investment Account Elimination Entry:1

| Common stock  | 200,000 | ← Common stock balance  |
|---|---------|---|
| Retained earnings   | 100,000 | ← Beginning balance in RE                                     |
| Investment in Special Foods<br>NCI in NA of Special Foods |         | ← Peerless' share of Special Foods' NA<br>← NCI's share of BV |

The basic elimination entry here is identical to the entry in Chapter 4 with one small exception: The credit to Investment in Special Foods was \$300,000 in Chapter 4 when Peerless purchased 100 percent of Special Foods' common stock. In this example, Peerless purchased only 80 percent of the common stock, so the \$300,000 book value of net assets is shared with the NCI shareholders. The differential can be allocated between Peerless and the noncontrolling interest as follows:

#### **Excess Value (Differential) Calculations:**

|                   | NCI 20% | + Peerless 80% = | Inventory | + Land | + Building | + Acc. Depr. | + Goodwill |
|-------------------|---------|------------------|-----------|--------|------------|--------------|------------|
| Beginning balance | 17,500  | 70,000           | 5,000     | 10,000 | 60,000     | 0            | 12,500     |

From this analysis, we can construct the excess value reclassification entry:

## Excess Value (Differential) Reclassification Entry:

| Inventory<br>Land<br>Building<br>Goodwill                 | 5,000<br>10,000<br>60,000<br>12,500 | <ul> <li>← Excess value at acquisition</li> <li>← Excess value at acquisition</li> <li>← Excess value at acquisition</li> <li>← Calculated value from acquisition</li> </ul> |
|---|-------------------------------------|--|
| Investment in Special Foods<br>NCI in NA of Special Foods | ,                                   | ← Peerless' share of differential ← NCI's share of differential  |

Again, this entry is identical to the one in the 100 percent owned Chapter 4 example except that the credit to Investment in Special Foods from the Chapter 4 example is now shared with the NCI shareholders. As explained in Chapter 4, Special Foods had accumulated depreciation on the acquisition date of \$300,000. The following elimination entry nets this accumulated depreciation out against the cost of the building and equipment.

## **Optional Accumulated Depreciation Elimination Entry:**

The combination of these last two elimination entries makes the building and equipment appear as if they were purchased on the acquisition date for their fair market values and recorded as new assets with zero accumulated depreciation as of that date.

| Buildings & Equipment          | 800,000   | 600,000   | 60,000      | 300,000    | 1,160,000    |
| Less: Accumulated Depreciation | (400,000) | (300,000) | 300,000     |            | (400,000)    |
| Goodwill                       |           |           | 12,500      |            | 12,500       |
| Total Assets                   | 1,100,000 | 500,000   | 387,500     | 610,000    | 1,377,500    |
| Accounts Payable               | 100,000   | 100,000   |             |            | 200,000      |
| Bonds Payable                  | 200,000   | 100,000   |             |            | 300,000      |
| Common Stock                   | 500,000   | 200,000   | 200,000     |            | 500,000      |
| Retained Earnings              | 300,000   | 100,000   | 100,000     |            | 300,000      |
| NCI in NA of Special Foods     | ,         | ,         |             | 60,000     | 77,500       |
|                                |           |           |             | 17,500     | ,            |
| Total Liabilities & Equity     | 1,100,000 | 500,000   | 300,000     | 77,500     | 1,377,500    |

Figure 5–3 illustrates Peerless' consolidation worksheet on the date of acquisition at January 1, 20X1. Once the elimination entries are placed in the worksheet, each row is summed across to get the consolidated totals. Note that the asset amounts included in the Consolidated column, and thus in the consolidated balance sheet, consist of book values for Peerless' assets and liabilities plus acquisition-date fair values for Special Foods' assets and liabilities plus goodwill.

## CONSOLIDATED FINANCIAL STATEMENTS WITH A MAJORITY-OWNED SUBSIDIARY

## LO 5-2

Make calculations and prepare elimination entries for the consolidation of a partially owned subsidiary when there is a complex positive differential.

Consolidation subsequent to acquisition involves the preparation of a complete set of consolidated financial statements, as discussed in Chapter 4. To continue the illustration from the previous section beyond the date of acquisition, assume Peerless Products and Special Foods report the income and dividends during 20X1 and 20X2 shown in Figure 5-4. With respect to the assets to which the \$87,500 differential relates, assume that the entire inventory is sold during 20X1, the buildings and equipment have a remaining economic life of 10 years from the date of combination, and Special Foods uses straight-line depreciation. Furthermore, assume that management determines at the end of 20X1 that the goodwill is impaired and should be written down by \$3,125. Management has determined that the goodwill arising in the acquisition of Special Foods relates proportionately to the controlling and noncontrolling interests, as does the impairment. Finally, assume that Peerless accounts for its investment in Special Foods using the equity method.

## **Initial Year of Ownership**

The business combination of Peerless Products and Special Foods occurs at the beginning of 20X1. Accordingly, Peerless records the acquisition on January 1, 20X1, as previously shown.

#### Parent Company Entries

During 20X1, Peerless makes the usual equity-method entries to record income and dividends from its subsidiary (see Figure 5-4). Unlike Chapter 4, because Peerless purchased

FIGURE 5-4 **Income and Dividend Information about Peerless Products and Special Foods for the** Years 20X1 and 20X2

| Separate operating income, Peerless | \$140,000            |                  |
| Net income, Special Foods           |                      | \$50,000         |
| Dividends                           | 60,000               | 30,000           |
| 20X2:                               |                      |                  |
| Separate operating income, Peerless | 160,000              | 75.000           |
| Net income, Special Foods           | 50.000               | 75,000           |
| Dividends                           | 60,000               | 40,000           |

only 80 percent of the voting stock, it must share Special Foods' income and dividends with the subsidiary's noncontrolling stockholders. Accordingly, Peerless recognizes only its proportionate share of Special Foods' net income and dividends. Peerless records the following entries during 20X1:

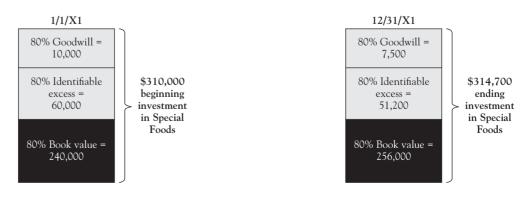

| (2) | Investment in Special Foods                                 | 40,000 |        |
|-----|---|--------|--------|
|     | Income from Special Foods                                   |        | 40,000 |
|     | Record Peerless' 80% share of Special Foods' 20X1 income.   |        |        |
| (3) | Cash  | 24,000 |        |
|     | Investment in Special Foods                                 |        | 24,000 |
|     | Record Peerless' 80% share of Special Foods' 20X1 dividend. |        |        |

In addition, Peerless must write off a portion of the differential with the following entry:

| (4)  | Income from Special Foods   | 11,300 |
|--|-----------------------------|--------|
|  | Investment in Special Foods | 11,300 |
| Record amortization of excess acquisition price. |                             |        |

Special Foods' undervalued inventory, comprising \$5,000 of the total differential, was sold during the year. Therefore, Peerless' \$4,000 portion ( $$5,000 \times 80\%$ ) must be written off by reducing both the investment account and the parent's income from the subsidiary. Also, Peerless' portion of the excess fair value of Special Foods' buildings and equipment must be amortized at \$4,800 per year [( $$60,000 \div 10$ )  $\times 0.80$ ] over the remaining 10-year life. Finally, Peerless' portion of the goodwill impairment, 2,500 (\$3,125  $\times$  0.80), is also included in this adjustment. Thus, the entire write-off of the differential is \$11,300 (\$4,000 + \$4,800 + \$2,500). A more detailed calculation of Peerless' share of the differential amortization is illustrated below in the "Excess Value (Differential) Calculations."

The following diagrams illustrate the breakdown of the book value and excess value components of the investment account at the beginning and end of the year.

The book value component can be summarized as follows:

#### **Book Value Calculations:**

|                             | NCI 20% + | Peerless 80% | = Common Stock | + Retained Earnings |
|-----------------------------|-----------|--------------|----------------|---------------------|
| Original book value         | 60,000    | 240,000      | 200,000        | 100,000             |
| + Net Income                | 10,000    | 40,000       |                | 50,000              |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)     |                | (30,000)            |
| Ending book value           | 64,000    | 256,000      | 200,000        | 120,000             |

The boxed numbers in the chart above comprise the basic elimination entry:

#### **Basic Investment Account Elimination Entry:**

| Retained earnings<br>Income from Special Foods<br>NCI in NI of Special Foods<br>Dividends declared | 10,000<br>30,000 | ← Common stock balance<br>← Beginning balance in RE<br>← Peerless' share of Special Foods' NI<br>← NCI's share of Special Foods' NI<br>← 100% of Special Foods' dividends<br>← Peerless' share of Special Foods' NA |
|--|------------------|---|
| Investment in Special Foods<br>NCI in NA of Special Foods  | 256,000          | <ul> <li>← Peerless' share of Special Foods' NA</li> <li>← NCI's share of net amount of BV</li> </ul>   |

We then analyze the differential and its changes during the period:

#### **Excess Value (Differential) Calculations:**

|                   | NCI 20% + | Peerless 80% | = | Inventory | + | Land   | + | Building | + | Acc. Depr. | + | Goodwill |
|-------------------|-----------|--------------|---|-----------|---|--------|---|----------|---|------------|---|----------|
| Beginning balance | 17,500    | 70,000       |   | 5,000     |   | 10,000 |   | 60,000   |   | 0          |   | 12,500   |
| Amortization      | (2,825)   | (11,300)     |   | (5,000)   |   |        |   |          |   | (6,000)    |   | (3,125)  |
| Ending balance    | 14,675    | 58,700       |   | 0         |   | 10,000 |   | 60,000   |   | (6,000)    |   | 9,375    |

The entire differential amount assigned to the inventory already passed through cost of goods sold during the year. Thus, there is no longer a differential related to inventory at the end of the year. The only other amortization item is the excess value assigned to the building, amortized over a 10-year period ( $\$60,000 \div 10 = \$6,000$  per year). Finally, the goodwill is deemed to be impaired and worth only \$9,375.

Because Peerless' share of the amortization of the differential was already written off from the investment account against the Income from Special Foods account on its books, the changes shown in the middle row of this chart are simply reclassified from the Income from Special Foods account to the various income statement accounts to which they apply using the following worksheet entry:

#### **Amortized Excess Value Reclassification Entry:**

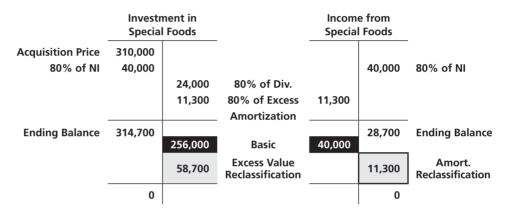

| Cost of goods sold 5,000 Depreciation expense 6,000 Goodwill impairment loss 3,125 Income from Special Foods NCI in NI of Special Foods | 11,300 | <ul> <li>← Extra cost of goods sold</li> <li>← Depreciation of excess building value</li> <li>← Goodwill impairment</li> <li>← Peerless' share of amortization</li> <li>← NCI's share of amortization</li> </ul> |
|---|--------|--|
|---|--------|--|

Finally, the remaining unamortized differential shown in the bottom row of the chart above is reclassified to the accounts that need to be revalued to their amortized acquisitiondate fair values:

#### **Excess Value (Differential) Reclassification Entry:**

| Land                        | 10,000 |        | ← Remaining excess value            |
|-----------------------------|--------|--------|-------------------------------------|
| Building                    | 60,000 |        | ← Remaining excess value            |
| Goodwill                    | 9,375  |        | ← Calculated value from acquisition |
| Accumulated depreciation    |        | 6,000  | ← Excess building value ÷10 years   |
| Investment in Special Foods |        | 58,700 | ← Peerless' share of differential   |
| NCI in NA of Special Foods  |        | 14,675 | ← NCI's share of differential       |

In sum, these worksheet entries (1) eliminate the balances in the Investment in Special Foods and Income from Special Foods accounts, (2) reclassify the amortization of excess value to the proper income statement accounts, and (3) reclassify the remaining differential to the appropriate balance sheet accounts as of the end of the accounting period. The following T-accounts illustrate how Peerless' equity method investment-related accounts are eliminated.

Again, we repeat the same accumulated depreciation elimination entry this year (and every year as long as Special Foods owns the assets) that we used in the initial year.

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation 300,000 | , Accumulated depreciation at the time |
|----------------------------------|--|
| Building and equipment 300,000   | of the acquisition netted against cost |

## Consolidation Worksheet—Initial Year of Ownership

After the subsidiary income accruals are entered on Peerless' books, the adjusted trial balance data of the consolidating companies are entered in the three-part consolidation worksheet as shown in Figure 5–5. The last column in the worksheet will serve as a basis for preparing consolidated financial statements at the end of 20X1.

Once the appropriate elimination entries are placed in the consolidation worksheet in Figure 5–5, the worksheet is completed by summing each row across, taking into consideration the debit or credit effect of the eliminations.

#### Consolidated Net Income and Retained Earnings

As can be seen from the worksheet in Figure 5–5, total consolidated net income for 20X1 is \$175,875 and the amount of that income accruing to the controlling interest, shown as the last number in the income statement section of the worksheet in the Consolidated column, is \$168,700. The amount of retained earnings reported in the consolidated balance sheet at December 31, 20X1, shown as the last number in the retained earnings section of the worksheet in the Consolidated column, is \$408,700. Figure 5–6 on page 211 illustrates the computation of these amounts.

| Total Liabilities & Equity         | 1,208,700 | 520,000   | 364,125    | 122,800          | 1,487,375    |

## **Second Year of Ownership**

The equity-method and consolidation procedures employed during the second and subsequent years of ownership are the same as those used during the first year and are illustrated by continuing the Peerless Products and Special Foods example through 20X2. No further impairment of the goodwill arising from the business combination occurs in 20X2.

## Parent Company Entries

Given the income and dividends as shown in Figure 5–4, Peerless Products records the following entries on its separate books during 20X2:

| (5) | Investment in Special Foods | 60,000 |
|-----|-----------------------------|--------|
|     | Income from Special Foods   | 60.000 |

## FIGURE 5-6 **Consolidated Net Income and Retained** Earnings, 20X1; 80 Percent Acquisition at More than Book Value

| Consolidated net income, 20X1: Peerless' separate operating income Special Foods' net income Write-off of differential related to inventory sold in 20X1 Amortization of differential related to buildings and equipment in 20X1 Goodwill impairment loss | \$140,000<br>50,000<br>(5,000)<br>(6,000)<br>(3,125) |
|---|--|
| Consolidated net income   | \$175,875  |
| Income to controlling interest, 20X1: Consolidated net income Income to noncontrolling interest Income to controlling interest  | \$175,875<br>(7,175)<br>\$168,700                    |
| Consolidated retained earnings, December 31, 20X1: Peerless' retained earnings on date of combination, January 1, 20X1 Income to controlling interest, 20X1 Dividends declared by Peerless, 20X1 Consolidated retained earnings                           | \$300,000<br>168,700<br>(60,000)<br><u>\$408,700</u> |

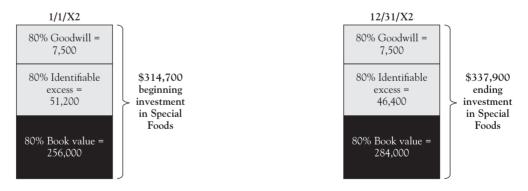

| (6) | Cash  | 32,000 |        |
|-----|---|--------|--------|
|     | Investment in Special Foods                                 |        | 32,000 |
|     | Record Peerless' 80% share of Special Foods' 20X2 dividend. |        |        |
| (7) | Income from Special Foods                                   | 4,800  |        |
|     | Investment in Special Foods                                 |        | 4,800  |

Record amortization of excess acquisition price.

## Consolidation Worksheet—Second Year Following Combination

The consolidation procedures in the second year following the acquisition are very similar to those in the first year. Consistent with the process illustrated in 20X1, we follow the same process for 20X2. In order to determine the worksheet entries for 20X2, we first summarize the changes in the parent's investment account during 20X2 as follows:

The book value component can be summarized as follows:

## **Book Value Calculations:**

|                                      | NCI 20% +        | Peerless 80%      | = Common Stock + | Retained Earnings |
|--------------------------------------|------------------|-------------------|------------------|-------------------|
| Beginning book value<br>+ Net income | 64,000<br>15,000 | 256,000<br>60,000 | 200,000          | 120,000<br>75,000 |
| <ul><li>Dividends</li></ul>          | (8,000)          | (32,000)          |                  | (40,000)          |
| Ending book value                    | 71,000           | 284,000           | 200,000          | 155,000           |

The boxed numbers in the preceding chart comprise the basic elimination entry:

#### **Basic Elimination Entry:**

The entire differential amount assigned to the inventory already passed through cost of goods sold during the prior year period. The only other amortization item is the excess value assigned to the building, which continues to be written off over a 10-year period  $(\$60,000 \div 10 = \$6,000).$ 

#### **Excess Value (Differential) Calculations:**

|                    | NCI 20% + | Peerless 80% = | Land   | + Building | + Acc. Depr. | + Goodwill |
|--------------------|-----------|----------------|--------|------------|--------------|------------|
| Beginning balances | 14,675    | 58,700         | 10,000 | 60,000     | (6,000)      | 9,375      |
| Amortization       | (1,200)   | (4,800)        |        |            | (6,000)      |            |
| Ending balance     | 13,475    | 53,900         | 10,000 | 60,000     | (12,000)     | 9,375      |

Because the amortization of the differential was already written off from the investment account against the Income from Special Foods account, the change to the differential shown in the middle row of this chart is simply reclassified from the Income from Special Foods account to the income statement account to which it applies during the consolidation process. Then, the remaining amount of the differential from the last row of this chart is reclassified to the various balance accounts that need to be revalued to their amortized acquisition-date fair values:

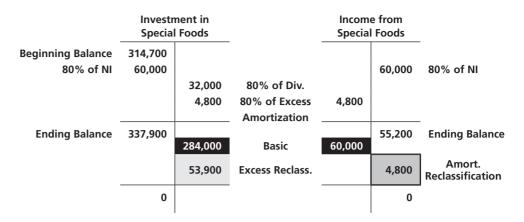

#### **Amortized Excess Value Reclassification Entry:**

| Depreciation expense<br>Income from Special Foods<br>NCI in NI of Special Foods | 6,000 | 4.800 | ← Depreciation of excess building value<br>← Peerless' share of amortization of diff.<br>← NCI's share of amortization of differential |
|---|-------|-------|--|
|---|-------|-------|--|

## **Excess Value (Differential) Reclassification Entry:**

| Land<br>Building<br>Goodwill | 10,000<br>60,000<br>9,375 | <ul> <li>Remaining excess value</li> <li>Remaining excess value</li> <li>Calculated value from acquisition</li> </ul> |
|------------------------------|---------------------------|---|
| Accumulated depreciation     | 12,000                    |   |
| Investment in Special Foods  | 53,900                    | ← Peerless' share of excess value   |
| NCI in NA of Special Foods   | 13,475                    | ← NCI's share of excess value   |

Again, these worksheet entries (1) eliminate the balances in the Investment in Special Foods and Income from Special Foods accounts, (2) reclassify the amortization of excess value to the proper income statement accounts, and (3) reclassify the remaining differential to the appropriate balance sheet accounts at the end of the accounting period. The following T-accounts illustrate how Peerless' Investment in Special Foods and Income from Special Foods accounts are eliminated.

Again, we repeat the same accumulated depreciation elimination entry this year (and every year as long as Special Foods owns the assets) that we used in the initial year.

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation 300,000 | n 300,000 | Accumulated depreciation at the time   |
|----------------------------------|-----------|--|
| Building and equipment           | 300,000   | of the acquisition netted against cost |

Figure 5–7 illustrates the worksheet to prepare a complete set of consolidated financial statements for the year 20X2. Figure 5–8 shows the computation of 20X2 consolidated net income and consolidated retained earnings at the end of 20X2.

#### Consolidated Financial Statements

Figure 5–9 on page 215 presents a consolidated income statement and retained earnings statement for the year 20X2 and a consolidated balance sheet as of December 31, 20X2.

## DISCONTINUANCE OF CONSOLIDATION

LO 5-3

Understand and explain what happens when a parent company ceases to consolidate a subsidiary.

A parent that has been consolidating a subsidiary in its financial statements should exclude that company from future consolidation if the parent can no longer exercise control over it. Control might be lost for a number of reasons, such as (1) the parent sells some or all of its interest in the subsidiary, (2) the subsidiary issues additional common stock, (3) the parent enters into an agreement to relinquish control, or (4) the subsidiary comes under the control of the government or other regulator.

If a parent loses control of a subsidiary and no longer holds an equity interest in the former subsidiary, it recognizes a gain or loss for the difference between any proceeds received from the event leading to loss of control (e.g., sale of interest, expropriation of subsidiary) and the carrying amount of the parent's equity interest. If the parent loses control but maintains a noncontrolling equity interest in the former subsidiary, it must recognize a gain or loss for the difference, at the date control is lost, between (1) the sum of any proceeds received by the parent and the fair value of its remaining equity interest in the former subsidiary and (2) the carrying amount of the parent's total interest in the subsidiary.

As an example, assume that Peerless Products sells three-quarters of its 80 percent interest in Special Foods on January 1, 20X2, for \$246,000, leaving it holding 20 percent of Special Foods' outstanding stock. On that date, assume that the fair value of Special Foods as a whole is \$410,000 and the carrying amount of Peerless' 80 percent share of Special Foods is \$314,700 (as shown earlier in the chapter). Assume the fair value of

|  |  |                          | 608,000               | Retained Earnings  | 563,900                          |              |
| Goodwill                                       |  |                          | 9,375                 | Total Controlling Interest                                   |                                  | 1,063,900    |
|  |  |                          |                       | Noncontrolling Interest                                      |                                  | 84,475       |
| Total Assets                                   |  |                          | \$1,648,375           | Total Liabilities & Equity                                   |                                  | \$1,648,375  |

Peerless' remaining 20 percent interest in Special Foods is \$82,000. Peerless' gain on the sale of Special Foods stock is computed as follows:

| Cash proceeds received Fair value of Peerless' remaining equity interest in Special Foods                         | \$246,000<br>82,000               |
|---|-----------------------------------|
| Peerless' total interest in Special Foods at date of sale<br>Gain on sale of 60 percent interest in Special Foods | \$328,000<br>314,700<br>\$ 13,300 |

Peerless reports the \$13,300 gain in 20X2 income as follows:

| (8) | Cash                              | 246,000 |
|-----|-----------------------------------|---------|
|     | Investment in Special Foods Stock | 232,700 |
|     | Gain on sale of investment.       | 13,300  |

Record the sale of 75% of the investment in Special Foods Stock.

Note that because Peerless no longer has a significant influence, the investment will be accounted for using the cost basis (\$82,000) going forward.

# TREATMENT OF OTHER COMPREHENSIVE INCOME

# LO 5-4

Make calculations and prepare elimination entries for the consolidation of a partially owned subsidiary when there is a complex positive differential and other comprehensive income.

ASC 220-10-55 requires that companies separately report other comprehensive income (OCI), which includes all revenues, expenses, gains, and losses that under generally accepted accounting principles are excluded from net income.<sup>2</sup> Comprehensive income is the sum of net income and other comprehensive income. ASC 220-10-55 permits several different options for reporting comprehensive income, but the consolidation process is the same regardless of the reporting format.

Other comprehensive income accounts are temporary accounts that are closed at the end

# FYI

Levi Strauss & Co. reported a \$138 million gain in other comprehensive income (OCI) in 2010. The portion of this gain that accrued to the NCI shareholders was \$2.1 million; the remaining \$135.9 million was attributable to the parent company's shareholders.

of each period. Instead of being closed to Retained Earnings as revenue and expense accounts are, other comprehensive income accounts are closed to a special stockholders' equity account, Accumulated Other Comprehensive Income (AOCI).

# Modification of the Consolidation Worksheet

When a parent or subsidiary has recorded other comprehensive income, the consolidation worksheet normally includes an additional section for other comprehensive income. This section of the worksheet facilitates computation of the amount of other comprehensive income to be reported; the portion, if any, of other comprehensive income to be assigned to the noncontrolling interest; and the amount of accumulated other comprehensive income to be reported in the consolidated balance sheet. Although this extra section of the worksheet for comprehensive income could be placed after the income statement section of the standard worksheet, the format used here is to place it at the bottom of the worksheet. If neither the parent nor any subsidiary reports other comprehensive income, the section can be omitted from the worksheet. When other comprehensive income is reported, the worksheet is prepared in the normal manner, with the additional section added to the bottom. The only modification within the standard worksheet is an additional stockholders' equity account included in the balance sheet portion of the worksheet for the cumulative effects of the other comprehensive income.

To illustrate the consolidation process when a subsidiary reports other comprehensive income, assume that during 20X2 Special Foods purchases \$20,000 of investments classified as available-for-sale. By December 31, 20X2, the fair value of the securities increases to \$30,000. Other than the effects of accounting for Special Foods' investment in securities, the financial statement information reported by Peerless Products and Special Foods at December 31, 20X2, is identical to that presented in Figure 5–8.

# Adjusting Entry Recorded by Subsidiary

At December 31, 20X2, Special Foods, the subsidiary, recognizes the increase in the fair value of its available-for-sale securities by recording the following adjusting entry:

(9) 10,000 Investment in Available-for-Sale Securities Unrealized Gain on Investments (OCI) 10,000

Record the increase in fair value of available-for sale securities.

The unrealized gain is not included in the subsidiary's net income but is reported by the subsidiary as an element of OCI.

<sup>&</sup>lt;sup>2</sup> Other comprehensive income elements include foreign currency translation adjustments, unrealized gains and losses on certain derivatives and investments in certain types of securities, and certain minimum pension liability adjustments.

# Adjusting Entry Recorded by Parent Company

In 20X2. Peerless records all its normal entries relating to its investment in Special Foods as if the subsidiary had not reported other comprehensive income. In addition, at December 31, 20X2, Peerless Products separately recognizes its proportionate share of the subsidiary's unrealized gain from the increase in the value of the available-for-sale securities:

(10)8,000 Investment in Special Foods Other Comprehensive Income from Special Foods 8.000

> Record share of the increase in value of available-for-salesecurities held by subsidiary.

# Consolidation Worksheet—Second Year Following Combination

The worksheet to prepare a complete set of consolidated financial statements for the year 20X2 is illustrated in Figure 5–10. In the worksheet, Peerless' balance in the Investment in Special Foods Stock account is more than the balance in Figure 5–8. Specifically, because of the adjusting entry just mentioned, Peerless' \$8,000 proportionate share of Special Foods' unrealized gain is included in the separate section of the worksheet for comprehensive income (Other Comprehensive Income from Subsidiary—Unrealized Gain on Investments). Special Foods' trial balance has been changed to reflect (1) the reduction in the cash balance resulting from the investment acquisition, (2) the investment in available-for-sale securities, and (3) an unrealized gain of \$10,000 on the investment.

### **Consolidation Procedures**

The normal elimination entries (the basic elimination entry, the amortized excess cost reclassification entry, the differential reclassification entry, and the accumulated depreciation elimination entry) were used in preparing the consolidation worksheet for 20X2 presented in Figure 5–7.

One additional entry is needed for the treatment of the subsidiary's other comprehensive income. First, the proportionate share of the subsidiary's other comprehensive income recorded by the parent in the adjusting entry previously mentioned must be eliminated to avoid double-counting the subsidiary's other comprehensive income. Thus, the adjusting entry is reversed in the worksheet. Moreover, a proportionate share of the subsidiary's other comprehensive income must be allocated to the noncontrolling interest:

### Other Comprehensive Income Entry:

| -     |                |
|-------|----------------|
| 8,000 |                |
| 2,000 |                |
|       | 8,000          |
|       | 2,000          |
|       | 8,000<br>2,000 |

The amount of consolidated other comprehensive income reported in the consolidated financial statements is equal to the subsidiary's \$10,000 amount. The noncontrolling interest's \$2,000 proportionate share of the subsidiary's other comprehensive income is deducted to arrive at the \$8,000 other comprehensive income allocated to the controlling

Although consolidated net income is the same in Figure 5–10 as in Figure 5–7, the other comprehensive income section of the worksheet in Figure 5–10 gives explicit recognition to the unrealized gain on available-for-sale securities held by Special Foods. This permits recognition in the consolidated financial statements under any of the alternative formats permitted by the FASB.

| Total Liabilities & Stockholders' Equity  |                       | \$1,658,375           |

along with its share of consolidated net income, to arrive at the consolidated comprehensive income allocated to the controlling interest. The amount of other comprehensive income allocated to the controlling interest is carried to the Accumulated Other Comprehensive Income that is reported in the consolidated balance sheet, and the noncontrolling interest's share is included in the Noncontrolling Interest amount in the consolidated balance sheet. The FASB requires that the amount of each other comprehensive income element allocated to the controlling and noncontrolling interests be disclosed in the consolidated statements or notes.

# **Consolidation Worksheet—Comprehensive Income** in Subsequent Years

Each year following 20X2, Special Foods will adjust the unrealized gain on investments on its books for the change in fair value of the available-for-sale securities. For example, if Special Foods' investment increased in value by an additional \$5,000 during 20X3, Special Foods would increase by \$5,000 the carrying amount of its investment in securities and recognize as an element of 20X3's other comprehensive income an unrealized gain of \$5,000. Under equity-method recording, Peerless would increase its Investment in Special Foods Stock account and record its \$4,000 share of the subsidiary's other comprehensive income.

The elimination entries required to prepare the consolidation worksheet at December 31, 20X3, would include the normal elimination entries (the basic elimination entry, the amortized excess cost reclassification entry, the differential reclassification entry, and the accumulated depreciation elimination entry). In addition, the basic elimination entry would be expanded to eliminate the subsidiary's \$10,000 beginning Accumulated Other Comprehensive Income balance and to increase the noncontrolling interest by its proportionate share of the subsidiary's beginning Accumulated Other Comprehensive Income amount ( $$10,000 \times 0.20$ ). The Other Comprehensive Income elimination entry allocates the 20X3 other comprehensive income to the noncontrolling interest:

# Other Comprehensive Income Entry:

| OCI from Special Foods      | 4,000 |       |
|-----------------------------|-------|-------|
| OCI to the NCI              | 1,000 |       |
| Investment in Special Foods |       | 4,000 |
| NCI in NA of subsidiary     |       | 1,000 |

# Summary of **Key Concepts**

The procedures and worksheet for consolidating less-than-wholly-owned subsidiaries are the same as discussed in Chapter 4 for wholly owned subsidiaries, with several modifications. The worksheet elimination entries are modified to include the noncontrolling shareholders' claim on the income and assets of the subsidiary. The noncontrolling interest has a claim on subsidiary assets based on its acquisition-date fair value. If the acquisition-date fair value of the consideration given in a business combination, plus the fair value of any noncontrolling interest, exceeds the book value of the subsidiary, the difference is referred to as a differential and increases both the controlling and noncontrolling interests. The subsidiary's assets and liabilities are valued in consolidation based on their full acquisition-date fair values, with goodwill recognized at acquisition for the difference between (1) the sum of the fair value of the consideration given in the combination and the fair value of the noncontrolling interest and (2) the fair value of the subsidiary's net identifiable assets. Any subsequent write-off of the differential reduces both the controlling and noncontrolling interests.

Consolidated net income is equal to the parent's income from its own operations plus the subsidiary's net income adjusted for any amortization or write-off of the differential. The amount of consolidated net income attributable to the noncontrolling interest is equal to the noncontrolling interest's proportionate share of the subsidiary's net income less a proportionate share of any differential write-off. The income attributable to the controlling interest is equal to consolidated net income less the income attributable to the noncontrolling interest.

A subsidiary's other comprehensive income for the period must be recognized in consolidated other comprehensive income and allocated between the controlling and noncontrolling interests. The consolidation worksheet is modified to accommodate the other comprehensive income items by adding a special section at the bottom.

# **Kev Terms**

accumulated other comprehensive income (AOCI), 216 comprehensive income, 216 other comprehensive income (OCI), 216

### Additional Consolidation Details Appendix **5A**

Chapters 3, 4, and 5 provide a conceptual foundation for preparing consolidated financial statements and a description of the basic procedures used in preparing consolidated statements. Before moving on to intercompany transactions in Chapters 6 through 8, several additional items should be considered to provide completeness and clarity.

# SUBSIDIARY VALUATION ACCOUNTS AT ACQUISITION

ASC 805-20-30 indicates that all assets and liabilities acquired in a business combination should be valued at their acquisition-date fair values and no valuation accounts are to be carried over. Although the application of this rule is clear-cut in merger-type business combinations, its application in consolidation following a stock acquisition is less clear. A subsidiary maintains an ongoing set of books and, unless push-down accounting is employed, it will carry forward its accounts. For some valuation accounts, such as accumulated depreciation, theory has dictated that the acquisition-date amount of the valuation account should be offset against the related asset account each time consolidated statements are prepared. Nevertheless, as an expediency, and because of a lack of materiality, companies generally have not made this offset, with no effect on the net amount of the asset. That is not expected to change under ASC 805-20-30. For some other valuation accounts, depending on their nature and materiality and how the amounts work out over time, they may have to be offset each time consolidated statements are prepared, at least for some number of periods. This is the reason for the optional accumulated depreciation elimination entry.

# **NEGATIVE RETAINED EARNINGS OF SUBSIDIARY** AT ACQUISITION

A parent company may acquire a subsidiary with a negative or debit balance in its retained earnings account. An accumulated deficit of a subsidiary at acquisition causes no special problems in the consolidation process. The basic investment account elimination entry is the same in the consolidation worksheet except that the debit balance in the subsidiary's Retained Earnings account is eliminated with a credit entry. Thus, the basic investment account elimination entry appears as follows:

### **Basic Investment Account Elimination Entry:**

| Common stock                | XX |    |
|-----------------------------|----|----|
| Income from Special Foods   | XX |    |
| NCI in NI of Special Foods  | XX |    |
| Retained earnings           |    | XX |
| Dividends declared          |    | XX |
| Investment in Special Foods |    | XX |
| NCI in NA of Special Foods  |    | XX |
|                             |    |    |

# OTHER STOCKHOLDERS' EQUITY ACCOUNTS

The discussion of consolidated statements up to this point has dealt with companies having stockholders' equity consisting only of retained earnings and a single class of capital stock issued at par. Typically, companies have more complex stockholders' equity structures, often including preferred stock and various types of additional contributed capital. In general, all stockholders' equity accounts accruing to the common shareholders receive the same treatment as common stock and are eliminated at the time common stock is eliminated. The treatment of preferred stock in the consolidation process is discussed in Chapter 9.

# SUBSIDIARY'S DISPOSAL OF DIFFERENTIAL-RELATED ASSETS

The disposal of an asset usually has income statement implications. If the asset is held by a subsidiary and is one to which a differential is assigned in the consolidation worksheet, both the parent's equity-method income and consolidated net income are affected. On the parent's books, the portion of the differential included in the subsidiary investment account that relates to the asset sold must be written off by the parent under the equity method as a reduction in both the income from the subsidiary and the investment account. In consolidation, the portion of the differential related to the asset sold is treated as an adjustment to consolidated income.

## Inventory

Any inventory-related differential is assigned to inventory for as long as the subsidiary holds the inventory units. In the period in which the inventory units are sold, the inventory-related differential is assigned to Cost of Goods Sold, as illustrated previously in Figure 5–5.

The inventory costing method used by the subsidiary determines the period in which the differential cost of goods sold is recognized. When the subsidiary uses FIFO inventory costing, the inventory units on hand on the date of combination are viewed as being the first units sold after the combination. Therefore, the differential normally is assigned to cost of goods sold in the period immediately after the combination. When the subsidiary uses LIFO inventory costing, the inventory units on the date of combination are viewed as remaining in the subsidiary's inventory. Thus, when the subsidiary uses LIFO inventory costing, the differential is not assigned to cost of goods sold unless the inventory level drops below its level at the date of combination.

# Fixed Assets

A differential related to land held by a subsidiary is added to the Land balance in the consolidation worksheet each time a consolidated balance sheet is prepared. If the subsidiary sells the land to which the differential relates, the differential is treated in the consolidation worksheet as an adjustment to the gain or loss on the sale of the land in the period of the sale.

To illustrate, assume that on January 1, 20X1, Pluto purchases all the common stock of Star at \$10,000 more than book value. All the differential relates to land that Star had purchased earlier for \$25,000. So long as Star continues to hold the land, the \$10,000 differential is assigned to Land in the consolidation worksheet. If Star sells the land to an unrelated company for \$40,000, the following entry is recorded on Star's books:

| (11) | Cash                 | 40,000 |
|------|----------------------|--------|
|      | Land                 | 25,000 |
|      | Gain on Sale of Land | 15,000 |
|      | Pocard calo of land  |        |

While a gain of \$15,000 is appropriate for Star to report, the accounting basis of the land to the consolidated entity is \$35,000 (\$25,000 + \$10,000). Therefore, the consolidated enterprise must report a gain of only \$5,000. To reduce the \$15,000 gain reported by Star to the \$5,000 gain that should be reported by the consolidated entity, the following elimination is included in the consolidation worksheet for the year of the sale:

### Eliminate Gain on Sale of Land: Gain on sale of land 10,000 **Income from Star** 10,000

If, instead, Star sells the land for \$32,000, the \$7,000 (\$32,000 - \$25,000) gain recorded by Star is eliminated, and a loss of \$3,000 (\$32,000 - \$35,000) is recognized in the consolidated income statement. The elimination entry in this case is

### Eliminate Gain and Record Loss on Sale of Land:

| Gain on sale of land | 7,000  |  |
|----------------------|--------|--|
| Loss on sale of land | 3,000  |  |
| Income from Star     | 10,000 |  |

When the equity method is used on the parent's books, the parent must adjust the carrying amount of the investment and its equity-method income in the period of the sale to write off the differential, as discussed in Chapter 2. Thereafter, the \$10,000 differential no longer exists.

The sale of differential-related equipment is treated in the same manner as land except that the amortization for the current and previous periods must be considered as well as any accumulated depreciation that may have existed at the acquisition date that is being removed from the records. If all of the assets associated with that accumulated depreciation are sold, there is no need for the optional entry after the sale of those assets.

Analysis

# **Consolidation Worksheet Preparation**

The newest clerk in the accounting office recently entered trial balance data for the parent company and its subsidiaries in the company's consolidation program. After a few minutes of additional work needed to eliminate the intercompany investment account balances, he expressed his satisfaction

"A" indicates that the item relates to Appendix 5A.

at having completed the consolidation worksheet for 20X5. In reviewing the printout of the consolidation worksheet, other employees raised several questions, and you are asked to respond.

## Required

Indicate whether each of the following questions can be answered by looking at the data in the consolidation worksheet (indicate why or why not):

- a. Is it possible to tell if the parent is using the equity method in recording its ownership of each subsidiary?
- b. Is it possible to tell if the correct amount of consolidated net income has been reported?
- c. One of the employees thought the parent company had paid well above the fair value of net assets for a subsidiary purchased on January 1, 20X5. Is it possible to tell by reviewing the consolidation worksheet?
- d. Is it possible to determine from the worksheet the percentage ownership of a subsidiary held by the parent?

LO 5-2

### **Consolidated Income Presentation** C5-2

### Research

Standard Company has a relatively high profit margin on its sales, and Jewel Company has a substantially lower profit margin. Standard holds 55 percent of Jewel's common stock and includes Jewel in its consolidated statements. Standard and Jewel reported sales of \$100,000 and \$60,000, respectively, in 20X4. Sales increased to \$120,000 and \$280,000 for the two companies in 20X5. The average profit margins of the two companies remained constant over the two years at 60 percent and 10 percent, respectively.

Standard's treasurer was aware that the subsidiary was awarded a major new contract in 20X5 and anticipated a substantial increase in net income for the year. She was disappointed to learn that consolidated net income allocated to the controlling interest had increased by only 38 percent even though sales were 2.5 times higher than in 20X4. She is not trained in accounting and does not understand the fundamental processes used in preparing Standard's consolidated income statement. She does know, however, that the earnings per share figures reported in the consolidated income statement are based on income allocated to the controlling interest and she wonders why that number isn't higher.

### Required

As a member of the accounting department, you have been asked to prepare a memo to the treasurer explaining how consolidated net income is computed and the procedures used to allocate income to the parent company and to the subsidiary's noncontrolling shareholders. Include in your memo citations to or quotations from the authoritative literature. To assist the treasurer in gaining a better understanding, prepare an analysis showing the income statement amounts actually reported for 20X4 and 20X5.

LO 5-1

### **Pro Rata Consolidation**

# Research

Rose Corporation and Krome Company established a joint venture to manufacture components for both companies' use on January 1, 20X1, and have operated it quite successfully for the past four years. Rose and Krome both contributed 50 percent of the equity when the joint venture was created. Rose purchases roughly 70 percent of the output of the joint venture and Krome purchases 30 percent. Rose and Krome have equal numbers of representatives on the joint venture's board of directors and participate equally in its management. Joint venture profits are distributed at year-end on the basis of total purchases by each company.

Rose has been using the equity method to report its investment in the joint venture; however, Rose's financial vice president believes that each company should use pro rata consolidation. As a senior accountant at Rose, you have been asked to prepare a memo discussing those situations in which pro rata consolidation may be appropriate and to offer your recommendation as to whether Rose should continue to use the equity method or switch to pro rata consolidation. Include in your memo citations of and quotations from the authoritative literature to support your arguments.

### C5-4 **Elimination Procedures**

# **Communication**

A new employee has been given responsibility for preparing the consolidated financial statements of Sample Company. After attempting to work alone for some time, the employee seeks assistance in gaining a better overall understanding of the way in which the consolidation process works.

### Required

You have been asked to provide assistance in explaining the consolidation process.

- a. Why must the elimination entries be entered in the consolidation worksheet each time consolidated statements are prepared?
- b. How is the beginning-of-period noncontrolling interest balance determined?
- c. How is the end-of-period noncontrolling interest balance determined?
- d. Which of the subsidiary's account balances must always be eliminated?
- e. Which of the parent company's account balances must always be eliminated?

# Research

# **Changing Accounting Standards: Monsanto Company**

Monsanto Company, a St. Louis-based company, is a leading provider of agricultural products for farmers. It sells seeds, biotechnology trait products, and herbicides worldwide.

### Required

- a. How did Monsanto Company report its income to noncontrolling (minority) shareholders of consolidated subsidiaries in its 2007 consolidated income statement?
- b. How did Monsanto Company report its subsidiary noncontrolling (minority) interest in its 2007 consolidated balance sheet?
- c. Comment on Monsanto's treatment of its subsidiary noncontrolling interest.
- d. In 2007, Monsanto had several affiliates that were special-purpose or variable interest entities. What level of ownership did Monsanto have in these entities? Were any of these consolidated? Why?

# Exercises

LO 5-1, 5-2

### E5-1 **Multiple-Choice Questions on Consolidation Process**

Select the most appropriate answer for each of the following questions.

- 1. If A Company acquires 80 percent of the stock of B Company on January 1, 20X2, immediately after the acquisition, which of the following is correct?
  - a. Consolidated retained earnings will be equal to the combined retained earnings of the two
  - b. Goodwill will always be reported in the consolidated balance sheet.
  - c. A Company's additional paid-in capital may be reduced to permit the carryforward of B Company retained earnings.
  - d. Consolidated retained earnings and A Company retained earnings will be the same.
- 2. Which of the following is correct?
  - a. The noncontrolling shareholders' claim on the subsidiary's net assets is based on the book value of the subsidiary's net assets.
  - b. Only the parent's portion of the difference between book value and fair value of the subsidiary's assets is assigned to those assets.
  - c. Goodwill represents the difference between the book value of the subsidiary's net assets and the amount paid by the parent to buy ownership.
  - d. Total assets reported by the parent generally will be less than total assets reported on the consolidated balance sheet.
- 3. Which of the following statements is correct?
  - a. Foreign subsidiaries do not need to be consolidated if they are reported as a separate operating group under segment reporting.
  - b. Consolidated retained earnings do not include the noncontrolling interest's claim on the subsidiary's retained earnings.
  - c. The noncontrolling shareholders' claim should be adjusted for changes in the fair value of the subsidiary assets but should not include goodwill.
  - d. Consolidation is expected any time the investor holds significant influence over the investee.

- 4. [AICPA Adapted] At December 31, 20X9, Grey Inc. owned 90 percent of Winn Corporation, a consolidated subsidiary, and 20 percent of Carr Corporation, an investee in which Grey cannot exercise significant influence. On the same date, Grey had receivables of \$300,000 from Winn and \$200,000 from Carr. In its December 31, 20X9, consolidated balance sheet, Grey should report accounts receivable from its affiliates of
  - a. \$500,000.
  - b. \$340,000.
  - c. \$230,000.
  - d. \$200,000.

### Multiple-Choice Questions on Consolidation [AICPA Adapted] E5-2

Select the correct answer for each of the following questions.

- 1. A 70 percent owned subsidiary company declares and pays a cash dividend. What effect does the dividend have on the retained earnings and noncontrolling interest balances in the parent company's consolidated balance sheet?
  - a. No effect on either retained earnings or noncontrolling interest.
  - b. No effect on retained earnings and a decrease in noncontrolling interest.
  - c. Decreases in both retained earnings and noncontrolling interest.
  - d. A decrease in retained earnings and no effect on noncontrolling interest.
- 2. How is the portion of consolidated earnings to be assigned to the noncontrolling interest in consolidated financial statements determined?
  - a. The parent's net income is subtracted from the subsidiary's net income to determine the noncontrolling interest.
  - b. The subsidiary's net income is extended to the noncontrolling interest.
  - c. The amount of the subsidiary's earnings recognized for consolidation purposes is multiplied by the noncontrolling interest's percentage of ownership.
  - d. The amount of consolidated earnings on the consolidated worksheets is multiplied by the noncontrolling interest percentage on the balance sheet date.
- 3. On January 1, 20X5, Post Company acquired an 80 percent investment in Stake Company. The acquisition cost was equal to Post's equity in Stake's net assets at that date. On January 1, 20X5, Post and Stake had retained earnings of \$500,000 and \$100,000, respectively. During 20X5, Post had net income of \$200,000, which included its equity in Stake's earnings, and declared dividends of \$50,000; Stake had net income of \$40,000 and declared dividends of \$20,000. There were no other intercompany transactions between the parent and subsidiary. On December 31, 20X5, what should the consolidated retained earnings be?
  - a. \$650,000.
  - b. \$666,000.
  - c. \$766,000.
  - d. \$770,000.

*Note:* Items 4 and 5 are based on the following information:

On January 1, 20X8, Ritt Corporation acquired 80 percent of Shaw Corporation's \$10 par common stock for \$956,000. On this date, the fair value of the noncontrolling interest was \$239,000, and the carrying amount of Shaw's net assets was \$1,000,000. The fair values of Shaw's identifiable assets and liabilities were the same as their carrying amounts except for plant assets (net) with a remaining life of 20 years, which were \$100,000 in excess of the carrying amount. For the year ended December 31, 20X8, Shaw had net income of \$190,000 and paid cash dividends totaling \$125,000.

- 4. In the January 1, 20X8, consolidated balance sheet, the amount of goodwill reported should be
  - a. \$0.
  - b. \$76,000.
  - c. \$95,000.
  - d. \$156,000.
- 5. In the December 31, 20X8, consolidated balance sheet, the amount of noncontrolling interest reported should be

- a. \$200,000.
- b. \$239,000.
- c. \$251,000.
- d. \$252,000.

### E5-3 **Elimination Entries with Differential**

On June 10, 20X8, Game Corporation acquired 60 percent of Amber Company's common stock. The fair value of the noncontrolling interest was \$32,800 on that date. Summarized balance sheet data for the two companies immediately after the stock purchase are as follows:

|                             | Game Corp. | Amber Co   | mpany      |
|-----------------------------|------------|------------|------------|
| Item                        | Book Value | Book Value | Fair Value |
| Cash                        | \$ 25,800  | \$ 5,000   | \$ 5,000   |
| Accounts Receivable         | 30,000     | 10,000     | 10,000     |
| Inventory                   | 80,000     | 20,000     | 25,000     |
| Buildings & Equipment (net) | 120,000    | 50,000     | 70,000     |
| Investment in Amber Stock   | 49,200     |            |            |
| Total                       | \$305,000  | \$85,000   | \$110,000  |
| Accounts Payable            | \$ 25,000  | \$ 3,000   | \$ 3,000   |
| Bonds Payable               | 150,000    | 25,000     | 25,000     |
| Common Stock                | 55,000     | 20,000     |            |
| Retained Earnings           | 75,000     | 37,000     |            |
| Total                       | \$305,000  | \$85,000   | \$ 28,000  |

# Required

- a. Give the elimination entries required to prepare a consolidated balance sheet immediately after the purchase of Amber Company shares.
- b. Explain how elimination entries differ from other types of journal entries recorded in the normal course of business.

### LO 5-2

### E5-4 **Computation of Consolidated Balances**

Slim Corporation's balance sheet at January 1, 20X7, reflected the following balances:

| Cash & Receivables          | \$ 80,000        | Accounts Payable                         | \$ 40,000        |
|-----------------------------|------------------|--|------------------|
| Inventory                   | 120,000          | Income Taxes Payable                     | 60,000           |
| Land                        | 70,000           | Bonds Payable                            | 200,000          |
| Buildings & Equipment (net) | 480,000          | Common Stock                             | 250,000          |
|                             |                  | Retained Earnings                        | 200,000          |
| Total Assets                | <u>\$750,000</u> | Total Liabilities & Stockholders' Equity | <u>\$750,000</u> |

Ford Corporation entered into an active acquisition program and acquired 80 percent of Slim's common stock on January 2, 20X7, for \$470,000. The fair value of the noncontrolling interest at that date was determined to be \$117,500. A careful review of the fair value of Slim's assets and liabilities indicated the following:

|                             | <b>Book Value</b> | Fair Value |
|-----------------------------|-------------------|------------|
| Inventory                   | \$120,000         | \$140,000  |
| Land                        | 70,000            | 60,000     |
| Buildings & Equipment (net) | 480,000           | 550,000    |

Goodwill is assigned proportionately to Ford and the noncontrolling shareholders.

# Required

Compute the appropriate amount related to Slim to be included in the consolidated balance sheet immediately following the acquisition for each of the following items:

- a. Inventory.
- b. Land.
- c. Buildings and Equipment (net).
- d. Goodwill.
- e. Investment in Slim Corporation.
- f. Noncontrolling Interest.

### **Balance Sheet Worksheet** E5-5

Power Company owns 90 percent of Pleasantdale Dairy's stock. The balance sheets of the two companies immediately after the Pleasantdale acquisition showed the following amounts:

|  | Power<br>Company  | Pleasantdale<br>Dairy                                  |
|--|---|--|
| Cash & Receivables Inventory Land Buildings & Equipment (net) Investment in Pleasantdale Stock                             | \$ 130,000<br>210,000<br>70,000<br>390,000<br>270,000     | \$ 70,000<br>90,000<br>40,000<br>220,000               |
| Total Assets   | \$1,070,000   | \$420,000  |
| Current Payables<br>Long-Term Liabilities<br>Common Stock<br>Retained Earnings<br>Total Liabilities & Stockholders' Equity | \$ 80,000<br>200,000<br>400,000<br>390,000<br>\$1,070,000 | \$ 40,000<br>100,000<br>60,000<br>220,000<br>\$420,000 |

The fair value of the noncontrolling interest at the date of acquisition was determined to be \$30,000. The full amount of the increase over book value is assigned to land held by Pleasantdale. At the date of acquisition, Pleasantdale owed Power \$8,000 plus \$900 accrued interest. Pleasantdale had recorded the accrued interest, but Power had not.

## Required

Prepare and complete a consolidated balance sheet worksheet.

### Majority-Owned Subsidiary Acquired at Higher than Book Value E5-6

Zenith Corporation acquired 70 percent of Down Corporation's common stock on December 31, 20X4, for \$102,200. The fair value of the noncontrolling interest at that date was determined to be \$43,800. Data from the balance sheets of the two companies included the following amounts as of the date of acquisition:

| Item                                 | Zenith<br>Corporation | Down<br>Corporation |
|--------------------------------------|-----------------------|---------------------|
| Cash                                 | \$ 50,300             | \$ 21,000           |
| Accounts Receivable                  | 90,000                | 44,000              |
| Inventory                            | 130,000               | 75,000              |
| Land                                 | 60,000                | 30,000              |
| Buildings & Equipment                | 410,000               | 250,000             |
| Less: Accumulated Depreciation       | (150,000)             | (80,000)            |
| Investment in Down Corporation Stock | 102,200               |                     |
| Total Assets                         | \$692,500             | \$340,000           |

(continued)

| Accounts Payable                         | \$152,500 | \$ 35,000 |
|--|-----------|-----------|
| Mortgage Payable                         | 250,000   | 180,000   |
| Common Stock                             | 80,000    | 40,000    |
| Retained Earnings                        | 210,000   | 85,000    |
| Total Liabilities & Stockholders' Equity | \$692,500 | \$340,000 |

At the date of the business combination, the book values of Down's assets and liabilities approximated fair value except for inventory, which had a fair value of \$81,000, and buildings and equipment, which had a fair value of \$185,000. At December 31, 20X4, Zenith reported accounts payable of \$12,500 to Down, which reported an equal amount in its accounts receivable.

### Required

- a. Give the elimination entry or entries needed to prepare a consolidated balance sheet immediately following the business combination.
- b. Prepare a consolidated balance sheet worksheet.
- c. Prepare a consolidated balance sheet in good form.

### E5-7 **Consolidation with Noncontrolling Interest**

Temple Corporation acquired 75 percent of Dynamic Corporation's voting common stock on December 31, 20X4, for \$390,000. At the date of combination, Dynamic reported the following:

| Current Assets<br>Long-Term Assets (net) | \$220,000<br>420,000 | Current Liabilities<br>Long-Term Liabilities<br>Common Stock<br>Retained Earnings | \$ 80,000<br>200,000<br>120,000<br>240,000 |
|--|----------------------|---|--|
| Total                                    | \$640,000            | Total   | \$640,000                                  |

At December 31, 20X4, the book values of Dynamic's net assets and liabilities approximated their fair values, except for buildings, which had a fair value of \$80,000 more than book value, and inventories, which had a fair value of \$36,000 more than book value. The fair value of the noncontrolling interest was determined to be \$130,000 at that date.

### Required

Temple Corporation wishes to prepare a consolidated balance sheet immediately following the business combination. Give the elimination entry or entries needed to prepare a consolidated balance sheet at December 31, 20X4.

### E5-8 Multiple-Choice Questions on Balance Sheet Consolidation

Power Corporation acquired 70 percent of Silk Corporation's common stock on December 31, 20X2. Balance sheet data for the two companies immediately following the acquisition follow:

| Item                                     | Power<br>Corporation | Silk<br>Corporation |
|--|----------------------|---------------------|
| Cash                                     | \$ 44,000            | \$ 30,000           |
| Accounts Receivable                      | 110,000              | 45,000              |
| Inventory                                | 130,000              | 70,000              |
| Land                                     | 80,000               | 25,000              |
| Buildings & Equipment                    | 500,000              | 400,000             |
| Less: Accumulated Depreciation           | (223,000)            | (165,000)           |
| Investment in Silk Corporation Stock     | 150,500              |                     |
| Total Assets                             | \$ 791,500           | \$405,000           |
| Accounts Payable                         | \$ 61,500            | \$ 28,000           |
| Taxes Payable                            | 95,000               | 37,000              |
| Bonds Payable                            | 280,000              | 200,000             |
| Common Stock                             | 150,000              | 50,000              |
| Retained Earnings                        | 205,000              | 90,000              |
| Total Liabilities & Stockholders' Equity | \$ 791,500           | \$405,000           |

LO 5-2

At the date of the business combination, the book values of Silk's net assets and liabilities approximated fair value except for inventory, which had a fair value of \$85,000, and land, which had a fair value of \$45,000. The fair value of the noncontrolling interest was \$64,500 on December 31, 20X2.

### Required

For each question below, indicate the appropriate total that should appear in the consolidated balance sheet prepared immediately after the business combination.

- 1. What amount of inventory will be reported?
  - a. \$179,000.
  - b. \$200,000.
  - c. \$210,500.
  - d. \$215,000.
- 2. What amount of goodwill will be reported?
  - a. \$0.
  - b. \$28,000.
  - c. \$40,000.
  - d. \$52,000.
- 3. What amount of total assets will be reported?
  - a. \$1,081,000.
  - b. \$1,121,000.
  - c. \$1,196,500.
  - d. \$1,231,500.
- 4. What amount of total liabilities will be reported?
  - a. \$265,000.
  - b. \$436,500.
  - c. \$622,000.
  - d. \$701,500.
- 5. What amount will be reported as noncontrolling interest?
  - a. \$42,000.
  - b. \$52,500.
  - c. \$60,900.
  - d. \$64,500.
- 6. What amount of consolidated retained earnings will be reported?
  - a. \$295,000.
  - b. \$268,000.
  - c. \$232,000.
  - d. \$205,000.
- 7. What amount of total stockholders' equity will be reported?
  - a. \$355,000.
  - b. \$397,000.
  - c. \$419,500.
  - d. \$495,000.

LO 5-2

### E5-9 **Majority-Owned Subsidiary with Differential**

Canton Corporation is a majority-owned subsidiary of West Corporation. West acquired 75 percent ownership on January 1, 20X3, for \$133,500. At that date, Canton reported common stock outstanding of \$60,000 and retained earnings of \$90,000, and the fair value of the noncontrolling interest was \$44,500. The differential is assigned to equipment, which had a fair value \$28,000 more than book value and a remaining economic life of seven years at the date of the business combination. Canton reported net income of \$30,000 and paid dividends of \$12,000 in 20X3.

## Required

- a. Give the journal entries recorded by West during 20X3 on its books if it accounts for its investment in Canton using the equity method.
- b. Give the elimination entries needed at December 31, 20X3, to prepare consolidated financial statements.

### LO 5-1, 5-2

## **Differential Assigned to Amortizable Asset**

Major Corporation acquired 90 percent of Lancaster Company's voting common stock on January 1, 20X1, for \$486,000. At the time of the combination, Lancaster reported common stock outstanding of \$120,000 and retained earnings of \$380,000, and the fair value of the noncontrolling interest was \$54,000. The book value of Lancaster's net assets approximated market value except for patents that had a market value of \$40,000 more than their book value. The patents had a remaining economic life of five years at the date of the business combination. Lancaster reported net income of \$60,000 and paid dividends of \$20,000 during 20X1.

### Required

- a. What balance did Major report as its investment in Lancaster at December 31, 20X1, assuming Major uses the equity method in accounting for its investment?
- b. Give the elimination entry or entries needed to prepare consolidated financial statements at December 31, 20X1.

### **Consolidation after One Year of Ownership** E5-11

Pioneer Corporation purchased 80 percent of Lowe Corporation's stock on January 1, 20X2. At that date, Lowe reported retained earnings of \$80,000 and had \$120,000 of stock outstanding. The fair value of its buildings was \$32,000 more than the book value.

Pioneer paid \$190,000 to acquire the Lowe shares. At that date, the noncontrolling interest had a fair value of \$47,500. The remaining economic life for all Lowe's depreciable assets was eight years on the date of combination. The amount of the differential assigned to goodwill is not impaired. Lowe reported net income of \$40,000 in 20X2 and declared no dividends.

### Required

- a. Give the elimination entries needed to prepare a consolidated balance sheet immediately after Pioneer purchased Lowe stock.
- b. Give all elimination entries needed to prepare a full set of consolidated financial statements for

### **Consolidation Following Three Years of Ownership**

Knox Corporation purchased 60 percent of Conway Company ownership on January 1, 20X7, for \$277,500. Conway reported the following net income and dividend payments:

| <b>X</b> |      |            |                |
|----------|------|------------|----------------|
|          | Year | Net Income | Dividends Paid |
|          | 20X7 | \$45,000   | \$25,000       |
| anced    | 20X8 | 55,000     | 35,000         |
| yGuide   | 20X9 | 30,000     | 10,000         |

On January 1, 20X7, Conway had \$250,000 of \$5 par value common stock outstanding and retained earnings of \$150,000, and the fair value of the noncontrolling interest was \$185,000. Conway held land with a book value of \$22,500 and a market value of \$30,000 and equipment with a book value of \$320,000 and a market value of \$360,000 at the date of combination. The remainder of the differential at acquisition was attributable to an increase in the value of patents, which had a remaining useful life of 10 years. All depreciable assets held by Conway at the date of acquisition had a remaining economic life of eight years.

### Required

- a. Compute the increase in the fair value of patents held by Conway.
- b. Prepare the elimination entries needed at January 1, 20X7, to prepare a consolidated balance sheet.

- c. Compute the balance reported by Knox as its investment in Conway at December 31, 20X8.
- d. Prepare the journal entries recorded by Knox with regard to its investment in Conway during
- e. Prepare the elimination entries needed at December 31, 20X9, to prepare a three-part consolidation worksheet.

### LO 5-2 **Consolidation Worksheet for Majority-Owned Subsidiary**

Proud Corporation acquired 80 percent of Stergis Company's voting stock on January 1, 20X3, at underlying book value. The fair value of the noncontrolling interest was equal to 20 percent of the book value of Stergis at that date. Proud uses the equity method in accounting for its ownership of Stergis during 20X3. On December 31, 20X3, the trial balances of the two companies are as follows:

|                                     | Proud Co  | rporation | Stergis Company |           |
|-------------------------------------|-----------|-----------|-----------------|-----------|
| Item                                | Debit     | Credit    | Debit           | Credit    |
| Current Assets                      | \$173,000 |           | \$105,000       |           |
| Depreciable Assets                  | 500,000   |           | 300,000         |           |
| Investment in Stergis Company Stock | 136,000   |           | ·               |           |
| Depreciation Expense                | 25,000    |           | 15,000          |           |
| Other Expenses                      | 105,000   |           | 75,000          |           |
| Dividends Declared                  | 40,000    |           | 10,000          |           |
| Accumulated Depreciation            | ·         | \$175,000 | ·               | \$ 75,000 |
| Current Liabilities                 |           | 50,000    |                 | 40,000    |
| Long-Term Debt                      |           | 100,000   |                 | 120,000   |
| Common Stock                        |           | 200,000   |                 | 100,000   |
| Retained Earnings                   |           | 230,000   |                 | 50,000    |
| Sales                               |           | 200,000   |                 | 120,000   |

### Required

- a. Give all elimination entries required on December 31, 20X4, to prepare consolidated financial statements.
- b. Prepare a three-part consolidation worksheet as of December 31, 20X4.

LO 5-4

### Preparation of Stockholders' Equity Section with Other Comprehensive Income E5-15

Broadmore Corporation acquired 75 percent of Stem Corporation's common stock on January 1, 20X8, for \$435,000. At that date, Stem reported common stock outstanding of \$300,000 and retained earnings of \$200,000, and the fair value of the noncontrolling interest was \$145,000. The book values and fair values of Stem's assets and liabilities were equal, except for other intangible assets, which had a fair value \$80,000 more than book value and a 10-year remaining life. Broadmore and Stem reported the following data for 20X8 and 20X9:

| Stem Corporation |                    |                         |                    | Broadmore            | Corporation        |
|------------------|--------------------|-------------------------|--------------------|----------------------|--------------------|
| Year             | Net<br>Income      | Comprehensive<br>Income | Dividends<br>Paid  | Operating Income     | Dividends<br>Paid  |
| 20X8<br>20X9     | \$40,000<br>60,000 | \$50,000<br>65,000      | \$15,000<br>30,000 | \$120,000<br>140,000 | \$70,000<br>70,000 |

### Required

- a. Compute consolidated comprehensive income for 20X8 and 20X9.
- b. Compute comprehensive income attributable to the controlling interest for 20X8 and 20X9.
- c. Assuming that Broadmore reported capital stock outstanding of \$320,000 and retained earnings of \$430,000 at January 1, 20X8, prepare the stockholders' equity section of the consolidated balance sheet at December 31, 20X8 and 20X9.

LO 5-4

### E5-16 **Elimination Entries for Subsidiary with Other Comprehensive Income**

Palmer Corporation acquired 70 percent of Krown Corporation's ownership on January 1, 20X8, for \$140,000. At that date, Krown reported capital stock outstanding of \$120,000 and retained earnings of \$80,000, and the fair value of the noncontrolling interest was equal to 30 percent of the book value of Krown. During 20X8, Krown reported net income of \$30,000 and comprehensive income of \$36,000 and paid dividends of \$25,000.

### Required

- a. Present all equity-method entries that Palmer would have recorded in accounting for its investment in Krown during 20X8.
- b. Present all elimination entries needed at December 31, 20X8, to prepare a complete set of consolidated financial statements for Palmer Corporation and its subsidiary.

### E5-17A Consolidation of Subsidiary with Negative Retained Earnings

General Corporation acquired 80 percent of Strap Company's voting common stock on January 1, 20X4, for \$138,000. At that date, the fair value of the noncontrolling interest was \$34,500. Strap's balance sheet at the date of acquisition contained the following balances:

| STRAP COMPANY<br>Balance Sheet<br>January 1, 20X4 |           |  |           |  |  |
|---|-----------|--|-----------|--|--|
| Cash  | \$ 20,000 | Accounts Payable                         | \$ 35,000 |  |  |
| Accounts Receivable                               | 35,000    | Notes Payable                            | 180,000   |  |  |
| Land  | 90,000    | Common Stock                             | 100,000   |  |  |
| Building & Equipment                              | 300,000   | Additional Paid-in Capital               | 75,000    |  |  |
| Less: Accumulated Depreciation                    | (85,000)  | Retained Earnings                        | (30,000)  |  |  |
| Total Assets                                      | \$360,000 | Total Liabilities & Stockholders' Equity | \$360,000 |  |  |

At the date of acquisition, the reported book values of Strap's assets and liabilities approximated fair value.

# Required

Give the elimination entry or entries needed to prepare a consolidated balance sheet immediately following the business combination.

### E5-18A **Complex Assignment of Differential**

On December 31, 20X4, Worth Corporation acquired 90 percent of Brinker Inc.'s common stock for \$864,000. At that date, the fair value of the noncontrolling interest was \$96,000. Of the \$240,000 differential, \$5,000 related to the increased value of Brinker's inventory, \$75,000 related to the increased value of its land, \$60,000 related to the increased value of its equipment, and \$50,000 was associated with a change in the value of its notes payable due to increasing interest rates. Brinker's equipment had a remaining life of 15 years from the date of combination. Brinker sold all inventory it held at the end of 20X4 during 20X5; the land to which the differential related also was sold during the year for a large gain. The amortization of the differential relating to Brinker's notes payable was \$7,500 for 20X5.

At the date of combination, Brinker reported retained earnings of \$120,000, common stock outstanding of \$500,000, and premium on common stock of \$100,000. For the year 20X5, it reported net income of \$150,000 but paid no dividends. Worth accounts for its investment in Brinker using the equity method.

# Required

- a. Present all entries that Worth would have recorded during 20X5 with respect to its investment in Brinker.
- b. Present all elimination entries that would have been included in the worksheet to prepare a full set of consolidated financial statements for the year 20X5.

# **Problems**

LO 5-1

### P5-19 Multiple-Choice Questions on Applying the Equity Method [AICPA Adapted] Select the correct answer for each of the following questions.

1. On July 1, 20X3, Barker Company purchased 20 percent of Acme Company's outstanding common stock for \$400,000 when the fair value of Acme's net assets was \$2,000,000. Barker does not have the ability to exercise significant influence over Acme's operating and financial policies. The following data concerning Acme are available for 20X3:

|                             | Twelve Months Ended<br>December 31, 20X3 | Six Months Ended<br>December 31, 20X3 |
|-----------------------------|--|---------------------------------------|
| Net income                  | \$300,000                                | \$160,000                             |
| Dividends declared and paid | 190,000                                  | 100,000                               |

In its income statement for the year ended December 31, 20X3, how much income should Barker report from this investment?

- a. \$20,000.
- b. \$32,000.
- c. \$38,000.
- d. \$60,000.
- 2. On January 1, 20X3, Miller Company purchased 25 percent of Wall Corporation's common stock; no differential resulted from the purchase. Miller appropriately uses the equity method for this investment, and the balance in Miller's investment account was \$190,000 on December 31, 20X3. Wall reported net income of \$120,000 for the year ended December 31, 20X3, and paid dividends on its common stock totaling \$48,000 during 20X3. How much did Miller pay for its 25 percent interest in Wall?
  - a. \$172,000.
  - b. \$202,000.
  - c. \$208,000.
  - d. \$232,000.
- 3. On January 1, 20X7, Robohn Company purchased for cash 40 percent of Lowell Company's 300,000 shares of voting common stock for \$1,800,000 when 40 percent of the underlying equity in Lowell's net assets was \$1,740,000. The payment in excess of underlying equity was assigned to amortizable assets with a remaining life of six years. As a result of this transaction, Robohn has the ability to exercise significant influence over Lowell's operating and financial policies. Lowell's net income for the year ended December 31, 20X7, was \$600,000. During 20X7, Lowell paid \$325,000 in dividends to its shareholders. The income reported by Robohn for its investment in Lowell should be
  - a. \$120,000.
  - b. \$130,000.
  - c. \$230,000.
  - d. \$240,000.
- 4. In January 20X0, Farley Corporation acquired 20 percent of Davis Company's outstanding common stock for \$800,000. This investment gave Farley the ability to exercise significant influence over Davis. The book value of the acquired shares was \$600,000. The excess of cost over book value was attributed to an identifiable intangible asset, which was undervalued on Davis' balance sheet and had a remaining economic life of 10 years. For the year ended December 31, 20X0, Davis reported net income of \$180,000 and paid cash dividends of \$40,000 on its common stock. What is the proper carrying value of Farley's investment in Davis on December 31, 20X0?
  - a. \$772,000.
  - b. \$780,000.
  - c. \$800,000.
  - d. \$808,000.

### **Amortization of Differential** P5-20

Ball Corporation purchased 30 percent of Krown Company's common stock on January 1, 20X5, by issuing preferred stock with a par value of \$50,000 and a market price of \$120,000. The following amounts relate to Krown's balance sheet items at that date:

|                                | <b>Book Value</b> | Fair Value |
|--------------------------------|-------------------|------------|
| Cash & Receivables             | \$ 200,000        | \$200,000  |
| Buildings & Equipment          | 400,000           | 360,000    |
| Less: Accumulated Depreciation | (100,000)         |            |
| Total Assets                   | \$ 500,000        |            |
| Accounts Payable               | \$ 50,000         | 50,000     |
| Bonds Payable                  | 200,000           | 200,000    |
| Common Stock                   | 100,000           |            |
| Retained Earnings              | 150,000           |            |
| Total Liabilities & Equities   | \$ 500,000        |            |

LO 5-1

Krown purchased buildings and equipment on January 1, 20X0, with an expected economic life of 20 years. No change in overall expected economic life occurred as a result of the acquisition of Ball's stock. The amount paid in excess of the fair value of Krown's reported net assets is attributed to unrecorded copyrights with a remaining useful life of eight years. During 20X5, Krown reported net income of \$40,000 and paid dividends of \$10,000.

# Required

Give all journal entries to be recorded on Ball Corporation's books during 20X5, assuming it uses the equity method in accounting for its ownership of Krown Company.

### P5-21 **Computation of Account Balances**

Easy Chair Company purchased 40 percent ownership of Stuffy Sofa Corporation on January 1, 20X1, for \$150,000. Stuffy Sofa's balance sheet at the time of acquisition was as follows:

| STUFFY SOFA CORPORATION<br>Balance Sheet<br>January 1, 20X1 |           |           |                              |           |
|---|-----------|-----------|------------------------------|-----------|
| Cash  |           | \$ 30,000 | Current Liabilities          | \$ 40,000 |
| Accounts Receivable   |           | 120,000   | Bonds Payable                | 200,000   |
| Inventory   |           | 80,000    | Common Stock                 | 200,000   |
| Land  |           | 150,000   | Additional Paid-In Capital   | 40,000    |
| Buildings & Equipment                                       | \$ 30,000 |           |                              |           |
| Less: Accumulated Depreciation                              | (120,000) | 180,000   | Retained Earnings            | 80,000    |
| Total Assets  |           | \$560,000 | Total Liabilities & Equities | \$560,000 |

During 20X1 Stuffy Sofa Corporation reported net income of \$30,000 and paid dividends of \$9,000. The fair values of Stuffy Sofa's assets and liabilities were equal to their book values at the date of acquisition, with the exception of buildings and equipment, which had a fair value \$35,000 above book value. All buildings and equipment had remaining lives of five years at the time of the business combination. The amount attributed to goodwill as a result of its purchase of Stuffy Sofa shares is not impaired.

### Required

- a. What amount of investment income will Easy Chair Company record during 20X1 under equity-method accounting?
- b. What amount of income will be reported under the cost method?
- c. What will be the balance in the investment account on December 31, 20X1, under (1) costmethod and (2) equity-method accounting?

### LO 5-1 P5-22 **Multistep Acquisition**

Jackson Corporation purchased shares of Phillips Corporation in the following sequence:

| Date            | Number of Shares<br>Purchased | Amount<br>Paid |
|-----------------|-------------------------------|----------------|
| January 1, 20X6 | 1,000 shares                  | \$25,000       |
| January 1, 20X8 | 500 shares                    | 15,000         |
| January 1, 20X9 | 2,000 shares                  | 70,000         |

The book value of Phillips' net assets at January 1, 20X6, was \$200,000. Each year since Jackson first purchased shares, Phillips has reported net income of \$70,000 and paid dividends of \$20,000. The amount paid in excess of the book value of Phillips' net assets was attributed to the increase in the value of identifiable intangible assets with a remaining life of five years at the date the shares of Phillips were purchased. Phillips has had 10,000 shares of voting common stock outstanding throughout the four-year period.

### Required

Give the journal entries recorded on Jackson Corporation's books in 20X9 related to its investment in Phillips Corporation.

### P5-23 **Complex Differential**

Essex Company issued common shares with a par value of \$50,000 and a market value of \$165,000 in exchange for 30 percent ownership of Tolliver Corporation on January 1, 20X2. Tolliver reported the following balances on that date:

### **TOLLIVER CORPORATION Balance Sheet** January 1, 20X2

|                                | <b>Book Value</b> | Fair Value |
|--------------------------------|-------------------|------------|
| Assets                         |                   |            |
| Cash                           | \$ 40,000         | \$ 40,000  |
| Accounts Receivable            | 80,000            | 80,000     |
| Inventory (FIFO basis)         | 120,000           | 150,000    |
| Land                           | 50,000            | 65,000     |
| Buildings & Equipment          | 500,000           | 320,000    |
| Less: Accumulated Depreciation | (240,000)         |            |
| Patent                         |                   | 25,000     |
| Total Assets                   | \$550,000         | \$680,000  |
| Liabilities & Equities         |                   |            |
| Accounts Payable               | \$ 30,000         | \$ 30,000  |
| Bonds Payable                  | 100,000           | 100,000    |
| Common Stock                   | 150,000           |            |
| Additional Paid-In Capital     | 20,000            |            |
| Retained Earnings              | 250,000           |            |
| Total Liabilities & Equities   | \$550,000         |            |

The estimated economic life of the patents held by Tolliver is 10 years. The buildings and equipment are expected to last 12 more years on average. Tolliver paid dividends of \$9,000 during 20X2 and reported net income of \$80,000 for the year.

# Required

Compute the amount of investment income (loss) reported by Essex from its investment in Tolliver for 20X2 and the balance in the investment account on December 31, 20X2, assuming the equity method is used in accounting for the investment.

# LO 5-1

### P5-24 **Equity Entries with Differential**

On January 1, 20X0, Hunter Corporation issued 6,000 of its \$10 par value shares to acquire 45 percent of the shares of Arrow Manufacturing. Arrow Manufacturing's balance sheet immediately before the acquisition contained the following items:

### **ARROW MANUFACTURING Balance Sheet** January 1, 20X0

|                              | <b>Book Value</b> | Fair Value |
|------------------------------|-------------------|------------|
| Assets                       |                   |            |
| Cash & Receivables           | \$ 30,000         | \$ 30,000  |
| Land                         | 70,000            | 80,000     |
| Buildings & Equipment (net)  | 120,000           | 150,000    |
| Patent                       | 80,000            | 80,000     |
| Total Assets                 | \$300,000         |            |
| Liabilities & Equities       |                   |            |
| Accounts Payable             | \$ 90,000         | 90,000     |
| Common Stock                 | 150,000           |            |
| Retained Earnings            | 60,000            |            |
| Total Liabilities & Equities | \$300,000         |            |

LO 5-1

On the date of the stock acquisition, Hunter's shares were selling at \$35, and Arrow Manufacturing's buildings and equipment had a remaining economic life of 10 years. The amount of the differential assigned to goodwill is not impaired.

In the two years following the stock acquisition, Arrow Manufacturing reported net income of \$80,000 and \$50,000 and paid dividends of \$20,000 and \$40,000, respectively. Hunter used the equity method in accounting for its ownership of Arrow Manufacturing.

## Required

- a. Give the entry recorded by Hunter Corporation at the time of acquisition.
- b. Give the journal entries recorded by Hunter during 20X0 and 20X1 related to its investment in Arrow Manufacturing.
- c. What balance will be reported in Hunter's investment account on December 31, 20X1?

### P5-25 **Equity Entries with Differential**

Ennis Corporation acquired 35 percent of Jackson Corporation's stock on January 1, 20X8, by issuing 25,000 shares of its \$2 par value common stock. Jackson Corporation's balance sheet immediately before the acquisition contained the following items:

| JACKSON CORPORATION Balance Sheet January 1, 20X8 |                  |            |  |
|---|------------------|------------|--|
|   | Book Value       | Fair Value |  |
| Assets  |                  |            |  |
| Cash & Receivables                                | \$ 40,000        | \$ 40,000  |  |
| Inventory (FIFO basis)                            | 80,000           | 100,000    |  |
| Land  | 50,000           | 70,000     |  |
| Buildings & Equipment (net)                       | 240,000          | 320,000    |  |
| Total Assets                                      | <u>\$410,000</u> | \$530,000  |  |
| Liabilities & Equities                            |                  |            |  |
| Accounts Payable                                  | \$ 70,000        | \$ 70,000  |  |
| Common Stock                                      | 130,000          |            |  |
| Retained Earnings                                 | 210,000          |            |  |
| Total Liabilities & Equities                      | \$410,000        |            |  |

Shares of Ennis were selling at \$8 at the time of the acquisition. On the date of acquisition, the remaining economic life of buildings and equipment held by Jackson was 20 years. The amount of the differential assigned to goodwill is not impaired. For the year 20X8, Jackson reported net income of \$70,000 and paid dividends of \$10,000.

### Required

- a. Give the journal entries recorded by Ennis Corporation during 20X8 related to its investment in Jackson Corporation.
- b. What balance will Ennis report as its investment in Jackson at December 31, 20X8?

### P5-26 **Additional Ownership Level**

Balance sheet, income, and dividend data for Amber Corporation, Blair Corporation, and Carmen Corporation at January 1, 20X3, were as follows:

| Account Balances    | Amber<br>Corporation | Blair<br>Corporation | Carmen<br>Corporation |
|---------------------|----------------------|----------------------|-----------------------|
| Cash                | \$ 70,000            | \$ 60,000            | \$ 20,000             |
| Accounts Receivable | 120,000              | 80,000               | 40,000                |
| Inventory           | 100,000              | 90,000               | 65,000                |
| Fixed Assets (net)  | 450,000              | 350,000              | 240,000               |
| Total Assets        | \$740,000            | \$580,000            | \$365,000             |

(continued)

| Accounts Payable               | \$105,000        | \$110,000 | \$ 45,000        |
|--------------------------------|------------------|-----------|------------------|
| Bonds Payable                  | 300,000          | 200,000   | 120,000          |
| Common Stock                   | 150,000          | 75,000    | 90,000           |
| Retained Earnings              | 185,000          | 195,000   | 110,000          |
| Total Liabilities & Equity     | <u>\$740,000</u> | \$580,000 | <u>\$365,000</u> |
| Income from Operations in 20X3 | \$220,000        | \$100,000 |                  |
| Net Income for 20X3            |                  |           | \$ 50,000        |
| Dividends Declared & Paid      | 60,000           | 30,000    | 25,000           |

On January 1, 20X3, Amber Corporation purchased 40 percent of the voting common stock of Blair Corporation by issuing common stock with a par value of \$40,000 and fair value of \$130,000. Immediately after this transaction, Blair purchased 25 percent of the voting common stock of Carmen Corporation by issuing bonds payable with a par value and market value of \$51,500.

On January 1, 20X3, the book values of Blair's net assets were equal to their fair values except for equipment that had a fair value \$30,000 more than book value and patents that had a fair value \$25,000 more than book value. At that date, the equipment had a remaining economic life of eight years, and the patents had a remaining economic life of five years. The book values of Carmen's assets were equal to their fair values except for inventory that had a fair value \$6,000 in excess of book value and was accounted for on a FIFO basis.

# Required

- a. Compute the net income reported by Amber Corporation for 20X3, assuming Amber and Blair used the equity method in accounting for their intercorporate investments.
- b. Give all journal entries recorded by Amber relating to its investment in Blair during 20X3.

### **Correction of Error** P5-27

Hill Company paid \$164,000 to acquire 40 percent ownership of Dale Company on January 1, 20X2. Net book value of Dale's assets on that date was \$300,000. Book values and fair values of net assets held by Dale were the same except for equipment and patents. Equipment held by Dale had a book value of \$70,000 and fair value of \$120,000. All of the remaining purchase price was attributable to the increased value of patents with a remaining useful life of eight years. The remaining economic life of all depreciable assets held by Dale was five years.

Dale Company's net income and dividends for the three years immediately following the purchase of shares were

| Year | Net Income | Dividends |
|------|------------|-----------|
| 20X2 | \$40,000   | \$15,000  |
| 20X3 | 60,000     | 20,000    |
| 20X4 | 70,000     | 25,000    |

The computation of Hill's investment income for 20X4 and entries in its investment account since the date of purchase were as follows:

# 20X4 Investment Income

| <u>-</u>   |         |          |
|--|---------|----------|
| Pro rata income accrual (\$70,000 $\times$ 0.40) |         | \$28,000 |
| Amortize patents ( $$44,000 \div 8$ years)       | \$5,500 |          |
| Dividends received ( $$25,000 \times 0.40$ )     |         | 10,000   |
| 20X4 investment income                           |         | \$32,500 |

|                       | <b>Investment in Dale Company</b> |         |  |
|-----------------------|-----------------------------------|---------|--|
| 1/1/X2 purchase price | \$164,000                         |         |  |
| 20X2 income accrual   | 16,000                            |         |  |
| Amortize patents      |                                   | \$5,500 |  |
| 20X3 income accrual   | 24,000                            |         |  |
| Amortize patents      |                                   | 5,500   |  |
| 20X4 income accrual   | 28,000                            |         |  |
| Amortize patents      |                                   | 5,500   |  |

Before making closing entries at the end of 20X4, Hill's new controller reviewed the reports and was convinced that both the balance in the investment account and the investment income that Hill reported for 20X4 were in error.

\$215,500

# Required

Prepare a correcting entry, along with supporting computations, to properly state the balance in the investment account and all related account balances at the end of 20X4.

## Majority-Owned Subsidiary Acquired at More Than Book Value

12/31/X4 balance

Porter Corporation acquired 70 percent of Darla Corporation's common stock on December 31, 20X4, for \$102,200. At that date, the fair value of the noncontrolling interest was \$43,800. Data from the balance sheets of the two companies included the following amounts as of the date of acquisition:

| Item   | Porter<br>Corporation   | Darla<br>Corporation   |
|--|---|--|
| Cash Accounts Receivable Inventory Land Buildings & Equipment Less: Accumulated Depreciation Investment in Darla Corporation Stock | \$ 50,300<br>90,000<br>130,000<br>60,000<br>410,000<br>(150,000)<br>102,200 | \$ 21,000<br>44,000<br>75,000<br>30,000<br>250,000<br>(80,000) |
| Total Assets   | \$692,500   | \$340,000  |
| Accounts Payable<br>Mortgage Payable<br>Common Stock<br>Retained Earnings<br>Total Liabilities & Stockholders' Equity              | \$152,500<br>250,000<br>80,000<br>210,000<br>\$692,500                      | \$ 35,000<br>180,000<br>40,000<br>85,000<br>\$340,000          |

At the date of the business combination, the book values of Darla's assets and liabilities approximated fair value except for inventory, which had a fair value of \$81,000, and buildings and equipment, which had a fair value of \$185,000. At December 31, 20X4, Porter reported accounts payable of \$12,500 to Darla, which reported an equal amount in its accounts receivable.

### Required

- a. Give the elimination entry or entries needed to prepare a consolidated balance sheet immediately following the business combination.
- b. Prepare a consolidated balance sheet worksheet.
- c. Prepare a consolidated balance sheet in good form.

### P5-29 **Balance Sheet Consolidation of Majority-Owned Subsidiary** LO 5-2

On January 2, 20X8, Total Corporation acquired 75 percent of Ticken Tie Company's outstanding common stock. In exchange for Ticken Tie's stock, Total issued bonds payable with a par value of

\$500,000 and fair value of \$510,000 directly to the selling stockholders of Ticken Tie. At that date, the fair value of the noncontrolling interest was \$170,000. The two companies continued to operate as separate entities subsequent to the combination.

Immediately prior to the combination, the book values and fair values of the companies' assets and liabilities were as follows:

|                            | Total      |            | Ticken <sup>*</sup> | Tie        |
|----------------------------|------------|------------|---------------------|------------|
|                            | Book Value | Fair Value | Book Value          | Fair Value |
| Cash                       | \$ 12,000  | \$ 12,000  | \$ 9,000            | \$ 9,000   |
| Receivables                | 41,000     | 39,000     | 31,000              | 30,000     |
| Allowance for Bad Debts    | (2,000)    |            | (1,000)             |            |
| Inventory                  | 86,000     | 89,000     | 68,000              | 72,000     |
| Land                       | 55,000     | 200,000    | 50,000              | 70,000     |
| Buildings & Equipment      | 960,000    | 650,000    | 670,000             | 500,000    |
| Accumulated Depreciation   | (411,000)  |            | (220,000)           |            |
| Patent                     |            |            |                     | 40,000     |
| Total Assets               | \$741,000  | \$990,000  | \$607,000           | \$721,000  |
| Current Payables           | \$ 38,000  | \$ 38,000  | \$ 29,000           | \$ 29,000  |
| Bonds Payable              | 200,000    | 210,000    | 100,000             | 100,000    |
| Common Stock               | 300,000    |            | 200,000             |            |
| Additional Paid-in Capital | 100,000    |            | 130,000             |            |
| Retained Earnings          | 103,000    |            | 148,000             |            |
| Total Liabilities & Equity | \$741,000  |            | \$607,000           |            |

At the date of combination, Ticken Tie owed Total \$6,000 plus accrued interest of \$500 on a shortterm note. Both companies have properly recorded these amounts.

### Required

- a. Record the business combination on the books of Total Corporation.
- b. Present in general journal form all elimination entries needed in a worksheet to prepare a consolidated balance sheet immediately following the business combination on January 2, 20X8.
- c. Prepare and complete a consolidated balance sheet worksheet as of January 2, 20X8, immediately following the business combination.
- d. Present a consolidated balance sheet for Total and its subsidiary as of January 2, 20X8.

# LO 5-1, 5-2

### P5-30 **Incomplete Data**

Blue Corporation acquired controlling ownership of Skyler Corporation on December 31, 20X3, and a consolidated balance sheet was prepared immediately. Partial balance sheet data for the two companies and the consolidated entity at that date follow:

### **BLUE CORPORATION AND SKYLER CORPORATION Balance Sheet Data** December 31, 20X3

| Item                                   | Blue<br>Corporation | Skyler<br>Corporation | Consolidated<br>Entity |

| Noncontrolling Interest      |                     |                       | 90,650                 |
| Total Liabilities & Equities | \$ ?                | \$380,000             | \$875,650              |

During 20X3, Blue provided engineering services to Skyler and has not yet been paid for them. There were no other receivables or payables between Blue and Skyler at December 31, 20X3.

## Required

- a. What is the amount of unpaid engineering services at December 31, 20X3, on work done by Blue for Skyler?
- b. What balance in accounts receivable did Skyler report at December 31, 20X3?
- c. What amounts of wages payable did Blue and Skyler report at December 31, 20X3?
- d. What was the fair value of Skyler as a whole at the date of acquisition?
- e. What percentage of Skyler's shares were purchased by Blue?
- f. What amounts of capital stock and retained earnings must be reported in the consolidated balance sheet?

### LO 5-2 P5-31 **Income and Retained Earnings**

Quill Corporation acquired 70 percent of North Company's stock on January 1, 20X9, for \$105,000. At that date, the fair value of the noncontrolling interest was equal to 30 percent of the book value of North Company. The companies reported the following stockholders' equity balances immediately after the acquisition:

|                            | Quill       | North     |
|----------------------------|-------------|-----------|
|                            | Corporation | Company   |
| Common Stock               | \$120,000   | \$ 30,000 |
| Additional Paid-in Capital | 230,000     | 80,000    |
| Retained Earnings          | 290,000     | 40,000    |
| Total                      | \$640,000   | \$150,000 |

Quill and North reported 20X9 operating incomes of \$90,000 and \$35,000 and dividend payments of \$30,000 and \$10,000, respectively.

### Required

- a. Compute the amount reported as net income by each company for 20X9, assuming Quill uses equity-method accounting for its investment in North.
- b. Compute consolidated net income for 20X9.
- c. Compute the reported balance in retained earnings at December 31, 20X9, for both companies.
- d. Compute consolidated retained earnings at December 31, 20X9.
- e. How would the computation of consolidated retained earnings at December 31, 20X9, change if Quill uses the cost method in accounting for its investment in North?

### LO 5-2

### P5-32 Consolidation Worksheet at End of First Year of Ownership

Power Corporation acquired 75 percent of Best Company's ownership on January 1, 20X8, for \$96,000. At that date, the fair value of the noncontrolling interest was \$32,000. The book value of Best's net assets at acquisition was \$100,000. The book values and fair values of Best's assets and liabilities were equal, except for Best's buildings and equipment, which were worth \$20,000 more than book value. Buildings and equipment are depreciated on a 10-year

Although goodwill is not amortized, the management of Power concluded at December 31, 20X8, that goodwill from its purchase of Best shares had been impaired and the correct carrying amount was \$2,500. Goodwill and goodwill impairment were assigned proportionately to the controlling and noncontrolling shareholders.

Trial balance data for Power and Best on December 31, 20X8, are as follows:

|                              | Power Co  | <b>Power Corporation</b> |           | mpany     |
|------------------------------|-----------|--------------------------|-----------|-----------|
| Item                         | Debit     | Credit                   | Debit     | Credit    |
| Cash                         | \$ 47,500 |                          | \$ 21,000 |           |
| Accounts Receivable          | 70,000    |                          | 12,000    |           |

### Required

- a. Give all elimination entries needed to prepare a three-part consolidation worksheet as of December 31, 20X8.
- b. Prepare a three-part consolidation worksheet for 20X8 in good form.

### Consolidation Worksheet at End of Second Year of Ownership

LO 5-2

This problem is a continuation of P5-32. Power Corporation acquired 75 percent of Best Company's ownership on January 1, 20X8, for \$96,000. At that date, the fair value of the noncontrolling interest was \$32,000. The book value of Best's net assets at acquisition was \$100,000. The book values and fair values of Best's assets and liabilities were equal, except for Best's buildings and equipment, which were worth \$20,000 more than book value. Buildings and equipment are depreciated on a 10-year basis.

Although goodwill is not amortized, the management of Power concluded at December 31, 20X8, that goodwill from its purchase of Best shares had been impaired and the correct carrying amount was \$2,500. Goodwill and goodwill impairment were assigned proportionately to the controlling and noncontrolling shareholders. No additional impairment occurred in 20X9.

LO 5-2

Trial balance data for Power and Best on December 31, 20X9, are as follows:

|                              | Power Co    | <b>Power Corporation</b> |           | mpany     |
|------------------------------|-------------|--------------------------|-----------|-----------|

|                          | \$1,825,200 | <u>\$1,</u> | 825,200 | \$850,000 | \$850,000 |

### Additional Information

- 1. On January 1, 20X7, Granite reported net assets with a book value of \$150,000 and a fair value of \$191,250. The difference between fair value and book value of Granite's net assets is related entirely to Buildings and Equipment. Granite's depreciable assets had an estimated economic life of 11 years on the date of combination.
- 2. At December 31, 20X8, Mortar's management reviewed the amount attributed to goodwill and concluded goodwill was impaired and should be reduced to \$14,000. Goodwill and goodwill impairment were assigned proportionately to the controlling and noncontrolling shareholders.
- 3. Mortar used the equity method in accounting for its investment in Granite.
- 4. Detailed analysis of receivables and payables showed that Mortar owed Granite \$9,000 on December 31, 20X8.

# Required

- a. Give all journal entries recorded by Mortar with regard to its investment in Granite during 20X8.
- b. Give all elimination entries needed to prepare a full set of consolidated financial statements for 20X8.
- c. Prepare a three-part consolidation worksheet as of December 31, 20X8.

### P5-35 Subsidiary with Other Comprehensive Income in Year of Acquisition

Amber Corporation acquired 60 percent ownership of Sparta Company on January 1, 20X8, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 40 percent of the book value of Sparta Company. Trial balance data at December 31, 20X8, for Amber and Sparta are as follows:

|                                      | Amber Co  | orporation | Sparta Company |           |  |  |

# **Additional Information**

Sparta purchased stock of Row Company on January 1, 20X8, for \$30,000 and classified the investment as available-for-sale securities. The value of Row's securities increased to \$40,000 and \$44,000, respectively, at December 31, 20X8, and 20X9.

# Required

- a. Give all elimination entries needed to prepare a three-part consolidation worksheet as of December 31, 20X9.
- b. Prepare a three-part consolidation worksheet for 20X9 in good form.

### P5-37A **Comprehensive Problem: Majority-Owned Subsidiary**

Master Corporation acquired 80 percent ownership of Stanley Wood Products Company on January 1, 20X1, for \$160,000. On that date, the fair value of the noncontrolling interest was \$40,000, and Stanley reported retained earnings of \$50,000 and had \$100,000 of common stock outstanding. Master has used the equity method in accounting for its investment in Stanley.

Trial balance data for the two companies on December 31, 20X5, are as follows:

|   |    | Master<br>Corporation |     |          | Stanley Wood<br>Products Company |           |  |
|---|----|-----------------------|-----|----------|----------------------------------|-----------|--|
| Item                                      |    | Debit                 |     | Credit   | Debit                            | Credit    |  |
| Cash & Receivables                        | \$ | 81,000                |     |          | \$ 65,000                        |           |  |

# Additional Information

- 1. On the date of combination, the fair value of Stanley's depreciable assets was \$50,000 more than book value. The differential assigned to depreciable assets should be written off over the following 10-year period.
- 2. There was \$10,000 of intercorporate receivables and payables at the end of 20X5.

### Required

LO 5-2

- a. Give all journal entries that Master recorded during 20X5 related to its investment in Stanley.
- b. Give all elimination entries needed to prepare consolidated statements for 20X5.
- c. Prepare a three-part worksheet as of December 31, 20X5.

### P5-38A **Comprehensive Problem: Differential Apportionment**

Mortar Corporation acquired 80 percent ownership of Granite Company on January 1, 20X7, for \$173,000. At that date, the fair value of the noncontrolling interest was \$43,250. The trial balances for the two companies on December 31, 20X7, included the following amounts:

|                                     |       | Mortar Co | rporation | Granite Company |        |  |

Most people know the catchy jingle, "I don't want to grow up; I'm a Toys "R" Us kid."

The business continued to expand and in 1978 Toys "R" Us went public. During the 1980s, in an effort to further expand its business, Toys "R" Us branched out into the clothing market with Kids "R" Us stores (these stores were discontinued in 2003). It also opened two international stores in Singapore and Canada. The 1990s saw further expansion with the creation of the Babies "R" Us brand, which has since grown to more than 260 locations.

In its next effort to expand, Toys "R" Us Inc. launched a subsidiary, Toysrus.com, in 1999 to capture a portion of the growing online toy retail market. As a subsidiary of Toys "R" Us Inc., Toysrus.com acts independently of the parent company. However, the dot-com does not manufacture inventory or purchase it from outside sources; it receives its entire inventory from Toys "R" Us Inc.

Because Toysrus.com is a wholly owned subsidiary of Toys "R" Us Inc., transactions between the two companies are not considered "arm's length." They are related-party transactions and must be eliminated. Thus, the profit from intercompany inventory transfers is eliminated in preparing consolidated financial statements. This elimination is required because Toys "R" Us Inc. and Toysrus.com, in essence, are the same company and a company cannot make a profit by selling inventory to itself. This elimination process becomes quite complicated, and the procedures are slightly different for partially owned companies when the transactions are "upstream" (from subsidiary to parent). This chapter examines intercompany inventory transactions and the consolidation procedures associated with them.

### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 6-1 Understand and explain intercompany transfers and why they must be eliminated.
- LO 6-2 Understand and explain concepts associated with inventory transfers and transfer pricing.
- LO 6-3 Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following downstream inventory transfers.
- LO 6-4 Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following upstream inventory transfers.
- LO 6-5 Understand and explain additional considerations associated with consolidation.

# **OVERVIEW OF THE CONSOLIDATED ENTITY** AND INTERCOMPANY TRANSACTIONS

LO 6-1

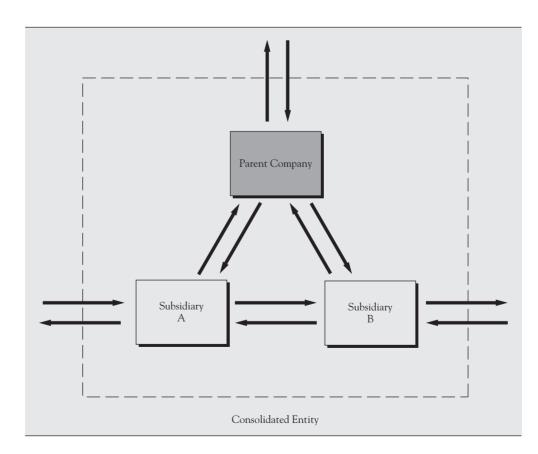

Understand and explain and why they must be

The consolidated entity is an aggregation of a number of different companies. The financial statements prepared by the individual affiliates are consolidated into a single set of financial statements representing the financial position and operating results of the entire economic entity as if it were a single company.

A parent company and its subsidiaries often engage in a variety of transactions among themselves. For example, manufacturing companies often have subsidiaries that develop raw materials or produce components to be included in the products of affiliated companies. Some companies sell consulting or other services to affiliated companies. A number of major retailers, such as J. C. Penney Company, transfer receivables to their credit subsidiaries in return for operating cash. United States Steel Corporation and its subsidiaries engage in numerous transactions with one another, including sales of raw materials, fabricated products, and transportation services. Such transactions often are critical to the operations of the overall consolidated entity. These transactions between related companies are referred to as intercompany or intercorporate transfers.

Figure 6–1 illustrates a consolidated entity with each of the affiliated companies engaging in both intercompany transfers and transactions with external parties. From a consolidated viewpoint, only transactions with parties outside the economic entity are included in the income statement. Thus, the arrows crossing the perimeter of the consolidated entity in Figure 6-1 represent transactions that are included in the operating results of the consolidated entity for the period. Transfers between the affiliated companies, shown in Figure 6-1 as those arrows not crossing the boundary of the consolidated entity, are equivalent to transfers between operating divisions of a single company and are not reported in the consolidated statements.

FIGURE 6-1 Transactions of **Affiliated Companies** 

The central idea of consolidated financial statements is that they report on the activities of the consolidating affiliates as if the separate affiliates actually constitute a single company. Because single companies are not permitted to reflect internal transactions in their financial statements, consolidated entities also must exclude from their financial statements the effects of transactions that are totally within the consolidated entity. Building on the basic consolidation procedures presented in earlier chapters, this chapter and the next two deal with the effects of intercompany transfers. This chapter deals with intercompany inventory sales, and Chapters 7 and 8 discuss intercompany services, fixed asset sales, and intercompany debt transfers.

# **Elimination of Intercompany Transfers**

Only "arms-length" transactions (i.e., those conducted between completely independent parties who act in their own best interests) may be reflected in the consolidated financial statements. Thus, all aspects of intercompany transfers must be eliminated in preparing consolidated financial statements so that the statements appear as if they were those of a single company. ASC 810-10-45-1 mentions open account balances, security holdings, sales and purchases, and interest and dividends as examples of the intercompany balances and transactions that must be eliminated.

No distinction is made between wholly owned and less-than-wholly-owned subsidiaries with regard to the elimination of intercompany transfers. The focus in consolidation is on the single-entity concept rather than on the percentage of ownership. Once the conditions for consolidation are met, a company becomes part of a single economic entity, and all transactions with related companies become internal transfers that must be eliminated fully, regardless of the level of ownership held.

### Elimination of Unrealized Profits and Losses

Companies usually record transactions with affiliates on the same basis as transactions with nonaffiliates, including the recognition of profits and losses. Profit or loss from selling an item to a related party normally is considered realized at the time of the sale from the selling company's perspective, but the profit is not considered realized for consolidation purposes until confirmed, usually through resale to an unrelated party. This unconfirmed profit from an intercompany transfer is referred to as unrealized intercompany profit.

Unrealized profits and losses are always eliminated in the consolidation process using worksheet elimination entries. However, companies sometimes differ on the question of whether the parent company should also remove the effects of intercompany transactions from its books through equity method journal entries. To maintain consistency with prior chapters, we advocate the fully adjusted equity method, which requires the parent to adjust its books to remove the effects of intercompany transactions. This method ensures that the parents' books are fully up-to-date and accurate. By removing the effects of intercompany transactions, the parent ensures that (1) its income is equal to the controlling interest in consolidated income and (2) its retained earnings balance is equal to consolidated retained earnings number in the consolidated financial statements.<sup>1</sup>

# INVENTORY TRANSACTIONS

LO 6-2

concepts associated with inventory transfers and transfer pricing.

Inventory transactions are the most common form of intercompany exchange. Conceptually, the elimination of inventory transfers between related companies is no different than the elimination of other types of intercompany transactions. All revenue and expense

<sup>1</sup> Another approach, which we call the **modified equity method**, ignores intercompany transactions on the parents' books. Proponents of this method argue that worksheet elimination entries remove the effects of these transactions in the consolidation process anyway, so there is no need for the parent to record the extra entries to ensure that its books are always up-to-date. Although it is true that the consolidated financial statements are the same either way, key numbers in the parents' books (such as net income and retained earnings) no longer equal the balances in the consolidated financial statements. We present this alternative approach in Appendix A.

items recorded by the participants must be eliminated fully in preparing the consolidated income statement, and the basis of transferred assets must be adjusted so that they appear in the consolidated balance sheet at the original owner's cost basis. Moreover, under the fully adjusted equity method, unrealized profits and losses on intercompany transfers are deferred until the items are sold to a nonaffiliate.

The recordkeeping process for intercompany inventory transfers may be more complex than for other forms of transfers. Companies often have many different types of inventory items, and some may be transferred from affiliate to affiliate. Also, the problems of keeping tabs on which items have been resold and which items are still on hand are greater in the case of inventory transactions because part of a shipment may be sold immediately by the purchasing company and other units may remain on hand for several accounting periods.

### **Consolidation Worksheet Elimination Entries**

The worksheet elimination entries used in preparing consolidated financial statements must fully remove the effects of all transactions between related companies. When there have been intercompany inventory transactions, elimination entries are needed to remove the revenue and expenses related to the intercompany transfers recorded by the individual companies. The worksheet entries ensure that only the cost of the inventory to the consolidated entity is (1) included in the consolidated balance sheet when the inventory is still on hand and (2) charged to cost of goods sold in the period the inventory is resold to nonaffiliates.

### **Transfers at Cost**

Merchandise is sometimes sold to related companies at the seller's cost or carrying value. When an intercorporate sale includes no profit or loss, the balance sheet inventory amounts at the end of the period require no adjustment for consolidation because the purchasing affiliate's inventory carrying amount is the same as the cost to the transferring affiliate and the consolidated entity. At the time the inventory is resold to a nonaffiliate, the amount recognized as cost of goods sold by the affiliate making the outside sale is the cost to the consolidated entity.

Even when the intercorporate sale includes no profit or loss, however, a worksheet elimination entry is needed to remove both the revenue and the cost of goods sold recorded by the seller from the intercorporate sale and any unpaid payable or receivable balance that may remain. This worksheet elimination entry avoids overstating these two accounts. The elimination entry does not affect consolidated net income when the transfer is made at cost because both revenue and cost of goods sold are reduced by the same amount.

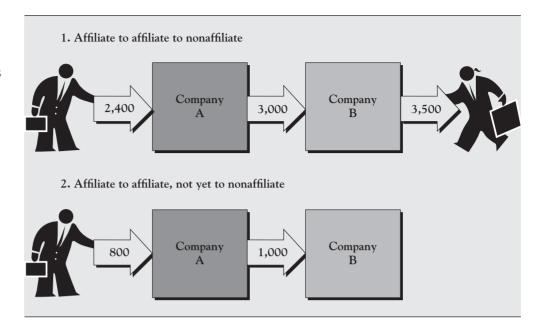

Companies often transfer inventory at a profit or loss to shift income to jurisdictions with lower tax rates to minimize tax liabilities. However, strict federal tax laws limit the transfer of profits outside the **United States** 

### **Transfers at a Profit or Loss**

Companies use many different approaches in setting intercorporate transfer prices. In some companies, the sale price to an affiliate is the same as the price to any other customer. Some companies routinely mark up inventory transferred to affiliates by a certain percentage of cost. Other companies have elaborate transfer pricing policies designed to encourage internal sales. Regardless

of the method used in setting intercorporate transfer prices, the elimination process must remove the effects of such sales from the consolidated statements. Profit or loss from selling an item to a related party normally is considered realized at the time of the sale from the selling company's perspective, but the profit is not considered realized for consolidation purposes until confirmed, usually through resale to an unrelated party. This unconfirmed profit from an intercompany transfer is referred to as unrealized intercompany profit.

FIGURE 6-2 Two Types of Intercompany **Inventory Transfers** 

### Calculating Unrealized Profit or Loss

The calculation of unrealized intercompany profit or loss is an important step in eliminating the effects of intercompany transfers. In order to illustrate this calculation, it is important to first understand that there are two types of intercompany inventory transfers: (1) a transfer from one affiliate to another, which is then sold to an independent nonaffiliate and (2) a transfer from one affiliate to another, which has not yet been sold to an independent nonaffiliate. Figure 6-2 presents examples of each type of transfer.

In each case, Company A purchases inventory in an arm's-length transaction from an independent party. Company A then transfers the inventory to Company B (an affiliate) at a profit. In case 1, Company B eventually sells the inventory to an unrelated party. However, in case 2, Company B still holds the inventory at the end of the reporting period. The gross profit on the case 2 transfer from Company A to Company B represents unrealized intercompany profit because the inventory has not yet been sold to an independent party. When companies sell to affiliated companies on a regular basis, at the end of a reporting period, some of the inventory is often still on hand awaiting the sale to an independent party. Thus, the two cases in Figure 6-2 could represent intercompany sales (1) during the period and (2) just prior to the end of the period. The following chart summarizes these intercompany inventory transactions:

|                     | Total        | (1)          | (2)       |
|---------------------|--------------|--------------|-----------|
|                     | Intercompany | Resold to    | Inventory |
|                     | Sales        | Nonaffiliate | on Hand   |
| Sales               | 4,000        | 3,000        | 1,000     |
| – COGS              | 3,200        | 2,400        | 800       |
| <b>Gross Profit</b> | 800          | 600          | 200       |
| GP%                 | 20%          |              |           |

### **CAUTION**

Note that all numbers in this chart are stated from Company A's perspective. Columns 2 and 3 simply break out the portion of the total column that was (1) resold or (2) still on hand in Company B's ending inventory. For example, the inventory in case 1 was eventually resold to a nonaffiliate for \$3,500. However, this chart reports only what happened to Company A's sales.

Company A has total intercompany sales of \$4,000 to Company B with total gross profit on these sales of \$800. These sales can be divided into two categories: (1) those that Company B eventually resells during the current period, \$3,000, and (2) those that are still in Company B's inventory at the end of the accounting period, \$1,000. The gross profit on the intercompany sales that have not yet been realized through a sale to an independent third party, \$200, should be deferred until this inventory is eventually resold to a nonaffiliate. Under the fully adjusted equity method, this unrealized gross profit is deferred on the parent company's books through an equity method entry (discussed in more detail later). All intercompany sales are also deferred in the consolidated financial statements through a worksheet elimination entry(ies).

It is sometimes necessary to use the gross profit percentage to estimate the unrealized gross profit on intercompany transfers, assuming that the selling company uses a constant markup percentage on all intercompany transfers. For example, assume that Company A transfers inventory costing \$9,000 to Company B, an affiliated company, for \$10,000. At the end of the accounting period, Company B still has \$3,000 of this inventory on hand in its warehouse. To calculate the unrealized profit given this limited information, first calculate gross profit and gross profit percentage on total intercompany sales.

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |
|--------------|--------------------------------|----------------------------------|-----------------------------|
| Sales        | \$10,000                       |                                  | \$3,000                     |
| – COGS       | 9,000                          |                                  |                             |
| Gross Profit |                                |                                  | ???                         |

Gross profit is \$1,000. Thus, gross profit percentage is 10 percent ( $$1,000 \div $10,000$ ). If we assume the gross profit percentage is the same across all intercompany sales, we can estimate the unrealized gross profit on intercompany sales (lower right-hand corner of the chart) by multiplying the balance on hand in intercompany inventory by the gross profit percentage to calculate the unrealized gross profit of  $$300 (\$3,000 \times 10\%)$ .

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |
|--------------|--------------------------------|----------------------------------|-----------------------------|
| Sales        | \$10,000                       |                                  | \$3,000                     |
| – COGS       | 9,000                          |                                  |                             |
| Gross Profit | \$ 1,000                       |                                  | \$ 300                      |
| GP%          | 10%                            |                                  |                             |

### **CAUTION**

Students are sometimes confused when given information about markup on cost. Obviously, markup on cost is not the same ratio as the markup on transfer price. Nevertheless, students often mix them up. Be careful to ensure that you use the markup on transfer price (gross profit percentage) to calculate unrealized gross profit!

Inventory transfer problems often use terminology that is unfamiliar. For example, the selling price of the inventory is sometimes called the *transfer price* and the gross profit on intercompany sales is often referred to simply as the *markup*. Based on these definitions, another term for gross profit percentage is simply *markup on sales*. Similarly, *markup on cost* is the ratio

of gross profit divided by cost of goods sold. When provided with information about markup on cost, this information must first be used to calculate cost of goods sold. Then calculate gross profit and gross profit percentage to determine unrealized gross profit on intercompany inventory transfers.

As an example, assume that Company A transfers inventory to an affiliate, Company B, for \$5,000 with a 25 percent markup on cost and that Company B resells \$3,500 of this inventory to nonaffiliates during the accounting period. How much unrealized gross

profit from Company A's intercompany sales should be deferred at the end of the period? This information can be summarized as follows:

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |
|--------------|--------------------------------|----------------------------------|-----------------------------|
| Sales        | \$5,000                        | \$3,500                          |                             |
| – COGS       |                                |                                  |                             |
| Gross Profit |                                |                                  | ???                         |
| GP%          |                                |                                  |                             |

When the information is given in terms of markup on cost, we must first calculate the cost of goods sold. Because the markup on cost is given as 25 percent, we can express this relationship by defining cost of goods sold as C and then expressing the markup (gross profit) as 0.25C.

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |
|--------------|--------------------------------|----------------------------------|-----------------------------|
| Sales        | \$5,000                        | \$3,500                          |                             |
| – COGS       | С                              |                                  |                             |
| Gross Profit | 0.25 C                         |                                  | ???                         |
| GP%          |                                |                                  |                             |

Thus, we can solve for cost of goods sold algebraically as follows:

Sales – COGS = Gross Profit  

$$$5,000 - C = 0.25C$$
  
 $$5,000 = 1.25C$   
 $C = $4,000$ 

We can then calculate gross profit percentage (markup on transfer price) of 20 percent (\$1,000 ÷ \$5,000). Moreover, we can solve for Company B's ending inventory balance of \$1,500 (\$5,000 – \$3,500 resold).

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |
|--------------|--------------------------------|----------------------------------|-----------------------------|
| Sales        | 5,000                          | 3,500                            | 1,500                       |
| – COGS       | 4,000                          |                                  |                             |
| Gross Profit | 1,000                          |                                  | ???                         |
| GP%          | 20%                            |                                  | •                           |

Finally, we can calculate the unrealized gross profit of \$300 (\$1,500  $\times$  20%).

The chart above provides valuable information for two important accounting tasks. First, the number in the lower right-hand corner represents the unrealized profit or loss that must be deferred. The parent company makes an equity method journal entry to defer the portion of the unrealized profits that accrue to the controlling interest. After all the missing numbers in the chart are filled in, it can then be used to prepare elimination entries to defer unrealized profit and to adjust the basis of inventory to reflect the actual purchase price when it was purchased from a nonaffiliate.

### Deferring Unrealized Profit or Loss on the Parent's Books

For consolidation purposes, profits recorded on an intercorporate inventory sale are recognized in the period in which the inventory is resold to an unrelated party. Until the point of resale, all intercorporate profits must be deferred. When a parent company sells inventory to a subsidiary, referred to as a downstream sale, any gain or loss on the transfer accrues to the parent company's stockholders. When a subsidiary sells inventory to its parent, an *upstream sale*, any gain or loss accrues to the subsidiary's stockholders. If the subsidiary is wholly owned, all gain or loss ultimately accrues to the parent company as the sole stockholder. If, however, the selling subsidiary is not wholly owned, the profit or loss on the upstream sale is apportioned between the parent company and the noncontrolling shareholders.

In sum, under the fully adjusted equity method, unrealized profit or loss on intercompany inventory transfers is always deferred on the parent's books to ensure that the parent company's (1) net income equals the controlling interest in consolidated income and (2) retained earnings equals consolidated retained earnings. The only question is whether all (with downstream transactions) or the parent's proportionate share (with upstream transactions) of the unrealized gross profit should be deferred on the parent's books. The journal entry on the parent's books to defer unrealized gross profit follows:

| Income from Subsidiary   | XXX |
|--------------------------|-----|
| Investment in Subsidiary | XXX |

The unrealized gross profit is calculated as demonstrated in the previous subsection. In downstream transactions, the parent company uses this journal entry to defer the entire amount. In upstream transactions, the parent defers only its proportional share of the unrealized gross profit.

Unrealized profits or losses are deferred only until they are realized. In most cases, inventory on hand at the end of one period is sold in the next period. Once the inventory is sold to an unaffiliated party, the previously deferred amount is recognized in the period of the arm's-length sale by reversing the deferral on the parent's books as follows:

| Investment Subsidiary  | XXX |
|------------------------|-----|
| Income from Subsidiary | XXX |

### **Deferring Unrealized Profit or Loss in the Consolidation**

When intercompany sales include unrealized profits or losses, the worksheet elimination entry(ies) needed for consolidation in the period of transfer must adjust accounts in both the consolidated income statement and balance sheet:

**Income statement: Sales and cost of goods sold.** All sales revenue from intercompany transfers and the related cost of goods sold recorded by the transferring affiliate must be removed.

**Balance sheet: Inventory.** The entire unrealized profit or loss on intercompany transfers must be removed from inventory so that it will be reported at the cost to the consolidated entity.

The resulting financial statements appear as if the intercompany transfer had not occurred. To understand how to eliminate the effects of intercompany inventory transfers in the consolidated financial statements, we refer to the examples illustrated in Figure 6–2. One way to eliminate intercompany inventory profits or losses is to separately eliminate the effects of (1) sales from one affiliate to another that have subsequently been sold to a nonaffiliated party(ies) and (2) sales from one affiliate to another that have not yet been sold to a nonaffiliated person(s) or entity(ies). To explain how to separately eliminate the effects of these types of inventory transfers, we repeat the summary of the transactions from Figure 6–2 here:

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |
|--------------|--------------------------------|----------------------------------|-----------------------------|
| Sales        | 4,000                          | 3,000                            | 1,000                       |
| – COGS       | 3,200                          | 2,400                            | 800                         |
| Gross Profit | 800                            | 600                              | 200                         |

We first focus on Column (1), which summarizes all sales of inventory from Company A to Company B that have eventually been sold to a nonaffiliated party. The inventory was originally purchased in an arm's-length transaction for \$2,400. It was then transferred from Company A to Company B for \$3,000. Finally, this inventory was sold to an unrelated party for \$3,500. The only portion of this transaction that does not involve an unaffiliated party is the \$3,000 internal transfer, which needs to be eliminated. In this transaction, it turns out that Company A's transfer price (sales revenue) is \$3,000. Company B originally records its inventory at this same amount, but when it is sold, \$3,000 is removed from inventory and recorded as cost of goods sold. Thus, the worksheet elimination entry to remove the effects of this transfer removes Company A's sales revenue and Company B's cost of goods sold related to this intercompany transfer as follows:

| Sales              | 3,000 |       |
|--------------------|-------|-------|
| Cost of Goods Sold |       | 3,000 |

We next turn our attention to Column (2), which summarizes all inventory sales from Company A to Company B that are not yet sold to a nonaffiliated party. Company A originally purchased the inventory from an unaffiliated party for \$800 and then transferred it to Company B for \$1,000. The unrealized gross profit on this transfer is \$200. Two problems are associated with this transaction. First, Company A's income is overstated by \$200. Second, Company B's inventory is overstated by \$200. Although the inventory was purchased in an arm's-length transaction for \$800, the intercompany transfer resulted in the basis of the inventory being increased by \$200. To ensure that the consolidated financial statements will appear as if the inventory had stayed on Company A's books (as if it had not been transferred), we prepare the following worksheet elimination entry:

| Sales              | 1,000 |     |
|--------------------|-------|-----|
| Cost of Goods Sold |       | 800 |
| Inventory          |       | 200 |

These two elimination entries could also be combined. The combined entry would appear as follows:

| Sales              | 4,000 |       |
|--------------------|-------|-------|
| Cost of Goods Sold |       | 3,800 |
| Inventory          |       | 200   |

After preparing the three-by-three internal inventory transfer summary chart, this elimination "combined" entry can be taken directly from the chart. The debit to sales is always the number in the upper left-hand corner (total intercompany sales). The credit to cost of goods sold is always the sum of the numbers in the middle column of the top row (intercompany sales that are eventually resold to nonaffiliates) and the middle row of the third column (intercompany cost of goods sold on inventory still on hand). Finally, the credit to inventory is the unrealized gross profit number in the lower right column. The purpose of this credit to inventory is to ensure that inventory appears in the consolidated financial statements at the original cost basis from an arm's-length transaction.

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |
|--------------|--------------------------------|----------------------------------|-----------------------------|
| Sales        | 4,000                          | 3,000                            | 1,000                       |
| – COGS       | 3,200                          | 2,400                            | 800                         |
| Gross Profit | 800                            | 600                              | 200                         |

The net effect of this combined worksheet elimination entry is to remove the gross profit on all intercompany sales and to adjust the ending intercompany-transferred inventory back to its original basis. Thus, one elimination entry can remove the effects of all intercompany inventory transfers during the accounting period.

We note that the basic elimination entry is modified slightly when intercompany profits associated with inventory transfers result in unrealized profits. We illustrate this modification later in several examples.

Assuming the inventory in Column (2), which is still on hand at the end of the first year, is subsequently sold in the following year, recognizing the deferred gross profit from the first year in the second year would then be appropriate. The worksheet entry to essentially force this now realized gross profit to be recognized in the consolidated financial statements in year 2 is to credit Cost of Goods Sold and debit the Investment in Sub account as follows:

| Investment in Sub  | 200 |     |
|--------------------|-----|-----|
| Cost of Goods Sold |     | 200 |

Because the overvalued intercompany inventory in beginning inventory is charged to cost of goods sold at the time of the inventory's sale to an unrelated party during the period, the cost of the goods sold is overstated. Thus, a credit to Cost of Goods Sold corrects this account balance and increases income by the amount of gross profit that was deferred in the prior year. The debit goes to Investment in Sub. Note that we prepared an equity method adjustment in the previous year to defer the unrealized gross profit. We can say that essentially this entry artificially decreased the investment account, so we debit that amount back into the investment account so that the account essentially increases back to its correct balance so that it can be eliminated by the basic elimination entry. We demonstrate how this works later in the chapter.

### Why Adjust the Parent's Books and Make Worksheet Eliminations for the Consolidated Financial Statements?

Students often ask whether preparing an equity method journal entry on the parent's books to defer unrealized profits or losses combined with worksheet entries to remove the effects of intercompany inventory transfers is the same as "double-counting" the deferral. Some ask why we do the work twice. The answer is quite simple. We defer unrealized intercompany profit or loss to ensure that the parent's books are completely up-to-date. To be consistent with prior chapters, the fully adjusted equity method requires a journal entry to defer intercompany profit/loss to ensure that the parent's net income equals the controlling interest in consolidated net income and that the parent's retained earnings is equal to consolidated retained earnings. However, even though we "fix" the parent's books through an equity method journal entry, the Investment in Sub account and the Income from Sub accounts are eliminated in the consolidation process. However, without a worksheet elimination entry, sales and cost of goods sold would be overstated on the income statement, and inventory would be overstated on the balance sheet. Thus, even though we ensure that the parent's books are up-to-date, we still need to remove the effects of intercompany inventory transfers from the consolidated financial statements.

### **Effect of Type of Inventory System**

Most companies use either a perpetual or a periodic inventory control system to keep track of inventory and cost of goods sold. Under a perpetual inventory system, a purchase of merchandise is debited directly to the Inventory account; a sale requires a debit to Cost of Goods Sold and a credit to Inventory for the cost of the item. When a periodic system is used, a purchase of merchandise is debited to a Purchases account rather than to Inventory, and no entry is made to recognize cost of goods sold until the end of the accounting period.

The choice between periodic and perpetual inventory systems results in different entries on the books of the individual companies and, therefore, slightly different worksheet elimination entries in preparing consolidated financial statements. Because most companies use perpetual inventory systems, the discussion in the chapter focuses on the consolidation procedures used in connection with perpetual inventories.

## DOWNSTREAM SALE OF INVENTORY<sup>2</sup>

LO 6-3

Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following downstream inventory transfers.

Consolidated net income must be based on realized income. Because intercompany profits from downstream sales are on the parent's books, consolidated net income and the overall claim of parent company shareholders must be reduced by the full amount of the unrealized profits.

When a company sells an inventory item to an affiliate, one of three situations results: (1) the item is resold to a nonaffiliate during the same period, (2) the item is resold to a nonaffiliate during the next period, or (3) the item is held for two or more periods by the purchasing affiliate. We use the continuing example of Peerless Products Corporation and Special Foods Inc. to illustrate the consolidation process under each of the alternatives. Picking up with the example in Chapter 3, to illustrate more fully the treatment of unrealized intercompany profits, assume the following with respect to the Peerless and Special Foods example used previously:

- 1. Peerless Products Corporation purchases 80 percent of Special Foods Inc.'s stock on December 31, 20X0, at the stock's book value of \$240,000. The fair value of Special Foods' noncontrolling interest on that date is \$60,000, the book value of those shares.
- 2. During 20X1, Peerless reports separate income of \$140,000 income from regular operations and declares dividends of \$60,000. Special Foods reports net income of \$50,000 and declares dividends of \$30,000.
- 3. Peerless accounts for its investment in Special Foods using the equity method under which it records its share of Special Foods' net income and dividends and also adjusts for unrealized intercompany profits using the fully adjusted equity method.

As an illustration of the effects of a downstream inventory sale, assume that on March 1, 20X1, Peerless buys inventory for \$7,000 and resells it to Special Foods for \$10,000 on April 1. Peerless records the following entries on its books:

|     | March 1, 20X1                                   |        |        |
|-----|---|--------|--------|
| (1) | Inventory                                       | 7,000  |        |
|     | Cash  |        | 7,000  |
|     | Record inventory purchase.                      |        |        |
|     | April 1, 20X1                                   |        |        |
| (2) | Cash  | 10,000 |        |
|     | Sales   |        | 10,000 |
|     | Record sale of inventory to Special Foods.      |        |        |
| (3) | Cost of Goods Sold                              | 7,000  |        |
|     | Inventory                                       |        | 7,000  |
|     | Record cost of inventory sold to Special Foods. |        |        |

<sup>&</sup>lt;sup>2</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

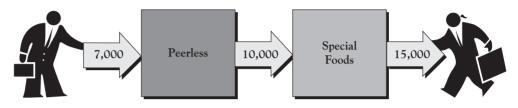

Special Foods records the purchase of the inventory from Peerless with the following entry:

|     | April 1, 20X1 |        |
|-----|---------------|--------|
| (4) | Inventory     | 10,000 |
|     | Cash          | 10,000 |

Record purchase of inventory from Peerless.

### **Resale in Period of Intercorporate Transfer**

To illustrate consolidation when inventory is sold to an affiliate and then resold to a nonaffiliate during the same period, assume that on November 5, 20X1, Special Foods sells the inventory purchased from Peerless to a nonaffiliated party for \$15,000, as follows:

March 1, 20X1

April 1, 20X1

November 5, 20X1

This inventory transfer can be summarized as follows:

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |  |
|--------------|--------------------------------|----------------------------------|-----------------------------|--|
| Sales        | 10,000                         | 10,000                           | 0                           |  |
| – COGS       | 7,000                          | 7,000                            | 0                           |  |
| Gross Profit | 3,000                          | 3,000                            | 0                           |  |

Peerless does not need to defer any intercompany profit on its books because all the intercompany profit has been realized through resale of the inventory to the external party during the current period. Stated differently, the summary chart indicates that there is no intercompany inventory on hand at the end of the period. Thus, there are no unrealized profits to defer.

Special Foods records the sale to a nonaffiliated party with the following entries:

|     | November 5, 20X1               |        |
|-----|--------------------------------|--------|
| (5) | Cash                           | 15,000 |
|     | Sales                          | 15,000 |
|     | Record sale of inventory.      |        |
| (6) | Cost of Goods Sold             | 10,000 |
|     | Inventory                      | 10,000 |
|     | Record cost of inventory sold. |        |

A review of all entries recorded by the individual companies indicates that incorrect balances will be reported in the consolidated income statement if the effects of the intercorporate sale are not removed:

| ltem               | Peerless | Special   | Unadjusted | Consolidated |
|--------------------|----------|-----------|------------|--------------|
|                    | Products | Foods     | Totals     | Amounts      |
| Sales              | \$10,000 | \$ 15,000 | \$ 25,000  | \$15,000     |
| Cost of Goods Sold | (7,000)  | (10,000)  | (17,000)   | (7,000)      |
| Gross Profit       | \$ 3,000 | \$ 5,000  | \$ 8,000   | \$ 8,000     |

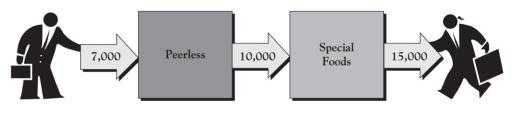

Although consolidated gross profit is correct even if no adjustments are made, the totals for sales and cost of goods sold derived by simply adding the amounts on the books of Peerless and Special Foods are overstated for the consolidated entity. The selling price of the inventory in an arm's-length transaction is \$15,000, and the original cost to Peerless Products is \$7,000. Thus, gross profit of \$8,000 is correct from a consolidated viewpoint, but consolidated sales and cost of goods sold should be \$15,000 and \$7,000, respectively, rather than \$25,000 and \$17,000. In the consolidation worksheet, the amount of the intercompany sale must be eliminated from both sales and cost of goods sold to correctly state the consolidated totals:

| Sales              | 10,000 |        |
|--------------------|--------|--------|
| Cost of Goods Sold |        | 10,000 |

Note that this worksheet entry does not affect consolidated net income because both sales and cost of goods sold are reduced by the same amount.

### Resale in Period Following Intercorporate Transfer

When inventory is sold to an affiliate at a profit but is not resold during the same period, appropriate adjustments are needed to prepare consolidated financial statements in the period of the intercompany sale and in each subsequent period until the inventory is sold to a nonaffiliate. By way of illustration, assume that Peerless Products purchases inventory on March 1, 20X1 for \$7,000 and sells the inventory during the year (on April 1) to Special Foods for \$10,000. Special Foods sells the inventory to a nonaffiliated party for \$15,000 on January 2, 20X2, as follows:

March 1, 20X1

April 1, 20X1

January 2, 20X2

This inventory transfer can be summarized as follows:

|              | Total<br>Intercompany<br>Sales | (1)<br>Resold to<br>Nonaffiliate | (2)<br>Inventory<br>on Hand |  |
|--------------|--------------------------------|----------------------------------|-----------------------------|--|
| Sales        | 10,000                         | 0                                | 10,000                      |  |
| – COGS       | 7,000                          | 0                                | 7,000                       |  |
| Gross Profit | 3,000                          | 0                                | 3,000                       |  |

As of the end of 20X1, the entire intercompany inventory is still on hand in Special Foods' warehouse. In this case, all the intercompany gross profit is unrealized at December 31, 20X1. Thus, Peerless needs to defer all the intercompany gross profit on its books because none of the intercompany profit has been realized through resale of the inventory to an external party during the current period. In other words, the summary chart indicates that there is \$10,000 of intercompany inventory on hand at the end of the period and the unrealized profit of \$3,000 must be deferred on Peerless' books as shown in entry (9) on the next page.

During 20X1, Peerless records the purchase of the inventory and the sale to Special Foods with journal entries (1) through (3), given previously; Special Foods records the purchase of the inventory from Peerless with entry (4). In 20X2, Special Foods records the sale of the inventory to Nonaffiliated with entries (5) and (6), given earlier.

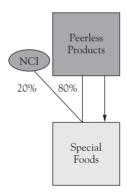

### Equity-Method Entries—20X1

Under the equity method, Peerless records its share of Special Foods' income and dividends for 20X1:

| (7) | Investment in Special Foods                               | 40,000 |        |
|-----|---|--------|--------|
|     | Income from Special Foods                                 |        | 40,000 |
|     | Record Peerless' 80% share of Special Foods' 20X1 income. |        |        |
| (8) | Cash  | 24,000 |        |
|     | Investment in Special Foods                               |        | 24,000 |
|     |   |        |        |

Record Peerless' 80% share of Special Foods' 20X1 dividend

As a result of these entries, the ending balance in the investment account is currently \$256,000 (\$240,000 + \$40,000 - \$24,000). However, because the downstream sale of inventory to Special Foods results in \$3,000 of unrealized profits, Peerless makes an adjustment in the equity method investment and income accounts to reduce the income from Special Foods on the income statement and Investment in Special Foods on the balance sheet by its share of the unrealized gross profit. Because this is a downstream transaction, the sale (and associated unrealized gross profit) resides on Peerless' income

statement. Because we assume the NCI shareholders do not own Peerless stock, they do not share in the deferral of the unrealized profit. Under the fully adjusted equity method, Peerless defers the entire \$3,000 using the following equity method entry:

Defer unrealized gross profit on inventory sales to Special Foods not yet resold.

Note that this entry accomplishes two important objectives. First, because Peerless income is overstated by \$3,000, the adjustment to Income from Special Foods offsets this overstatement so that Peerless' bottom-line net income is now correct. Second, Special Foods' inventory is currently overstated by \$3,000. Because the Investment in Special Foods account summarizes Peerless' investment in Special Foods' balance sheet, this reduction to the investment account offsets the fact that Special Foods' inventory (and thus entire balance sheet) is overstated by \$3,000. Thus, after making this equity-method adjustment to defer the unrealized gross profit, Peerless' financial statements are now correctly stated. Therefore, Peerless' reported income will be exactly equal to the controlling interest in net income on the consolidated financial statements.

### Consolidation Worksheet—20X1

We present the consolidation worksheet prepared at the end of 20X1 in Figure 6–3. The first two elimination entries are the same as we calculated in Chapter 3 with one minor exception. Under the fully adjusted equity method, there is one difference in preparing the basic elimination entry when unrealized intercompany profits exist. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry, we reduce the amounts in the Income from Special Foods and Investment in Special Foods by the \$3,000 unrealized gross profit deferral.

#### **Book Value Calculations:**

| Book falac calculat         |           |                |   |              |                       |
|-----------------------------|-----------|----------------|---|--------------|-----------------------|
|                             | NCI 20% - | + Peerless 80% | = | Common Stock | c + Retained Earnings |
| Original book value         | 60,000    | 240,000        |   | 200,000      | 100,000               |
| + Net income                | 10,000    | 40,000         |   |              | 50,000                |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)       |   |              | (30,000)              |
| Ending book value           | 64,000    | 256,000        |   | 200,000      | 120,000               |

FIGURE 6-3 December 31, 20X1, Consolidation Worksheet, Period of Intercompany Sale; Downstream Inventory Sale

|                                 | Peerless  | Special   | Eliminatio | on Entries |              |

| Less: Dividends Declared        | (60,000)  | (30,000)  |            | 30,000     | (60,000)     |
| Ending Balance                  | 417,000   | 120,000   | 157,000    | 37,000     | 417,000      |
| Balance Sheet                   |           |           |            |            |              |
| Cash                            | 264,000   | 75,000    |            |            | 339,000      |
| Accounts Receivable             | 75,000    | 50,000    |            |            | 125,000      |
| Inventory                       | 100,000   | 75,000    |            | 3,000      | 172,000      |
| Investment in Special Foods     | 253,000   |           |            | 253,000    | 0            |
| Land                            | 175,000   | 40,000    |            |            | 215,000      |
| Buildings & Equipment           | 800,000   | 600,000   |            | 300,000    | 1,100,000    |
| Less: Accumulated Depreciation  | (450,000) | (320,000) | 300,000    |            | (470,000)    |
| Total Assets                    | 1,217,000 | 520,000   | 300,000    | 556,000    | 1,481,000    |
| Accounts Payable                | 100,000   | 100,000   |            |            | 200,000      |
| Bonds Payable                   | 200,000   | 100,000   |            |            | 300,000      |
| Common Stock                    | 500,000   | 200,000   | 200,000    |            | 500,000      |
| Retained Earnings               | 417,000   | 120,000   | 157,000    | 37,000     | 417,000      |
| NCI in NA of Special Foods      |           |           |            | 64,000     | 64,000       |
| Total Liabilities & Equity      | 1,217,000 | 520,000   | 357,000    | 101,000    | 1,481,000    |

#### **Basic Investment Account Elimination Entry:**

| Common stock                | 200,000 | ← Common stock balance                      |
|-----------------------------|---------|---|
| Retained earnings           | 100,000 | ← Beginning balance in RE                   |
| Income from Special Foods   | 37,000  | ← Peerless' % of NI − <b>Deferred GP</b>    |
| NCI in NI of Special Foods  | 10,000  | ← NCI share of Special Foods' NI            |
| Dividends declared          | 30,000  | ← 100% of sub's dividends declared          |
| Investment in Special Foods | 253,000 | ← Net BV in investment − <b>Deferred GP</b> |
| NCI in NA of Special Foods  | 64,000  | $\leftarrow$ NCI share of net amount of BV  |

The accumulated depreciation entry is the same as in previous chapters. It is always the amount of accumulated depreciation on the acquisition date.

### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 |                             | Accumulated depreciation at |
|--------------------------|---------|-----------------------------|-----------------------------|
| Building and equipment   | 300,000 | the time of the acquisition |                             |
|                          |         |                             | netted against cost         |

Moreover, although Peerless recorded an equity-method entry to defer the unrealized gross profit, both the Income from Special Foods and Investment in Special Foods accounts are eliminated with the basic elimination entry. Peerless' Sales and Cost of Goods Sold amounts are still overstated (by \$10,000 and \$7,000, respectively). Moreover, Special Foods' ending inventory is still overstated by \$3,000. Simply adding up the Peerless and Special Foods columns of the consolidation worksheet will result in overstated consolidated net income, total assets, and retained earnings. Therefore, we also record a new elimination entry to correct the unadjusted totals to the appropriate consolidated amounts. In doing so, consolidated income is reduced by \$3,000 (\$10,000 - \$7,000). In addition, ending inventory reported on Special Foods' books is stated at the intercompany exchange price rather than the historical cost to the consolidated entity. Until Special Foods resells it to an external party, the inventory must be reduced by the amount of unrealized intercompany profit each time consolidated statements are prepared.

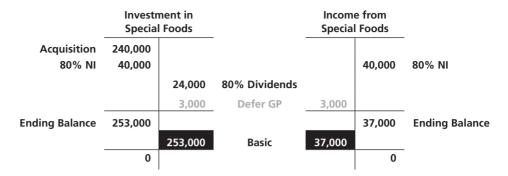

### Elimination of Intercompany Sales to Special Foods (still on hand in ending inventory):

| Sales              | 10,000 |       |
|--------------------|--------|-------|
| Cost of Goods Sold |        | 7,000 |
| Inventory          |        | 3,000 |

This elimination entry removes the effects of the intercompany inventory sale. The journal entries recorded by Peerless Products and Special Foods in 20X1 on their separate books will result in an overstatement of consolidated gross profit for 20X1 and the consolidated inventory balance at year-end unless the amounts are adjusted in the consolidation worksheet. The amounts resulting from the intercompany inventory transactions from the separate books of Peerless Products and Special Foods, and the appropriate consolidated amounts, are as follows:

| Item               | Peerless    | Special              | Unadjusted      | Consolidated   |
|--------------------|-------------|----------------------|-----------------|----------------|
|                    | Products    | Foods                | Totals          | Amounts        |
| Sales              | \$10,000    | \$ 0                 | \$10,000        | \$ 0           |
| Cost of Goods Sold | (7,000)     |                      | (7,000)         | 0              |
| Gross Profit       | \$ 3,000    | <u>0</u> <u>\$ 0</u> | \$ 3,000        | \$ 0           |
| Inventory          | <u>\$ 0</u> | <u>\$10,000</u>      | <u>\$10,000</u> | <u>\$7,000</u> |

The following T-accounts summarize the effects of all equity-method entries on Peerless' books as well as the basic elimination entry:

### Consolidated Net Income—20X1

Consolidated net income for 20X1 is shown as \$187,000 in the Figure 6-3 worksheet. This amount is computed and allocated as follows:

| Peerless' separate income   | \$140,000 |
|---|-----------|
| Less: Unrealized intercompany profit on downstream inventory sale | (3,000)   |
| Peerless' separate realized income                                | \$137,000 |
| Special Foods' net income   | 50,000    |
| Consolidated net income, 20X1                                     | \$187,000 |
| Income to noncontrolling interest (\$50,000 $	imes$ 0.20)         | (10,000)  |
| Income to controlling interest                                    | \$177,000 |
|   |           |

### Equity-Method Entries—20X2

During 20X2, Special Foods receives \$15,000 when it sells to an unaffiliated party the inventory that it had purchased for \$10,000 from Peerless in 20X1. Also, Peerless records its pro rata portion of Special Foods' net income (\$75,000) and dividends (\$40,000) for 20X2 with the normal equity-method entries:

| (10) | Investment in Special Foods                               | 60,000 |        |
|------|---|--------|--------|
|      | Income from Special Foods                                 |        | 60,000 |
|      | Record Peerless' 80% share of Special Foods' 20X2 income. |        |        |
| (11) | Cash  | 32,000 |        |
|      | Investment in Special Foods                               |        | 32,000 |

Record Peerless' 80% share of Special Foods' 20X2 dividend.

Under the fully adjusted equity method, once the inventory is sold to an unaffiliated party, the deferral in the equity-method accounts is no longer necessary and is reversed out as follows:

Reverse the 20X1 gross profit deferral on inventory sold to unaffiliated customers.

### Consolidation Worksheet—20X2

Figure 6–4 on page 267 illustrates the consolidation worksheet at the end of 20X2. The first two elimination entries are the same as those presented in Chapter 3 with one exception to the basic elimination entry. Whereas we subtracted the deferral of unrealized gross profit in 20X1, we now add back this deferral in the basic elimination entry for 20X2.

#### **Book Value Calculations:**

|                             | NCI 20% + | Peerless 80% = | = Common Stock+ | Retained Earnings |
|-----------------------------|-----------|----------------|-----------------|-------------------|
| Beginning book value        | 64,000    | 256,000        | 200,000         | 120,000           |
| + Net income                | 15,000    | 60,000         |                 | 75,000            |
| <ul><li>Dividends</li></ul> | (8,000)   | (32,000)       |                 | (40,000)          |
| Ending book value           | 71,000    | 284,000        | 200,000         | 155,000           |

### **Basic Elimination Entry:**

| Common stock                | 200,000 | ← Common stock balance              |
|-----------------------------|---------|-------------------------------------|
| Retained earnings           | 120,000 | ← Beginning balance in RE           |
| Income from Special Foods   | 63,000  | ← Peerless' % of NI + 20X1 reversal |
| NCI in NI of Special Foods  | 15,000  | ← NCI share of Special Foods' NI    |
| Dividends declared          | 40,000  | ← 100% of sub's dividends declared  |
| Investment in Special Foods | 287,000 | ← Net investment + 20X1 reversal    |
| NCI in NA of Special Foods  | 71,000  | ← NCI share of ending book value    |

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 |         | Accumulated depreciation at |
|--------------------------|---------|---------|-----------------------------|
| Building and equipment   | 300,000 | 300,000 | the time of the acquisition |
| building and equipment   |         | 300,000 | netted against cost         |

An additional elimination entry is needed to recognize the \$3,000 of income that was deferred in 20X1. Whereas the inventory had not yet been sold to an unaffiliated customer in 20X1 and needed to be deferred, that inventory has now been sold in 20X2 and should be recognized in the consolidated financial statements.

#### Reversal of the 20X1 Gross Profit Deferral:

| Investment in Special Foods | 3,000 |       |
|-----------------------------|-------|-------|
| Cost of Goods Sold          |       | 3,000 |

Special Foods' unrealized intercompany profit included in beginning inventory was charged to Cost of Goods Sold when Special Foods sold the inventory during the period. Thus, consolidated cost of goods sold will be overstated for 20X2 if it is based on the unadjusted totals from the books of Peerless and Special Foods:

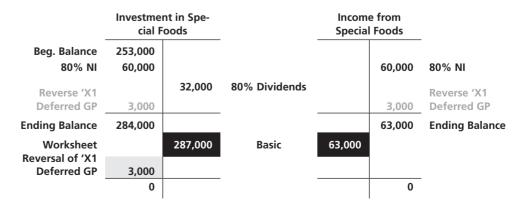

| Item               | Peerless<br>Products |   | Special<br>Foods | Unadjusted<br>Totals | Consolidated<br>Amounts |
|--------------------|----------------------|---|------------------|----------------------|-------------------------|
| Sales              | \$                   | 0 | \$ 15,000        | \$ 15,000            | \$15,000                |
| Cost of Goods Sold |                      | 0 | (10,000)         | (10,000)             | (7,000)                 |
| Gross Profit       | \$                   | 0 | \$ 5,000         | \$ 5,000             | \$ 8,000                |

Unlike the period in which the intercompany transfer occurs, no adjustment to sales is required in a subsequent period when the inventory is sold to a nonaffiliate. The amount reported by Special Foods reflects the sale outside the economic entity and is the appropriate amount to be reported for consolidation. By removing the \$3,000 of intercorporate profit from Cost of Goods Sold with this elimination entry, the original acquisition price paid by Peerless Products is reported in Cost of Goods Sold, and \$8,000 of gross profit is correctly reported in the consolidated income statement.

FIGURE 6-4 December 31, 20X2, Consolidation Worksheet, Next Period Following Intercompany Sale; Downstream **Inventory Sale** 

|                                 | Peerless  | Special   | Elimination Entries |         |              |
|---------------------------------|-----------|-----------|---------------------|---------|--------------|
|                                 | Products  | Foods     | DR                  | CR      | Consolidated |
| Income Statement                |           |           |                     |         |              |
| Sales                           | 450,000   | 300,000   |                     |         | 750,000      |
| Less: COGS                      | (180,000) | (160,000) |                     | 3,000   | (337,000)    |
| Less: Depreciation Expense      | (50,000)  | (20,000)  |                     |         | (70,000)     |
| Less: Other Expenses            | (60,000)  | (45,000)  |                     |         | (105,000)    |
| Income from Special Foods       | 63,000    |           | 63,000              |         | 0            |
| Consolidated Net Income         | 223,000   | 75,000    | 63,000              | 3,000   | 238,000      |
| NCI in Net Income               |           |           | 15,000              |         | (15,000)     |
| Controlling Interest Net Income | 223,000   | 75,000    | 78,000              | 3,000   | 223,000      |
| Statement of Retained Earnings  |           |           |                     |         |              |
| Beginning Balance               | 417,000   | 120,000   | 120,000             |         | 417,000      |
| Net Income                      | 223,000   | 75,000    | 78,000              | 3,000   | 223,000      |
| Less: Dividends Declared        | (60,000)  | (40,000)  |                     | 40,000  | (60,000)     |
| Ending Balance                  | 580,000   | 155,000   | 198,000             | 43,000  | 580,000      |
| Balance Sheet                   |           |           |                     |         |              |
| Cash                            | 291,000   | 85,000    |                     |         | 376,000      |
| Accounts Receivable             | 150,000   | 80,000    |                     |         | 230,000      |
| Inventory                       | 180,000   | 90,000    |                     |         | 270,000      |
| Investment in Special Foods     | 284,000   |           | 3,000               | 287,000 | 0            |
| Land                            | 175,000   | 40,000    |                     |         | 215,000      |
| Buildings & Equipment           | 800,000   | 600,000   |                     | 300,000 | 1,100,000    |
| Less: Accumulated Depreciation  | (500,000) | (340,000) | 300,000             |         | (540,000)    |
| Total Assets                    | 1,380,000 | 555,000   | 303,000             | 587,000 | 1,651,000    |
| Accounts Payable                | 100,000   | 100,000   |                     |         | 200,000      |
| Bonds Payable                   | 200,000   | 100,000   |                     |         | 300,000      |
| Common Stock                    | 500,000   | 200,000   | 200,000             |         | 500,000      |
| Retained Earnings               | 580,000   | 155,000   | 198,000             | 43,000  | 580,000      |
| NCI in NA of Special Foods      |           |           |                     | 71,000  | 71,000       |
| Total Liabilities & Equity      | 1,380,000 | 555,000   | 398,000             | 114,000 | 1,651,000    |

Once the sale is made to an external party, the transaction is complete and no adjustments or eliminations related to the intercompany transaction are needed in future periods. The following T-accounts illustrate the effects of all equity-method journal entries on Peerless' books as well as the elimination entries on the consolidation worksheet.

#### Consolidated Net Income—20X2

Consolidated net income for 20X2 is shown as \$238,000 in the Figure 6-4 worksheet. This amount is verified and allocated as follows:

| Peerless' separate income<br>Realization of deferred intercompany profit on downstream inventory sale | \$160,000<br>3,000    |
|---|-----------------------|
| Peerless' separate realized income<br>Special Foods' net income                                       | \$163,000<br>         |
| Consolidated net income, 20X2 Income to noncontrolling interest (\$75,000 $\times$ 0.20)              | \$238,000<br>(15,000) |
| Income to controlling interest  | <u>\$223,000</u>      |

### **Inventory Held for Two or More Periods**

Companies may carry the cost of inventory purchased from an affiliate for more than one accounting period. For example, the cost of an item may be in a LIFO inventory layer and would be included as part of the inventory balance until the layer is liquidated. Prior to liquidation, an elimination entry is needed in the consolidation worksheet each time consolidated statements are prepared to restate the inventory to its cost to the consolidated entity. For example, if Special Foods continues to hold the inventory purchased from Peerless Products, the following elimination entry is needed in the consolidation worksheet each time a consolidated balance sheet is prepared for years following the year of intercompany sale, for as long as the inventory is held:

| Investment in Special Foods | 3,000 |       |
|-----------------------------|-------|-------|
| Inventory                   |       | 3,000 |

This elimination entry simply corrects the balance in both the Inventory and Investment in Special Foods accounts. Whereas Peerless recorded an equity-method adjustment to defer the \$3,000 of unrealized gross profit in the year of the intercompany inventory transfer by artificially decreasing the Investment in Special Foods to offset the overstated inventory balance on Special Foods' books, this entry simply corrects both accounts. No income statement adjustments are needed in the periods following the intercorporate sale until the inventory is resold to parties external to the consolidated entity.

### **UPSTREAM SALE OF INVENTORY**

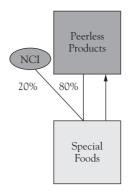

LO 6-4

Prepare equity-method iournal entries and elimination entries for the consolidation of a subsidiary following upstream inventory transfers.

When an upstream inventory sale occurs and the parent resells the inventory to a nonaffiliate during the same period, all the parent's equity-method entries and the elimination entries in the consolidation worksheet are identical to those in the downstream case.

When the inventory is not resold to a nonaffiliate before the end of the period, worksheet elimination entries are different from the downstream case only by the apportionment of the unrealized intercompany profit to both the controlling and noncontrolling interests. In this case because the sale appears on Special Foods' income statement and because the NCI shareholders own 20 percent of Special Foods' outstanding shares, they are entitled to 20 percent of Special Foods' net income. Thus, the deferral of unrealized gross profits accrues to both Peerless and the NCI shareholders. In other words, the intercompany profit in an upstream sale is recognized by the subsidiary and shared by between the controlling and noncontrolling stockholders of the subsidiary. Therefore, the elimination of the unrealized intercompany profit must reduce the interests of both ownership groups each period until the resale of the inventory to a nonaffiliated party confirms the profit.

We illustrate an upstream sale using the same example as used for the downstream sale except that Special Foods sells the inventory to Peerless. Assume Special Foods purchases the inventory on March 1, 20X1, for \$7,000 and sells it to Peerless for \$10,000 during the same year. Peerless holds the inventory until January 2, 20X2, at which time Peerless sells it to a nonaffiliated party for \$15,000.

### **Equity-Method Entries—20X1**

Peerless Products records the following equity-method entries in 20X1:

| (13)  | Investment in Special Foods                                 | 40,000 |        |
|-------|---|--------|--------|
|       | Income from Special Foods                                   |        | 40,000 |
|       | Record Peerless' 80% share of Special Foods' 20X1 income.   |        | _      |
| (4.4) |   | 24.000 |        |
| (14)  | Cash  | 24,000 |        |
|       | Investment in Special Foods                                 |        | 24,000 |
|       | Record Peerless' 80% share of Special Foods' 20X1 dividend. |        |        |

These entries are the same as in the illustration of the downstream sale. The only difference is that the fully adjusted equity-method entry to defer the unrealized gross profit is only for Peerless' ownership percentage of Special Foods (80 percent). Thus, the deferral

| (15) | Income from Special Foods   | 2,400 |
|------|-----------------------------|-------|
|      | Investment in Special Foods | 2,400 |

Eliminate unrealized gross profit on inventory purchases from Special Foods.

of Peerless relative share of the unrealized gross profit is \$2,400 (\$3,000  $\times$  80%).

### Consolidation Worksheet—20X1

We present the worksheet for the preparation of the 20X1 consolidated financial statements in Figure 6-5. The first two elimination entries are the same as we calculated in Chapter 3 with one minor exception. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry, we reduce the amounts in Peerless' Income from Special Foods and Investment in Special Foods accounts by Peerless' share of the deferral,  $$2,400 ($3,000 \times 80\%)$ . We also reduce the NCI in Net Income of Special Foods and NCI in Net Assets of Special Foods by the NCI share of the deferral, \$600 (\$3,000  $\times$  20%).

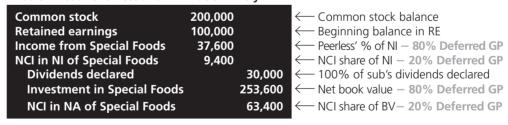

#### **Book Value Calculations:**

| Book falac calculat         | 0.1.51  |                |   |              |                       |  |
|-----------------------------|---------|----------------|---|--------------|-----------------------|--|
|                             | NCI 20% | + Peerless 80% | = | Common Stock | c + Retained Earnings |  |
| Original book value         | 60,000  | 240,000        |   | 200,000      | 100,000               |  |
| + Net income                | 10,000  | 40,000         |   |              | 50,000                |  |
| <ul><li>Dividends</li></ul> | (6,000) | (24,000)       |   |              | (30,000)              |  |
| Ending book value           | 64,000  | 256,000        |   | 200,000      | 120,000               |  |

FIGURE 6-5 December 31, 20X1, Consolidation Worksheet, Period of Intercompany Sale; Upstream Inventory Sale

|                                 | Peerless  | Special     | Elimination | on Entries |              |

### **Basic Investment Account Elimination Entry:**

### **Optional Accumulated Depreciation Elimination Entry:**

The consolidation worksheet entry to remove the effects of the intercompany sale is identical to the downstream case. The only difference is that the overstated Sales and Cost of Goods Sold numbers are now in the Special Foods' column of the consolidation worksheet and the overstated inventory is now in the Peerless column.

#### Eliminate Inventory Purchases from Special Foods (still on hand):

| Sales              | 10,000 |       |
|--------------------|--------|-------|
| Cost of Goods Sold |        | 7,000 |
| Inventory          |        | 3,000 |

### **STOP & THINK**

Why isn't the credit to Investment in Special Foods in the basic elimination entry equal to the amount normally calculated in the Book Value Calculations box (\$256,000)? It is because Peerless defers 80 percent of the unrealized gross profit (\$2,400) with an equitymethod adjustment, but Special Foods does not defer the unrealized profit. As indicated in the t-accounts, when a company has unrealized gross profit on inventory transfers, the basic elimination entry must be modified to account for the fact that Peerless has already adjusted for its share of the deferral but Special Foods has not.

### Consolidated Net Income—20X1

We note that because the unrealized profit elimination is allocated proportionately between the controlling and noncontrolling interests in the upstream case, the income assigned to the noncontrolling shareholders is \$600 (\$3,000  $\times$  0.20) less in Figure 6-5 for the upstream case than in Figure 6-3 for the downstream case. Accordingly, the amount of income assigned to the controlling interest is \$600 higher. Note that consolidated net income and all other income statement amounts are the same whether the sale is

upstream or downstream. The worksheet indicates that consolidated net income for 20X1 is \$187,000. Consolidated net income is computed and allocated to the controlling and noncontrolling stockholders as follows:

| Peerless' separate income<br>Special Foods' net income<br>Less: Unrealized intercompany profit on upstream inventory sale | \$50,000<br>(3,000) | \$140,000                         |
|---|---------------------|-----------------------------------|
| Special Foods' realized net income  |                     | 47,000                            |
| Consolidated net income, 20X1 Income to noncontrolling interest ( $$47,000 \times 0.20$ ) Income to controlling interest  |                     | \$187,000<br>(9,400)<br>\$177,600 |

### **Equity-Method Entries—20X2**

Peerless recognizes its share of Special Foods' income (\$75,000) and dividends (\$40,000) for 20X2 with the normal equity-method entries:

| (16) | Investment in Special Foods                                 | 60,000 |        |
|------|---|--------|--------|
|      | Income from Special Foods                                   |        | 60,000 |
|      | Record Peerless' 80% share of Special Foods' 20X2 income.   |        |        |
|      |   |        |        |
| (17) | Cash  | 32,000 |        |
|      | Investment in Special Foods                                 |        | 32,000 |
|      | Record Peerless' 80% share of Special Foods' 20X2 dividend. |        |        |

Under the fully adjusted equity method, Peerless reverses the deferred gross profit from 20X1 because this inventory has now been sold.

(18)2,400 Investment in Special Foods Income from Special Foods 2,400

Reverse the 20X1 gross profit deferral on inventory sold to unaffiliated customers.

### Consolidation Worksheet—20X2

Figure 6-6 illustrates the consolidation worksheet used to prepare consolidated financial statements at the end of 20X2. The first two elimination entries are the same as we prepared in Chapter 3 with the previously explained exception. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry and because the inventory sold to Peerless by Special Foods last year has now been sold to an unaffiliated party, we must now increase the amounts in Peerless' Income from Special Foods and Investment in Special Foods accounts by Peerless' share of the deferral, \$2,400 ( $\$3,000 \times 80\%$ ). We also increase the NCI in Net Income of Special Foods and NCI in Net Assets of Special Foods by the NCI share of the deferral,  $\$600 (\$3,000 \times 20\%).$

| Total Liabilities & Equity      | 1,380,000        | 555,000   | 398,600    | 114,600   | 1,651,000    |  |

#### **Book Value Calculations:**

|                             | NCI 20%+ | Peerless 80% | = | Common Stock | + Retained Earnings |
|-----------------------------|----------|--------------|---|--------------|---------------------|
| Beginning book value        | 64,000   | 256,000      |   | 200,000      | 120,000             |
| + Net income                | 15,000   | 60,000       |   |              | 75,000              |
| <ul><li>Dividends</li></ul> | (8,000)  | (32,000)     |   |              | (40,000)            |
| Ending book value           | 71,000   | 284,000      | - | 200,000      | 155,000             |

### **Basic Elimination Entry:**

### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | • |         | Accumulated depreciation at the |
|--------------------------|---|---------|---------------------------------|
| Building and equipment   |   | 300,000 | time of the acquisition netted  |
| building and equipment   |   | 300,000 | against cost                    |

Recall that Peerless deferred 80 percent of the unrealized gross profit on the upstream inventory sale last year on its books through an equity-method journal entry. Thus, the beginning balance in the Investment account (\$253,600) is not equal to Peerless' 80 percent share of Special Foods' equity accounts in the beginning balance line of the Book Value Calculations box above (\$256,000). This is why the basic elimination entry to the Investment in Special Foods account is increased by the amount of last year's deferral.

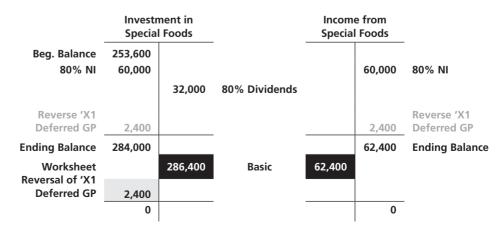

Similar to the downstream example, the unrealized intercompany profit included in Peerless' beginning inventory was charged to Cost of Goods Sold when Peerless sold the inventory during 20X2. Thus, consolidated cost of goods sold will be overstated for 20X2 if it is reported in the consolidated income statement at the unadjusted total from the books of Peerless and Special Foods. The following elimination entry corrects Cost of Goods Sold and

splits this adjustment proportionately between Peerless' investment account and the NCI in Net Assets of Special Foods.

#### Reversal of 20X1 Gross Profit Deferral:

| Investment in Special Foods | 2,400 |       |
|-----------------------------|-------|-------|
| NCI in NA of Special Foods  | 600   |       |
| Cost of Goods Sold          |       | 3,000 |

The following T-accounts illustrate the effects of all equity-method journal entries on Peerless' books as well as the worksheet elimination entries.

### Consolidated Net Income—20X2

Consolidated net income for 20X2 is shown as \$238,000 in the Figure 6-6 worksheet. This amount is computed and allocated as follows:

| Peerless' separate income<br>Special Foods' net income<br>Realization of deferred intercompany profit on upstream inventory sale | \$75,000<br>3,000 | \$160,000             |
|--|-------------------|-----------------------|
| Special Foods' realized net income   |                   | 78,000                |
| Consolidated net income, 20X2 Income to noncontrolling interest ( $\$78,000 \times 0.20$ )                                       |                   | \$238,000<br>(15,600) |
| Income to controlling interest   |                   | <u>\$222,400</u>      |

### ADDITIONAL CONSIDERATIONS

Understand and explain additional considerations associated with consolidation.

The frequency of intercompany inventory transfers and the varied circumstances under which they may occur raise a number of additional implementation issues. Several of these are discussed briefly in this section.

### Sale from One Subsidiary to Another

Transfers of inventory often occur between companies that are under common control or ownership. When one subsidiary sells merchandise to another subsidiary, the elimination entries are identical to those presented earlier for sales from a subsidiary to its parent. The full amount of any unrealized intercompany profit is eliminated, with the profit elimination allocated proportionately against the selling subsidiary's ownership interests.

As an illustration, assume that Peerless Products owns 90 percent of the outstanding stock of Super Industries in addition to its 80 percent interest in Special Foods. If Special Foods sells inventory at a \$3,000 profit to Super Industries for \$10,000 and Super Industries holds all of the inventory at the end of the period, the following elimination entry is among those needed in the consolidation worksheet prepared at the end of the period:

#### Eliminate Intercompany Inventory Sales (still on hand):

| Sales              | 10,000 |       |
|--------------------|--------|-------|
| Cost of Goods Sold |        | 7,000 |
| Inventory          |        | 3,000 |

The two shareholder groups of the selling affiliate allocate proportionately the \$3,000 deferral of unrealized intercompany profit. Consolidated net income is reduced by the full \$3,000 unrealized intercompany profit. The income allocated to the controlling interest is reduced by Peerless' 80 percent share of the intercompany profit, or \$2,400, and Special Foods' noncontrolling interest is reduced by its 20 percent share, or \$600.

#### Costs Associated with Transfers

When one affiliate transfers inventory to another, some additional cost, such as freight, is often incurred in the transfer. This cost should be treated in the same way as if the affiliates were operating divisions of a single company. If the additional cost would be inventoried in transferring the units from one location to another within the same company, that treatment also would be appropriate for consolidation.

#### **Lower of Cost or Market**

A company might write down inventory purchased from an affiliate under the lower-of-costor-market rule if the market value at the end of the period is less than the intercompany transfer price. To illustrate this situation, assume that a parent company purchases inventory for \$20,000 and sells it to its subsidiary for \$35,000. The subsidiary still holds the inventory at year-end and determines that its current market value (replacement cost) is \$25,000.

The subsidiary writes the inventory down from \$35,000 to its lower market value of \$25,000 at the end of the year and records the following entry:

| (19)                                  | Loss on Decline in Inventory Value | 10,000 |
|---------------------------------------|------------------------------------|--------|
|                                       | Inventory                          | 10,000 |
| Write down inventory to market value. |                                    |        |

Although this entry revalues the inventory to \$25,000 on the subsidiary's books, the appropriate valuation from a consolidated viewpoint is the \$20,000 original cost of the inventory to the parent. Therefore, the following elimination entry is needed in the consolidation worksheet:

### Eliminate Intercompany Inventory Sales (still on hand):

| Sales                              | 35,000 |        |
|------------------------------------|--------|--------|
| Cost of Goods Sold                 |        | 20,000 |
| Inventory                          |        | 5,000  |
| Loss on Decline in Inventory Value |        | 10,000 |

The inventory loss recorded by the subsidiary must be eliminated because the \$20,000 inventory valuation for consolidation purposes is below the \$25,000 market value of the inventory.

### Sales and Purchases before Affiliation

Sometimes companies that have sold inventory to one another later join together in a business combination. The consolidation treatment of profits on inventory transfers that occurred before the business combination depends on whether the companies were at that time independent and the sale transaction was the result of arm's-length bargaining. As a general rule, the effects of transactions that are not the result of arm's-length bargaining must be eliminated. However, the combining of two companies does not necessarily mean that their prior transactions with one another were not conducted at arm's length. The circumstances surrounding the prior transactions, such as the price and quantity of units transferred, would have to be examined.

In the absence of evidence to the contrary, companies that have joined together in a business combination are viewed as having been separate and independent prior to the combination. Thus, if the prior sales were the result of arm's-length bargaining, they are viewed as transactions between unrelated parties. Accordingly, no elimination or adjustment is needed in preparing consolidated statements subsequent to the combination, even if an affiliate still holds the inventory.

# Summary of **Key Concepts**

Consolidated financial statements are prepared for the consolidated entity as if it were a single company. Therefore, the effects of all transactions between companies within the entity must be eliminated in preparing consolidated financial statements.

Each time consolidated statements are prepared, all effects of intercompany transactions occurring during that period and the effects of unrealized profits from transactions in prior periods must be eliminated. For intercompany inventory transactions, the intercompany sale and cost of goods sold must be eliminated. In addition, the intercompany profit may not be recognized in consolidation until it is confirmed by resale of the inventory to an external party. Unrealized intercompany profits must be eliminated fully and are allocated proportionately against the stockholder groups of the selling affiliate. If inventory containing unrealized intercompany profits is sold during the period, consolidated cost of goods sold must be adjusted to reflect the actual cost to the consolidated entity of the inventory sold; if the inventory is still held at the end of the period, it must be adjusted to its actual cost to the consolidated entity.

# Appendix **6A**

# Intercompany Inventory Transactions—Modified Equity Method and Cost Method

This appendix illustrates consolidation procedures under the modified (or sometimes called the basic) equity method and then the cost method. We use the upstream sale example presented earlier to illustrate these alternative methods. Assume that Special Foods purchases inventory for \$7,000 in 20X1 and, in the same year, sells the inventory to Peerless Products for \$10,000. Peerless Products sells the inventory to external parties in 20X2. Both companies use perpetual inventory control systems.

### **MODIFIED EQUITY METHOD**

The journal entries on Peerless' books and the elimination entries in the consolidation worksheet are the same under the modified equity method as under the fully adjusted method except for differences related to unrealized intercompany profits. When using the fully adjusted equity method, the parent reduces its income and the balance of the investment account for its share of unrealized intercompany profits that arise during the period. Subsequently, the parent increases its income and the carrying amount of the investment account when the intercompany profits are realized through transactions with external parties. These adjustments related to unrealized gross profit on intercompany sales are omitted under the modified equity method. As a result, the worksheet entry in the second year to recognize the deferred gross profit from the first year is slightly different. Instead of recording a debit to the investment account, this debit goes to beginning retained earnings.

### Modified Equity-Method Entries—20X1

In 20X1, Peerless Products records the normal equity-method entries reflecting its share of Special Foods' income and dividends but omits the additional entry to reduce income and the investment account by the parent's share of the unrealized intercompany profit arising during the year:

| (20) | Investment in Special Foods                               | 40,000 |        |
|------|---|--------|--------|
|      | Income from Special Foods                                 |        | 40,000 |
|      | Record Peerless' 80% share of Special Foods' 20X1 income. |        |        |
| (21) | Cash  | 24.000 |        |
| (21) | Casii   | 24,000 |        |
|      | Investment in Special Foods                               |        | 24,000 |

Record Peerless' 80% share of Special Foods' 20X1 dividend.

#### Consolidation Elimination Entries—20X1

Figure 6–7 illustrates the consolidation worksheet for 20X1 under the modified equity method. The elimination entries are the same as we presented for the fully adjusted equity method with one minor exception. We do not reduce the amounts in Peerless' Income from Special Foods and Investment in Special Foods accounts by Peerless' share of the deferral, because no adjustment was made to the investment account or income from sub account under the modified equity method, \$2,400 ( $\$3,000 \times 80\%$ ), but we do reduce the NCI in Net Income of Special Foods and NCI in Net Assets of Special Foods by the NCI share of the deferral, \$600 ( $\$3,000 \times 20\%$ ).

#### **Book Value Calculations:**

| Book falac calculat         |         |                |   |             |                       |
|-----------------------------|---------|----------------|---|-------------|-----------------------|
|                             | NCI 20% | + Peerless 80% | = | Common Stoc | k + Retained Earnings |
| Original book value         | 60,000  | 240,000        |   | 200,000     | 100,000               |
| + Net income                | 10,000  | 40,000         |   |             | 50,000                |
| <ul><li>Dividends</li></ul> | (6,000) | (24,000)       |   |             | (30,000)              |
| Ending book value           | 64,000  | 256,000        |   | 200,000     | 120,000               |

| NCI in NA of Special Foods      |           |           |            | 63,400    | 63,400       |
| Total Liabilities & Equity      | 1,220,000 | 520,000   | 359,400    | 100,400   | 1,481,000    |

### **Basic Investment Account Elimination Entry:**

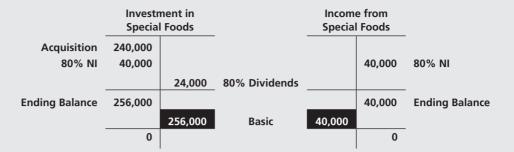

| Common stock<br>Retained earnings | 200,000<br>100,000 | ← Common stock balance<br>← Beginning balance in RE |
|-----------------------------------|--------------------|---|
| Income from Special Foods         | 40,000             | ← Peerless' % of NI                                 |
| NCI in NI of Special Foods        | 9,400              | ← NCI share of NI – 20% Deferred GP                 |
| Dividends declared                | 30,000             | ← 100% of sub's dividends declared                  |
| Investment in Special Foods       | 256,000            | ← Net book value                                    |
| NCI in NA of Special Foods        | 63,400             | ← NCI share BV − 20% Deferred GP                    |

### **Optional Accumulated Depreciation Elimination:**

| Accumulated depreciation | - | 300,000 | Accumulated depreciation at the time of the acquisition netted |
|--------------------------|---|---------|--|
| Building and equipment   |   | 300,000 | against cost   |

### **Eliminate Inventory Purchases from Special Foods (still on hand):**

| Sales              | 10,000 |                |
|--------------------|--------|----------------|
| Cost of Goods Sold |        | 7,000<br>3,000 |
| Inventory          |        | 3,000          |

### Modified Equity-Method Entries—20X2

The equity method journal entries on Peerless' books are the same as illustrated previously, except that the adjustment for Peerless' share of the deferral is omitted:

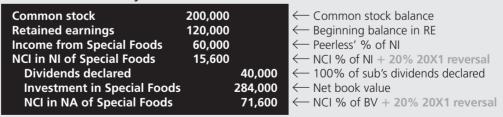

### Consolidation Elimination Entries—20X2

Figure 6-8 illustrates the consolidation worksheet for 20X2 under the modified equity method. The first two elimination entries are the same with one exception. Because the inventory sold to Peerless by Special Foods last year has now been sold to an unaffiliated party, we now increase the NCI in Net Income of Special Foods and NCI in Net Assets of Special Foods by the NCI share of the deferral, \$600 ( $\$3,000 \times 20\%$ ). However, we do not increase the amounts in Peerless' Income from Special Foods and Investment in Special Foods accounts by Peerless' share of the deferral, \$2,400 (\$3,000 × 80%), because no adjustment was made to the investment account or income account under the modified equity method.

### **Book Value Calculations:**

| Dook value calculations:    |          |              |                |                   |  |  |  |  |
|-----------------------------|----------|--------------|----------------|-------------------|--|--|--|--|
|                             | NCI 20%+ | Peerless 80% | Common Stock + | Retained Earnings |  |  |  |  |
| Beginning book value        | 64,000   | 256,000      | 200,000        | 120,000           |  |  |  |  |
| + Net income                | 15,000   | 60,000       |                | 75,000            |  |  |  |  |
| <ul><li>Dividends</li></ul> | (8,000)  | (32,000)     |                | (40,000)          |  |  |  |  |
| Ending book value           | 71,000   | 284,000      | 200,000        | 155,000           |  |  |  |  |

#### **Basic Elimination Entry:**

Similar to 20X1, the unrealized intercompany profit included in Peerless' beginning inventory was charged to Cost of Goods Sold when Peerless sold the inventory during 20X2. Thus, consolidated cost of goods sold will be overstated for 20X2 if it is reported in the consolidated income statement at the unadjusted total from the books of Peerless and Special Foods. The following elimination entry corrects Cost of Goods Sold and splits this adjustment proportionately between beginning retained earnings and the NCI in Net Assets of Special Foods.

FIGURE 6-8 December 31, 20X2, Modified Equity-Method Consolidation Worksheet, Next Period Following Intercompany Sale; Upstream Inventory Sale

|                                 | Peerless  | Special   | Eliminatio | n Entries |              |

#### **Reversal of 20X1 Gross Profit Deferral:**

| Retained Earnings<br>NCI in NA of Special Foods | 2,400<br>600 |       |
|---|--------------|-------|
| Cost of Goods Sold                              |              | 3,000 |

### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated dep | reciation | 300,000 |         | Accumulated depreciation at the |
|-----------------|-----------|---------|---------|---------------------------------|
| Puilding and a  |           |         | 200 000 | time of the acquisition netted  |
| Building and e  | quipment  |         | 300,000 | against cost                    |

### **COST METHOD**

When using the cost method, the parent records dividends received from the subsidiary as income but makes no adjustments with respect to undistributed income of the subsidiary or unrealized intercompany profits. As an example of consolidation following an upstream intercompany sale of inventory when the parent accounts for its investment in the subsidiary using the cost method, assume the same facts as in previous illustrations dealing with an upstream sale.

### **Consolidation Elimination Entries—20X1**

Figure 6–9 illustrates the consolidation worksheet for 20X1 under the cost method. The following elimination entries are needed in the worksheet used to prepare consolidated financial statements for 20X1 using the cost method:

### **Investment Elimination Entry:**

### **Dividend Elimination Entry:**

| Dividend income            | 24,000 | ← Peerless' 80% share of dividends      |
|----------------------------|--------|---|
| NCI in NI of Special Foods | 6,000  | ← NCI's 20% share of dividends declared |
| Dividends declared         | 30,000 | ← 100% of Special Foods' dividends      |

| Bonds Payable                             | 200,000              | 100,000              |                 |                 | 300,000              |
| Common Stock                              | 500,000              | 200,000              | 200,000         |                 | 500,000              |
| Retained Earnings                         | 404,000              | 120,000              | 143,400         | 37,000          | 417,600              |
| NCI in NA of Special Foods                |                      |                      |                 | 60,000<br>3,400 | 63,400               |
| Total Liabilities & Equity                | 1,204,000            | 520,000              | 343,400         | 97,000          | 1,481,000            |

### Assign Special Foods' Undistributed Income to NCI:

### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 |         | Accumulated depreciation at the |
|--------------------------|---------|---------|---------------------------------|
| Building and equipment   | •       | 300,000 | time of the acquisition netted  |
| building and equipment   |         |         | against cost                    |

### Eliminate Inventory Purchases from Special Foods (still on hand):

| Sales              | 10,000 |       |
|--------------------|--------|-------|
| Cost of Goods Sold |        | 7,000 |
| Inventory          |        | 3,000 |

The investment elimination entry eliminates the original balances in Special Foods' equity section accounts as of the acquisition date. It simultaneously eliminates the Investment in Special Foods account and establishes the NCI in Net Assets account (for the NCI share of the Special Foods' net assets as of the acquisition date). The dividend elimination entry eliminates Special Foods' declared dividends and Peerless' dividend income and establishes the NCI in net income with the NCI share of dividends declared. Although Peerless uses the cost method to account for its investment, the consolidated financial statements still must report the NCI shareholders' share of Special Foods' reported net income, and a portion of that income is allocated in the form of a dividend. Nevertheless, the NCI in Net income should report the NCI share of reported income (adjusted for the deferred gross profit on upstream intercompany sales). Thus, the third elimination entry assigns the NCI shareholders' 20 percent of the undistributed income (adjusted for 20 percent of the deferred gross profit) to both the NCI in Net Income of Special Foods and NCI in Net Assets of Special Foods. The optional accumulated depreciation and deferred gross profit elimination entries are the same as those explained for the fully adjusted equity method.

#### Consolidation Elimination Entries—20X2

Figure 6-10 illustrates the consolidation worksheet for 20X2 under the cost method. Elimination entries needed in the consolidation worksheet prepared at the end of 20X2 are as follows:

### **Investment Elimination Entry:**

| Common stock                   | 200,000 |         | ← Common stock balance             |
|--------------------------------|---------|---------|------------------------------------|
| Retained earnings              | 100,000 |         | ← RE on acquisition date           |
| Investment in Special Foods    |         | 240,000 | ← Original cost of investment      |
| NCI in NA of Special Foods     |         | 60,000  | ← NCI share of acquisition date BV |
| itel ill itel of special roods |         | 00,000  | The share of degalstron date by    |

### **Dividend Elimination Entry:**

| Dividend income            | 32,000 |        | ← Peerless' 80% share of dividends      |
|----------------------------|--------|--------|---|
| NCI in NI of Special Foods | 8,000  |        | ← NCI's 20% share of dividends declared |
| Dividends declared         |        | 40,000 | ← 100% of Special Foods' dividends      |

### Assign Special Foods' Undistributed Income to NCI:

\*Note that these entries adjust for the subsidiary's retained earnings balance. The subsidiary does not adjust for the deferral of unrealized gross profit because this adjustment is made on the parent's books.

#### Optional Accumulated Depreciation Elimination Entry:

| Accumulated depreciation | 300 000 |         | Accumulated depreciation at the |
|--------------------------|---------|---------|---------------------------------|
| Building and equipment   | •       |         | time of the acquisition netted  |
| Building and equipment   |         | 300,000 | against cost                    |

| NCI in NA of Special Foods      |           |           | 600            | 60,000<br>11,600 | 71,000       |  |  |
| Total Liabilities & Equity      | 1,336,000 | 555,000   | 354,600        | 103,000          | 1,651,000    |  |  |

### Reversal of 20X1 gross profit deferral:

| Retained earnings*<br>NCI in NA of Special Foods | 2,400<br>600 |       |
|--|--------------|-------|
| Cost of Goods Sold                               |              | 3,000 |

<sup>\*</sup>Note that these entries adjust for the subsidiary's retained earnings balance. The subsidiary does not adjust for the deferral of unrealized gross profit because this adjustment is made on the parent's books.

The investment and dividend elimination entries are the same as in 20X1. The third entry assigns cumulative undistributed net income from Special Foods. It assigns 20 percent of the 20X2 net income to the NCI shareholders and 20 percent of the 20X1 net income to retained earnings for the prior year. The accumulated depreciation elimination entry is the same as in 20X1. However, the last entry is identical to the entry under the modified equity method.

| Questions   |        |   |
|-------------|--------|---|
| LO 6-1      | Q6-1   | Why must inventory transfers to related companies be eliminated in preparing consolidated financial statements?   |
| LO 6-2      | Q6-2   | Why is there a need for an elimination entry when an intercompany inventory transfer is made at cost?   |
| LO 6-3      | Q6-3   | Distinguish between an upstream sale of inventory and a downstream sale. Why is it important to know whether a sale is upstream or downstream?  |
| LO 6-3      | Q6-4   | How do unrealized intercompany profits on a downstream sale of inventory made during the current period affect the computation of consolidated net income and income to the controlling interest?   |
| LO 6-4      | Q6-5   | How do unrealized intercompany profits on an upstream sale of inventory made during the current period affect the computation of consolidated net income and income to the controlling interest?  |
| LO 6-3, 6-4 | Q6-6   | Will the elimination of unrealized intercompany profits on an upstream sale or on a downstream sale in the current period have a greater effect on income assigned to the noncontrolling interest? Why?   |
| LO 6-3      | Q6-7   | What elimination entry is needed when inventory is sold to an affiliate at a profit and is resold to an unaffiliated party before the end of the reporting period? (Assume both affiliates use perpetual inventory systems.)  |
| LO 6-3      | Q6-8   | What elimination entry is needed when inventory is sold to an affiliate at a profit and is not resold before the end of the period? (Assume both affiliates use perpetual inventory systems.)   |
| LO 6-3, 6-4 | Q6-9   | How is the amount to be reported as cost of goods sold by the consolidated entity determined when there have been intercorporate sales during the period?   |
| LO 6-3, 6-4 | Q6-10  | How is the amount to be reported as consolidated retained earnings determined when there have been intercorporate sales during the period?  |
| LO 6-3, 6-4 | Q6-11  | How is the amount of consolidated retained earnings assigned to the noncontrolling interest affected by unrealized inventory profits at the end of the year?  |
| LO 6-3, 6-4 | Q6-12  | How do unrealized intercompany inventory profits from a prior period affect the computation of consolidated net income when the inventory is resold in the current period? Is it important to know whether the sale was upstream or downstream? Why, or why not?                          |
| LO 6-3, 6-4 | Q6-13  | How will the elimination of unrealized intercompany inventory profits recorded on the parent's books affect consolidated retained earnings?   |
| LO 6-3, 6-4 | Q6-14  | How will the elimination of unrealized intercompany inventory profits recorded on the subsidiary's books affect consolidated retained earnings?   |
| LO 6-5      | Q6-15* | Is an inventory sale from one subsidiary to another treated in the same manner as an upstream sale or a downstream sale? Why?   |
| LO 6-5      | Q6-16* | Par Company regularly purchases inventory from Eagle Company. Recently, Par Company purchased a majority of the voting shares of Eagle Company. How should Par Company treat inventory profits recorded by Eagle Company before the day of acquisition? Following the day of acquisition? |

### Cases

LO 6-2

#### C6-1 **Measuring Cost of Goods Sold**

Judgment

Shortcut Charlie usually manages to develop some simple rule to handle even the most complex situations. In providing for the elimination of the effects of inventory transfers between the parent company and a subsidiary or between subsidiaries, Shortcut started with the following rules:

- 1. When the buyer continues to hold the inventory at the end of the period, credit Cost of Goods Sold for the amount recorded as cost of goods sold by the company that made the intercompany sale.
- 2. When the buyer resells the inventory before the end of the period, credit Cost of Goods Sold for the amount recorded as cost of goods sold by the company that made the intercompany sale plus the profit recorded by that company.
- 3. Debit Sales for the total amount credited in rule 1 or 2 above.

One of the new employees is seeking some assistance in understanding how the rules work and why.

<sup>\*</sup>Indicates that the item relates to "Additional Considerations."

### Reauired

- a. Explain why rule 1 is needed when consolidated statements are prepared.
- b. Explain what is missing from rule 1, and prepare an alternative or additional statement for the elimination of unrealized profit when the purchasing affiliate does not resell to an unaffiliated company in the period in which it purchases inventory from an affiliate.
- c. Does rule 2 lead to the correct result? Explain your answer.
- d. The rules do not provide assistance in determining how much profit either of the two companies recorded. Where should the employee look to determine the amount of profit referred to in rule 2?

### LO 6-1, 6-2

#### C6-2 **Inventory Values and Intercompany Transfers**

### Research

Water Products Corporation has been supplying high-quality bathroom fixtures to its customers for several decades and uses a LIFO inventory system. Rapid increases in the cost of fixtures have resulted in inventory values substantially below current replacement cost. To bring its inventory carrying costs up to more reasonable levels, Water Products sold its entire inventory to Plumbers Products Corporation and purchased an entirely new supply of inventory items from Growinkle Manufacturing. Water Products owns common stock of both Growinkle and Plumbers Products.

Water Products' external auditor immediately pointed out that under some ownership levels of these two companies, Water Products could accomplish its goal and under other levels it could not.

Prepare a memo to Water Products' president describing the effects of intercompany transfers on the valuation of inventories and discuss the effects that different ownership levels of Growinkle and Plumbers Products would have on the success of Water Products' plan. Include citations to or quotations from the authoritative accounting literature to support your position.

#### LO 6-1

#### **Unrealized Inventory Profits**

### **Understanding**

Morrison Company owns 80 percent of Bloom Corporation's stock, acquired when Bloom's fair value as a whole was equal to its book value. The companies frequently engage in intercompany inventory transactions.

#### Required

Name the conditions that would make it possible for each of the following statements to be true. Treat each statement independently.

- a. Income assigned to the noncontrolling interest in the consolidated income statement for 20X3 is higher than a pro rata share of Bloom's reported net income.
- b. Income assigned to the noncontrolling interest in the consolidated income statement for 20X3 is higher than a pro rata share of Bloom's reported net income, but consolidated net income is reduced as a result of the elimination of intercompany inventory transfers.
- c. Cost of goods sold reported in the income statement of Morrison is higher than consolidated cost of goods sold for 20X3.
- d. Consolidated inventory is higher than the amounts reported by the separate companies.

### LO 6-3, 6-4

### **Eliminating Inventory Transfers**

### Analysis

Ready Building Products has six subsidiaries that sell building materials and supplies to the public and to the parent and other subsidiaries. Because of the invoicing system Ready uses, it is not possible to keep track of which items have been purchased from related companies and which have been bought from outside sources. Due to the nature of the products purchased, there are substantially different profit margins on different product groupings.

### Required

- a. If no effort is made to eliminate intercompany sales for the period or unrealized profits at yearend, what elements of the financial statements are likely to be misstated?
- b. What type of control system would you recommend to Ready's controller to provide the information needed to make the required elimination entries?
- c. Would it matter if the buyer and seller used different inventory costing methods (FIFO, LIFO, or weighted average)? Explain.
- d. Assume you believe that the adjustments for unrealized profit would be material. How would you go about determining what amounts must be eliminated at the end of the current period?

#### C6-5 **Intercompany Profits and Transfers of Inventory**

Many companies transfer inventories from one affiliate to another. Often the companies have integrated operations in which one affiliate provides the raw materials, another manufactures finished products, another distributes the products, and perhaps another sells the products at retail. In other cases, various affiliates may be established for selling the company's products in different geographic locations, especially in different countries. Often tax considerations also have an effect on intercompany transfers.

#### Required

- a. Are Xerox Corporation's intercompany transfers significant? How does Xerox treat intercompany transfers for consolidation purposes?
- b. How does ExxonMobil Corporation price its products for intercompany transfers? Are these transfers significant? How does ExxonMobil treat intercompany profits for consolidation purposes?
- c. What types of intercompany and intersegment sales does Ford Motor Company have? Are they significant? How are they treated for consolidation?

LO 6-3. 6-4

#### Multiple-Choice Questions on Intercompany Inventory Transfers E6-1 [AICPA Adapted]

Select the correct answer for each of the following questions.

- 1. Perez Inc. owns 80 percent of Senior Inc. During 20X2, Perez sold goods with a 40 percent gross profit to Senior. Senior sold all of these goods in 20X2. For 20X2 consolidated financial statements, how should the summation of Perez and Senior income statement items be adjusted?
  - a. Sales and Cost of Goods Sold should be reduced by the intercompany sales amount.
  - b. Sales and Cost of Goods Sold should be reduced by 80 percent of the intercompany sales
  - c. Net income should be reduced by 80 percent of the gross profit on intercompany sales
  - d. No adjustment is necessary.
- 2. Parker Corporation owns 80 percent of Smith Inc.'s common stock. During 20X1, Parker sold inventory to Smith for \$250,000 on the same terms as sales made to third parties. Smith sold all of the inventory purchased from Parker in 20X1. The following information pertains to Smith's and Parker's sales for 20X1:

|                        | Parker                   | Smith                  |
|------------------------|--------------------------|------------------------|
| Sales<br>Cost of Sales | \$1,000,000<br>(400,000) | \$700,000<br>(350,000) |
| Gross Profit           | \$ 600,000               | \$350,000              |

What amount should Parker report as cost of sales in its 20X1 consolidated income statement?

- a. \$750,000.
- b. \$680,000.
- c. \$500,000.
- d. \$430,000.

*Note:* Items 3 and 4 are based on the following information:

Nolan owns 100 percent of the capital stock of both Twill Corporation and Webb Corporation. Twill purchases merchandise inventory from Webb at 140 percent of Webb's cost. During 20X0, Webb sold merchandise that had cost it \$40,000 to Twill. Twill sold all of this merchandise to unrelated customers for \$81,200 during 20X0. In preparing combined financial statements for 20X0, Nolan's bookkeeper disregarded the common ownership of Twill and Webb.

- 3. What amount should be eliminated from cost of goods sold in the combined income statement for 20X0?
  - a. \$56,000.
  - b. \$40,000.
  - c. \$24,000.
  - d. \$16,000.
- 4. By what amount was unadjusted revenue overstated in the combined income statement for 20X0?
  - a. \$16,000.
  - b. \$40,000.
  - c. \$56,000.
  - d. \$81,200.
- 5. Clark Company had the following transactions with affiliated parties during 20X2:
  - Sales of \$60,000 to Dean Inc., with \$20,000 gross profit. Dean had \$15,000 of this inventory on hand at year-end. Clark owns a 15 percent interest in Dean and does not exert significant influence.
  - Purchases of raw materials totaling \$240,000 from Kent Corporation, a wholly owned subsidiary. Kent's gross profit on the sales was \$48,000. Clark had \$60,000 of this inventory remaining on December 31, 20X2.

Before elimination entries, Clark had consolidated current assets of \$320,000. What amount should Clark report in its December 31, 20X2, consolidated balance sheet for current assets?

- a. \$320,000.
- b. \$317,000.
- c. \$308,000.
- d. \$303,000.
- 6. Selected data for two subsidiaries of Dunn Corporation taken from the December 31, 20X8, preclosing trial balances are as follows:

|  | Banks Co.<br>(Debits) | Lamm Co.<br>(Credits) |
|--|-----------------------|-----------------------|
| Shipments to Banks                               | \$                    | \$150,000             |
| Shipments from Lamm                              | 200,000               |                       |
| Intercompany Inventory Profit on Total Shipments |                       | 50,000                |

Additional data relating to the December 31, 20X8, inventory are as follows:

| Inventory acquired by Banks from outside parties | \$175,000 |
|--|-----------|
| Inventory acquired by Lamm from outside parties  | 250,000   |
| Inventory acquired by Banks from Lamm            | 60,000    |

At December 31, 20X8, the inventory reported on the combined balance sheet of the two subsidiaries should be:

- a. \$425,000.
- b. \$435,000.
- c. \$470,000.
- d. \$485,000.

#### E6-2 Multiple-Choice Questions on the Effects of Inventory Transfers [AICPA Adapted] Select the correct answer for each of the following questions.

1. During 20X3, Park Corporation recorded sales of inventory for \$500,000 to Small Company, its wholly owned subsidiary, on the same terms as sales made to third parties. At December 31, 20X3, Small held one-fifth of these goods in its inventory. The following information pertains to Park's and Small's sales for 20X3:

|                        | Park                     | Small                    |
|------------------------|--------------------------|--------------------------|
| Sales<br>Cost of Sales | \$2,000,000<br>(800,000) | \$1,400,000<br>(700,000) |
| Gross Profit           | \$1,200,000              | \$ 700,000               |

In its 20X3 consolidated income statement, what amount should Park report as cost of sales?

- a. \$1,000,000.
- b. \$1,060,000.
- c. \$1,260,000.
- d. \$1,500,000.

*Note:* Items 2 through 6 are based on the following information:

Selected information from the separate and consolidated balance sheets and income statements of Power Inc. and its subsidiary, Spin Company, as of December 31, 20X8, and for the year then ended is as follows:

|                                  | Power     | Spin      | Consolidated |
|----------------------------------|-----------|-----------|--------------|
| Balance Sheet Accounts           |           |           |              |
| Accounts Receivable              | \$ 26,000 | \$ 19,000 | \$ 39,000    |
| Inventory                        | 30,000    | 25,000    | 52,000       |
| Investment in Spin               | 53,000    |           |              |
| Patents                          |           |           | 20,000       |
| NCI in NA of Spin                |           |           | 14,000       |
| Stockholders' Equity             | 154,000   | 50,000    | 154,000      |
| <b>Income Statement Accounts</b> |           |           |              |
| Revenues                         | \$200,000 | \$140,000 | \$308,000    |
| Cost of Goods Sold               | 150,000   | 110,000   | 231,000      |
| Gross Profit                     | \$ 50,000 | \$ 30,000 | \$ 77,000    |
| Income from Spin                 | 7,400     |           |              |
| Amortization of Patents          |           |           | 2,000        |
| Net Income                       | 33,000    | 15,000    | 40,000       |

### Additional Information

During 20X8, Power sold goods to Spin at the same markup that Power uses for all sales. At December 31, 20X8, Spin had not paid for all of these goods and still held 37.5 percent of them in inventory.

Power acquired its interest in Spin on January 2, 20X5, when the book values and fair values of the assets and liabilities of Spin were equal, except for patents, which had a fair value of \$28,000. The fair value of the noncontrolling interest was equal to a proportionate share of fair value of Spin's net assets.

- 2. What was the amount of intercompany sales from Power to Spin during 20X8?
  - a. \$3,000.
  - b. \$6,000.
  - c. \$29,000.
  - d. \$32,000.
- 3. At December 31, 20X8, what was the amount of Spin's payable to Power for intercompany sales?
  - a. \$3,000.
  - b. \$6,000.

LO 6-4

- c. \$29,000.
- d. \$32,000.
- 4. In Power's consolidated balance sheet, what was the carrying amount of the inventory that Spin purchased from Power?
  - a. \$3,000.
  - b. \$6,000.
  - c. \$9,000.
  - d. \$12,000.
- 5. What is the percent of noncontrolling interest ownership of Spin?
  - a. 10 percent.
  - b. 20 percent.
  - c. 25 percent.
  - d. 45 percent.
- 6. Over how many years has Power chosen to amortize patents?
  - a. 10 years.
  - b. 14 years.
  - c. 23 years.
  - d. 40 years.

### LO 6-3 Multiple-Choice Questions—Consolidated Income Statement E6-3

Select the correct answer for each of the following questions.

Blue Company purchased 60 percent ownership of Kelly Corporation in 20X1. On May 10, 20X2, Kelly purchased inventory from Blue for \$60,000. Kelly sold all of the inventory to an unaffiliated company for \$86,000 on November 10, 20X2. Blue produced the inventory sold to Kelly for \$47,000. The companies had no other transactions during 20X2.

- 1. What amount of sales will be reported in the 20X2 consolidated income statement?
  - a. \$51,600.
  - b. \$60,000.
  - c. \$86,000.
  - d. \$146,000.
- 2. What amount of cost of goods sold will be reported in the 20X2 consolidated income statement?
  - a. \$36,000.
  - b. \$47,000.
  - c. \$60,000.
  - d. \$107,000.
- 3. What amount of consolidated net income will be assigned to the controlling shareholders for 20X2?
  - a. \$13,000.
  - b. \$26,000.
  - c. \$28,600.
  - d. \$39,000.

### Multiple-Choice Questions—Consolidated Balances

Select the correct answer for each of the following questions.

Lorn Corporation purchased inventory from Dresser Corporation for \$120,000 on September 20, 20X1, and resold 80 percent of the inventory to unaffiliated companies prior to December 31, 20X1, for \$140,000. Dresser produced the inventory sold to Lorn for \$75,000. Lorn owns 70 percent of Dresser's voting common stock. The companies had no other transactions during 20X1.

- 1. What amount of sales will be reported in the 20X1 consolidated income statement?
  - a. \$98,000.
  - b. \$120,000.

- c. \$140,000.
- d. \$260,000.
- 2. What amount of cost of goods sold will be reported in the 20X1 consolidated income statement?

  - b. \$75,000.
  - c. \$96,000.
  - d. \$120,000.
  - e. \$171,000.
- 3. What amount of consolidated net income will be assigned to the controlling interest for 20X1?
  - a. \$20,000.
  - b. \$30,800.
  - c. \$44,000.
  - d. \$45,000.
  - e. \$69,200.
  - f. \$80,000.
- 4. What inventory balance will be reported by the consolidated entity on December 31, 20X1?
  - a. \$15,000.
  - b. \$16,800.
  - c. \$24,000.
  - d. \$39,000.

### Multiple-Choice Questions—Consolidated Income Statement E6-5

Select the correct answer for each of the following questions.

Amber Corporation holds 80 percent of the stock of Movie Productions Inc. During 20X4, Amber purchased an inventory of snack bar items for \$40,000 and resold \$30,000 to Movie Productions for \$48,000. Movie Productions Inc. reported sales of \$67,000 in 20X4 and had inventory of \$16,000 on December 31, 20X4. The companies held no beginning inventory and had no other transactions in 20X4.

- 1. What amount of cost of goods sold will be reported in the 20X4 consolidated income statement?
  - a. \$20,000.
  - b. \$30,000.
  - c. \$32,000.
  - d. \$52,000.
  - e. \$62,000.
- 2. What amount of net income will be reported in the 20X4 consolidated income statement?
  - a. \$12,000.
  - b. \$18,000.
  - c. \$40,000.
  - d. \$47,000.
  - e. \$53,000.
- 3. What amount of income will be assigned to the noncontrolling interest in the 20X4 consolidated income statement?
  - a. \$7,000.
  - b. \$8,000.
  - c. \$9,400.
  - d. \$10,200.
  - e. \$13,400.

### **Realized Profit on Intercompany Sale** E6-6

Nordway Corporation acquired 90 percent of Olman Company's voting shares of stock in 20X1. During 20X4, Nordway purchased 40,000 Playday doghouses for \$24 each and sold 25,000 of

LO 6-3

LO 6-3

them to Olman for \$30 each. Olman sold all of the doghouses to retail establishments prior to December 31, 20X4, for \$45 each. Both companies use perpetual inventory systems.

# Required

- a. Give the journal entries Nordway recorded for the purchase of inventory and resale to Olman Company in 20X4.
- b. Give the journal entries Olman recorded for the purchase of inventory and resale to retail establishments in 20X4.
- c. Give the worksheet elimination entry(ies) needed in preparing consolidated financial statements for 20X4 to remove all effects of the intercompany sale.

### LO 6-3

### E6-7 Sale of Inventory to Subsidiary

Nordway Corporation acquired 90 percent of Olman Company's voting shares of stock in 20X1. During 20X4, Nordway purchased 40,000 Playday doghouses for \$24 each and sold 25,000 of them to Olman for \$30 each. Olman sold 18,000 of the doghouses to retail establishments prior to December 31, 20X4, for \$45 each. Both companies use perpetual inventory systems.

# Reauired

- a. Give all journal entries Nordway recorded for the purchase of inventory and resale to Olman Company in 20X4.
- b. Give the journal entries Olman recorded for the purchase of inventory and resale to retail establishments in 20X4.
- c. Give the worksheet elimination entry(ies) needed in preparing consolidated financial statements for 20X4 to remove the effects of the intercompany sale.

### E6-8 **Inventory Transfer between Parent and Subsidiary**

Karlow Corporation owns 60 percent of Draw Company's voting shares. During 20X3, Karlow produced 25,000 computer desks at a cost of \$82 each and sold 10,000 of them to Draw for \$94 each. Draw sold 7,000 of the desks to unaffiliated companies for \$130 each prior to December 31, 20X3, and sold the remainder in early 20X4 for \$140 each. Both companies use perpetual inventory systems.

### Required

- a. What amounts of cost of goods sold did Karlow and Draw record in 20X3?
- b. What amount of cost of goods sold must be reported in the consolidated income statement for
- c. Give the worksheet elimination entry or entries needed in preparing consolidated financial statements at December 31, 20X3, relating to the intercorporate sale of inventory.
- d. Give the worksheet elimination entry or entries needed in preparing consolidated financial statements at December 31, 20X4, relating to the intercorporate sale of inventory.
- e. Give the worksheet elimination entry or entries needed in preparing consolidated financial statements at December 31, 20X4, relating to the intercorporate sale of inventory if the sales were upstream. Assume that Draw produced the computer desks at a cost of \$82 each and sold 10,000 desks to Karlow for \$94 each in 20X3, with Karlow selling 7,000 desks to unaffiliated companies in 20X3 and the remaining 3,000 in 20X4.

# LO 6-4

# **Income Statement Effects of Unrealized Profit**

Holiday Bakery owns 60 percent of Farmco Products Company's stock. During 20X8, Farmco produced 100,000 bags of flour, which it sold to Holiday Bakery for \$900,000. On December 31, 20X8, Holiday had 20,000 bags of flour purchased from Farmco Products on hand. Farmco prices its sales at cost plus 50 percent of cost for profit. Holiday, which purchased all its flour from Farmco in 20X8, had no inventory on hand on January 1, 20X8.

Holiday Bakery reported income from its baking operations of \$400,000, and Farmco Products reported net income of \$150,000 for 20X8.

# Required

- a. Compute the amount reported as cost of goods sold in the 20X8 consolidated income statement.
- b. Give the worksheet elimination entry or entries required to remove the effects of the intercompany sale in preparing consolidated statements at the end of 20X8.
- c. Compute the amounts reported as consolidated net income and income assigned to the controlling interest in the 20X8 consolidated income statement.

LO 6-4

### E6-10 **Prior-Period Unrealized Inventory Profit**

Holiday Bakery owns 60 percent of Farmco Products Company's stock. On January 1, 20X9, inventory reported by Holiday included 20,000 bags of flour purchased from Farmco at \$9 per bag. By December 31, 20X9, all the beginning inventory purchased from Farmco Products had been baked into products and sold to customers by Holiday. There were no transactions between Holiday and Farmco during 20X9.

Both Holiday Bakery and Farmco Products price their sales at cost plus 50 percent markup for profit. Holiday reported income from its baking operations of \$300,000, and Farmco reported net income of \$250,000 for 20X9.

### Required

- a. Compute the amount reported as cost of goods sold in the 20X9 consolidated income statement for the flour purchased from Farmco in 20X8.
- b. Give the elimination entry or entries required to remove the effects of the unrealized profit in beginning inventory in preparing the consolidation worksheet as of December 31, 20X9.
- c. Compute the amounts reported as consolidated net income and income assigned to the controlling interest in the 20X9 consolidated income statement.

LO 6-3, 6-4

### **Computation of Consolidated Income Statement Data** E6-11

Prem Company acquired 60 percent ownership of Cooper Company's voting shares on January 1, 20X2. During 20X5, Prem purchased inventory for \$20,000 and sold the full amount to Cooper Company for \$30,000. On December 31, 20X5, Cooper's ending inventory included \$6,000 of items purchased from Prem. Also in 20X5, Cooper purchased inventory for \$50,000 and sold the units to Prem for \$80,000. Prem included \$20,000 of its purchase from Cooper in ending inventory on December 31, 20X5.

Summary income statement data for the two companies revealed the following:

|                    | Prem Company | Cooper Company     |
|--------------------|--------------|--------------------|
| Sales              | \$ 400,000   | \$ 200,000         |
| Income from Cooper | 20,500       | <del></del>        |
|                    | \$ 420,500   | \$ 200,000         |
| Cost of Goods Sold | \$ 250,000   | \$ 120,000         |
| Other Expenses     | 70,000       | 35,000             |
| Total Expenses     | \$(320,000)  | <u>\$(155,000)</u> |
| Net Income         | \$ 100,500   | \$ 45,000          |

### Required

- a. Compute the amount to be reported as sales in the 20X5 consolidated income statement.
- b. Compute the amount to be reported as cost of goods sold in the 20X5 consolidated income statement.
- c. What amount of income will be assigned to the noncontrolling shareholders in the 20X5 consolidated income statement?
- d. What amount of income will be assigned to the controlling interest in the 20X5 consolidated income statement?

### E6-12 Intercompany Sales

Hollow Corporation acquired 70 percent of Surg Corporation's voting stock on May 18, 20X1. The companies reported the following data with respect to intercompany sales in 20X4 and 20X5:

| Year | Purchased<br>by | Purchase<br>Price | Sold<br>to   | Sale<br>Price | Unsold at<br>End of Year | Year Sold to<br>Unaffiliated Co. |
|------|-----------------|-------------------|--------------|---------------|--------------------------|----------------------------------|
| 20X4 | Surg Corp.      | \$120,000         | Hollow Corp. | \$180,000     | \$ 45,000                | 20X5                             |
| 20X5 | Surg Corp.      | 90,000            | Hollow Corp. | 135,000       | 30,000                   | 20X6                             |
| 20X5 | Hollow Corp.    | 140,000           | Surg Corp.   | 280,000       | 110,000                  | 20X6                             |

Hollow reported operating income (excluding income from its investment in Surg) of \$160,000 and \$220,000 in 20X4 and 20X5, respectively. Surg reported net income of \$90,000 and \$85,000 in 20X4 and 20X5, respectively.

### Required

- a. Compute consolidated net income for 20X4.
- b. Compute the inventory balance reported in the consolidated balance sheet at December 31, 20X5, for the transactions shown.
- c. Compute the amount included in consolidated cost of goods sold for 20X5 relating to the transactions shown.
- d. Compute the amount of income assigned to the controlling interest in the 20X5 consolidated income statement.

### LO 6-3, 6-4

### **Consolidated Balance Sheet Worksheet** E6-13

The December 31, 20X8, balance sheets for Doorst Corporation and its 70 percent—owned subsidiary Hingle Company contained the following summarized amounts:

# DOORST CORPORATION AND HINGLE COMPANY **Balance Sheets** December 31, 20X8

|                                    | Doorst<br>Corporation | Hingle<br>Company |
|------------------------------------|-----------------------|-------------------|
| Cash & Receivables                 | \$ 98,000             | \$ 40,000         |
| Inventory                          | 150,000               | 100,000           |
| Buildings & Equipment (net)        | 310,000               | 280,000           |
| Investment in Hingle Company Stock | 242,000               |                   |
| Total Assets                       | \$800,000             | \$420,000         |
| Accounts Payable                   | \$ 70,000             | \$ 20,000         |
| Common Stock                       | 200,000               | 150,000           |
| Retained Earnings                  | 530,000               | 250,000           |
| Total Liabilities & Equity         | \$800,000             | \$420,000         |

Doorst acquired the shares of Hingle Company on January 1, 20X7. On December 31, 20X8, assume Doorst sold inventory to Hingle during 20X8 for \$100,000 and Hingle sold inventory to Doorst for \$300,000. Doorst's balance sheet contains inventory items purchased from Hingle for \$95,000. The items cost Hingle \$55,000 to produce. In addition, Hingle's inventory contains goods it purchased from Doorst for \$25,000 that Doorst had produced for \$15,000. Assume Hingle reported net income of \$70,000 and dividends of \$14,000.

# Required

- a. Prepare all elimination entries needed to complete a consolidated balance sheet worksheet as of December 31, 20X8.
- b. Prepare a consolidated balance sheet worksheet as of December 31, 20X8.

LO 6-5

### E6-14\* **Multiple Transfers between Affiliates**

Klon Corporation owns 70 percent of Brant Company's stock and 60 percent of Torkel Company's stock. During 20X8, Klon sold inventory purchased in 20X7 for \$100,000 to Brant for \$150,000. Brant then sold the inventory at its cost of \$150,000 to Torkel. Prior to December 31, 20X8, Torkel sold \$90,000 of inventory to a nonaffiliate for \$120,000 and held \$60,000 in inventory at December 31, 20X8.

# Required

- a. Give the journal entries recorded by Klon, Brant, and Torkel during 20X8 relating to the intercorporate sale and resale of inventory.
- b. What amount should be reported in the 20X8 consolidated income statement as cost of goods sold?
- c. What amount should be reported in the December 31, 20X8, consolidated balance sheet as inventory?
- d. Give the elimination entry needed at December 31, 20X8, to remove the effects of the inventory transfers.

LO 6-4

### **Inventory Sales** E6-15

Herb Corporation holds 60 percent ownership of Spice Company. Each year, Spice purchases large quantities of a gnarl root used in producing health drinks. Spice purchased \$150,000 of roots in 20X7 and sold \$40,000 of these purchases to Herb for \$60,000. By the end of 20X7, Herb had resold all but \$15,000 of its purchase from Spice. Herb generated \$90,000 on the sale of roots to various health stores during the year.

### Required

- a. Give the journal entries recorded by Herb and Spice during 20X7 relating to the initial purchase, intercorporate sale, and resale of gnarl roots.
- b. Give the worksheet elimination entries needed as of December 31, 20X7, to remove all effects of the intercompany transfer in preparing the 20X7 consolidated financial statements.

LO 6-4

### E6-16 **Prior-Period Inventory Profits**

Home Products Corporation, which sells a broad line of home detergent products, owns 75 percent of the stock of Level Brothers Soap Company. During 20X8, Level Brothers sold soap products to Home Products for \$180,000, which it had produced for \$120,000. Home Products sold \$150,000 of its purchase from Level Brothers in 20X8 and the remainder in 20X9. In addition, Home Products purchased \$240,000 of inventory from Level Brothers in 20X9 and resold \$90,000 of the items before year-end. Level Brothers' cost to produce the items sold to Home Products in 20X9 was \$160,000.

### Required

- a. Give all worksheet elimination entries needed for December 31, 20X9, to remove the effects of the intercompany inventory transfers in 20X8 and 20X9.
- b. Compute the amount of income assigned to noncontrolling shareholders in the 20X8 and 20X9 consolidated income statements if Level Brothers reported net income of \$350,000 for 20X8 and \$420,000 for 20X9.

# **Problems**

LO 6-4

### **Consolidated Income Statement Data** P6-17

Sweeny Corporation owns 60 percent of Bitner Company's shares. Partial 20X2 financial data for the companies and consolidated entity were as follows:

|                    | Sweeny Corporation | Bitner Company | <b>Consolidated Totals</b> |
|--------------------|--------------------|----------------|----------------------------|
| Sales              | \$550,000          | \$450,000      | \$820,000                  |
| Cost of Goods Sold | 310,000            | 300,000        | 420,000                    |
| Inventory, Dec. 31 | 180,000            | 210,000        | 375,000                    |

On January 1, 20X2, Sweeny's inventory contained items purchased from Bitner for \$75,000. The cost of the units to Bitner was \$50,000. All intercorporate sales during 20X2 were made by Bitner to Sweeny.

- a. What amount of intercorporate sales occurred in 20X2?
- b. How much unrealized intercompany profit existed on January 1, 20X2? On December 31, 20X2?
- c. Give the worksheet elimination entries relating to inventory and cost of goods sold needed to prepare consolidated financial statements for 20X2.
- d. If Bitner reports net income of \$90,000 for 20X2, what amount of income is assigned to the noncontrolling interest in the 20X2 consolidated income statement?

### P6-18 **Unrealized Profit on Upstream Sales**

Carroll Company sells all its output at 25 percent above cost. Pacific Corporation purchases all its inventory from Carroll. Selected information on the operations of the companies over the past three years is as follows:

|      | Carroll Comp           | any        | Pacific Corporation |                  |  |  |
|------|------------------------|------------|---------------------|------------------|--|--|
| Year | Sales to Pacific Corp. | Net Income | Inventory, Dec. 31  | Operating Income |  |  |
| 20X2 | \$200,000              | \$100,000  | \$ 70,000           | \$150,000        |  |  |
| 20X3 | 175,000                | 90,000     | 105,000             | 240,000          |  |  |
| 20X4 | 225,000                | 160,000    | 120,000             | 300,000          |  |  |

Pacific acquired 60 percent of the ownership of Carroll on January 1, 20X1, at underlying book value.

# Required

Compute consolidated net income and income assigned to the controlling interest for 20X2, 20X3, and 20X4.

### LO 6-3, 6-4 P6-19 **Net Income of Consolidated Entity**

Master Corporation acquired 70 percent of Crown Corporation's voting stock on January 1, 20X2, for \$416,500. The fair value of the noncontrolling interest was \$178,500 at the date of acquisition. Crown reported common stock outstanding of \$200,000 and retained earnings of \$350,000. The differential is assigned to buildings with an expected life of 15 years at the date of acquisition.

On December 31, 20X4, Master had \$25,000 of unrealized profits on its books from inventory sales to Crown, and Crown had \$40,000 of unrealized profit on its books from inventory sales to Master. All inventory held at December 31, 20X4, was sold during 20X5.

On December 31, 20X5, Master had \$14,000 of unrealized profit on its books from inventory sales to Crown, and Crown had unrealized profit on its books of \$55,000 from inventory sales to Master.

Master reported income from its separate operations (excluding income on its investment in Crown and amortization of purchase differential) of \$118,000 in 20X5, and Crown reported net income of \$65,000.

### Reauired

Compute consolidated net income and income assigned to the controlling interest in the 20X5 consolidated income statement.

### P6-20 **Correction of Elimination Entries**

In preparing the consolidation worksheet for Bolger Corporation and its 60 percent-owned subsidiary, Feldman Company, the following elimination entries were proposed by Bolger's bookkeeper:

| Cash             | 80,000 |
|------------------|--------|
| Accounts Payable | 80,000 |

To eliminate the unpaid balance for intercorporate inventory sales in 20X5.

| Cost of Goods Sold     | 12,000 |
|------------------------|--------|
| Income from Subsidiary | 12,000 |

To eliminate unrealized inventory profits at December 31, 20X5.

LO 6-4

LO 6-4

| Income from Subsidiary | 140,000 |
|------------------------|---------|
| Sales                  | 140,000 |

To eliminate intercompany sales for 20X5.

Bolger's bookkeeper recently graduated from Oddball University, and although the dollar amounts recorded are correct, he had some confusion in determining which accounts needed adjustment. All intercorporate sales in 20X5 were from Feldman to Bolger, and Feldman sells inventory at cost plus 40 percent of cost. Bolger uses the fully adjusted equity method in accounting for its ownership in Feldman.

### Required

- a. What percentage of the intercompany inventory transfer was resold prior to the end of 20X5?
- b. Give the appropriate elimination entries needed at December 31, 20X5, to prepare consolidated financial statements.

### LO 6-3, 6-4

### P6-21 **Incomplete Data**

Lever Corporation acquired 75 percent of the ownership of Tropic Company on January 1, 20X1. The fair value of the noncontrolling interest at acquisition was equal to its proportionate share of the fair value of the net assets of Tropic. The full amount of the differential at acquisition was attributable to buildings and equipment, which had a remaining useful life of eight years. Financial statement data for the two companies and the consolidated entity at December 31, 20X6, are as follows:

### LEVER CORPORATION AND TROPIC COMPANY **Balance Sheet Data** December 31, 20X6

| Item                           | Lever<br>Corporation | Tropic<br>Company | Consolidated<br>Entity |
|--------------------------------|----------------------|-------------------|------------------------|

### LEVER CORPORATION AND TROPIC COMPANY **Income Statement Data** For the Year Ended December 31, 20X6

Consolidated Lever **Tropic** Item Corporation Company **Entity** Sales \$420,000 \$260,000 \$650,000 Income from Subsidiary 32,250 Total Income \$452,250 \$260,000 \$650,000 \$170,000 \$445,000 Cost of Goods Sold \$310,000 **Depreciation Expense** 20,000 25,000 50,000 Interest Expense 25,000 9,500 34,500 Other Expenses 22,000 15,500 37,500 **Total Expenses** (\$377,000)(\$220,000)(\$567,000) Consolidated Net Income \$ 83,000 Income to Noncontrolling Interest (7,750)\$ 75,250 \$ 40,000 \$ 75,250 Controlling Interest in Net Income

All unrealized profit on intercompany inventory sales on January 1, 20X6, were eliminated on Lever's books. All unrealized inventory profits at December 31, 20X6, were eliminated on Tropic's books. Assume Lever uses the fully adjusted equity method and that Lever does not make the optional depreciation elimination worksheet entry.

# Required

- a. For the buildings and equipment held by Tropic when Lever acquired it and still on hand on December 31, 20X6, by what amount had buildings and equipment increased in value from their acquisition to the date of combination with Lever?
- b. What amount should be reported as accumulated depreciation for the consolidated entity at December 31, 20X6 (assuming Lever does not make the optional accumulated depreciation elimination entry)?
- c. If Tropic reported capital stock outstanding of \$60,000 and retained earnings of \$30,000 on January 1, 20X1, what amount did Lever pay to acquire its ownership of Tropic?
- d. What balance does Lever report as its investment in Tropic at December 31, 20X6?
- e. What amount of intercorporate sales of inventory occurred in 20X6?
- f. What amount of unrealized inventory profit exists at December 31, 20X6?
- g. Give the elimination entry used in eliminating intercompany inventory sales during 20X6.
- h. What was the amount of unrealized inventory profit at January 1, 20X6?
- i. What balance in accounts receivable did Lever report at December 31, 20X6?

### P6-22 **Eliminations for Upstream Sales**

Clean Air Products owns 80 percent of the stock of Superior Filter Company, which it acquired at underlying book value on August 30, 20X6. At that date, the fair value of the noncontrolling interest was equal to 20 percent of the book value of Superior Filter. Summarized trial balance data for the two companies as of December 31, 20X8, are as follows:

|                                     |    | Clean Air<br>Products |     | -        | or Filter<br>pany |           |
|-------------------------------------|----|-----------------------|-----|----------|-------------------|-----------|

| Total                               | \$ | 1,108,000             | \$1 | ,108,000 | \$540,000         | \$540,000 |

On January 1, 20X8, Clean Air's inventory contained filters purchased for \$60,000 from Superior Filter, which had produced the filters for \$40,000. In 20X8, Superior Filter spent \$100,000 to produce additional filters, which it sold to Clean Air for \$150,000. By December 31, 20X8, Clean Air had sold all filters that had been on hand January 1, 20X8, but continued to hold in inventory \$45,000 of the 20X8 purchase from Superior Filter.

### Required

- a. Prepare all elimination entries needed to complete a consolidation worksheet for 20X8.
- b. Compute consolidated net income and income assigned to the controlling interest in the 20X8 consolidated income statement.
- c. Compute the balance assigned to the noncontrolling interest in the consolidated balance sheet as of December 31, 20X8.

LO 6-4

### LO 6-3, 6-4

### P6-23 **Multiple Inventory Transfers**

Ajax Corporation purchased at book value 70 percent of Beta Corporation's ownership and 90 percent of Cole Corporation's ownership in 20X5. At the dates the ownership was acquired, the fair value of the noncontrolling interest was equal to a proportionate share of book value. There are frequent intercompany transfers among the companies. Activity relevant to 20X8 follows:

| Year | Producer         | Production<br>Cost | Buyer            | Transfer<br>Price | Unsold at<br>End of Year | Year<br>Sold |
|------|------------------|--------------------|------------------|-------------------|--------------------------|--------------|
| 20X7 | Beta Corporation | \$24,000           | Ajax Corporation | \$30,000          | \$10,000                 | 20X8         |
| 20X7 | Cole Corporation | 60,000             | Beta Corporation | 72,000            | 18,000                   | 20X8         |
| 20X8 | Ajax Corporation | 15,000             | Beta Corporation | 35,000            | 7,000                    | 20X9         |
| 20X8 | Beta Corporation | 63,000             | Cole Corporation | 72,000            | 12,000                   | 20X9         |
| 20X8 | Cole Corporation | 27.000             | Ajax Corporation | 45.000            | 15.000                   | 20X9         |

For the year ended December 31, 20X8, Ajax reported \$80,000 of income from its separate operations (excluding income from intercorporate investments), Beta reported net income of \$37,500, and Cole reported net income of \$20,000.

### Required

- a. Compute the amount to be reported as consolidated net income for 20X8.
- b. Compute the amount to be reported as inventory in the December 31, 20X8, consolidated balance sheet for the preceding items.
- c. Compute the amount to be reported as income assigned to noncontrolling shareholders in the 20X8 consolidated income statement.

### LO 6-3, 6-4

### **Consolidation with Inventory Transfers and Other Comprehensive Income** P6-24

On January 1, 20X1, Priority Corporation purchased 90 percent of Tall Corporation's common stock at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 10 percent of Tall Corporation's book value. Priority uses the equity method in accounting for its investment in Tall. The stockholders' equity section of Tall at January 1, 20X5, contained the following balances:

| Common Stock (\$5 par)                 | \$  | 400,000  |
|--|-----|----------|
| Additional Paid-in Capital             |     | 200,000  |
| Retained Earnings                      |     | 790,000  |
| Accumulated Other Comprehensive Income |     | 10,000   |
| Total                                  | \$1 | ,400,000 |
|  |     |          |

During 20X4, Tall sold goods costing \$30,000 to Priority for \$45,000, and Priority resold 60 percent of them prior to year-end. It sold the remainder in 20X5. Also in 20X4, Priority sold inventory items costing \$90,000 to Tall for \$108,000. Tall resold \$60,000 of its purchases in 20X4 and the remaining \$48,000 in

In 20X5, Priority sold additional inventory costing \$30,000 to Tall for \$36,000, and Tall resold \$24,000 of it prior to year-end. Tall sold inventory costing \$60,000 to Priority in 20X5 for \$90,000, and Priority resold \$48,000 of its purchase by December 31, 20X5.

Priority reported 20X5 income of \$240,000 from its separate operations and paid dividends of \$150,000. Tall reported 20X5 net income of \$90,000 and comprehensive income of \$110,000. Tall reported other comprehensive income of \$10,000 in 20X4. In both years, other comprehensive income arose from an increase in the market value of securities classified as available-for-sale. Tall paid dividends of \$60,000 in 20X5.

### Required

- a. Compute the balance in the investment account reported by Priority at December 31, 20X5.
- b. Compute the amount of investment income reported by Priority on its investment in Tall for 20X5.
- c. Compute the amount of income assigned to noncontrolling shareholders in the 20X5 consolidated income statement.
- d. Compute the balance assigned to noncontrolling shareholders in the consolidated balance sheet prepared at December 31, 20X5.

- e. Priority and Tall report inventory balances of \$120,000 and \$100,000, respectively, at December 31, 20X5. What amount should be reported as inventory in the consolidated balance sheet at December 31, 20X5?
- f. Compute the amount reported as consolidated net income for 20X5.
- g. Prepare the elimination entries needed to complete a consolidation worksheet as of December 31,

### LO 6-3, 6-4

### P6-25 **Multiple Inventory Transfers between Parent and Subsidiary**

Proud Company and Slinky Company both produce and purchase equipment for resale each period and frequently sell to each other. Since Proud Company holds 60 percent ownership of Slinky Company, Proud's controller compiled the following information with regard to intercompany transactions between the two companies in 20X5 and 20X6:

|      |                |                | Percent Resold<br>to Nonaffiliate in |      | Cost to   | Sale Price   |
|------|----------------|----------------|--------------------------------------|------|-----------|--------------|
| Year | Produced by    | Sold to        | 20X5                                 | 20X6 | Produce   | to Affiliate |
| 20X5 | Proud Company  | Slinky Company | 60%                                  | 40%  | \$100,000 | \$150,000    |
| 20X5 | Slinky Company | Proud Company  | 30                                   | 50   | 70,000    | 100,000      |
| 20X6 | Proud Company  | Slinky Company |                                      | 90   | 40,000    | 60,000       |
| 20X6 | Slinky Company | Proud Company  |                                      | 25   | 200,000   | 240,000      |

# Required

- a. Give the elimination entries required at December 31, 20X6, to eliminate the effects of the inventory transfers in preparing a full set of consolidated financial statements.
- b. Compute the amount of cost of goods sold to be reported in the consolidated income statement for 20X6.

### LO 6-3, 6-4

### **Consolidation Following Inventory Transactions** P6-26

Bell Company purchased 60 percent ownership of Troll Corporation on January 1, 20X1, for \$82,800. On that date, the noncontrolling interest had a fair value of \$55,200 and Troll reported common stock outstanding of \$100,000 and retained earnings of \$20,000. The full amount of the differential is assigned to land to be used as a future building site. Bell uses the fully adjusted equity method in accounting for its ownership of Troll. On December 31, 20X2, the trial balances of the two companies are as follows:

|                                       | Bell Co   | mpany     | <b>Troll Corporation</b> |           |

|                                       | \$963,980 | \$963,980 | \$586,200                | \$586,200 |

Troll sold inventory costing \$25,500 to Bell for \$42,500 in 20X1. Bell resold 80 percent of the purchase in 20X1 and the remainder in 20X2. Troll sold inventory costing \$21,000 to Bell in 20X2 for \$35,000, and Bell resold 70 percent of it prior to December 31, 20X2. In addition, Bell sold inventory costing \$14,000 to Troll for \$28,000 in 20X2, and Troll resold all but \$13,000 of its purchase prior to December 31, 20X2.

Assume both companies use straight-line depreciation and that no property, plant, and equipment has been purchased since the acquisition.

### Reauired

- a. Record the journal entry or entries for 20X2 on Bell's books related to its investment in Troll Corporation, using the equity method.
- b. Prepare the elimination entries needed to complete a consolidated worksheet for 20X2.
- c. Prepare a three-part consolidation worksheet for 20X2.

# LO 6-3, 6-4

### P6-27 **Consolidation Worksheet**

Crow Corporation purchased 70 percent of West Company's voting common stock on January 1, 20X5, for \$291,200. On that date, the noncontrolling interest had a fair value of \$124,800 and the book value of West's net assets was \$380,000. The book values and fair values of West's assets and liabilities were equal except for land that had a fair value \$14,000 higher than book value. The amount attributed to goodwill as a result of the acquisition is not amortized and has not been impaired.

### **CROW CORPORATION AND WEST COMPANY Trial Balance Data** December 31, 20X9

On January 1, 20X9, Crow's inventory contained \$30,000 of unrealized intercompany profits recorded by West. West's inventory on that date contained \$15,000 of unrealized intercompany profits recorded on Crow's books. Both companies sold their ending 20X8 inventories to unrelated companies in 20X9.

During 20X9, West sold inventory costing \$37,000 to Crow for \$62,000. Crow held all inventory purchased from West during 20X9 on December 31, 20X9. Also during 20X9, Crow sold goods costing \$54,000 to West for \$90,000. West continues to hold \$20,000 of its purchase from Crow on December 31, 20X9. Assume Crow uses the fully adjusted equity method.

### Required

- a. Prepare all elimination entries needed to complete a consolidation worksheet as of December 31, 20X9.
- b. Prepare a consolidation worksheet as of December 31, 20X9.

### LO 6-3, 6-4

### **Computation of Consolidated Totals** P6-28

Bunker Corporation owns 80 percent of Harrison Company's stock. At the end of 20X8, Bunker and Harrison reported the following partial operating results and inventory balances:

|  | Bunker<br>Corporation | Harrison<br>Company |
|--|-----------------------|---------------------|
| Total sales  | \$660,000             | \$510,000           |
| Sales to Harrison Company  | 140,000               |                     |
| Sales to Bunker Corporation  |                       | 240,000             |
| Net income   |                       | 20,000              |
| Operating income (excluding investment income from Harrison) Inventory on hand, December 31, 20X8, purchased from: | 70,000                |                     |
| Harrison Company   | 48,000                |                     |
| Bunker Corporation   |                       | 42,000              |

Bunker regularly prices its products at cost plus a 40 percent markup for profit. Harrison prices its sales at cost plus a 20 percent markup. The total sales reported by Bunker and Harrison include both intercompany sales and sales to nonaffiliates.

### Required

- a. What amount of sales will be reported in the consolidated income statement for 20X8?
- b. What amount of cost of goods sold will be reported in the 20X8 consolidated income statement?
- c. What amount of consolidated net income and income to controlling interest will be reported in the 20X8 consolidated income statement?
- d. What balance will be reported for inventory in the consolidated balance sheet for December 31, 20X8?

### LO 6-3, 6-4

### P6-29 **Intercompany Transfer of Inventory**

Pine Corporation acquired 70 percent of Bock Company's voting common shares on January 1, 20X2, for \$108,500. At that date, the noncontrolling interest had a fair value of \$46,500 and Bock reported \$70,000 of common stock outstanding and retained earnings of \$30,000. The differential is assigned to buildings and equipment, which had a fair value \$20,000 higher than book value and a remaining 10-year life, and to patents, which had a fair value \$35,000 higher than book value and a remaining life of five years at the date of the business combination. Trial balances for the companies as of December 31, 20X3, are as follows:

|                                  | <b>Pine Corporation</b> |           | <b>Bock Company</b> |           |
|----------------------------------|-------------------------|-----------|---------------------|-----------|
| Item                             | Debit                   | Credit    | Debit               | Credit    |
| Cash & Accounts Receivable       | \$ 15,400               |           | \$ 21,600           |           |
| Inventory                        | 165,000                 |           | 35,000              |           |
| Land                             | 80,000                  |           | 40,000              |           |

| Accounts Payable                 |                         | 92,400    |                     | 35,000    |
| Bonds Payable                    |                         | 200,000   |                     | 100,000   |
| Bond Premium                     |                         |           |                     | 1,600     |
| Common Stock                     |                         | 120,000   |                     | 70,000    |
| Retained Earnings                |                         | 127,900   |                     | 60,000    |
| Sales                            |                         | 260,000   |                     | 125,000   |
| Other Income                     |                         | 13,600    |                     | •         |
| Income from Subsidiary           |                         | 8,100     |                     |           |
|                                  | \$962,000               | \$962,000 | \$471,600           | \$471,600 |

On December 31, 20X2, Bock purchased inventory for \$32,000 and sold it to Pine for \$48,000. Pine resold \$27,000 of the inventory (i.e., \$27,000 of the \$48,000 acquired from Bock) during 20X3 and had the remaining balance in inventory at December 31, 20X3.

During 20X3, Bock sold inventory purchased for \$60,000 to Pine for \$90,000, and Pine resold all but \$24,000 of its purchase. On March 10, 20X3, Pine sold inventory purchased for \$15,000 to Bock for \$30,000. Bock sold all but \$7,600 of the inventory prior to December 31, 20X3. Assume Pine uses the fully adjusted equity method, that both companies use straight-line depreciation, and that no property, plant, and equipment has been purchased since the acquisition.

### Required

- a. Give all elimination entries needed to prepare a full set of consolidated financial statements at December 31, 20X3, for Pine and Bock.
- b. Prepare a three-part consolidation worksheet for 20X3.

### LO 6-3, 6-4

### P6-30 **Consolidation Using Financial Statement Data**

Bower Corporation acquired 60 percent of Concerto Company's stock on January 1, 20X3, for \$24,000 in excess of book value. On that date, the book values and fair values of Concerto's assets and liabilities were equal and the fair value of the noncontrolling interest was \$16,000 in excess of book value. The full amount of the differential at acquisition was assigned to goodwill of \$40,000. At December 31, 20X6, Bower management reviewed the amount assigned to goodwill and concluded it had been impaired. They concluded the correct carrying value at that date should be \$30,000 and the impairment loss should be assigned proportionately between the controlling and noncontrolling interests.

Balance sheet data for January 1, 20X6, and December 31, 20X6, and income statement data for 20X6 for the two companies are as follows:

# **BOWER CORPORATION AND CONCERTO COMPANY Balance Sheet Data** January 1, 20X6

| Net Income                          |           | 76,400     |                         | \$ 35,000 |

On January 1, 20X6, Bower held inventory purchased from Concerto for \$48,000. During 20X6, Bower purchased an additional \$90,000 of goods from Concerto and held \$54,000 of its purchases on December 31, 20X6. Concerto sells inventory to the parent at 20 percent above cost.

Concerto also purchases inventory from Bower. On January 1, 20X6, Concerto held inventory purchased from Bower for \$14,000, and on December 31, 20X6, it held inventory purchased from Bower for \$7,000. Concerto's total purchases from Bower were \$22,000 in 20X6. Bower sells items to Concerto at 40 percent above cost.

During 20X6, Bower paid dividends of \$50,000, and Concerto paid dividends of \$20,000. Assume that Bower uses the fully adjusted equity method that both companies use straight-line depreciation, and that no property, plant, and equipment has been purchased since the acquisition.

### Required

- a. Prepare all elimination entries needed to complete a consolidation worksheet as of December 31, 20X6.
- b. Prepare a three-part consolidation worksheet as of December 31, 20X6.

LO 6-3, 6-4

### P6-31 **Intercorporate Transfer of Inventory**

Block Corporation was created on January 1, 20X0, to develop computer software. On January 1, 20X5, Foster Company purchased 90 percent of Block's common stock at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 10 percent of Block's book value. Trial balances for Foster and Block on December 31, 20X9, are as follows:

|   | 20X9 Trial Balance Data |                  |                   |                  |  |

During 20X9, Block produced inventory for \$20,000 and sold it to Foster for \$30,000. Foster resold 60 percent of the inventory in 20X9. Also in 20X9, Foster sold inventory purchased from Block in 20X8. It had cost Block \$60,000 to produce the inventory, and Foster purchased it for \$75,000. Assume Foster uses the fully adjusted equity method.

- a. What amount of cost of goods sold will be reported in the 20X9 consolidated income statement?
- b. What inventory balance will be reported in the December 31, 20X9, consolidated balance sheet?
- c. What amount of income will be assigned to noncontrolling shareholders in the 20X9 consolidated income statement?
- d. What amount will be assigned to noncontrolling interest in the consolidated balance sheet prepared at December 31, 20X9?
- e. What amount of retained earnings will be reported in the consolidated balance sheet at December 31, 20X9?
- f. Give all elimination entries required to prepare a three-part consolidation worksheet at December 31, 20X9.
- g. Prepare a three-part consolidation worksheet at December 31, 20X9.

### P6-32 Consolidated Balance Sheet Worksheet [AICPA Adapted]

The December 31, 20X6, condensed balance sheets of Pine Corporation and its 90 percent-owned subsidiary, Slim Corporation, are presented in the accompanying worksheet.

### Additional Information

- Pine's investment in Slim was acquired for \$1,170,000 cash on January 1, 20X6, and is accounted for by the equity method. The fair value of the noncontrolling interest at that date was \$130,000.
- At January 1, 20X6, Slim's retained earnings amounted to \$600,000, and its common stock amounted to \$200,000.
- Slim declared a \$1,000 cash dividend in December 20X6, payable in January 20X7.
- Slim borrowed \$100,000 from Pine on June 30, 20X6, with the note maturing on June 30, 20X7, at 10 percent interest. Correct interest accruals have been recorded by both companies.
- During 20X6, Pine sold merchandise to Slim at an aggregate invoice price of \$300,000, which included a profit of \$60,000. At December 31, 20X6, Slim had not paid Pine for \$90,000 of these purchases, and 5 percent of the total merchandise purchased from Pine still remained in Slim's inventory. Assume Pine uses the fully adjusted equity method.
- Pine's excess cost over book value of its investment in Slim has appropriately been identified as goodwill. At December 31, 20X6, Pine's management reviewed the amount attributed to goodwill and found no evidence of impairment.

Complete the accompanying worksheet for Pine and its subsidiary, Slim, at December 31, 20X6.

| Common Stock                      |            | 200,000    |           | 100,000   |
| Additional Paid-in Capital        |            |            |           | 20,000    |
| Retained Earnings                 |            | 337,500    |           | 215,000   |
| Sales                             |            | 500,000    |           | 250,000   |
| Other Income                      |            | 20,400     |           | 30,000    |
| Income from Sharp Company         |            | 25,400     |           |           |
|                                   | 1,793,300  | 1,793,300  | \$855,000 | \$855,000 |

### **Additional Information**

- 1. The full amount of the differential at acquisition was assigned to buildings and equipment with a remaining 10-year economic life.
- 2. Randall and Sharp regularly purchase inventory from each other. During 20X6, Sharp Company sold inventory costing \$40,000 to Randall Corporation for \$60,000, and Randall resold 60 percent of the inventory in 20X6 and 40 percent in 20X7. Also in 20X6, Randall sold inventory costing \$20,000 to Sharp for \$26,000. Sharp resold two-thirds of the inventory in 20X6 and one-third in 20X7.
- 3. During 20X7, Sharp sold inventory costing \$30,000 to Randall for \$45,000, and Randall sold items purchased for \$9,000 to Sharp for \$12,000. Before the end of the year, Randall resold one-third of the inventory it purchased from Sharp in 20X7. Sharp continues to hold all the units purchased from Randall during 20X7.
- 4. Sharp owes Randall \$10,000 on account on December 31, 20X7.
- 5. Assume that both companies use straight-line depreciation and that no property, plant, and equipment has been purchased since the acquisition.

### Required

- a. Prepare the 20X7 journal entries recorded on Randall's books related to its investment in Sharp if Randall uses the equity method.
- b. Prepare all elimination entries needed to complete a consolidation worksheet as of December 31,
- c. Prepare a three-part consolidation worksheet as of December 31, 20X7.
- d. Prepare, in good form, a consolidated income statement, balance sheet, and retained earnings statement for 20X7.

### P6-34 Comprehensive Consolidation Worksheet; Fully Adjusted Equity Method [AICPA Adapted]

Fran Corporation acquired all outstanding \$10 par value voting common stock of Brey Inc. on January 1, 20X9, in exchange for 25,000 shares of its \$20 par value voting common stock. On December 31, 20X8, Fran's common stock had a closing market price of \$30 per share on a national stock exchange. The acquisition was appropriately accounted for under the acquisition method. Both companies continued to operate as separate business entities maintaining separate accounting records with years ending December 31. Fran accounts for its investment in Brey stock using the fully adjusted equity method (i.e., adjusting for unrealized intercompany profits).

On December 31, 20X9, the companies had condensed financial statements as follows:

|  | Fran Corporatio     |   | Br    | ey Inc.  |
|--|---------------------|---|-------|--|

### Additional Information

No changes occurred in the Common Stock and Additional Paid-in Capital accounts during 20X9 except the one necessitated by Fran's acquisition of Brey.

At the acquisition date, the fair value of Brey's machinery exceeded its book value by \$54,000. The excess cost will be amortized over the estimated average remaining life of six years. The fair values of all of Brey's other assets and liabilities were equal to their book values. At December 31, 20X9, Fran's management reviewed the amount attributed to goodwill as a result of its purchase of Brey's common stock and concluded an impairment loss of \$35,000 should be recognized in 20X9.

During 20X9, Fran purchased merchandise from Brey at an aggregate invoice price of \$180,000, which included a 100 percent markup on Brey's cost. At December 31, 20X9, Fran owed Brey \$86,000 on these purchases, and \$36,000 of this merchandise remained in Fran's inventory. Assume Fran uses the fully adjusted equity method.

### Required

Develop and complete a consolidation worksheet that would be used to prepare a consolidated income statement and a consolidated retained earnings statement for the year ended December 31, 20X9, and a consolidated balance sheet as of December 31, 20X9. List the accounts in the worksheet in the same order as they are listed in the financial statements provided. Formal consolidated statements are not required. Ignore income tax considerations. Supporting computations should be in good form.

### P6-35A **Modified Equity Method**

On December 31, 20X7, Randall Corporation recorded the following entry on its books to adjust from the fully adjusted equity method to the modified equity method for its investment in Sharp Company stock:

| Investment in Sharp Company Stock | 11,000 |       |
|-----------------------------------|--------|-------|
| Retained Earnings                 |        | 8,400 |
| Income from Sharp Company         |        | 2,600 |

# Required

- a. Adjust the data reported by Randall in the trial balance contained in P6-33 for the effects of the preceding adjusting entry.
- b. Prepare the journal entries that would have been recorded on Randall's books during 20X7 under the modified equity method.
- c. Prepare all elimination entries needed to complete a consolidation worksheet at December 31, 20X7, assuming Randall has used the modified equity method.
- d. Complete a three-part consolidation worksheet as of December 31, 20X7.

### P6-36A **Cost Method**

The trial balance data presented in Problem P6-34 can be converted to reflect use of the cost method by inserting the following amounts in place of those presented for Randall Corporation:

| Investment in Sharp Company Stock | \$280,000 |
|-----------------------------------|-----------|
| Retained Earnings                 | 329,900   |
| Income from Subsidiary            | 0         |
| Dividend Income                   | 20,000    |

# Required

- a. Prepare the journal entries that would have been recorded on Randall's books during 20X7 under the cost method.
- b. Prepare all elimination entries needed to complete a consolidation worksheet as of December 31, 20X7, assuming Randall uses the cost method.
- c. Complete a three-part consolidation worksheet as of December 31, 20X7.

# MICRON'S INTERCOMPANY FIXED ASSET SALE

Micron Technology Inc., ranked number 287 in the 2011 Fortune 500 listing, was founded in Boise, Idaho, in 1978 and specializes in the fabrication of DRAM, SDRAM, flash memory, SSD, and CMOS semiconductor chips. Through a long series of acquisitions, Micron now owns many subsidiaries both in the United States and internationally. Micron also has several joint ventures with other companies. For example, in January 2006, Micron and Intel Corporation formed a new company called IM Flash Technologies, LLC, located in Lehi, Utah. A few years earlier in 2002, Micron acquired Toshiba's commodity DRAM operations located in Manassas, Virginia. This wholly owned subsidiary is now called Micron Technology Virginia.

In June 2009, IM Flash Technologies sold underutilized semiconductor manufacturing equipment to Micron Technology Virginia. The equipment originally cost \$3,673,962 and had been assigned a five-year useful life. Because it had been depreciated for only approximately 25 months of its expected 60-month useful life, IM Flash Technologies determined that the equipment had a book value of \$2,439,888 at the time of the transfer. Given the agreed-upon fair market value and selling price of \$1,500,000, IM Flash Technologies realized a loss of \$939,888 on this intercompany asset sale. Because Micron Technology, Inc. owns more than 50 percent of IM Flash Technologies and 100 percent of Micron Technology Virginia, it consolidates both companies. Therefore, the loss on this sale between affiliated companies had to be eliminated in the consolidation process. This chapter explores the accounting for both depreciable and nondepreciable asset transfers among affiliated companies.

### LEARNING OBJECTIVES

When you finish studying this chapter, you should be able to:

- LO 7-1 Understand and explain concepts associated with transfers of long-term assets and services.
- LO 7-2 Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following an intercompany land transfer.
- LO 7-3 Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following a downstream land transfer.
- LO 7-4 Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following an upstream land transfer.
- Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following a downstream depreciable asset
- LO 7-6 Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following an upstream depreciable asset transfer.

# INTERCOMPANY LONG-TERM ASSET TRANSFERS

LO 7-1

Understand and explain concepts associated with transfers of long-term assets and services.

The following illustrations provide an overview of the intercompany sale process using land as an example. Figure 7-1 presents a series of transactions involving a parent company and its subsidiary. First, Parent Company purchases land from an unrelated party. Then Parent Company sells the land to a subsidiary. Finally, the subsidiary sells the land to an unrelated party. The three transactions, and the amounts, are as follows:

- T1—Purchase by Parent Company from an outsider for \$10,000.
- T2—Sale from Parent Company to Subsidiary Corporation for \$15,000.
- T3—Sale from Subsidiary Corporation to an outsider for \$25,000.

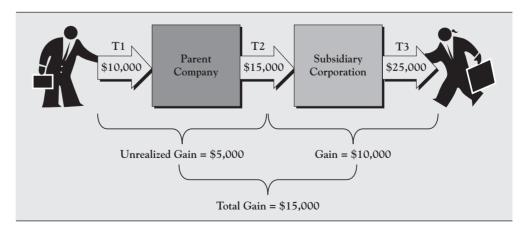

As shown in the following cases, the amount of gain reported by each of the individual companies and by the consolidated entity in each accounting period depends on which transactions occur during that period.

### Case A

All three transactions are completed in the same accounting period. The gain amounts reported on the transactions are:

> Parent Company \$ 5,000 (\$15,000 - \$10,000) 10,000 (\$25,000 - \$15,000)Subsidiary Corporation 15,000 (\$25,000 - \$10,000)Consolidated Entity

FIGURE 7-1 **Intercompany Sales** 

The gain reported by each of the entities is considered to be realized because the land is resold to an unrelated party during the period. The total gain that the consolidated entity reported is the difference between the \$10,000 price it paid to an unaffiliated seller and the \$25,000 price at which it sold the land to an unaffiliated buyer. This \$15,000 gain is reported in the consolidated income statement. From a consolidated viewpoint, the sale from Parent Company to Subsidiary Corporation, transaction T2, is an internal transaction and is not reported in the consolidated financial statements.

### Case B

Only transaction T1 is completed during the current period. The gain amounts reported on the transactions are:

| Parent Company         | \$0 |
|------------------------|-----|
| Subsidiary Corporation | 0   |
| Consolidated Entity    | 0   |

Neither of the affiliated companies has made a sale, and no gains are reported or realized. The land is reported both in Parent Company's balance sheet and in the consolidated balance sheet at its cost to Parent, which also is the cost to the consolidated entity.

### Case C

Only transactions T1 and T2 are completed during the current period. The gain amounts reported on the transactions are:

| Parent Company         | \$5,000 (\$15,000 - \$10,000) |
|------------------------|-------------------------------|
| Subsidiary Corporation | 0                             |
| Consolidated Entity    | 0                             |

The \$5,000 gain reported by Parent Company is considered unrealized from a consolidated point of view and is not reported in the consolidated income statement because the land has not been resold to a party outside the consolidated entity. Subsidiary Corporation's books carry the land at \$15,000, the cost to Subsidiary. From a consolidated viewpoint, the land is overvalued by \$5,000 and must be reported at its \$10,000 cost to the consolidated entity.

### Case D

Only transaction T3 is completed during the current period; those of T1 and T2 occurred in a prior period. The gain amounts reported on the transactions in the current period are:

| Parent Company         | \$ 0                         |
|------------------------|------------------------------|
| Subsidiary Corporation | 10,000 (\$25,000 - \$15,000) |
| Consolidated Entity    | 15,000 (\$25,000 - \$10,000) |

Subsidiary recognizes a gain equal to the difference between its selling price, \$25,000, and cost, \$15,000, and the consolidated entity reports a gain equal to the difference between its selling price of \$25,000 and the cost to the consolidated entity from an outsider of \$10,000.

From a consolidated viewpoint, the sale of an asset wholly within the consolidated entity involves only a change in the technical owner of the asset and possibly its location and does not represent the culmination of the earning process. To culminate the earning process with respect to the consolidated entity, it must make a sale to a party external to the consolidated entity. The key to deciding when to report a transaction in the consolidated financial statements is to visualize the consolidated entity and determine whether a particular transaction (1) occurs totally within the consolidated entity, in which case its effects must be excluded from the consolidated statements or (2) involves outsiders and thus constitutes a transaction of the consolidated entity.

# INTERCOMPANY TRANSFERS OF SERVICES

Related companies frequently purchase services from one another. These services may be of many different types; intercompany purchases of consulting, engineering, marketing, and maintenance services are common.

When one company purchases services from a related company, the purchaser typically records an expense and the seller records revenue. When consolidated financial statements are prepared, both the revenue and the expense must be eliminated. For example, if the parent sells consulting services to the subsidiary for \$50,000, the parent would recognize \$50,000 of consulting revenue on its books and the subsidiary would recognize \$50,000 of consulting expense. In the consolidation worksheet, an elimination entry would be needed to reduce both consulting revenue (debit) and consulting expense (credit) by \$50,000. Because the revenue and expense are equal and both are eliminated, income is unaffected by the elimination. Even though income is not affected, the elimination is still important, however, because otherwise both revenues and expenses are overstated.

Generally, a simplistic approach is appropriate in eliminating intercompany transfers of services by assuming that the services benefit the current period and, therefore, any intercompany profit on the services becomes realized within the period of transfer. Accordingly, no elimination entries relating to the current period's transfer of services are needed in future periods because the intercompany profit is considered realized in the transfer period.

Usually the assumption that the profit on intercompany sales of services is realized in the period of sale is realistic. In some cases, however, realization of intercompany profit on the services does not occur in the period the services are provided, and the amounts are significant. For example, if the parent company charges a subsidiary for architectural services to design a new manufacturing facility for the subsidiary, the subsidiary would include that cost in the capitalized cost of the new facility. From a consolidated point of view, however, any profit the parent recognized on the intercompany sale of services (revenue over the cost of providing the service) would have to be eliminated from the reported cost of the new facility until the intercompany profit became realized. Realization would be viewed as occurring over the life of the facility. Thus, elimination entries would be needed each year similar to those illustrated later in the chapter for intercompany fixed asset transfers.

# INTERCOMPANY LAND TRANSFERS<sup>1</sup>

LO 7-2

Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following an intercompany land transfer.

When intercompany transfers of noncurrent assets occur, adjustments often are needed in the preparation of consolidated financial statements for as long as the acquiring company holds the assets. The simplest example of an intercompany asset transfer is the intercompany sale of land.

# Overview of the Profit Elimination Process

When related companies transfer land at book value, no special adjustments or eliminations are needed in preparing the consolidated statements. If, for example, a company purchases land for \$10,000 and sells it to its subsidiary for \$10,000, the asset continues to be valued at the \$10,000 original cost to the consolidated entity:

|      | Parent |        | Subsidiary |        |        |
|------|--------|--------|------------|--------|--------|
| Cash | 10,000 |        | Land       | 10,000 |        |
| Land |        | 10,000 | Cash       |        | 10,000 |

Because the seller records no gain or loss, both income and assets are stated correctly from a consolidated viewpoint.

<sup>&</sup>lt;sup>1</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

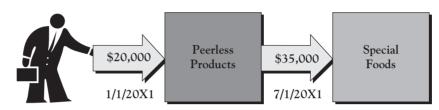

Land transfers at more or less than book value do require special treatment. Under the fully adjusted equity method, the parent company must defer any unrealized gains or losses until it eventually sells the assets to unrelated parties. Moreover, in the consolidation process, the selling entity's gain or loss must be eliminated because the consolidated entity still holds the land, and no gain or loss may be reported in the consolidated financial statements until the land is sold to a party outside the consolidated entity. Likewise, the land must be reported at its original cost in the consolidated financial statements as long as it is held within the consolidated entity, regardless of which affiliate holds the land.

As an illustration, assume that Peerless Products Corporation acquires land for \$20,000 on January 1, 20X1, and sells the land to its subsidiary, Special Foods Incorporated, on July 1, 20X1, for \$35,000, as follows:

eerless *Products* 

Corporation

Peerless records the purchase of the land and its sale to Special Foods with the following entries:

|     | January 1, 20X1                       |        |        |
|-----|---------------------------------------|--------|--------|
| (1) | Land                                  | 20,000 |        |
|     | Cash                                  |        | 20,000 |
|     | Record land purchase.                 |        |        |
|     | July 1, 20X1                          |        |        |
| (2) | Cash                                  | 35,000 |        |
|     | Land                                  |        | 20,000 |
|     | Gain on Sale of Land                  |        | 15,000 |
|     | Record sale of land to Special Foods. |        |        |

Special Foods records the purchase of the land from Peerless as follows:

|     | July 1, 20X1 |        |
|-----|--------------|--------|
| (3) | Land         | 35,000 |
|     | Cash         | 35,000 |
|     |              |        |

Record purchase of land from Peerless.

The intercompany transfer leads to a \$15,000 gain on Peerless' books, and the carrying value of the land increases by the same amount on Special Foods' books. Neither of these amounts may be reported in the consolidated financial statements because the \$15,000 intercompany gain is unrealized from a consolidated viewpoint. The land has not been sold to a party outside the consolidated entity but only transferred within it; consequently, the land must still be reported in consolidated financial statements at its original cost to the consolidated entity.

When intercompany gains or losses on asset transfers are incurred, the parent company can choose to use the fully adjusted equity method, which requires it to adjust its investment and income from subsidiary accounts to remove the unrealized gain.

|     | July 1, 20X1                      |        |
|-----|-----------------------------------|--------|
| (4) | Income from Special Foods         | 15,000 |
|     | Investment in Special Foods Stock | 15,000 |

Defer gain on intercompany land sale to Special Foods.

This equity-method entry ensures that the parent company's income is exactly equal to the controlling interest in consolidated income on the consolidated financial statements.

Students sometimes ask if this entry "double-counts" the deferral of the gain because the gain is also eliminated in the consolidation worksheet. Note that this equity-method entry defers the gain on the parent's books to ensure that the parent's net income is accurate and equal to the parent's share of consolidated net income. Although the parent company records this deferral in its books, the investment in subsidiary and income from subsidiary accounts are eliminated in the consolidation process (i.e., they do not show up in the consolidated financial statements). Thus, the worksheet elimination entry is still necessary to ensure that the gain is removed from the consolidated financial statements. This explanation will be clearer in subsequent examples where we present the full consolidation worksheet.

Chapter 6 explains that the deferral of unrealized gross profit on intercompany inventory transfers is reversed in the subsequent accounting period if the inventory is sold to an outside party. Similarly, the deferral of gain on an intercompany asset transfer is reversed in the period in which the asset is sold to an outsider.

We use the fully adjusted equity method in all subsequent examples in the chapter. Another option is to ignore this unrealized gain on the parent company's books and adjust for it in the consolidation worksheet only under the modified equity method. We illustrate this approach in the appendix.

In the consolidation process, the gain should be eliminated and the land restated from the \$35,000

recorded on Special Foods' books to its original cost of \$20,000. This is accomplished with the following elimination entry in the consolidation worksheet prepared at the end of 20X1:

Gain on Sale of Land 15,000 Land 15,000

# **Assignment of Unrealized Profit Elimination**

Unrealized intercompany gains and losses must be eliminated fully when preparing consolidated financial statements. Regardless of the parent's percentage ownership of a subsidiary, the full amount of any unrealized gains and losses must be eliminated and must be excluded from consolidated net income. Although the full amount of an unrealized gain or loss is excluded from consolidated net income, a question arises when the parent owns less than 100 percent of a subsidiary as to whether the unrealized profit elimination should reduce the controlling or noncontrolling interest, or both.

A gain or loss on an intercompany transfer is recognized by the selling affiliate and ultimately accrues to the stockholders of that affiliate. When a parent sells to a subsidiary, referred to as a downstream sale, any gain or loss on the transfer accrues to the parent company's stockholders. When a subsidiary sells to its parent, an *upstream sale*, any gain or loss accrues to the subsidiary's stockholders. If the subsidiary is wholly owned, all gain or loss ultimately accrues to the parent company as the sole stockholder. If, however, the selling subsidiary is not wholly owned, the gain or loss on the upstream sale is apportioned between the parent company and the noncontrolling shareholders.

Generally, the consolidated entity does not consider gains and losses realized until a sale is made to an unrelated, external party. Unrealized gains and losses are eliminated in preparing consolidated financial statements against the interests of those shareholders who recognized the gains and losses in the first place: the shareholders of the selling affiliate. Therefore, the direction of the sale determines which shareholder group absorbs the elimination of unrealized intercompany gains and losses. Thus, unrealized intercompany gains and losses are eliminated in consolidation in the following ways:

| Sale   | Elimination   |
|--|---|
| Downstream (parent to subsidiary) Upstream (subsidiary to parent): | Against controlling interest  |
| Wholly owned subsidiary<br>Majority-owned subsidiary               | Against controlling interest Proportionately against controlling and noncontrolling interests |

As an illustration, assume that Purity Company owns 75 percent of the common stock of Southern Corporation. Purity reports operating income of \$100,000 from its own activities, excluding any investment income from or transactions with Southern; Southern reports operating income of \$50,000, exclusive of any gains or losses on asset transfers. In each example, assume the selling affiliate has a separate unrealized gain of \$10,000 on the intercompany transfer of an asset. In the case of a downstream transfer, all unrealized profit is eliminated from the controlling interest's share of income when consolidated statements are prepared. Thus, the controlling interest in consolidated net income is computed as follows:

| Southern's reported net income  | \$ 50,000 |
|---|-----------|
| Purity's ownership percentage   | × 0.75    |
| Purity's share of Southern's reported income                                | 37,500    |
| Less: Purity's 100% deferral of the unrealized downstream intercompany gain | (10,000)  |
| Purity's income from Southern   | 27,500    |
| Purity's separate income (including downstream intercompany gain)           | 110,000   |
| Income to controlling interest  | \$137,500 |

If, instead, the intercompany transfer is upstream from subsidiary to parent, the unrealized profit on the upstream sale is eliminated proportionately from the interests of the controlling and noncontrolling shareholders. In this situation, the controlling interest in consolidated net income is computed as follows:

| Southern's operating income  | \$ 50,000 |
|--|-----------|
| Upstream intercompany gain   |           |
| Southern's reported net income   | 60,000    |
| Purity's ownership percentage  | × 0.75    |
| Purity's share of Southern's reported income                             | 45,000    |
| Less: Purity's 75% deferral of the upstream unrealized intercompany gain | (7,500)   |
| Purity's income from Southern  | 37,500    |
| Purity's separate income   | 100,000   |
| Income to controlling interest   | \$137,500 |

Consolidated net income (\$150,000) and the controlling interest in consolidated net income (\$137,500) are the same whether the intercompany sale is upstream or downstream, but the allocation of the deferral differs. Because Purity recognized all the gain in the downstream case, the controlling interest's share of income is reduced by the full unrealized gain elimination. In the upstream case, the intercompany gain was recognized by Southern and shared proportionately by Southern's controlling and noncontrolling interests. Therefore, the elimination is made proportionately against the controlling and noncontrolling interests' share of income.

Note that unrealized intercompany gains and losses are always fully eliminated in preparing consolidated financial statements. The existence of a noncontrolling interest in a selling subsidiary only affects the allocation of the deferral of the unrealized gain or loss, not the amount deferred.

# Income to the Noncontrolling Interest

The income assigned to the noncontrolling interest is the noncontrolling interest's proportionate share of the subsidiary's reported net income realized in transactions with parties external to the consolidated entity. Income assigned to the noncontrolling interest in the downstream example is computed as follows:

| Southern's reported net income | \$50,000        |
|--------------------------------|-----------------|
| NCI's percentage               | × 0.25          |
| Income to NCI                  | <u>\$12,500</u> |

Income assigned to the noncontrolling interest in the upstream example is computed as follows:

| Southern's reported income (including intercompany gain)   | \$60,000            |
|--|---------------------|
| NCI's ownership percentage   | × 0.25              |
| NCI's share of Southern's reported income<br>Less: NCI's 25% deferral of the upstream unrealized intercompany gain | \$15,000<br>(2,500) |
| Income to NCI  | \$12,500)           |
| income to reci   | \$12,500            |

In the downstream example, the \$10,000 of unrealized intercompany profit is recognized on the parent company's books; therefore, the noncontrolling interest is not affected by the unrealized gain on the downstream intercompany transaction. The entire \$50,000 of the subsidiary's income is realized in transactions with parties external to the consolidated entity. In the upstream example, the subsidiary's income includes \$10,000 of unrealized intercompany profit. The amount of the subsidiary's income realized in transactions with external parties is only \$50,000 (\$60,000 less \$10,000 of unrealized intercompany profit).

# **Downstream Sale of Land**

As in Chapter 6, assume that Peerless Products purchases 80 percent of the common stock of Special Foods on December 31, 20X0, for its book value of \$240,000, and that the fair value of Special Foods' noncontrolling interest on that date is equal to its book value of \$60,000. Assume that during 20X1, Peerless reports separate income of \$140,000 income from regular operations and declares dividends of \$60,000. Special Foods reports net income of \$50,000 and declares dividends of \$30,000. In addition, on July 1, 20X1, Peerless sells land to Special Foods for \$35,000. Peerless had originally purchased the land on January 1, 20X1, for \$20,000, resulting in an unrealized gain of \$15,000. Special Foods continues to hold the land through 20X1 and subsequent years.

# Fully Adjusted Equity-Method Entries—20X1

During 20X1, Peerless records its share of Special Foods' income and dividends with the usual fully adjusted equity-method entries:

| (5) | Investment in Special Foods                                 | 40,000 |        |
|-----|---|--------|--------|
|     | Income from Special Foods                                   |        | 40,000 |
|     | Record Peerless' 80% share of Special Foods' 20X1 income.   |        |        |
| (6) | Cash  | 24,000 |        |
|     | Investment in Special Foods                                 |        | 24,000 |
|     | Record Peerless' 80% share of Special Foods' 20X1 dividend. |        |        |

Under the fully adjusted equity method, because the downstream sale of land to Special Foods results in a \$15,000 unrealized gain, Peerless makes an adjustment in the equitymethod accounts to reduce the income from Special Foods on the income statement and Investment in Special Foods on the balance sheet by its share of the unrealized gain. Because this is a downstream transaction, the sale (and associated unrealized gain) resides on Peerless' income statement. Because we assume the NCI shareholders

do not own Peerless stock, they do not share in the deferral of the unrealized gain.

Peerless Products

NCI 80% 20% Special Foods

LO 7-3

Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following a downstream land transfer.

Under the fully adjusted equity method, Peerless Inc. defers the entire \$15,000 using the following equity-method entry:

| (7) | Income from Special Foods   | 15,000 |
|-----|-----------------------------|--------|
|     | Investment in Special Foods | 15,000 |

Defer gain on intercompany land sale to Special Foods.

Note that this entry accomplishes two important objectives. First, because Peerless' income is overstated by \$15,000, the adjustment to Income from Special Foods offsets this overstatement so that Peerless' bottom-line net income is now correct. Second, Special Foods' land account is currently overstated by \$15,000 (because the land was originally acquired by Peerless for \$20,000, but it is now recorded at \$35,000 on Special Foods' books). Because the Investment in Special Foods account summarizes Peerless' investment in Special Foods' balance sheet, this reduction to the investment account offsets the fact that Special Foods' land (and thus entire balance sheet) is overstated by \$15,000. Thus, after making this equity-method adjustment to defer the unrealized gain on the sale of land, Peerless' financial statements are now correctly stated. Therefore, Peerless' reported income will be exactly equal to the controlling interest in net income on the consolidated financial statements.

On December 31, 20X1, the Peerless' equity-method accounts appear as follows:

|                          |                   | nent in<br>I Foods | _                |        | e from<br>I Foods |                |
|--------------------------|-------------------|--------------------|------------------|--------|-------------------|----------------|
| Acquisition<br>80% of NI | 240,000<br>40,000 |                    |                  |        | 40,000            | 80% of NI      |
|                          |                   | 24,000             | 80% of Dividends |        |                   |                |
|                          |                   | 15,000             | Defer Gain       | 15,000 |                   |                |
| <b>Ending Balance</b>    | 241,000           |                    | _                |        | 25,000            | Ending Balance |

In summary, when Peerless defers the unrealized gain in the equity method accounts, the \$15,000 decrease in the Income from special Foods account offsets the gain on Peerless' books so that Peerless' income is correct (and equal to the controlling interest in consolidated net income). Moreover, because the Investment in Special Foods account summarizes the entire balance sheet of Special Foods, the \$15,000 decrease in the investment account offsets the fact that the land account is overstated by \$15,000 on Special Foods' books. The following illustration shows how the internal sale of the land and the deferral on Peerless' books affect these accounts.

| Assets     | Liabilities | Equity       |  |
|------------|-------------|--------------|--|
|            |             | Gain +15,000 |  |
| Investment |             | Income from  |  |
| -15,000    |             | Sub -15,000  |  |

| Assets       | Liabilities | Equity |
|--------------|-------------|--------|
| Land +15,000 |             |        |
|              |             |        |
|              |             |        |

### Consolidation Worksheet—20X1

We present the consolidation worksheet prepared at the end of 20X1 in Figure 7–2. The first two elimination entries are the same as originally presented in Chapter 3 with one minor exception. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry, we reduce the amounts in the Income from Special Foods and Investment in Special Foods accounts by the \$15,000 gain deferral.

FIGURE 7-2 December 31, 20X1, Consolidation Worksheet, Period of Intercompany Sale; Downstream Sale of Land

|                                 | Peerless  | Special   | Elimination Entries |         |              |
|---------------------------------|-----------|-----------|---------------------|---------|--------------|

| Bonds Payable                   | 200,000   | 100,000   |                     |         | 300,000      |
| Common Stock                    | 500,000   | 200,000   | 200,000             |         | 500,000      |
| Retained Earnings               | 420,000   | 120,000   | 150,000             | 30,000  | 420,000      |
| NCI in NA of Special Foods      |           |           |                     | 64,000  | 64,000       |
| Total Liabilities & Equity      | 1,220,000 | 520,000   | 350,000             | 94,000  | 1,484,000    |

# **Book Value Calculations:**

|                             | NCI 20% - | + Peerless 80% = | = Common Stock + | - Retained Earnings |
|-----------------------------|-----------|------------------|------------------|---------------------|
| Beginning book value        | 60,000    | 240,000          | 200,000          | 100,000             |
| + Net income                | 10,000    | 40,000           |                  | 50,000              |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)         |                  | (30,000)            |
| Ending book value           | 64,000    | 256,000          | 200,000          | 120,000             |

# **Basic Investment Account Elimination Entry:**

| Common stock                | 200,000 | $\leftarrow$ Common stock balance          |
|-----------------------------|---------|--|
| Retained earnings           | 100,000 | ← Beginning RE from trial balance          |
| Income from Special Foods   | 25,000  | ← Peerless' % of NI – <b>Deferred Gain</b> |
| NCI in NI of Special Foods  | 10,000  | $\leftarrow$ NCI share of reported NI      |
| Dividends declared          | 30,000  | ← 100% of sub's dividends declared         |
| Investment in Special Foods | 241,000 | ← Net BV − <b>Deferred Gain</b>            |
| NCI in NA of Special Foods  | 64,000  | $\leftarrow$ NCI share of net book value   |
|                             |         | I  |

### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation   | 300,000 | Accumulated depreciation at the             |
|----------------------------|---------|---|
| Decilation and accions and | 200.000 | $\leftarrow$ time of the acquisition netted |
| Building and equipment     | 300,000 | against cost                                |

Moreover, although Peerless recorded an equity-method entry to defer the unrealized gain on the sale of land, both the Income from Special Foods and Investment in Special Foods accounts are eliminated with the basic elimination entry. Therefore, based on the remaining numbers appearing in the trial balance, Peerless' income is overstated by the gain (\$15,000), Moreover, Special Foods' land account is still overstated by \$15,000. Simply adding up the Peerless and Special Foods columns of the consolidation worksheet will result in overstated consolidated net income, total assets, and retained earnings. Therefore, we also record an elimination to correct the unadjusted totals to the appropriate consolidated amounts. In doing so, consolidated income is reduced by \$15,000 when the gain is eliminated. In addition, land reported on Special Foods' books is stated at the intercompany sale price rather than the historical cost to the consolidated entity. Until the land is resold to an external party by Special Foods, its carrying value must be reduced by the amount of unrealized intercompany gain each time consolidated statements are prepared.

# Eliminate Gain on Sale of Land to Special Foods:

| Gain on Sale of Land | 15,000 |        |
|----------------------|--------|--------|
| Land                 |        | 15,000 |

In sum, because the land is still held within the consolidated entity, the \$15,000 gain recognized on Peerless' books must be eliminated in the consolidation worksheet so that it does not appear in the consolidated income statement. Similarly, the land must appear in the consolidated balance sheet at its \$20,000 original cost to the consolidated entity and, therefore, must be reduced from the \$35,000 amount carried on Special Foods' books.

### Consolidated Net Income

The 20X1 consolidated net income is computed and allocated as follows:

| Peerless' separate income   | \$155,000             |
|---|-----------------------|
| Less: Unrealized intercompany gain on downstream land sale                                | (15,000)              |
| Peerless' separate realized income  | \$140,000             |
| Special Foods' net income   | 50,000                |
| Consolidated net income, 20X1 Income to noncontrolling interest ( $$50,000 \times 0.20$ ) | \$190,000<br>(10,000) |
| Income to controlling interest  | <u>\$180,000</u>      |

### Noncontrolling Interest

The noncontrolling stockholders' share of consolidated net income is limited to their proportionate share of the subsidiary's income. Special Foods' net income for 20X1 is \$50,000, and the noncontrolling stockholders' ownership interest is 20 percent. Therefore, income of \$10,000 (\$50,000  $\times$  0.20) is allocated to the noncontrolling interest.

As shown in Figure 7–2, the total noncontrolling interest at the end of 20X1 is \$64,000. Normally the noncontrolling interest's claim on the subsidiary's net assets at a particular date is equal to a proportionate share of the subsidiary's book value and remaining differential at that date. In this example, the subsidiary's acquisition-date fair value and book value are equal, and, thus, no differential is associated with the combination. Accordingly, the noncontrolling interest on December 31, 20X1, is equal to a proportionate share of Special Foods' book value:

| Book value of Special Foods, December 31, 20X1:  |           |
|--|-----------|
| Common stock                                     | \$200,000 |
| Retained earnings                                | 120,000   |
| Total book value                                 | \$320,000 |
| Noncontrolling stockholders' proportionate share | × 0.20    |
| Noncontrolling interest, December 31, 20X1       | \$ 64,000 |

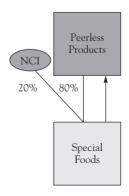

The noncontrolling interest is unaffected by the unrealized gain on the downstream sale.

# **Upstream Sale of Land**

An upstream sale of land results in the recording of an intercompany gain on the subsidiary's books. If the profits are unrealized from a consolidated viewpoint, they must not be included in the consolidated financial statements. Unrealized intercompany gains are eliminated from the consolidation worksheet in the same manner as in the downstream case. However, the gain elimination reduces both the controlling and the noncontrolling interests in proportion to their ownership.

When an upstream asset sale occurs and the parent resells the asset to a nonaffiliate during the same period, all the parent's equity-method entries and the elimination entries in the consolidation worksheet are identical to those in the downstream case. When the asset is not resold to a nonaffiliate before the end of the period, worksheet elimination entries are different from the downstream case only by the apportionment of the unrealized intercompany gain to both the controlling and noncontrolling interests. In this case, because the sale appears on Special Foods' income statement and because the NCI shareholders own 20 percent of Special Foods' outstanding shares, they are entitled to 20 percent of Special Foods' net income. Thus, the deferral of the unrealized gain accrues to both the Peerless and the NCI shareholders. In other words, the intercompany gain on an upstream sale is recognized by the subsidiary and shared between the controlling and noncontrolling stockholders of the subsidiary. Therefore, the elimination of the unrealized intercompany profit must reduce the interests of both ownership groups each period until the profit is confirmed by resale of the asset to a nonaffiliated party.

The treatment of an upstream sale may be illustrated with the same example used to illustrate a downstream sale. In this case, Special Foods recognizes a \$15,000<sup>2</sup> gain from

<sup>&</sup>lt;sup>2</sup> To avoid additional complexity, we assume the land's fair value is equal to its book value on the business combination date. As a result, there is no differential related to the land.

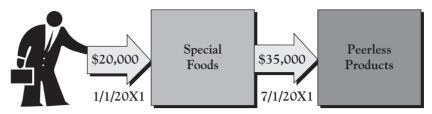

# LO 7-4

Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following an upstream land transfer.

selling the land to Peerless in addition to the \$50,000 of income earned from its regular operations; thus, Special Foods' net income for 20X1 is \$65,000. Peerless' separate income is \$140,000 and comes entirely from its normal operations.

The upstream sale from Special Foods to Peerless is as follows:

# Fully Adjusted Equity-Method Entries—20X1

During 20X1, Peerless records the normal entries under the fully adjusted equity method, reflecting its share of Special Foods' income and dividends:

| (8) | Investment in Special Foods                               | 52,000 |        |
|-----|---|--------|--------|
|     | Income from Special Foods                                 |        | 52,000 |
|     | Record Peerless' 80% share of Special Foods' 20X1 income. |        |        |
| (9) | Cash  | 24,000 |        |
|     | Investment in Special Foods                               |        | 24,000 |

Record Peerless' 80% share of Special Foods' 20X1 dividend.

These entries are the same as in the illustration of the downstream sale. The only difference is in the fully adjusted equity-method entry to defer the unrealized gain. The difference is that deferral is only for Peerless' ownership percentage of Special Foods (80 percent). Thus, the deferral of Peerless' relative share of the unrealized gross profit is  $12,000 (15,000 \times 0.80)$ .

| (10) | Income from Special Foods   | 12,000 |
|------|-----------------------------|--------|
|      | Investment in Special Foods | 12,000 |

Defer unrealized gain on the sale of land to Special Foods.

Peerless' equity-method accounts appear as follows at the end of 20X1:

| Investme<br>Special F    |                   |        |                  |        | e from<br>I Foods |                       |

| <b>Ending Balance</b>    | 256,000           |        |                  |        | 40,000            | <b>Ending Balance</b> |

# Consolidation Worksheet—20X1

Figure 7-3 illustrates the consolidation worksheet prepared at the end of 20X1. The first two elimination entries are the same as we prepared in Chapter 3 with one minor exception. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry, we reduce the amounts in Peerless' Income from Special Foods and Investment in Special Foods accounts by Peerless' share of the gain deferral, \$12,000 ( $\$15,000 \times 0.80$ ). We also reduce the NCI in Net Income of Special Foods and NCI in Net Assets of Special Foods by the NCI's share of the deferral,  $\$3,000 (\$15,000 \times 0.20).$

# **Book Value Calculations:**

|                             | NCI 20% | + Peerless 80% | = Common Stock + | - Retained Earnings |
|-----------------------------|---------|----------------|------------------|---------------------|
| Beginning book value        | 60,000  | 240,000        | 200,000          | 100,000             |
| + Net income                | 13,000  | 52,000         |                  | 65,000              |
| <ul><li>Dividends</li></ul> | (6,000) | (24,000)       |                  | (30,000)            |
| Ending book value           | 67,000  | 268,000        | 200,000          | 135,000             |

# **Basic Investment Account Elimination Entry:**

| Common stock Retained earnings Income from Special Foods NCI in NI of Special Foods Dividends declared | 200,000<br>100,000<br>40,000<br>10,000 | <ul> <li>← Common stock balance</li> <li>← Beginning RE from trial balance</li> <li>← Peerless' % of NI – 80% Def. Gain</li> <li>← NCI share of NI – 20% Def. Gain</li> <li>← 100% of sub's dividends declared</li> </ul> |
|--|--|---|
| Dividends declared   | 30,000                                 | $\leftarrow$ 100% of sub's dividends declared   |
| Investment in Special Foods  |  | ← Net BV − 80% Def. Gain  |
| NCI in NA of Special Foods   | 64,000                                 | $\leftarrow$ NCI share of BV $-$ 20% <b>Def. Gain</b>   |

# **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 | Accumulated depreciation at the             |
|--------------------------|---------|---|
| Building and equipment   | 300,000 | time of the acquisition netted against cost |
| Building and equipment   | 300,000 | '   |

The consolidation worksheet entry to correct for the intercompany sale is identical to the downstream case. The only difference is that the unrealized gain (and overstated income) is now in Special Foods' column of the consolidation worksheet and the overstated land is now in Peerless' column.

# Eliminate Gain on Purchase of Land from **Special Foods:**

| Gain on Sale of Land | 15,000 |
|----------------------|--------|
| Land                 | 15,000 |

# Consolidated Net Income

When intercompany profits that are unrealized from a consolidated point of view are included in a subsidiary's income, both consolidated net income and the noncontrolling stockholders' share of income must be adjusted for the unrealized profits. Consolidated net income for 20X1 is computed and allocated as follows:

| Peerless' separate income<br>Special Foods' net income<br>Less: Unrealized intercompany gain on upstream land sale | \$65,000<br>(15,000) | \$140,000             |
|--|----------------------|-----------------------|
| Special Foods' realized net income   |                      | 50,000                |
| Consolidated net income, 20X1 Income to noncontrolling interest ( $$50,000 \times 0.20$ )                          |                      | \$190,000<br>(10,000) |
| Income to controlling interest   |                      | <u>\$180,000</u>      |

Consolidated net income in this year is the same whether or not there is an intercompany sale because the gain is unrealized. The unrealized gain must be eliminated fully, with consolidated net income based only on the realized income of the two affiliates.

# Noncontrolling Interest

The income assigned to the noncontrolling shareholders is computed as their proportionate share of the realized income of Special Foods, as follows:

| Special Foods' net income<br>Less: Unrealized intercompany profit on upstream land sale                         | \$65,000<br>(15,000)           |
|---|--------------------------------|
| Special Foods' realized income Proportionate share to noncontrolling interest Income to noncontrolling interest | \$50,000<br>× 0.20<br>\$10,000 |
| meonic to noncontrolling interest   | <del>\$10,000</del>            |

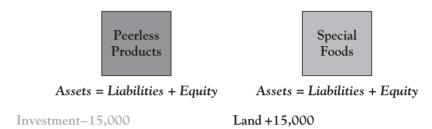

The total noncontrolling interest in the net assets of Special Foods is computed, in the absence of a differential, as the noncontrolling stockholders' proportionate share of the stockholders' equity of Special Foods, excluding unrealized gains and losses. On December 31, 20X1, the noncontrolling interest totals \$64,000, computed as follows:

| Book value of Special Foods, December 31, 20X1:    |           |
|--|-----------|
| Common stock                                       | \$200,000 |
| Retained earnings                                  | _135,000  |
| Total book value                                   | \$335,000 |
| Unrealized intercompany gain on upstream land sale | (15,000)  |
| Realized book value of Special Foods               | \$320,000 |
| Noncontrolling stockholders' proportionate share   | × 0.20    |
| Noncontrolling interest, December 31, 20X1         | \$ 64,000 |
|  |           |

# Eliminating the Unrealized Gain after the First Year

In the period in which unrealized profits arise from an intercompany sale, worksheet elimination entries are used in the consolidation process to remove the gain or loss recorded by the seller and to adjust the reported amount of the asset back to the price the selling affiliate originally paid.

When Peerless deferred the gain on its books in the year of the internal asset sale, the decrease in Income from Special Foods offset the gain on sale on its own books. When the gain and the Income from Special Foods accounts were closed out to retained earnings, the gain was offset against the artificially low Income from Special Foods balance. Hence, Peerless' retained earnings at the end of the year of the internal land sale is correct. The following illustration shows that Special Foods' land account is still overvalued and Peerless' investment account is still artificially low by the \$15,000 deferral.

Each period thereafter while the purchasing affiliate holds the asset, the reported asset balance and the shareholder claims of the selling affiliate are adjusted to remove the effects of the unrealized gain or loss. Income in those subsequent periods is not affected. For example, if Special Foods continues to hold the land purchased from Peerless Products, the following elimination entry is needed in the consolidation worksheet each time a consolidated balance sheet is prepared for years following the year of intercompany sale, for as long as the land is held:

| Investment in Special Foods | 15,000 |        |
|-----------------------------|--------|--------|
| Land                        |        | 15,000 |

This elimination entry simply corrects the balance in both the Land and Investment in Special Foods accounts. Whereas Peerless recorded an equity-method adjustment to defer the \$15,000 of unrealized gain on the sale of land in the year of the intercompany land transfer by artificially decreasing the Investment in Special Foods to offset the overstated land balance on Special Foods' books, this entry simply corrects both accounts. No income statement adjustments are needed in the periods following the intercompany sale until the inventory is resold to parties external to the consolidated entity.

In the upstream case, the subsidiary recognizes the intercompany gain. In the consolidation worksheet prepared in years subsequent to the intercompany transfer while the parent holds the land, the unrealized intercompany gain is eliminated from the reported balance of the land and proportionately from the subsidiary ownership interests with the following entry:

| Investment in Special Foods<br>NCI in NA of Special Foods | 12,000<br>3,000 |        |
|---|-----------------|--------|
| Land  |                 | 15,000 |

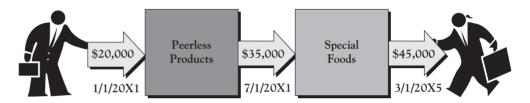

Recall that in the upstream case, Peerless deferred only its 80 percent share of the unrealized gain. As a result, the Investment in Special Foods account is "artificially low" by \$12,000. Thus, it make sense that the elimination entry can only increase the investment account by the amount that was deferred. All other elimination entries are made as if there is no unrealized intercompany gain.

# **Subsequent Disposition of the Asset**

Unrealized profits on intercompany sales of assets are viewed as being realized at the time the assets are resold to external parties. When a transferred asset is subsequently sold to an external party, the gain or loss recognized by the affiliate selling to the external party must be adjusted for consolidated reporting by the amount of the previously unrealized (and deferred) intercompany gain or loss. Although the seller's reported profit on the external sale is based on that affiliate's cost, the gain or loss reported by the consolidated entity is based on the cost of the asset to the consolidated entity, which is the cost incurred by the affiliate that purchased the asset originally from an outside party.

When previously unrealized intercompany profits are realized, the effects of the profit deferral must be reversed. At the time of realization, the full amount of the deferred intercompany profit is added back into the consolidated income computation and assigned to the shareholder interests from which it originally was eliminated.

To illustrate the treatment of unrealized intercompany profits once the transferred asset is resold, assume that Peerless purchases land from an outside party for \$20,000 on January 1, 20X1, and sells the land to Special Foods on July 1, 20X1, for \$35,000. Special Foods subsequently sells the land to an outside party on March 1, 20X5, for \$45,000, as follows:

Special Foods recognizes a gain on the sale to the outside party of \$10,000 (\$45,000 - \$35,000). From a consolidated viewpoint, however, the gain is \$25,000, the difference between the price at which the land left the consolidated entity (\$45,000) and the price at which the land entered the consolidated entity (\$20,000) when it was originally purchased by Peerless. Peerless would record an equity-method entry on its books to reverse the original deferral entry (10).

Reverse the deferred profit on the sale of land.

In the consolidation worksheet, the land no longer needs to be reduced by the unrealized intercompany gain because the gain now is realized and the consolidated entity no longer holds it. Instead, the \$10,000 gain recognized by Special Foods on the sale of the land to an outsider must be adjusted to reflect a total gain for the consolidated entity of \$25,000. Thus, the following elimination entry is made in the consolidation worksheet prepared at the end of 20X5:

| <b>Investment in Special Foods</b> | 15,000 |        |
|------------------------------------|--------|--------|
| Gain on sale of land               |        | 15,000 |

All other elimination entries are the same as if there were no unrealized intercompany profits at the beginning of the period. No additional consideration need be given to the intercompany transfer in periods subsequent to the external sale. From a consolidated viewpoint, all aspects of the transaction are complete, and the profit is realized once the sale to an external party occurs.

In this example, if Peerless had sold the land to the external party following an upstream intercompany transfer from Special Foods, the worksheet treatment would be the same as in the case of the downstream transfer except that the debit would be prorated between Investment in Special Foods (\$12,000) and NCI in Net Assets of Special Foods (\$3,000) based on the relative ownership interests.

**Investment in Special Foods** 12,000 **NCI in NA of Special Foods** 3,000 Gain on sale of land 15,000

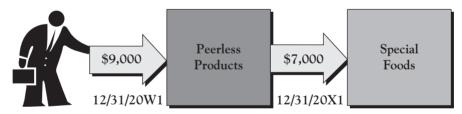

## INTERCOMPANY TRANSFERS OF DEPRECIABLE ASSETS

Unrealized intercompany profits on a depreciable or amortizable asset are viewed as being realized gradually over the remaining economic life of the asset as it is used by the purchasing affiliate in generating revenue from unaffiliated parties. In effect, a portion of the unrealized gain or loss is realized each period as benefits are derived from the asset and its service potential expires.

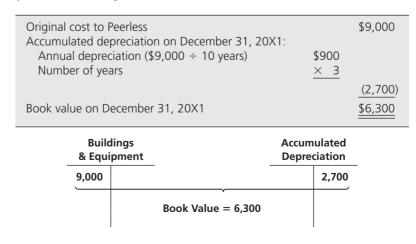

The amount of depreciation recognized on a company's books each period on an asset purchased from an affiliate is based on the intercompany transfer price. From a consolidated viewpoint, however, depreciation must be based on the cost of the asset to the consolidated entity, which is the asset's cost to the affiliate company that originally purchased it from an outsider. Elimination entries are needed in the consolidation worksheet to restate the asset, the associated accumulated depreciation, and the depreciation expense to the amounts that would have appeared in the financial statements if there had been no intercompany transfer. Because the intercompany sale takes place totally within the consolidated entity, the consolidated financial statements must appear as if the intercompany transfer had never occurred.

#### **Downstream Sale**

We now modify the Peerless Products and Special Foods example to illustrate the downstream sale of a depreciable asset. Assume that Peerless sells equipment to Special Foods on December 31, 20X1, for \$7,000, as follows:

The equipment originally cost Peerless \$9,000 when purchased on December 31, 20W8, three years before the December 31, 20X1, sale to Special Foods. Assume that the equipment has been depreciated based on an estimated useful life of 10 years using the straightline method with no residual value. The book value of the equipment immediately before the sale by Peerless is computed as follows:

## LO 7-5

Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following a downstream depreciable asset transfer.

The gain recognized by Peerless on the intercompany sale of the equipment is

| Sale price of the equipment       | \$7,000 |
|-----------------------------------|---------|
| Less: Book value of the equipment | (6,300) |
| Gain on sale of the equipment     | \$ 700  |

## Separate-Company Entries—20X1

Special Foods records the purchase of the equipment at its cost:

|      | December 31, 20X1             |       |       |
|------|-------------------------------|-------|-------|
| (12) | Equipment                     | 7,000 |       |
|      | Cash                          |       | 7,000 |
|      | Record purchase of equipment. |       |       |

Special Foods does not depreciate the equipment during 20X1 because it purchased the equipment at the very end of 20X1. However, Peerless does record depreciation expense on the equipment for 20X1 because it holds the asset until the end of the year (and the 20X1 depreciation expense is recorded prior to calculating the gain on sale shown above):

|      | December 31, 20X1                                   |     |     |
|------|---|-----|-----|
| (13) | Depreciation Expense                                | 900 |     |
|      | Accumulated Depreciation                            |     | 900 |
|      | Record 20X1 depreciation expense on equipment sold. |     |     |

Peerless also records the sale of the equipment at the end of 20X1 and recognizes the 700 (7,000 - 6,300) gain on the sale:

|      | December 31, 20X1         |       |   |
|------|---------------------------|-------|---|
| (14) | Cash                      | 7,000 | ٦ |
|      | Accumulated Depreciation  | 2,700 |   |
|      | Equipment                 | 9,000 | ) |
|      | Gain on Sale of Equipment | 700   | ) |
|      | Record sale of equipment. |       | _ |

In addition, Peerless records the normal fully adjusted equity-method entries to recognize its share of Special Foods' income and dividends for 20X1:

| (15) | Investment in Special Foods Stock                    | 40,000 |        |
|------|--|--------|--------|
|      | Income from Special Foods                            |        | 40,000 |
|      | Record equity-method income: $$50,000 \times 0.80$ . |        |        |
| (16) | Cash   | 24,000 |        |
|      | Investment in Special Foods Stock                    |        | 24,000 |
|      | Description of from Special Foods, \$20,000 × 0.00   |        |        |

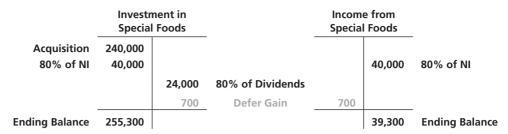

Record dividends from Special Foods: \$30,000  $\times$  0.80.

To ensure that its income for 20X1 is correct, under the fully adjusted equity method, Peerless also defers 100 percent of the gain on the downstream intercompany sale of equipment as follows:

| (17) | Income from Special Foods   | 700 |
|------|-----------------------------|-----|
|      | Investment in Special Foods | 700 |

Defer unrealized gain on asset sale to Special Foods.

Thus, Peerless' equity-method accounts appear as follows at the end of 20X1:

## Consolidation Worksheet—20X1

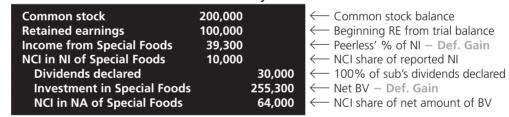

Figure 7-4 illustrates the worksheet to prepare consolidated financial statements at the end of 20X1. To prepare the basic elimination entry, we first analyze the book value of Special Foods and allocate each component to Peerless and the NCI shareholders:

#### **Book Value Calculations:**

|                             | NCI 20% - | + Peerless 80% | = | Common Stock | + Retained Earnings |
|-----------------------------|-----------|----------------|---|--------------|---------------------|
| Beginning book value        | 60,000    | 240,000        |   | 200,000      | 100,000             |
| + Net income                | 10,000    | 40,000         |   |              | 50,000              |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)       |   |              | (30,000)            |
| Ending book value           | 64,000    | 256,000        |   | 200,000      | 120,000             |

The basic elimination entry is the same as illustrated in Chapter 3 except that we adjust the entries to the Investment in Special Foods and Income from Special Foods accounts for the gain that has been deferred on the intercompany asset sale (\$700):

#### **Basic Investment Account Elimination Entry:**

## **Optional Accumulated Depreciation Elimination Entry:**

Although Peerless recorded an equity-method entry to defer the unrealized gain on the equipment sale, both the Income from Special Foods and Investment in Special Foods accounts are eliminated with the basic elimination entry. Peerless' income is overstated by the gain (\$700). Moreover, Special Foods' Building and Equipment account is overstated by the same amount. Therefore, we need an additional elimination entry to remove the gain that appears in Peerless' income statement and to correct the basis of the equipment on Special Foods' books to make it appear as if the asset had not been sold within the consolidated group. One way to calculate this elimination entry is to compare what actually happened (as recorded on the individual financial statements of the two companies) with how the accounts would have appeared in the consolidated financial statements if the transfer had not occurred. Whereas the equipment currently resides on Special Foods' books (valued at the acquisition price of \$7,000 with no accumulated depreciation), we want it to appear in the consolidated financial statements if the transfer had not occurred as if it had not been transferred from Peerless to Special

FIGURE 7-4 December 31, 20X1, Consolidation Worksheet, Period of Intercompany Sale; Downstream

| Common Stock                    | 500,000   | 200,000   | 200,000    |           | 500,000      |
| Retained Earnings               | 420,000   | 120,000   | 150,000    | 30,000    | 420,000      |
| NCI in NA of Special Foods      |           |           |            | 64,000    | 64,000       |
| Total Liabilities & Equity      | 1,220,000 | 520,000   | 350,000    | 94,000    | 1,484,000    |

Foods (historical cost of \$9,000 with accumulated depreciation of \$2,700 as explained previously). The following T-accounts illustrate how to determine the correct elimination entry to defer the gain and correct the basis of the asset:

|               | Buildings<br>Equipmer |        | Accumulated<br>Depreciation | Gain o | n Sale |
|---------------|-----------------------|--------|-----------------------------|--------|--------|
| Special Foods | 7,000                 | Actual | 0                           |        | 700    |
|               | 2,000                 |        | 2,700                       | 700    |        |
| Peerless      | 9,000                 | As if  | 2,700                       |        | 0      |

Note that the elimination entry comprises the adjustments to convert each account from "actual" to "as if" the transfer had not taken place.

Eliminate Gain on the Equipment Sold to Special Foods and Correct the Assets' Basis:

|                                |       | -     |
|--------------------------------|-------|-------|
| Gain on Sale                   | 700   |       |
| <b>Buildings and Equipment</b> | 2,000 |       |
| Accumulated Depreciation       | n     | 2.700 |

## Separate-Company Entries—20X2

During 20X2, Special Foods begins depreciating its \$7,000 cost of the equipment acquired from Peerless Products over its remaining life of seven years using straight-line depreciation. The resulting depreciation is \$1,000 per year (\$7,000  $\div$  7 years):

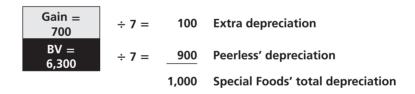

Record depreciation expense for 20X2.

Peerless records its normal equity-method entries for 20X2 to reflect its share of Special Foods' \$74,000 income and dividends of \$40,000. Note that Special Foods' net income is only \$74,000 in 20X2 because it has been reduced by the \$1,000 of depreciation on the transferred asset. Accordingly, Peerless' share of that income is \$59,200  $(\$74,000 \times 0.80).$ 

| (19) | Investment in Special Foods                          | 59,200 |        |
|------|--|--------|--------|
|      | Income from Subsidiary                               |        | 59,200 |
|      | Record equity-method income: $$74,000 \times 0.80$ . |        |        |
| (20) | Cash   | 32,000 |        |
|      | Investment in Special Foods                          |        | 32,000 |
|      | De and divide de fram Carriel Frank #40,000 × 0,00   |        |        |

Record dividends from Special Foods: \$40,000  $\times$  0.80.

Peerless must record one additional equity-method entry related to the transferred asset. Because the equipment was recorded at the time of the December 31, 20X1, sale on Special Foods' balance sheet at \$7,000 (rather than the \$6,300 book value at which it had been recorded on Peerless' books), Special Foods will record "extra" depreciation expense each year over the asset's seven-year life. Special Foods' annual depreciation  $(\$7,000 \div 7 \text{ years} = \$1,000 \text{ per year})$  is \$100 higher per year than it would have been if Peerless had kept the equipment (\$900 per year).

Special Foods' extra depreciation essentially cancels out one-seventh of the unrealized gain. As a result, over the asset's seven-year life, the unrealized gain is offset by the \$700 of extra depreciation expense. Thus, in 20X2 (and each of the next six years) Peerless adjusts for the "extra depreciation" by reversing one-seventh of the gain deferral in its equity-method accounts as follows:

Reverse one-seventh of the deferred gain on fixed asset sold to Special Foods.

### Consolidation Worksheet—20X2

Figure 7–5 on page 331 presents the consolidation worksheet for 20X2. The trial balance amounts from the Chapter 3 example have been adjusted to reflect the intercompany asset sale. To prepare the basic elimination entry, we again analyze the updated book value of Special Foods and examine the allocation of each component to Peerless and the NCI shareholders. Thus, to present the consolidated financial statements as if the equipment had

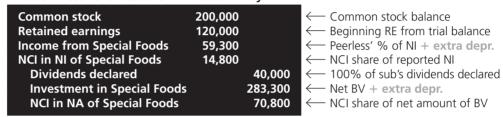

not been transferred to Special Foods, we need to decrease depreciation expense to the amount Peerless would have recorded had the equipment stayed on its books.

#### **Book Value Calculations:**

|                             | NCI 20% - | + Peerless 80% | Common Stock + | Retained Earnings |
|-----------------------------|-----------|----------------|----------------|-------------------|
| Beginning book value        | 64,000    | 256,000        | 200,000        | 120,000           |
| + Net income                | 14,800    | 59,200         |                | 74,000            |
| <ul><li>Dividends</li></ul> | (8,000)   | (32,000)       |                | (40,000)          |
| Ending book value           | 70,800    | 283,200        | 200,000        | 154,000           |

The basic elimination entry is the same as illustrated in Chapter 3 except that we adjust the entries to the Investment in Special Foods and Income from Special Foods accounts for the extra \$100 of depreciation for 20X2 associated with the asset transfer:

#### **Basic Investment Account Elimination Entry:**

#### **Optional Accumulated Depreciation Elimination Entry:**

In the 20X2 worksheet, two consolidation elimination entries are necessary. The first corrects depreciation expense by adjusting it to what it would have been if the asset had stayed on Peerless' books. The second revalues the asset from its current book value on Special Foods' books to what its book value would have been if it had stayed on Peerless' books. Again, T-accounts can be a helpful tool in figuring out the elimination entries. We find it useful to calculate the elimination of the extra depreciation expense first because the debit to Accumulated Depreciation affects the calculation of the credit to this account in the second entry.

|               | Buildii<br>Equip | _      | Accum<br>Depre |       |
|---------------|------------------|--------|----------------|-------|
| Special Foods | 7,000            | Actual |                | 1,000 |
|               | 2,000            |        | 100            | 2,700 |
| Peerless      | 9,000            | As if  |                | 3,600 |

The actual amounts in these accounts are based on Special Foods' acquisition price (\$7,000) and its first year's accumulated depreciation (\$1,000). The "as if" amounts are Peerless' original cost when it acquired the equipment from an unrelated party and the accumulated depreciation it would have reflected had the asset stayed on Peerless' books in the absence of the transfer, \$3,600 (\$2,700 prior year's accumulated depreciation + \$900 current year's depreciation). The second elimination entry is calculated as the amounts needed to adjust from actual to as if the asset had stayed on Peerless' books (after entering the debit to Accumulated Depreciation from the first elimination entry).

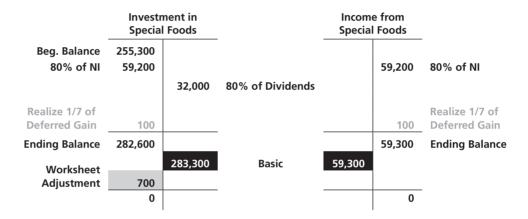

| Accumulated Depreciation | 100 |     |
|--------------------------|-----|-----|
| Depreciation Expense     |     | 100 |

Entries to adjust equipment and accumulated depreciation as if still on parent's books:

**Investment in Special Foods** 700 **Buildings and Equipment** 2,000 **Accumulated Depreciation** 2,700

Note that the first elimination entry backs out the extra depreciation expense from Special Foods' income statement. Again, the debit to the investment account in the second elimination entry is equal to the amount of unrealized gain at the beginning of the year. Given the gain deferral entry in 20X1 under the fully adjusted equity method, the investment account is "artificially low" by \$700. Thus, the basic elimination entry would "overeliminate" this account. Therefore, the debit of \$700 helps to eliminate the investment account. The debit to Buildings and Equipment in this elimination entry is simply the difference between Special Foods' cost (\$7,000) and peerless' historical cost (\$9,000). The credit to accumulated depreciation in this elimination entry represents the difference between what accumulated depreciation would have been if the asset had stayed on Peerless' books, \$3,600 (\$900 × 4 years) and the amount Special Foods actually recorded, \$1,000, less the extra depreciation.

The following T-accounts illustrate how the worksheet entries eliminate the Investment in Special Foods and Income from Special Foods accounts:

Once all the elimination entries have been made in the worksheet, the adjusted balances exclude the effects of the intercompany transfer:

|                          | Subsidiary<br>Trial Balance | Elimination | Consolidated<br>Amounts |
|--------------------------|-----------------------------|-------------|-------------------------|
| Buildings & Equipment    | \$7,000                     | \$2,000     | \$9,000                 |
| Accumulated Depreciation | (1,000)                     | (2,600)     | (3,600)                 |
| Depreciation Expense     | 1,000                       | (100)       | 900                     |

## Consolidated Net Income and Retained Earnings

Computation of consolidated net income for 20X2 must include an adjustment for the realization of profit on the 20X1 sale of equipment to Special Foods:

| Peerless' separate income<br>Partial realization of intercompany gain on downstream sale of equipment | \$160,900<br>100      |
|---|-----------------------|
| Peerless' separate realized income<br>Special Foods' net income                                       | \$161,000<br>74,000   |
| Consolidated net income, 20X2 Income to noncontrolling interest ( $$74,000 \times 0.20$ )             | \$235,000<br>(14,800) |
| Income to controlling interest  | \$220,200             |

FIGURE 7-5 December 31, 20X2, Consolidation Worksheet, Next Period Following Intercompany Sale; Downstream Sale of Equipment

Because Peerless adjusts its investment income from Special Foods for unrealized gains and losses under the fully adjusted equity method, Peerless' Retained Earnings account equals the amount that should be reported as consolidated retained earnings. This is one of the advantages of using the fully adjusted equity method. Appendix 7A illustrates procedures for the modified equity method.

#### Noncontrolling Interest

Income allocated to the noncontrolling stockholders in 20X2 is equal to their proportionate share of the subsidiary's realized and reported income. Special Foods' net income for 20X2 is \$74,000, and the noncontrolling interest's 20 percent share is \$14,800  $(\$74,000 \times 0.20).$ 

The total noncontrolling interest in the net assets of Special Foods at the end of 20X2 is \$70,800, equal to the noncontrolling stockholders' proportionate share of the total book value of the subsidiary:

| Book value of Special Foods, December 31, 20X2:  |                  |
|--|------------------|
| Common stock                                     | \$200,000        |
| Retained earnings                                | 154,000          |
| Total book value                                 | \$354,000        |
| Noncontrolling stockholders' proportionate share | × 0.20           |
| Noncontrolling interest, December 31, 20X2       | <u>\$ 70,800</u> |

Normally the noncontrolling interest at a particular date is equal to a proportionate share of the subsidiary's book value plus the noncontrolling interest's share of the remaining differential at that date. In this example, however, no differential was recognized at the date of combination.

## Consolidation in Subsequent Years

The consolidation procedures in subsequent years are quite similar to those in 20X2. As long as Special Foods continues to hold and depreciate the equipment (i.e., until the asset is fully depreciated), consolidation procedures include two objectives each year:

- 1. Restating the asset and accumulated depreciation balances from actual to as if the asset had stayed on Peerless' books.
- 2. Adjusting depreciation expense for the year from actual to as if the asset had stayed on Peerless' books.

Figure 7–6 summarizes the worksheet elimination entries at December 31 of each year from 20X1 to 20X8. Observation of the elimination entries from 20X2-20X8 illustrates a clear pattern. The first elimination entry to back out the extra depreciation is the same each year. Because the extra depreciation recorded each year by Special Foods effectively cancels out one-seventh of the unrealized gain and because Peerless continues to record an equity method adjustment to recognize this "canceling" of the unrealized gain as shown in entry (21), the debit to the Investment in Special Foods account and the credit to Accumulated Depreciation in the second elimination entry each decreases by \$100 each year until the asset is fully depreciated and the intercompany gain is fully recognized. After 20X8, once the transferred asset is fully depreciated no further equity-method entries are required on Peerless' books and only one elimination entry is required in consolidation related to this asset transfer. The elimination entry in all subsequent years (for as long as Special Foods owns the transferred asset) would simply debit Buildings and Equipment for \$2,000 (to increase the basis from Special Foods acquisition price of \$7,000 to Peerless' original purchase price of \$9,000) and credit Accumulated Depreciation for \$2,000.

## Change in Estimated Life of Asset upon Transfer

When a depreciable asset is transferred between companies, a change in the remaining estimated economic life may be appropriate. For example, the acquiring company may use the asset in a different type of production process, or the frequency of use may change. When a change in the estimated life of a depreciable asset occurs at the time of an intercompany transfer, the treatment is no different than if the change had occurred while the asset remained on the books of the transferring affiliate. The new remaining useful life is used as a basis for depreciation both by the purchasing affiliate and for purposes of preparing consolidated financial statements. Thus, the as if calculation assumes the asset stayed on the transferring company's books but that the transferring company decided to revise its depreciation estimate to the useful life adopted by the new asset owner.

## **Upstream Sale**

The treatment of unrealized profits arising from upstream intercompany sales is identical to that of downstream sales except that the unrealized profit, and subsequent realization, must be allocated between the controlling and noncontrolling interests. We illustrate an upstream sale using the same example we demonstrated previously for the downstream sale. Assume that Special Foods sells equipment to Peerless Products for \$7,000 on December 31, 20X1, and reports total income for 20X1 of \$50,700 (\$50,000 + \$700),

LO 7-6

Prepare equity-method journal entries and elimination entries for the consolidation of a subsidiary following an upstream depreciable asset transfer.

including the \$700 gain on the sale of the equipment. Special Foods originally purchased the equipment for \$9,000 three years before the intercompany sale.<sup>3</sup> The book value of the equipment at the date of sale is as follows:

| Original cost to Special Foods   |       | \$9,000 |
|--|-------|---------|
| Accumulated depreciation on December 31, 20X1:<br>Annual depreciation (\$9,000 ÷ 10 years) | \$900 |         |
| Number of years  | × 3   |         |
|  |       | (2,700) |
| Book value on December 31, 20X1  |       | \$6,300 |

## Separate-Company Entries—20X1

Record sale of equipment.

Special Foods records depreciation on the equipment for the year and the sale of the equipment to Peerless on December 31, 20X1, with the following entries:

Peerless records the purchase of the equipment from Special Foods with the following entry:

|      | December 31, 20X1             |       |       |
|------|-------------------------------|-------|-------|
| (24) | Equipment                     | 7,000 |       |
|      | Cash                          |       | 7,000 |
|      | Record purchase of equipment. |       |       |

In addition, Peerless records the following equity-method entries on December 31, 20X1, to recognize its share of Special Foods' reported income and dividends:

| (25) | Investment in Special Foods   | 40,560 |        |
|------|---|--------|--------|
|      | Income from Special Foods   |        | 40,560 |
|      | Record Peerless' 80% share of Special Foods' 20X1 income: $\$50,700 \times 0$ . | 80     |        |
|      |   |        |        |
| (26) | Cash  | 24 000 |        |
| (26) | Cash Investment in Special Foods  | 24,000 | 24.000 |

Finally, under the fully adjusted equity method, Peerless records its share of the gain deferral from the purchase of the equipment from Special Foods.

| (27) | Income from Special Foods   |  |   |   | 560  |     |
|------|-----------------------------|--|---|---|------|-----|
|      | Investment in Special Foods |  |   |   |      | 560 |
|      | - 6 6                       |  | - | _ | <br> |     |

Defer 80% of the unrealized gain on equipment purchase from Special Foods: \$700  $\times$  0.80.

<sup>&</sup>lt;sup>3</sup> To avoid additional complexity, we assume the equipment's fair value is equal to its book value on the business combination date. As a result, there is no differential related to the equipment.

These entries result in the following balances in the Investment in Special Foods and Income from Special Foods equity-method accounts:

|                          |                   | nent in<br>I Foods |                  |     | e from<br>I Foods |                       |
|--------------------------|-------------------|--------------------|------------------|-----|-------------------|-----------------------|
| Acquisition<br>80% of NI | 240,000<br>40,560 |                    |                  |     | 40,560            | 80% of NI             |
|                          |                   | 24,000             | 80% of Dividends |     |                   |                       |
|                          |                   | 560                | Defer 80% Gain   | 560 |                   |                       |
| <b>Ending Balance</b>    | 256,000           |                    |                  |     | 40,000            | <b>Ending Balance</b> |

#### Consolidation Worksheet—20X1

Figure 7–7 on page 337 illustrates the consolidation worksheet for 20X1. It is the same as the worksheet presented in Figure 7-5 except for minor modifications to reflect the upstream sale of the equipment. As usual, to prepare the basic elimination entry, we first analyze the book value of Special Foods and allocate each component to Peerless and the NCI shareholders:

#### **Book Value Calculations:**

|                             | NCI 20% + | Peerless 80% | = Common Stock + | Retained Earnings |
|-----------------------------|-----------|--------------|------------------|-------------------|
| Beginning book value        | 60,000    | 240,000      | 200,000          | 100,000           |
| + Net income                | 10,140    | 40,560       |                  | 50,700            |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)     |                  | (30,000)          |
| Ending book value           | 64,140    | 256,560      | 200,000          | 120,700           |

The basic elimination entry is the same as illustrated in Chapter 3 except that we adjust both the controlling and noncontrolling interests in Special Foods' income and net assets by their respective shares of the gain that has been deferred on the intercompany asset sale:

### **Basic Investment Account Elimination Entry:**

#### **Optional Accumulated Depreciation Elimination Entry:**

As illustrated previously, one way to calculate the gain elimination entry is to compare what actually happened (as recorded on the individual financial statements of the two companies) with how the transaction would appear in the consolidated financial statements if the asset transfer had not taken place. Whereas the equipment currently resides on Peerless' books (valued at the acquisition price of \$7,000 with no accumulated depreciation), we want it to appear in the consolidated financial statements as if it had not been transferred from Special Foods to Peerless (historical cost of \$9,000 with accumulated depreciation of \$2,700, as explained previously). The following T-accounts illustrate how to determine the correct elimination entry to defer the gain and correct the basis of the asset:

|               | Buildiı<br>Equip | 9      | Accumulated<br>Depreciation | Gain o | n Sale |
|---------------|------------------|--------|-----------------------------|--------|--------|
| Peerless      | 7,000            | Actual | 0                           |        | 700    |
|               | 2,000            |        | 2,700                       | 700    |        |
| Special Foods | 9,000            | As if  | 2,700                       |        | 0      |

Eliminate Gain on the Equipment Sold to Special Foods and Correct the Assets' Basis:

| Gain on Sale                    | 700   |       |
|---------------------------------|-------|-------|
| Buildings and Equipment         | 2,000 |       |
| <b>Accumulated Depreciation</b> |       | 2,700 |

As it turns out, the elimination entry for the upstream sale is exactly the same as the downstream example for 20X1.

As illustrated in Figure 7–7, the income assigned to the noncontrolling shareholders based on their share of Special Foods' realized income is computed as follows:

| Net income of Special Foods for 20X1             | \$50,700 |
|--|----------|
| Unrealized gain on intercompany sale             | (700)    |
| Realized net income of Special Foods for 20X1    | \$50,000 |
| Noncontrolling stockholders' proportionate share | × 0.20   |
| Income to noncontrolling interest, 20X1          | \$10,000 |

In the upstream case, as in the downstream case, consolidated net income is reduced by the amount of the current period's unrealized gain on the intercompany transfer. However, in the upstream case, the unrealized gain reduces both the controlling and noncontrolling interests proportionately because both are owners of Special Foods and share in the gain. The allocation of Special Foods' income to the controlling and noncontrolling interests is based on Special Foods' realized net income after having deducted the unrealized gain. The computation and allocation of 20X1 consolidated net income is as follows:

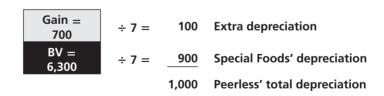

| Peerless' separate income                                       |          | \$140,000        |
|---|----------|------------------|
| Special Foods' net income                                       | \$50,700 |                  |
| Less: Unrealized intercompany gain on upstream sale of equipmen | (700)    |                  |
| Special Foods' realized net income                              |          | 50,000           |
| Consolidated net income, 20X1                                   |          | \$190,000        |
| Income to noncontrolling interest (\$50,000 $\times$ 0.20)      |          | (10,000)         |
| Income to controlling interest                                  |          | <u>\$180,000</u> |

## Separate-Company Books—20X2

In the year following the intercompany transfer, Special Foods reports net income of \$75,900 (because the \$900 of depreciation expense on the transferred asset is now on Peerless' income statement). In the upstream example, the extra \$100 of depreciation expense now appears in Peerless' income statement:

FIGURE 7-7 December 31, 20X1, Consolidation Worksheet, Period of Intercompany Sale; **Upstream Sale of Equipment**

| Total Liabilities & Equity      | 1,220,000 | 520,700          | 350,700 | 94,000     | 1,484,000    |  |

Peerless records the normal fully adjusted equity-method entries on its books to recognize its share of Special Foods' 20X2 income and dividends. Moreover, it recognizes 80 percent of the deferred gain, \$80 ((\$700  $\div$  7 years)  $\times$  0.80).

Peerless' extra depreciation essentially cancels out one-seventh of the unrealized gain. As a result, over the seven-year life of the asset, Peerless recognizes one-seventh of the gain deferral each year in its equity-method accounts:

(28)Investment in Special Foods Income from Special Foods 80 At the end of 20X2, the Investment in Special Foods and Income from Special Foods accounts on Peerless' books appear as follows:

|                           | Investr<br>Special |        |                  | Income<br>Special I |        |                       |
|---------------------------|--------------------|--------|------------------|---------------------|--------|-----------------------|

#### Consolidation Elimination Entries—20X2

Figure 7–8 presents the consolidation worksheet for 20X2. We again analyze the updated book value of Special Foods and examine the allocation of each component to Peerless and the NCI shareholders. Also, to present the consolidated financial statements as if the equipment had not been transferred to Peerless, we need to decrease depreciation expense to the amount Special Foods would have recorded had the equipment stayed on its books.

#### **Book Value Calculations:**

|                             | NCI 20% + | Peerless 80% = | Common Stock + | Retained Earnings |
|-----------------------------|-----------|----------------|----------------|-------------------|
| Beginning book value        | 64,140    | 256,560        | 200,000        | 120,700           |
| + Net income                | 15,180    | 60,720         |                | 75,900            |
| <ul><li>Dividends</li></ul> | (8,000)   | (32,000)       |                | (40,000)          |
| Ending book value           | 71,320    | 285,280        | 200,000        | 156,600           |

The basic elimination entry is the same as illustrated in Chapter 3 except that we adjust the entries to the Investment in Special Foods and Income from Special Foods accounts for their 80 percent share of the extra \$100 of depreciation for 20X2 associated with the asset transfer. Moreover, we add back 20 percent of the \$100 of extra depreciation to the NCI in NI of Special Foods and NCI in NA of Special Foods:

### **Basic Investment Account Elimination Entry:**

| Retained earnings<br>Income from Special Foods  | 200,000<br>120,700<br>60,800 | <ul> <li>← Common stock balance</li> <li>← Beginning RE from trial balance</li> <li>← Peerless' % of NI + 80% extra depr.</li> </ul>   |
|---|------------------------------|--|
| NCI in NI of Special Foods<br>Dividends declared<br>Investment in Special Foods<br>NCI in NA of Special Foods | 285,360                      | <ul> <li>← NCI share of NI + 20% extra depr.</li> <li>← 100% of sub's dividends declared</li> <li>← Net BV + 80% extra depr.</li> <li>← NCI share of BV + 20% extra depr.</li> </ul> |

#### **Optional Accumulated Depreciation Elimination Entry:**

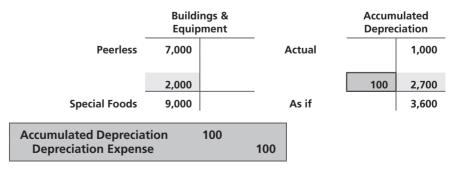

| Accumulated depreciation | 300.000 | Accumulated depreciation at the  |
|--------------------------|---------|----------------------------------|
| •                        |         | ← time of the acquisition netted |
| Building and equipment   | 300,000 | against cost                     |

In the 20X2 worksheet, the same two consolidation elimination entries discussed in the downstream example are necessary. The only difference from the downstream example is that the amount of deferred gain on Special Foods' equipment sale to Peerless at the beginning of the period (\$700) is allocated between Peerless and the NCI shareholders based on their relative ownership percentages. Again, T-accounts can be a helpful tool in figuring out the elimination entries. It is helpful to calculate the elimination

FIGURE 7-8 December 31, 20X2, Consolidation Worksheet, Next Period Following Intercompany Sale; **Upstream Sale of Equipment** 

|                                 | Peerless Special |           | Eliminatio | on Entries |                  |
|---------------------------------|------------------|-----------|------------|------------|------------------|

| Less: Accumulated Depreciation  | (501,000)        | (336,400) | 300,000    | 2,700      | (540,000)        |
| Total Assets                    | 1,379,800        | 556,600   | 302,660    | 588,060    | 1,651,000        |
|                                 |                  |           | ===,===    | ===,       |                  |
| Accounts Payable                | 100,000          | 100,000   |            |            | 200,000          |
| Bonds Payable                   | 200,000          | 100,000   | 200.000    |            | 300,000          |
| Common Stock                    | 500,000          | 200,000   | 200,000    | 40.400     | 500,000          |
| Retained Earnings               | 579,800          | 156,600   | 196,700    | 40,100     | 579,800          |
| NCI in NA of Special Foods      |                  |           | 140        | 71,340     | 71,200           |
| Total Liabilities & Equity      | 1,379,800        | 556,600   | 396,840    | 111,440    | <u>1,651,000</u> |

of the extra depreciation expense first because the debit to Accumulated Depreciation affects the calculation of the credit to this account in the second entry.

The actual amounts in these accounts are based on Peerless' acquisition price (\$7,000) and its first year's accumulated depreciation (\$1,000). The as if amounts are Special Foods' original cost when it acquired the equipment from an unrelated party and the accumulated depreciation it would have reflected had the asset stayed on Special Foods' books in the absence of the transfer, \$3,600 (\$2,700 prior-year accumulated depreciation + \$900 current-year depreciation). The second elimination entry is calculated as the amounts needed to adjust from actual to as if the asset had stayed on Special Foods' books.

Entries to Adjust Equipment and Accumulated Depreciation as if Still on Parent's Books:

| Investment in Special Foods     | 560   |       |
|---------------------------------|-------|-------|
| NCI in NA of Special Foods      | 140   |       |
| Buildings and Equipment         | 2,000 |       |
| <b>Accumulated Depreciation</b> |       | 2,700 |

As explained in the downstream example, the key to understanding these elimination entries is that the debit to the investment account in the first elimination entry is equal to Peerless' share of the unrealized gain at the beginning of the year. Given the gain deferral entry in 20X1 under the fully adjusted equity method, the investment account is "artificially low" by \$560. Thus, the basic elimination entry would "over-eliminate" this account. For this reason, the debit of \$560 helps to eliminate the investment account. The rest of the deferral, \$140, is allocated to the noncontrolling interest.

#### Consolidated Net Income

Peerless Products' separate income for 20X2 is \$159,000 after deducting an additional \$1,000 for the depreciation on the transferred asset. Consolidated net income for 20X2 is computed and allocated as follows:

| Specia | ss' separate income<br>I Foods' net income<br>realization of intercompany gain on upstream sale of equipment | \$75,900<br>100 | \$159,000             |
|--------|--|-----------------|-----------------------|
| Specia | l Foods' realized net income   |                 | 76,000                |
|        | lidated net income, 20X2 e to noncontrolling interest (\$76,000 $	imes$ 0.20)                                |                 | \$235,000<br>(15,200) |
| Incom  | e to controlling interest  |                 | <u>\$219,800</u>      |

Note that the partial realization of intercompany gain on the asset transfer is the extra depreciation recorded this year by Peerless.

#### Noncontrolling Interest

The noncontrolling interest's share of income is \$15,200 for 20X2, computed as the noncontrolling stockholders' proportionate share of the realized income of Special Foods  $(\$76,000 \times 0.20)$ . Total noncontrolling interest in the absence of a differential is computed as the noncontrolling stockholders' proportionate share of the stockholders' equity of Special Foods, excluding unrealized gains and losses. On December 31, 20X2, the noncontrolling interest totals \$71,200, computed as follows:

| Book value of Special Foods, December 31, 20X2:<br>Common Stock<br>Retained earnings (\$120,700 + \$75,900 - \$40,000) | \$200,000<br> |
|--|---------------|
| Total book value   | \$356,600     |
| Unrealized 20X1 intercompany gain on upstream sale   | (700)         |
| Intercompany gain realized in 20X2   | 100           |
| Realized book value of Special Foods   | \$356,000     |
| Noncontrolling stockholders' share   | × 0.20        |
| Noncontrolling interest, December 31, 20X2   | \$ 71,200     |

## Consolidation in Subsequent Years

The consolidation procedures in subsequent years are quite similar to those in 20X2. Figure 7–9 summarizes the worksheet elimination entries at December 31 of each year from 20X2 to 20X8. We omit 20X1 because it is identical to the downstream entry

FIGURE 7–9 Summary of Worksheet Elimination Entries over the Life of the Transferred Asset (upstream transfer)

|             | (apstream transfer)  |                     |       |                |                 |             |        | _              |
|-------------|--|---------------------|-------|----------------|-----------------|-------------|--------|----------------|
| 20X2:       | Accumulated Depreciation<br>Depreciation Expense   | 100                 | 100   | Peerless:      | Build. & Equip. | _<br>Actual | Acc. I | 1,000          |

| After 20X8: | Investment in Special Foods<br>Accumulated Depreciation  | 2,000               | 2,000 | Peerless:      | Build. & Equip. | _<br>Actual | Acc. I | 7,000          |
|             |  |                     |       | Special Foods: | 2,000<br>9,000  | –<br>As if  |        | 2,000<br>9,000 |

reported in Figure 7-6. Observation of the elimination entries from 20X2-20X8 again illustrates a clear pattern. The first elimination entry to back out the extra depreciation is the same, each year. Because the extra depreciation recorded each year by Peerless effectively cancels out one-seventh of the unrealized gain and because Peerless continues to record an equity-method adjustment to recognize this acknowledgment of the unrealized gain (entry 28), the sum of the debits to the Investment and NCI in NA of Special Foods accounts, and the credit to accumulated depreciation in the second elimination entry each decreases by \$100 each year until the asset is fully depreciated and the intercompany gain is fully recognized. After 20X8, no further equity-method entries are required on Peerless' books, and only one elimination entry is required in consolidation related to this asset transfer. The elimination entry in all subsequent years (for as long as Peerless owns the transferred asset) would simply debit Buildings and Equipment for \$2,000 (to increase the basis from Peerless' acquisition price of \$7,000 to Special Food's original purchase price of \$9,000) and credit Accumulated Depreciation for \$2,000.

#### **Asset Transfers before Year-End**

In cases in which an intercompany asset transfer occurs during a period rather than at its end, a portion of the intercompany gain or loss is considered to be realized in the period of the transfer. When this occurs, the worksheet elimination entries at year-end must include an adjustment of depreciation expense and accumulated depreciation. The amount of this adjustment is equal to the difference between the depreciation recorded by the purchaser and that which would have been recorded by the seller during the portion of the year elapsing after the intercompany sale.

For example, if the upstream equipment sale from Special Foods to Peerless had occurred on January 1, 20X1, rather than on December 31, 20X1, an additional elimination entry (the second entry listed for every other year) would be needed in the consolidation worksheet on December 31, 20X1, to eliminate the "extra" depreciation.

## INTERCOMPANY TRANSFERS OF AMORTIZABLE ASSETS

Production rights, patents, and other types of intangible assets may be sold to affiliated enterprises. Accounting for intangible assets usually differs from accounting for tangible assets in that amortizable intangibles normally are reported at the remaining unamortized balance without the use of a contra account for accumulated amortization. Other than netting the accumulated amortization on an intangible asset against the asset cost, the intercompany sale of intangibles is treated in the same way in consolidation as the intercompany sale of tangible assets.

# Summary of **Key Concepts**

Transactions between affiliated companies within a consolidated entity must be viewed as if they occurred within a single company. Under generally accepted accounting principles, the effects of transactions that are internal to an enterprise may not be included in external accounting reports. Therefore, the effects of all transactions between companies within the consolidated entity must be eliminated in preparing consolidated financial statements.

The treatment of intercompany noncurrent asset transfers is similar to the treatment of intercompany inventory transfers discussed in Chapter 6. The elimination of intercompany transactions must include the removal of unrealized intercompany profits. When one company sells an asset to an affiliate within the consolidated entity, any intercompany profit is not considered realized until confirmed by subsequent events. If the asset has an unlimited life, as with land, the unrealized intercompany gain or loss is realized at the time the asset is resold to a party outside the consolidated entity. If the asset has a limited life, the unrealized intercompany gain or loss is considered to be realized over the remaining life of the asset as the asset is used and depreciated or amortized.

Consolidation procedures relating to unrealized gains and losses on intercompany transfers of assets involve worksheet adjustments to restate the assets and associated accounts, such as accumulated depreciation, to the balances that would be reported if there had been no intercompany transfer. In the period of transfer, the income assigned to the shareholders of the selling affiliate must be reduced by their share of the unrealized intercompany profit. If the sale is a downstream sale, the unrealized intercompany gain or loss is eliminated against the controlling interest. When an upstream sale occurs, the unrealized intercompany gain or loss is eliminated proportionately against the controlling and noncontrolling interests.

downstream sale, 312

upstream sale, 312

## Appendix 7A Intercompany Noncurrent Asset Transactions— Modified Equity Method and Cost Method

A parent company may account for a subsidiary using any of several methods. So long as the subsidiary is to be consolidated, the method of accounting for it on the parent's books will have no impact on the consolidated financial statements. Although the primary focus of this chapter is on consolidation using the fully adjusted equity method on the parent's books, two other methods are used in practice with some frequency as well. These methods are the modified equity method and the cost method.

# **MODIFIED EQUITY METHOD**

A company that chooses to account for an investment using the modified equity method records its proportionate share of subsidiary income and dividends in the same manner as under the fully adjusted equity method. However, it does not defer its share of any unrealized profits from intercompany transactions using equity-method entries. Instead, these unrealized gains and losses are removed from the parent's retained earnings in the period after the intercompany sale. In the absence of these equity-method adjustments, the parent's net income is usually not equal to the amount of consolidated net income allocated to the controlling interest.

As an illustration, assume the same facts as in the upstream sale of equipment discussed previously and reflected in the worksheets presented in Figures 7-7 and 7-8. Special Foods sells equipment to Peerless Products for \$7,000 on December 31, 20X1, and reports total income of \$50,700 for 20X1, including the \$700 gain on the sale of the equipment. Special Foods originally purchased the equipment for \$9,000 three years before the intercompany sale. Both companies use straight-line depreciation.

As illustrated previously, Special Foods records 20X1 depreciation on the equipment and the gain on the December 31, 20X1, sale of the equipment to Peerless with the following entries:

|      | December 31, 20X1                                   |       |       |
|------|---|-------|-------|
| (29) | Depreciation Expense                                | 900   |       |
|      | Accumulated Depreciation                            |       | 900   |
|      | Record 20X1 depreciation expense on equipment sold. |       |       |
|      | December 31, 20X1                                   |       |       |
| (30) | Cash  | 7,000 |       |
|      | Accumulated Depreciation                            | 2,700 |       |
|      | Equipment   |       | 9,000 |
|      | Gain on Sale of Equipment                           |       | 700   |
|      | Record sale of equipment.                           |       |       |

Peerless records the purchase of the equipment from Special Foods with the following entry:

|      | December 31, 20X1             |       |       |
|------|-------------------------------|-------|-------|
| (31) | Equipment                     | 7,000 |       |
|      | Cash                          |       | 7,000 |
|      | Record purchase of equipment. |       |       |

## Modified Equity-Method Entries—20X1

In addition, Peerless records the following modified equity-method entries on December 31, 20X1, to recognize its share of Special Foods' reported income and dividends:

Record Peerless' 80% share of Special Foods' 20X1 income:  $$50,700 \times 0.80$ .

Record Peerless' 80% share of Special Foods' 20X1 dividend:  $$30,000 \times 0.80$ .

However, Peerless does not record an equity-method entry for its share of the gain deferral from the purchase of the asset from Special Foods.

## Consolidation Elimination Entries—20X1

The consolidation worksheet elimination entries under the modified equity method are almost identical to those used under the fully adjusted equity method for 20X1 with one minor exception. We go through the exact same analysis of the book value of Special Foods and allocate each component to Peerless and the NCI shareholders:

#### **Book Value Calculations:**

|                             | NCI 20% + | Peerless 80% | = | Common Stock | + Retained Earnings |
|-----------------------------|-----------|--------------|---|--------------|---------------------|
| Beginning book value        | 60,000    | 240,000      |   | 200,000      | 100,000             |
| + Net income                | 10,140    | 40,560       |   |              | 50,700              |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)     |   |              | (30,000)            |
| Ending book value           | 64,140    | 256,560      |   | 200,000      | 120,700             |

The basic elimination entry under the modified equity method is almost identical to the basic elimination entry under the fully adjusted equity method with one minor exception. Because we don't make equity-method adjustments for the unrealized gain in Peerless' books, we no longer adjust the entries to the Investment in Special Foods and Income from Special Foods accounts for the gain that has been deferred on the intercompany asset sale. Note that we continue to adjust the NCI shareholders' share of Special Foods' income and their share of Special Foods' book value of net assets:

#### **Basic Investment Account Elimination Entry:**

| Common stock Retained earnings Income from Special Foods NCI in NI of Special Foods Dividends declared Investment in Special Foods | 200,000<br>100,000<br>40,560<br>10,000<br>30,000<br>256,560 |  |
|--|---|--|
| Investment in Special Foods NCI in NA of Special Foods   | 256,560<br>64,000   |  |
| •  |   |  |

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 | Accumulated depreciation at the             |
|--------------------------|---------|---|
| Building and equipment   | 300,000 | time of the acquisition netted against cost |

The following T-accounts illustrate that we arrive at the exact same answer in 20X1 for eliminating the intercompany gain on the sale of equipment from Special Foods to Peerless Products:

|               | Buildi<br>Equip | •      | Accumulated<br>Depreciation | Gain o | n Sale |
|---------------|-----------------|--------|-----------------------------|--------|--------|
| Special Foods | 7,000           | Actual | 0                           |        | 700    |
|               | 2,000           |        | 2,700                       | 700    |        |
| Peerless      | 9,000           | As if  | 2,700                       |        | 0      |

### Eliminate Gain on the Equipment Sold to Special Foods and Correct the Assets' Basis:

| Gain on Sale             | 700   |       |
|--------------------------|-------|-------|
| Buildings and Equipment  | 2,000 |       |
| Accumulated Depreciation |       | 2,700 |

Figure 7–10 illustrates the consolidation worksheet for 20X1.

## Modified Equity-Method Entries—20X2

In 20X2, Peerless records its share of Special Foods' \$75,900 income and \$40,000 of dividends as follows:

Peerless does not make an entry under the modified equity method to increase income for the par-

## Consolidation Elimination Entries—20X2

tial realization of the unrealized intercompany gain.

To derive the elimination entries for the 20X2 worksheet, we again analyze the updated book value of Special Foods and examine the allocation of each component to Peerless and the NCI shareholders. Also, to present the consolidated financial statements as if the equipment had not been transferred to Peerless, we need to decrease depreciation expense to the amount Special Foods would have recorded had the equipment stayed on its books.

#### **Book Value Calculations:**

|                             | NCI 20% + | Peerless 80% | = | Common Stock | + Retained Earnings |
|-----------------------------|-----------|--------------|---|--------------|---------------------|
| Beginning book value        | 64,140    | 256,560      |   | 200,000      | 120,700             |
| + Net income                | 15,180    | 60,720       |   |              | 75,900              |
| <ul><li>Dividends</li></ul> | (8,000)   | (32,000)     |   |              | (40,000)            |
| Ending book value           | 71,320    | 285,280      |   | 200,000      | 156,600             |

The basic elimination entry is the same as illustrated for the fully adjusted equity method except that we no longer adjust the entries to the Investment in Special Foods and Income from Special Foods accounts for their 80 percent share of the extra \$100 of depreciation for 20X2 associated with the asset transfer. However, we continue to add back 20 percent of the \$100 of extra depreciation to the NCI in NI of Special Foods and NCI in NA of Special Foods:

#### **Basic Investment Account Elimination Entry:**

| Common stock                | 200,000 |         | ← Common stock balance                         |
|-----------------------------|---------|---------|--|
| Retained earnings           | 120,700 |         | ← Beginning RE from trial balance              |
| Income from Special Foods   | 60,800  |         | ← Peerless' share of reported NI               |
| NCI in NI of Special Foods  | 15,200  |         | ← NCI share of NI + 20% extra depr.            |
| Dividends declared          |         | 40,000  | ← 100% of sub's dividends declared             |
| Investment in Special Foods |         | 285,360 | ← Net BV left in the invest. acct.             |
| NCI in NA of Special Foods  |         | 71,340  | $\leftarrow$ NCI share of BV + 20% extra depr. |

FIGURE 7-10 December 31, 20X1, Modified Equity Method Consolidation Worksheet, Period of Intercompany Sale; Upstream Sale of Equipment

|                                 | Residence Constant Elimination Entries  |                  |         |            |              |
|---------------------------------|---|------------------|---------|------------|--------------|

| Less: Accumulated Depreciation  | (450,000)                               | (317,300)        | 300,000 | 2,700      | (470,000)    |
| Total Assets                    | 1,220,560                               | 520,700          | 302,000 | 559,260    | 1,484,000    |
| Accounts Payable                | 100,000                                 | 100,000          |         |            | 200,000      |
| Bonds Payable                   | 200,000                                 | 100,000          |         |            | 300,000      |
| Common Stock                    | 500,000                                 | 200,000          | 200,000 |            | 500,000      |
| Retained Earnings               | 420,560                                 | 120,700          | 151,260 | 30,000     | 420,000      |
| NCI in NA of Special Foods      |   |                  |         | 64,000     | 64,000       |
| Total Liabilities & Equity      | 1,220,560                               | 520,700          | 351,260 | 94,000     | 1,484,000    |

## **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation      | 300,000 | Accumulated depreciation at the             |
|-------------------------------|---------|---|
| <b>Building and equipment</b> | 300,000 | time of the acquisition netted against cost |

In the 20X2 worksheet, the only difference from the fully adjusted equity method example is that although the amount of deferred gain on Special Foods' equipment sale to Peerless at the beginning of the period (\$700) is still allocated between Peerless and the NCI shareholders based on their relative ownership percentages, the amount accruing to Peerless is recorded as a decrease to beginning Retained Earnings rather than as a debit to the Investment in Special Foods account. The reason the elimination entry affects the Retained Earnings account instead of the Investment in Special Foods account is that no adjustments have been made under the equity method to ensure that Peerless' books are up-to-date. T-accounts can be a helpful tool in figuring out the elimination entries:

|               | Buildings &<br>Equipment |  |        | Accum<br>Depre | ulated<br>ciation |
|---------------|--------------------------|--|--------|----------------|-------------------|
| Special Foods | 7,000                    |  | Actual |                | 1,000             |
|               | 2,000                    |  |        | 100            | 2,700             |
| Peerless      | 9,000                    |  | As if  |                | 3,600             |

| Accumulated Depreciation | 100 |     |
|--------------------------|-----|-----|
| Depreciation Expense     |     | 100 |

## Entries to Adjust Equipment and Accumulated Depreciation as if Still on Parent's Books:

| Retained Earnings               | 560   |       |
|---------------------------------|-------|-------|
| NCI in NA of Special Foods      | 140   |       |
| Buildings and Equipment         | 2,000 |       |
| <b>Accumulated Depreciation</b> |       | 2,700 |

Again, these elimination entries related to the intercompany asset sale are identical to those used under the fully adjusted equity method with the one exception that the debit for \$560 in the second elimination entry goes to Retained Earnings rather than the Investment in Special Foods account. In all cases, the entries under the modified equity method are identical to those illustrated in Figure 7-9 except that the entries to the Investment in Special Foods account are replaced with entries to Retained Earnings.

Figure 7–11 illustrates the consolidation worksheet for 20X2.

FIGURE 7-11 December 31, 20X2, Modified Equity-Method Consolidation Worksheet, Next Period Following Intercompany Sale; Upstream Sale of Equipment

|                                 | Peerless  | Peerless Special _ |                    | on Entries |              |

| Retained Earnings               | 580,280   | 156,600            | 197,180            | 40,100     | 579,800      |
| NCI in NA of Special Foods      | 200,200   | ,                  | 140                | 71,340     | 71,200       |
| Total Liabilities & Equity      | 1,380,280 | 556,600            | 397,320            | 111,440    | 1,651,000    |

## **COST METHOD**

When using the cost method of accounting for an investment in a subsidiary, the parent records dividends received from the subsidiary during the period as income. No entries are made under the cost method to record the parent's share of undistributed subsidiary earnings, amortize differential, or remove unrealized intercompany profits.

To illustrate consolidation following an intercompany sale of equipment when the parent accounts for its subsidiary investment using the cost method, assume the same facts as in the previous illustrations of an upstream sale.

## Consolidation Elimination Entries—20X1

The following elimination entries would appear in the worksheet used to consolidate Peerless and Special Foods at the end of 20X1, assuming Peerless uses the cost method to account for its investment:

#### **Investment Elimination Entry:**

| Common stock                | 200,000 |         |
|-----------------------------|---------|---------|
| Retained earnings           | 100,000 |         |
| Investment in Special Foods |         | 240,000 |
| NCI in NA of Special Foods  |         | 60,000  |

#### **Dividend Elimination Entry:**

| Dividend income            | 24,000 |        |
|----------------------------|--------|--------|
| NCI in NI of Special Foods | 6,000  |        |
| Dividends declared         |        | 30,000 |

#### Assign Undistributed Income to NCI:

| NCI in NI of Special Foods | 4,000 | ← NC I's 20% share of undistributed NI |
|----------------------------|-------|--|
| NCI in NA of Special Foods | 4,000 | ← NCI's 20% share of undistributed NI  |

### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 |         | Accumulated depreciation at the             |
|--------------------------|---------|---------|---|
| Building and equipment   |         | 300,000 | time of the acquisition netted against cost |

#### **Eliminate Asset Purchase from Special Foods:**

| Buildings and equipment<br>Gain on Sale | 2,000<br>700 |       |
|---|--------------|-------|
| Accumulated Depreciation                |              | 2,700 |

The first four elimination entries are identical to those illustrated in Appendix 6A. They (1) eliminate the book value of Special Foods' equity accounts against the original investment account, (2) eliminate Special Foods' 20X1 dividends declared, (3) assign undistributed realized income to the NCI shareholders, and (4) eliminate accumulated depreciation recorded by Special Foods on fixed assets prior to Peerless' acquisition. Finally, the elimination entry related to the fixed asset transfer is identical to the one used under both the fully adjusted and modified equity methods.

Figure 7–12 illustrates the consolidation worksheet for 20X1.

### Consolidation Elimination Entries—20X2

The following elimination entries would appear in the worksheet used to consolidate Peerless and Special Foods at the end of 20X2, assuming Peerless uses the cost method to account for its investment:

## **Investment Elimination Entry:**

| Common stock                | 200,000 |
|-----------------------------|---------|
| Retained earnings           | 100,000 |
| Investment in Special Foods | 240,000 |
| NCI in NA of Special Foods  | 60,000  |

| Less: Accumulated Depreciation  | (450,000) | (317,300) | 300,000    | 2,700           | (470,000)    |
| Total Assets                    | 1,204,000 | 520,700   | 302,000    | 542,700         | 1,484,000    |
| Accounts Payable                | 100,000   | 100,000   |            |                 | 200,000      |
| Bonds Payable                   | 200,000   | 100,000   |            |                 | 300,000      |
| Common Stock                    | 500,000   | 200,000   | 200,000    |                 | 500,000      |
| Retained Earnings               | 404,000   | 120,700   | 134,700    | 30,000          | 420,000      |
| NCI in NA of Special Foods      |           |           |            | 60,000<br>4,000 | 64,000       |
| Total Liabilities & Equity      | 1,204,000 | 520,700   | 334,700    | 94,000          | 1,484,000    |

## **Dividend Elimination Entry:**

| Dividend income            | 32,000 |        |
|----------------------------|--------|--------|
| NCI in NI of Special Foods | 8,000  |        |
| Dividends declared         |        | 40,000 |

## **Assign Prior Undistributed Income to NCI:**

| NCI in NI of Special Foods | 7,200 |        | $\leftarrow$ NCI's 20% share of 20X2 undistributed NI |
|----------------------------|-------|--------|---|
| Retained earnings          | 4,140 |        | ← NCI's 20% share of 20X1 undistributed NI            |
| NCI in NA of Special Foods |       | 11,340 | ← NCI's 20% share of cumulative undistributed NI      |

# **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation      | 300,000 | Accumulated depreciation at the time of |
|-------------------------------|---------|---|
| <b>Building and equipment</b> | 300,000 | the acquisition netted against cost     |

| <b>Accumulated Depreciation</b> | 100 |     |
|---------------------------------|-----|-----|
| Depreciation Expense            |     | 100 |

## Entries to Adjust Equipment and Accumulated Depreciation as if Still on Peerless' Books:

| Retained Earnings          | 560   |       |
|----------------------------|-------|-------|
| NCI in NA of Special Foods | 140   |       |
| Buildings and Equipment    | 2,000 |       |
| Accumulated Depreciation   |       | 2,700 |

Again, the first four elimination entries are essentially identical to those illustrated in Appendix 6A. They (1) eliminate the book value of Special Foods' equity accounts against the original investment account, (2) eliminate Special Foods' 20X1 dividends declared, (3) assign undistributed income to the NCI shareholders, and (4) eliminate accumulated depreciation recorded by Special Foods on fixed assets prior to Peerless' acquisition. Finally, the elimination entries related to the fixed asset transfer is identical to the one used under the modified equity method.

Figure 7–13 illustrates the consolidation worksheet for 20X2.

| Questions           |         |  |
|---------------------|---------|--|
| LO 7-1              | Q7-1    | When are profits on intercompany sales considered to be realized? Explain.   |
| LO 7-2              | Q7-2    | What is an upstream sale? Which company may have unrealized profits on its books in an upstream sale?  |
| LO 7-1              | Q7-3    | What dollar amounts in the consolidated financial statements will be incorrect if intercompany services are not eliminated?  |
| LO 7-1              | Q7-4    | How are unrealized profits on current-period intercompany sales treated in preparing the income statement for $(a)$ the selling company and $(b)$ the consolidated entity?   |
| LO 7-1              | Q7-5    | How are unrealized profits treated in the consolidated income statement if the intercompany sale occurred in a prior period and the transferred item is sold to a nonaffiliate in the current period?  |
| LO 7-1              | Q7-6    | How are unrealized intercompany profits treated in the consolidated statements if the intercompany sale occurred in a prior period and the profits have not been realized by the end of the current period?  |
| LO 7-2              | Q7-7    | What is a downstream sale? Which company may have unrealized profits on its books in a downstream sale?  |
| LO 7-2, 7-3, 7-     | -4 Q7-8 | What portion of the unrealized intercompany profit is eliminated in a downstream sale? In an upstream sale?  |
| LO 7-2              | Q7-9    | How is the effect of unrealized intercompany profits on consolidated net income different between an upstream and a downstream sale?   |
| LO 7-4              | Q7-10   | Unrealized profits from a prior-year upstream sale were realized in the current period. What effect will this event have on income assigned to the noncontrolling interest in the consolidated income statement for the current period?  |
| LO 7-6              | Q7-11   | A subsidiary sold a depreciable asset to the parent company at a profit in the current period. Will the income assigned to the noncontrolling interest in the consolidated income statement for the current period be more than, less than, or equal to a proportionate share of the reported net income of the subsidiary? Why?   |
| LO 7-6              | Q7-12   | A subsidiary sold a depreciable asset to the parent company at a profit of \$1,000 in the current period. Will the income assigned to the noncontrolling interest in the consolidated income statement for the current period be more if the intercompany sale occurs on January 1 or on December 31? Why?   |
| LO 7-5              | Q7-13   | If a company sells a depreciable asset to its subsidiary at a profit on December 31, 20X3, what account balances must be eliminated or adjusted in preparing the consolidated income statement for 20X3?   |
| LO 7-5              | Q7-14   | If the sale in the preceding question occurs on January 1, 20X3, what additional account will require adjustment in preparing the consolidated income statement?   |
| LO 7-5, 7-6         | Q7-15   | In the period in which an intercompany sale occurs, how do the consolidation elimination entries differ when unrealized profits pertain to an intangible asset rather than a tangible asset?   |
| LO 7-3, 7-5         | Q7-16   | When is unrealized profit on an intercompany sale of land considered realized? When is profit on an intercompany sale of equipment considered realized? Why do the treatments differ?  |
| LO 7-5, 7-6         | Q7-17   | In the elimination of a prior-period unrealized intercompany gain on depreciable assets, why does the debit to the Investment account decrease over time?  |
| LO 7-2, 7-5,<br>7-6 | Q7-18A  | A parent company may use on its books one of several different methods of accounting for its ownership of a subsidiary: (a) cost method, (b) modified equity method, or (c) fully adjusted equity method. How will the choice of method affect the reported balance in the investment account when there are unrealized intercompany profits on the parent's books at the end of the period? |

## Cases

#### **Correction of Elimination Procedures** C7-1

## Research

Plug Corporation purchased 60 percent of Coy Company's common stock approximately 10 years ago. On January 1, 20X2, Coy sold equipment to Plug for \$850,000 and recorded a \$150,000 loss on the sale. Coy had purchased the equipment for \$1,200,000 on January 1, 20X0, and was depreciating it on a straight-line basis over 12 years with no assumed residual value.

In preparing Plug's consolidated financial statements for 20X2, its chief accountant increased the reported amount of the equipment by \$150,000 and eliminated the loss on the sale of equipment recorded by Coy. No other eliminations or adjustments related to the equipment were made.

<sup>&</sup>quot;A" indicates that the item relates to Appendix 7A.

### Required

As a member of the audit firm Gotcha and Gotcha, you have been asked, after reviewing Plug's consolidated income statement, to prepare a memo to Plug's controller detailing the elimination procedures that should be followed in transferring equipment between subsidiary and parent. Include citations to or quotations from the authoritative literature to support your recommendations. Your memo should include the correct elimination entry and explain why each debit and credit is needed.

## **Elimination of Intercompany Services**

Research

Dream Corporation owns 90 percent of Classic Company's common stock and 70 percent of Plain Company's stock. Dream provides legal services to each subsidiary and bills it for 150 percent of the cost of the services provided. During 20X3, Classic recorded legal expenses of \$80,000 when it paid Dream for legal assistance in an unsuccessful patent infringement suit against another company, and Plain recorded legal expenses of \$150,000 when it paid Dream for legal work associated with the purchase of additional property in Montana to expand an existing strip mine owned by Plain. In preparing the consolidated statements at December 31, 20X3, no eliminations were made for intercompany services. When asked why no entries had been made to eliminate the intercompany services, Dream's chief accountant replied that intercompany services are not mentioned in the company accounting manual and can be ignored.

#### Reauired

Prepare a memo detailing the appropriate treatment of legal services provided by Dream to Plain and Classic during 20X3. Include citations to or quotations from authoritative accounting standards to support your recommendations. In addition, provide the elimination entries at December 31, 20X3 and 20X4, needed as a result of the services provided in 20X3, and explain why each debit or credit is necessary.

LO 7-2, 7-5

#### **Noncontrolling Interest** C7-3

**Understanding** 

Current reporting standards require the consolidated entity to include all the revenues, expenses, assets, and liabilities of the parent and its subsidiaries in the consolidated financial statements. When the parent does not own all of a subsidiary's shares, various rules and procedures exist with regard to the assignment of income and net assets to noncontrolling shareholders and the way in which the noncontrolling interest is to be reported.

### Required

- a. How is the amount of income assigned to noncontrolling shareholders in the consolidated income statement computed if there are no unrealized intercompany profits on the subsidiary's books?
- b. How is the amount reported for the noncontrolling interest in the consolidated balance sheet computed if there are no unrealized intercompany profits on the subsidiary's books?
- c. What effect do unrealized intercompany profits have on the computation of income assigned to the noncontrolling interest if the profits arose from a transfer of (1) land or (2) equipment?
- d. Are the noncontrolling shareholders of a subsidiary likely to find the amounts assigned to them in the consolidated financial statements useful? Explain.

LO 7-1, 7-4

#### **Intercompany Sale of Services**

**Analysis** 

Diamond Manufacturing Company regularly purchases janitorial and maintenance services from its wholly owned subsidiary, Schwartz Maintenance Services Inc. Schwartz bills Diamond monthly at its regular rates for the services provided, with the services consisting primarily of cleaning, grounds keeping, and small repairs. The cost of providing the services that Schwartz sells consists mostly of salaries and associated labor costs that total about 60 percent of the amount billed. Diamond issues consolidated financial statements annually.

#### Required

- a. When Diamond prepares consolidated financial statements, what account balances of Diamond and Schwartz related to the intercompany sale of services must be adjusted or eliminated in the consolidation worksheet? What impact do these adjustments or eliminations have on consolidated net income?
- b. In the case of intercompany sales of services at a profit, at what point in time are the intercompany profits considered to be realized? Explain.

## **C7-5** Intercompany Profits

Analysis

Companies have many different practices for pricing transfers of goods and services from one affiliate to another. Regardless of the approaches used for internal decision making and performance evaluation or for tax purposes, all intercompany profits, unless immaterial, are supposed to be eliminated when preparing consolidated financial statements until confirmed through transactions with external parties.

### Required

Verizon Communications is in the telephone business, although it is larger and more diversified than many smaller telecommunications companies. How does it treat intercompany profits for consolidation?

## Exercises

#### Multiple-Choice Questions on Intercompany Transfers [AICPA Adapted] E7-1

For each question, select the single best answer.

- 1. Water Company owns 80 percent of Fire Company's outstanding common stock. On December 31, 20X9, Fire sold equipment to Water at a price in excess of Fire's carrying amount but less than its original cost. On a consolidated balance sheet at December 31, 20X9, the carrying amount of the equipment should be reported at
  - a. Water's original cost.
  - b. Fire's original cost.
  - c. Water's original cost less Fire's recorded gain.
  - d. Water's original cost less 80 percent of Fire's recorded gain.
- 2. Company J acquired all of Company K's outstanding common stock in exchange for cash. The acquisition price exceeds the fair value of net assets acquired. How should Company J determine the amounts to be reported for the plant and equipment and long-term debt acquired from Company K?

|    | Plant and Equipment | Long-Term Debt      |
|----|---------------------|---------------------|
| a. | K's carrying amount | K's carrying amount |
| b. | K's carrying amount | Fair value          |
| с. | Fair value          | K's carrying amount |
| d. | Fair value          | Fair value          |

- 3. Port Inc. owns 100 percent of Salem Inc. On January 1, 20X2, Port sold delivery equipment to Salem at a gain. Port had owned the equipment for two years and used a five-year straight-line depreciation rate with no residual value. Salem is using a three-year straight-line depreciation rate with no residual value for the equipment. In the consolidated income statement, Salem's recorded depreciation expense on the equipment for 20X2 will be decreased by
  - a. 20 percent of the gain on the sale.
  - b.  $33^{1}/_{3}$  percent of the gain on the sale.
  - c. 50 percent of the gain on the sale.
  - d. 100 percent of the gain on the sale.
- 4. On January 1, 20X0, Poe Corporation sold a machine for \$900,000 to Saxe Corporation, its wholly owned subsidiary. Poe paid \$1,100,000 for this machine, which had accumulated depreciation of \$250,000. Poe estimated a \$100,000 salvage value and depreciated the machine using the straightline method over 20 years, a policy that Saxe continued. In Poe's December 31, 20X0, consolidated balance sheet, this machine should be included in fixed-asset cost and accumulated depreciation as

|    | Cost        | Accumulated Depreciation |
|----|-------------|--------------------------|
| a. | \$1,100,000 | \$300,000                |
| b. | \$1,100,000 | \$290,000                |
| С. | \$ 900,000  | \$ 40,000                |
| d. | \$ 850,000  | \$ 42 500                |

5. Scroll Inc., a wholly owned subsidiary of Pirn Inc., began operations on January 1, 20X1. The following information is from the condensed 20X1 income statements of Pirn and Scroll:

|  | Pirn                              | Scroll                            |
|--|-----------------------------------|-----------------------------------|
| Sales<br>Cost of Goods Sold                                | \$500,000<br>(350,000)            | \$300,000<br>(270,000)            |
| Gross Profit Depreciation Other Expenses                   | \$150,000<br>(40,000)<br>(60,000) | \$ 30,000<br>(10,000)<br>(15,000) |
| Income from Operations Gain on Sale of Equipment to Scroll | \$ 50,000<br>12,000               | \$ 5,000                          |
| Income before Taxes  | \$ 62,000                         | \$ 5,000                          |

Scroll purchased equipment from Pirn for \$36,000 on January 1, 20X1, that is depreciated using the straight-line method over four years. What amount should be reported as depreciation expense in Pirn's 20X1 consolidated income statement?

- a. \$50,000.
- b. \$47,000.
- c. \$44,000.
- d. \$41,000.

#### LO 7-2, 7-6 **Multiple-Choice Questions on Intercompany Transactions** E7-2

Select the correct answer for each of the following questions.

1. Upper Company holds 60 percent of Lower Company's voting shares. During the preparation of consolidated financial statements for 20X5, the following elimination entry was made:

| Investmen | t in Lower | 10,000 |        |
|-----------|------------|--------|--------|
| Land      |            | 1      | 10,000 |

Which of the following statements is correct?

- a. Upper Company purchased land from Lower Company during 20X5.
- b. Upper Company purchased land from Lower Company before January 1, 20X5.
- c. Lower Company purchased land from Upper Company during 20X5.
- d. Lower Company purchased land from Upper Company before January 1, 20X5.
- 2. Middle Company holds 60 percent of Bottom Corporation's voting shares. Bottom has developed a new type of production equipment that appears to be quite marketable. It spent \$40,000 in developing the equipment; however, Middle agreed to purchase the production rights for the machine for \$100,000. If the intercompany sale occurred on January 1, 20X2, and the production rights are expected to have value for five years, at what amount should the rights be reported in the consolidated balance sheet for December 31, 20X2?
  - a. \$0.
  - b. \$32,000.
  - c. \$80,000.
  - d. \$100,000.

*Note:* Questions 3 through 6 are based on the following information:

On January 1, 20X4, Gold Company purchased a computer with an expected economic life of five years. On January 1, 20X6, Gold sold the computer to TLK Corporation and recorded the following entry:

| Cash                      | 39,000 |
|---------------------------|--------|
| Accumulated Depreciation  | 16,000 |
| Computer Equipment        | 40,000 |
| Gain on Sale of Equipment | 15,000 |

TLK Corporation holds 60 percent of Gold's voting shares. Gold reported net income of \$45,000 including the gain on the sale of equipment, and TLK reported income from its own operations of \$85,000 for 20X6. There is no change in the estimated economic life of the equipment as a result of the intercompany transfer.

- 3. In the preparation of the 20X6 consolidated income statement, depreciation expense will be
  - a. Debited for \$5,000 in the elimination entries.
  - b. Credited for \$5,000 in the elimination entries.
  - c. Debited for \$13,000 in the elimination entries.
  - d. Credited for \$13,000 in the elimination entries.
- 4. In the preparation of the 20X6 consolidated balance sheet, computer equipment will be
  - a. Debited for \$1,000.
  - b. Debited for \$15,000.
  - c. Credited for \$24,000.
  - d. Debited for \$40,000.
- 5. Income assigned to the noncontrolling interest in the 20X6 consolidated income statement will be
  - a. \$12,000.
  - b. \$14,000.
  - c. \$18,000.
  - d. \$52,000.
- 6. Consolidated net income for 20X6 will be
  - a. \$106,000.
  - b. \$112,000.
  - c. \$120,000.
  - d. \$130,000.

#### **Elimination Entries for Land Transfer** LO 7-3

Huckster Corporation purchased land on January 1, 20X1, for \$20,000. On June 10, 20X4, it sold the land to its subsidiary, Lowly Corporation, for \$30,000. Huckster owns 60 percent of Lowly's voting shares.

## Required

- a. Give the worksheet elimination entries needed to remove the effects of the intercompany sale of land in preparing the consolidated financial statements for 20X4 and 20X5.
- b. Give the worksheet elimination entries needed on December 31, 20X4 and 20X5, if Lowly had initially purchased the land for \$20,000 and then sold it to Huckster on June 10, 20X4, for \$30,000.

## E7-4 Intercompany Services

Power Corporation owns 75 percent of Swift Company's stock. Swift provides health care services to its employees and those of Power. During 20X2, Power recorded \$45,000 as health care expense for medical care given to its employees by Swift. Swift's costs incurred in providing the services to Power were \$32,000.

### Required

- a. By what amount will consolidated net income change when the intercompany services are eliminated in preparing Power's consolidated statements for 20X2?
- b. What would be the impact of eliminating the intercompany services on consolidated net income if Power owned 100 percent of Swift's stock rather than 75 percent? Explain.
- c. If in its consolidated income statement for 20X2 Power had reported total health care costs of \$70,000, what was the cost to Swift of providing health care services to its own employees?

#### **Elimination Entries for Intercompany Services** E7-5

On January 1, 20X5, Block Corporation started using a wholly owned subsidiary to deliver all its sales overnight to its customers. During 20X5, Block recorded delivery service expense of \$76,000 and made payments of \$58,000 to the subsidiary.

#### Required

Give the worksheet elimination entries related to the intercompany services needed on December 31, 20X5, to prepare consolidated financial statements.

#### LO 7-6

#### E7-6 Elimination Entries for Depreciable Asset Transfer: Year-End Sale

Pam Corporation holds 70 percent ownership of Northern Enterprises. On December 31, 20X6, Northern paid Pam \$40,000 for a truck that Pam had purchased for \$45,000 on January 1, 20X2. The truck was considered to have a 15-year life from January 1, 20X2, and no residual value. Both companies depreciate equipment using the straight-line method.

#### Required

- a. Give the worksheet elimination entry or entries needed on December 31, 20X6, to remove the effects of the intercompany sale.
- b. Give the worksheet elimination entry or entries needed on December 31, 20X7, to remove the effects of the intercompany sale.

#### LO 7-4

#### E7-7 Transfer of Land

Bowen Corporation owns 70 percent of Roan Corporation's voting common stock. On March 12, 20X2, Roan sold land it had purchased for \$140,000 to Bowen for \$185,000. Bowen plans to build a new warehouse on the property in 20X3.

#### Required

- a. Give the worksheet elimination entries to remove the effects of the intercompany sale of land in preparing the consolidated financial statements at December 31, 20X2 and 20X3.
- b. Give the worksheet elimination entries needed at December 31, 20X3 and 20X4, if Bowen had initially purchased the land for \$150,000 and sold it to Roan on March 12, 20X2, for \$180,000.

#### LO 7-5

### E7-8 Transfer of Depreciable Asset at Year-End

Frazer Corporation purchased 60 percent of Minnow Corporation's voting common stock on January 1, 20X1. On December 31, 20X5, Frazer received \$210,000 from Minnow for a truck Frazer had purchased on January 1, 20X2, for \$300,000. The truck is expected to have a 10-year useful life and no salvage value. Both companies depreciate trucks on a straight-line basis.

#### Required

- a. Give the worksheet elimination entry or entries needed at December 31, 20X5, to remove the effects of the intercompany sale.
- b. Give the worksheet elimination entry or entries needed at December 31, 20X6, to remove the effects of the intercompany sale.

## LO 7-5

## E7-9 Transfer of Depreciable Asset at Beginning of Year

Frazer Corporation purchased 60 percent of Minnow Corporation's voting common stock on January 1, 20X1. On January 1, 20X5, Frazer received \$245,000 from Minnow for a truck Frazer had purchased on January 1, 20X2, for \$300,000. The truck is expected to have a 10-year useful life and no salvage value. Both companies depreciate trucks on a straight-line basis.

#### Required

- a. Give the worksheet elimination entry or entries needed at December 31, 20X5, to remove the effects of the intercompany sale.
- b. Give the worksheet elimination entry or entries needed at December 31, 20X6, to remove the effects of the intercompany sale.

#### LO 7-5

#### E7-10 Sale of Equipment to Subsidiary in Current Period

On January 1, 20X7, Wainwrite Corporation sold to Lance Corporation equipment it had purchased for \$150,000 and used for eight years. Wainwrite recorded a gain of \$14,000 on the sale. The equipment has a total useful life of 15 years and is depreciated on a straight-line basis. Wainwrite holds 70 percent of Lance's voting common shares.

#### Required

- a. Give the journal entry made by Wainwrite on January 1, 20X7, to record the sale of equipment.
- b. Give the journal entries recorded by Lance during 20X7 to record the purchase of equipment and year-end depreciation expense.

- c. Give the elimination entry or entries related to the intercompany sale of equipment needed at December 31, 20X7, to prepare a full set of consolidated financial statements.
- d. Give the elimination entry or entries related to the equipment required at January 1, 20X8, to prepare a consolidated balance sheet only.

#### **Upstream Sale of Equipment in Prior Period** LO 7-6

Baywatch Industries has owned 80 percent of Tubberware Corporation for many years. On January 1, 20X6, Baywatch paid Tubberware \$270,000 to acquire equipment that Tubberware had purchased on January 1, 20X3, for \$300,000. The equipment is expected to have no scrap value and is depreciated over a 15-year useful life.

Baywatch reported operating earnings of \$100,000 for 20X8 and paid dividends of \$40,000. Tubberware reported net income of \$40,000 and paid dividends of \$20,000 in 20X8.

#### Required

- a. Compute the amount reported as consolidated net income for 20X8.
- b. By what amount would consolidated net income change if the equipment sale had been a downstream sale rather than an upstream sale?
- c. Give the elimination entry or entries required to eliminate the effects of the intercompany sale of equipment in preparing a full set of consolidated financial statements at December 31, 20X8.

#### **Elimination Entries for Midyear Depreciable Asset Transfer** E7-12

Kline Corporation holds 90 percent ownership of Andrews Company, On July 1, 20X3, Kline sold equipment that it had purchased for \$30,000 on January 1, 20X1, to Andrews for \$28,000. The equipment's original six-year estimated total economic life remains unchanged. Both companies use straight-line depreciation. The equipment's residual value is considered negligible.

### Required

- a. Give the elimination entry or entries in the consolidation worksheet prepared as of December 31, 20X3, to remove the effects of the intercompany sale.
- b. Give the elimination entry or entries in the consolidation worksheet prepared as of December 31, 20X4, to remove the effects of the intercompany sale.

## **Consolidated Net Income Computation**

Verry Corporation owns 75 percent of Spawn Corporation's voting common stock. Verry reported income from its separate operations of \$90,000 and \$110,000 in 20X4 and 20X5, respectively. Spawn reported net income of \$60,000 and \$40,000 in 20X4 and 20X5, respectively.

#### Required

- a. Compute consolidated net income and the income assigned to the controlling interest for 20X4 and 20X5 if Verry sold land with a book value of \$95,000 to Spawn for \$120,000 on June 30, 20X4.
- b. Compute consolidated net income and the amount of income assigned to the controlling interest in the consolidated statements for 20X4 and 20X5 if Spawn sold land with a book value of \$95,000 to Verry for \$120,000 on June 30, 20X4.

#### LO 7-2, 7-3, 7-4 **E7-14 Elimination Entries for Intercompany Transfers**

Grand Delivery Service acquired at book value 80 percent of the voting shares of Acme Real Estate Company. On that date, the fair value of the noncontrolling interest was equal to 20 percent of Acme's book value. Acme Real Estate reported common stock of \$300,000 and retained earnings of \$100,000. During 20X3 Grand Delivery provided courier services for Acme Real Estate in the amount of \$15,000. Also during 20X3, Acme Real Estate purchased land for \$1,000. It sold the land to Grand Delivery Service for \$26,000 so that Grand Delivery could build a new transportation center. Grand Delivery reported \$65,000 of operating income from its delivery operations in 20X3. Acme Real Estate reported net income of \$40,000 and paid dividends of \$10,000 in 20X3.

#### Required

- a. Compute consolidated net income for 20X3.
- b. Give all journal entries recorded by Grand Delivery Service related to its investment in Acme Real Estate assuming Grand uses the fully adjusted equity method in accounting for the investment.
- c. Give all elimination entries required in preparing a consolidation worksheet as of December 31, 20X3.

## LO 7-2

LO 7-6

LO 7-6

### E7-15 Sale of Building to Parent in Prior Period

Advanced StudyGuide .com

Turner Company purchased 70 percent of Split Company's stock approximately 20 years ago. On December 31, 20X8, Turner purchased a building from Split for \$300,000. Split had purchased the building on January 1, 20X1, at a cost of \$400,000 and used straight-line depreciation on an expected life of 20 years. The asset's total estimated economic life is unchanged as a result of the intercompany sale.

#### Required

- a. What amount of depreciation expense on the building will Turner report for 20X9?
- b. What amount of depreciation expense would Split have reported for 20X9 if it had continued to own the building?
- c. Give the elimination entry or entries needed to eliminate the effects of the intercompany building transfer in preparing a full set of consolidated financial statements at December 31, 20X9
- d. What amount of income will be assigned to the noncontrolling interest in the consolidated income statement for 20X9 if Split reports net income of \$40,000 for 20X9?
- e. Split reports assets with a book value of \$350,000 and liabilities of \$150,000 at January 1, 20X9, and reports net income of \$40,000 and dividends of \$15,000 for 20X9. What amount will be assigned to the noncontrolling interest in the consolidated balance sheet at December 31, 20X9, assuming the fair value of the noncontrolling interest at the date of acquisition was equal to 30 percent of Split Company's book value?

## .o 7-5 E7-16 Intercompany Sale at a Loss

Parent Company holds 90 percent of Sunway Company's voting common shares. On December 31, 20X8, Parent recorded a loss of \$16,000 on the sale of equipment to Sunway. At the time of the sale, the equipment's estimated remaining economic life was eight years.

### Required

- a. Will consolidated net income be increased or decreased when elimination entries associated with the sale of equipment are made at December 31, 20X8? By what amount?
- b. Will consolidated net income be increased or decreased when elimination entries associated with the sale of equipment are made at December 31, 20X9? By what amount?

### E7-17 Elimination Entries Following Intercompany Sale at a Loss

Brown Corporation holds 70 percent of Transom Company's voting common stock. On January 1, 20X2, Transom paid \$300,000 to acquire a building with a 15-year expected economic life. Transom uses straight-line depreciation for all depreciable assets. On December 31, 20X7, Brown purchased the building from Transom for \$144,000. Brown reported income, excluding investment income from Transom, of \$125,000 and \$150,000 for 20X7 and 20X8, respectively. Transom reported net income of \$15,000 and \$40,000 for 20X7 and 20X8, respectively.

#### Required

- a. Give the appropriate elimination entry or entries needed to eliminate the effects of the intercompany sale of the building in preparing consolidated financial statements for 20X7.
- b. Compute the amount to be reported as consolidated net income for 20X7 and the income to be allocated to the controlling interest.
- c. Give the appropriate elimination entry or entries needed to eliminate the effects of the intercompany sale of the building in preparing consolidated financial statements for 20X8.
- d. Compute consolidated net income and the amount of income assigned to the controlling share-holders in the consolidated income statement for 20X8.

#### LO 7-4 E7-18 Multiple Transfers of Asset

Swanson Corporation purchased land from Clayton Corporation for \$240,000 on December 20, 20X3. This purchase followed a series of transactions between Swanson-controlled subsidiaries. On February 7, 20X3, Sullivan Corporation purchased the land from a nonaffiliate for \$145,000. It sold the land to Kolder Company for \$130,000 on October 10, 20X3, and

Kolder sold the land to Clayton for \$180,000 on November 27, 20X3. Swanson has control of the following companies:

| Subsidiary           | Level of Ownership | 20X3 Net Income |
|----------------------|--------------------|-----------------|
| Sullivan Corporation | 80 percent         | \$120,000       |
| Kolder Company       | 70 percent         | 60,000          |
| Clayton Corporation  | 90 percent         | 80,000          |

Swanson reported income from its separate operations of \$150,000 for 20X3.

#### Required

- a. At what amount should the land be reported in the consolidated balance sheet as of December 31, 20X3?
- b. What amount of gain or loss on sale of land should be reported in the consolidated income statement for 20X3?
- c. What amount of income should be assigned to the controlling shareholders in the consolidated income statement for 20X3?
- d. Give any elimination entry related to the land that should appear in the worksheet used to prepare consolidated financial statements for 20X3.

#### LO 7-6 E7-19 **Elimination Entry in Period of Transfer**

Blank Corporation owns 60 percent of Grand Corporation's voting common stock. On December 31, 20X4, Blank paid Grand \$276,000 for dump trucks Grand had purchased on January 1, 20X2. Both companies use straight-line depreciation. The elimination entry included in preparing consolidated financial statements at December 31, 20X4, was

| Trucks                   | 24,000 |
|--------------------------|--------|
| Gain on Sale of Trucks   | 36,000 |
| Accumulated Depreciation | 60,000 |

#### Reauired

LO 7-6

- a. What amount did Grand pay to purchase the trucks on January 1, 20X2?
- b. What was the economic life of the trucks on January 1, 20X2?
- c. Give the worksheet elimination entry needed in preparing the consolidated financial statements at December 31, 20X5.

#### **Elimination Entry Computation** E7-20

Stern Manufacturing purchased an ultrasound drilling machine with a remaining 10-year economic life from a 70 percent-owned subsidiary for \$360,000 on January 1, 20X6. Both companies use straightline depreciation. The subsidiary recorded the following entry when it sold the machine to Stern:

| Cash                      | 360,000 |
|---------------------------|---------|
| Accumulated Depreciation  | 150,000 |
| Equipment                 | 450,000 |
| Gain on Sale of Equipment | 60,000  |

#### Required

Give the worksheet Elimination entry or entries needed to remove the effects of the intercompany sale of equipment when consolidated financial statements are prepared as of (a) December 31, 20X6, and (b) December 31, 20X7.

#### LO 7-6 Using the Elimination Entry to Determine Account Balances

Pastel Corporation acquired a controlling interest in Somber Corporation in 20X5 for an amount equal to its underlying book value. At the date of acquisition, the fair value of the noncontrolling interest was equal to its proportionate share of the book value of Somber Corporation. In preparing a consolidated balance sheet worksheet at January 1, 20X9, Pastel's controller included the following elimination entry:

LO 7-3, 7-6

| Equipment                  | 53,500 |
|----------------------------|--------|
| Investment in Somber Corp. | 9,450  |
| Noncontrolling Interest    | 1,050  |
| Accumulated Depreciation   | 64,000 |

A note at the bottom of the consolidation worksheet at January 1, 20X9, indicates the equipment was purchased from a nonaffiliate on January 1, 20X1, for \$120,000 and was sold to an affiliate on December 31, 20X8. The equipment is being depreciated on a 15-year straight-line basis. Somber reported stock outstanding of \$300,000 and retained earnings of \$200,000 at January 1, 20X9. Somber reported net income of \$25,000 and paid dividends of \$6,000 for 20X9.

# Required

- a. What percentage ownership of Somber Corporation does Pastel hold?
- b. Was the parent or subsidiary the owner prior to the intercompany sale of equipment? Explain.
- c. What was the intercompany transfer price of the equipment on December 31, 20X8?
- d. What amount of income will be assigned to the noncontrolling interest in the consolidated income statement for 20X9?
- e. Assuming Pastel and Somber report depreciation expense of \$15,000 and \$9,000, respectively, for 20X9, what depreciation amount will be reported in the consolidated income statement for
- f. Give all remaining elimination entries needed at December 31, 20X9, to prepare a complete set of consolidated financial statements.

#### LO 7-1, 7-2 **Intercompany Sale of Services** E7-22

Norgaard Corporation purchased management consulting services from its 75 percent-owned subsidiary, Bline Inc. During 20X3, Norgaard paid Bline \$123,200 for its services. For the year 20X4, Bline billed Norgaard \$138,700 for such services and collected all but \$6,600 by year-end. Bline's labor cost and other associated costs for the employees providing services to Norgaard totaled \$91,000 in 20X3 and \$112,000 in 20X4. Norgaard reported \$2,342,000 of income from its own separate operations for 20X4, and Bline reported net income of \$631,000.

## Reauired

- a. Present all elimination entries related to the intercompany sale of services that would be needed in the consolidation worksheet used to prepare a complete set of consolidated financial statements for 20X4.
- b. Compute consolidated net income for 20X4 and the amount of income assigned to the controlling interest.

#### E7-23A **Modified Equity Method and Cost Method**

Newtime Products purchased 65 percent of TV Sales Company's stock at underlying book value on January 1, 20X3. At that date, the fair value of the noncontrolling interest was equal to 35 percent of the book value of TV Sales. TV Sales reported shares outstanding of \$300,000 and retained earnings of \$100,000. During 20X3, TV Sales reported net income of \$50,000 and paid dividends of \$5,000. In 20X4, TV Sales reported net income of \$70,000 and paid dividends of \$20,000.

The following transactions occurred between Newtime Products and TV Sales in 20X3 and 20X4:

- 1. TV Sales sold camera equipment to Newtime for a \$40,000 profit on December 31, 20X3. The equipment had a five-year estimated economic life remaining at the time of intercompany transfer and is depreciated on a straight-line basis.
- 2. Newtime sold land costing \$30,000 to TV Sales on June 30, 20X4, for \$41,000.

## Required

- a. Assuming that Newtime uses the modified equity method to account for its investment in TV Sales:
  - (1) Give the journal entries recorded on Newtime's books in 20X4 related to its investment in TV Sales.
  - (2) Give all elimination entries needed to prepare a consolidation worksheet for 20X4.

- b. Assuming that Newtime uses the cost method to account for its investment in TV Sales:
  - (1) Give the journal entries recorded on Newtime's books in 20X4 related to its investment in TV Sales.
  - (2) Give all elimination entries needed to prepare a consolidation worksheet for 20X4.

# **Problems**

LO 7-3, 7-4

StudyGuide .com

## P7-24 **Computation of Consolidated Net Income**

Petime Corporation acquired 90 percent ownership of United Grain Company on January 1, 20X4, for \$108,000 when the fair value of United's net assets was \$10,000 higher than its \$110,000 book value. The increase in value was attributed to amortizable assets with a remaining life of 10 years. At that date, the fair value of the noncontrolling interest was equal to \$12,000.

During 20X4, United sold land to Petime at a \$7,000 profit. United Grain reported net income of \$19,000 and paid dividends of \$4,000 in 20X4. Petime reported income, exclusive of its income from United Grain, of \$34,000 and paid dividends of \$15,000 in 20X4.

## Reauired

- a. Compute the amount of income assigned to the controlling interest in the consolidated income statement for 20X4.
- b. By what amount will the 20X4 income assigned to the controlling interest increase or decrease if the sale of land had been from Petime to United Grain, the gain on the sale of land had been included in Petime's \$34,000 income, and the \$19,000 was income from operations of United Grain?

#### LO 7-6 P7-25 **Subsidiary Net Income**

Bold Corporation acquired 75 percent of Toll Corporation's voting common stock on January 1, 20X4, for \$348,000, when the fair value of its net identifiable assets was \$464,000 and the fair value of the noncontrolling interest was \$116,000. Toll reported common stock outstanding of \$150,000 and retained earnings of \$270,000. The excess of fair value over book value of Toll's net assets was attributed to amortizable assets with a remaining life of 10 years. On December 31, 20X4, Toll sold a building to Bold and recorded a gain of \$20,000. Income assigned to the noncontrolling shareholders in the 20X4 consolidated income statement was \$17,500.

# Required

- a. Compute the amount of net income Toll reported for 20X4.
- b. Compute the amount reported as consolidated net income if Bold reported operating income of \$234,000 for 20X4.
- c. Compute the amount of income assigned to the controlling interest in the 20X4 consolidated income statement.

#### LO 7-6 **Transfer of Asset from One Subsidiary to Another**

Pelts Company holds a total of 70 percent of Bugle Corporation and 80 percent of Cook Products Corporation stock. Bugle purchased a warehouse with an expected life of 20 years on January 1, 20X1, for \$40,000. On January 1, 20X6, it sold the warehouse to Cook Products for \$45,000.

## Required

Complete the following table showing selected information that would appear in the separate 20X6 income statements and balance sheets of Bugle Corporation and Cook Products Corporation and in the 20X6 consolidated financial statements.

|  | Bugle<br>Corporation | Cook Products Corporation | Consolidated<br>Entity |
|--|----------------------|---------------------------|------------------------|
| Depreciation expense Fixed assets—warehouse Accumulated depreciation Gain on sale of warehouse |                      |                           |                        |

# **Consolidated Elimination Entry**

In preparing its consolidated financial statements at December 31, 20X7, the following elimination entries were included in the consolidation worksheet of Master Corporation:

## LO 7-6

| Buildings                | 140,000 |
|--------------------------|---------|
| Gain on Sale of Building | 28,000  |
| Accumulated Depreciation | 168,000 |
| Accumulated Depreciation | 2.000   |
| •                        | ,       |
| Depreciation Expense     | 2,000   |

Master owns 60 percent of Rakel Corporation's voting common stock. On January 1, 20X7, Rakel sold Master a building it had purchased for \$600,000 on January 1, 20X1, and depreciated on a 20-year straight-line basis. Master recorded depreciation for 20X7 using straight-line depreciation and the same useful life and residual value as Rakel.

## Reauired

- a. What amount did Master pay Rakel for the building?
- b. What amount of accumulated depreciation did Rakel report at January 1, 20X7, prior to the sale?
- c. What annual depreciation expense did Rakel record prior to the sale?
- d. What expected residual value did Rakel use in computing its annual depreciation expense?
- e. What amount of depreciation expense did Master record in 20X7?
- f. If Rakel reported net income of \$80,000 for 20X7, what amount of income will be assigned to the noncontrolling interest in the consolidated income statement for 20X7?
- g. If Rakel reported net income of \$65,000 for 20X8, what amount of income will be assigned to the noncontrolling interest in the consolidated income statement for 20X8?

LO 7-4, 7-6

#### P7-28 **Multiple-Choice Questions**

Select the correct answer for each of the following questions.

- 1. In the preparation of a consolidated income statement:
  - a. Income assigned to noncontrolling shareholders always is computed as a pro rata portion of the reported net income of the consolidated entity.
  - b. Income assigned to noncontrolling shareholders always is computed as a pro rata portion of the reported net income of the subsidiary.
  - c. Income assigned to noncontrolling shareholders in the current period is likely to be less than a pro rata portion of the reported net income of the subsidiary in the current period if the subsidiary had an unrealized gain on an intercompany sale of depreciable assets in the preceding period. Assume the depreciable asset was subsequently sold in the current period.
  - d. Income assigned to noncontrolling shareholders in the current period is likely to be more than a pro rata portion of the reported net income of the subsidiary in the current period if the subsidiary had an unrealized gain on an intercompany sale of depreciable assets in the preceding period. Assume the depreciable asset was subsequently sold in the current period.
- 2. When a 90 percent-owned subsidiary records a gain on the sale of land to an affiliate during the current period and the land is not resold before the end of the period:
  - a. Ninety percent of the gain will be excluded from consolidated net income.
  - b. Consolidated net income will be increased by the full amount of the gain.
  - c. A proportionate share of the unrealized gain will be excluded from income assigned to noncontrolling interest.
  - d. The full amount of the unrealized gain will be excluded from income assigned to noncontrolling interest.
- 3. Minor Company sold land to Major Company on November 15, 20X4, and recorded a gain of \$30,000 on the sale. Major owns 80 percent of Minor's common shares. Which of the following statements is correct?
  - a. A proportionate share of the \$30,000 must be treated as a reduction of income assigned to the noncontrolling interest in the consolidated income statement unless the land is resold to a nonaffiliate in 20X4.
  - b. The \$30,000 will not be treated as an adjustment in computing income assigned to the noncontrolling interest in the consolidated income statement in 20X4 unless the land is resold to a nonaffiliate in 20X4.
  - c. In computing consolidated net income, it does not matter whether the land is or is not resold to a nonaffiliate before the end of the period; the \$30,000 will not affect the computation of consolidated net income in 20X4 because the profits are on the subsidiary's books.
  - d. Minor's trial balance as of December 31, 20X4, should be adjusted to remove the \$30,000 gain because the gain is not yet realized.

4. Lewis Company owns 80 percent of Tomassini Corporation's stock. You are told that Tomassini has sold equipment to Lewis and that the following elimination entries are needed to prepare consolidated statements for 20X9:

| Equipment                 | 20,000 |        |
|---------------------------|--------|--------|
| Gain on Sale of Equipment | 40,000 |        |
| Accumulated Depreciation  |        | 60,000 |
|                           |        |        |
| Accumulated Depreciation  | 5,000  |        |
| Depreciation Expense      |        | 5,000  |

Which of the following is incorrect?

- a. The parent paid \$40,000 in excess of the subsidiary's carrying amount to acquire the asset.
- b. From a consolidated viewpoint, depreciation expense as Lewis recorded it is overstated.
- c. The asset transfer occurred in 20X9 before the end of the year.
- d. Consolidated net income will be reduced by \$40,000 when these elimination entries are made.

## P7-29 **Intercompany Services Provided to Subsidiary**

During 20X4, Plate Company paid its employees \$80,000 for work done in helping its wholly owned subsidiary build a new office building that was completed on December 31, 20X4. Plate recorded the \$110,000 payment from the subsidiary for the work done as service revenue. The subsidiary included the payment in the cost of the building and is depreciating the building over 25 years with no assumed residual value. Plate uses the fully adjusted equity method.

## Required

Present the elimination entries needed at December 31, 20X4 and 20X5, to prepare Plate's consolidated financial statements.

### P7-30 **Consolidated Net Income with Intercompany Transfers**

StudyGuide .com

In its 20X7 consolidated income statement, Bower Development Company reported consolidated net income of \$961,000 and \$39,000 of income assigned to the 30 percent noncontrolling interest in its only subsidiary, Subsidence Mining, Inc. During the year, Subsidence had sold a previously mined parcel of land to Bower for a new housing development; the sales price to Bower was \$500,000, and the land had a carrying amount at the time of sale of \$560,000. At the beginning of the previous year, Bower had sold excavation and grading equipment to Subsidence for \$240,000; the equipment had a remaining life of six years as of the date of sale and a book value of \$210,000. The equipment originally had cost \$350,000 when Bower purchased it on January 2, 20X2. The equipment never was expected to have any salvage value.

Bower had acquired 70 percent of the voting shares of Subsidence eight years earlier when the fair value of its net assets was \$200,000 higher than book value, and the fair value of the noncontrolling interest was \$60,000 more than a proportionate share of the book value of Subsidence's net assets. All the excess over the book value was attributable to intangible assets with a remaining life of 10 years from the date of combination. Both parent and subsidiary use straight-line amortization and depreciation. Assume Bower uses the fully adjusted equity method.

# Required

- a. Present the journal entry made by Bower to record the sale of equipment in 20X6 to Subsidence.
- b. Present all elimination entries related to the intercompany transfers of land and equipment that should appear in the consolidation worksheet used to prepare a complete set of consolidated financial statements for 20X7.
- c. Compute Subsidence's 20X7 reported net income.
- d. Compute Bower's 20X7 income from its own separate operations, excluding any investment income from its investment in Subsidence Mining.

# LO 7-4, 7-5

## P7-31 **Preparation of Consolidated Balance Sheet**

Lofton Company owns 60 percent of Temple Corporation's voting shares, purchased on May 17, 20X1, at book value. At that date, the fair value of the noncontrolling interest was equal to 40 percent of the book value of Temple Corporation. The companies' permanent accounts on December 31, 20X6, contained the following balances:

|  | Lofton<br>Company   | Temple<br>Corporation   |
|--|---|---|
| Cash and Receivables Inventory Land Buildings & Equipment Investment in Temple Corporation Stock | \$101,000<br>80,000<br>150,000<br>400,000<br>141,000            | \$ 20,000<br>40,000<br>90,000<br>300,000                        |
| Accumulated Depreciation Accounts Payable Notes Payable Common Stock Retained Earnings           | 872,000<br>\$135,000<br>90,000<br>200,000<br>100,000<br>347,000 | \$450,000<br>\$ 85,000<br>25,000<br>90,000<br>200,000<br>50,000 |
|  | <u>\$872,000</u>  | <u>\$450,000</u>  |

On January 1, 20X2, Lofton paid \$100,000 for equipment with a 10-year expected total economic life. The equipment was depreciated on a straight-line basis with no residual value. Temple purchased the equipment from Lofton on December 31, 20X4, for \$91,000. Assume Lofton did not change the estimated useful life of the equipment.

Temple sold land it had purchased for \$30,000 on February 23, 20X4, to Lofton for \$20,000 on October 14, 20X5. Assume Lofton uses the fully adjusted equity method.

# Required

- a. Prepare a consolidated balance sheet worksheet in good form as of December 31, 20X6.
- b. Prepare a consolidated balance sheet as of December 31, 20X6.

# LO 7-4, 7-5

## P7-32 **Consolidation Worksheet in Year of Intercompany Transfer**

Prime Company holds 80 percent of Lane Company's stock, acquired on January 1, 20X2, for \$160,000. On the acquisition date, the fair value of the noncontrolling interest was \$40,000. Lane reported retained earnings of \$50,000 and had \$100,000 of common stock outstanding. Prime uses the fully adjusted equity method in accounting for its investment in Lane.

Trial balance data for the two companies on December 31, 20X6, are as follows:

|                                  | Prime Co   | mpany  | Lane Company |        |  |
|----------------------------------|------------|--------|--------------|--------|--|
| Item                             | Debit      | Credit | Debit        | Credit |  |
| Cash & Accounts Receivable       | \$ 113,000 |        | \$ 35,000    |        |  |
| Inventory                        | 260,000    |        | 90,000       |        |  |
| Land                             | 80,000     |        | 80,000       |        |  |
| Buildings & Equipment            | 500,000    |        | 150,000      |        |  |
| Investment in Lane Company Stock | 191,600    |        |              |        |  |
| Cost of Goods Sold               | 140,000    |        | 60,000       |        |  |
| Depreciation & Amortization      | 25,000     |        | 15,000       |        |  |
| Other Expenses                   | 15,000     |        | 5,000        |        |  |
| Dividends Declared               | 30,000     |        | 5,000        |        |  |

(continued)

| Accumulated Depreciation  |             | \$ 205,000  |           | \$ 45,000 |
|---------------------------|-------------|-------------|-----------|-----------|
| Accounts Payable          |             | 60,000      |           | 20,000    |
| Bonds Payable             |             | 200,000     |           | 50,000    |
| Common Stock              |             | 300,000     |           | 100,000   |
| Retained Earnings         |             | 322,000     |           | 95,000    |
| Sales                     |             | 240,000     |           | 130,000   |
| Gain on Sale of Equipment |             | 20,000      |           |           |
| Income from Subsidiary    |             | 7,600       |           |           |
| Total                     | \$1,354,600 | \$1,354,600 | \$440,000 | \$440,000 |

- 1. At the date of combination, the book values and fair values of all separately identifiable assets and liabilities of Lane were the same. At December 31, 20X6, the management of Prime reviewed the amount attributed to goodwill as a result of its purchase of Lane stock and concluded an impairment loss of \$18,000 should be recognized in 20X6 and shared proportionately between the controlling and noncontrolling shareholders.
- 2. On January 1, 20X5, Lane sold land that had cost \$8,000 to Prime for \$18,000.
- 3. On January 1, 20X6, Prime sold to Lane equipment that it had purchased for \$75,000 on January 1, 20X1. The equipment has a total economic life of 15 years and was sold to Lane for \$70,000. Both companies use straight-line depreciation.
- 4. There was \$7,000 of intercompany receivables and payables on December 31, 20X6.

# Required

- a. Give all elimination entries needed to prepare a consolidation worksheet for 20X6.
- b. Prepare a three-part worksheet for 20X6 in good form.
- c. Prepare a consolidated balance sheet, income statement, and retained earnings statement for 20X6.

# LO 7-4, 7-5

#### P7-33 **Consolidation Worksheet in Year Following Intercompany Transfer**

Prime Company holds 80 percent of Lane Company's stock, acquired on January 1, 20X2, for \$160,000. On the date of acquisition, Lane reported retained earnings of \$50,000 and \$100,000 of common stock outstanding, and the fair value of the noncontrolling interest was \$40,000. Prime uses the fully adjusted equity method in accounting for its investment in Lane.

Trial balance data for the two companies on December 31, 20X7, are as follows:

|                                  |     | Prime Company |     |          |      | Lane Company |          |   |
|----------------------------------|-----|---------------|-----|----------|------|--------------|----------|---|
| Item                             |     | Debit         |     | Credit   | De   | ebit         | Credit   |   |
| Cash & Accounts Receivable       | \$  | 151,000       |     |          | \$ 5 | 5,000        |          |   |

| Investment in Lane Company Stock |     | 201,600       |     |          |      |              |          |   |
| Cost of Goods Sold               |     | 160,000       |     |          | 8    | 0,000        |          |   |
| Depreciation & Amortization      |     | 25,000        |     |          | 1    | 5,000        |          |   |
| Other Expenses                   |     | 20,000        |     |          | 1    | 0,000        |          |   |
| Dividends Declared               |     | 60,000        |     |          | 3    | 5,000        |          |   |
| Accumulated Depreciation         |     |               | \$  | 230,000  |      |              | \$ 60,00 | 0 |
| Accounts Payable                 |     |               |     | 60,000   |      |              | 25,00    | 0 |
| Bonds Payable                    |     |               |     | 200,000  |      |              | 50,00    | 0 |
| Common Stock                     |     |               |     | 300,000  |      |              | 100,00   | 0 |
| Retained Earnings                |     |               |     | 379,600  |      |              | 140,00   | 0 |
| Sales                            |     |               |     | 250,000  |      |              | 150,00   | 0 |
| Income from Subsidiary           |     |               |     | 38,000   |      |              |          |   |
| Total                            | \$1 | 1,457,600     | \$1 | ,457,600 | \$52 | 5,000        | \$525,00 | 0 |

- 1. At the date of combination, the book values and fair values of Lane's separately identifiable assets and liabilities were equal. The full amount of the increased value of the entity was attributed to goodwill. At December 31, 20X6, the management of Prime reviewed the amount attributed to goodwill as a result of its purchase of Lane stock and recognized an impairment loss of \$18,000. No further impairment occurred in 20X7.
- 2. On January 1, 20X5, Lane sold land for \$18,000 that had cost \$8,000 to Prime.
- 3. On January 1, 20X6, Prime sold to Lane equipment that it had purchased for \$75,000 on January ary 1, 20X1. The equipment has a total 15-year economic life and was sold to Lane for \$70,000. Both companies use straight-line depreciation.
- 4. Intercompany receivables and payables total \$4,000 on December 31, 20X7.

# Required

- a. Prepare a reconciliation between the balance in Prime's Investment in Lane Company Stock account reported on December 31, 20X7, and Lane's book value.
- b. Prepare all worksheet elimination entries needed as of December 31, 20X7, and complete a three-part consolidation worksheet for 20X7.

# LO 7-4, 7-5

## P7-34 **Intercompany Sales in Prior Years**

On January 1, 20X5, Pond Corporation acquired 80 percent of Skate Company's stock by issuing common stock with a fair value of \$180,000. At that date, Skate reported net assets of \$150,000. The fair value of the noncontrolling interest was \$45,000. Assume Pond uses the fully adjusted equity method. The balance sheets for Pond and Skate at January 1, 20X8, and December 31, 20X8, and income statements for 20X8 were reported as follows:

| 20X8 Balance Sheet Data   |   |   |  |   |  |  |
|---|---|---|--|---|--|--|
|   | Pond C  | orporation  | Skate Company  |   |  |  |

| Net Income               |           | \$ 81,500 |           | \$ 30,000 |

- 1. In 20X2, Skate developed a patent for a high-speed drill bit that Pond planned to market extensively. In accordance with generally accepted accounting standards, Skate charges all research and development costs to expense in the year the expenses are incurred. At January 1, 20X5, the market value of the patent rights was estimated to be \$50,000. Pond believes the patent will be of value for the next 20 years. The remainder of the differential is assigned to buildings and equipment, which also had a 20-year estimated economic life at January 1, 20X5. All of Skate's other assets and liabilities identified by Pond at the date of acquisition had book values and fair values that were relatively equal.
- 2. On December 31, 20X7, Pond sold a building to Skate for \$65,000 that it had purchased for \$125,000 and depreciated on a straight-line basis over 25 years. At the time of sale, Pond reported accumulated depreciation of \$75,000 and a remaining life of 10 years.
- 3. On July 1, 20X6, Skate sold land that it had purchased for \$22,000 to Pond for \$35,000. Pond is planning to build a new warehouse on the property prior to the end of 20X9.
- 4. Both Pond and Skate paid dividends in 20X8.

# Required

- a. Give all elimination entries required to prepare a three-part consolidation working paper at December 31, 20X8.
- b. Prepare a three-part worksheet for 20X8 in good form.

## P7-35 Intercompany Sale of Land and Depreciable Asset

Topp Corporation acquired 70 percent of Morris Company's voting common stock on January 1, 20X3, for \$158,900. Morris reported common stock outstanding of \$100,000 and retained earnings of \$85,000. The fair value of the noncontrolling interest was \$68,100 at the date of acquisition. Buildings and equipment held by Morris had a fair value \$25,000 higher than book value. The remainder of the differential was assigned to a copyright held by Morris. Buildings and equipment had a 10-year remaining life and the copyright had a 5-year life at the date of acquisition.

Trial balances for Topp and Morris on December 31, 20X5, are as follows:

|                                    | <b>Topp Corporation</b> |         |        | Morris    | Company |
|------------------------------------|-------------------------|---------|--------|-----------|---------|
|                                    |                         | Debit   | Credit | Debit     | Credit  |

Topp sold land it had purchased for \$21,000 to Morris on September 20, 20X4, for \$32,000. Morris plans to use the land for future plant expansion. On January 1, 20X5, Morris sold equipment to Topp for \$91,600. Morris purchased the equipment on January 1, 20X3, for \$100,000 and depreciated it on a 10-year basis, including an estimated residual value of \$10,000. The residual value and estimated economic life of the equipment remained unchanged as a result of the transfer and both companies use straight-line depreciation. Assume Topp uses the fully adjusted equity method.

# Required

- a. Compute the amount of income assigned to the noncontrolling interest in the consolidated income statement for 20X5.
- b. Prepare a reconciliation between the balance in the Investment in Morris Company Stock account reported by Topp at December 31, 20X5, and the underlying book value of net assets reported by Morris at that date.
- c. Give all elimination entries needed to prepare a full set of consolidated financial statements at December 31, 20X5, for Topp and Morris.
- d. Prepare a three-part worksheet for 20X5 in good form.

## P7-36 **Incomplete Data**

Partial trial balance data for Mound Corporation, Shadow Company, and the consolidated entity at December 31, 20X7, are as follows:

| Item                               | Mound<br>Corporation | Shadow<br>Company | Consolidated<br>Entity |
|------------------------------------|----------------------|-------------------|------------------------|
| Cash                               | \$ 65,300            | \$ 25,000         | \$ 90,300              |

| Total Credits                             | \$1 | ,180,900          | \$ | 615,000          | \$<br>1,674,200      |

- 1. Mound Corporation acquired 60 percent ownership of Shadow Company on January 1, 20X4, for \$106,200. Shadow reported net assets of \$150,000 at that date, and the fair value of the noncontrolling interest was estimated to be \$70,800. The full amount of the differential at acquisition is assigned to copyrights that are being amortized over a six-year life.
- 2. On August 13, 20X7, Mound sold land to Shadow for \$28,000. Mound also has accounts receivable from Shadow on services performed prior to the end of 20X7.
- 3. Shadow sold equipment it had purchased for \$60,000 on January 1, 20X4, to Mound on for \$45,000 January 1, 20X6. The equipment is depreciated on a straight-line basis and had a total expected useful life of five years when Shadow purchased it. No change in life expectancy resulted from the intercompany transfer. Assume Mound uses the fully adjusted equity method.
- 4. Assume Mound Corp. does not use the optional accumulation depreciation elimination entry.

## Required

Compute the dollar amount for each of the balances identified by a letter.

## P7-37 Intercompany Sale of Equipment at a Loss in Prior Period

Block Corporation was created on January 1, 20X0, to develop computer software. On January 1, 20X5, Foster Company acquired 90 percent of Block's common stock at its underlying book value. At that date, the fair value of the noncontrolling interest was equal to 10 percent of the book value of Block Corporation. Trial balances for Foster and Block on December 31, 20X9, follow:

|                                 | <b>Foster Company</b> |             | Block Co  | rporation |
|---------------------------------|-----------------------|-------------|-----------|-----------|
|                                 | Debit                 | Credit      | Debit     | Credit    |
| Cash                            | \$ 82,000             |             | \$ 32,400 |           |
| Accounts Receivable             | 80,000                |             | 90,000    |           |
| Other Receivables               | 40,000                |             | 10,000    |           |

| Total                           | \$1,891,500           | \$1,891,500 | \$932,400 | \$932,400 |

On January 1, 20X7, Block sold equipment to Foster for \$48,000. Block had purchased the equipment for \$90,000 on January 1, 20X5, and was depreciating it on a straight-line basis with a 10-year expected life and no anticipated scrap value. The equipment's total expected life is unchanged as a result of the intercompany sale. Assume Foster uses the fully adjusted equity method.

# Required

- a. Give all elimination entries required to prepare a three-part consolidated working paper at December 31, 20X9.
- b. Prepare a three-part worksheet for 20X9 in good form.

## P7-38 **Comprehensive Problem: Intercompany Transfers**

Rossman Corporation holds 75 percent of the common stock of Schmid Distributors Inc., purchased on December 31, 20X1, for \$2,340,000. At the date of acquisition, Schmid reported common stock with a par value of \$1,000,000, additional paid-in capital of \$1,350,000, and retained earnings of \$620,000. The fair value of the noncontrolling interest at acquisition was \$780,000. The differential at acquisition was attributable to the following items:

| \$ 30,000 |
|-----------|
| 56,000    |
| 64,000    |
| \$150,000 |
|           |

During 20X2, Rossman sold a plot of land that it had purchased several years before to Schmid at a gain of \$23,000; Schmid continues to hold the land. In 20X6, Rossman and Schmid entered into a five-year contract under which Rossman provides management consulting services to Schmid on a continuing basis; Schmid pays Rossman a fixed fee of \$80,000 per year for these services. At December 31, 20X8, Schmid owed Rossman \$20,000 as the final 20X8 quarterly payment under the contract.

On January 2, 20X8, Rossman paid \$250,000 to Schmid to purchase equipment that Schmid was then carrying at \$290,000. Schmid had purchased that equipment on December 27, 20X2, for \$435,000. The equipment is expected to have a total 15-year life and no salvage value. The amount of the differential assigned to goodwill has not been impaired.

At December 31, 20X8, trial balances for Rossman and Schmid appeared as follows:

|                              | Rossman C    | Corporation  | Schmid Dist | ributors Inc. |
|------------------------------|--------------|--------------|-------------|---------------|
| Item                         | Debit        | Credit       | Debit       | Credit        |
| Cash                         | \$ 50,700    |              | \$ 38,000   |               |
| Current Receivables          | 101,800      |              | 89,400      |               |
| Inventory                    | 286,000      |              | 218,900     |               |
| Investment in Schmid Stock   | 2,974,000    |              |             |               |
| Land                         | 400,000      |              | 1,200,000   |               |
| Buildings & Equipment        | 2,400,000    |              | 2,990,000   |               |
| Cost of Goods Sold           | 2,193,000    |              | 525,000     |               |
| Depreciation & Amortization  | 202,000      |              | 88,000      |               |
| Other Expenses               | 1,381,000    |              | 227,000     |               |
| Dividends Declared           | 50,000       |              | 20,000      |               |
| Accumulated Depreciation     |              | \$ 1,105,000 |             | \$ 420,000    |
| Current Payables             |              | 86,200       |             | 76,300        |
| Bonds Payable                |              | 1,000,000    |             | 200,000       |
| Common Stock                 |              | 100,000      |             | 1,000,000     |
| Additional Paid-in Capital   |              | 1,272,000    |             | 1,350,000     |
| Retained Earnings, January 1 |              | 1,474,800    |             | 1,400,000     |
| Sales                        |              | 4,801,000    |             | 985,000       |
| Other Income or Loss         |              | 90,000       | 35,000      |               |
| Income from Schmid           |              | 109,500      |             |               |
| Total                        | \$10,038,500 | \$10,038,500 | \$5,431,300 | \$5,431,300   |

As of December 31, 20X8, Schmid had declared but not yet paid its fourth-quarter dividend of \$5,000. Both companies use straight-line depreciation and amortization. Rossman uses the fully adjusted equity method to account for its investment in Schmid.

# Required

- a. Compute the amount of the differential as of January 1, 20X8.
- b. Verify the balance in Rossman's Investment in Schmid Stock account as of December 31, 20X8.
- c. Present all elimination entries that would appear in a three-part consolidation worksheet as of December 31, 20X8.
- d. Prepare and complete a three-part worksheet for the preparation of consolidated financial statements for 20X8.

## P7-39A **Modified Equity Method Computation of Retained Earnings Following Multiple Transfers**

Great Company acquired 80 percent of Meager Corporation's common stock on January 1, 20X4, for \$280,000. The fair value of the noncontrolling interest was \$70,000 at the date of acquisition. Great's corporate controller has lost the consolidation files for the past three years and has asked you to compute the proper retained earnings balances for the consolidated entity at January 1, 20X8, and December 31, 20X8. The controller has been able to determine the following:

- 1. The book value of Meager's net assets at January 1, 20X4, was \$290,000, and the fair value of its net assets was \$325,000. This difference was due to an increase in the value of equipment. All depreciable assets had a remaining life of 10 years at the date of combination. At December 31, 20X8, Great's management reviewed the amount attributed to goodwill as a result of its purchase of Meager common stock and concluded that an impairment loss of \$17,500 should be recognized in 20X8 and shared proportionately between the controlling and noncontrolling shareholders.
- 2. Great uses the modified equity method in accounting for its investment in Meager.
- 3. Meager has reported net income of \$30,000 and paid dividends of \$20,000 each year since Great purchased its ownership.
- 4. Great reported retained earnings of \$450,000 in its December 31, 20X7, balance sheet. For 20X8, Great reported operating income of \$65,000 and paid dividends of \$45,000.
- 5. Meager sold land costing \$40,000 to Great for \$56,000 on December 31, 20X7.
- 6. On January 1, 20X6, Great sold depreciable assets with a remaining useful life of 10 years to Meager and recorded a \$22,000 gain on the sale.

Compute the appropriate amounts to be reported as consolidated retained earnings at January 1, 20X8, and December 31, 20X8.

## P7-40A Consolidation Worksheet with Intercompany Transfers (Modified Equity Method)

Mist Company acquired 65 percent of Blank Corporation's voting common stock on June 20, 20X2, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 35 percent of the book value of Blank Corporation. The balance sheets and income statements for the companies at December 31, 20X4, are as follows:

# MIST COMPANY AND BLANK CORPORATION **Balance Sheets** December 31, 20X4

| Item                            | Mist Company | Blank Corp |
|---------------------------------|--------------|------------|
| Cash                            | \$ 32,500    | \$ 22,000  |
| Accounts Receivable             | 62,000       | 37,000     |
| Inventory                       | 95,000       | 71,000     |
| Land                            | 40,000       | 15,000     |
| Buildings & Equipment (net)     | 200,000      | 125,000    |
| Investment in Blank Corp. Stock | 110,500      |            |
| Total Assets                    | \$540,000    | \$270,000  |

(continued)

# MIST COMPANY AND BLANK CORPORATION **Balance Sheets** December 31, 20X4

| Item                                     | Mist Company | Blank Corp. |

| Income from Subsidiary                            |           | 19,500             |          |           |
|   |           | \$310,000          |          | \$141,700 |
| Cost of Goods & Services Sold                     | \$160,000 |                    | \$75,000 |           |
| Depreciation Expense                              | 22,000    | /                  | 19,000   |           |
| Other Expenses                                    | 76,000    | (258,000)          | 17,700   | (111,700) |
| Net Income  |           | \$ 52,000          |          | \$ 30,000 |
| Dividends Paid                                    |           | (25,000)           |          | (5,000)   |
| Change in Retained Earnings                       |           | \$ 27,000          |          | \$ 25,000 |

# Additional Information

- 1. Mist uses the modified equity method in accounting for its investment in Blank.
- 2. During 20X4, Mist charged Blank \$24,000 for consulting services provided to Blank during the year. The services cost Mist \$17,000.
- 3. On January 1, 20X4, Blank sold Mist a building for \$13,200 above its carrying value on Blank's books. The building had a 12-year remaining economic life at the time of transfer.
- 4. On June 14, 20X4, Mist sold land it had purchased for \$3,000 to Blank for \$7,000. Blank continued to hold the land at December 31, 20X4.

# Required

- a. Give all elimination entries needed to prepare a full set of consolidated financial statements for 20X4.
- b. Prepare a consolidation worksheet for 20X4.
- c. Prepare the 20X4 consolidated balance sheet, income statement, and retained earnings statement.

#### P7-41A **Modified Equity Method**

LO 7-6

On December 31, 20X7, Prime Company recorded the following entry on its books to adjust its investment in Lane Company from the fully adjusted equity method to the modified equity method:

| Income from Lane Company         | 2,000  |
|----------------------------------|--------|
| Investment in Lane Company Stock | 38,400 |
| Retained Earnings                | 40,400 |

# Required

- a. Adjust the data reported by Prime in the trial balance in Problem P7-33 for the effects of the adjusting entry presented above.
- b. Prepare the journal entries that would have been recorded on Prime's books during 20X7 if it had always used the modified equity method.
- c. Prepare all elimination entries needed to complete a consolidation worksheet as of December 31, 20X7, assuming Prime has used the modified equity method.
- d. Complete a three-part consolidation worksheet as of December 31, 20X7.

#### P7-42A **Cost Method**

The trial balance data presented in P7-33 can be converted to reflect use of the cost method by inserting the following amounts in place of those presented for Prime Company:

| Investment in Lane Company Stock | \$160,000 |
|----------------------------------|-----------|
| Beginning Retained Earnings      | 348,000   |
| Income from Subsidiary           | 0         |
| Dividend Income                  | 28,000    |

# Required

- a. Prepare the journal entries that would have been recorded on Prime's books during 20X7 under the cost method.
- b. Prepare all elimination entries needed to complete a consolidation worksheet as of December 31, 20X7, assuming Prime has used the cost method.
- c. Complete a three-part consolidation worksheet as of December 31, 20X7.

# FORD'S DEBT TRANSFERS

An advantage when one corporation controls another is that the controlling entity's management has the ability to transfer resources between the two legal entities as needed. For example, the controlling corporation may make loans to or borrow from the other entity when cash is short. The borrower often benefits from lower borrowing rates, less-restrictive credit terms, and the informality and lower debt issue costs of intercompany borrowing relative to public debt offerings. The lending affiliate may benefit by being able to invest excess funds in a company about which it has considerable knowledge, perhaps allowing it to earn a given return on the funds invested while incurring less risk than if it invested in unrelated companies. Also, the combined entity may find it advantageous for the parent company or another affiliate to borrow funds for the entire enterprise rather than having each affiliate going directly to the capital markets. Ford exercised this option in 2009.

Between January 2003 and January 2008, the U.S. economy underwent one of the biggest booms in its history. The NASDAQ, S&P 500, and Dow Jones Industrial Average all increased by at least 60 percent, with the NASDAQ jumping almost 100 percent. However, such unprecedented growth could not continue indefinitely. Beginning in early 2008 and continuing through 2009, the economy made a complete turnaround. The housing bubble burst, Lehman Brothers closed its doors, and the great behemoth, General Motors, was forced into bankruptcy. However, during this time of economic turmoil, Ford was able to wisely use intercompany debt transactions to its advantage.

During the first quarter of 2009, Ford Motor Credit (a wholly owned subsidiary of Ford Motor Company) paid \$1.1 billion to purchase a portion of Ford Motor Company's senior secured term loan debt. Ford Motor Credit then distributed the debt to its immediate parent, Ford Holdings LLC, which in turn forgave the debt. By carefully managing its business, in part through a savvy application of debt transfers, Ford was able to avoid much of the turmoil many other companies experienced during this turbulent period. This chapter introduces accounting for debt transfers.

# **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 8-1 Understand and explain concepts associated with intercompany debt transfers.
- LO 8-2 Prepare journal entries and elimination entries related to direct intercompany debt transfers.
- LO 8-3 Prepare journal entries and elimination entries related to debt purchased from a nonaffiliate at an amount less than book value.
- LO 8-4 Prepare journal entries and elimination entries related to debt purchased from a nonaffiliate at an amount more than book value.

# CONSOLIDATION OVERVIEW

LO 8-1

Understand and explain concepts associated with intercompany debt transfers

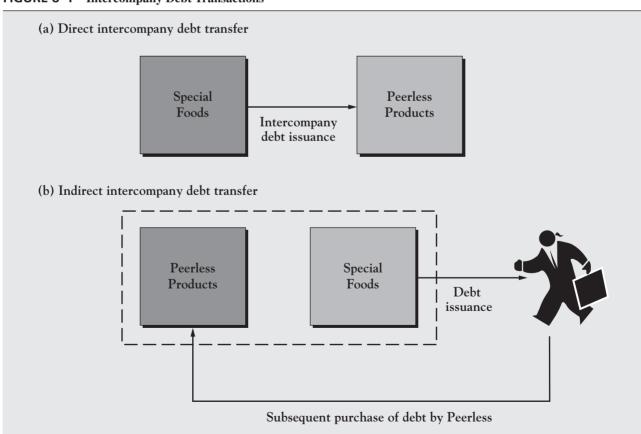

Figure 8–1 illustrates two types of intercompany debt transfers. A *direct intercompany* debt transfer involves a loan from one affiliate to another without the participation of an unrelated party, as in Figure 8–1(a). Examples include a trade receivable/payable arising from an intercompany sale of inventory on credit and the issuance of a note payable by one affiliate to another in exchange for operating funds.

An *indirect intercompany debt transfer* involves the issuance of debt to an unrelated party and the subsequent purchase of the debt instrument by an affiliate of the issuer. For example, in Figure 8-1(b), Special Foods borrows funds by issuing a debt instrument, such as a note or a bond, to a nonaffiliated investor. Special Foods' parent, Peerless Products, subsequently purchased the debt instrument from the nonaffiliated investor. Thus, Peerless Products acquires the debt of Special Foods indirectly through the nonaffiliated investor.

All account balances arising from intercorporate financing arrangements must be eliminated when consolidated statements are prepared. The consolidated financial statements portray the consolidated entity as a single company. Therefore, in Figure 8-1, transactions that do not cross the boundary of the consolidated entity are not reported in the consolidated financial statements. Although in illustration (a) Special Foods borrows funds from Peerless, the consolidated entity as a whole does not borrow, and the intercompany loan is not reflected in the consolidated financial statements.

In illustration (b), Special Foods borrows funds from the nonaffiliated investor. Because this transaction is with an unrelated party and crosses the boundary of the consolidated entity (denoted by the dashed line), it is reflected in the consolidated financial statements.

FIGURE 8-1 Intercompany Debt Transactions

In effect, the consolidated entity is borrowing from an outside party, and the liability is included in the consolidated balance sheet. When Peerless purchases Special Foods' debt instrument from the nonaffiliated investor, this transaction also crosses the boundary of the consolidated entity. In effect, the consolidated entity repurchases its debt, which it reports as a debt retirement. As with most retirements of debt before maturity, a purchase of an affiliate's bonds usually gives rise to a gain or loss on the retirement; the gain or loss is reported in the consolidated income statement even though it does not appear in the separate income statement of either affiliate.

This chapter discusses the procedures used to prepare consolidated financial statements when intercorporate indebtedness arises from either direct or indirect debt transfers. Although the discussion focuses on bonds, the same concepts and procedures also apply to notes and other types of intercorporate indebtedness.

# **BOND SALE DIRECTLY TO AN AFFILIATE**

LO 8-2

Prepare journal entries and elimination entries related to direct intercompany debt

When one company sells bonds directly to an affiliate, all effects of the intercompany indebtedness must be eliminated in preparing consolidated financial statements. A company cannot report an investment in its own bonds or a bond liability to itself. Thus, when the consolidated entity is viewed as a single company, all amounts associated with the intercorporate indebtedness must be eliminated, including the investment in bonds, the bonds payable, any unamortized discount or premium on the bonds, the interest income and expense on the bonds, and any accrued interest receivable and payable.

# **Transfer at Par Value**

When a note or bond payable is sold directly to an affiliate at par value, the entries recorded by the investor and the issuer should be mirror images of each other. To illustrate, assume that on January 1, 20X1, Special Foods borrows \$100,000 from Peerless Products by issuing to Peerless \$100,000 par value, 12 percent, 10-year bonds. This transaction is represented by Figure 8–1(a). During 20X1, Special Foods records interest expense on the bonds of \$12,000 ( $100,000 \times 0.12$ ), and Peerless records an equal amount of interest income.

In the preparation of consolidated financial statements for 20X1, two elimination entries are needed in the consolidation worksheet to remove the effects of the intercompany indebtedness:

# **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable<br>Investment in Special Foods Bonds | 100,000 | 100,000 |
|--|---------|---------|
| Eliminate Intercompany Interest:                   |         |         |
| Interest Income<br>Interest Expense                | 12,000  | 12,000  |

These entries eliminate from the consolidated statements the bond investment and associated income recorded on Peerless' books and the liability and related interest expense recorded on Special Foods' books. The resulting statements appear as if the indebtedness does not exist, which from a consolidated viewpoint it does not.

Note that these entries have no effect on consolidated net income because they reduce interest income and interest expense by the same amount. These elimination entries are required at the end of each period for as long as the intercorporate indebtedness continues. If any interest had accrued on the bonds at year-end, that too would have to be eliminated.

# Transfer at a Discount or Premium

When the coupon or nominal interest rate on a bond is different from the yield demanded by those who lend funds, a bond sells at a discount or premium. In such cases, the amount of bond interest income or expense recorded no longer equals the cash interest payments. Instead, interest income and expense amounts are adjusted for the amortization of the discount or premium.

As an illustration of the treatment of intercompany bond transfers at other than par, assume that on January 1, 20X1, Peerless Products purchases \$100,000 par value, 12 percent, 10-year bonds from Special Foods when the market interest rate is 13 percent. In order to yield a 13 percent return, Special Foods issues the bonds at a discount for \$94,490.75. Interest on the bonds is payable on January 1 and July 1. The interest expense recognized by Special Foods and the interest income recognized by Peerless each period based on effective interest amortization of the discount over the life of the bonds can be summarized as follows:

| Bond Discount Amortization Table |            |  |   |                             |            |                                |                               |
|----------------------------------|------------|--|---|-----------------------------|------------|--------------------------------|-------------------------------|
| Payment<br>Number                | Period End | Interest<br>Payment<br>(Face × 0.12<br>× 6/12) | Interest<br>Expense<br>(Carrying<br>Value × 0.13<br>× 6/12) | Amortization<br>of Discount | Discount   | Bonds<br>Payable<br>Face Value | Carrying<br>Value of<br>Bonds |
|                                  |            |  |   |                             | (5,509.25) | 100,000                        | 94,490.75                     |
| 1                                | 7/1/20X1   | 6,000  | 6,141.90  | 141.90                      | (5,367.36) | 100,000                        | 94,632.64                     |

| 18                               | 1/1/20Y0   | 6,000  | 6,413.92  | 413.92                      | (910.31)   | 100,000                        | 99,089.69                     |
| 19                               | 7/1/20Y0   | 6,000  | 6,440.83  | 440.83                      | (469.48)   | 100,000                        | 99,530.52                     |
| 20                               | 1/1/20Y1   | 6,000  | 6,469.48  | 469.48                      | 0.00       | 100,000                        | 100,000.00                    |
|                                  |            | 120,000  | 125,509.25  | 5,509.25                    |            |                                |                               |

# Entries by the Debtor

Special Foods records the issuance of the bonds on January 1 at a discount of \$5,509. It recognizes interest expense on July 1, when the first semiannual interest payment is made, and on December 31, when interest is accrued for the second half of the year. The amortization of the bond discount causes interest expense to be higher than the cash interest payment and causes the balance of the discount to decrease. Special Foods records the following entries related to the bonds during 20X1<sup>1</sup>:

|     | January 1, 20X1                      |        |         |
|-----|--------------------------------------|--------|---------|
| (1) | Cash                                 | 94,491 |         |
|     | Discount on Bonds Payable            | 5,509  |         |
|     | Bonds Payable                        |        | 100,000 |
|     | Issue bonds to Peerless Products.    |        |         |
|     | July 1, 20X1                         |        |         |
| (2) | Interest Expense                     | 6,142  |         |
|     | Discount on Bonds Payable            |        | 142     |
|     | Cash                                 |        | 6,000   |
|     | Semiannual interest payment.         |        |         |
|     | December 31, 20X1                    |        |         |
| (3) | Interest Expense                     | 6,151  |         |
|     | Discount on Bonds Payable            |        | 151     |
|     | Interest Payable                     |        | 6,000   |
|     | Accrue interest expense at year-end. |        |         |

# Entries by the Bond Investor

Peerless Products records the purchase of the bonds and the interest income derived from the bonds during 20X1 with the following entries:

|     | January 1, 20X1                       |        |        |
|-----|---------------------------------------|--------|--------|
| (4) | Investment in Special Foods Bonds     | 94,491 |        |
|     | Cash                                  |        | 94,491 |
|     | Purchase of bonds from Special Foods. |        |        |
|     | July 1, 20X1                          |        |        |
| (5) | Cash                                  | 6,000  |        |
|     | Investment in Special Foods Bonds     | 142    |        |
|     | Interest Income                       |        | 6,142  |
|     | Receive interest on bond investment.  |        |        |
|     | December 31, 20X1                     |        |        |
| (6) | Interest Receivable                   | 6,000  |        |
|     | Investment in Special Foods Bonds     | 151    |        |
|     | Interest Income                       |        | 6,151  |
|     | Accrue interest income at year-end.   |        |        |

The amortization of the discount by Peerless increases interest income to an amount higher than the cash interest payment and causes the balance of the bond investment account to increase.

# Elimination Entries at Year-End<sup>2</sup>

The December 31, 20X1, bond-related amounts taken from the books of Peerless Products and Special Foods and the appropriate consolidated amounts are as follows:

| Item                      | Peerless<br>Products | Special Foods | Unadjusted<br>Totals | Consolidated<br>Amounts |
|---------------------------|----------------------|---------------|----------------------|-------------------------|
| Bonds Payable             | 0                    | \$(100,000)   | \$(100,000)          | 0                       |
| Discount on Bonds Payable | 0                    | 5,216         | 5,216                | 0                       |
| Interest Payable          | 0                    | (6,000)       | (6,000)              | 0                       |
| Investment in Bonds       | \$ 94,784            | 0             | 94,784               | 0                       |
| Interest Receivable       | 6,000                | 0             | 6,000                | 0                       |
| Interest Expense          | 0                    | \$ 12,293     | \$ 12,293            | 0                       |
| Interest Income           | \$(12,293)           | 0             | (12,293)             | 0                       |

All account balances relating to the intercorporate bond holdings must be eliminated in the preparation of consolidated financial statements. Toward that end, the consolidation worksheet prepared on December 31, 20X1, includes the following elimination entries related to the intercompany bond holdings:

# Eliminata Intorcorranta Dand Haldings

| Eliminate intercorporate Bond Holding   | 5:             |                 |
|---|----------------|-----------------|
| Bonds Payable<br>Investment in Special Foods Bonds<br>Discount on Bonds Payable | 100,000        | 94,784<br>5,216 |
| Eliminate Intercompany Interest:  |                |                 |
| Interest Income<br>Interest Expense   | 12,293         | 12,293          |
| Eliminate Intercompany Interest Receiv  | /able/Payable: |                 |
| Interest Payable Interest Receivable  | 6,000          | 6,000           |

The first entry eliminates the bonds payable and associated discount against the investment in bonds. The book value of the bond liability on Special Foods' books and the investment in bonds on Peerless' books will be the same so long as both companies amortize the discount in the same way.

The second entry eliminates the bond interest income recognized by Peerless during 20X1 against the bond interest expense recognized by Special Foods. Because the interest for the second half of 20X1 was accrued but not paid, an intercompany receivable/ payable exists at the end of the year. The third entry eliminates the interest receivable against the interest payable.

Consolidation at the end of 20X2 requires elimination entries similar to those at the end of 20X1. Under the effective interest method, an increasing portion of the discount is amortized each period. By the end of the second year (i.e., the fourth interest payment), the carrying value of the bond investment on Peerless' books increases to \$95,116 (\$94,491 issue price + discount amortization of \$142 + \$151 + \$161 + 171).Similarly, the bond discount on Special Foods' books decreases to \$4,884, resulting in an effective bond liability of \$95,116. The consolidation elimination entries related to the bonds at the end of 20X2 are as follows:

# Fliminate Intercornorate Rond Holdings

| Eliminate intercorporate bond riolaning   | , , ,          |                 |
|---|----------------|-----------------|
| Bonds Payable<br>Investment in Special Foods Bonds<br>Discount on Bonds Payable | 100,000        | 95,116<br>4,884 |
| Eliminate Intercompany Interest:  |                |                 |
| Interest Income<br>Interest Expense   | 12,332         | 12,332          |
| Eliminate Intercompany Interest Receiv  | vable/Payable: |                 |
| Interest Payable<br>Interest Receivable   | 6,000          | 6,000           |

# **BONDS OF AFFILIATE PURCHASED FROM A NONAFFILIATE**

A more complex situation occurs when an affiliate of the issuer later acquires bonds that were issued to an unrelated party. From the viewpoint of the consolidated entity, an acquisition of an affiliate's bonds retires the bonds at the time they are purchased. The bonds no longer are held outside the consolidated entity once another company within the consolidated entity purchases them, and they must be treated as if repurchased by the debtor. Acquisition of an affiliate's bonds by another company within the consolidated entity is referred to as constructive retirement. Although the bonds actually are not retired, they are treated as if they were retired in preparing consolidated financial statements.

When a constructive retirement occurs, the consolidated income statement for the period reports a gain or loss on debt retirement based on the difference between the carrying value of the bonds on the books of the debtor and the purchase price paid by the affiliate in acquiring the bonds. Neither the bonds payable nor the purchaser's investment in the bonds is reported in the consolidated balance sheet because the bonds are no longer considered outstanding.

# **Purchase at Book Value**

In the event that a company purchases an affiliate's debt from an unrelated party at a price equal to the liability reported by the debtor, the elimination entries required in preparing the consolidated financial statements are identical to those used in eliminating a direct intercorporate debt transfer. In this case, the total of the bond liability and the related premium or discount reported by the debtor equal the balance in the investment account shown by the bondholder, and the interest income reported by the bondholder each period equals the interest expense reported by the debtor. All these amounts need to be eliminated to avoid misstating the accounts in the consolidated financial statements.

# Purchase at an Amount Less than Book Value

Continuing movement in the level of interest rates and the volatility of other factors influencing the securities markets make it unlikely that a company's bonds will sell after issuance at a price identical to their book value. When the price paid to acquire an affiliate's bonds differs from the liability reported by the debtor, a gain or loss is reported in the consolidated income statement in the period of constructive retirement. In addition, the bond interest income and interest expense reported by the two affiliates subsequent to the purchase must be eliminated in preparing consolidated statements. Interest income reported by the investing affiliate and interest expense reported by the debtor are not equal in this case because of the different bond carrying amounts on the books of the two companies. The difference in the bond carrying amounts is reflected in the amortization of the discount or premium and, in turn, causes interest income and expense to differ.

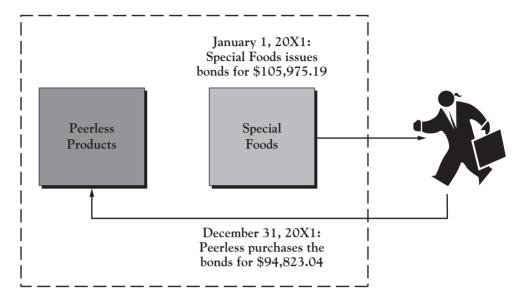

As an example of consolidation following the purchase of an affiliate's bonds at less than book value, assume that Peerless Products Corporation purchases 80 percent of the common stock of Special Foods Inc. on December 31, 20X0, for its underlying book value of \$240,000. At that date, the fair value of the noncontrolling interest is equal to its book value of \$60,000. In addition, the following conditions occur:

- 1. On January 1, 20X1, Special Foods issues 10-year, 12 percent bonds payable with a par value of \$100,000; the bonds are issued at a premium, \$105,975.19, to yield the current market interest rate of 11 percent. A nonaffiliated investor purchases the bonds from Special Foods.
- 2. The bonds pay interest on June 30 and December 31.
- 3. Both Peerless Products and Special Foods amortize bond discounts and premiums using the effective interest method.
- 4. On December 31, 20X1, Peerless Products purchases the bonds from the nonaffiliated investor for \$94,823.04 when the bonds' carrying value on Special Foods' books is \$105,623.04, resulting in a gain of \$10,800 on the constructive retirement of the bonds. Note that Peerless' purchase price reflects the current market interest rate of 12.992186% when the bonds have 18 payments left to maturity.
- 5. Special Foods reports net income of \$50,152 for 20X1 and \$75,192 for 20X2 and declares dividends of \$30,000 in 20X1 and \$40,000 in 20X2.
- 6. Peerless earns \$140,000 in 20X1 and \$160,000 in 20X2 from its own separate operations. Peerless declares dividends of \$60,000 in both 20X1 and 20X2.

LO 8-3

Prepare journal entries and elimination entries related to debt purchased from a nonaffiliate at an amount less than book value.

The bond transactions of Special Foods and Peerless appear as follows:

In addition, the interest expense recognized by Special Foods each period based on effective interest amortization of the premium over the life of the bonds can be summarized as follows:

| Bond Premium Amortization Table |            |  |   |                         |          |                                |                               |
|---------------------------------|------------|--|---|-------------------------|----------|--------------------------------|-------------------------------|

|                                 |            | 120,000.00                                     | 114,024.81  | (5,975.19)              |          |                                |                               |

# Bond Liability Entries—20X1

Special Foods records the following entries related to its bonds during 20X1:

|     | January 1, 20X1  |         |         |
|-----|--|---------|---------|
| (7) | Cash   | 105,975 |         |
|     | Bonds Payable  |         | 100,000 |
|     | Premium on Bonds Payable                                 |         | 5,975   |
|     | Sale of bonds to nonaffiliated investor.                 |         |         |
|     | June 30, 20X1  |         |         |
| (8) | Interest Expense   | 5,829   |         |
|     | Premium on Bonds Payable                                 | 171     |         |
|     | Cash   |         | 6,000   |
|     | Semiannual payment of interest (see amortization table). |         |         |
|     | December 31, 20X1  |         |         |
| (9) | Interest Expense   | 5,819   |         |
|     | Premium on Bonds Payable                                 | 181     |         |
|     | Cash   |         | 6,500   |
|     | Semiannual nayment of interest                           |         |         |

Semiannual payment of interest.

Entry (7) records the issuance of the bonds to a nonaffiliated investor for \$105,975. Entries (8) and (9) record the payment of interest and the amortization of the bond premium at each of the two interest payment dates during 20X1. Total interest expense for 20X1 is \$11,648 (\$5,829 + \$5,819), and the book value of the bonds on December 31, 20X1, is \$105,623 as shown in the amortization table.

# **Bond Investment Entries—20X1**

Peerless Products records the purchase of Special Foods' bonds from the nonaffiliated party with the following entry:

|      | December 31, 20X1                 |        |
|------|-----------------------------------|--------|
| (10) | Investment in Special Foods Bonds | 94,823 |
|      | Cash                              | 94,823 |

Purchase of Special Foods bonds from a nonaffiliated investor.

This entry is the same as if the bonds purchased were those of an unrelated company. Peerless purchases the bonds at the very end of the year after payment of the interest to the nonaffiliated investor; therefore, Peerless earns no interest on the bonds during 20X1, nor is there any interest accrued on the bonds at the date of purchase.

# Computation of Gain on Constructive Retirement of Bonds

From a consolidated viewpoint, the purchase of Special Foods' bonds by Peerless is considered a retirement of the bonds by the consolidated entity. Therefore, in the preparation of consolidated financial statements, a gain or loss must be recognized for the difference between the book value of the bonds on the date of repurchase and the amount paid by the consolidated entity in reacquiring the bonds:

| Book value of Special Foods' bonds, December 31, 20X1 | \$105,623 |
|---|-----------|
| Price paid by Peerless to purchase bonds              | (94,823)  |
| Gain on constructive retirement of bonds              | \$ 10,800 |

This gain is included in the consolidated income statement as a gain on the retirement of bonds.

# Assignment of Gain on Constructive Retirement

Four approaches have been used in practice for assigning the gain or loss on the constructive retirement of an affiliate's bonds to the shareholders of the participating companies. Depending upon the method selected, the gain or loss may be assigned to any of the following:

- 1. The affiliate issuing the bonds.
- 2. The affiliate purchasing the bonds.
- 3. The parent company.
- 4. The issuing and purchasing companies based on the difference between the carrying amounts of the bonds on their books at the date of purchase and the par value of the bonds.

No compelling reasons seem to exist for choosing one of these methods over the others, and in practice the choice often is based on expediency and lack of materiality. The FASB's approach is to assign the gain or loss to the issuing company (approach 1). In previous chapters, gains and losses on intercompany transactions were viewed as accruing to the shareholders of the selling affiliate. When this approach is applied in the case of intercorporate debt transactions, gains and losses arising from the intercompany debt transactions are viewed as accruing to the shareholders of the selling or issuing affiliate. In effect, the purchasing affiliate is viewed as acting on behalf of the issuing affiliate by acquiring the bonds.

An important difference exists between the intercompany gains and losses discussed in previous chapters and the gains and losses arising from intercorporate debt transactions. Gains and losses from intercorporate transfers of assets are recognized by the individual affiliates and are eliminated in consolidation. Gains and losses from intercorporate debt transactions are not recognized by the individual affiliates but must be included in consolidation.

When the subsidiary is the issuing affiliate, the gain or loss on constructive retirement of the bonds is viewed as accruing to the subsidiary's shareholders. Thus, the gain or loss is apportioned between the controlling and noncontrolling interests based on the relative ownership interests in the common stock (similar to upstream inventory or asset transfers). If the parent is the issuing affiliate, the entire gain or loss on the constructive retirement accrues to the controlling interest and none is apportioned to the noncontrolling interest (similar to downstream inventory or asset transfers).

As a result of the interest income and expense entries recorded annually by the companies involved, the constructive gain or loss is recognized over the remaining term of the bond issue; accordingly, the total amount of the unrecognized gain or loss decreases each period and is fully amortized at the time the bond matures. Thus, no permanent gain or loss is assigned to the debtor company's shareholders.

# Fully Adjusted Equity-Method Entries—20X1

In addition to recording the bond investment with entry (10), Peerless records the following equity-method entries during 20X1 to account for its investment in Special Foods stock:

| (11) | Investment in Special Foods Stock             | 40,122 |        |
|------|---|--------|--------|
|      | Income from Special Foods                     |        | 40,122 |
|      | Record equity-method income: \$50,152 × 0.80. |        |        |
|      |   |        |        |
| (12) | Cash  | 24,000 |        |
|      |   |        |        |
|      | Investment in Special Foods Stock             |        | 24,000 |

The full gain on constructive retirement is included in consolidated net income. That gain is attributed to the shareholders of the issuing company, Special Foods. Therefore, Peerless records its proportionate share of the gain, \$8,640 ( $\$10,800 \times 0.80$ ) under the fully adjusted equity method.

Record Peerless 80% share of the gain on the constructive retirement of Special Foods' bonds.

We note that a proportionate share of the gain is also assigned to the noncontrolling interest when the elimination entries are made in preparing the consolidation worksheet. If Peerless had been the issuing affiliate, all of the gain would have been included in its share of consolidated net income and none would have been allocated to the noncontrolling interest. These entries result in a \$264,762 balance in the investment account at the end of 20X1.

|                            | Inv. in           | Special<br>ods | _               | Inc. from Special<br>Foods | _                     |

# Consolidation Worksheet—20X1

Figure 8–2 on page 386 illustrates the consolidation worksheet prepared at the end of 20X1. The first two elimination entries are the same as we prepared in Chapter 3 with one minor exception. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry, we increase the amounts in Peerless' Income from Special Foods and Investment in Special Foods accounts by Peerless' share of the gain on bond retirement, \$8,640 ( $\$10,800 \times 80\%$ ). We also increase the NCI in Net Income of Special Foods and NCI in Net Assets of Special Foods by the NCI share of the gain,  $$2,160 ($10,800 \times 20\%)$ .

## **Book Value Calculations:**

|                             | NCI 20% - | + Peerless 80% = | = Common Stock + | Retained Earnings |
|-----------------------------|-----------|------------------|------------------|-------------------|
| Beginning book value        | 60,000    | 240,000          | 200,000          | 100,000           |
| + Net Income                | 10,030    | 40,122           |                  | 50,152            |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)         |                  | (30,000)          |
| Ending book value           | 64,030    | 256,122          | 200,000          | 120,152           |

$$\frac{\text{NCI 20\% + Peerless 80\%}}{2,160} = \frac{\text{Retirement Gain}}{10,800}$$

# **Basic Investment Account Elimination Entry:**

|                                   |                    | <i>y</i> · |  |
|-----------------------------------|--------------------|------------|--|
| Common stock<br>Retained earnings | 200,000<br>100,000 |            | ← Common stock balance<br>← Beg. RE from trial balance |
| Income from Special Foods         | 48,762             |            | ← Peerless' % of NI + 80% Ret. Gain                    |
| NCI in NI of Special Foods        | 12,190             |            | ← NCI share of NI + 20% Ret. Gain                      |
| Dividends declared                |                    |            | ← 100% of sub's dividends                              |
| Investment in Special Foods       |                    | 264,762    | ← Net BV + 80% Ret. Gain                               |
| NCI in NA of Special Foods        |                    | 66,190     | ← NCI share BV + 20% Ret. Gain                         |

# **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation      | 300,000 |         | Accumulated depreciation                              |
|-------------------------------|---------|---------|---|
| <b>Building and equipment</b> |         | 300,000 | at the time of the acquisition<br>netted against cost |

Special Foods' bonds payable and Peerless' investment in Special Foods' bonds cannot appear in the consolidated balance sheet because the bond holdings involve parties totally within the single economic entity. Note that the gain recognized on the constructive retirement of the bonds does not appear on the books of either Peerless or Special Foods because the bonds still are outstanding from the perspective of the separate companies. From the viewpoint of the consolidated entity, the bonds are retired at the end of 20X1, and a gain must be entered in the consolidation worksheet so that it appears in the consolidated income statement.

| Item                     | Peerless | Special     | Unadjusted  | Consolidated |
|--------------------------|----------|-------------|-------------|--------------|
|                          | Products | Foods       | Totals      | Amounts      |
| Bonds Payable            | 0        | \$(100,000) | \$(100,000) | 0            |
| Premium on Bonds Payable | 0        | (5,623)     | (5,623)     | 0            |
| Investment in Bonds      | \$94,823 | 0           | 94,823      | 0            |
| Interest Expense         | 0        | \$ 11,648   | \$ 11,648   | \$11,648     |
| Interest Income          | 0        | 0           | 0           | 0            |
| Gain on Bond Retirement  | 0        | 0           | 0           | (10,800)     |

Thus, the consolidation worksheet entry to eliminate intercompany bond holdings eliminates the bond payable and its associated premium accounts from Special Foods' financial statements. It also removes the investment in Special Foods Bonds from Peerless' financial statements. Finally, it records the bond retirement gain.

# **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable                     | 100,000 |        |
|-----------------------------------|---------|--------|
| Premium on Bonds Payable          | 5,623   |        |
| Investment in Special Foods Bonds |         | 94,823 |
| Gain on Bond Retirement           |         | 10,800 |

No eliminations are needed with respect to interest income or interest expense in preparing the consolidated statements for December 31, 20X1. Because Peerless purchased the bonds at the end of the year, Peerless records no interest income until 20X2. The interest expense of \$11,648 (\$5,829 + 5,819) recorded by Special Foods is viewed appropriately as interest expense of the consolidated entity because an unrelated party held the bonds during all of 20X1.

## Consolidated Net Income—20X1

Consolidated net income of \$200,952 (Figure 8–2) is computed and allocated as follows:

| Peerless' separate income<br>Special Foods' net income<br>Gain on constructive retirement of bonds | \$50,152<br>10,800 | \$140,000             |
|--|--------------------|-----------------------|
| Special Foods' realized net income   |                    | 60,952                |
| Consolidated net income, 20X1 Income to noncontrolling interest ( $$60,952 \times 0.20$ )          |                    | \$200,952<br>(12,190) |
| Income to controlling interest   |                    | \$188,762             |

StudyGuide .com

Consolidated net income is \$10,800 higher than it would have been had Peerless not purchased the bonds.

# Noncontrolling Interest—December 31, 20X1

Total noncontrolling interest on December 31, 20X1, in the absence of a differential, includes a proportionate share of both the reported book value of Special Foods and the gain on constructive bond retirement. The balance of the noncontrolling interest on December 31, 20X1, is computed as follows:

| Book value of Special Foods' net assets, December 31, 20X1: | ¢200.000  |
|---|-----------|
| Common stock  | \$200,000 |
| Retained earnings   | 120,152   |
| Total reported book value                                   | \$320,152 |
| Gain on constructive retirement of bonds                    | 10,800    |
| Realized book value of Special Foods' net assets            | \$330,952 |
| Noncontrolling stockholders' share                          | × 0.20    |
| Noncontrolling interest in net assets, December 31, 20X1    | \$ 66,190 |
|   |           |

# **Bond Liability Entries—20X2**

Special Foods records interest on its bonds during 20X2 with the following entries:

|      | June 30, 20X2                   |       |       |
|------|---------------------------------|-------|-------|
| (14) | Interest Expense                | 5,809 |       |
|      | Premium on Bonds Payable        | 191   |       |
|      | Cash                            |       | 6,000 |
|      | Semiannual payment of interest. |       |       |
|      | December 31, 20X2               |       |       |
| (15) | Interest Expense                | 5,799 |       |
|      | Premium on Bonds Payable        | 201   |       |
|      | Cash                            |       | 6,000 |

Semiannual payment of interest.

# **Bond Investment Entries—20X2**

Peerless Products accounts for its investment in Special Foods' bonds in the same way as if the bonds were those of a nonaffiliate. The \$94,823 purchase price paid by Peerless reflects a \$5,177 (\$100,000 - \$94,823) discount from the par value of the bonds. This discount is amortized over the nine-year remaining term of the bonds based on the amortization table (partially presented below) for each six-month interest payment period.

|                   | Bond Discount Amortization Table |  |  |                          |            |                                |                               |  |
|-------------------|----------------------------------|--|--|--------------------------|------------|--------------------------------|-------------------------------|--|
| Payment<br>Number | Period End                       | Interest<br>Payment<br>(Face × 0.12<br>× 6/12) | Interest Expense<br>(Carrying Value<br>× 0.12992186<br>× 6/12) | Amortization of Discount | Discount   | Bonds<br>Payable<br>Face Value | Carrying<br>Value of<br>Bonds |  |
|                   | 12/31/20X1                       |  |  |                          | (5,176.96) | 100,000.00                     | 94,823.04                     |  |
| 1                 | 6/30/20X2                        | 6,000  | 6,159.79   | 159.79                   | (5,017.17) | 100,000.00                     | 94,982.83                     |  |
| 2                 | 12/31/20X2                       | 6,000  | 6,170.17   | 170.17                   | (4,847.00) | 100,000.00                     | 95,153.00                     |  |
| 3                 | 6/30/20X3                        | 6,000  | 6,181.23   | 181.23                   | (4,665.77) | 100,000.00                     | 95,334.23                     |  |
| 4                 | 12/31/20X3                       | 6,000  | 6,193.00   | 193.00                   | (4,472.77) | 100,000.00                     | 95,527.23                     |  |

Peerless' entries to record interest income for 20X2 are as follows:

|      | June 30, 20X2                     |       |       |
|------|-----------------------------------|-------|-------|
| (16) | Cash                              | 6,000 |       |
|      | Investment in Special Foods Bonds | 160   |       |
|      | Interest Income                   |       | 6,160 |
|      | Record receipt of bond interest.  |       |       |
|      | December 31, 20X2                 |       |       |
| (17) | Cash                              | 6,000 |       |
|      | Investment in Special Foods Bonds | 170   |       |
|      | Interest Income                   |       | 6,170 |
|      | December of board interest        |       |       |

Record receipt of bond interest.

Peerless earns this \$12,330 (\$6,160 + \$6,170) of interest income in addition to its \$160,000 of separate operating income for 20X2.

# Subsequent Recognition of Gain on Constructive Retirement

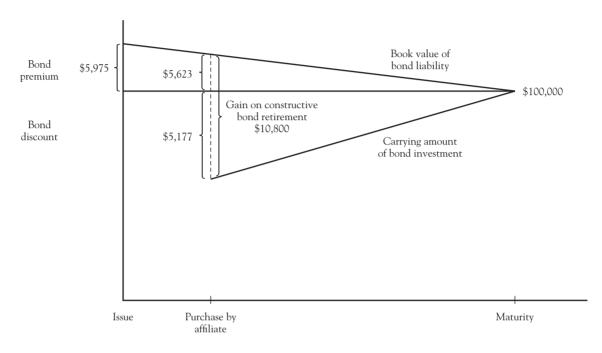

In the year of the constructive bond retirement, 20X1, the entire \$10.800 gain on the retirement is recognized in the consolidated income statement but not on the books of either Peerless or Special Foods. The total gain on the constructive bond retirement in

20X1 is equal to the sum of Peerless' discount on the bond investment and Special Foods' premium on the bond liability at the time of the constructive retirement (12/31/20X1):

| Peerless' discount on bond investment          | \$ 5,177 |
|--|----------|
| Special Foods' premium on bond liability       | 5,623    |
| Total gain on constructive retirement of bonds | \$10,800 |

This concept can be illustrated as follows:

In each year subsequent to 20X1, both Peerless and Special Foods recognize a portion of the constructive gain as they amortize the discount on the bond investment and the premium on the bond liability (based on their respective amortization tables). Thus, the \$10,800 gain on constructive bond retirement, previously recognized in the consolidated income statement, is recognized on the books of Peerless and Special Foods over the remaining nine-year term of the bonds.

# Fully Adjusted Equity-Method Entries—20X2

Peerless recognizes its share of Special Foods' income (\$75,192) and dividends (\$40,000) for 20X2 with the normal equity method entries:

| (18)  | Investment in Special Foods                               | 60,154 |        |
|-------|---|--------|--------|
|       | Income from Special Foods                                 |        | 60,154 |
|       | Record Peerless' 80% share of Special Foods' 20X2 income. |        |        |
| (4.0) |   |        |        |
| (19)  | Cash  | 32.000 |        |
| (13)  | Casii   | 32,000 |        |
| (13)  | Investment in Special Foods                               | 32,000 | 32,000 |

Under the fully adjusted equity method, Peerless records its proportionate 80 percent share of the constructive gain recognition.

| (20) | Income from Special Foods   | 578 |
|------|-----------------------------|-----|
|      | Investment in Special Foods | 578 |

Recognize 80% share of amortization of premium and discount  $[0.80 \times (191 + 201 + 160 + 170)]$ .

Whereas neither Peerless nor Special Foods recognized any of the gain from the constructive bond retirement on its separate books in 20X1, Peerless adjusted its equitymethod income from Special Foods for its 80 percent share of the \$10.800 gain, \$8.640. Therefore, as Peerless and Special Foods recognize the gain over the remaining term of the bonds, Peerless must reverse its 20X1 entry for its share of the gain. This adjustment is needed to avoid double-counting Peerless' share of the gain. Thus, the original adjustment of \$8,640 is reversed by the 80 percent portion of the combined amortization of Special Foods' premium and Peerless' discount each year.

# Consolidation Worksheet—20X2

Figure 8–3 on page 392 presents the consolidation worksheet for December 31, 20X2. The first two elimination entries are the same as we prepared in Chapter 3 with the previously explained exception. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry, a portion of the constructive gain is recognized and shared between Peerless (80 percent) and the NCI shareholders (20 percent). Thus, the basic elimination entry subtracts the proportionate share of the constructive gain recognition from the Income from Special Foods, Investment in Special Foods' stock, NCI in net income of Special Foods, and NCI in net assets of Special Foods accounts.

## **Book Value Calculations:**

| NCI 20% + Peerless 80% = Common Stock + Retained Earnings |         |          |         |          |  |
|---|---------|----------|---------|----------|--|
| Beginning book value                                      | 64,030  | 256,122  | 200,000 | 120,152  |  |
| + Net income  | 15,038  | 60,154   |         | 75,192   |  |
| <ul><li>Dividends</li></ul>                               | (8,000) | (32,000) |         | (40,000) |  |
| Ending book value   | 71,069  | 284,275  | 200,000 | 155,344  |  |

| NCI 20% | + Peerless | 80% = | Gain Recognition |
|---------|------------|-------|------------------|
| 144     | 578        |       | 722              |

## **Basic Investment Account Elimination Entry:**

| Common stock                      | 200,000  | ← Common stock balance                   |
|-----------------------------------|----------|--|
| Retained earnings                 | 120,152  | $\leftarrow$ Beg. RE from trial balance  |
| Income from Special Foods         | 59,576   | ← Peerless' % of NI − 80% 20X2 Rec. Gain |
| NCI in NI of Special Foods        | 14,894   | ← NCI % of NI - 20% 20X2 Rec. Gain       |
| Dividends declared                | 40,000   | ← 100% of sub's dividends declared       |
| Investment in Special Foods Stock | 283,698* | ← Net BV - 80% 20X2 Rec. Gain            |
| NCI in NA of Special Foods        | 70,924*  | ← NCI % of BV - 20% 20X2 Rec. Gain       |
|                                   |          |  |

<sup>\*</sup>Rounding difference

# **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation      | 300,000 |         | Accumulated depreciation at the time   |
|-------------------------------|---------|---------|--|
| <b>Building and equipment</b> |         | 300,000 | of the acquisition netted against cost |

The worksheet entry to eliminate the intercompany bond holdings credits the constructive gain on the bond retirement amount between the NCI interest in net assets of Special Foods and Peerless' Investment in Special Foods Common Stock account. In other words, the worksheet entry credits the Investment in Special Foods Common Stock account for \$8,640 ( $$10,800 \times 0.80$ ) to eliminate the remaining balance in the account. Similarly, the noncontrolling interest is increased by \$2,160 ( $$10,800 \times 0.20$ ), its proportionate share of the constructive gain on the bond retirement.

The intercompany bond holdings elimination entry also eliminates all aspects of the intercorporate bond holdings, including (1) Peerless' investment in bonds, \$95,161, (2) Special Foods' bonds payable, \$100,000, and the associated premium, \$5,231, (3) Peerless' bond interest income, \$12,338, and (4) Special Foods' bond interest expense, \$11,608 (\$5,809 + \$5,799). The amounts related to the bonds from the books of Peerless and Special Foods and the appropriate consolidated amounts are as follows:

| Item                     | Peerless<br>Products | Special<br>Foods | Unadjusted<br>Totals | Consolidated<br>Amounts |
|--------------------------|----------------------|------------------|----------------------|-------------------------|
| Bonds Payable            | 0                    | \$(100,000)      | \$(100,000)          | 0                       |
| Premium on Bonds Payable | 0                    | (5,231)          | (5,231)              | 0                       |
| Investment in Bonds      | \$95,153             | 0                | 95,153               | 0                       |
| Interest Expense         | 0                    | \$ 11,608        | \$ 11,608            | 0                       |
| Interest Income          | \$(12,330)           | 0                | (12,330)             | 0                       |

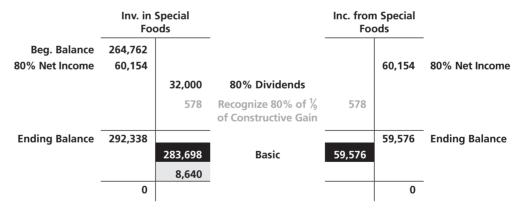

This analysis leads to the following worksheet entry to eliminate intercompany bond holdings.

# **Eliminate Intercompany Bond Holdings:**

| Bonds Payable                            | 100,000 |        |
|--|---------|--------|
| Premium on Bonds Payable                 | 5,231   |        |
| Interest Income                          | 12,330  |        |
| <b>Investment in Special Foods Bonds</b> |         | 95,153 |
| Interest Expense                         |         | 11,608 |
| Investment in Special Foods Stock        |         | 8,640  |
| NCI in NA of Special Foods               |         | 2,160  |
|  |         |        |

# Investment Account—20X2

The following T-accounts illustrate Peerless' Investment in the common stock of Special Foods and Income from Special Foods accounts at the end of 20X2 and how the elimination entries zero out their balances on the worksheet:

# Consolidated Net Income—20X2

Consolidated net income of \$246,800 in Figure 8–3 is computed and allocated as follows:

| Peerless' separate income<br>Special Foods' net income<br>Peerless' amortization of bond discount<br>Special Foods' amortization of bond premium | \$75,192<br>(330)<br>(392) | \$172,330             |
|--|----------------------------|-----------------------|
| Special Foods' realized net income   |                            | 74,470                |
| Consolidated net income, 20X1 Income to noncontrolling interest ( $$74,470 \times 0.20$ )  |                            | \$246,800<br>(14,894) |
| Income to controlling interest   |                            | <u>\$231,906</u>      |

# Noncontrolling Interest—December 31, 20X2

Total noncontrolling interest in the Net Assets of Special Foods account on December 31, 20X2, includes a proportionate share of both the reported book value of Special Foods and the portion of the gain on constructive bond retirement not yet recognized by the affiliates:

| Book value of Special Foods' net assets, December 31, 20X2:<br>Common stock<br>Retained earnings  |                   | \$200,000<br>155,344             |
|---|-------------------|----------------------------------|
| Total book value of net assets<br>Gain on constructive retirement of bonds<br>Less: Portion recognized by affiliates during 20X2                  | \$10,800<br>(722) | \$355,344                        |
| Constructive gain not yet recognized by affiliates  |                   | 10,078                           |
| Realized book value of Special Foods net assets<br>Noncontrolling stockholders' share<br>Noncontrolling interest in net assets, December 31, 20X2 |                   | \$365,422<br>× 0.20<br>\$ 73,084 |

# **Bond Elimination Entry in Subsequent Years**

In years after 20X2, the worksheet entry to eliminate the intercompany bonds and to adjust for the gain on constructive retirement of the bonds is similar to the entry to eliminate intercompany bond holdings in 20X2. The unamortized bond discount and premium decrease each year based on the amortization table. As of the beginning of 20X3, \$10,078 of the gain on the constructive retirement of the bonds remains unrecognized by the affiliates, computed as follows:

|            | onstructive retirement of bonds   |       | \$10,800 |
|------------|---|-------|----------|
|            | ion recognized by affiliates during 20X2:<br>s' amortization of bond discount | \$330 |          |
| Special    | Foods' amortization of bond premium   | 392   |          |
| Total gair | recognized by affiliates  |       | (722)    |
| Unrecogr   | ized gain on constructive retirement of bonds, January 1, 20X3                |       | \$10,078 |

The remaining unrecognized gain, \$10,078, can be allocated between Peerless (\$8,062) and the noncontrolling interest (\$2,016) based on their respective ownership interests (80% and 20%). The intercompany bond holdings elimination entry also eliminates all aspects of the intercorporate bond holdings, including (1) Peerless' investment in bonds, \$95,527, (2) Special Foods' bonds payable, \$100,000, and the associated premium, \$4,795, (3) Peerless' bond interest income, \$12,374, and (4) Special Foods' bond interest expense, \$11,564 (\$5,788 + \$5,776). The amounts related to the bonds from the books of Peerless and Special Foods and the appropriate consolidated amounts are as follows:

| Item                     | Peerless   | Special     | Unadjusted  | Consolidated |
|--------------------------|------------|-------------|-------------|--------------|
|                          | Products   | Foods       | Totals      | Amounts      |
| Bonds Payable            | 0          | \$(100,000) | \$(100,000) | 0            |
| Premium on Bonds Payable | 0          | (4,795)     | (4,795)     | 0            |
| Investment in Bonds      | \$95,527   | 0           | 95,527      | 0            |
| Interest Expense         | 0          | \$ 11,564   | \$ 11,564   | 0 0          |
| Interest Income          | \$(12,374) | 0           | (12,374)    |              |

FIGURE 8–3 December 31, 20X2, Consolidation Worksheet; Next Year Following Repurchase of Bonds at Less than Book Value

|   | Peerless  | Special   | Eliminatio       | on Entries      |                         |  |
|---|-----------|-----------|------------------|-----------------|-------------------------|--|
|   | Products  | Foods     | DR               | CR              | Consolidated            |  |

| Accounts Payable                          | 100,000   | 100,000   |                  |                 | 200,000                 |  |
| Bonds Payable                             | 200,000   | 100,000   | 100,000          |                 | 200,000                 |  |
| Premium on Bonds Payable                  |           | 5,231     | 5,231            |                 |                         |  |
| Common Stock                              | 500,000   | 200,000   | 200,000          |                 | 500,000                 |  |
| Retained Earnings                         | 600,668   | 155,344   | 206,952          | 51,608          | 600,668                 |  |
| NCI in NA of Special Foods                |           |           |                  | 70,924<br>2,160 | 73,084                  |  |
| Total Liabilities & Equity                | 1,400,668 | 560,575   | 512,183          | 124,692         | 1,573,752               |  |

Based on these numbers, the bond elimination entry at the end of 20X3 would be as follows:

# **Eliminate Intercompany Bond Holdings:**

| Bonds Payable                     | 100,000 |        |
|-----------------------------------|---------|--------|
| Premium on Bonds Payable          | 4,795   |        |
| Interest Income                   | 12,374  |        |
| Investment in Special Foods Bonds |         | 95,527 |
| Interest Expense                  |         | 11,564 |
| Investment in Special Foods Stock |         | 8,062  |
| NCI in NA of Special Foods        |         | 2,016  |
|                                   |         |        |

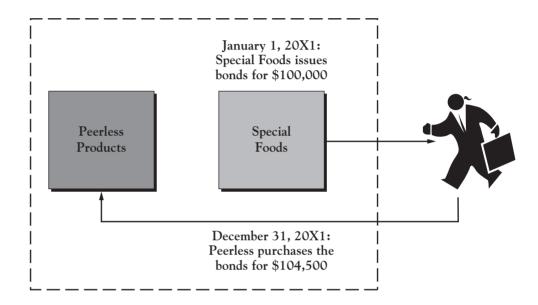

# LO 8-4

Prepare journal entries and elimination entries related to debt purchased from a nonaffiliate at an amount more than book value.

# Purchase at an Amount Higher than Book Value

When an affiliate's bonds are purchased from a nonaffiliate at an amount greater than their book value, the consolidation procedures are virtually the same as previously illustrated except that a loss is recognized on the constructive retirement of the debt. For example, assume that Special Foods issues 10-year 12 percent bonds on January 1, 20X1, at par of \$100,000. The bonds are purchased from Special Foods by a nonaffiliate, which sells the bonds to Peerless Products on December 31, 20X1, for \$104,500.

The bond transactions of Special Foods and Peerless appear as follows:

Special Foods recognizes \$12,000 ( $$100,000 \times 0.12$ ) of interest expense each year. Peerless recognizes interest income based on the following amortization table:

| Bond Premium Amortization Table |            |  |   |                          |          |                                |                               |
|---------------------------------|------------|--|---|--------------------------|----------|--------------------------------|-------------------------------|
| Payment<br>Number               | Period End | Interest<br>Payment<br>(Face × 0.12<br>× 6/12) | Interest Income<br>(Carrying Value<br>× 0.11193771<br>× 6/12) | Amortization of Discount | Discount | Bonds<br>Payable<br>Face Value | Carrying<br>Value of<br>Bonds |
|                                 | 12/31/20X1 |  |   |                          | 4,500.00 | 100,000.00                     | 104,500.00                    |
| 1                               | 6/30/20X2  | 6,000  | 5,848.75  | (151.25)                 | 4,348.75 | 100,000.00                     | 104,348.75                    |
| 2                               | 12/31/20X2 | 6,000  | 5,840.28  | (159.72)                 | 4,189.03 | 100,000.00                     | 104,189.03                    |
| 3                               | 6/30/20X3  | 6,000  | 5,831.34  | (168.66)                 | 4,020.37 | 100,000.00                     | 104,020.37                    |
| 4                               | 12/31/20X3 | 6,000  | 5,821.90  | (178.10)                 | 3,842.27 | 100,000.00                     | 103,842.27                    |

Because the bonds were issued at par, the carrying amount on Special Foods' books remains at \$100,000. Thus, once Peerless purchases the bonds from a nonaffiliate for \$104,500, a loss on the constructive retirement must be recognized in the consolidated income statement for \$4,500 (\$104,500 - \$100,000). The bond elimination entry in the

consolidation worksheet prepared at the end of 20X1 removes the bonds payable and the bond investment and recognizes the loss on the constructive retirement:

# **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable                     | 100,000 |         |
|-----------------------------------|---------|---------|
| Loss on Bond Retirement           | 4,500   |         |
| Investment in Special Foods Bonds |         | 104,500 |

In subsequent years, Peerless amortizes the premium on the bond investment, reducing interest income and the bond investment balance by the amount the premium is amortized each year. This, in effect, recognizes a portion of the loss on the constructive retirement. When consolidated statements are prepared, the amount of the loss on constructive retirement that has not been recognized by the separate affiliates at the beginning of the period is allocated proportionately against the ownership interests of the issuing affiliate. The bond elimination entry needed in the consolidation worksheet prepared at the end of 20X2 is as follows:

# **Eliminate Intercompany Bond Holdings:**

| Bonds Payable<br>Interest Income  | 100,000<br>11,689 |         |
|-----------------------------------|-------------------|---------|
| Investment in Special Foods Stock | 3,600             |         |
| NCI in NA of Special Foods        | 900               |         |
| Investment in Special Foods Bonds |                   | 104,189 |
| Interest Expense                  |                   | 12,000  |

```
$11,689 = $5,849 + $5,840 from amortization table
  $3,600 = $4,500 \times 0.80 (Peerless' share of the premium)
    $900 = $4,500 \times 0.20 (NCI's share of the premium)
104,189 = 104,500 - 151 - 160 (amortized premium)
 12,000 = 100,000 \times 0.12
```

Similarly, the following worksheet entry is needed in the consolidation worksheet at the end of 20X3:

# **Eliminate Intercompany Bond Holdings:**

| . , ,                             | •         |
|-----------------------------------|-----------|
| Bonds Payable                     | 100,000   |
| Interest Income                   | 11,653    |
| Investment in Special Foods Stock | 3,451     |
| NCI in NA of Special Foods        | 838       |
| Investment in Special Foods Bond  | s 103,842 |
| Interest Expense                  | 12,000    |

```
$11,653 = $5,831 + $5,822 from amortization table
  \$3,451 = \$4,189 \times 0.80 (Peerless' share of the premium)
    $838 = $4,189 \times 0.20 (NCI's share of the premium)
103,842 = 104,189 - 169 - 178 (amortized premium)
 $12,000 = $100,000 \times 0.12
```

# Summary of **Key Concepts**

The effects of intercompany debt transactions must be eliminated completely in preparing consolidated financial statements, just as with other types of intercompany transactions. Only debt transactions between the consolidated entity and unaffiliated parties are reported in the consolidated statements.

When one affiliate issues bonds that are purchased directly by another affiliate, the bonds are viewed from a consolidated point of view as never having been issued. Thus, all aspects of the intercompany bond holding are eliminated in consolidation. Items requiring elimination include (1) the bond investment from the purchasing affiliate's books, (2) the bond liability and any associated discount or premium from the issuer's books, (3) the interest income recognized by the investing affiliate and the interest expense recognized by the issuer, and (4) any intercompany interest receivable/payable as of the date of the consolidated statements.

When a company purchases the bonds of an affiliate from a nonaffiliate, it treats the bonds in consolidation as if they had been issued and subsequently repurchased by the consolidated entity. If the price paid by the purchasing affiliate is different from the issuer's book value of the bonds, a gain or loss from retirement of the bonds is recognized in the consolidated income statement. In addition, all aspects of the intercompany bond holding are eliminated because the bonds are treated as if the consolidated entity had retired them.

# Appendix **8A**

# Intercompany Indebtedness—Fully Adjusted Equity Method Using Straight-Line Interest Amortization

# LO 8-2

This appendix repeats the main examples in the chapter but assumes that the companies amortize interest using the straight-line method for amortizing discounts and premiums on bonds

# TRANSFER AT A DISCOUNT OR PREMIUM

When the coupon or nominal interest rate on a bond is different from the yield demanded by those who lend funds, a bond sells at a discount or premium. In such cases, the amount of bond interest income or expense recorded no longer equals the cash interest payments. Instead, interest income and expense amounts are adjusted for the amortization of the discount or premium.

As an illustration of the treatment of intercompany bond transfers at other than par, assume that on January 1, 20X1, Peerless Products purchases \$100,000 par value, 12 percent, 10-year bonds from Special Foods for \$90,000. Interest on the bonds is payable on January 1 and July 1. The interest expense recognized by Special Foods and the interest income recognized by Peerless each year include straight-line amortization of the discount, as follows:

| Cash interest ( $$100,000 \times 0.12$ )   | \$12,000 |
|--|----------|
| Amortization of discount ( $$10,000 \div 20$ semiannual interest periods) $\times$ 2 periods | 1,000    |
| Interest expense or income   | \$13,000 |

Half of these amounts are recognized in each of the two interest payment periods during a year. Although the effective interest method of amortization usually is required for amortizing discounts and premiums, the straight-line method is acceptable when it does not depart materially from the effective interest method and when transactions are between parent and subsidiary companies or between subsidiaries of a common parent.

# Entries by the Debtor

Special Foods records the issuance of the bonds on January 1 at a discount of \$10,000. It recognizes interest expense on July 1 when the first semiannual interest payment is made, and on December 31, when interest is accrued for the second half of the year. The amortization of the bond discount causes interest expense to be higher than the cash interest payment and causes the balance of the discount to decrease. Special Foods records the following entries related to the bonds during 20X1:

|      | January 1, 20X1                      |        |         |
|------|--------------------------------------|--------|---------|
| (1A) | Cash                                 | 90,000 |         |
|      | Discount on Bonds Payable            | 10,000 |         |
|      | Bonds Payable                        |        | 100,000 |
|      | Issue bonds to Peerless Products.    |        |         |
|      | July 1, 20X1                         |        |         |
| (2A) | Interest Expense                     | 6,500  |         |
|      | Discount on Bonds Payable            |        | 500     |
|      | Cash                                 |        | 6,000   |
|      | Semiannual interest payment.         |        |         |
|      | December 31, 20X1                    |        |         |
| (3A) | Interest Expense                     | 6,500  |         |
|      | Discount on Bonds Payable            |        | 500     |
|      | Interest Payable                     |        | 6,000   |
|      | Accrue interest expense at year-end. |        |         |

## Entries by the Bond Investor

Peerless Products records the purchase of the bonds and the interest income derived from the bonds during 20X1 with the following entries:

|      | January 1, 20X1                       |        |        |
|------|---------------------------------------|--------|--------|
| (4A) | Investment in Special Foods Bonds     | 90,000 |        |
|      | Cash                                  |        | 90,000 |
|      | Purchase of bonds from Special Foods. |        |        |
|      | July 1, 20X1                          |        |        |
| (5A) | Cash                                  | 6,000  |        |
|      | Investment in Special Foods Bonds     | 500    |        |
|      | Interest Income                       |        | 6,500  |
|      | Receive interest on bond investment.  |        |        |
|      | December 31, 20X1                     |        |        |
| (6A) | Interest Receivable                   | 6,000  |        |
|      | Investment in Special Foods Bonds     | 500    |        |
|      | Interest Income                       |        | 6,500  |
|      | Accrue interest income at year and    |        |        |

Accrue interest income at year-end.

The amortization of the discount by Peerless increases interest income to an amount higher than the cash interest payment and causes the balance of the bond investment account to increase.

#### Elimination Entries at Year-End

The December 31, 20X1, bond-related amounts taken from the books of Peerless Products and Special Foods and the appropriate consolidated amounts are as follows:

| Item                      | Peerless<br>Products | Special<br>Foods | Unadjusted<br>Totals | Consolidated<br>Amounts |
|---------------------------|----------------------|------------------|----------------------|-------------------------|
| Bonds Payable             | 0                    | \$(100,000)      | \$(100,000)          | 0                       |
| Discount on Bonds Payable | 0                    | 9,000            | 9,000                | 0                       |
| Interest Payable          | 0                    | (6,000)          | (6,000)              | 0                       |
| Investment in Bonds       | \$ 91,000            | 0                | 91,000               | 0                       |
| Interest Receivable       | 6,000                | 0                | 6,000                | 0                       |
| Interest Expense          | 0                    | \$ 13,000        | \$ 13,000            | 0                       |
| Interest Income           | \$(13,000)           | 0                | (13,000)             | 0                       |

All account balances relating to the intercorporate bond holdings must be eliminated in the preparation of consolidated financial statements. Toward that end, the consolidation worksheet prepared on December 31, 20X1, includes the following elimination entries related to the intercompany bond holdings:

#### **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable                     | 100,000 |        |
|-----------------------------------|---------|--------|
| Investment in Special Foods Bonds |         | 91,000 |
| Discount on Bonds Payable         |         | 9,000  |

#### Eliminate Intercompany Interest:

| Interest Income  | 13,000 |        |
|------------------|--------|--------|
| Interest Expense | •      | 13,000 |

#### Eliminate Intercompany Interest Receivable/Payable:

| Interest Payable    | 6,000 |       |  |
|---------------------|-------|-------|--|
| Interest Receivable |       | 6,000 |  |

The first entry eliminates the bonds payable and associated discount against the investment in bonds. The book value of the bond liability on Special Foods' books and the investment in bonds on Peerless' books will be the same so long as both companies amortize the discount in the same way.

The second entry eliminates the bond interest income recognized by Peerless during 20X1 against the bond interest expense recognized by Special Foods. Because the interest for the second half of 20X1 was accrued but not paid, an intercompany receivable/payable exists at the end of the year. The third entry eliminates the interest receivable against the interest payable.

Consolidation at the end of 20X2 requires elimination entries similar to those at the end of 20X1. Because \$1,000 of the discount is amortized each year, the bond investment balance on Peerless' books increases to \$92,000 (\$90,000 + \$1,000 + \$1,000). Similarly, the bond discount on Special Foods' books decreases to \$8,000, resulting in an effective bond liability of \$92,000. The consolidation elimination entries related to the bonds at the end of 20X2 are as follows:

#### **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable                     | 100,000 |        |
|-----------------------------------|---------|--------|
| Investment in Special Foods Bonds |         | 92,000 |
| Discount on Bonds Payable         |         | 8,000  |

#### Eliminate Intercompany Interest:

| Interest Income  | 13,000 |
|------------------|--------|
| Interest Expense | 13,000 |

#### Eliminate Intercompany Interest Receivable/Payable:

| Interest Payable    | 6,000 |
|---------------------|-------|
| Interest Receivable | 6,000 |

## BONDS OF AFFILIATE PURCHASED FROM A NONAFFILIATE

A more complex situation occurs when an affiliate of the issuer later acquires bonds that were issued to an unrelated party. From the viewpoint of the consolidated entity, an acquisition of an affiliate's bonds retires the bonds at the time they are purchased. The bonds no longer are held outside the consolidated entity once another company within the consolidated entity purchases them, and they must be treated as if repurchased by the debtor. Acquisition of an affiliate's bonds by another company within the consolidated entity is referred to as constructive retirement. Although the bonds actually are not retired, they are treated as if they were retired in preparing consolidated financial statements.

When a constructive retirement occurs, the consolidated income statement for the period reports a gain or loss on debt retirement based on the difference between the carrying value of the bonds on the books of the debtor and the purchase price paid by the affiliate in acquiring the bonds. Neither the bonds payable nor the purchaser's investment in the bonds is reported in the consolidated balance sheet because the bonds are no longer considered outstanding.

## **Purchase at Book Value**

In the event that a company purchases an affiliate's debt from an unrelated party at a price equal to the liability reported by the debtor, the elimination entries required in preparing the consolidated financial statements are identical to those used in eliminating a direct intercorporate debt transfer. In this case, the total of the bond liability and the related premium or discount reported by the debtor equal the balance in the investment account shown by the bondholder, and the interest income reported by the bondholder each period equals the interest expense reported by the debtor. All of these amounts need to be eliminated to avoid misstating the accounts in the consolidated financial statements.

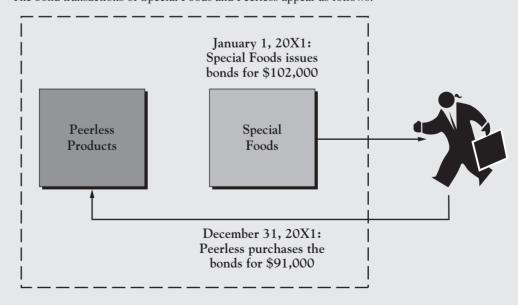

## Purchase at an Amount Less than Book Value

Continuing movement in the level of interest rates and the volatility of other factors influencing the securities markets make it unlikely that a company's bonds will sell after issuance at a price identical to their book value. When the price paid to acquire an affiliate's bonds differs from the liability reported by the debtor, a gain or loss is reported in the consolidated income statement in the period of constructive retirement. In addition, the bond interest income and interest expense reported by the two affiliates subsequent to the purchase must be eliminated in preparing consolidated statements. Interest income reported by the investing affiliate and interest expense reported by the debtor are not equal in this case because of the different bond carrying amounts on the books of the two companies. The difference in the bond carrying amounts is reflected in the amortization of the discount or premium and, in turn, causes interest income and expense to differ.

As an example of consolidation following the purchase of an affiliate's bonds at less than book value, assume that Peerless Products Corporation purchases 80 percent of the common stock of Special Foods Inc. on December 31, 20X0, for its underlying book value of \$240,000. At that date, the fair value of the noncontrolling interest is equal to its book value of \$60,000. In addition, the following conditions occur:

- 1. On January 1, 20X1, Special Foods issues 10-year, 12 percent bonds payable with a par value of \$100,000; the bonds are issued at 102. The nonaffiliated investor purchases the bonds from Special Foods.
- 2. The bonds pay interest on June 30 and December 31.
- 3. Both Peerless Products and Special Foods amortize bond discount and premium using the straight-line method.
- 4. On December 31, 20X1, Peerless Products purchases the bonds from the nonaffiliated investor for \$91,000.
- 5. Special Foods reports net income of \$50,000 for 20X1 and \$75,000 for 20X2 and declares dividends of \$30,000 in 20X1 and \$40,000 in 20X2.
- 6. Peerless earns \$140,000 in 20X1 and \$160,000 in 20X2 from its own separate operations. Peerless declares dividends of \$60,000 in both 20X1 and 20X2.

The bond transactions of Special Foods and Peerless appear as follows:

## LO 8-3

to debt purchased from a less than book value.

#### Bond Liability Entries—20X1

Special Foods records the following entries related to its bonds during 20X1:

|      | January 1, 20X1                              |         |         |
|------|--|---------|---------|
| (7A) | Cash   | 102,000 |         |
|      | Bonds Payable                                |         | 100,000 |
|      | Premium on Bonds Payable                     |         | 2,000   |
|      | Sale of bonds to the nonaffiliated investor. |         |         |
|      | June 30, 20X1                                |         |         |
| (A8) | Interest Expense                             | 5,900   |         |
|      | Premium on Bonds Payable                     | 100     |         |
|      | Cash   |         | 6,000   |
|      | Semiannual payment of interest:              |         |         |
|      | \$5,900 = \$6,000 - \$100                    |         |         |
|      | $100 = 2,000 \div 20$ interest periods       |         |         |
|      | $$6,000 = $100,000 \times 0.12 \times 6/12.$ |         |         |
|      | December 31, 20X1                            |         |         |
| (9A) | Interest Expense                             | 5,900   |         |
|      | Premium on Bonds Payable                     | 100     |         |
|      | Cash   |         | 6,000   |
|      | Semiannual payment of interest.              |         |         |

Entry (7A) records the issuance of the bonds to the nonaffiliated investor for \$102,000. Entries (8A) and (9A) record the payment of interest and the amortization of the bond premium at each of the two interest payment dates during 20X1. Total interest expense for 20X1 is \$11,800 ( $\$5,900 \times 2$ ), and the book value of the bonds on December 31, 20X1, is as follows:

| Book value of bonds at issuance        | \$102,000 |
|--|-----------|
| Amortization of premium, 20X1          | (200)     |
| Book value of bonds, December 31, 20X1 | \$101,800 |

## **Bond Investment Entries—20X1**

Peerless Products records the purchase of Special Foods' bonds from the nonaffiliated investor with the following entry:

|       | December 31, 20X1                 |        |
|-------|-----------------------------------|--------|
| (10A) | Investment in Special Foods Bonds | 91,000 |
|       | Cash                              | 91,000 |

Purchase of Special Foods bonds from a nonaffiliated investor.

This entry is the same as if the bonds purchased were those of an unrelated company. Peerless purchases the bonds at the very end of the year after payment of the interest to a nonaffiliated investor; therefore, Peerless earns no interest on the bonds during 20X1, nor is there any interest accrued on the bonds at the date of purchase.

### Computation of Gain on Constructive Retirement of Bonds

From a consolidated viewpoint, the purchase of Special Foods' bonds by Peerless is considered a retirement of the bonds by the consolidated entity. Therefore, in the preparation of consolidated financial statements, a gain or loss must be recognized for the difference between the book value of the bonds on the date of repurchase and the amount paid by the consolidated entity in reacquiring the bonds:

| Book value of Special Foods' bonds, December 31, 20X1 | \$101,800        |
|---|------------------|
| Price paid by Peerless to purchase bonds              | (91,000)         |
| Gain on constructive retirement of bonds              | <u>\$ 10,800</u> |

This gain is included in the consolidated income statement as a gain on the retirement of bonds.

### Assignment of Gain on Constructive Retirement

Four approaches have been used in practice for assigning the gain or loss on the constructive retirement of an affiliate's bonds to the shareholders of the participating companies. Depending upon the method selected, the gain or loss may be assigned to any of the following:

- 1. The affiliate issuing the bonds.
- 2. The affiliate purchasing the bonds.
- 3. The parent company.
- 4. The issuing and purchasing companies based on the difference between the carrying amounts of the bonds on their books at the date of purchase and the par value of the bonds.

No compelling reasons seem to exist for choosing one of these methods over the others, and in practice the choice often is based on expediency and lack of materiality. The FASB's approach is to assign the gain or loss to the issuing company. In previous chapters, gains and losses on intercompany transactions were viewed as accruing to the shareholders of the selling affiliate. When this approach is applied in the case of intercorporate debt transactions, gains and losses arising from the intercompany debt transactions are viewed as accruing to the shareholders of the selling or issuing affiliate. In effect, the purchasing affiliate is viewed as acting on behalf of the issuing affiliate by acquiring the bonds.

An important difference exists between the intercompany gains and losses discussed in previous chapters and the gains and losses arising from intercorporate debt transactions. Gains and losses from intercorporate transfers of assets are recognized by the individual affiliates and are eliminated in consolidation. Gains and losses from intercorporate debt transactions are not recognized by the individual affiliates but must be included in consolidation.

When the subsidiary is the issuing affiliate, the gain or loss on constructive retirement of the bonds is viewed as accruing to the subsidiary's shareholders. Thus, the gain or loss is apportioned between the controlling and noncontrolling interests based on the relative ownership interests in the common stock (similar to upstream inventory or asset transfers). If the parent is the issuing affiliate, the entire gain or loss on the constructive retirement accrues to the controlling interest and none is apportioned to the noncontrolling interest (similar to downstream inventory or asset transfers).

As a result of the interest income and expense entries recorded annually by the companies involved, the constructive gain or loss is recognized over the remaining term of the bond issue; accordingly, the total amount of the unrecognized gain or loss decreases each period and is fully amortized at the time the bond matures. Thus, no permanent gain or loss is assigned to the debtor company's shareholders.

#### Fully Adjusted Equity-Method Entries—20X1

In addition to recording the bond investment with entry (10A), Peerless records the following equity-method entries during 20X1 to account for its investment in Special Foods stock:

| (11A) | Investment in Special Foods Stock                    | 40,000 |        |
|-------|--|--------|--------|
|       | Income from Special Foods                            |        | 40,000 |
|       | Record equity-method income: $$50,000 \times 0.80$ . |        |        |
|       |  |        |        |
|       |  |        |        |
| (12A) | Cash   | 24,000 |        |
| (12A) | Cash<br>Investment in Special Foods Stock            | 24,000 | 24,000 |

The full gain on constructive retirement is included in consolidated net income. That gain is attributed to the shareholders of the issuing company, Special Foods. Therefore, Peerless records its proportionate share of the gain, \$8,640 ( $\$10,800 \times 0.80$ ), under the fully adjusted equity method.

Record Peerless' 80% share of the gain on the constructive retirement of Special Foods' bonds.

We note that a proportionate share of the gain is also assigned to the noncontrolling interest when the elimination entries are made in preparing the consolidation worksheet. If Peerless had been the issuing affiliate, all of the gain would have been included in its share of consolidated net income and none would have been allocated to the noncontrolling interest. These entries result in a \$264,640 balance in the investment account at the end of 20X1.

|                            | Inv. in Special<br>Foods |        |                                | Inc. from Special<br>Foods |        |                       |  |
|----------------------------|--------------------------|--------|--------------------------------|----------------------------|--------|-----------------------|--|
| Acquisition 80% Net Income | 240,000<br>40,000        |        |                                |                            | 40,000 | 80% Net Income        |  |
|                            |                          | 24,000 | 80% Dividends                  |                            |        |                       |  |
|                            | 8,640                    |        | 80% of Bond<br>Retirement Gain |                            | 8,640  |                       |  |
| <b>Ending Balance</b>      | 264,640                  |        |                                |                            | 48,640 | <b>Ending Balance</b> |  |

### Consolidation Worksheet—20X1

Figure 8-1A illustrates the consolidation worksheet prepared at the end of 20X1. The first two elimination entries are the same as we prepared in Chapter 3 with one minor exception. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry, we increase the amounts in Peerless' Income from Special Foods and Investment in Special Foods Stock accounts by Peerless' share of the gain on bond retirement, \$8,640 ( $\$10,800 \times 0.80$ ). We also increase the NCI in Net Income of Special Foods and NCI in Net Assets of Special Foods by the NCI share of the gain, \$2,160 (\$10,800  $\times$  0.20).

### **Book Value Calculations:**

|                             | NCI 20% | + Peerless 80% = | Common Stock | + Retained Earnings |
|-----------------------------|---------|------------------|--------------|---------------------|
| Beginning book value        | 60,000  | 240,000          | 200,000      | 100,000             |
| + Net Income                | 10,000  | 40,000           |              | 50,000              |
| <ul><li>Dividends</li></ul> | (6,000) | (24,000)         |              | (30,000)            |
| Ending book value           | 64,000  | 256,000          | 200,000      | 120,000             |

| NCI 20% | + Peerless 80% = | Retirement Gain |
|---------|------------------|-----------------|
| 2,160   | 8,640            | 10,800          |

### **Basic Investment Account Elimination Entry:**

| Common stock<br>Retained earnings | 200,000<br>100,000 |   |
|-----------------------------------|--------------------|---|
| Income from Special Foods         | 48,640             | ● Peerless' % of NI + 80% Ret. Gain     |
| NCI in NI of Special Foods        | 12,160             | 0 ← NCI share of NI + 20% Ret. Gain     |
| Dividends declared                |                    | <b>30,000</b> ← 100% of sub's dividends |
| Investment in Special Foods Stock |                    | 264,640 ← Net BV + 80% Ret. Gain        |
| NCI in NA of Special Foods        |                    | 66,160 ← NCI share BV + 20% Ret. Gain   |

### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 |         | Accumulated depreciation at              |
|--------------------------|---------|---------|--|
|                          |         |         | $\leftarrow$ the time of the acquisition |
| Building and equipment   |         | 300,000 | netted against cost                      |

Special Foods' bonds payable and Peerless' investment in Special Foods' bonds cannot appear in the consolidated balance sheet because the bond holdings involve parties totally within the single economic entity. Note that the gain recognized on the constructive retirement of the bonds does

FIGURE 8-1A December 31, 20X1, Consolidation Worksheet; Repurchase of Bonds at Less than Book Value

| Total Liabilities & Equity        | 1,228,640 | 521,800   | 462,600    | 106,960    | 1,394,800    |

not appear on the books of either Peerless or Special Foods because the bonds still are outstanding from the perspective of the separate companies. From the viewpoint of the consolidated entity, the bonds are retired at the end of 20X1, and a gain must be entered in the consolidation worksheet so that it appears in the consolidated income statement.

| Item                     | Peerless<br>Products | Special<br>Foods | Unadjusted<br>Totals | Consolidated<br>Amounts |
|--------------------------|----------------------|------------------|----------------------|-------------------------|
| Bonds Payable            | 0                    | \$(100,000)      | \$(100,000)          | 0                       |
| Premium on Bonds Payable | 0                    | (1,800)          | (1,800)              | 0                       |
| Investment in Bonds      | \$91,000             | 0                | 91,000               | 0                       |
| Interest Expense         | 0                    | \$ 11,800        | \$ 11,800            | \$11,800                |
| Interest Income          | 0                    | 0                | 0                    | 0                       |
| Gain on Bond Retirement  | 0                    | 0                | 0                    | (10,800)                |

Thus, the consolidation worksheet entry to eliminate intercompany bond holdings eliminates the bond payable and its associated premium accounts from Special Foods' financial statements. It also removes the investment in Special Foods Bonds from Peerless' financial statements. Finally, it records the bond retirement gain.

#### **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable                     | 100,000 |        |
|-----------------------------------|---------|--------|
| Premium on Bonds Payable          | 1,800   |        |
| Investment in Special Foods Bonds |         | 91,000 |
| Gain on Bond Retirement           |         | 10,800 |

No eliminations are needed with respect to interest income or interest expense in preparing the consolidated statements for December 31, 20X1. Because Peerless purchased the bonds at the end of the year, Peerless records no interest income until 20X2. The interest expense of \$11,800 (\$12,000 - \$200) recorded by Special Foods is viewed appropriately as interest expense of the consolidated entity because an unrelated party held the bonds during all of 20X1.

#### Consolidated Net Income—20X1

Consolidated net income of \$200,800 (in Figure 8–1A) is computed and allocated as follows:

| Peerless' separate income<br>Special Foods' net income<br>Gain on constructive retirement of bonds                       | \$50,000<br>10,800 | \$140,000                          |
|--|--------------------|------------------------------------|
| Special Foods' realized net income   |                    | 60,800                             |
| Consolidated net income, 20X1 Income to noncontrolling interest ( $$60,800 \times 0.20$ ) Income to controlling interest |                    | \$200,800<br>(12,160)<br>\$188,640 |

Consolidated net income is \$10,800 higher than it would have been had Peerless not purchased the bonds.

#### Noncontrolling Interest—December 31, 20X1

Total noncontrolling interest on December 31, 20X1, in the absence of a differential, includes a proportionate share of both the reported book value of Special Foods and the gain on constructive bond retirement. The balance of the noncontrolling interest on December 31, 20X1, is computed as follows:

| Book value of Special Foods' net assets, December 31, 20X1:<br>Common stock | \$200,000        |
|---|------------------|
| Retained earnings   | 120,000          |
| Total reported book value   | \$320,000        |
| Gain on constructive retirement of bonds                                    | 10,800           |
| Realized book value of Special Foods' net assets                            | \$330,800        |
| Noncontrolling stockholders' share  | × 0.20           |
| Noncontrolling interest, in net assets December 31, 20X1                    | <u>\$ 66,160</u> |

#### **Bond Liability Entries—20X2**

Special Foods records interest on its bonds during 20X2 with the following entries:

|       | June 30, 20X2                   |       |       |
|-------|---------------------------------|-------|-------|
| (14A) | Interest Expense                | 5,900 |       |
|       | Premium on Bonds Payable        | 100   |       |
|       | Cash                            |       | 6,000 |
|       | Semiannual payment of interest. |       |       |
| _     | December 31, 20X2               |       |       |
| (15A) | Interest Expense                | 5,900 |       |
|       | Premium on Bonds Payable        | 100   |       |
|       | Cash                            |       | 6,000 |

Semiannual payment of interest.

#### **Bond Investment Entries—20X2**

Peerless Products accounts for its investment in Special Foods' bonds in the same way as if the bonds were those of a nonaffiliate. The \$91,000 purchase price paid by Peerless reflects a \$9,000 (\$100,000 - \$91,000) discount from the par value of the bonds. This discount is amortized over the nine-year remaining term of the bonds at \$1,000 per year ( $$9,000 \div 9$  years), or \$500 per six-month interest payment period. Peerless' entries to record interest income for 20X2 are as follows:

|       | June 30, 20X2                     |              |       |
|-------|-----------------------------------|--------------|-------|
| (16A) | Cash                              | 6,000        |       |
|       | Investment in Special Foods Bonds | 500          |       |
|       | Interest Income                   |              | 6,500 |
|       | Record receipt of bond interest.  |              |       |
|       |                                   |              |       |
|       | December 31, 20X2                 |              |       |
| (17A) | December 31, 20X2  Cash           | 6,000        |       |
| (17A) |                                   | 6,000<br>500 |       |
| (17A) | Cash                              | •            | 6,500 |

Peerless earns this \$13,000 of interest income in addition to its \$160,000 of separate operating income for 20X2.

### Subsequent Recognition of Gain on Constructive Retirement

In the year of the constructive bond retirement, 20X1, the entire \$10,800 gain on the retirement was recognized in the consolidated income statement but not on the books of either Peerless or Special Foods. The total gain on the constructive bond retirement in 20X1 was equal to the sum of the discount on Peerless' bond investment and the premium on Special Foods' bond liability at the time of the constructive retirement:

| Peerless' discount on bond investment          | \$ 9,000        |
|--|-----------------|
| Special Foods' premium on bond liability       | 1,800           |
| Total gain on constructive retirement of bonds | <u>\$10,800</u> |

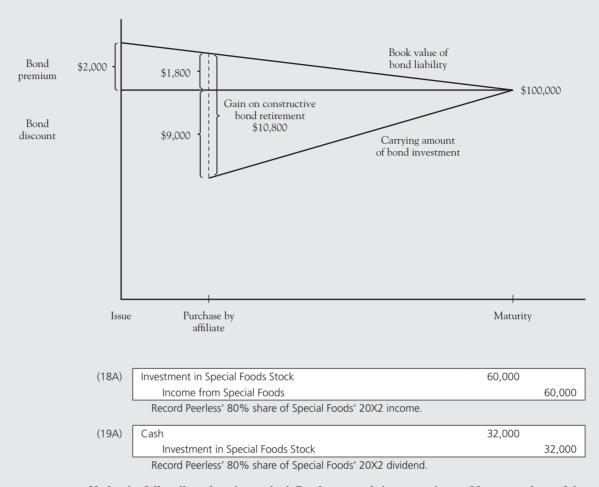

In each year subsequent to 20X1, both Peerless and Special Foods recognize a portion of the constructive gain as they amortize the discount on the bond investment and the premium on the bond liability:

| Peerless' amortization of discount on bond investment ( $$9,000 \div 9$ years) Special Foods' amortization of premium on bonds payable ( $$1,800 \div 9$ years) | \$1,000<br>200 |
|---|----------------|
| Annual increase in combined incomes of separate companies   | <u>\$1,200</u> |

Thus, the \$10,800 gain on constructive bond retirement, previously recognized in the consolidated income statement, is recognized on the books of Peerless and Special Foods at the rate of \$1,200 each year. Over the remaining nine-year term of the bonds, Peerless and Special Foods will recognize the full 10.800 gain  $1.200 \times 9$ . This concept can be illustrated as follows:

#### Fully Adjusted Equity-Method Entries—20X2

Peerless recognizes its share of Special Foods' income (\$75,000) and dividends (\$40,000) for 20X2 with the normal equity-method entries:

Under the fully adjusted equity method, Peerless records its proportionate 80 percent share of the constructive gain recognition.

| ncome from Special Foods          | 960 |
|-----------------------------------|-----|
| Investment in Special Foods Stock | 960 |
| _                                 | •   |

Recognize 80% share of  $\frac{1}{9}$  of constructive gain: 0.80  $\times$   $\frac{1}{9}$   $\times$  \$10,800.

Whereas neither Peerless nor Special Foods recognized any of the gain from the constructive bond retirement on its separate books in 20X1, Peerless adjusts its equity-method income from Special Foods for its 80 percent share of the \$10,800 gain, \$8,640. Therefore, as Peerless and Special Foods recognize the gain over the remaining term of the bonds, Peerless must reverse its 20X1 equity-method entry for its share of the gain amortization each year. Thus, the original adjustment of \$8,640 is reversed by \$960 ( $$8,640 \div 9$  years) each year.

| Elimination of Peerless' interest income                | \$13,000 |
|---|----------|
| Elimination of Special Foods' interest expense          | (11,800) |
| Net reduction in consolidated net income                | \$ 1,200 |
| Peerless' proportionate share                           | × 0.80   |
| Reduction in Peerless' share of consolidated net income | \$ 960   |

## Consolidation Worksheet—20X2

Figure 8-2A presents the consolidation worksheet for December 31, 20X2. The first two elimination entries are the same as we prepared in Chapter 3 with the previously explained exception. Although the analysis of the "book value" portion of the investment account is the same, in preparing the basic elimination entry, one-ninth of the constructive gain is recognized and shared between Peerless (80 percent) and the NCI shareholders (20 percent). Thus, the basic elimination entry subtracts the proportionate share of the constructive gain recognition from the Income from Special Foods, Investment in Special Foods' stock, NCI in net income of Special Foods, and NCI in net assets of Special Foods accounts.

#### **Book Value Calculations:**

| ٠.  |   |         |          |         |          |  |  |  |
|---|---|---------|----------|---------|----------|--|--|--|
|   | NCI 20% + Peerless 80% = Common Stock + Retained Earnings |         |          |         |          |  |  |  |
| Beginning book value 64,000 256,000 200,000 120,000 |   |         |          |         |          |  |  |  |
|   | + Net Income  | 15,000  | 60,000   |         | 75,000   |  |  |  |
|   | <ul><li>Dividends</li></ul>                               | (8,000) | (32,000) |         | (40,000) |  |  |  |
|   | Ending book value   | 71,000  | 284,000  | 200,000 | 155,000  |  |  |  |

| NCI 20% | + Peerless 80% = | <b>Gain Recognition</b> |
|---------|------------------|-------------------------|
| 240     | 960              | 1,200                   |

#### **Basic Investment Account Elimination Entry:**

| Common stock                      | 200,000 |         | ← Common stock balance                          |
|-----------------------------------|---------|---------|---|
| Retained earnings                 | 120,000 |         | ← Beg. RE from trial balance                    |
| Income from Special Foods         | 59,040  |         | $\leftarrow$ % of NI $-$ 80% Gain Rec.          |
| NCI in NI of Special Foods        | 14,760  |         | $\leftarrow$ NCI % of NI $-$ 20% 20X2 Gain Rec. |
| Dividends declared                |         | 40,000  | ← 100% of sub's dividends                       |
| Investment in Special Foods Stock |         | 283,040 | $\leftarrow$ Net BV $-$ 80% 20X2 Gain Rec.      |
| NCI in NA of Special Foods        |         | 70,760  | $\leftarrow$ NCI % of BV $-$ 20% Gain Rec.      |

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 |         | Accumulated depreciation at                     |
|--------------------------|---------|---------|---|
| Building and equipment   |         | 300,000 | the time of the acquisition netted against cost |

The worksheet entry to eliminate the intercompany bond holdings credits the constructive gain on the bond retirement amount between the NCI interest in net assets of Special Foods and Peerless' Investment in Special Foods Common Stock account. In other words, the worksheet entry credits the Investment in Special Foods Common Stock account for \$8,640  $(\$10,800 \times 0.80)$  to eliminate the remaining balance in the account. Similarly, the noncontrolling interest is increased by \$2,160 ( $$10,800 \times 0.20$ ), its proportionate share of the constructive gain on the bond retirement.

The intercompany bond holdings elimination entry also eliminates all aspects of the intercorporate bond holdings, including (1) Peerless' investment in bonds, (2) Special Foods' bonds payable and the associated premium, (3) Peerless' bond interest income, and (4) Special Foods' bond interest expense. The amounts related to the bonds from the books of Peerless and Special Foods and the appropriate consolidated amounts are as follows:

| Item                     | Peerless<br>Products | Special<br>Foods | Unadjusted<br>Totals | Consolidated<br>Amounts |
|--------------------------|----------------------|------------------|----------------------|-------------------------|
| Bonds Payable            | 0                    | \$(100,000)      | \$(100,000)          | 0                       |
| Premium on Bonds Payable | 0                    | (1,600)          | (1,600)              | 0                       |
| Investment in Bonds      | \$92,000             | 0                | 92,000               | 0                       |
| Interest Expense         | 0                    | \$ 11,800        | \$ 11,800            | 0                       |
| Interest Income          | \$(13,000)           | 0                | (13,000)             | 0                       |

FIGURE 8-2A December 31, 20X2, Consolidation Worksheet; Next Year Following Repurchase of Bonds at Less than Book Value

|  | Peerless  | Special   | Eliminatio       | on Entries          |                         |

#### Investment Account—20X2

The following T-accounts illustrate Peerless' Investment in the Common Stock of Special Foods and Income from Special Foods accounts at the end of 20X2 and how the elimination entries zero out their balances on the worksheet:

### Consolidated Net Income—20X2

Consolidated net income of \$246,800 in Figure 8–2A is computed and allocated as follows:

| Peerless' separate income                                  |          | \$173,000 |
|--|----------|-----------|
| Special Foods' net income                                  | \$75,000 |           |
| Peerless' amortization of bond discount                    | (1,000)  |           |
| Special Foods' amortization of bond premium                | (200)    |           |
| Special Foods' realized net income                         |          | 73,800    |
| Consolidated net income, 20X2                              |          | \$246,800 |
| Income to noncontrolling interest (\$73,800 $\times$ 0.20) |          | (14,760)  |
| Income to controlling interest                             |          | \$232,040 |
|  |          |           |

Net income assigned to the noncontrolling interest can be computed as follows:

| Net income of Special Foods, 20X2                             | \$75,000 |
|---|----------|
| Less: 20X1 gain on constructive retirement of debt recognized |          |
| in 20X2 by affiliates:  |          |
| Amortization of Peerless' bond discount                       | (1,000)  |
| Amortization of Special Foods' bond premium                   | (200)    |
| Special Foods' realized net income                            | \$73,800 |
| Noncontrolling interest's proportionate share                 | × 0.20   |
| Noncontrolling interest's share of income                     | \$14,760 |
|   |          |

## Noncontrolling Interest—December 31, 20X2

Total noncontrolling interest in the net assets of Special Foods on December 31, 20X2, includes a proportionate share of both the reported book value of Special Foods and the portion of the gain on constructive bond retirement not yet recognized by the affiliates:

| Book value of Special Foods' net assets, December 31, 20X2:<br>Common stock<br>Retained earnings |          | \$200,000<br> |
|--|----------|---------------|
| Total book value   |          | \$355,000     |
| Gain on constructive retirement of bonds   | \$10,800 |               |
| Less: Portion recognized by affiliates during 20X2   | (1,200)  |               |
| Constructive gain not yet recognized by affiliates   |          | 9,600         |
| Realized book value of Special Foods' net assets   |          | \$364,600     |
| Noncontrolling stockholders' share   |          | × 0.20        |
| Noncontrolling interest net assets, December 31, 20X2  |          | \$ 72,920     |
|  |          |               |

### **Bond Elimination Entry in Subsequent Years**

In years after 20X2, the worksheet entry to eliminate the intercompany bonds and to adjust for the gain on constructive retirement of the bonds is similar to the entry to eliminate intercompany bond holdings in 20X2. The unamortized bond discount and premium decrease each year by \$1,000 and \$200, respectively. As of the beginning of 20X3, \$9,600 of the gain on the constructive retirement of the bonds remains unrecognized by the affiliates, computed as follows:

| Gain on constructive retirement of bonds                               |         | \$10,800 |
|--|---------|----------|
| Less: Portion recognized by affiliates during 20X2:                    |         |          |
| Peerless' amortization of bond discount                                | \$1,000 |          |
| Special Foods' amortization of bond premium                            | 200     |          |
| Total gain recognized by affiliates                                    |         | (1,200)  |
| Unrecognized gain on constructive retirement of bonds, January 1, 20X3 |         | \$ 9,600 |

The bond elimination entry at the end of 20X3 would be as follows:

#### **Eliminate Intercompany Bond Holdings:**

| Bonds Payable                     | 100,000 |        |
|-----------------------------------|---------|--------|
| Premium on Bonds Payable          | 1,400   |        |
| Interest Income                   | 13,000  |        |
| Investment in Special Foods Bonds |         | 93,000 |
| Interest Expense                  |         | 11,800 |
| Investment in Special Foods Stock |         | 7,680  |
| NCI in NA of Special Foods        |         | 1,920  |
|                                   |         |        |

#### LO 8-4

to debt purchased from a nonaffiliate at an amount more than book value.

## Purchase at an Amount Higher than Book Value

When an affiliate's bonds are purchased from a nonaffiliate at an amount greater than their book value, the consolidation procedures are virtually the same as previously illustrated except that a loss is recognized on the constructive retirement of the debt. For example, assume that Special Foods issues 10-year, 12 percent bonds on January 1, 20X1, at par of \$100,000. The bonds are purchased from Special Foods by a nonaffiliated investor, which sells the bonds to Peerless Products on December 31, 20X1, for \$104,500. Special Foods recognizes  $$12,000 ($100,000 \times 0.12)$  of interest expense each year. Peerless recognizes interest income of \$11,500 in each year after 20X1, computed as follows:

| Annual cash interest payment ( $100,000 \times 0.12$ )                   | \$12,000 |
|--|----------|
| Less: Amortization of premium on bond investment ( $4,500 \div 9$ years) | (500)    |
| Interest income  | \$11,500 |

Because the bonds were issued at par, the carrying amount on Special Foods' books remains at \$100,000. Thus, once Peerless purchases the bonds from the nonaffiliated investor for \$104,500, a loss on the constructive retirement must be recognized in the consolidated income statement for \$4,500 (\$104,500 - \$100,000). The bond elimination entry in the consolidation worksheet prepared at the end of 20X1 removes the bonds payable and the bond investment and recognizes the loss on the constructive retirement:

## **Eliminate Intercorporate Bond Holdings:**

| •                                 | 9       |         |
|-----------------------------------|---------|---------|
| Bonds Payable                     | 100,000 |         |
| Loss on Bond Retirement           | 4,500   |         |
| Investment in Special Foods Bonds |         | 104,500 |

In subsequent years, Peerless amortizes the premium on the bond investment, reducing interest income and the bond investment balance by \$500 each year. This, in effect, recognizes a portion of the loss on the constructive retirement. When consolidated statements are prepared, the amount of the loss on constructive retirement that has not been recognized by the separate affiliates at the beginning of the period is allocated proportionately against the ownership interests of the issuing affiliate. The bond elimination entry needed in the consolidation worksheet prepared at the end of 20X2 is as follows:

#### **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable                     | 100,000 |         |
|-----------------------------------|---------|---------|
| Interest Income                   | 11,500  |         |
| Investment in Special Foods Stock | 3,600   |         |
| NCI in NA of Special Foods        | 900     |         |
| Investment in Special Foods Bonds |         | 104,000 |
| Interest Expense                  |         | 12,000  |

 $$11,500 = ($100,000 \times 0.12) - $500$  $\$3,600 = \$4,500 \times 0.80$  $$900 = $4,500 \times 0.20$ 104,000 = 104,500 - 500 $12,000 = 100,000 \times 0.12$ 

Similarly, the following entry is needed in the consolidation worksheet at the end of 20X3:

## **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable                     | 100,000 |         |
|-----------------------------------|---------|---------|
| Interest Income                   | 11,500  |         |
| Investment in Special Foods Stock | 3,200   |         |
| NCI in NA of Special Foods        | 800     |         |
| Investment in Special Foods Bonds |         | 103,500 |
| Interest Expense                  |         | 12,000  |

 $\$3,200 = (\$4,500 - \$500) \times 0.80$  $$800 = ($4,500 - $500) \times 0.20$ 103,500 = 104,500 - 500 - 500

## Appendix 8B Intercompany Indebtedness—Modified Equity Method and Cost Method

This appendix illustrates consolidation procedures under the modified equity method and then the cost method using the example of the intercompany bond transaction presented earlier in Appendix 8A. Assume that Special Foods issues bonds with a par value of \$100,000 and a term of 10 years to a nonaffiliated investor for \$102,000 on January 1, 20X1. Peerless Products purchases the bonds from the nonaffiliated investor on December 31, 20X1, for \$91,000.

# **MODIFIED EQUITY METHOD**

The accounting procedures under the modified equity method are the same as under the fully adjusted equity method except that the parent (1) does not adjust its income and the investment account by its proportionate share of the gain or loss on the constructive retirement of the bonds in the year of repurchase and (2) does not adjust for the implicit recognition of the gain or loss by it and its subsidiary as they amortize the discount and premium in subsequent years. The 20X1 gain on the constructive retirement in this illustration is \$10,800, computed as follows:

Book value of Special Foods' bonds, December 31, 20X1 (\$102,000 - \$200) \$101,800 Price paid by Peerless to purchase bonds (91,000)Gain on constructive retirement of bonds \$ 10,800

## Modified Equity-Method Entries—20X1

Peerless records the following entries under the modified equity method during 20X1:

| (1B) | Investment in Special Foods Stock                         | 40,000 |        |
|------|---|--------|--------|
|      | Income from Special Foods                                 |        | 40,000 |
|      | Record Peerless' 80% share of Special Foods' 20X1 income. |        |        |
| (2B) | Cash  | 24,000 |        |
|      | Investment in Special Foods Stock                         |        | 24,000 |

Record Peerless' 80% share of Special Foods' 20X1 dividend.

The difference is that this method does not adjust equity-method net income for Peerless' proportionate share of the gain on the constructive retirement of Special Foods' bonds. Because Peerless does not adjust its equity-method income for its share of the constructive retirement gain, Peerless' net income will not equal the controlling interest in consolidated net income.

### Consolidation Elimination Entries—20X1

Figure 8-1B illustrates the 20X1 worksheet under the modified equity method. The 20X1 worksheet under the modified equity method. sheet to prepare consolidated financial statements for Peerless Products and Special Foods contains the following elimination entries. They are essentially the same as those presented in the chapter except that only the NCI accounts are adjusted for the 20 percent portion of the retirement gain in the basic elimination entry (i.e., the Income from Special Foods and Investment in Special Foods common stock are not adjusted):

#### **Basic Investment Account Elimination Entry:**

| Common stock                      | 200,000 |         | ← Common stock balance                 |
|-----------------------------------|---------|---------|--|
| Retained earnings                 | 100,000 |         | ← Beg. RE from trial balance           |
| Income from Special Foods         | 40,000  |         | ← Peerless' share of Special Foods' RI |
| NCI in NI of Special Foods        | 12,160  |         | ← NCI share of NI + 20% Ret. Gain      |
| Dividends declared                |         | 30,000  | ← 100% of sub's dividends              |
| Investment in Special Foods stock |         | 256,000 | ← Net BV left in inv. acct.            |
| NCI in NA of Special Foods        |         | 66,160  | ← NCI share BV + 20% Ret. Gain         |

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation<br>Building and equipment | 300,000<br>300,000 | Accumulated depreciation at the time of the acquisition netted against cost |
|--|--------------------|---|
|--|--------------------|---|

#### **Eliminate Intercorporate Bond Holdings:**

| Bonds Payable                     | 100,000 |       |
|-----------------------------------|---------|-------|
| Premium on Bonds Payable          | 1,800   |       |
| Investment in Special Foods Bonds | 9       | 1,000 |
| Gain on Bond Retirement           | 1       | 0,800 |

## Modified Equity-Method Entries—20X2

In addition to the entries related to its investment in Special Foods' bonds, Peerless records the following entries during 20X2 under the modified equity method:

| (3B) | Investment in Special Foods Stock                         | 60,000 |        |
|------|---|--------|--------|
|      | Income from Special Foods                                 |        | 60,000 |
|      | Record Peerless' 80% share of Special Foods' 20X1 income. |        |        |
|      |   |        |        |
| (4B) | Cash  | 32,000 |        |
|      | Investment in Special Foods Stock                         |        | 32,000 |

Record Peerless' 80% share of Special Foods 20X1 dividend.

FIGURE 8–1B December 31, 20X1, Consolidation Worksheet; Repurchase of Bonds at Less than Book Value, Modified Equity Method

## **Consolidation Elimination Entries—20X2**

Figure 8–2B illustrates the consolidation worksheet for 20X2 under the modified equity method. The following elimination entries are needed in the worksheet to prepare consolidated financial statements for 20X2. Again, they are essentially the same as those presented in the chapter except that only the NCI accounts are adjusted for the 20 percent portion of the retirement gain recognition in the basic elimination entry (i.e., the Income from Special Foods and Investment in Special Foods Common Stock accounts are not adjusted).

### **Basic Investment Account Elimination Entry:**

| Common stock                      | 200,000 |        | ← Common stock balance                     |
|-----------------------------------|---------|--------|--|
| Retained earnings                 | 120,000 |        | ← Beg. RE from trial balance               |
| Income from Special Foods         | 60,000  |        | ← Peerless' share of Special Foods' RI     |
| NCI in NI of Special Foods        | 14,760  |        | $\leftarrow$ NCI % of NI $-$ 20% Gain Rec. |
| Dividends declared                |         | 40,000 | $\leftarrow$ 100% of sub's dividends       |
| Investment in Special Foods stock | 2       |        | ← Net BV left in the inv. acct.            |
| NCI in NA of Special Foods        |         | 70,760 | $\leftarrow$ NCI % of BV $-$ 20% Gain Rec. |

## **Optional Accumulated Depreciation Elimination Entry:**

**Accumulated depreciation** 300,000 **Building and equipment** 300,000

Accumulated depreciation at - the time of the acquisition netted against cost

## **Eliminate Intercompany Bond Holdings:**

| Bonds Payable                     | 100,000 |        |
|-----------------------------------|---------|--------|
| Premium on Bonds Payable          | 1,600   |        |
| Interest Income                   | 13,000  |        |
| Investment in Special Foods Bonds |         | 92,000 |
| Interest Expense                  |         | 11,800 |
| Retained Earnings, January 1      |         | 8,640  |
| NCI in NA of Special Foods        |         | 2,160  |
|                                   |         |        |

## **COST METHOD**

Preparation of consolidated financial statements when the cost method has been used is illustrated with the same example employed for the modified equity method. Peerless recognizes dividend income of \$24,000 (\$30,000  $\times$  0.80) in 20X1 and \$32,000 (\$40,000  $\times$  0.80) in 20X2 under the cost method. Peerless makes no adjustments with respect to Special Foods' undistributed earnings or the gain on the constructive bond retirement.

## **Consolidation Elimination Entries—20X1**

Figure 8–3B illustrates the consolidation worksheet for 20X1 under the cost method. The following elimination entries are needed in the worksheet used to prepare consolidated financial statements for 20X1 using the cost method:

FIGURE 8-3B December 31, 20X1, Consolidation Worksheet; Repurchase of Bonds at Less than Book Value, Cost Method

| Cost Method                       |           |           |                |                 |              |
|-----------------------------------|-----------|-----------|----------------|-----------------|--------------|

#### **Investment Elimination Entry:**

 Original amount invested (100%) Common stock 200.000 100,000 - RE on acquisition date **Retained earnings Investment in Special Foods stock** 240,000 - Original cost of investment **NCI in NA of Special Foods** 60,000 NCI share of acquisition date BV

#### **Dividend Elimination Entry:**

- Peerless' 80% share of dividends declared **Dividend income** 24,000 - NCI's 20% share of dividends declared **NCI in NI of Special Foods** 6,000 **Dividends declared** - 100% of Special Foods' dividends declared 30,000

#### Assign Undistributed Income to NCI:

NCI's 20% share of undistributed income - from Special Foods + 20% Ret. Gain **NCI in NI of Special Foods** 6,160 **NCI in NA of Special Foods** 6,160 - NCI's 20% share of undistributed income from Special Foods + 20% Ret. Gain

#### **Optional Accumulated Depreciation Elimination Entry:**

Accumulated depreciation at the time **Accumulated depreciation** 300,000 of the acquisition netted 300,000 **Building and equipment** against cost

#### **Eliminate Intercorporate Bond Holdings:**

**Bonds Payable** 100,000 **Premium on Bonds Payable** 1,800 **Investment in Special Foods Bonds** 91,000 **Gain on Bond Retirement** 10,800

## Consolidation Elimination Entries—20X2

Figure 8-4B illustrates the consolidation worksheet for 20X2 under the cost method. Elimination entries needed in the consolidation worksheet prepared at the end of 20X2 are as follows:

#### **Investment Elimination Entry:**

200,000 Original amount invested (100%) Common stock **Retained earnings** 100,000 ← RE on acquisition date **Investment in Special Foods stock** 240,000 Original cost of investment **NCI in NA of Special Foods** 60,000 NCI share of acquisition date BV

## **Dividend Elimination Entry:**

**Dividend income** 32,000 Peerless' 80% share of dividends declared **NCI in NI of Special Foods** 8,000 - NCI's 20% share of dividends declared **Dividends declared** 40,000 - 100% of Special Foods' dividends declared

## **Assign Undistributed Income to NCI:**

NCI in NI of Special Foods 6,760
Retained earnings 4,000
NCI in NA of Special Foods 10,760

NCI's 20% share of 20X2 undistributed income from Special Foods - 20% 20X2

- ← Gain Recognition
- ← NCI's 20% share of undistributed 20X1 NI
- ← NCI's 20% share of cumulative undistributed income from Special Foods − 20% 20X2 Gain Recognition

## **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 |         | Accumulated depreciation at the  |
|--------------------------|---------|---------|----------------------------------|
| Building and equipment   | 300,000 | 300,000 | ← time of the acquisition netted |
| banang ana equipment     |         | 300,000 | against cost                     |

## **Eliminate Intercompany Bond Holdings:**

| Bonds Payable                     | 100,000 |        |
|-----------------------------------|---------|--------|
| Premium on Bonds Payable          | 1,600   |        |
| Interest Income                   | 13,000  |        |
| Investment in Special Foods Bonds |         | 92,000 |
| Interest Expense                  |         | 11,800 |
| Retained Earnings                 |         | 8,640  |
| NCI in NA of Special Foods        |         | 2,160  |

| Questions   |       |  |
|-------------|-------|--|
| LO 8-1      | Q8-1  | When is a gain or loss on bond retirement included in the consolidated income statement?   |
| LO 8-2      | Q8-2  | What is meant by a constructive bond retirement in a multi-corporate setting? How does a constructive bond retirement differ from an actual bond retirement?   |
| LO 8-2      | Q8-3  | When a bond issue has been placed directly with an affiliate, what account balances will be stated incorrectly in the consolidated statements if the intercompany bond ownership is not eliminated in preparing the consolidation worksheet?   |
| LO 8-3, 8-4 | Q8-4  | When an affiliate's bonds are purchased from a nonaffiliate during the period, what balances will be stated incorrectly in the consolidated financial statements if the intercompany bond ownership is not eliminated in preparing the consolidation worksheet?  |
| LO 8-1, 8-2 | Q8-5  | For a multi-corporate entity, how is the recognition of gains or losses on bond retirement changed when emphasis is placed on the economic entity rather than the legal entity?  |
| LO 8-2, 8-3 | Q8-6  | When a parent company sells land to a subsidiary at more than book value, the consolidation elimination entries at the end of the period include a debit to the gain on the sale of land. When a parent purchases the bonds of a subsidiary from a nonaffiliate at less than book value, the elimination entries at the end of the period contain a credit to a gain on bond retirement. Why are these two situations not handled in the same manner in the consolidation worksheet? |
| LO 8-2      | Q8-7  | What is the effect of eliminating intercompany interest income and interest expense on consolidated net income when bonds have been sold directly to an affiliate? Why?  |
| LO 8-2      | Q8-8  | What is the effect of eliminating intercompany interest income and interest expense on consolidated net income when a loss on bond retirement has been reported in a prior year's consolidated financial statements as a result of a constructive retirement of an affiliate's bonds? Why?   |
| LO 8-3, 8-4 | Q8-9  | If an affiliate's bonds are purchased from a nonaffiliate at the beginning of the current year, how can the amount of the gain or loss on constructive retirement be computed by looking at the two companies' year-end trial balances?  |
| LO 8-4      | Q8-10 | When the parent company purchases a subsidiary's bonds from a nonaffiliate for more than book value, what income statement accounts will be affected in preparing consolidated financial statements? What will be the effect on income assigned to the controlling interest in the consolidated income statement?  |
| LO 8-3      | Q8-11 | When a subsidiary purchases the bonds of its parent from a nonaffiliate for less than book value, what will be the effect on consolidated net income and income to the controlling interest?   |
| LO 8-2      | Q8-12 | How is the amount of income assigned to the noncontrolling interest affected by the direct placement of a subsidiary's bonds with the parent company?  |
| LO 8-3      | Q8-13 | How is the amount of income assigned to the noncontrolling interest affected when the parent purchases the bonds of its subsidiary from an unaffiliated company for less than book value?  |
|             |       |  |

LO 8-2, 8-3, 8-4 **Q8-14** 

How would the relationship between interest income recorded by a subsidiary and interest expense recorded by the parent be expected to change when comparing a direct placement of the parent's bonds with the subsidiary to a constructive retirement in which the subsidiary purchases the bonds of the parent from a nonaffiliate?

LO 8-3

08-15

A subsidiary purchased bonds of its parent company from a nonaffiliate in the preceding period, and a gain on bond retirement was reported in the consolidated income statement as a result of the purchase. What effect will that event have on the amount of consolidated net income and income to the noncontrolling interest reported in the current period?

LO 8-4

Q8-16

A parent company purchased its subsidiary's bonds from a nonaffiliate in the preceding year, and a loss on bond retirement was reported in the consolidated income statement. How will income assigned to the noncontrolling interest be affected in the year following the constructive retirement?

LO 8-3, 8-4

Q8-17

A parent purchases a subsidiary's bonds directly from it. The parent later sells the bonds to a nonaffiliate. From a consolidated viewpoint, what occurs when the parent sells the bonds? Is a gain or loss reported in the consolidated income statement when the parent sells the bonds? Why?

LO 8-3, 8-4

Q8-18

Shortly after a parent company purchased its subsidiary's bonds from a nonaffiliate, the subsidiary retired the entire issue. How is the gain or loss on bond retirement reported by the subsidiary treated for consolidation purposes?

#### Cases

LO 8-4

#### **C8-1** Recognition of Retirement Gains and Losses

Analysis

Bradley Corporation sold bonds to Flood Company in 20X2 at 90. At the end of 20X4, Century Corporation purchased the bonds from Flood at 105. Bradley then retired the full bond issue on December 31, 20X7, at 101. Century holds 80 percent of Bradley's voting stock. Neither Century nor Bradley owns stock of Flood Company.

## Required

- a. Indicate how each of the three bond transactions should be recorded by the companies involved.
- b. Indicate when, if at all, the consolidated entity headed by Century should recognize a gain or loss on bond retirement, and indicate whether a gain or a loss should be recognized.
- c. Will income assigned to Bradley's noncontrolling shareholders be affected by the bond transactions? If so, in which years?

LO 8-2

## **C8-2** Borrowing by Variable Interest Entities

Research

Hydro Corporation needed to build a new production facility. Because it already had a relatively high debt ratio, the company decided to establish a joint venture with Rich Corner Bank. This arrangement permitted the joint venture to borrow \$30,000,000 for 20 years on a fixed-interest-rate basis at a rate nearly 2 percent less than Hydro would have paid if it had borrowed the money. Rich Corner Bank purchased 100 percent of the joint venture's equity for \$200,000, and Hydro provided a guarantee of the debt to the bondholders and a guarantee to Rich Corner Bank that it would earn a 20 percent annual return on its investment.

On completion of the production facility, Hydro entered into a 10-year lease with the joint venture for use of the new facility. Due to the lease agreement terms, Hydro has reported the lease as an operating lease. Hydro does not report an investment in the joint venture because it holds no equity interest.

#### Required

As a senior member of Hydro's accounting staff, you have been asked to investigate the financial reporting standards associated with accounting for variable interest entities and determine whether Hydro's reporting is appropriate. Prepare a memo to Hydro's president stating your findings and conclusions and analyzing the impact on Hydro's financial statements if the current reporting procedures are inappropriate. Include citations to or quotations from the authoritative accounting literature in support of your findings and conclusions.

LO 8-3

#### **C8-3** Subsidiary Bond Holdings

Farflung Corporation has in excess of 60 subsidiaries worldwide. It owns 65 percent of the voting common stock of Micro Company and 80 percent of the shares of Eagle Corporation. Micro sold

#### Research

\$400,000 par value first mortgage bonds at par value on January 2, 20X0, to Independent Company. No intercorporate ownership exists between Farflung and its subsidiaries and Independent.

On December 31, 20X4, Independent determined the need for cash for other purposes and sold the Micro bonds to Eagle for \$424,000. Farflung's accounting department was not aware of Eagle's bond purchase and included the Micro Company bonds among its long-term liabilities in the consolidated balance sheet prepared at December 31, 20X4.

### Required

In reviewing the financial statements of Farflung and its subsidiaries at December 31, 20X5, you discovered Eagle Corporation's investment in Micro's bonds and immediately brought it to the attention of Farflung's financial vice president. You have been asked to prepare a memo to the financial vice president detailing the appropriate reporting treatment when intercorporate bond ownership occurs in this way and to provide recommendations as to the actions, if any, Farflung should take in preparing its consolidated statements at December 31, 20X5. Include in your memo citations to or quotations from applicable authoritative accounting standards in support of your position.

LO 8-4

#### **Interest Income and Expense**

### **Understanding**

Snerd Corporation's controller is having difficulty explaining the impact of several of the company's intercorporate bond transactions.

#### Required

- a. Snerd receives interest payments in excess of the amount of interest income it records on its investment in Snort bonds. Did Snerd purchase the bonds at par value, at a premium, or at a discount? How can you tell?
- b. The 20X3 consolidated income statement reported a gain on the retirement of a subsidiary's bonds. If Snerd purchased the bonds from a nonaffiliate at par value:
  - (1) Were the subsidiary's bonds originally sold at a premium or a discount? How can you tell?
  - (2) Will the annual interest payments received by Snerd be more or less than the interest expense recorded by the subsidiary? Explain.
  - (3) How is the difference between the interest income recorded by Snerd and the interest expense recorded by the subsidiary treated in preparing consolidated financial statements at the end of each period?

#### **Intercompany Debt**

Analysis

Intercompany debt, both long term and short term, arises frequently. In some cases, intercorporate borrowings may arise because one affiliate can borrow at a cheaper rate than others, and lending to other affiliates may reduce the overall cost of borrowing. In other cases, intercompany receivables/payables arise because of intercompany sales of goods or services or other types of intercompany transactions.

#### Required

- a. What major problem might arise with intercompany debt between a domestic parent and a foreign subsidiary or between subsidiaries in different countries? How has The Hershey Company dealt with this problem?
- b. Did The Hershey Company's intercompany loans arise because of direct loans or because of intercompany sales of goods and services on credit?

#### Exercises

LO 8-2

#### E8-1 **Bond Sale from Parent to Subsidiary (Effective Interest Method)**

Lamar Corporation owns 60 percent of Humbolt Corporation's voting shares. On January 1, 20X2, Lamar Corporation sold \$150,000 par value, 6 percent first mortgage bonds to Humbolt for \$156,000. The bonds mature in 10 years and pay interest semiannually on January 1 and July 1.

## Required

- a. Prepare the journal entries for 20X2 for Humbolt related to its ownership of Lamar's bonds.
- b. Prepare the journal entries for 20X2 for Lamar related to the bonds.
- c. Prepare the worksheet elimination entries needed on December 31, 20X2, to remove the effects of the intercorporate ownership of bonds.

### LO 8-2 E8-1A Bond Sale from Parent to Subsidiary (Straight-Line Method)

Assume the same facts as in E8-1 and prepare entries using straight-line amortization of bond discount or premium.

## LO 8-2 E8-2 Computation of Transfer Price (Effective Interest Method)

Nettle Corporation sold \$100,000 par value, 10-year first mortgage bonds to Timberline Corporation on January 1, 20X5. The bonds, which bear a nominal interest rate of 12 percent, pay interest semiannually on January 1 and July 1. The current market interest rate is 11 percent. Timberline Corporation owns 65 percent of the voting stock of Nettle Corporation, and consolidated statements are prepared on December 31, 20X7.

#### Required

- a. What was the original purchase price of the bonds to Timberline Corporation?
- b. What is the balance in Timberline's bond investment account on December 31, 20X7?
- c. Give the worksheet elimination entry or entries needed to remove the effects of the intercompany ownership of bonds in preparing consolidated financial statements for 20X7.

## LO 8-2 E8-2A Computation of Transfer Price (Straight-line Method)

Nettle Corporation sold \$100,000 par value, 10-year first mortgage bonds to Timberline Corporation on January 1, 20X5. The bonds, which bear a nominal interest rate of 12 percent, pay interest semiannually on January 1 and July 1. The entry to record interest income by Timberline Corporation on December 31, 20X7, was as follows:

| Interest Receivable                    | 6,000 |
|--|-------|
| Interest Income                        | 5,750 |
| Investment in Nettle Corporation Bonds | 250   |

Timberline Corporation owns 65 percent of the voting stock of Nettle Corporation, and consolidated statements are prepared on December 31, 20X7.

### Required

- a. What was the original purchase price of the bonds to Timberline Corporation?
- b. What is the balance in Timberline's bond investment account on December 31, 20X7?
- c. Give the worksheet elimination entry or entries needed to remove the effects of the intercompany ownership of bonds in preparing consolidated financial statements for 20X7.

#### LO 8-2 E8-3 Bond Sale at Discount (Effective Interest Method)

Wood Corporation owns 70 percent of Carter Company's voting shares. On January 1, 20X3, Carter sold bonds with a par value of \$600,000 at 98. Wood purchased \$400,000 par value of the bonds; the remainder was sold to nonaffiliates. The bonds mature in five years and pay an annual interest rate of 8 percent. Interest is paid semiannually on January 1 and July 1.

#### Required

- a. What amount of interest expense should be reported in the 20X4 consolidated income statement?
- b. Give the journal entries Wood recorded during 20X4 with regard to its investment in Carter bonds.
- c. Give all worksheet elimination entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements for 20X4.

### LO 8-2 E8-3A Bond Sale at Discount (Straight-line Method)

Assume the same facts as in E8-3 but prepare entries using straight-line amortization of bond discount or premium.

<sup>&</sup>quot;A" indicates that the item relates to Appendix 8A.

LO 8-3, 8-4

## E8-4 Evaluation of Intercorporate Bond Holdings (Effective Interest Method)

Stellar Corporation purchased bonds of its subsidiary from a nonaffiliate during 20X6. Although Stellar purchased the bonds at par value, a loss on bond retirement is reported in the 20X6 consolidated income statement as a result of the purchase.

## Required

- a. Were the bonds originally sold by the subsidiary at a premium or a discount? Explain.
- b. Will the annual interest payments Stellar receives more or less than the interest expense the subsidiary records each period? Explain.
- c. As a result of the entry recorded at December 31, 20X7, to eliminate the effects of the intercompany bond holding, will consolidated net income be increased or decreased? Explain.

LO 8-2, 8-3, 8-4

#### E8-5 Multiple-Choice Questions (Effective Interest Method)

Select the correct answer for each of the following questions.

1. [AICPA Adapted] Wagner, a holder of a \$1,000,000 Palmer Inc. bond, collected the interest due on March 31, 20X8, and then sold the bond to Seal Inc. for \$975,000. On that date, Palmer, a 75 percent owner of Seal, had a \$1,075,000 carrying amount for this bond. What was the effect of Seal's purchase of Palmer's bond on the retained earnings and noncontrolling interest amounts reported in Palmer's March 31, 20X8, consolidated balance sheet?

|    | Retained Earnings  | Noncontrolling Interest |
|----|--------------------|-------------------------|
| a. | \$100,000 increase | No effect               |
| b. | \$75,000 increase  | \$25,000 increase       |
| c. | No effect          | \$25,000 increase       |
| d. | No effect          | \$100,000 increase      |

- 2. [AICPA Adapted] P Company purchased term bonds at a premium on the open market. These bonds represented 20 percent of the outstanding class of bonds issued at a discount by S Company, P's wholly owned subsidiary. P intends to hold the bonds to maturity. In a consolidated balance sheet, the difference between the bond carrying amounts of the two companies would be:
  - a. Included as a decrease to retained earnings.
  - b. Included as an increase in retained earnings.
  - c. Reported as a deferred debit to be amortized over the remaining life of the bonds.
  - d. Reported as a deferred credit to be amortized over the remaining life of the bonds.

*Note*: The following information relates to questions 3–6:

Kruse Corporation holds 60 percent of the voting common shares of Gary's Ice Cream Parlors. On January 1, 20X6, Gary's purchased \$50,000 par value, 10 percent first mortgage bonds of Kruse from Cane for \$58,000. Kruse originally issued the bonds to Cane on January 1, 20X4, for \$53,000. The bonds have a 10-year maturity from the date of issue and pay interest semiannually.

Gary's reported net income of \$20,000 for 20X6, and Kruse reported income (excluding income from ownership of Gary's stock) of \$40,000.

- 3. What amount of interest expense does Kruse record for 20X6?
  - a. \$4,777.
  - *b.* \$4,767.
  - c. \$4,756.
  - d. \$4,805.
- 4. What amount of interest income does Gary's Ice Cream Parlors record for 20X6?
  - a. \$4,233.
  - b. \$5,000.
  - *c.* \$4,145.
  - d. \$6,000.

- 5. What gain or loss on the retirement of bonds should be reported in the 20X6 consolidated income statement?
  - a. \$2,423 gain.
  - b. \$5,617 gain.
  - c. \$5,408 loss.
  - d. \$8,004 loss.
- 6. What amount of consolidated net income should be reported for 20X6?
  - a. \$47,253.
  - b. \$54,410.
  - c. \$55,126.
  - d. \$60,256.

## LO 8-2, 8-3, 8-4 E8-5A Multiple-Choice Questions (Straight-line Method)

Kruse Corporation holds 60 percent of the voting common shares of Gary's Ice Cream Parlors. On January 1, 20X6, Gary's purchased \$50,000 par value, 10 percent first mortgage bonds of Kruse from Cane for \$58,000. Kruse originally issued the bonds to Cane on January 1, 20X4, for \$53,000. The bonds have a 10-year maturity from the date of issue and pay interest semiannually. The bonds are accounted for using straight-line amortization of premiums and discounts.

Gary's reported net income of \$20,000 for 20X6, and Kruse reported income (excluding income from ownership of Gary's stock) of \$40,000.

#### Required

Select the correct answer for each of the following questions.

- 1. What amount of interest expense does Kruse record 20X6?
  - a. \$4,000.
  - b. \$4,700.
  - c. \$5,000.
  - d. \$10,000.
- 2. What amount of interest income does Gary's Ice Cream Parlors record for 20X6?
  - a. \$4,000.
  - b. \$5,000.
  - c. \$9,000.
  - d. \$10,000.
- 3. What gain or loss on the retirement of bonds should be reported in the 20X6 consolidated income statement?
  - a. \$2,400 gain.
  - b. \$5,600 gain.
  - c. \$5,600 loss.
  - d. \$8,000 loss.
- 4. What amount of consolidated net income should be reported for 20X6?
  - a. \$47,100.
  - b. \$54,400.
  - c. \$55,100.
  - d. \$60,000.

### LO 8-2 E8-6 Multiple-Choice Questions (Effective Interest Method)

On January 1, 20X4, Passive Heating Corporation paid \$104,000 for \$100,000 par value, 9 percent bonds of Solar Energy Corporation. Solar had issued \$300,000 of the 10-year bonds on January 1, 20X2, for \$360,000. The bonds pay interest semiannually. Passive previously had purchased 80 percent of the common stock of Solar on January 1, 20X1, at underlying book value.

Passive reported operating income (excluding income from subsidiary) of \$50,000, and Solar reported net income of \$30,000 for 20X4.

#### Required

Select the correct answer for each of the following questions.

- 1. What amount of interest expense should be included in the 20X4 consolidated income statement?
  - a. \$14,626.
  - b. \$18,415.
  - c. \$21,678.
  - d. \$27,112.
- 2. What amount of gain or loss on bond retirement should be included in the 20X4 consolidated income statement?
  - a. \$4,243 gain.
  - b. \$4,243 loss.
  - c. \$12,923 gain.
  - d. \$16,115 loss.
- 3. Income assigned to the noncontrolling interest in the 20X4 consolidated income statement should be
  - a. \$6,534.
  - b. \$8,321.
  - c. \$8,388.
  - d. \$16,826.

## **Multiple-Choice Questions (Straight-Line Method)**

Assume the same facts as in E8-6 except that the company uses straight-line amortization:.

#### Required

LO 8-2

Select the correct answer for each of the following questions.

- 1. What amount of interest expense should be included in the 20X4 consolidated income statement?
  - a. \$14,000.
  - b. \$18,000.
  - c. \$21,000.
  - d. \$27,000.
- 2. What amount of gain or loss on bond retirement should be included in the 20X4 consolidated income statement?
  - a. \$4,000 gain.
  - b. \$4,000 loss.
  - c. \$12,000 gain.
  - d. \$16,000 loss.
- 3. Income assigned to the noncontrolling interest in the 20X4 consolidated income statement should be
  - a. \$6,000.
  - b. \$8,100.
  - c. \$8,400.
  - d. \$16,000.

#### Constructive Retirement at End of Year (Effective Interest Method) E8-7

Able Company issued \$600,000 of 9 percent first mortgage bonds on January 1, 20X1, at 103. The bonds mature in 20 years and pay interest semiannually on January 1 and July 1. Prime Corporation LO 8-2

LO 8-3

LO 8-3

purchased \$400,000 of Able's bonds from the original purchaser on December 31, 20X5, for \$397,000. Prime owns 60 percent of Able's voting common stock.

#### Required

- a. Prepare the worksheet elimination entry or entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements for 20X5.
- b. Prepare the worksheet elimination entry or entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements for 20X6.

## LO 8-2 E8-7A Constructive Retirement at End of Year (Straight-Line Method)

Assume the same facts as in E8-7 but prepare entries using straight-line amortization of bond discount or premium.

### E8-8 Constructive Retirement at Beginning of Year (Effective Interest Method)

Able Company issued \$600,000 of 9 percent first mortgage bonds on January 1, 20X1, at 103. The bonds mature in 20 years and pay interest semiannually on January 1 and July 1. Prime Corporation purchased \$400,000 of Able's bonds from the original purchaser on January 1, 20X5, for \$396,800. Prime owns 60 percent of Able's voting common stock.

#### Required

- a. Prepare the worksheet elimination entry or entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements for 20X5.
- b. Prepare the worksheet elimination entry or entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements for 20X6.

### LO 8-2 E8-8A Constructive Retirement at Beginning of Year (Straight-Line Method)

Assume the same facts as in E8-8 but prepare entries using straight-line amortization of bond discount or premium.

## E8-9 Retirement of Bonds Sold at a Discount (Effective Interest Method)

Farley Corporation owns 70 percent of Snowball Enterprises' stock. On January 1, 20X1, Farley sold \$1,000,000 par value, 7 percent (paid semiannually), 20-year, first mortgage bonds to Kling Corporation at 97. On January 1, 20X8, Snowball purchased \$300,000 par value of the Farley bonds directly from Kling for \$296,880.

#### Required

Prepare the elimination entry needed at December 31, 20X8, to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements.

#### E8-9A Retirement of Bonds Sold at a Discount (Straight-Line Method)

Assume the same facts as in E8-9 but prepare entries using straight-line amortization of bond discount or premium.

## LO 8-2 E8-10 Loss on Constructive Retirement (Effective Interest Method)

Apple Corporation holds 60 percent of Shortway Publishing Company's voting shares. Apple issued \$500,000 of 10 percent (paid semiannually) bonds with a 10-year maturity on January 1, 20X2, at 90. On January 1, 20X8, Shortway purchased \$100,000 of the Apple bonds for \$106,000. Partial trial balances for the two companies on December 31, 20X8, are as follows:

|   | Apple<br>Corporation | Shortway<br>Publishing Company |
|---|----------------------|--------------------------------|
| Investment in Shortway Publishing Company Stock | \$141,000            |                                |
| Investment in Apple Corporation Bonds           |                      | \$104,676                      |
| Bonds Payable                                   | 500,000              |                                |
| Discount on Bonds Payable                       | 21,289               |                                |
| Interest Expense                                | 55,626               |                                |
| Interest Income                                 |                      | 8,676                          |
| Interest Payable                                | 25,000               |                                |
| Interest Receivable                             |                      | 5,000                          |

#### Required

Prepare the worksheet elimination entry or entries needed on December 31, 20X8, to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements.

#### LO 8-2

### E8-10A Loss on Constructive Retirement (Straight-Line Method)

Apple Corporation holds 60 percent of Shortway Publishing Company's voting shares. Apple issued \$500,000 of 10 percent bonds with a 10-year maturity on January 1, 20X2, at 90. On January 1, 20X8, Shortway purchased \$100,000 of the Apple bonds for \$106,000. Partial trial balances for the two companies on December 31, 20X8, are as follows:

|   | Apple<br>Corporation | Shortway<br>Publishing Company |
|---|----------------------|--------------------------------|
| Investment in Shortway Publishing Company Stock | \$132,000            |                                |
| Investment in Apple Corporation Bonds           |                      | \$106,000                      |
| Bonds Payable                                   | 500,000              |                                |
| Discount on Bonds Payable                       | 15,000               |                                |
| Interest Expense                                | 55,000               |                                |
| Interest Income                                 |                      | 8,000                          |

#### Required

Prepare the worksheet elimination entry or entries needed on December 31, 20X8, to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements.

#### LO 8-2

#### **Determining the Amount of Retirement Gain or Loss (Effective** E8-11 Interest Method)

StudyGuide .com

Online Enterprises owns 95 percent of Downlink Corporation. On January 1, 20X1, Downlink issued \$200,000 of five-year bonds at 115. Annual interest of 12 percent is paid semiannually on January 1 and July 1. Online purchased \$100,000 of the bonds on July 1, 20X3, at par value. The following balances are taken from the separate 20X3 financial statements of the two companies:

|  | Online Enterprises | Downlink Corporation |
|--|--------------------|----------------------|
| Investment in Downlink Corporation Bonds | \$100,000          |                      |
| Interest Income                          | 6,000              |                      |
| Interest Receivable                      | 6,000              |                      |
| Bonds Payable                            |                    | \$200,000            |
| Bond Premium                             |                    | 13,475               |
| Interest Expense                         |                    | 18,039               |
| Interest Payable                         |                    | 12,000               |

## Required

- a. Compute the amount of interest expense that should be reported in the consolidated income statement for 20X3.
- b. Compute the gain or loss on constructive bond retirement that should be reported in the 20X3 consolidated income statement.
- c. Prepare the consolidation worksheet elimination entry or entries as of December 31, 20X3, to remove the effects of the intercorporate bond ownership.

#### LO 8-2

#### **Determining the Amount of Retirement Gain or Loss (Straight-Line Method)** E8-11A

Online Enterprises owns 95 percent of Downlink Corporation. On January 1, 20X1, Downlink issued \$200,000 of five-year bonds at 115. Annual interest of 12 percent is paid semiannually on January 1 and July 1. Online purchased \$100,000 of the bonds on August 31, 20X3, at par value. The following balances are taken from the separate 20X3 financial statements of the two companies:

|  | Online Enterprises | <b>Downlink Corporation</b> |
|--|--------------------|-----------------------------|
| Investment in Downlink Corporation Bonds | \$105,700          |                             |
| Interest Income Interest Receivable      | 4,000<br>6,000     |                             |
| Bonds Payable                            | 0,000              | \$200,000                   |
| Bond Premium                             |                    | 12,000                      |
| Interest Expense                         |                    | 18,000                      |
| Interest Payable                         |                    | 12,000                      |

#### Required

- a. Compute the amount of interest expense that should be reported in the consolidated income statement for 20X3.
- b. Compute the gain or loss on constructive bond retirement that should be reported in the 20X3 consolidated income statement.
- c. Prepare the consolidation worksheet elimination entry or entries as of December 31, 20X3, to remove the effects of the intercorporate bond ownership.

#### E8-12 **Evaluation of Bond Retirement (Effective Interest Method)**

Bundle Company issued \$500,000 par value, 10-year bonds at 104 on January 1, 20X3, which Mega Corporation purchased. The coupon rate on the bonds is 11 percent. Interest payments are made semiannually on July 1 and January 1. On July 1, 20X6, Parent Company purchased \$200,000 par value of the bonds from Mega for \$192,200. Parent owns 70 percent of Bundle's voting shares.

#### Required

- a. What amount of gain or loss will be reported in Bundle's 20X6 income statement on the retirement of bonds?
- b. Will a gain or loss be reported in the 20X6 consolidated financial statements for Parent for the constructive retirement of bonds? What amount will be reported?
- c. How much will Parent's purchase of the bonds change consolidated net income for 20X6?
- d. Prepare the worksheet elimination entry or entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements at December 31, 20X6.
- e. Prepare the worksheet elimination entry or entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements at December 31, 20X7.
- f. If Bundle reports net income of \$50,000 for 20X7, what amount of income will be assigned to the noncontrolling interest in the consolidated income statement?

#### **Loss on Constructive Retirement (Straight-Line Method)** E8-12A

Assume the same facts as in E8-12 but prepare entries using straight-line amortization of bond discount or premium.

#### Elimination of Intercorporate Bond Holdings (Effective Interest Method) E8-13

Stang Corporation issued to Bradley Company \$400,000 par value, 10-year bonds with a coupon rate of 12 percent on January 1, 20X5, at 105. The bonds pay interest semiannually on July 1 and January 1. On January 1, 20X8, Purple Corporation purchased \$100,000 of the bonds from Bradley for \$104,900. Purple owns 65 percent of the voting common shares of Stang and prepares consolidated financial statements.

#### Required

- a. Prepare the worksheet elimination entry or entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements for 20X8.
- b. Assuming that Stang reports net income of \$20,000 for 20X8, compute the amount of income assigned to noncontrolling shareholders in the 20X8 consolidated income statement.
- c. Prepare the worksheet elimination entry or entries needed to remove the effects of the intercorporate bond ownership in preparing consolidated financial statements for 20X9.

#### Loss on Constructive Retirement (Straight-Line Method)

Assume the same facts as in E8-13 but prepare entries using straight-line amortization of bond discount or premium.

#### P8-14 Consolidation Worksheet with Sale of Bonds to Subsidiary (Effective Interest Method)

Porter Company purchased 60 percent ownership of Temple Corporation on January 1, 20X1, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 40 percent of Temple's book value. On January 1, 20X1, Porter sold \$80,000 par value, 8 percent, five-year bonds directly to Temple when the market interest rate was 7 percent. The bonds pay interest annually on December 31. Porter uses the fully adjusted equity method in accounting for its ownership of Temple. On December 31, 20X2, the trial balances of the two companies are as follows:

|                            | Porter C  | ompany    | <b>Temple Corporation</b> |           |
|----------------------------|-----------|-----------|---------------------------|-----------|
| Item                       | Debit     | Credit    | Debit                     | Credit    |
| Cash & Accounts Receivable | \$ 81,480 |           | \$ 38,720                 |           |
| Inventory                  | 120,000   |           | 65,000                    |           |
| Buildings & Equipment      | 500,000   |           | 300,000                   |           |
| Investment in Temple       |           |           |                           |           |

## Required

- a. Record the journal entry or entries for 20X4 on Mega's books related to its investment in Tarp Company stock.
- b. Record the journal entry or entries for 20X4 on Mega's books related to its investment in Tarp Company bonds.
- c. Record the journal entry or entries for 20X4 on Tarp's books related to its bonds payable.
- d. Prepare the elimination entries needed to complete a consolidated worksheet for 20X4.
- e. Prepare a three-part consolidated worksheet for 20X4.

#### **Direct Sale of Bonds to Parent (Effective Interest Method)**

On January 1, 20X1, Fern Corporation paid Morton Advertising \$116,200 to acquire 70 percent of Vincent Company's stock. Fern also paid \$45,000 to acquire \$50,000 par value 8 percent, 10-year bonds directly from Vincent on that date. This purchase represented ½ of the bonds that were originally issued. Interest payments are made on January 1 and July 1. The fair value of the noncontrolling interest at January 1, 20X1, was \$49,800, and book value of Vincent's net assets was \$110,000. The book values and fair values of Vincent's assets and liabilities were equal except for buildings and equipment, which had a fair value \$56,000 higher than book value and a remaining economic life of 14 years at January 1, 20X1.

- c. Prepare elimination entries needed to complete a consolidation worksheet for 20X3.
- d. Prepare a three-part consolidation worksheet for 20X3.

#### LO 8-3 P8-17 Information Provided in Elimination Entry (Effective Interest Method)

Gross Corporation issued \$500,000 par value, 10-year bonds at 104 on January 1, 20X1, which Independent Corporation purchased. On January 1, 20X5, Rupp Corporation purchased \$200,000 of Gross bonds from Independent for \$196,700. The bonds pay 9 percent interest annually on December 31. The preparation of consolidated financial statements for Gross and Rupp at December 31, 20X7, required the following elimination entry:

| Bonds Payable                         | 200,000 |         |
|---------------------------------------|---------|---------|
| Premium on Bonds Payable              | 3,105   |         |
| Interest Income                       | 18,520  |         |
| Investment in Gross Corporation Bonds |         | 198,130 |
| Interest Expense                      |         | 17,121  |
| Retained Earnings, January 1          |         | 4,780   |
| Noncontrolling Interest               |         | 1,594   |

#### Required

With the information given, answer each of the following questions. Show how you derived your answer.

- a. Is Gross or Rupp the parent company? How do you know?
- b. What percentage of the subsidiary's ownership does the parent hold?
- c. If 20X7 consolidated net income of \$70,000 would have been reported without the preceding elimination entry, what amount will actually be reported?
- d. Will income to the noncontrolling interest reported in 20X7 increase or decrease as a result of the preceding elimination entry? By what amount?
- e. Prepare the elimination entry needed to remove the effects of the intercorporate bond ownership in completing a three-part consolidation worksheet at December 31, 20X8.

#### Information Provided in Elimination Entry (Straight-Line Method) P8-17A

Gross Corporation issued \$500,000 par value 10-year bonds at 104 on January 1, 20X1, which Independent Corporation purchased. On July 1, 20X5, Rupp Corporation purchased \$200,000 of Gross bonds from Independent. The bonds pay 9 percent interest annually on December 31. The preparation of consolidated financial statements for Gross and Rupp at December 31, 20X7, required the following elimination entry:

| Bonds Payable                         | 200,000 |         |
|---------------------------------------|---------|---------|
| Premium on Bonds Payable              | 2,400   |         |
| Interest Income                       | 18,600  |         |
| Investment in Gross Corporation Bonds |         | 198,200 |

| Investment in Gross Corporation Stock |         | 4,200   |
| NCI in NA of Gross Corporation        |         | 1,400   |

## Required

With the information given, answer each of the following questions. Show how you derived your answer.

- a. Is Gross or Rupp the parent company? How do you know?
- b. What percentage of the subsidiary's ownership does the parent hold?
- c. If 20X7 consolidated net income of \$70,000 would have been reported without the preceding elimination, what amount will actually be reported?
- d. Will income to the noncontrolling interest reported in 20X7 increase or decrease as a result of the preceding elimination entry? By what amount?
- e. Prepare the elimination entry needed to remove the effects of the intercorporate bond ownership in completing a three-part consolidation worksheet at December 31, 20X8.

## LO 8-4 P8-18 Prior Retirement of Bonds (Effective Interest Method)

Amazing Corporation purchased \$100,000 par value bonds of its subsidiary, Broadway Company, on December 31, 20X5, from Lemon Corporation for \$102,800. The 10-year bonds bear a 9 percent coupon rate, and Broadway originally sold them on January 1, 20X3, to Lemon at 95. Interest is paid annually on December 31. Amazing owns 85 percent of the stock of Broadway.

In preparing the consolidation worksheet at December 31, 20X6, Amazing's controller made the following entry to eliminate the effects of the intercorporate bond ownership:

| Bonds Payable                        | 100,000 |         |
|--------------------------------------|---------|---------|
| Interest Income                      | 8,691   |         |
| Retained Earnings, January 1         | 5,741   |         |
| Noncontrolling Interest              | 1,013   |         |
| Investment in Broadway Company Bonds |         | 102,491 |
| Discount on Bonds Payable            |         | 3,535   |
| Interest Expense                     |         | 9,419   |

## Required

With the information given, answer the following questions:

- *a.* Prepare the journal entry made by Amazing in 20X6 to record its interest income on the Broadway bonds that it holds.
- *b.* Prepare the elimination entry to remove the effects of the intercorporate bond ownership in completing a three-part consolidation worksheet at December 31, 20X5.
- c. Broadway reported net income of \$60,000 and \$80,000 for 20X5 and 20X6, respectively. Amazing reported income from its separate operations of \$120,000 and \$150,000 for 20X5 and 20X6, respectively. What amount of consolidated net income and income to the controlling interest will be reported in the consolidated income statements for 20X5 and 20X6?

## LO 8-4 P8-18A Prior Retirement of Bonds (Straight-Line Method)

Amazing Corporation purchased \$100,000 par value bonds of its subsidiary, Broadway Company, on December 31, 20X5, from Lemon Corporation. The 10-year bonds bear a 9 percent coupon rate, and Broadway originally sold them on January 1, 20X3, to Lemon. Interest is paid annually on December 31. Amazing owns 85 percent of the stock of Broadway.

In preparing the consolidation worksheet at December 31, 20X6, Amazing's controller made the following entry to eliminate the effects of the intercorporate bond ownership:

| Bonds Payable                        | 100,000 |         |
|--------------------------------------|---------|---------|
| Interest Income                      | 8,600   |         |
| Investment in Broadway Company Stock | 5,355   |         |
| NCI in NA of Broadway Company        | 945     |         |
| Investment in Broadway Company Bonds |         | 102,400 |
| Discount on Bonds Payable            |         | 3,000   |
| Interest Expense                     |         | 9,500   |

## Required

With the information given, answer the following questions:

- a. What amount did Amazing pay when it purchased Broadway's bonds?
- b. Prepare the journal entry made by Broadway in 20X6 to record its interest expense for the year.
- c. Prepare the journal entry made by Amazing in 20X6 to record its interest income on the Broadway bonds that it holds.
- d. Prepare the elimination entry to remove the effects of the intercorporate bond ownership in completing a three-part consolidation worksheet at December 31, 20X5.
- e. Broadway reported net income of \$60,000 and \$80,000 for 20X5 and 20X6, respectively. Amazing reported income from its separate operations of \$120,000 and \$150,000 for 20X5 and 20X6, respectively. What amount of consolidated net income and income to the controlling interest will be reported in the consolidated income statements for 20X5 and 20X6?

LO 8-2

## Incomplete Data (Straight-Line Method)

Ballard Corporation purchased 70 percent of Condor Company's voting shares on January 1, 20X4, at underlying book value. On that date it also purchased \$100,000 par value 12 percent Condor bonds, which had been issued on January 1, 20X1, with a 10-year maturity.

During preparation of the consolidated financial statements for December 31, 20X4, the following elimination entry was made in the worksheet:

| Bonds Payable                      | 100,000 |  |
|------------------------------------|---------|--|
| Bond Premium                       | 6,000   |  |
| Loss on Bond Retirement            | 3,500   |  |
| Interest Income                    | ?       |  |
| Investment in Condor Company Bonds | 109,000 |  |
| Interest Expense                   | ?       |  |

## Required

- a. What price did Ballard pay to purchase the Condor bonds?
- b. What was the carrying amount of the bonds on Condor's books on the date of purchase?
- c. If Condor reports net income of \$30,000 in 20X5, what amount of income should be assigned to the noncontrolling interest in the 20X5 consolidated income statement?

LO 8-4

## P8-20

## **Balance Sheet Eliminations (Effective Interest Method)**

Bath Corporation acquired 80 percent of Stang Brewing Company's stock on January 1, 20X1, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 20 percent of Stang's book value. On January 1, 20X1, Stang issued \$300,000 par value, 8 percent, 10-year bonds to Sidney Malt Company for \$360,000. Bath subsequently purchased \$100,000 of the bonds from Sidney Malt for \$102,000 on January 1, 20X3. Interest is paid semiannually on January 1 and July 1.

Summarized balance sheets for Bath and Stang as of December 31, 20X4, follow:

| BATH CORPORATION  Balance Sheet  December 31, 20X4 |           |                                    |           |
|--|-----------|------------------------------------|-----------|
| Cash & Receivables                                 | \$122,500 | Accounts Payable                   | \$ 40,000 |

## **Balance Sheet Eliminations (Straight-Line Method)**

Bath Corporation acquired 80 percent of Stang Brewing Company's stock on January 1, 20X1, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 20 percent of Stang's book value. On January 1, 20X1, Stang issued \$300,000 par value, 8 percent, 10-year bonds to Sidney Malt Company. Bath subsequently purchased \$100,000 of the bonds from Sidney Malt for \$102,000 on January 1, 20X3. Interest is paid semiannually on January 1 and July 1. Assume Bath Corporation uses the fully adjusted equity method.

Summarized balance sheets for Bath and Stang as of December 31, 20X4, follow:

| BATH CORPORATION  Balance Sheet  December 31, 20X4 |           |                                    |           |

- a. Prepare a consolidation worksheet for 20X3 in good form.
- b. Prepare a consolidated balance sheet, income statement, and statement of changes in retained earnings for 20X3.

## LO 8-4

#### Consolidation Worksheet—Year after Retirement (Effective Interest Method) P8-24

Bennett Corporation owns 60 percent of the stock of Stone Container Company, which it acquired at book value in 20X1. At that date, the fair value of the noncontrolling interest was equal to 40 percent of Stone's book value. On December 31, 20X3, Bennett purchased \$100,000 par value bonds of Stone for \$107,000. Stone originally issued the 10-year bonds at par value on January 1, 20X1. The bonds' coupon rate is 9 percent. Interest is paid semiannually on June 30 and December 31. Trial balances for the two companies on December 31, 20X4, are as follows:

|                                     |     | Ben<br>Corpo |     |           | Stone Container<br>Company |           |  |

During 20X7, Lance resold inventory purchased from Avery in 20X6. It had cost Avery \$44,000 to produce the inventory, and Lance had purchased it for \$59,000. In 20X7, Lance had purchased inventory for \$40,000 and sold it to Avery for \$60,000. At December 31, 20X7, Avery continued to hold \$27,000 of the inventory.

Avery had issued \$200,000 of 8 percent, 10-year bonds on January 1, 20X4, at 104. Lance had purchased \$80,000 of the bonds from one of the original owners for \$78,400 on December 31, 20X5. Interest is paid annually on December 31. Assume Lance uses the fully adjusted equity method.

## Required

- a. What amount of cost of goods sold will be reported in the 20X7 consolidated income statement?
- b. What inventory balance will be reported in the December 31, 20X7, consolidated balance sheet?
- c. Prepare the journal entry to record interest expense for Avery for 20X7.
- d. Prepare the journal entry to record interest income for Lance for 20X7.
- e. What amount will be assigned to the noncontrolling interest in the consolidated balance sheet prepared at December 31, 20X7?
- Prepare all elimination entries needed at December 31, 20X7, to complete a three-part consolidation worksheet.
- g. Prepare a consolidation worksheet for 20X7 in good form.

## LO 8-3

#### P8-25A Intercorporate Inventory and Debt Transfers (Straight-Line Method)

Lance Corporation purchased 75 percent of Avery Company's common stock at underlying book value on January 1, 20X3. At that date, the fair value of the noncontrolling interest was equal to 25 percent of Avery's book value. Trial balances for Lance and Avery on December 31, 20X7, are as follows:

| 20X7 Trial Balance Data   |    |                             |           |                  |               |  |  |

During 20X7, Lance resold inventory purchased from Avery in 20X6. It had cost Avery \$44,000 to produce the inventory, and Lance had purchased it for \$59,000. In 20X7, Lance had purchased inventory for \$40,000 and sold it to Avery for \$60,000. At December 31, 20X7, Avery continued to hold \$27,000 of the inventory.

Avery had issued \$200,000 of 8 percent, 10-year bonds on January 1, 20X4, at 104. Lance had purchased \$80,000 of the bonds from one of the original owners for \$78,400 on December 31, 20X5. Both companies use straight-line write-off of premiums and discounts. Interest is paid annually on December 31. Assume Lance uses the fully adjusted equity method.

## Required

LO 8-4

- a. What amount of cost of goods sold will be reported in the 20X7 consolidated income statement?
- b. What inventory balance will be reported in the December 31, 20X7, consolidated balance sheet?
- c. Prepare the journal entry to record interest expense for Avery for 20X7.
- d. Prepare the journal entry to record interest income for Lance for 20X7.
- e. What amount will be assigned to the noncontrolling interest in the consolidated balance sheet prepared at December 31, 20X7?
- f. Prepare all elimination entries needed at December 31, 20X7, to complete a three-part consolidation worksheet.
- g. Prepare a consolidation worksheet for 20X7 in good form.

#### P8-26 Intercorporate Bond Holdings and Other Transfers (Effective Interest Method)

On January 1, 20X5, Pond Corporation purchased 75 percent of Skate Company's stock at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 25 percent of Skate's book value. The balance sheets for Pond and Skate at January 1, 20X8, and December 31, 20X8, and income statements for 20X8 were reported as follows:

## **Additional Information**

- 1. Pond sold a building to Skate for \$65,000 on December 31, 20X7. Pond had purchased the building for \$125,000 and was depreciating it on a straight-line basis over 25 years. At the time of sale, Pond reported accumulated depreciation of \$75,000 and a remaining life of 10 years.
- 2. On July 1, 20X6, Skate sold land that it had purchased for \$22,000 to Pond for \$35,000. Pond is planning to build a new warehouse on the property prior to the end of 20X9.
- 3. Skate issued \$100,000 par value, 10-year bonds with a coupon rate of 10 percent on January 1, 20X5, at \$95,000. On December 31, 20X7, Pond purchased \$40,000 par value of Skate's bonds for \$42,800. Interest payments are made on July 1 and January 1.
- 4. Pond and Skate paid dividends of \$30,000 and \$10,000, respectively, in 20X8.

## Required

LO 8-4

- a. Prepare all elimination entries needed at December 31, 20X8, to complete a three-part consolidation worksheet.
- b. Prepare a three-part worksheet for 20X8 in good form.

#### P8-26A Intercorporate Bond Holdings and Other Transfers (Straight-Line Method)

On January 1, 20X5, Pond Corporation purchased 75 percent of Skate Company's stock at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 25 percent of Skate's book value. The balance sheets for Pond and Skate at January 1, 20X8, and December 31, 20X8, and income statements for 20X8 were reported as follows:

## **Additional Information**

- 1. Pond sold a building to Skate for \$65,000 on December 31, 20X7. Pond had purchased the building for \$125,000 and was depreciating it on a straight-line basis over 25 years. At the time of sale, Pond reported accumulated depreciation of \$75,000 and a remaining life of 10 years. Assume Pond uses the fully adjusted equity method.
- 2. On July 1, 20X6, Skate sold land that it had purchased for \$22,000 to Pond for \$35,000. Pond is planning to build a new warehouse on the property prior to the end of 20X9.
- 3. Skate issued \$100,000, par value 10-year bonds with a coupon rate of 10 percent on January 1, 20X5, at \$95,000. On December 31, 20X7, Pond purchased \$40,000 par value of Skate's bonds for \$42,800. Both companies amortize bond premiums and discounts on a straight-line basis. Interest payments are made on July 1 and January 1.
- 4. Pond and Skate paid dividends of \$30,000 and \$10,000, respectively, in 20X8.

## Required

- a. Prepare all elimination entries needed at December 31, 20X8, to complete a three-part consolidation worksheet.
- b. Prepare a three-part worksheet for 20X8 in good form.

## LO 8-3, 8-4

#### P8-27B Comprehensive Multiple-Choice Questions (Modified Equity Method)

Panther Enterprises owns 80 percent of Grange Corporation's voting stock. Panther acquired the shares on January 1, 20X4, for \$234,500. On that date, the fair value of the noncontrolling interest was \$58,625, and Grange reported common stock outstanding of \$200,000 and retained earnings of \$50,000. The book values and fair values of Grange's assets and liabilities were equal except for buildings with a fair value \$30,000 more than book value at the time of combination. The buildings had an expected 10-year remaining economic life from the date of combination. On December 31, 20X6, Panther's management reviewed the amount attributed to goodwill as a result of the acquisition of Grange and concluded an impairment loss of \$7,500 should be recorded in 20X6, with the loss shared proportionately between the controlling and noncontrolling interests.

The following trial balances were prepared by the companies on December 31, 20X6:

|                             | Panther E       | nte | rprises   | Grange Co | orporation |

Panther purchases much of its inventory from Grange. The inventory Panther held on January 1, 20X6, contained \$2,000 of unrealized intercompany profit. During 20X6, Grange had sold goods costing \$50,000 to Panther for \$70,000. Panther had resold the inventory held at the beginning of the year and 70 percent of the inventory it purchased in 20X6 prior to the end of the year. The inventory remaining at the end of 20X6 was sold in 20X7.

On January 1, 20X6, Panther purchased from Kirkwood Corporation \$100,000 par value bonds of Grange Corporation. Kirkwood had purchased the 10-year bonds on January 1, 20X1. The coupon rate is 9 percent and interest is paid annually on December 31. Assume Panther uses the modified equity method.

<sup>&</sup>quot;B" indicates that the item relates to Appendix 8B.

## Required

- Select the correct answer for each of the following questions. 1. What should be the total amount of inventory reported in the consolidated balance sheet as of December 31, 20X6? a. \$360,000. b. \$374,000. c. \$375,200. d. \$380,000. 2. What amount of cost of goods sold should be reported in the 20X6 consolidated income statement? a. \$288,000. b. \$294,000. c. \$296,000. d. \$360,000. 3. What amount of interest income did Panther Enterprises record from its investment in Grange Corporation bonds during 20X6? a. \$7,400. b. \$7,720. c. \$9,000. d. \$10,600.
- 4. What amount of interest expense should be reported in the 20X6 consolidated income statement?
  - a. \$24,000.
  - b. \$32,000.
  - *c.* \$33,000.
  - d. \$40,000.
- 5. What amount of goodwill would be reported by the consolidated entity at January 1, 20X4?
  - a. \$10,500.
  - b. \$13,125.
  - c. \$34,500.
  - d. \$43,125.
- 6. What amount of depreciation and amortization expense should be reported in the 20X6 consolidated income statement?
  - a. \$77,000.
  - b. \$80,000.
  - c. \$82,400.
  - d. \$83,000.
- 7. What amount of gain or loss on bond retirement should be included in the 20X6 consolidated income statement?
  - a. \$2,400.
  - b. \$3,000.
  - c. \$4,000.
  - d. \$6,400.
- 8. What amount of income should be assigned to the noncontrolling interest in the 20X6 consolidated income statement?
  - a. \$4,620.
  - b. \$6,120.
  - c. \$6,720.
  - d. \$8,000.

- 9. What amount should be assigned to the noncontrolling interest in the consolidated balance sheet as of December 31, 20X6?
  - a. \$60,000.
  - b. \$63,320.
  - c. \$65,000.
  - d. \$68,645.
- 10. What amount of goodwill, if any, should be reported in the consolidated balance sheet as of December 31, 20X6?
  - a. \$0.
  - b. \$5,625.
  - c. \$10,500.
  - d. \$13,125.

## LO 8-2, 8-3

#### P8-28 Comprehensive Problem: Intercorporate Transfers (Effective Interest Method)

Topp Manufacturing Company acquired 90 percent of Bussman Corporation's outstanding common stock on December 31, 20X5, for \$1,152,000. At that date, the fair value of the noncontrolling interest was \$128,000, and Bussman reported common stock outstanding of \$500,000, premium on common stock of \$280,000, and retained earnings of \$420,000. The book values and fair values of Bussman's assets and liabilities were equal except for land, which was worth \$30,000 more than its book value.

On April 1, 20X6, Topp issued at par \$200,000 of 10 percent bonds directly to Bussman; interest on the bonds is payable March 31 and September 30. On January 1, 20X7, Topp purchased all of Bussman's outstanding 10-year 12 percent bonds from an unrelated institutional investor at 98. The bonds originally had been issued on January 1, 20X1, for 101. Interest on the bonds is payable December 31 and June 30.

Since the date it was acquired by Topp Manufacturing, Bussman has sold inventory to Topp on a regular basis. The amount of such intercompany sales totaled \$64,000 in 20X6 and \$78,000 in 20X7, including a 30 percent gross profit. All inventory transferred in 20X6 had been resold by December 31, 20X6, except inventory for which Topp had paid \$15,000 and did not resell until January 20X7. All inventory transferred in 20X7 had been resold at December 31, 20X7, except merchandise for which Topp had paid \$18,000.

At December 31, 20X7, trial balances for Topp and Bussman appeared as follows:

|                              | Topp Man    | ufacturing  | Bussman C   | Corporation |
|------------------------------|-------------|-------------|-------------|-------------|

| Income from Bussman Corp.    |             | 84,936      |             |             |
| Total                        | \$9,555,752 | \$9,555,752 | \$3,771,874 | \$3,771,874 |

As of December 31, 20X7, Bussman had declared but not yet paid its fourth-quarter dividend of \$10,000. Both Topp and Bussman use the effective interest method for the amortization of bond discount and premium. On December 31, 20X7, Topp's management reviewed the amount attributed to goodwill as a result of its purchase of Bussman common stock and concluded that an impairment loss in the amount of \$25,000 had occurred during 20X7 and should be shared proportionately between the controlling and noncontrolling interests. Topp uses the fully adjusted equity method to account for its investment in Bussman.

## Reauired

- a. Compute the amount of the goodwill as of January 1, 20X7.
- b. Compute the balance of Topp's Investment in Bussman Stock account as of January 1, 20X7.
- c. Compute the gain or loss on the constructive retirement of Bussman's bonds that should appear in the 20X7 consolidated income statement.
- d. Compute the income that should be assigned to the noncontrolling interest in the 20X7 consolidated income statement.
- e. Compute the total noncontrolling interest as of December 31, 20X6.
- f. Present all elimination entries that would appear in a three-part consolidation worksheet as of December 31, 20X7.
- g. Prepare and complete a three-part worksheet for the preparation of consolidated financial statements for 20X7.

| Retained Earnings, January 1 |                    | 3,028,950   |             | 470,000     |
| Sales                        |                    | 3,101,000   |             | 790,000     |
| Other Income                 |                    | 135,000     |             | 31,000      |
| Income from Bussman Corp.    |                    | 82,890      |             |             |
| Total                        | \$9,555,840        | \$9,555,840 | \$3,772,000 | \$3,772,000 |

As of December 31, 20X7, Bussman had declared but not yet paid its fourth-quarter dividend of \$10,000. Both Topp and Bussman use straight-line depreciation and amortization, including the amortization of bond discount and premium. On December 31, 20X7, Topp's management reviewed the amount attributed to goodwill as a result of its purchase of Bussman common stock and concluded that an impairment loss in the amount of \$25,000 had occurred during 20X7 and should be shared proportionately between the controlling and noncontrolling interests. Topp uses the fully adjusted equity method to account for its investment in Bussman.

## Required

- a. Compute the amount of the goodwill as of January 1, 20X7.
- b. Compute the balance of Topp's Investment in Bussman Stock account as of January 1, 20X7.
- c. Compute the gain or loss on the constructive retirement of Bussman's bonds that should appear in the 20X7 consolidated income statement.
- d. Compute the income that should be assigned to the noncontrolling interest in the 20X7 consolidated income statement.
- e. Compute the total noncontrolling interest as of December 31, 20X6.
- f. Present all elimination entries that would appear in a three-part consolidation worksheet as of December 31, 20X7.
- g. Prepare and complete a three-part worksheet for the preparation of consolidated financial statements for 20X7.

## LO 8-2, 8-3

#### P8-29B Comprehensive Problem: Intercorporate Transfers (Modified Equity Method)

Topp Manufacturing Company acquired 90 percent of Bussman Corporation's outstanding common stock on December 31, 20X5, for \$1,152,000. At that date, the fair value of the noncontrolling interest was \$128,000, and Bussman reported common stock outstanding of \$500,000, premium on common stock of \$280,000, and retained earnings of \$420,000. The book values and fair values of Bussman's assets and liabilities were equal except for land, which was worth \$30,000 more than its book value.

On April 1, 20X6, Topp issued at par \$200,000 of 10 percent bonds directly to Bussman; interest on the bonds is payable March 31 and September 30. On January 2, 20X7, Topp purchased all of Bussman's outstanding 10-year, 12 percent bonds from an unrelated institutional investor at 98. The bonds originally had been issued on January 2, 20X1, for 101. Interest on the bonds is payable December 31 and June 30.

Since the date it was acquired by Topp Manufacturing, Bussman has sold inventory to Topp on a regular basis. The amount of such intercompany sales totaled \$64,000 in 20X6 and \$78,000 in 20X7, including a 30 percent gross profit. All inventory transferred in 20X6 had been resold by December 31, 20X6, except inventory for which Topp had paid \$15,000 and did not resell until January 20X7. All inventory transferred in 20X7 had been resold at December 31, 20X7, except merchandise for which Topp had paid \$18,000.

| At December 31, 20X7, trial balar | ices for Topp and Bussman | appeared as follows: |
|-----------------------------------|---------------------------|----------------------|
|-----------------------------------|---------------------------|----------------------|

|                              | Topp Manufacturing |             | Bussman C   | Corporation |

| Accumulated Depreciation     |                    | \$1,210,000 |             | \$ 619,000  |
| Current Payables             |                    | 98,000      |             | 79,000      |
| Bonds Payable                |                    | 200,000     |             | 1,000,000   |
| Premium on Bonds Payable     |                    |             |             | 3,000       |
| Common Stock                 |                    | 1,000,000   |             | 500,000     |
| Premium on Common Stock      |                    | 700,000     |             | 280,000     |
| Retained Earnings, January 1 |                    | 3,033,000   |             | 470,000     |
| Sales                        |                    | 3,101,000   |             | 790,000     |
| Other Income                 |                    | 135,000     |             | 31,000      |
| Income from Bussman          |                    | 90,000      |             |             |
| Total                        | \$9,567,000        | \$9,567,000 | \$3,772,000 | \$3,772,000 |

As of December 31, 20X7, Bussman had declared but not yet paid its fourth-quarter dividend of \$10,000. Both Topp and Bussman use straight-line depreciation and amortization, including the amortization of bond discount and premium. On December 31, 20X7, Topp's management reviewed the amount attributed to goodwill as a result of its purchase of Bussman common stock and concluded that an impairment loss in the amount of \$25,000 had occurred during 20X7 and should be shared proportionately between the controlling and noncontrolling interests. Topp uses the modified equity method to account for its investment in Bussman.

## Required

- a. Compute the amount of the goodwill as of January 1, 20X7.
- b. Compute the balance of Topp's Investment in Bussman Stock account as of January 1, 20X7.
- c. Compute the gain or loss on the constructive retirement of Bussman's bonds that should appear in the 20X7 consolidated income statement.
- d. Compute the income that should be assigned to the noncontrolling interest in the 20X7 consolidated income statement.
- e. Compute the total noncontrolling interest as of December 31, 20X6.
- f. Present all elimination entries that would appear in a three-part consolidation worksheet as of December 31, 20X7.
- g. Prepare and complete a three-part worksheet for the preparation of consolidated financial statements for 20X7.

#### P8-30B Cost Method

The trial balance data presented in P8-24 can be converted to reflect use of the cost method by inserting the following amounts in place of those presented for Bennett Corporation:

| Investment in Stone Container Stock | \$ 75,000 |
|-------------------------------------|-----------|
| Retained Earnings                   | 187,200   |
| Income from Subsidiary              | 0         |
| Dividend Income                     | 6,000     |
|                                     |           |

Stone reported retained earnings of \$25,000 on the date Bennett purchased 60 percent of the stock.

## Required

- a. Prepare the journal entries that would have been recorded on Bennett's books during 20X4 under the cost method.
- b. Prepare all elimination entries needed to complete a consolidation worksheet as of December 31, 20X4, assuming Bennett uses the cost method.
- c. Complete a three-part consolidation worksheet as of December 31, 20X4.

## BERKSHIRE HATHAWAY'S VARIED INVESTMENTS

Chapter 2 provides an overview of the rise of one of the most successful investment companies in modern history, Berkshire Hathaway, under the direction of Warren Buffett. We do not repeat that history here, but we note that although Berkshire Hathaway owns common stock in many well-known companies, it also has various other investments that might surprise you. For example, did you know that in 2008 Berkshire Hathaway purchased preferred stock in Wrigley, Goldman Sachs, and General Electric (GE) totaling \$14.5 billion?

In previous chapters, we have focused on simple ownership situations in which the controlling entity has owned common stock (CS) in other controlled entities. In practice, however, relatively complex ownership structures are frequent. For example, until recently, Berkshire held both common and preferred shares of GE. Other times, one or more subsidiaries may acquire stock of the parent or of other related companies. Sometimes the parent's ownership claim on a subsidiary may change through its purchase or sale of subsidiary shares or through stock transactions of the subsidiary.

The discussion in this chapter provides a basic understanding of some of the consolidation problems arising from complex ownership situations commonly encountered in practice. Specifically, this chapter discusses

- 1. Subsidiary preferred stock (PS) outstanding.
- 2. Changes in the parent's ownership interest in the subsidiary.
- 3. Multiple ownership levels.
- 4. Reciprocal or mutual ownership.
- 5. Subsidiary stock dividends.
- 6. Ownership interests other than stock.

## BERKSHIRE HATHAWAY INC.

## **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 9-1 Understand and explain how the consolidation process differs when the subsidiary has preferred stock outstanding.
- LO 9-2 Make calculations and prepare elimination entries for the consolidation of a partially owned subsidiary when the subsidiary has preferred stock outstanding.

- LO 9-3 Make calculations and explain how consolidation procedures differ when the parents' ownership interest changes during the accounting period.
- LO 9-4 Make calculations and prepare elimination entries for the consolidation of a partially owned subsidiary when the subsidiary has a complex ownership structure.
- LO 9-5 Understand and explain how consolidation procedures differ when the subsidiary pays stock dividends.

## SUBSIDIARY PREFERRED STOCK OUTSTANDING

LO 9-1

Understand and explain how the consolidation process differs when the subsidiary has preferred stock outstanding.

Many companies have more than one type of stock outstanding. Each type of security typically serves a particular function, and each has a different set of rights and features. Preferred stockholders normally have preference over common shareholders with respect to dividends and the distribution of assets in a liquidation. The right to vote usually is withheld from preferred shareholders, so preferred stock ownership normally does not convey control, regardless of the number of shares owned.

Because a subsidiary's preferred shareholders do have a claim on the net assets of the subsidiary, special attention must be given to that claim in the preparation of consolidated financial statements.

## **Consolidation with Subsidiary Preferred Stock Outstanding**

During the preparation of consolidated financial statements, the amount of subsidiary stockholders' equity accruing to preferred shareholders must be determined before dealing with the elimination of the intercompany common stock ownership. If the parent holds some of the subsidiary's preferred stock, its portion of the preferred stock interest must be eliminated. Any portion of the subsidiary's preferred stock interest not held by the parent is assigned to the noncontrolling interest.

As an illustration of the preparation of consolidated financial statements with subsidiary preferred stock outstanding, recall the following information from the example of Peerless Products Corporation and Special Foods Incorporated used in previous chapters:

- 1. Peerless Products purchases 80 percent of Special Foods' common stock on January 1, 20X1, at its book value of \$240,000. At the date of combination, the fair value of Special Foods' common stock held by the noncontrolling shareholders is equal to its book value of \$60,000.
- 2. Peerless Products earns income from its own operations of \$140,000 in 20X1 and declares dividends of \$60,000.
- 3. Special Foods reports net income of \$50,000 in 20X1 and declares common dividends of \$30,000.

Also assume that on January 1, 20X1, immediately after the combination, Special Foods issues \$100,000 of 12 percent preferred stock at par value, none of which Peerless purchased. The regular \$12,000 preferred dividend is paid in 20X1.

4. Assume that accumulated depreciation on Special Foods' books on the acquisition date is \$200,000.

## Allocation of Special Foods' Net Income

Of the total \$50,000 of net income reported by Special Foods for 20X1, \$12,000  $(\$100,000 \times 0.12)$  is assigned to the preferred shareholders as their current dividend. Peerless Products records its share of the remaining amount, computed as follows:

LO 9-2

Make calculations and prepare elimination entries for the consolidation of a partially owned subsidiary when the subsidiary has preferred stock outstanding.

| Special Foods' net income, 20X1                       | \$50,000 |
|---|----------|
| Less: Preferred dividends ( $$100,000 \times 0.12$ )  | (12,000) |
| Special Foods' income accruing to common shareholders | \$38,000 |
| Peerless' proportionate share                         | × 0.80   |
| Peerless' income from Special Foods                   | \$30,400 |

Income assigned to the noncontrolling interest for 20X1 is the total of Special Foods' preferred dividends and the noncontrolling common stockholders' 20 percent share of Special Foods' \$38,000 of income remaining after preferred dividends are deducted:

| Preferred dividends of Special Foods  | \$12,000 |
|---|----------|
| Income assigned to Special Foods' noncontrolling common shareholders ( $\$38,000 \times 0.20$ ) | 7,600    |
| Income to noncontrolling interest   | \$19,600 |

Although consolidated net income is unaffected by preferred dividends, the amount allocated to the controlling interest is affected because the income allocated to the noncontrolling interest is deducted to arrive at the amount allocated to the controlling interest. In this example, the computation and allocation of consolidated net income is as follows:

| Peerless' separate operating income<br>Special Foods' net income | \$140,000<br>50,000   |
|--|-----------------------|
| Consolidated net income<br>Income to the noncontrolling interest | \$190,000<br>(19,600) |
| Income attributed to the controlling interest                    | <u>\$170,400</u>      |

## Consolidation Worksheet<sup>1</sup>

Figure 9-1 on page 455 presents the 20X1 consolidation worksheet. To prepare the consolidation worksheet, we first analyze the book value of common equity to prepare the basic elimination entry. Because Special Foods was purchased for an amount equal to the book value of net assets, there is no differential in this example. In consolidation, the \$12,000 preferred dividend is treated as income assigned to the noncontrolling interest. Because Peerless holds none of Special Foods' preferred stock, the entire \$12,000 is allocated to the noncontrolling interest.

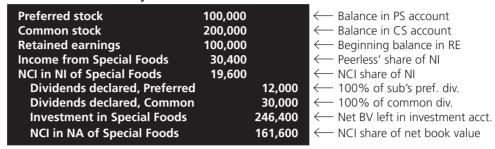

## **Book Value Calculations:**

|   | NCI      |   | Investment |   | Preferred |   | Common  | Retained   |
|---|----------|---|------------|---|-----------|---|---------|------------|
|   | 20%      | + | 80%        | = | Stock     | + | Stock   | + Earnings |
| Beginning book value                    | 160,000  |   | 240,000    |   | 100,000   |   | 200,000 | 100,000    |
| + Net income                            | 19,600   |   | 30,400     |   |           |   |         | 50,000     |
| <ul> <li>Preferred dividends</li> </ul> | (12,000) |   | 0          |   |           |   |         | (12,000)   |
| <ul> <li>Common dividends</li> </ul>    | (6,000)  |   | (24,000)   |   |           |   |         | (30,000)   |
| Ending book value                       | 161,600  |   | 246,400    |   | 100,000   |   | 200,000 | 108,000    |

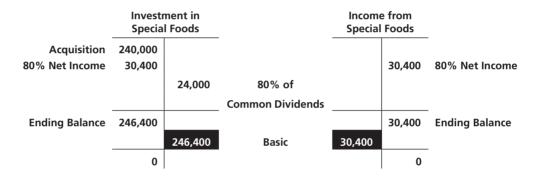

<sup>&</sup>lt;sup>1</sup> To view a video explanation of this topic, visit advancedstudyguide.com.

An analysis of these book value calculations leads to the following basic elimination entry. Note that the numbers highlighted in blue are the figures that appear in the basic elimination entry.

## **Basic Elimination Entry:**

In addition to closing out Special Foods' equity accounts, this elimination entry also eliminates Peerless' Investment in Special Foods and Income from Special Foods accounts:

The only other elimination entry is the optional accumulated depreciation elimination entry:

## **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 200,000 | Accumulated depreciation       |
|--------------------------|---------|--------------------------------|
| Building and equipment   | 200,000 | at the time of the acquisition |

These elimination entries lead to the consolidation worksheet shown in Figure 9–1.

## **Subsidiary Preferred Stock Held by Parent**

Occasionally a parent company holds preferred stock of a subsidiary in addition to its investment in the subsidiary's common stock (similar to the Berkshire investment in GE mentioned previously). The preferred stock is eliminated along with the subsidiary's other equity accounts in the consolidation process. In addition, any dividend income from the subsidiary's preferred stock recorded by the parent must be eliminated because it is income from an affiliated company.

As an illustration of the treatment of subsidiary preferred stock held by the parent, assume that Peerless Products purchases 60 percent of Special Foods' \$100,000 par value, 12 percent preferred stock for \$60,000 when issued on January 1, 20X1. During 20X1, dividends of \$12,000 are declared on the preferred stock. Peerless recognizes

| Retained Earnings                   | 410,400          | 108,000   | 150,000    | 42,000    | 410,400      |
| NCI in NA of Special Foods          |                  |           |            | 161,600   | 161,600      |
| Total Liabilities & Equity          | 1,410,400        | 708,000   | 450,000    | 203,600   | 1,872,000    |

 $\$7,200 \ (\$12,000 \times 0.60)$  of dividend income from its investment in Special Foods' preferred stock, and the remaining \$4,800 ( $$12,000 \times 0.40$ ) is paid to the holders of the other preferred shares.

In consolidation, the total income assigned to the noncontrolling interest includes the portion of the preferred dividend paid on the shares not held by Peerless:

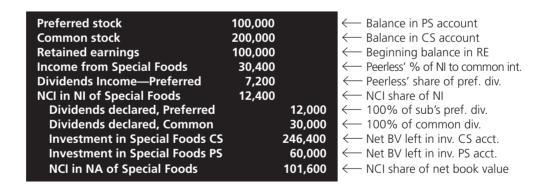

| Noncontrolling interest's share of preferred dividends (\$12,000 × 0.40)<br>Income assigned to Special Foods' noncontrolling common shareholders | \$ 4,800 |
|--|----------|
| (\$38,000 × 0.20)  | 7,600    |
| Income to noncontrolling interest  | \$12,400 |

To prepare the basic elimination entry, we first analyze the book value of equity and the related investment accounts in Peerless' common and preferred stock, the noncontrolling interest, and preferred dividend income accounts at the end of 20X1 as follows:

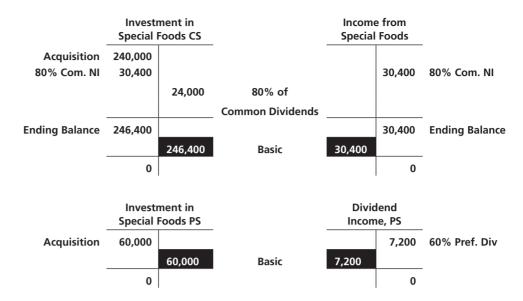

## **Book Value Calculations:**

|   | NCI<br>40%/20% | + Inv. PS<br>+ 60% | Pref. Div.<br>+ Income 60% + | Inv. CS<br>80% | = | Preferred<br>Stock |    | ommon<br>Stock | + | Retained<br>Earnings |
|---|----------------|--------------------|------------------------------|----------------|---|--------------------|----|----------------|---|----------------------|
| Beginning book value                    | 100,000        | 60,000             |                              | 240,000        |   | 100,000            | 20 | 00,000         |   | 100,000              |
| + Net income                            | 12,400         |                    | 7,200                        | 30,400         |   |                    |    |                |   | 50,000               |
| <ul> <li>Preferred dividends</li> </ul> | (4,800)        |                    | (7,200)                      |                |   |                    |    |                |   | (12,000)             |
| Common dividends                        | (6,000)        |                    |                              | (24,000)       |   |                    |    |                |   | (30,000)             |
| Ending book value                       | 101,600        | 60,000             | 0                            | 246,400        |   | 100,000            | 20 | 00,000         |   | 108,000              |

We note that although a dividend on common shares represents a return of capital under the equity method, a dividend on preferred shares is dividend income, which is not a return of capital. Therefore, it is recorded as income, not a reduction to the Investment in Special Foods' Preferred Stock account. This is why the preferred dividend income is listed in a separate column from the Investment in Special Foods' Preferred Stock account in this book value analysis. We also note that although Peerless maintains separate accounts for its Investment in Special Foods' Common and Preferred Stock, it is not necessary to keep separate columns in this analysis for the NCI shareholders' share of each. Therefore, the NCI column actually includes 40 percent of the equity accruing to preferred shareholders and 20 percent of the equity accruing to the common shareholders. Finally, because this example has no differential, the basic elimination entry will eliminate all of these accounts. Therefore, based on this analysis, we prepare the basic elimination entry as follows:

Although the "basic" elimination entry began as a very simple entry back in Chapter 2, this particular example has grown to a more complex entry. The following T-accounts illustrate how this entry achieves the objectives of (1) closing out all of Special Food's equity and dividend accounts, (2) closing out the Investment in Special Foods CS and Income from Special Foods accounts, and (3) closing out the Investment in Special Foods' PS and Dividend Income from Preferred Stock accounts.

Note also that the standard accumulated depreciation elimination entry also applies:

## **Subsidiary Preferred Stock with Special Provisions**

Many different preferred stock features are found in practice. For example, most preferred stocks are cumulative, a few are participating, and many are callable at some price other than par value. When a subsidiary with preferred stock outstanding is consolidated, the provisions of the preferred stock agreement must be examined to determine the portion of the subsidiary's stockholders' equity to be assigned to the preferred stock interest.

A cumulative dividend provision provides some degree of protection for preferred shareholders by requiring the company to pay both current and omitted past preferred dividends before any dividend can be given to common shareholders. If a subsidiary has cumulative preferred stock outstanding, an amount of income equal to the current year's preferred dividend is assigned to the preferred stock interest in consolidation whether or not the preferred dividend is declared. When dividends are in arrears on a subsidiary's cumulative preferred stock, recognition is given in consolidation to the claim of the preferred shareholders by assigning to the preferred stock interest an amount of subsidiary retained earnings equal to the dividends in arrears. On the other hand, when a subsidiary's preferred stock is noncumulative, the subsidiary has no obligation to pay undeclared dividends. Consequently, no special consolidation procedures are needed with respect to undeclared dividends on noncumulative subsidiary preferred

Preferred stock participation features allow the preferred stockholders to receive a share of income distribution that exceeds the preferred stock base dividend rate. Although few preferred stocks are participating, many different types of participation arrangements are possible. Once the degree of participation has been determined, the appropriate share of subsidiary income and net assets is assigned to the preferred stock interest in the consolidated financial statements.

The GE preferred stock purchased by Berkshire Hathaway in 2008 was callable by GE for \$110,000. On October 17, 2011, GE fully redeemed all of Berkshire Hathaway's 30,000 preferred shares for a total of \$3.3 billion.

Many preferred stocks are callable, often at prices that exceed the par value. The amount to be paid to retire a subsidiary's callable preferred stock under the preferred stock agreement is viewed as the preferred stockholders' claim on the subsidiary's assets, and that amount of subsidiary stockholders' equity is assigned to the preferred stock interest in preparing the consolidated balance sheet.

## Illustration of Subsidiary Preferred Stock with Special Features

To examine the consolidation treatment of subsidiary preferred stock with the most common special features, assume that Special Foods issues \$100,000 par value, 12 percent preferred stock on January 1, 20X0, and that the stock is cumulative, nonparticipating, and callable at 105. No dividends are declared on the preferred stock during 20X0. On January 1, 20X1, Peerless Products purchases 80 percent of Special Foods' common stock for \$240,000 when the fair value of the noncontrolling interest in Special Foods' common stock is \$60,000. Also on January 1, 20X1, Peerless purchases 60 percent of the preferred stock for \$61,000. The following are the stockholders' equity accounts of Special Foods on January 1, 20X1:

| \$100,000 |
|-----------|
| 200,000   |
| 100,000   |
| \$400,000 |
|           |

The amount assigned to the preferred stock interest in the preparation of a consolidated balance sheet on January 1, 20X1, is computed as follows:

| Par value of Special Foods' preferred stock<br>Call premium | \$100,000<br>5,000 |
|---|--------------------|
| Dividends in arrears for 20X0                               | 12,000             |
| Total preferred stock interest, January 1, 20X1             | <u>\$117,000</u>   |

This amount is apportioned between Peerless and the noncontrolling shareholders:

| Peerless' share of preferred stock interest ( $$117,000 \times 0.60$ )              | \$ 70,200        |
|---|------------------|
| Noncontrolling stockholders' share of preferred stock interest ( $\$117,000 \times$ | 0.40) 46,800     |
| Total preferred stock interest, January 1, 20X1                                     | <u>\$117,000</u> |

Because the preferred stock interest exceeds the par value of the preferred stock by \$17,000, the portion of Special Foods' retained earnings accruing to the common shareholders is reduced by that amount. Therefore, Special Foods' common stockholders have a total claim on the company's net assets as follows:

| Common stock                                 | \$200,000 |
|--|-----------|
| Retained earnings (\$100,000 - \$17,000)     | 83,000    |
| Total common stock interest, January 1, 20X1 | \$283,000 |

To prepare elimination entries, we first analyze the book value of Special Foods' net assets and the associated amounts in Peerless' investment accounts as well as the NCI ownership interest in Special Foods.

## **Book Value Calculations:**

|                      | NCI<br>40%/20% | + | Inv. PS<br>60% | + | Inv. CS<br>80% | = | Preferred<br>Stock | + | Common<br>Stock | + | Retained<br>Earnings |
|----------------------|----------------|---|----------------|---|----------------|---|--------------------|---|-----------------|---|----------------------|
| Beginning book value | 100,000        |   | 60,000         |   | 240,000        |   | 100,000            |   | 200,000         |   | 100,000              |

This analysis leads to the following basic elimination entry:

## **Basic Elimination Entry:**

| Preferred stock<br>Common stock                               | 100,000<br>200,000 |                   | ← Balance in PS account<br>← Balance in CS account         |
|---|--------------------|-------------------|--|
| Retained earnings   | 100,000            |                   | ← BB in RE   |
| Investment in Special Foods CS Investment in Special Foods PS |                    | 240,000<br>60,000 | ← Net BV left in inv. in CS<br>← Net BV left in inv. in PS |
| NCI in NA of Special Foods                                    |                    |                   | ← NCI share of net book value                              |

The following points provide context to the next two elimination entries.

1. The total noncontrolling interest on January 1, 20X1, consists of both preferred and common stock interests, as follows:

| Preferred stock interest (\$117,000 $\times$ 0.40) | \$ 46,800    |
|--|--------------|
| Common stock interest                              | 60,000       |
| Total noncontrolling interest, January 1, 20       | X1 \$106,800 |

2. The NCI shareholders sold 60 percent of the preferred shares to Peerless at an amount lower than their actual value after considering dividends in arrears and the claim associated with the call option.

| Claim on Special Foods' net assets ( $$117,000 \times 0.60$ ) | \$70,200 |
|---|----------|
| Proceeds from sale of preferred stock to Peerless             | (61,000) |
| "Loss" on sale of preferred shares to Peerless                | \$ 9,200 |

From a consolidated viewpoint, Peerless' purchase of the preferred stock is considered a retirement of a noncontrolling ownership interest by the consolidated entity. Because this retirement occurred at less than book value and gains and losses are not recognized on capital transactions, this excess is considered to be additional paid-in capital.

The next elimination entry allocates the \$17,000 reduction in retained earnings to the preferred interest:

| Retained earnings                     | 17,000 |       | ← RE to preferred shareholders    |
|---------------------------------------|--------|-------|-----------------------------------|
| Investment in Special Foods PS        |        | 1,000 | ← Excess value in inv. in PS      |
| Additional Paid-In Capital            |        | 9,200 | ← "Loss" to NCI on sale of PS     |
| NCI in NA of Special Foods            |        | 6,800 | ← NCI 40% share of extra PS value |
| • • • • • • • • • • • • • • • • • • • |        |       |                                   |

This elimination entry reclassifies \$17,000 of common equity to the preferred interest. However, because Special Foods' Retained Earnings account was already eliminated by the basic elimination entry, this debit to the Retained Earnings account would result in a consolidated Retained Earnings balance that would be different from Peerless' retained earnings number. Recall that the consolidated financial statements should include the parent company's equity account balances. Therefore, one final elimination entry is necessary to return the consolidated retained earnings number to Peerless' balance.

Because the book value of Special Foods' common stock is only \$283,000 on January 1. 20X1, Peerless' acquisition of 80 percent of Special Foods' common stock for \$240,000 results in a differential:

| Consideration given by Peerless Products Fair value of noncontrolling interest in Special Foods' common stock | \$240,000<br>60,000    |
|---|------------------------|
| Book value of Special Foods' common stock   | \$300,000<br>(283,000) |
| Differential  | \$ 17,000              |

Stated differently, because at the combination date the sum of the fair values of the consideration exchanged (\$240,000) and the noncontrolling interest in Special Foods' common stock (\$60,000) exceeds the book value of the common shares (\$283,000), a differential arises. This \$17,000 differential is assigned to the appropriate assets and liabilities in the worksheet.

| Differential      | 17,000 |
|-------------------|--------|
| Retained Earnings | 17,000 |

## CHANGES IN PARENT COMPANY OWNERSHIP

Prior to 2010, Berkshire Hathaway owned shares of BNSF Railway Corporation, but did not control it. On February 12, 2010, Berkshire

purchased the remaining shares to achieve 100% control and now

LO 9-3

Make calculations and explain how consolidation procedures differ when the parents' ownership interest changes during the accounting period.

.com

FYI

Although preceding chapters have treated the parent company's subsidiary ownership interest as remaining constant over time, in actuality, ownership levels sometimes vary. Changes in ownership levels may result from either the parent's or the subsidiary's actions. The parent company can change ownership ratios by purchasing or selling shares of the subsidiary in transactions with unaffiliated companies. A subsidiary can change the parent's ownership percentage by selling additional shares to or repurchasing shares from unaffiliated parties or through stock transactions with the parent (if the subsidiary is less than wholly owned).

## Parent's Purchase of Additional Shares from Nonaffiliate

A parent company may purchase the common stock of a subsidiary at different points in time. Until control is achieved, the intercorporate investment is accounted for as discussed in Chapter 2. Once control is achieved, the entire investment is valued based on

fair values at the date control is achieved, and subsequently consolidated financial statements must be presented.

> Purchases of additional shares of an investee's stock were discussed in Chapters 1 and 2. Additional effects of multiple purchases of a subsidiary's stock on the consolidation process are illustrated in the following example.

Assume that on January 1, 20X0, Special Foods has \$200,000 of common stock outstanding and retained earnings of \$60,000. During 20X0, 20X1, and 20X2, Special Foods reports the following information:

consolidates BNSF.

| Period | Net Income | Dividends | <b>Ending Book Value</b> |
|--------|------------|-----------|--------------------------|
| 20X0   | \$40,000   | 0         | \$300,000                |
| 20X1   | 50,000     | \$30,000  | 320,000                  |
| 20X2   | 75,000     | 40,000    | 355,000                  |

Peerless Products purchases its 80 percent interest in Special Foods in several blocks, as follows:

| Purchase Date   | Ownership<br>Percentage<br>Acquired | Cost                           | Book<br>Value                  | Differential     |
|---|-------------------------------------|--------------------------------|--------------------------------|------------------|
| January 1, 20X0<br>December 31, 20X0<br>January 1, 20X2 | 20<br>10<br><u>50</u><br><u>80</u>  | \$ 56,000<br>35,000<br>185,000 | \$ 52,000<br>30,000<br>160,000 | \$4,000<br>5,000 |

The entire differential relates to land held by Special Foods. Note that Peerless does not gain control of Special Foods until January 1, 20X2.

The investment account on Peerless' books includes the following amounts through 20X1:

|                  |         | ment in<br>I Foods | _               |
|------------------|---------|--------------------|-----------------|
| Purchase 20% CS  | 56,000  |                    |                 |
| 20% Net Income   | 8,000   |                    |                 |
| Purchase 10% CS  | 35,000  |                    | _               |
| 12/31/X0 Balance | 99,000  |                    |                 |
| 30% Net Income   | 15,000  |                    |                 |
|                  |         | 9,000              | 30% of Dividend |
| 12/31/X1 Balance | 105,000 |                    |                 |

When Peerless gains control of Special Foods on January 1, 20X2, assume that the fair value of the 30 percent equity interest it already holds in Special Foods is \$111,000 and the fair value of Special Foods' 20 percent remaining noncontrolling interest is \$74,000. The book value of Special Foods as a whole on that date is \$320,000. Under ASC 805, the differential on the combination date is computed as follows:

| Fair value of consideration exchanged      | \$185,000 |
|--|-----------|
| Fair value of equity interest already held | 111,000   |
| Fair value of noncontrolling interest      | 74,000    |
|  | \$370,000 |
| Book value of Special Foods                | (320,000) |
| Differential                               | \$ 50,000 |
|  |           |

Because the entire differential relates to land in this example, it is not amortized or written off either on Peerless' books or for consolidation.

Under the requirements of ASC 805, Peerless must remeasure the equity interest it already held in Special Foods to its fair value at the date of combination and recognize a gain or loss for the difference between the fair value and its carrying amount:

| Fair value of equity interest already held               | \$111,000 |
|--|-----------|
| Carrying amount of investment, December 31, 20X1         | (105,000) |
| Gain on increase in value of investment in Special Foods | \$ 6,000  |

Peerless recognizes the \$6,000 gain (with a credit) in income and increases the investment balance (with a debit) on its books by that amount. The total balance of the investment account on Peerless' books immediately after the combination is as follows:

| Carrying amount of investment, December 31, 20X1 | \$105,000 |
|--|-----------|
| Increase in value of investment in Special Foods | 6,000     |
| Cost of January 1, 20X2, shares acquired         | 185,000   |
| Peerless' total recorded amount of investment    | \$296,000 |

Because Peerless Products gains control of Special Foods on January 1, 20X2, consolidated statements are prepared for the year 20X2. The ending balance in the Investment in Special Foods account at the end of 20X2 is calculated as follows:

|   |                  | ment in<br>I Foods |                 |
|---|------------------|--------------------|-----------------|
| 12/31/X1 Balance<br>Fair Value Adjustment | 105,000<br>6,000 |                    |                 |
| Purchase 50% CS                           | 185,000          |                    | -               |
| 1/1/X2 Balance                            | 296,000          |                    |                 |
| 80% Net Income                            | 60,000           |                    |                 |
|   |                  | 32,000             | 80% of Dividend |
| 12/31/X2 Balance                          | 324,000          |                    |                 |

To prepare the consolidation worksheet at the end of the year, we first analyze the book value component to construct the basic elimination entry:

## **Book Value Calculations:**

|                             | NCI 20% + Peerless 80% = Common Stock + Retai |          |         | - Retained Earnings |  |  |
|-----------------------------|---|----------|---------|---------------------|--|--|
| Beginning book value        | 64,000  | 256,000  | 200,000 | 120,000             |  |  |
| + Net income                | 15,000  | 60,000   |         | 75,000              |  |  |
| <ul><li>Dividends</li></ul> | (8,000)                                       | (32,000) |         | (40,000)            |  |  |
| Ending book value           | 71,000  | 284,000  | 200,000 | 155,000             |  |  |

## **Basic Elimination Entry:**

| Common stock                | 200,000 | ← Common stock balance                           |
|-----------------------------|---------|--|
| Retained earnings           | 120,000 | ← Beginning balance in RE                        |
| Income from Special Foods   | 60,000  | ← Peerless' share of reported NI                 |
| NCI in NI of Special Foods  | 15,000  | ← NCI share of reported NI                       |
| Dividends declared          | 40,000  | ← 100% of dividends                              |
| Investment in Special Foods | 284,000 | $\leftarrow$ Net amount of BV left in inv. acct. |
| NCI in NA of Special Foods  | 71,000  | ← NCI's share of net BV                          |

We then analyze the differential and its changes during the period:

## **Excess Value (Differential) Calculations:**

|                                | NCI 20% +                               | Peerless 80% =                          | Land                                    |
|--------------------------------|---|---|---|
| Beginning balance Amortization | 10,000                                  | 40,000                                  | 50,000                                  |
| Ending balance                 | 10,000                                  | 40,000                                  | 50,000                                  |
|                                | ======================================= | ======================================= | ======================================= |

| Land                        | 50,000 |        | ← Excess value from undervalued land |
|-----------------------------|--------|--------|--------------------------------------|
| Investment in Special Foods |        | 40,000 | ← Peerless' share of excess value    |
| NCI in NA of Special Foods  |        | 10,000 | ← NCI's share of excess value        |

A gain or loss normally occurs and is recorded on the seller's books when a company disposes of all or part of an investment. ASC 323 deals explicitly with sales of stock of an investee, requiring recognition of a gain or loss on the difference between the selling price and the carrying amount of the stock. What happens, however, when the shares sold are those of a subsidiary and the subsidiary continues to qualify for consolidation? This question caused difficulty in practice for many years, but ASC 810 resolves the issue. When a parent sells some shares of a subsidiary but continues to hold a controlling interest, ASC 810 makes clear that this is considered to be an equity transaction and no gain or loss may be recognized in consolidated net income. Under ASC 810, changes in a parent's ownership interest in a subsidiary while the parent retains control require an adjustment to the amount assigned to the noncontrolling interest to reflect its change in ownership of the subsidiary. The difference between the fair value of the consideration received or paid in the equity transaction and the adjustment to the noncontrolling interest results in an adjustment to the stockholders' equity attributable to the controlling interest.

As an illustration of the sale of subsidiary stock to a nonaffiliate, assume that on December 31, 20X0, Special Foods has 20,000 common shares outstanding with a total par value of \$200,000 and retained earnings of \$100,000. On that date, Peerless acquires an 80 percent interest in Special Foods by purchasing 16,000 shares of its \$10 par common stock at book value of \$240,000 ( $$300,000 \times 0.80$ ). The noncontrolling interest in Special Foods has a fair value equal to its book value of \$60,000 at that time. Special Foods reports net income of \$50,000 for 20X1 and pays dividends of \$30,000. On January 1, 20X2, Peerless sells 1,000 shares of its Special Foods common stock to a nonaffiliate for \$19,000, leaving it with a 75 percent interest (15,000 ÷ 20,000) in Special Foods. On the date of sale, Special Foods has total stockholders' equity of \$320,000, consisting of common stock of \$200,000 and retained earnings of \$120,000.

## Recognition of Sale on Parent Company Books

The equity-method carrying amount of Peerless' investment in Special Foods on the date Peerless sells 1,000 shares reflects Peerless' share of Special Foods' 20X1 net income and dividends, as follows:

| Cost of investment, December 31, 20X0                                       | \$240,000        |
|---|------------------|
| Peerless' share of Special Foods' 20X1 net income ( $$50,000 \times 0.80$ ) | 40,000           |
| Peerless' share of Special Foods' 20X1 dividends ( $\$30,000 \times 0.80$ ) | (24,000)         |
| Investment balance, January 1, 20X2   | <u>\$256,000</u> |

Because this example has no differential, the balance of the investment account equals 80 percent of the total stockholders' equity of Special Foods on January 1, 20X2. Likewise, the noncontrolling interest is \$64,000, equal to 20 percent of Special Foods' total stockholders' equity.

In practice, companies might recognize the sale of subsidiary shares in one of two ways. Although ASC 810 does not permit a gain or loss on the sale of the shares to be reported in consolidated net income, some parent companies might choose to recognize a gain on their separate books. Thus, Peerless might record the sale of the Special Foods stock with the following entry:

|     | January 1, 20X2                   |        |
|-----|-----------------------------------|--------|
| (1) | Cash                              | 19,000 |
|     | Investment in Special Foods Stock | 16,000 |
|     | Gain on Sale of Investment        | 3,000  |
|     | Record sale of investment:        |        |
|     | $16,000 = 256,000 \times 1/6.$    |        |

Peerless recognizes a gain of \$3,000 on the sale for the difference between the \$16,000 carrying amount of the shares ( $$256,000 \times 1/16$ ) and the selling price of \$19,000.

On the other hand, the gain cannot be reported in the consolidated financial statements and, therefore, will have to be eliminated in consolidation and reclassified as additional paid-in capital. Thus, a better alternative on the parent's books may be to avoid recognizing a gain that later will have to be reclassified as additional paid-in capital and instead recognize an increase in additional paid-in capital:

|      | January 1, 20X2                   |        |   |  |  |  |
|------|-----------------------------------|--------|---|--|--|--|
| (1a) | Cash                              | 19,000 | 1 |  |  |  |
|      | Investment in Special Foods Stock | 16,000 |   |  |  |  |
|      | Additional Paid-In Capital        | 3,000  |   |  |  |  |

## Consolidation Worksheet 20X2

From a consolidation perspective, ASC 810 requires that the difference between the proceeds received from the sale of subsidiary stock and the adjustment to the noncontrolling interest from the change in its ownership of the subsidiary be recognized in equity attributable to the parent. Upon Peerless' sale of the Special Foods stock the noncontrolling interest increases from \$64,000 (\$320,000  $\times$  0.20) to \$80,000 (\$320,000  $\times$  0.25), an increase of \$16,000. The difference between the \$19,000 of proceeds received and the \$16,000 increase in the noncontrolling interest is \$3,000, and this amount is recognized in consolidation as additional paid-in capital attributable to the parent.

If Peerless recorded the sale of Special Foods shares on its books with entry (1a), consolidated net income and additional paid-in capital in consolidated equity are correctly stated without further adjustment. However, if Peerless recorded a gain on its books with entry (1), the gain must be eliminated with the following entry in the consolidation worksheet:

| Gain on Sale of Investment | 3,000 |       |
|----------------------------|-------|-------|
| Additional Paid-In Capital |       | 3,000 |

This elimination entry reclassifies the gain from the parent's books, so the transaction is treated from a consolidated perspective as an equity transaction in accordance with ASC 810.

The balance in Peerless' investment account at December 31, 20X2, is \$266,250. This amount is the result of the following entries in the investment account:

|                  | Investment in<br>Special Foods |         |                             |
|------------------|--------------------------------|---------|-----------------------------|
| Purchase 80% CS  | 240,000                        |         |                             |
| 80% Net Income   | 40,000                         |         |                             |
|                  |                                | 24,000  | 80% of Dividend             |
| 12/31/X1 Balance | 256,000                        |         |                             |
|                  |                                | 16,000  | Sale of 1,000 Shares to NCI |
| 75% Net Income   | 56,250                         |         |                             |
|                  |                                | 30,000  | 75% of Dividend             |
| 12/31/X2 Balance | 266,250                        |         |                             |
|                  |                                | 266,250 | Basic Elimination Entry     |
|                  | 0                              |         |                             |

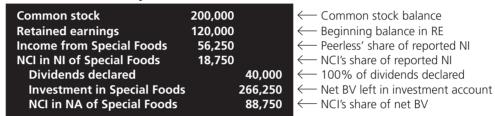

To calculate the basic elimination entry shown in the T-account, we analyze the book value component of the investment:

### **Book Value Calculations:**

|                             | NCI 25% + Peerless 75% = Common Stock + Retained Earnings |          |         |          |
|-----------------------------|---|----------|---------|----------|
| Beginning book value        | 80,000  | 240,000  | 200,000 | 120,000  |
| + Net income                | 18,750  | 56,250   |         | 75,000   |
| <ul><li>Dividends</li></ul> | (10,000)  | (30,000) |         | (40,000) |
| Ending book value           | 88,750  | 266,250  | 200,000 | 155,000  |

This analysis leads to the following basic elimination entry:

## **Basic Elimination Entry:**

## Consolidation Subsequent to 20X2

In preparing consolidated financial statements each year after 20X2, no special elimination entries are needed with respect to the 20X2 sale of subsidiary shares if Peerless recorded the sale on its books with entry (1a). If, however, Peerless recorded a gain from the sale on its books in 20X2, a worksheet entry is needed in subsequent worksheets to reestablish the \$3,000 increase in additional paid-in capital. Because the gain recognized by Peerless in 20X2 has been closed to Retained Earnings, beginning retained earnings must be reduced to eliminate the effects of the gain. The entry included in the consolidation worksheet each year after 20X2 is as follows:

| Retained Earnings, January 1 | 3,000 |       |
|------------------------------|-------|-------|
| Additional Paid-In Capital   |       | 3,000 |

Obviously, recording the sale of subsidiary shares as an equity transaction on the parent's books initially avoids the continued need to eliminate the effects of the gain.

## Subsidiary's Sale of Additional Shares to Nonaffiliate

The consolidated enterprise can generate additional funds when a subsidiary sells new shares to parties outside the economic entity. A sale of additional shares to an unaffiliated party increases the total stockholders' equity of the consolidated entity by the amount received by the subsidiary from the sale. Such a sale increases the subsidiary's total shares outstanding and, consequently, reduces the percentage ownership held by the parent company. At the same time, the dollar amount assigned to the noncontrolling interest in the consolidated financial statements increases. The resulting amounts of the controlling and noncontrolling interests are affected by two factors:

- 1. The number of shares sold to nonaffiliates.
- 2. The price at which the shares are sold to nonaffiliates.

## Difference between Book Value and Sale Price of Subsidiary Shares

If the sale price of new shares equals the book value of outstanding shares, there is no change in the existing shareholders' claim. If the subsidiary's stockholders' equity is viewed as a pie, the overall size of the pie increases. The parent's share of the pie decreases, but the size of the parent's slice remains the same because of the increase in the overall size of the pie. The elimination entries used in consolidation simply are changed to recognize the increase in the claim of the noncontrolling shareholders and the corresponding increase in the stockholders' equity balances of the subsidiary.

Most sales, however, do not occur at book value. When the sale price and book value are not the same, all common shareholders are assigned a pro rata portion of the difference. In this situation, the book value of the subsidiary's shares held by the parent changes even though the number remains constant. The size of both the pie and the parent's share of it change; the size of the parent's slice changes because the increase in the pie's size and the decrease in the parent's share do not exactly offset each other.

The issuance of additional shares by a subsidiary to unaffiliated parties is viewed as an equity transaction from a consolidated perspective. Even though the parent is not directly involved in the transaction, the book value of its subsidiary shares changes as a result of the additional shares being issued. The parent recognizes this change in the book value of the controlling interest in the subsidiary by adjusting the carrying amount of its investment in the subsidiary and additional paid-in capital. The parent's additional paid-in capital is then carried to the worksheet in consolidation.

From a consolidated viewpoint, a subsidiary's sale of additional shares to unaffiliated parties and a parent's sale of subsidiary shares are similar transactions: In both cases, the consolidated entity sells shares to the noncontrolling interest. Because the participants in a consolidation are regarded as members of a single economic entity, the sale of subsidiary shares to the noncontrolling interest should be treated in the same way regardless of whether the parent or the subsidiary sells the shares. The recognition of a gain or loss on such a transaction is inappropriate because the sale of stock to unaffiliated parties by the consolidated entity is a capital transaction from a single-entity viewpoint.

## Illustration of Subsidiary's Sale of Stock to Nonaffiliate

To examine the sale of additional shares by a subsidiary to a nonaffiliate, assume that Peerless Products acquires an 80 percent interest in Special Foods by purchasing 16,000 shares of Special Foods' \$10 par common stock on December 31, 20X0, at book value of \$240,000. Special Foods only has common stock outstanding. All other information is the same as that used previously. Therefore, by December 31, 20X1, the equity-method carrying amount of the investment on Peerless' books is \$256,000. On January 1, 20X2, Special Foods issues 5,000 additional shares of stock to nonaffiliates for \$20 per share, a total of \$100,000. After the sale, Special Foods has 25,000 shares outstanding, and Peerless has a 64 percent interest  $(16,000 \div 25,000)$ in Special Foods.

The January 1, 20X2, issuance of additional shares results in the following change in Special Foods' balance sheet:

|                                  | Before Sale | Following Sale   |
|----------------------------------|-------------|------------------|
| Common Stock, \$10 par value     | \$200,000   | \$250,000        |
| Additional Paid-In Capital (PIC) |             | 50,000           |
| Retained Earnings                | 120,000     | 120,000          |
| Total Stockholders' Equity       | \$320,000   | <u>\$420,000</u> |

The book value of Peerless' investment in Special Foods changes as a result of the sale of additional shares as follows:

|   | Before Sale Following Sale |                  |  |
|---|----------------------------|------------------|--|
| Special Foods' total stockholders' equity           | \$320,000                  | \$420,000        |  |
| Peerless' proportionate share                       | × 0.80                     | × 0.64           |  |
| Book value of Peerless' investment in Special Foods | \$256,000                  | <u>\$268,800</u> |  |

Note that, although Peerless' ownership percentage decreases from 80 percent to 64 percent, the book value of Peerless' investment increases by \$12,800. The increase in book value occurs because the \$20 issue price of the additional shares exceeds the \$16 (\$320,000 \div 20,000 shares) book value of the outstanding shares before the sale:

| Issue price of additional shares Book value of shares before sale (\$320,000 ÷ 20,000 shares) | \$ 20<br>(16)   |
|---|-----------------|
| Excess of issue price over book value   | \$ 4            |
| Number of shares issued   | × 5,000         |
| Excess book value added   | \$20,000        |
| Peerless' proportionate share   | × 0.64          |
| Increase in Peerless' interest  | <u>\$12,800</u> |

Peerless records the increase in its equity in the net assets of Special Foods with the following entry:

| (2) | Investment in Special Foods Stock | 12,800 |
|-----|-----------------------------------|--------|
|     | Additional Paid-In Capital        | 12,800 |

Record increase in equity in subsidiary resulting from subsidiary issue of shares.

The following T-account summarizes the activity in Peerless' investment in Special Foods:

|                   |         | ment in<br>Foods CS |                         |
|-------------------|---------|---------------------|-------------------------|
| Purchase 80% CS   | 240,000 |                     |                         |
| 80% Net Income    | 40,000  |                     |                         |
|                   |         | 24,000              | 80% of Dividend         |
| 12/31/X1 Balance  | 256,000 |                     |                         |
| New Shares Issued | 12,800  |                     | -                       |
| Balance 1/1/20X2  | 268,800 |                     |                         |
|                   |         | 268,800             | Basic Elimination Entry |
|                   | 0       |                     |                         |

To calculate the basic elimination entry shown in the T-account, we analyze the book value component of the investment:

## **Book Value Calculations:**

|                                       | NCI<br>36% | Peerless<br>+ 64% | = | Common<br>Stock | + | Additional<br>Paid-In Capital | Retained<br>+ Earnings |
|---------------------------------------|------------|-------------------|---|-----------------|---|-------------------------------|------------------------|
| Book value on 12/31/20X1              | 64,000     | 256,000           |   | 200,000         |   |                               | 120,000                |
| New shares issued (5,000 $\times$ 20) | 87,200     | 12,800            |   | 50,000          |   | 50,000                        |                        |
| Book value on 1/1/20X2                | 151,200    | 268,800           |   | 250,000         |   | 50,000                        | 120,000                |

This analysis leads to the following basic elimination entry:

#### **Basic Elimination Entry:**

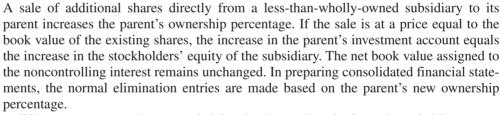

Additional paid-in capital recorded by Special Foods from the sale of the additional shares is eliminated in the preparation of consolidated financial statements, as are all of the subsidiary's stockholders' equity accounts. The noncontrolling interest's share of the increase in the book value of Special Foods' stock resulting from the sale of additional shares is reflected in the balance of the noncontrolling interest in the consolidated balance sheet. The \$151,200 balance of the noncontrolling interest is 36 percent of the \$420,000 total book value of Special Foods after the sale of the additional shares. Peerless' \$12,800 share of the increase in Special Foods' book value is included in the consolidated balance sheet by carrying over the additional paid-in capital recorded by Peerless.

# Subsidiary's Sale of Stock at Less than Book Value

A sale of stock by a subsidiary to a nonaffiliate at less than existing book value has an effect opposite to that illustrated in the preceding example. The parent company's claim is diminished as a result of selling additional shares at less than existing book value. A reduction in the book value of the shares held by the parent normally is treated as a debit to Additional Paid-In Capital and a credit to the investment account. In the absence of the Additional Paid-In Capital account, retained earnings decreases.

# Subsidiary's Sale of Additional Shares to Parent

When a parent purchases a subsidiary's shares directly from the subsidiary at an amount other than book value, it increases the carrying amount of its investment by the fair value of the consideration given. In consolidation, the amount of the noncontrolling interest must be adjusted to reflect the change in its interest in the subsidiary occasioned by the parent's purchase of additional subsidiary shares. ASC 810 then requires an adjustment to consolidated additional paid-in capital for the difference between any consideration given or received by the consolidated entity and the amount of the adjustment to the noncontrolling interest. In the case of a parent purchasing additional shares from a less-than-wholly-owned subsidiary, no consideration is given or received from a consolidated perspective, so the amount of the adjustment to equity is equal to the change in the noncontrolling interest and total consolidated stockholders' equity is unchanged.

As an illustration of the sale of additional shares from a subsidiary to its parent, assume that in the example of Peerless Products and Special Foods, Peerless purchases in the market 16,000 shares of Special Foods \$10 par common stock at book value of \$240,000 on December 31, 20X0, giving Peerless an 80 percent interest. Special Foods has only

common stock outstanding. All other information is the same as that used previously. Therefore, by December 31, 20X1, the equity-method carrying amount of the investment on Peerless' books is \$256,000. On January 1, 20X2, Peerless purchases an additional 5,000 shares of common directly from Special Foods for \$20 per share. This additional \$100,000 investment gives Peerless an ownership interest in Special Foods totaling 84 percent  $(21,000 \div 25,000)$ .

Special Foods' sale of additional shares to Peerless results in the following changes:

|                              | <b>Before Sale</b> | Following Sale   |
|------------------------------|--------------------|------------------|
| Common Stock, \$10 par value | \$200,000          | \$250,000        |
| Additional Paid-In Capital   |                    | 50,000           |
| Retained Earnings            | 120,000            | 120,000          |
| Total Stockholders' Equity   | \$320,000          | <u>\$420,000</u> |

The book value of Peerless' investment in Special Foods changes as a result of the sale of additional shares, as follows:

|   | Before Sale      | Following Sale   |
|---|------------------|------------------|
| Special Foods' total stockholders' equity           | \$320,000        | \$420,000        |
| Peerless' proportionate share                       | × 0.80           | × 0.84           |
| Book value of Peerless' investment in Special Foods | <u>\$256,000</u> | <u>\$352,800</u> |

If Special Foods' stockholders' equity is viewed as a pie, the size of both the pie and Peerless' percentage share of it increase. The size of Peerless' slice of the pie increases by \$96,800 (\$352,800 - \$256,000).

The new book value per share of Special Foods' stock is \$16.80 (\$420,000 ÷ 25,000 shares) compared to the \$16.00 ( $$320,000 \div 20,000$  shares) book value before the sale of additional shares. The book value is higher because the price Peerless paid for the additional shares is more than the stock's previous book value. The excess of the amount paid by Peerless for Special Foods' stock (\$100,000) over the increase in the book value of the shares held by Peerless (\$96,800) is \$3,200.

The book value of the shares held by the noncontrolling interest, which is only 16 percent following Peerless' purchase, also increases, as follows:

| Noncontrolling interest after sale of additional shares to Peerless ( $\$420,000 \times 0.16$ )  | \$67,200 |
|--|----------|
| Noncontrolling interest before sale of additional shares to Peerless ( $\$320,000 \times 0.20$ ) | (64,000) |
| Increase in book value of noncontrolling interest  | \$ 3,200 |

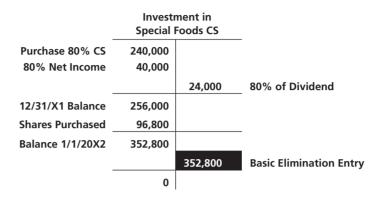

From a consolidated perspective, ASC 810 requires an adjustment to equity attributable to the parent (consolidated additional paid-in capital) for the amount of the difference between the consideration paid or received by the consolidated entity and the change in the noncontrolling interest. Because no consideration was paid or received by the consolidated entity overall, the required decrease in equity attributable to the parent is equal to the amount of change in the noncontrolling interest, \$3,200.

Peerless would record its purchase of additional shares of Special Foods stock as follows:

| (3) | Investment in Special Foods Stock | 96,800  |
|-----|-----------------------------------|---------|
|     | Additional Paid-In Capital        | 3,200   |
|     | Cash                              | 100,000 |

Record the purchase of additional Special Foods shares.

The following T-account summarizes the activity in Peerless' investment in Special Foods:

To calculate the basic elimination entry shown in the T-account, we analyze the book value component of the investment:

#### **Book Value Calculations:**

|  | NCI<br>16%      | Peerless<br>+ 84% | = | Common<br>Stock   | + | Additional<br>Paid-In Capital | + | Retained<br>Earnings |
|--|-----------------|-------------------|---|-------------------|---|-------------------------------|---|----------------------|
| Book value on 12/31/20X1                                 | 64,000<br>3,200 | 256,000<br>96,800 |   | 200,000<br>50,000 |   | 50.000                        |   | 120,000              |
| New shares issued (5,000 × 20)<br>Book value on 1/1/20X2 | 67,200          | 352,800           |   | 250,000           |   | 50,000                        |   | 120,000              |

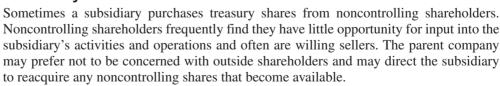

This analysis leads to the following basic elimination entry:

## **Basic Elimination Entry:**

The balance eliminated from Peerless' investment account equals the previous balance of \$256,000 plus the \$100,000 cost of the additional shares, minus the reduction in additional paid-in capital, \$3,200. The amount of the noncontrolling interest is established at 16 percent of the \$420,000 book value of Special Foods.

# Subsidiary's Purchase of Shares from Nonaffiliate

Although the parent is not a direct participant when a subsidiary purchases treasury stock from noncontrolling shareholders, the parent's equity in the net assets of the subsidiary may change as a result of the transaction. When this occurs, the amount of the change must be recognized in preparing the consolidated statements.

For example, assume that Peerless Products owns 80 percent of Special Foods' 20,000 shares of \$10 par common stock, which it purchased on January 1, 20X1, at book value of \$240,000. On January 1, 20X2, Special Foods purchases 1,000 treasury shares from a nonaffiliate for \$20 per share. Peerless' interest in Special Foods increases to 84.21 percent (16,000 ÷ 19,000) as a result of Special Foods' reacquisition of shares, and the noncontrolling interest decreases to 15.79 percent  $(3,000 \div 19,000)$ . The stockholders' equity of Special Foods before and after the reacquisition of shares is as follows:

|   | Before Purchase      | Following Purchase    |
|---|----------------------|-----------------------|
| Common Stock, \$10 par value<br>Retained Earnings | \$200,000<br>120,000 | \$200,000<br>120,000  |
| Total<br>Less: Treasury Stock                     | \$320,000            | \$320,000<br>(20,000) |
| Total Stockholders' Equity                        | \$320,000            | <u>\$300,000</u>      |

The underlying book value of Special Foods' shares held by Peerless changes as a result of the stock reacquisition, as follows:

|  | Before Purchase  | Following Purchase |
|--|------------------|--------------------|
| Special Foods' total stockholders' equity              | \$320,000        | \$300,000          |
| Peerless' proportionate share                          | × 0.80           | × 0.8421           |
| Book value of Peerless' investment in<br>Special Foods | <u>\$256,000</u> | <u>\$252,630</u>   |

The reacquisition of shares by Special Foods at an amount higher than book value results in a decrease in the book value of Peerless' investment of \$3,370 (\$256,000 - \$252,630). Peerless recognizes the decrease with the following entry:

| (4) | Retained Earnings                 | 3,370 |
|-----|-----------------------------------|-------|
|     | Investment in Special Foods Stock | 3,370 |

Record decrease in equity in subsidiary from subsidiary stock reacquisition

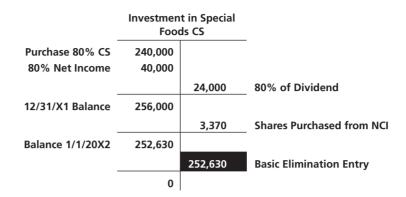

Because Peerless' equity in Special Foods decreases as a result of the transaction between Special Foods and the noncontrolling shareholders, Peerless recognizes that decrease in equity through entry (4). Peerless reduces its retained earnings because it has no additional paid-in capital on its books (where the reduction would normally take place).

From a consolidated perspective, the subsidiary's acquisition of treasury shares is considered an equity transaction with the noncontrolling shareholders. ASC 810 requires that equity attributable to the parent be adjusted for the difference between the consideration paid or received by the consolidated entity and the change in the noncontrolling interest. In this case, the stock repurchase by Special Foods reduces the noncontrolling interest as follows:

| Noncontrolling interest before repurchase of shares by Special Foods ( $$320,000 \times 0.20$ )<br>Noncontrolling interest after repurchase of shares by Special Foods | \$64,000        |
|--|-----------------|
| ( $$300,000 \times 0.1579$ )   | (47,370)        |
| Decrease in book value of noncontrolling interest  | <u>\$16,630</u> |

The difference between the \$20,000 consideration given by Special Foods to repurchase its shares and the \$16,630 decrease in the noncontrolling interest is \$3,370, and equity attributable to the parent must be reduced by this amount in the consolidated balance sheet. This effect has been accomplished on Peerless' separate books with entry (4) and will carry over to the consolidated financial statements.

The following T-account summarizes the activity in Peerless' investment in Special Foods:

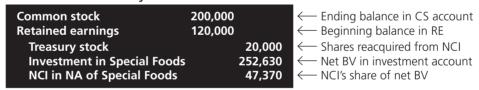

To calculate the basic elimination entry shown in the T-account, we analyze the book value component of the investment:

#### **Book Value Calculations:**

|   | NCI<br>15.79%      | + Peerless<br>84.21% | = | Common<br>Stock | + | Treasury<br>Stock | + | Retained<br>Earnings |
|---|--------------------|----------------------|---|-----------------|---|-------------------|---|----------------------|
| Book value on 12/31/X1<br>Shares repurchased (1,000 × 20) | 64,000<br>(16,630) | 256,000<br>(3,370)   |   | 200,000         |   | (20,000)          |   | 120,000              |
| Book value on 1/1/20X2                                    | 47,370             | 252,630              |   | 200,000         |   | (20,000)          |   | 120,000              |

This analysis leads to the following basic elimination entry:

#### **Basic Elimination Entry:**

Note that this entry eliminates all the common stockholders' equity balances of the subsidiary, including the treasury stock. An elimination entry is not needed to reduce equity by the \$3,370 change resulting from the repurchase because entry (4) accomplished that on Peerless' books and Peerless' retained earnings amount carries over to the consolidation worksheet.

# **Subsidiary's Purchase of Shares from Parent**

A subsidiary can reduce the number of shares it has outstanding through purchases from the parent as well as from noncontrolling shareholders. In practice, stock repurchases from the parent occur infrequently. A parent reducing its ownership interest in a subsidiary usually does so by selling some of its holdings to nonaffiliates to generate additional funds.

When a subsidiary reacquires some of its shares from its parent, the parent has traditionally recognized a gain or loss on the difference between the selling price and the change in the carrying amount of its investment. Some question exists as to whether a transaction of this type between a parent and its subsidiary can be regarded as arm's length; consequently, reporting the gain or loss in the parent's income statement can be questioned. From a consolidated viewpoint, when a subsidiary reacquires its shares from the parent, the transaction represents an internal transfer and does not give rise to a gain or loss. Because recognizing a gain or loss on the parent's books is questionable and the gain or loss would have to be eliminated in consolidation anyway, a better approach is for the parent to adjust additional paid-in capital rather than record a gain or loss on the transaction.

As an example of the reacquisition of a subsidiary's shares from its parent, assume that Peerless Products purchases 16,000 of Special Foods' 20,000 shares of \$10 par common stock on December 31, 20X0, at book value of \$240,000. On January 1, 20X2, Special Foods repurchases 4,000 shares from Peerless at \$20 per share, leaving Peerless with a 75 percent interest  $(12,000 \div 16,000)$  in Special Foods. The stockholders' equity of Special Foods before and after the reacquisition of shares is as follows:

|   | Before Purchase      | Following Purchase    |
|---|----------------------|-----------------------|
| Common Stock, \$10 par value<br>Retained Earnings | \$200,000<br>120,000 | \$200,000<br>120,000  |
| Total<br>Less: Treasury Stock                     | \$320,000            | \$320,000<br>(80,000) |
| Total Stockholders' Equity                        | \$320,000            | \$240,000             |

The carrying amount of Peerless' investment in Special Foods' stock equals the underlying book value of the shares in this example. The book value of the shares changes as a result of the reacquisition, as follows:

| Before Purchase  | Following Purchase  |
|------------------|---------------------|
| \$320,000        | \$240,000           |
| × 0.80           | × 0.75              |
|                  |                     |
| <u>\$256,000</u> | <u>\$180,000</u>    |
|                  | \$320,000<br>× 0.80 |

Peerless records the sale of 25 percent (4,000 ÷ 16,000) of its investment in Special Foods with the following entry:

|     | January 1, 20X2                   |        |        |
|-----|-----------------------------------|--------|--------|
| (5) | Cash                              | 80,000 |        |
|     | Investment in Special Foods Stock |        | 76,000 |
|     | Additional Paid-In Capital        |        | 4,000  |
|     |                                   |        |        |

Record sale of investment:  $\$80.000 = \$20 \times 4.000 \text{ shares}$ \$76,000 = \$256,000 - \$180,000\$4,000 = \$80,000 - \$76,000.

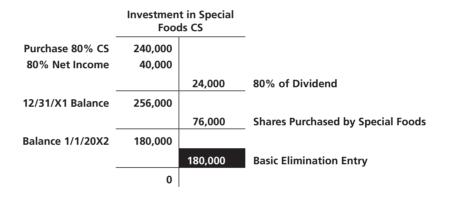

The new carrying value of the investment is \$180,000 (\$256,000 - \$76,000). Because there is no differential in this case, this amount equals 75 percent of Special Foods' total stockholders' equity of \$240,000 following the reacquisition. The \$76,000 decrease in the carrying value includes both the reduction resulting from the decrease in the number of shares held and the reduction in the book value of those shares still held.

The subsidiary's repurchase of shares from the parent also affects the noncontrolling interest, as follows:

| Noncontrolling interest before repurchase of shares by Special Foods ( $$320,000 \times 0.20$ )<br>Noncontrolling interest after repurchase of shares by Special Foods | \$64,000 |
|--|----------|
| (\$240,000 × 0.25)   | (60,000) |
| Decrease in book value of noncontrolling interest  | \$ 4,000 |

From a consolidated perspective, ASC 810 requires an adjustment to the equity attributable to the parent for the difference between the consideration paid or received and the change in the noncontrolling interest resulting from the subsidiary's repurchase of shares. In this example, the consolidated entity as a whole paid or received no consideration, so the required adjustment to equity is \$4,000, the amount of the change in the noncontrolling interest. The parent's equity has already been increased for the \$4,000 difference with entry (5) on the parent's books, and this amount carries into the consolidation worksheet. Thus, no adjustments to equity other than the basic elimination entry are required.

The following T-account summarizes the activity in Peerless' investment in Special Foods:

To calculate the basic elimination entry shown in the T-account, we analyze the book value component of the investment:

#### **Book Value Calculations:**

|   | NCI<br>25%        | Peerless<br>+ 75%   | = | Common<br>Stock | + | Treasury<br>Stock | + | Retained<br>Earnings |
|---|-------------------|---------------------|---|-----------------|---|-------------------|---|----------------------|
| Book value on 12/31/20X1<br>Shares repurchased (4,000 × 20) | 64,000<br>(4,000) | 256,000<br>(76,000) |   | 200,000         |   | (80,000)          |   | 120,000              |
| Book value on 1/1/20X2                                      | 60,000            | 180,000             |   | 200,000         |   | (80,000)          |   | 120,000              |

This analysis leads to the following basic elimination entry:

# **Basic Elimination Entry:**

|     | <u> </u>                    |         |   |
|-----|-----------------------------|---------|---|
|     | Common stock                | 200,000 | $\leftarrow$ Ending balance in common stock |

# COMPLEX OWNERSHIP STRUCTURES

#### LO 9-4

Make calculations and prepare elimination entries for the consolidation of a partially owned subsidiary when the subsidiary has a complex ownership

Current reporting standards call for preparing consolidated financial statements when one company has direct or indirect control over another. The discussion to this point has focused on a simple, direct parent-subsidiary relationship. Many companies, however, have substantially more complex organizational schemes.

Figure 9–2 shows three different types of ownership structures. A *direct ownership* situation of the type discussed in preceding chapters is shown in Figure 9-2(a); the parent has a controlling interest in each of the subsidiaries. In the multilevel ownership case shown in Figure 9–2(b), the parent has only *indirect control* over the company controlled by its subsidiary. The elimination entries used in preparing consolidated financial statements in this situation are similar to those used in a simple ownership situation, but careful attention must be given to the sequence in which the data are brought together.

In 2007, Berkshire acquired Boat America Corporation, which owns Seaworthy Insurance Company. Berkshire has indirect control over Seaworthy Insurance and therefore has consolidated both Boat America Corporation and Seaworthy Insurance.

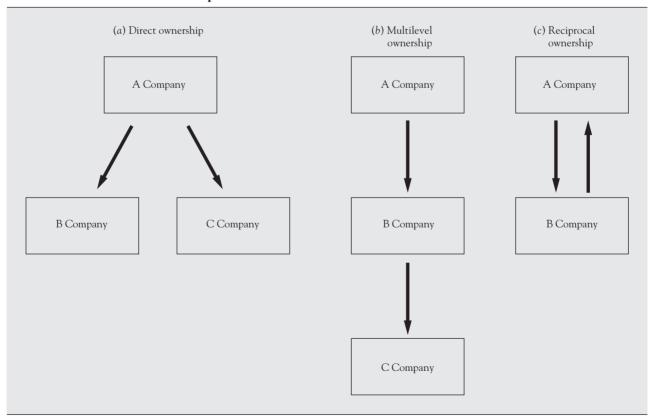

Figure 9–2(c) reflects reciprocal ownership or mutual holdings. With reciprocal ownership, the parent owns a majority of the subsidiary's common stock and the subsidiary holds some of the parent's common shares. If mutual shareholdings are ignored in the preparation of consolidated financial statements, some reported amounts may be materially overstated.

# **Multilevel Ownership and Control**

In many cases, companies establish multiple corporate levels through which they carry out diversified operations. For example, a company may have a number of subsidiaries, one of which is a retailer. The retail subsidiary may in turn have a finance subsidiary, a real estate subsidiary, an insurance subsidiary, and perhaps other subsidiaries. This means

FIGURE 9–2 Alternative Ownership Structures

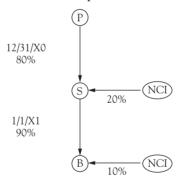

that when consolidated statements are prepared, they include companies in which the parent has only an indirect investment along with those in which it holds direct ownership. The complexity of the consolidation process increases as additional ownership levels are included. The amount of income and net assets to be assigned to the controlling and noncontrolling shareholders, and the amount of unrealized profits and losses to be eliminated, must be determined at each level of ownership.

When a number of different levels of ownership exist, the first step normally is to consolidate the bottom, or most remote, subsidiaries with the companies at the next higher level. This sequence is continued up through the ownership structure until the subsidiaries owned directly by the parent company are consolidated with it. Income is apportioned between the controlling and noncontrolling shareholders of the companies at each level.

As an illustration of consolidation when multiple ownership levels exist, assume the following:

- 1. Peerless Products purchases 80 percent of Special Foods' common stock on December 31, 20X0, at book value of \$240,000. On that date, Special Foods' 20 percent noncontrolling interest has a fair value of \$60,000.
- 2. Special Foods purchases 90 percent of Bottom Company's common stock on January 1, 20X1, at book value of \$162,000. At that time, Bottom Company's 10 percent noncontrolling interest has a fair value of \$18,000. On the date of acquisition, Bottom has common stock of \$100,000 and retained earnings of \$80,000.
- 3. During 20X1, Bottom reports net income of \$10,000 and declares dividends of \$8,000; Special Foods reports separate operating income of \$50,000 and declares dividends of \$30,000.
- 4. Assume that accumulated depreciation balances for Special Foods and Bottom Company are \$200,000 and \$15,000, respectively, on the acquisition dates.

All other data are the same as in the Peerless Products-Special Foods examples used throughout previous chapters. The ownership structure is as follows:

## Computation of Net Income

In the case of a three-tiered structure involving a parent company, its subsidiary, and the subsidiary's subsidiary, the parent company's equity-method net income is computed by first adding an appropriate portion of the income of the bottom subsidiary to the separate earnings of the parent's subsidiary and then adding an appropriate portion of that total to the parent's separate earnings. The computation of the parent's equity-method net income and the income to the noncontrolling interest is as follows:

|                               | Peerless<br>Products | Special<br>Foods | Bottom<br>Company | Noncontrolling<br>Interest |
|-------------------------------|----------------------|------------------|-------------------|----------------------------|
| Operating income Income from: | \$140,000            | \$50,000         | \$10,000          |                            |
| Bottom Company                |                      | 9,000            |                   | \$ 1,000                   |
| Special Foods                 | 47,200               |                  |                   | _11,800                    |
| Net income                    | <u>\$187,200</u>     | \$59,000         | <u>\$10,000</u>   | <u>\$12,800</u>            |

The computation of consolidated net income and the allocation of that income are as follows:

| Operating income: Peerless Products Special Foods Bottom Company   |                     | \$140,000<br>50,000<br>10,000 |
|--|---------------------|-------------------------------|
| Consolidated net income Noncontrolling interest in: Bottom Company ( $$10,000 \times 0.10$ ) Special Foods ( $$59,000 \times 0.20$ ) | \$ 1,000<br>_11,800 | \$200,000                     |
| Income to noncontrolling interest Income to controlling interest   |                     | (12,800)<br><u>\$187,200</u>  |

#### Consolidation Worksheet

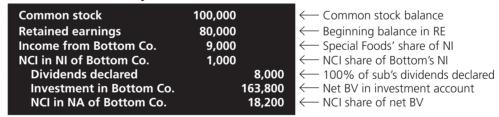

To prepare the consolidation worksheet, we begin with Special Foods' consolidation of Bottom Company. We first analyze the equity accounts of Bottom Company and the corresponding book value components of the Investment in Bottom Company and NCI accounts.

#### **Book Value Calculations:**

|                                      | NCI<br>10%      | + | Special<br>Foods 90% | = | Common<br>Stock | + | Retained<br>Earnings |
|--------------------------------------|-----------------|---|----------------------|---|-----------------|---|----------------------|
| Beginning book value<br>+ Net income | 18,000<br>1,000 |   | 162,000<br>9,000     |   | 100,000         |   | 80,000<br>10,000     |
| <ul><li>Dividends</li></ul>          | (800)           |   | (7,200)              |   |                 |   | (8,000)              |
| Ending book value                    | 18,200          |   | 163,800              |   | 100,000         |   | 82,000               |

This analysis leads to the basic elimination entry for Special Foods to consolidate Bottom Company:

# **Basic Elimination Entry:**

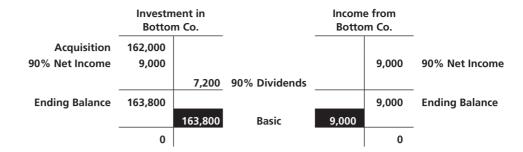

We also include the standard accumulated depreciation elimination entry (based on \$20,000 accumulated depreciation at 12/31/X1 less \$5,000 depreciation expense for 20X1):

## **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 15,000 |        | Accumulated depreciation at the |
|--------------------------|--------|--------|---------------------------------|
| - U.U.                   |        |        | time of the acquisition netted  |
| Building and equipment   |        | 15,000 | against cost                    |

The following T-accounts illustrate how the basic elimination entry closes out Special Foods' equity method accounts:

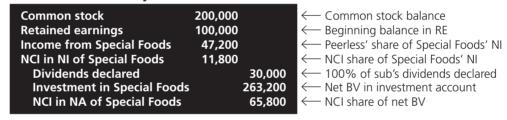

Next we prepare Peerless' book value calculations in preparation for its consolidation of Special Foods, Inc.:

#### **Book Value Calculations:**

|                             | NCI 20% + | Peerless 80% = | = Common Stock + | Retained Earnings |
|-----------------------------|-----------|----------------|------------------|-------------------|
| Beginning book value        | 60,000    | 240,000        | 200,000          | 100,000           |
| + Net income                | 11,800    | 47,200         |                  | 59,000            |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)       |                  | (30,000)          |
| Ending book value           | 65,800    | 263,200        | 200,000          | 129,000           |

This analysis leads to the basic elimination entry for Peerless to consolidate Special Foods:

#### **Basic Elimination Entry:**

We also include the standard accumulated depreciation elimination entry:

## **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 200,000 | Accumulated depreciation at the |
|--------------------------|---------|---------------------------------|
| Puilding and aquinment   | 200.000 | time of the acquisition netted  |
| Building and equipment   | 200,000 | against cost                    |

The following T-accounts illustrate how the basic elimination entry closes out Special Foods' equity-method accounts:

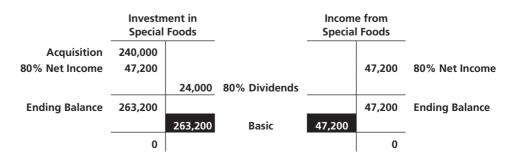

FIGURE 9-3 December 31, 20X1, Consolidation Worksheet, First Year Following Combination; Direct and Indirect Holdings

| Total Liabilities & Equity         | 1,427,200 | 729,000   | 200,000  | 549,000            | 122,000           | 1,929,200    |

Figure 9-3 presents the 20X1 consolidation worksheet for Peerless Products, Special Foods, and Bottom Company.

# Order of Acquisition

In the preceding example, Peerless acquired its investment in Special Foods before Special Foods acquired its investment in Bottom Company. If, however, Special Foods had already owned its interest in Bottom Company when Peerless purchased its interest in Special Foods, a portion of Bottom Company's undistributed income because its acquisition would have accrued to Special Foods. So long as Special Foods accounts

for its investment in Bottom Company using the equity method, no special problems arise; the normal consolidation procedures should be followed. However, if Special Foods uses the cost method in accounting for its investment in Bottom Company, a worksheet conversion to the equity method must be made so that Special Foods' retained earnings at the date of the combination includes the appropriate share of Bottom Company's earnings since acquisition and so that the differential is correctly determined.

## Unrealized Intercompany Profits

When intercompany sales occur between multilevel affiliates, unrealized intercompany profits must be eliminated against the appropriate ownership interests. The most convenient way of doing this is to compute the amount of realized income each company contributes before apportioning income between controlling and noncontrolling interests.

For example, the realized income accruing to the ownership interests of each affiliate is computed in the following manner given the unrealized profit amounts indicated:

|  | Peerless<br>Products | Special<br>Foods     | Bottom<br>Company   | Noncontrolling<br>Interest |
|--|----------------------|----------------------|---------------------|----------------------------|
| Operating income<br>Unrealized profit  | \$140,000<br>(5,000) | \$50,000<br>(10,000) | \$10,000<br>(3,000) |                            |
| Realized operating profit Income from: | \$135,000            | \$40,000             | \$ 7,000            |                            |
| Bottom Company<br>Special Foods        | 37,040               | 6,300                |                     | \$ 700<br>9,260            |
| Realized net income                    | \$172,040            | \$46,300             | \$ 7,000            | \$9,960                    |

Consolidated net income of \$182,000 equals the sum of the realized operating profit numbers of each of the individual companies (\$135,000 + \$40,000 + \$7,000). The income attributable to the controlling interest is \$172,040, equal to consolidated net income less the income attributable to the noncontrolling interest (\$182,000 - \$9,960). The normal worksheet entries to eliminate unrealized intercompany profits, as discussed in Chapters 6 and 7, are entered in the worksheet for each company involved.

# Reciprocal or Mutual Ownership

A reciprocal relationship exists when two companies hold stock in each other. Reciprocal relationships are relatively rare in practice, and their accounting impact is often immaterial.

The method of dealing with reciprocal relationships found most often in practice is the *treasury stock method*. Under the treasury stock method, purchases of a parent's stock by a subsidiary are treated in the same way as if the parent had repurchased its own stock and was holding it in the treasury. The subsidiary normally accounts for the investment in the parent's stock using the cost method because such investments usually are small and almost never confer the ability to significantly influence the parent.

Income assigned to the noncontrolling interest in the subsidiary should be based on the subsidiary's separate income excluding the dividend income from the investment in the parent. Similarly, the parent normally bases its equity-method share of the subsidiary's income on the subsidiary's income excluding the dividend income from the parent.

As an example of the treasury stock method, assume the following:

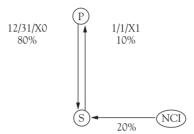

1. Peerless Products purchases 80 percent of Special Foods' common stock on December 31, 20X0, at book value of \$240,000. The fair value of the noncontrolling interest on that date is \$60,000.

- 2. Special Foods purchases 10 percent of Peerless' common stock on January 1, 20X1, at book value of \$80,000.
- 3. For 20X1, the two companies report the following separate operating income and dividends:

|                                    | Operating Income    | Dividends          |
|------------------------------------|---------------------|--------------------|
| Peerless Products<br>Special Foods | \$140,000<br>50,000 | \$60,000<br>30,000 |
| Total operating income             | <u>\$190,000</u>    |                    |

The reciprocal ownership relationship between Peerless and Special Foods is as follows:

Special Foods records the purchase of its investment in Peerless' common stock with the following entry:

|     | January 1, 20X1                       |        |
|-----|---------------------------------------|--------|
| (6) | Investment in Peerless Products Stock | 80,000 |
|     | Cash                                  | 80,000 |

Record purchase of Peerless Products stock.

Because it does not gain the ability to significantly influence Peerless, Special Foods accounts for the investment using the cost method. During 20X1, Special Foods records the receipt of dividends from Peerless with the following entry:

| (7) | Cash            | 6,000 |
|-----|-----------------|-------|
|     | Dividend Income | 6,000 |

Record dividend income from Peerless:  $$60,000 \times 0.10$ .

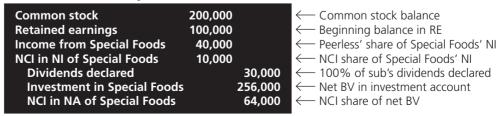

To prepare the consolidation worksheet at the end of 20X1, shown in Figure 9-4 on page 483, we analyze Special Foods' equity accounts and the corresponding book value components of the Investment in Special Foods and NCI accounts.

#### **Book Value Calculations:**

| Book falac calculation      |           |              |                  |                     |
|-----------------------------|-----------|--------------|------------------|---------------------|
|                             | NCI 20% - | Peerless 80% | = Common Stock → | - Retained Earnings |
| Beginning book value        | 60,000    | 240,000      | 200,000          | 100,000             |
| + Net income                | 10,000    | 40,000       |                  | 50,000              |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)     |                  | (30,000)            |
| Ending book value           | 64,000    | 256,000      | 200,000          | 120,000             |

This analysis produces the basic elimination entry for Peerless to consolidate Special Foods:

#### **Basic Elimination Entry:**

Two worksheet entries eliminate Special Foods' investment in Peerless and Special Foods' dividend income from Peerless:

#### **Eliminate Special Foods' Investment in Peerless:**

| Treasury Stock               | 80,000 |        |
|------------------------------|--------|--------|
| Investment in Peerless Stock |        | 80,000 |

#### Eliminate Special Foods' Dividend Income from Peerless:

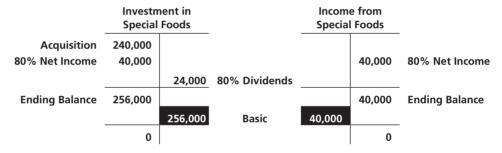

| Dividend income    | 6,000 |       |
|--------------------|-------|-------|
| Dividends declared |       | 6,000 |

The first of these elimination entries reclassifies Special Foods' investment in Peerless stock as if it were treasury stock. All of Peerless' common stock is shown in the consolidated balance sheet as outstanding. The treasury stock is shown at cost as an \$80,000 deduction from total stockholders' equity, just as treasury stock is shown in a single company's balance sheet at cost. Note that the second of these elimination entries reduces the amount shown in the consolidated retained earnings statement as dividends paid to those outside the consolidated entity. We also include the standard accumulated depreciation elimination entry:

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation 200,000  Building and equipment 200,000 | Accumulated depreciation  at the time of the acquisition netted against cost |
|--|--|
|--|--|

The following T-accounts illustrate how the basic elimination entry closes out Special Foods' equity-method accounts:

The remaining entries needed in the 20X1 consolidation worksheet are the normal entries to eliminate Peerless' investment in Special Foods and income from Special Foods that Peerless recognizes. The income from Special Foods recognized by Peerless is based on Special Foods' separate income, excluding dividend income from Peerless. Therefore, the income elimination is for \$40,000, Peerless' 80 percent share of Special Foods' separate operating income of \$50,000.

Consolidated net income is \$190,000, as can be seen in Figure 9–4. This amount can be computed and is allocated as follows:

| Peerless' separate operating income<br>Special Foods' separate operating income |          | \$140,000<br>50,000 |
|---|----------|---------------------|
| Consolidated net income Less income to noncontrolling interest:                 |          | \$190,000           |
| Special Foods' separate income (\$50,000)                                       | \$50,000 |                     |
| Noncontrolling stockholders' share  | × 0.20   | (10,000)            |
| Income to controlling interest  |          | \$180,000           |

Note that the amount of net income allocated to the noncontrolling interest is based on Special Foods' operating income of \$50,000 and excludes the dividends received from

| NCI in NA of Special Foods      |           |           |            | 64,000          | 64,000       |
| Total Liabilities & Equity      | 1,220,000 | 526,000   | 436,000    | 100,000         | 1,410,000    |

Peerless. A question arises in practice as to whether the income assigned to the noncontrolling interest should be based on the subsidiary's entire net income or only the portion derived from unrelated parties. Although the noncontrolling interest certainly has a claim on its share of the subsidiary's entire income, the approach most consistent with the FASB's entity view of consolidated financial statements is to exclude from the computation of the noncontrolling shareholders' income the dividends from the parent.

# SUBSIDIARY STOCK DIVIDENDS

#### LO 9-5

Understand and explain how consolidation procedures differ when the subsidiary pays stock dividends.

Subsidiary dividends payable in shares of the subsidiary's common stock require slight changes in the elimination entries used in preparing consolidated financial statements. Because stock dividends are issued proportionally to all common stockholders, the relative interests of the controlling and noncontrolling stockholders do not change as a result of the stock dividend. The investment's carrying amount on the parent's books also is unaffected by a stock dividend. On the other hand, the stockholders' equity accounts of the subsidiary do change, although total stockholders' equity does not. The stock dividend represents a permanent capitalization of retained earnings, thus decreasing retained earnings and increasing capital stock and, perhaps, additional paidin capital.

In the preparation of consolidated financial statements for the period in which a stock dividend is declared by the subsidiary, the stock dividend declaration must be eliminated along with the increased common stock and increased additional paid-in capital, if any. The stock dividend declared cannot appear in the consolidated retained earnings statement because only the parent's dividends are viewed as dividends of the consolidated entity.

In subsequent years, the balances in the subsidiary's stockholders' equity accounts are eliminated in the normal manner. Keep in mind that stock dividends do not change the total stockholders' equity of a company; they only realign the individual accounts within stockholders' equity. Therefore, the full balances of all the subsidiary's stockholders' equity accounts must be eliminated in consolidation, as is the usual procedure, even though amounts have been shifted from one account to another.

# **Illustration of Subsidiary Stock Dividends**

As an illustration of the treatment of a subsidiary's stock dividend, assume that in the Peerless Products and Special Foods example, Special Foods declares a 25 percent stock dividend in 20X1 on its \$200,000 of common stock and elects to capitalize the par value of the shares. Special Foods records the stock dividend with the following entry:

| (8) | Stock Dividends Declared | 50,000 |
|-----|--------------------------|--------|
|     | Common Stock             | 50,000 |

Record 25 percent stock dividend:  $$200,000 \times 0.25$ 

The investors make only a memo entry to record the receipt of the stock dividend. When Peerless prepares consolidated financial statements at the end of 20X1, the normal elimination entries are made in the worksheet. If Special Foods had not declared a stock dividend in 20X1, the basic entry would have been calculated as follows:

#### **Book Value Calculations:**

| book value calculations.    |           |                |                  |                   |
|-----------------------------|-----------|----------------|------------------|-------------------|
|                             | NCI 20% - | Peerless 80% = | = Common Stock + | Retained Earnings |
| Book value on 12/31/20X1    | 60,000    | 240,000        | 200,000          | 100,000           |
| + Net income                | 10,000    | 40,000         |                  | 50,000            |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)       |                  | (30,000)          |
| Book value on 1/1/20X2      | 64,000    | 256,000        | 200,000          | 120,000           |

#### **Basic Elimination Entry:**

| Income from Special Foods 40,000  NCI in NI of Special Foods 10,000  Dividends declared 30,000  Investment in Special Foods 256,000 | <ul> <li>Beginning balance in RE</li> <li>Peerless' share of Special Foods' NI</li> <li>NCI share of Special Foods' NI</li> <li>100% of sub's dividends declared</li> <li>Net BV in investment account</li> <li>NCI share of net BV</li> </ul> |
|---|--|
|---|--|

However, if Special Foods did declare a stock dividend, the basic elimination entry would be the same except for one minor modification as follows:

#### **Book Value Calculations:**

|                          | NCI 20% + | - Peerless 80% | = Common Stock + | Retained Earnings |
|--------------------------|-----------|----------------|------------------|-------------------|
| Book value on 12/31/20X1 | 60,000    | 240,000        | 200,000          | 100,000           |
| + Net income             | 10,000    | 40,000         |                  | 50,000            |
| - Dividends              | (6,000)   | (24,000)       |                  | (30,000)          |
| 25% stock dividend       |           |                | 50,000           | (50,000)          |
| Book value on 1/1/20X2   | 64,000    | 256,000        | 250,000          | 70,000            |

#### **Basic Elimination Entry:**

| Common stock Retained earnings Income from Special Foods NCI in NI of Special Foods Dividends declared Stock dividends declared | 250,000<br>100,000<br>40,000<br>10,000<br>30,000<br>50.000 |   |
|---|--|---|
| Stock dividends declared<br>Investment in Special Foods<br>NCI in NA of Special Foods   | 50,000   | ← 100% of sub's stock dividends<br>← Net BV in investment account |

Note that although the common stock balance has increased by the \$50,000 stock dividend, the elimination of retained earnings is not changed in the year of the stock dividend because dividends declared have not been closed to retained earnings; only the beginning balance of retained earnings is eliminated. Just as with other dividends of the subsidiary, stock dividends must be eliminated because they are not viewed as dividends of the consolidated entity.

## Impact on Subsequent Periods

At the end of 20X1, the stock dividend declaration is closed into the subsidiary's Retained Earnings account and does not separately appear in the financial statements of future periods. The stock dividend results in a common stock balance \$50,000 higher and a retained earnings balance \$50,000 lower on the subsidiary's books than if there had been no stock dividend. The investment elimination entry in the consolidation worksheet must reflect these changed balances.

If Special Foods hadn't declared a stock dividend in 20X1, the basic elimination entry on December 31, 20X2, would be calculated as follows:

#### **Book Value Calculations:**

|                          | NCI 20% + | - Peerless 80% = | = Common Stock + | Retained Earnings |
|--------------------------|-----------|------------------|------------------|-------------------|
| Book value on 12/31/20X1 | 64,000    | 256,000          | 200,000          | 120,000           |
| + Net income             | 15,000    | 60,000           |                  | 75,000            |
| - Dividends              | (8,000)   | (32,000)         |                  | (40,000)          |
| Book value on 1/1/20X2   | 71,000    | 284,000          | 200,000          | 155,000           |

#### **Basic Elimination Entry:**

| Common stock 200,000  Retained earnings 120,000  Income from Special Foods 60,000  NCI in NI of Special Foods 15,000  Dividends declared 40,0  Investment in Special Foods 284,0  NCI in NA of Special Foods 71,0 | ○ ← Net BV in investment account |
|---|----------------------------------|
|---|----------------------------------|

If Special Foods had declared the stock dividend during 20X1, the basic elimination entry in the consolidation worksheet prepared as of December 31, 20X2, would be as

#### **Book Value Calculations:**

|                          | NCI 20% + Peerless 80% = Common Stock + Retained Earnings |          |         |          |
|--------------------------|---|----------|---------|----------|
| Book value on 12/31/20X1 | 64,000  | 256,000  | 250,000 | 70,000   |
| + Net income             | 15,000  | 60,000   |         | 75,000   |
| - Dividends              | (8,000)   | (32,000) |         | (40,000) |
| Book value on 1/1/20X2   | 71,000  | 284,000  | 250,000 | 105,000  |

#### **Basic Elimination Entry:**

| Common stock                | 250,000 | ← Common stock balance                 |
|-----------------------------|---------|--|
| Retained earnings           | 70,000  | ← Beginning balance in RE              |
| Income from Special Foods   | 60,000  | ← Peerless' share of Special Foods' NI |
| NCI in NI of Special Foods  | 15,000  | ← NCI share of Special Foods' NI       |
| Dividends declared          | 40,000  | ← 100% of sub's dividends declared     |
| Investment in Special Foods | 284,000 | ← Net BV in investment account         |
| NCI in NA of Special Foods  | 71,000  | ← NCI's share of net BV                |
|                             |         |  |

Note that these two versions of the basic elimination entry are identical except that the elimination of common stock is \$50,000 higher and the elimination of retained earnings is \$50,000 lower, reflecting the differences in the balances of those accounts due to the stock dividend.

# Summary of **Key Concepts**

A number of stockholders' equity issues arise in the preparation of consolidated financial statements. When subsidiaries have preferred stock outstanding, any of the preferred stock held by the parent must be eliminated because it is held within the consolidated entity. The remaining preferred stock is treated as part of the noncontrolling interest. In the assessment of the preferred shareholders' claim, consideration must be given to all the features of the preferred stock, including cumulative dividends in arrears, dividend participation features, and retirement premiums.

Transactions involving a subsidiary's common stock include purchase or sale transactions involving the parent or parties outside of the consolidated entity (noncontrolling interest). These transactions may affect the carrying amounts of both the controlling and noncontrolling interests. So long as the parent continues to maintain a controlling financial interest in the subsidiary, these transactions are viewed as equity transactions and, from a consolidated perspective, no gain or loss may be recognized. In consolidation, equity attributable to the parent is adjusted for the difference between any consideration paid or received by the consolidated entity and the change in the carrying amount of the noncontrolling interest resulting from the transaction.

The organizational structure of some consolidated entities may be more complex than just a parent and one or more subsidiaries. In some cases, subsidiaries hold controlling interests in other companies, thus giving the parent an indirect controlling interest. Consolidation proceeds from the lowest level to the highest in these cases. In a relatively few cases, a subsidiary may own common shares of its parent. Those common shares are treated as treasury stock in consolidated financial statements.

Stock dividends declared by a subsidiary result in only minor changes in the eliminations needed to prepare consolidated financial statements. In the year the stock dividend is declared, the stock dividend declaration and the higher balance of the common stock must be eliminated in preparing consolidated statements. In subsequent years, the investment elimination entry reflects the higher amount of the subsidiary's common stock and the lower amount of retained earnings.

# Cases

Analysis

**Key Terms** 

direct ownership, 475

LO 9-1 C9-1 **Effect of Subsidiary Preferred Stock** 

Snow Corporation issued common stock with a par value of \$100,000 and preferred stock with a par value of \$80,000 on January 1, 20X5, when the company was created. Klammer Corporation acquired a controlling interest in Snow on January 1, 20X6.

## Required

What does Klammer's controller need to know about the preferred stock to determine the proper allocation of consolidated net income to the controlling and noncontrolling interests?

LO 9-2, 9-3

## Consolidated Stockholders' Equity: Theory vs. Practice

Research

Companies sometimes employ accounting practices that are not necessarily in accordance with accounting theory or even current standards. In some cases, companies may be following industry practices rather than generally accepted practices. In other cases, the practices may be justified as expedient because the amounts may be immaterial.

## Required

- a. How did Xerox Corporation reported the sale of stock of a subsidiary in its consolidated financial statements prior to 2008? How must such sales (assuming Xerox maintains control of the subsidiary) be reported under current standards?
- b. How does Occidental Petroleum Corporation treat subsidiary preferred stock? How should subsidiary preferred stock be reported in the consolidated financial statements?

LO 9-3

#### C9-3 Sale of Subsidiary Shares

Research

Book Corporation purchased 90,000 shares of Lance Company at underlying book value of \$3 per share on June 30, 20X1. On January 1, 20X5, Lance reported its net book value as \$400,000 and continued to have 100,000 shares of common stock outstanding. On that date, Book sold 30,000 shares of Lance to Triple Corporation for \$5.60 per share. Book uses the equity method in accounting for its investment in Lance and recorded a gain on sale of investments of \$48,000 in its consolidated income statement for 20X5.

## Required

Book's vice president of finance, Robert Reader, has asked you to prepare a memo addressed to him presenting the alternative ways to record the difference between the carrying value and sale price of the shares that are sold and your recommendations on the preferred reporting alternative. Citations to or quotations from the relevant authoritative accounting literature should be included in providing the basis of support for your recommendations.

LO 9-3

#### Sale of Subsidiary Shares

**Analysis** 

Hardcore Mining Company acquired 88 percent of the common stock of Mountain Trucking Company on January 1, 20X2, at a cost of \$30 per share. On December 31, 20X7, when the book value of Mountain Trucking stock was \$70 per share, Hardcore sold one-quarter of its investment in Mountain Trucking to Basic Manufacturing Company for \$90 per share.

#### Required

What effect will the sale have on the 20X7 consolidated financial statements of Hardcore Mining if (a) Basic Manufacturing is an unrelated company or (b) Hardcore Mining holds 60 percent of Basic's voting shares?

#### C9-5 **Reciprocal Ownership**

Strong Manufacturing Company holds 94 percent ownership of Thorson Farm Products and 68 percent ownership of Kenwood Distributors. Thorson has excess cash at the end of 20X4 and is considering buying shares of its own stock, shares of Strong, or shares of Kenwood.

Judgment

**Analysis** 

#### Required

If Thorson wishes to take the action that will be best for the consolidated entity, what factors must it consider in making its decision? How can it maximize consolidated net income?

#### **Complex Organizational Structures**

Major companies often have very complex organizational structures, sometimes consisting of different types of entities. Some organizational structures include combinations of corporations, partnerships, and perhaps other types of entities. Complex organizational structures often present challenges for financial reporting.

# Required

a. What type of entity is Atlas America, Inc. (i.e., corporation, partnership, trust)? What is the company's business?

LO 9-4

LO 9-4

- b. Atlas America lists a number of subsidiaries in its Form 10-K filed with the SEC (in a separate exhibit). What types of entities are included among the subsidiaries? How does the company report its subsidiaries and interests in energy partnerships?
- c. Atlas America lists subsidiaries with the names Atlas Pipeline Partners and Atlas Pipeline Holdings. What is the relationship between these companies?
- d. What type of entity is Atlas Pipeline Partners, L.P.? What types of entities are its subsidiaries? What arrangement is there for the management of Atlas Pipeline Partners?
- e. Does Atlas Pipeline Partners present separate or consolidated financial statements? What type of entity is NOARK Pipeline System, and what is Atlas Pipeline's relationship to NOARK? How is NOARK reflected in Atlas Pipeline's financial statements?

#### Exercises

LO 9-2

#### E9-1 **Multiple-Choice Questions on Preferred Stock Ownership**

Blank Corporation prepared the following summarized balance sheet on January 1, 20X1:

| Assets       | \$150,000 | Liabilities                  | \$ 20,000 |
|--------------|-----------|------------------------------|-----------|
|              |           | Preferred Stock              | 30,000    |
|              |           | Common Stock                 | 40,000    |
|              |           | Retained Earnings            | 60,000    |
| Total Assets | \$150,000 | Total Liabilities & Equities | \$150,000 |

Shepard Company acquires 80 percent of Blank Corporation's common stock on January 1, 20X1, for \$80,000. At that date, the fair value of the common shares held by the noncontrolling interest is \$20,000.

#### Required

Select the correct answer for each of the following questions.

- 1. The amount reported as noncontrolling interest in the consolidated balance sheet is
  - a. \$20,000.
  - b. \$26,000.
  - c. \$30,000.
  - d. \$50,000.
- 2. In addition to the common shares, Shepard Company purchases 70 percent of Blank's preferred shares for \$21,000. The amount reported as noncontrolling interest in Shepard's consolidated balance sheet is
  - a. \$9,000.
  - b. \$20,000.
  - c. \$29,000.
  - d. \$50,000.
- 3. In addition to the common shares, Shepard Company purchases 70 percent of Blank's preferred shares for \$21,000 on January 1, 20X1. If Shepard's retained earnings are \$150,000 on December 31, 20X0, the consolidated retained earnings reported immediately after the stock purchases are
  - a. \$48,000.
  - b. \$150,000.
  - c. \$198,000.
  - d. \$210,000.
- 4. In addition to the common shares, Shepard Company purchases 70 percent of Blank's preferred shares for \$21,000 on January 1, 20X1. Shepard has no preferred shares outstanding. The amount of preferred stock reported in the consolidated balance sheet immediately after the stock purchases is
  - a. \$0.
  - b. \$9,000.

- c. \$21,000.
- d. \$30,000.

#### LO 9-4

#### E9-2 **Multiple-Choice Questions on Multilevel Ownership**

Musical Corporation acquires 80 percent of Dustin Corporation's common shares on January 1, 20X2. On January 2, 20X2, Dustin acquires 60 percent of Rustic Corporation's common stock. Information on company book values on the date of purchase and operating results for 20X2 is as follows:

| Company             | Book Value | Purchase Price | 20X2 Operating Income |
|---------------------|------------|----------------|-----------------------|
| Musical Corporation | \$800,000  |                | \$100,000             |
| Dustin Corporation  | 300,000    | \$240,000      | 80,000                |
| Rustic Corporation  | 200,000    | 120,000        | 50,000                |

The fair values of the noncontrolling interests of Dustin and Rustic at the dates of acquisition were \$60,000 and \$80,000, respectively.

#### Required

Select the correct answer for each of the following questions.

- 1. Consolidated net income assigned to the controlling interest for 20X2 is
  - a. \$180,000.
  - b. \$188,000.
  - c. \$194,000.
  - d. \$234,000.
- 2. The amount of 20X2 income assigned to the noncontrolling interest of Rustic Corporation is
  - a. \$0.
  - b. \$20,000.
  - c. \$30,000.
  - d. \$50,000.
- 3. The amount of 20X2 income assigned to the noncontrolling interest of Dustin Corporation is
  - a. \$10,000.
  - b. \$16,000.
  - c. \$22,000.
  - d. \$26,000.
- 4. The amount of income assigned to the noncontrolling interest in the 20X2 consolidated income statement is
  - a. \$20,000.
  - b. \$22,000.
  - c. \$42,000.
  - d. \$46,000.
- 5. Assume that Dustin pays \$150,000, rather than \$120,000, to purchase 60 percent of Rustic's common stock, and the fair value of the noncontrolling interest is \$100,000 at the date of acquisition. If the differential is amortized over 10 years, the effect on 20X2 income assigned to the controlling shareholders will be a decrease of
  - a. \$0.
  - b. \$2,400.
  - c. \$3,000.
  - d. \$5,000.

## LO 9-2

#### **Acquisition of Preferred Shares**

The summarized balance sheet of Separate Company on January 1, 20X3, contained the following amounts:

| Total Assets | \$350,000 | Total Liabilities            | \$ 50,000 |
|--------------|-----------|------------------------------|-----------|
|              |           | Preferred Stock              | 100,000   |
|              |           | Common Stock                 | 50,000    |
|              |           | Retained Earnings            | 150,000   |
| Total Assets | \$350,000 | Total Liabilities & Equities | \$350,000 |

On January 1, 20X3, Joint Corporation acquired 70 percent of the common shares and 60 percent of the preferred shares of Separate Company at underlying book value. At that date, the fair value of the noncontrolling interest in Separate's common stock was equal to 30 percent of the book value of its common stock.

#### Required

Give the worksheet elimination entries needed to prepare a consolidated balance sheet immediately following Joint's purchase of shares.

#### LO 9-4

#### Reciprocal Ownership [AICPA Adapted]

Pride Corporation owns 80 percent of Simba Corporation's outstanding common stock. Simba, in turn, owns 10 percent of Pride's outstanding common stock.

- a. What percent of the dividends paid by Simba is reported as dividends declared in the consolidated financial statements?
- b. What percent of the dividends paid by Pride is reported as dividends declared in the consolidated retained earnings statement?

#### LO 9-2

## Subsidiary with Preferred Stock Outstanding

Clayton Corporation purchased 75 percent of Topple Corporation common stock and 40 percent of its preferred stock on January 1, 20X6, for \$270,000 and \$80,000, respectively. At the time of purchase, the fair value of the common shares of Topple held by the noncontrolling interest was \$90,000. Topple's balance sheet contained the following balances:

| \$200,000 |
|-----------|
| 150,000   |
| 210,000   |
| \$560,000 |
|           |

#### Required

Give the elimination entries needed to prepare a consolidated balance sheet immediately after Clayton purchased the Topple shares.

# LO 9-2

#### **Subsidiary with Preferred Stock Outstanding** E9-6

Clayton Corporation purchased 75 percent of Topple Company common stock and 40 percent of its preferred stock on January 1, 20X6, for \$270,000 and \$80,000, respectively. At the time of purchase, the fair value of Topple's common shares held by the noncontrolling interest was \$90,000. Topple's balance sheet contained the following balances:

| Preferred Stock (\$10 par value)<br>Common Stock (\$5 par value) | \$200,000<br>150,000 |
|--|----------------------|
| Retained Earnings  | 210,000              |
| Total Stockholders' Equity                                       | \$560,000            |

For the year ended December 31, 20X6, Topple reported net income of \$70,000 and paid dividends of \$50,000 (which includes the preferred dividend). The preferred stock is cumulative and pays an annual dividend of 8 percent.

## Required

- a. Prepare the journal entries recorded by Clayton for its investments in Topple during 20X6.
- b. Present the elimination entries needed to prepare the consolidated financial statements for Clayton Corporation as of December 31, 20X6.

#### LO 9-2 E9-7 **Preferred Dividends and Call Premium**

On January 1, 20X2, Fischer Corporation purchased 90 percent of Culbertson Company common shares and 60 percent of its preferred shares at underlying book value. At that date, the fair value of the noncontrolling interest in Culbertson's common stock was equal to 10 percent of the book value of its common stock. Culbertson's balance sheet at the time of purchase contained the following balances:

| Total Assets | \$860,000 | Total Liabilities            | \$ 80,000 |
|--------------|-----------|------------------------------|-----------|
|              |           | Preferred Stock              | 100,000   |
|              |           | Common Stock                 | 300,000   |
|              |           | Retained Earnings            | 380,000   |
| Total Assets | \$860,000 | Total Liabilities & Equities | \$860,000 |

The preferred shares, which are cumulative with regard to dividends, have a 12 percent annual dividend rate and are five years in arrears on January 1, 20X2. All of the \$10 par value preferred shares are callable at \$12 per share after December 31, 20X0. During 20X2, Culbertson reported net income of \$70,000 and paid no dividends.

#### Required

- a. Compute Culbertson's contribution to consolidated net income for 20X2.
- b. Compute the amount of income to be assigned to the noncontrolling interest in the 20X2 consolidated income statement.
- c. Compute the portion of Culbertson's retained earnings assignable to its preferred shareholders on January 1, 20X2.
- d. Compute the book value assigned to the common shareholders on January 1, 20X2.
- e. Compute the amount to be reported as the noncontrolling interest in the consolidated balance sheet on January 1, 20X2.

#### LO 9-4 E9-8 **Multilevel Ownership**

Grasper Corporation owns 70 percent of Latent Corporation's common stock and 25 percent of Dally Corporation's common stock. In addition, Latent owns 40 percent of Dally's stock. In 20X6, Grasper, Latent, and Dally reported operating income of \$90,000, \$60,000, and \$40,000 and paid dividends of \$45,000, \$30,000, and \$10,000, respectively.

#### Required

- a. What amount of consolidated net income will Grasper report for 20X6?
- b. What amount of income will be assigned to the noncontrolling interest in the 20X6 consolidated income statement?
- c. What amount of income will be assigned to the controlling interest in the 20X6 income
- d. What amount will be reported as dividends declared in Grasper's 20X6 consolidated retained earnings statement?

#### LO 9-4 **Elimination Entries for Multilevel Ownership** E9-9

Promise Enterprises acquired 90 percent of Brown Corporation's voting common stock on January 1, 20X3, for \$315,000. At that date, the fair value of the noncontrolling interest of Brown Corporation was \$35,000. Immediately after Promise acquired its ownership, Brown purchased 60 percent of Tann Company's stock for \$120,000. The fair value of the noncontrolling interest of Tann Company was \$80,000 at that date. During 20X3, Promise reported operating income of \$200,000 and paid dividends of \$80,000. Brown reported operating income of \$120,000 and

paid dividends of \$50,000. Tann reported net income of \$40,000 and paid dividends of \$15,000. At January 1, 20X3, the stockholders' equity sections of the balance sheets of the companies were as follows:

|                            | Promise     | Brown       | Tann      |
|----------------------------|-------------|-------------|-----------|
|                            | Enterprises | Corporation | Company   |
| Common Stock               | \$200,000   | \$150,000   | \$100,000 |
| Additional Paid-In Capital | 160,000     | 60,000      | 60,000    |
| Retained Earnings          | 360,000     | 140,000     | 40,000    |
| Total Stockholders' Equity | \$720,000   | \$350,000   | \$200,000 |

## Required

- a. Prepare the journal entries recorded by Brown for its investment in Tann during 20X3.
- b. Prepare the journal entries recorded by Promise for its investment in Brown during 20X3.
- c. Prepare the elimination entries related to Brown's investment in Tann and Promise's investment in Brown that are needed in preparing consolidated financial statements for Promise and its subsidiaries at December 31, 20X3.

#### LO 9-4

## **Reciprocal Ownership**

Grower Supply Corporation holds 85 percent of Schultz Company's voting common stock. At the end of 20X4, Schultz purchased 30 percent of Grower Supply's stock. Schultz records dividends received from Grower Supply as nonoperating income. In 20X5, Grower Supply and Schultz reported operating income (excluding any dividend income or income from subsidiaries) of \$112,000 and \$50,000 and paid dividends of \$70,000 and \$30,000, respectively.

#### Required

Compute the amounts reported as consolidated net income and income assigned to the controlling interest for 20X5 under the treasury stock method.

## **Consolidated Balance Sheet with Reciprocal Ownership**

Talbott Company purchased 80 percent of Short Company's stock on January 1, 20X8, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 20 percent of Short's book value. On December 31, 20X9, Short purchased 10 percent of Talbott's stock. Balance sheets for the two companies on December 31, 20X9, are as follows:

| TALBOTT COMPANY Condensed Balance Sheet December 31, 20X9 |     |           |                              |    |           |
|---|-----|-----------|------------------------------|----|-----------|
| Cash  | \$  | 78,000    | Accounts Payable             | \$ | 90,000    |
| Accounts Receivable                                       |     | 120,000   | Bonds Payable                |    | 400,000   |

| Investment in Talbott Company Common Stock                | 61,000    |                              |           |  |
| Total Assets  | \$600,000 | Total Liabilities & Equities | \$600,000 |  |

Assuming that the treasury stock method is used in reporting Talbott's shares held by Short, prepare a consolidated balance sheet worksheet and consolidated balance sheet for December 31, 20X9.

#### LO 9-5 **Subsidiary Stock Dividend** F9-12

Lake Company reported the following summarized balance sheet data as of December 31, 20X2:

| Cash                           | \$ 30,000 | Accounts Payable             | \$ 50,000 |
|--------------------------------|-----------|------------------------------|-----------|
| Accounts Receivable            | 80,000    | Common Stock                 | 100,000   |
| Inventory                      | 90,000    | Retained Earnings            | 200,000   |
| Buildings & Equipment          | 270,000   |                              |           |
| Less: Accumulated Depreciation | (120,000) |                              |           |
| Total Assets                   | \$350,000 | Total Liabilities & Equities | \$350,000 |

Lake issues 4,000 additional shares of its \$10 par value stock to its shareholders as a stock dividend on April 20, 20X3. The market price of Lake's shares at the time of the stock dividend is \$40. Lake reports net income of \$25,000 and pays a \$10,000 cash dividend in 20X3. Lindale Company acquired 70 percent of Lake's common shares at book value on January 1, 20X1. At that date, the fair value of the noncontrolling interest was equal to 30 percent of Lake's book value. Lindale uses the basic equity method in accounting for its investment in Lake.

#### Required

- a. Give the journal entries recorded by Lake and Lindale at the time the stock dividend is declared and distributed.
- b. Give the worksheet elimination entries needed to prepare consolidated financial statements for
- c. Give the worksheet elimination entry needed to prepare a consolidated balance sheet on January 1, 20X4.

#### E9-13 Sale of Subsidiary Shares by Parent

Stable Home Builders Inc. acquired 80 percent of Acme Concrete Works stock on January 1, 20X3, for \$360,000. At that date, the fair value of the noncontrolling interest was \$90,000. Acme Concrete's balance sheet contained the following amounts at the time of the combination:

| Cash                          | \$ 30,000 | Accounts Payable             | \$ 50,000 |
|-------------------------------|-----------|------------------------------|-----------|
| Accounts Receivable           | 65,000    | Bonds Payable                | 300,000   |
| Inventory                     | 15,000    | Common Stock                 | 200,000   |
| Construction Work in Progress | 470,000   | Retained Earnings            | 250,000   |
| Other Assets (net)            | 220,000   |                              |           |
| Total Assets                  | \$800,000 | Total Liabilities & Equities | \$800,000 |

During each of the next three years, Acme reported net income of \$50,000 and paid dividends of \$20,000. On January 1, 20X5, Stable sold 4,000 of the Acme \$10 par value shares for \$120,000 in cash. Stable used the basic equity method in accounting for its ownership of Acme.

#### Required

- a. Compute the balance in the investment account reported by Stable on January 1, 20X5, before its sale of shares.
- b. Prepare the entry recorded by Stable when it sold the Acme shares, assuming Stable records the excess of the sale price over the carrying value of the shares as an increase in additional paid-in
- c. Prepare the appropriate elimination entries to complete a full consolidation worksheet for 20X5.

#### E9-14 **Purchase of Additional Shares from Nonaffiliate**

Weal Corporation purchased 60 percent of Modern Products Company's shares on December 31, 20X7, for \$210,000. At that date, the fair value of the noncontrolling interest was \$140,000.

LO 9-3

LO 9-3

On January 1, 20X9, Weal purchased an additional 20 percent of Modern's common stock for \$96,000. Summarized balance sheets for Modern on the dates indicated are as follows:

|  | December 31   |   |   |  |
|--|---|---|---|--|
|  | 20X7  | 20X8  | 20X9  |  |
| Cash<br>Accounts Receivable<br>Inventory<br>Buildings & Equipment (net)                                | \$ 40,000<br>50,000<br>70,000<br>340,000                | \$ 70,000<br>90,000<br>100,000<br>320,000               | \$ 90,000<br>120,000<br>160,000<br>300,000              |  |
| Total Assets   | \$500,000   | \$580,000   | \$670,000   |  |
| Accounts Payable<br>Bonds Payable<br>Common Stock<br>Retained Earnings<br>Total Liabilities & Equities | \$ 50,000<br>100,000<br>150,000<br>200,000<br>\$500,000 | \$100,000<br>100,000<br>150,000<br>230,000<br>\$580,000 | \$140,000<br>100,000<br>150,000<br>280,000<br>\$670,000 |  |

Modern paid dividends of \$20,000 in each of the three years. Weal uses the basic equity method in accounting for its investment in Modern and amortizes all differentials over 10 years against the related investment income. All differentials are assigned to patents in the consolidated financial statements.

#### Required

- a. Compute the balance in Weal's Investment in Modern Products Company Stock account on December 31, 20X8.
- b. Compute the balance in Weal's Investment in Modern Products Company Stock account on December 31, 20X9.
- c. Prepare the elimination entries needed as of December 31, 20X9, to complete a three-part consolidation worksheet.

#### E9-15 Repurchase of Shares by Subsidiary from Nonaffiliate

Blatant Advertising Corporation acquired 60 percent of Quinn Manufacturing Company's shares on December 31, 20X1, at underlying book value of \$180,000. At that date, the fair value of the noncontrolling interest was equal to 40 percent of the book value of Quinn Manufacturing. Quinn's balance sheet on January 1, 20X7, contained the following balances:

| Cash                           | \$ 80,000 | Accounts Payable             | \$ 60,000 |
|--------------------------------|-----------|------------------------------|-----------|
| Accounts Receivable            | 100,000   | Bonds Payable                | 240,000   |
| Inventory                      | 160,000   | Common Stock                 | 100,000   |
| Buildings & Equipment          | 700,000   | Additional Paid-In Capital   | 150,000   |
| Less: Accumulated Depreciation | (240,000) | Retained Earnings            | 250,000   |
| Total Assets                   | \$800,000 | Total Liabilities & Equities | \$800,000 |

On January 1, 20X7, Quinn purchased 2,000 of its own \$10 par value common shares from Nonaffiliated Corporation for \$42 per share.

## Required

- a. Compute the change in the book value of the equity attributable to the parent as a result of the repurchase of shares by Quinn Manufacturing.
- b. Give the entry to be recorded on Blatant Advertising's books to recognize the change in the book value of the shares it holds.
- c. Give the elimination entry needed in preparing a consolidated balance sheet immediately following the purchase of shares by Quinn.

#### LO 9-3

## E9-16 Sale of Shares by Subsidiary to Nonaffiliate

Browne Corporation purchased 11,000 shares of Schroeder Corporation on January 1, 20X3, at book value. At that date, the fair value of the noncontrolling interest was equal to 26.7 percent of Schroeder's book value. On December 31, 20X8, Schroeder reported these balance sheet amounts:

| Cash                           | \$ 80,000 | Accounts Payable             | \$ 50,000 |
|--------------------------------|-----------|------------------------------|-----------|
| Accounts Receivable            | 120,000   | Bonds Payable                | 100,000   |
| Inventory                      | 200,000   | Common Stock                 | 150,000   |
| Buildings & Equipment          | 600,000   | Additional Paid-In Capital   | 50,000    |
| Less: Accumulated Depreciation | (250,000) | Retained Earnings            | 400,000   |
| Total Assets                   | \$750,000 | Total Liabilities & Equities | \$750,000 |

On January 1, 20X9, Schroeder issued an additional 5,000 shares of its \$10 par value common stock to Nonaffiliated Company for \$80 per share.

#### Required

- a. Compute the change in book value of the shares held by Browne as a result of Schroeder's issuance of additional shares.
- b. Give the entry to be recorded on Browne's books to recognize the change in book value of the shares it holds, assuming the change in book value is to be treated as an adjustment to additional paid-in capital.
- c. Record the elimination entry needed to prepare a consolidated balance sheet immediately after Schroeder's issuance of additional shares.

## **Problems**

LO 9-1, 9-2

#### P9-17 Multiple-Choice Questions on Preferred Stock Ownership

Stacey Corporation owns 80 percent of the common shares and 70 percent of the preferred shares of Upland Company, all purchased at underlying book value on January 1, 20X2. At that date, the fair value of the noncontrolling interest in Upland's common stock was equal to 20 percent of the book value of its common stock. The balance sheets of Stacey and Upland immediately after the acquisition contained these balances:

|                                      | Stacey<br>Corporation | Upland<br>Company |
|--------------------------------------|-----------------------|-------------------|
| Cash & Receivables                   | \$150,000             | \$ 80,000         |
| Inventory                            | 200,000               | 100,000           |
| Buildings & Equipment (net)          | 250,000               | 220,000           |
| Investment in Upland Preferred Stock | 70,000                |                   |
| Investment in Upland Common Stock    | 200,000               |                   |
| Total Assets                         | \$870,000             | \$400,000         |
| Liabilities                          | \$220,000             | \$ 50,000         |
| Preferred Stock                      |                       | 100,000           |
| Common Stock                         | 300,000               | 200,000           |
| Retained Earnings                    | 350,000               | 50,000            |
| Total Liabilities & Equities         | <u>\$870,000</u>      | \$400,000         |

The preferred stock issued by Upland pays a 10 percent dividend and is cumulative. For 20X2, Upland reports net income of \$30,000 and pays no dividends. Stacey reports income from its separate operations of \$100,000 and pays dividends of \$40,000 during 20X2.

#### Required

Select the correct answer for each of the following questions.

- 1. Total noncontrolling interest reported in the consolidated balance sheet as of January 1, 20X2, is
  - a. \$30,000.
  - b. \$50,000.
  - c. \$70,000.
  - d. \$80,000.
- 2. Income assigned to the noncontrolling interest in the 20X2 consolidated income statement is
  - a. \$6,000.
  - b. \$7,000.
  - c. \$9,000.
  - d. \$14,000.
- 3. What amount of income is attributable to the controlling interest for 20X2?
  - a. \$116,000.
  - b. \$123,000.
  - c. \$124,000.
  - d. \$130,000.
- 4. Total stockholders' equity reported in the consolidated balance sheet as of January 1, 20X2, is
  - a. \$650,000.
  - b. \$700,000.
  - c. \$730,000.
  - d. \$1,000,000.
- 5. Preferred stock outstanding reported in the consolidated balance sheet as of January 1, 20X2, is
  - a. \$0.
  - b. \$30,000.
  - c. \$70,000.
  - d. \$100,000.

#### LO 9-4 **Multilevel Ownership with Differential**

Purple Corporation owns 80 percent of Corn Corporation's common stock. It purchased the shares on January 1, 20X1, for \$520,000. At the date of acquisition, the fair value of the noncontrolling interest was \$130,000, and Corn reported common stock outstanding of \$400,000 and retained earnings of \$200,000. The differential is assigned to a trademark with a life of five years. Each year since acquisition, Corn has reported income from operations of \$60,000 and paid dividends of \$25,000.

Corn purchased 70 percent ownership of Bark Company on January 1, 20X3, for \$406,000. At that date, the fair value of the noncontrolling interest was \$174,000, and Bark reported common stock outstanding of \$250,000 and retained earnings of \$300,000. In 20X3, Bark reported net income of \$30,000 and paid dividends of \$20,000. The differential is assigned to buildings and equipment with an economic life of 10 years at the date of acquisition.

#### Required

- a. Prepare the journal entries recorded by Corn for its investment in Bark during 20X3.
- b. Prepare the journal entries recorded by Purple for its investment in Corn during 20X3.
- c. Prepare the elimination entries related to Corn's investment in Bark and Purple's investment in Corn needed to prepare consolidated financial statements for Purple and its subsidiaries at December 31, 20X3.

#### P9-19 **Subsidiary Stock Dividend**

Pound Manufacturing Corporation prepared the following balance sheet as of January 1, 20X8:

LO 9-5

| Cash                           | \$ 40,000 | Accounts Payable             | \$ 50,000        |
|--------------------------------|-----------|------------------------------|------------------|
| Accounts Receivable            | 90,000    | Bonds Payable                | 200,000          |
| Inventory                      | 180,000   | Common Stock                 | 100,000          |
| Buildings & Equipment          | 500,000   | Additional Paid-In Capital   | 70,000           |
| Less: Accumulated Depreciation | (110,000) | Retained Earnings            | 280,000          |
| Total Assets                   | \$700,000 | Total Liabilities & Equities | <u>\$700,000</u> |

The company is considering a 2-for-1 stock split, a stock dividend of 4,000 shares, or a stock dividend of 1,500 shares on its \$10 par value common stock. The current market price per share of Pound stock on January 1, 20X8, is \$50. Quick Sales Corporation acquired 68 percent of Pound's common shares on January 1, 20X4, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 32 percent of Pound's book value.

Give the investment elimination entry required to prepare a consolidated balance sheet at the close of business on January 1, 20X8, for each of the alternative transactions under consideration by Pound.

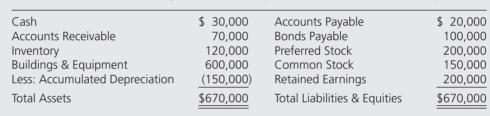

LO 9-2

StudyGuide

.com

#### P9-20 **Subsidiary Preferred Stock Outstanding**

Pert's preferred stock is \$100 par value, and its common stock is \$10 par value. The preferred dividends are cumulative and are two years in arrears on January 1, 20X5. Pert reports net income of \$34,000 for 20X5 and pays no dividends.

#### Required

- a. Present the worksheet elimination entries needed to prepare a consolidated balance sheet on January 1, 20X5.
- b. Assuming that Emerald reported income from its separate operations of \$80,000 in 20X5, compute the amount of consolidated net income and the amount of income to be assigned to the controlling shareholders in the 20X5 consolidated income statement.

LO 9-2

#### P9-21 **Ownership of Subsidiary Preferred Stock**

Presley Pools Inc. acquired 60 percent of the common stock of Jacobs Jacuzzi Company on December 31, 20X6, for \$1,800,000. At that date, the fair value of the noncontrolling interest was \$1,200,000. The full amount of the differential was assigned to goodwill. On December 31, 20X7, Presley Pools management reviewed the amount attributed to goodwill and concluded an impairment loss of \$26,000 should be recognized in 20X7. On January 2, 20X7, Presley purchased 20 percent of the outstanding preferred shares of Jacobs for \$42,000.

In its 20X6 annual report, Jacobs reported the following stockholders' equity balances at the end of the year:

| Preferred Stock (10 percent, \$100 par) | \$  | 200,000  |
|---|-----|----------|
| Premium on Preferred Stock              |     | 5,000    |
| Common Stock                            |     | 500,000  |
| Additional Paid-In Capital—Common       |     | 800,000  |
| Retained Earnings                       | _1  | ,650,000 |
| Total Stockholders' Equity              | \$3 | ,155,000 |
|   |     |          |

The preferred stock is cumulative and has a liquidation value equal to its call price of \$101 per share. Because of cash flow problems, Jacobs declared no dividends during 20X6, the first time it had missed a preferred dividend. With the improvement in operations during 20X7, Jacobs declared the current stated preferred dividend as well as preferred dividends in arrears; Jacobs also declared a common dividend for 20X7 of \$10,000. Jacobs' reported net income for 20X7 was \$280,000.

## Required

- a. Compute the amount of the preferred stockholders' claim on Jacobs Jacuzzi's assets on December 31, 20X6.
- b. Compute the December 31, 20X6, book value of the Jacobs common shares purchased by Presley.
- c. Compute the amount of goodwill associated with Presley's acquisition of Jacobs common
- d. Compute the amount of income that should be assigned to the noncontrolling interest in the 20X7 consolidated income statement.
- e. Compute the amount of income from its subsidiary that Presley should have recorded during 20X7 using the fully adjusted equity method.
- f. Compute the total amount that should be reported as noncontrolling interest in the December 31, 20X7, consolidated balance sheet.
- g. Present all elimination entries that should appear in a consolidation worksheet to prepare a complete set of 20X7 consolidated financial statements for Presley Pools and its subsidiary.

#### **Consolidation Worksheet with Subsidiary Preferred Stock** P9-22

Brown Company owns 90 percent of the common stock and 60 percent of the preferred stock of White Corporation, both acquired at underlying book value on January 1, 20X1. At that date, the fair value of the noncontrolling interest in White common stock was equal to 10 percent of the book value of its common stock. Trial balances for the companies on December 31, 20X6, are as follows:

|                                  | <b>Brown Company</b> |          | White Corporation |          |           |           |
|----------------------------------|----------------------|----------|-------------------|----------|-----------|-----------|
|                                  |                      | Debit    |                   | Credit   | Debit     | Credit    |

LO 9-2

White preferred shares pay a 7.5 percent annual dividend and are cumulative. Preferred dividends for 20X6 were declared on December 31, 20X6, and are to be paid January 1, 20X7.

#### Required

- a. Prepare the elimination entries needed to complete a full consolidation worksheet for 20X6.
- b. Prepare a consolidation worksheet as of December 31, 20X6.

#### LO 9-3 P9-23 **Subsidiary Stock Transactions**

Apex Corporation acquired 75 percent of Beta Company's common stock on May 15, 20X3, at underlying book value. Beta's balance sheet on December 31, 20X6, contained these amounts:

| Cash                           | \$ 75,000 | Accounts Payable             | \$ 30,000 |
|--------------------------------|-----------|------------------------------|-----------|
| Accounts Receivable            | 50,000    | Bonds Payable                | 200,000   |
| Inventory                      | 125,000   | Common Stock (\$10 par)      | 100,000   |
| Buildings & Equipment          | 700,000   | Additional Paid-In Capital   | 80,000    |
| Less: Accumulated Depreciation | (220,000) | Retained Earnings            | 320,000   |
| Total Assets                   | \$730,000 | Total Liabilities & Equities | \$730,000 |

During 20X7, Apex earned operating income of \$90,000, and Beta reported net income of \$45,000. Neither company declared any dividends during 20X7. Assume Apex Corporation has only no-par stock outstanding.

Beta is considering repurchasing 1,000 of its outstanding shares as treasury stock for \$68 each.

#### Required

- a. Assuming Beta purchases the shares from Nonaffiliated Company on January 1, 20X7:
  - (1) Compute the effect on the book value of the shares held by Apex.
  - (2) Give the entry on Apex's books to record the change in the book value of its investment in Beta's shares.
  - (3) Prepare the elimination entries needed on December 31, 20X7, to complete a consolidation worksheet.
- b. Assuming Beta purchases the shares directly from Apex on January 1, 20X7:
  - (1) Compute the effect on the book value of the shares held by Apex.
  - (2) Give the entry on Apex's books to record its sale of Beta shares to Beta.
  - (3) Prepare the elimination entries needed on December 31, 20X7, to complete a consolidation worksheet.

#### LO 9-3 P9-24 Sale of Subsidiary Share

Penn Corporation purchased 80 percent ownership of ENC Company on January 1, 20X2, at underlying book value. At that date, the fair value of the noncontrolling interest was equal to 20 percent of the book value of ENC. On January 1, 20X4, Penn sold 2,000 shares of ENC's stock for \$60,000 to American School Products and recorded a \$10,000 gain. Trial balances for the companies on December 31, 20X4, contain the following data:

|                           | Penn Corporation |        | ENC Company |        |
|---------------------------|------------------|--------|-------------|--------|
|                           | Debit            | Credit | Debit       | Credit |
| Cash                      | \$ 30,000        |        | \$ 35,000   |        |
| Accounts Receivable       | 70,000           |        | 50,000      |        |
| Inventory                 | 120,000          |        | 100,000     |        |
| Buildings & Equipment     | 650,000          |        | 230,000     |        |
| Investment in ENC Company | 162,000          |        |             |        |
| Cost of Goods Sold        | 210,000          |        | 100,000     |        |
| Depreciation Expense      | 20,000           |        | 15,000      |        |
| Other Expenses            | 21,000           |        | 25,000      |        |
| Dividends Declared        | 15,000           |        | 10,000      |        |

(continued)

ENC's net income was earned evenly throughout the year. Both companies declared and paid their dividends on December 31, 20X4. Penn uses the basic equity method in accounting for its investment in ENC.

#### Required

- a. Prepare the elimination entries needed to complete a full consolidation worksheet for 20X4.
- b. Prepare a consolidation worksheet for 20X4.

## P9-25 Sale of Shares by Subsidiary to Nonaffiliate

Craft Corporation held 80 percent of Delta Corporation's outstanding common shares on December 31, 20X2, which it had acquired at underlying book value. When the shares were acquired, the fair value of the noncontrolling interest was equal to 20 percent of Delta's book value. Balance sheets for the two companies on that date follow:

| CRAFT CORPORATION  Balance Sheet  December 31, 20X2 |                    |                              |             |  |  |
|---|--------------------|------------------------------|-------------|--|--|
| Cash  | \$ 50,000          | Accounts Payable             | \$ 70,000   |  |  |
| Accounts Receivable                                 | 90,000             | Mortgages Payable            | 250,000     |  |  |
| Inventory   | 180,000            | Common Stock                 | 300,000     |  |  |
| Buildings & Equipment                               | 700,000            | Additional Paid-In Capital   | 180,000     |  |  |
| Less: Accumulated Depreciation                      | (200,000)          | Retained Earnings            | 500,000     |  |  |
| Investment in Delta Corporation                     | 480,000            |                              |             |  |  |
| Total Assets  | <u>\$1,300,000</u> | Total Liabilities & Equities | \$1,300,000 |  |  |

| DELTA CORPORATION  Balance Sheet  December 31, 20X2 |            |                              |                  |  |  |
|---|------------|------------------------------|------------------|--|--|
| Cash  | \$ 50,000  | Accounts Payable             | \$ 70,000        |  |  |
| Accounts Receivable                                 | 120,000    | Taxes Payable                | 80,000           |  |  |
| Inventory   | 200,000    | Common Stock                 | 200,000          |  |  |
| Buildings & Equipment                               | 600,000    | Additional Paid-In Capital   | 50,000           |  |  |
| Less: Accumulated Depreciation                      | (220,000)  | Retained Earnings            | 350,000          |  |  |
| Total Assets  | \$ 750,000 | Total Liabilities & Equities | <u>\$750,000</u> |  |  |

On January 1, 20X3, Delta issued 4,000 additional shares of its \$10 par value common stock to Nonaffiliated Corporation for \$45 per share. Craft recorded the change in the book value of its Delta shares as an adjustment to its investment in Delta and an adjustment to its additional paid-in capital.

#### Required

- a. Give the worksheet elimination entry needed in preparing a consolidated balance sheet as of January 1, 20X3, immediately following the sale of shares by Delta.
- b. Prepare a consolidated balance sheet worksheet as of the close of business on January 1, 20X3.
- c. Prepare a consolidated balance sheet as of the close of business on January 1, 20X3.

LO 9-3

#### LO 9-3

#### P9-26 Sale of Additional Shares to Parent

Lane Manufacturing Company acquired 75 percent of Tin Corporation stock at underlying book value. At the date of acquisition, the fair value of the noncontrolling interest was equal to 25 percent of Tin's book value. The balance sheets of the two companies for January 1, 20X1, are as follows:

| LANE MANUFACTURING COMPANY  Balance Sheet  January 1, 20X1 |                    |                              |             |  |
|--|--------------------|------------------------------|-------------|--|
| Cash   | \$ 227,500         | Accounts Payable             | \$ 50,000   |  |
| Accounts Receivable  | 60,000             | Bonds Payable                | 400,000     |  |
| Inventory  | 100,000            | Common Stock                 | 200,000     |  |
| Buildings & Equipment                                      | 600,000            | Additional Paid-In Capital   | 50,000      |  |
| Less: Accumulated Depreciation                             | (150,000)          | Retained Earnings            | 400,000     |  |
| Investment in Tin Products                                 | 262,500            |                              |             |  |
| Total Assets   | <u>\$1,100,000</u> | Total Liabilities & Equities | \$1,100,000 |  |

| TIN CORPORATION  Balance Sheet  January 1, 20X1 |                  |                              |                  |  |
|---|------------------|------------------------------|------------------|--|
| Cash  | \$ 60,000        | Accounts Payable             | \$ 50,000        |  |
| Accounts Receivable                             | 100,000          | Bonds Payable                | 300,000          |  |
| Inventory                                       | 180,000          | Common Stock (\$10 par)      | 100,000          |  |

| Less: Accumulated Depreciation                  | (240,000)        | Retained Earnings            | 200,000          |  |
| Total Assets                                    | <u>\$700,000</u> | Total Liabilities & Equities | <u>\$700,000</u> |  |

On January 2, 20X1, Lane purchased an additional 2,500 shares of common stock directly from Tin for \$150,000. Any purchase differential is assigned to buildings and equipment.

#### Required

- a. Prepare the elimination entry needed to complete a consolidated balance sheet worksheet immediately following the issuance of additional shares to Lane.
- b. Prepare a consolidated balance sheet worksheet immediately following the issuance of additional shares to Lane.

#### LO 9-4

#### **P9-27 Complex Ownership Structure**

First Boston Corporation acquired 80 percent of Gulfside Corporation common stock on January 1, 20X5. Gulfside holds 60 percent of the voting shares of Paddock Company, and Paddock owns 10 percent of the stock of First Boston. All acquisitions were made at underlying book value. The fair value of the noncontrolling interest in Gulfside was equal to 20 percent of the book value of Gulfside when acquired by First Boston, and the fair value of the noncontrolling interest in Paddock was equal to 40 percent of its book value when control was acquired by Gulfside. During 20X7, income from the separate operations of First Boston, Gulfside, and Paddock was \$44,000, \$34,000, and \$50,000, respectively, and dividends of \$30,000, \$20,000, and \$10,000, respectively, were paid. The companies use the cost method of accounting for intercorporate investments and, accordingly, record dividends received as other (nonoperating) income.

## Required

Compute the amount of consolidated net income and the income to be assigned to the noncontrolling shareholders of Gulfside and Paddock for 20X7 using the treasury stock method.

ADVANCED CONSOLIDATION ISSUES AT GOOGLE

Larry Page and Sergey Brin founded Google Inc. while they were doctoral students at Stanford University in the mid-1990s. Google began, of course, as an Internet search engine. The company was incorporated in September 1998 and went public in August 2004. Although Google is best known for its search engine, the company has expanded into various online tools and products. Some of its better-known products are its Gmail e-mail software; its Web browser, Google Chrome; and its satellite map program, Google Earth. During its relatively short existence, Google has become one of the most wellknown high-tech companies in the world.

Google Inc. has acquired a relatively large number of companies in just over a decade. In fact, between 2001 and 2012, Google was involved in 116 separate acquisitions. Three of the most visible of these acquisitions were Applied Semantics in 2003, YouTube Inc. in 2006, and Motorola in 2012.

Due to its rapid growth, Google went from a small start-up company with relatively simple accounting to a global company with fairly complex accounting in just a few years. Although prior chapters have introduced the preparation of consolidated income statements, statements of retained earnings, and balance sheets, Google also prepares a consolidated statement of cash flows. Moreover, although prior chapters have assumed that all acquisitions used in the illustration have taken place at the beginning or the end of the fiscal year, none of Google's acquisitions took place at the turn of a new fiscal year. Finally, although prior chapters have ignored taxes and earnings per share (EPS) calculations, Google's consolidated financial statements include complex accounting for income taxes and earnings per share. Therefore, this chapter explores four additional issues related to consolidated financial statements:

- Google®
- 1. The consolidated statement of cash flows.
- 2. Consolidation following an interim acquisition.
- 3. Consolidation tax considerations.
- 4. Consolidated earnings per share.

#### **LEARNING OBJECTIVES**

When you finish studying this chapter, you should be able to:

- LO 10-1 Prepare a consolidated statement of cash flows.
- Make calculations and record journal and worksheet entries related to an
- Make basic calculations and journal entries related to income taxes in the consolidated financial statements.
- LO 10-4 Make calculations related to consolidated earnings per share.

### CONSOLIDATED STATEMENT OF CASH FLOWS

LO 10-1

Prepare a consolidated statement of cash flows. Consolidated entities, as with individual companies, must present a statement of cash *flows* when they issue a complete set of financial statements. A consolidated statement of cash flows is similar to a statement of cash flows prepared for a single-corporate entity and is prepared in basically the same manner.

# **Preparation of a Consolidated Cash Flow Statement**

A consolidated statement of cash flows is typically prepared after the consolidated income statement, retained earnings statement, and balance sheet. Rather than being included in the three-part consolidation worksheet, the consolidated cash flow statement is prepared from the information in the other three consolidated statements. When an indirect approach is used in preparing the statement with consolidated net income as the starting point, consolidated net income must be adjusted for all items that affect consolidated net income and the cash of the consolidated entity differently.

As in the other consolidated financial statements, all transfers between affiliates should be eliminated in preparing the consolidated statement of cash flows. Although the sale or purchase of assets is a source or use of cash to an individual company, if such activities occur entirely within the consolidated entity, they should not be included in the statement of cash flows. Unrealized profits on intercompany transfers are eliminated in preparing the consolidated balance sheet and income statement, and therefore no additional elimination of unrealized intercompany profits is needed in preparing the statement of cash flows.

The existence of a noncontrolling interest typically does not cause any special problems. In and of itself, the noncontrolling interest neither generates nor uses cash. Receipts from and payments to noncontrolling shareholders usually are included in the consolidated cash flow statement as cash flows related to financing activities. For example, dividend payments to noncontrolling shareholders normally are included along with dividend payments to parent company shareholders as a use of cash. A sale of additional shares to noncontrolling shareholders or a repurchase of shares from them is considered to be a transaction with a nonaffiliate and is reported as a source or use of cash.

# Consolidated Cash Flow Statement Illustrated<sup>1</sup>

As an example of the preparation of a consolidated cash flow statement, assume the following:

- 1. Peerless Products purchases 80 percent of Special Foods common stock on December 31, 20X0, for \$66,000 above book value. At the acquisition date, the noncontrolling interest has a fair value \$16,500 in excess of its book value. The total differential at the acquisition date is \$82,500 (\$66,000 + \$16,500).
- 2. Of the \$82,500 total differential, \$10,000 is assigned to land, \$60,000 to equipment with a 10-year remaining life, and \$12,500 to goodwill. Management determines that the goodwill is impaired and writes it down by \$3,125 at the end of 20X1; the value of the goodwill remains constant thereafter.
- 3. During 20X2, Peerless pays dividends of \$60,000; Special Foods reports net income of \$75,000 and pays dividends of \$40,000.
- 4. During 20X2, Peerless sells land that it had purchased in 20X1 for \$40,000 to a nonaffiliate for \$70,000.
- 5. Special Foods purchases additional equipment from an unrelated company at the end of 20X2 for \$100,000.

The consolidated income statement for 20X2 is as follows:

| Sales<br>Gain on Sale of Land     |           | \$720,000<br><u>30,000</u> |
|-----------------------------------|-----------|----------------------------|
|                                   |           | \$750,000                  |
| Less: Cost of Goods Sold          | \$340,000 |                            |
| Depreciation Expense              | 76,000    |                            |
| Other Expenses                    | 105,000   | (521,000)                  |
| Consolidated Net Income           |           | \$229,000                  |
| Income to Noncontrolling Interest |           | (13,800)                   |
| Income to Controlling Interest    |           | \$215,200                  |

Figure 10-1 on the next page presents a worksheet to prepare a consolidated statement of cash flows. Although a number of different worksheet formats may be used in preparing statements of cash flows, the worksheet for preparing a consolidated statement of cash flows is no different from that used for a single-corporate entity. See Figure 10-1 for

# **STOP & THINK**

Why is the cash flow statement so important? One reason is that companies can more easily manipulate income than they can cash flows. Operating cash flows can serve as a "reality check" for operating income. For example, in the first six months of 2012, Adidas recognized net income of \$625 million. By examining Adidas' consolidated statement of cash flows, a potential investor could understand more about Adidas' operations than is available on the income statement. Adidas' cash flow from operations for the same period was -\$70 million, which portrays a very different picture of operating performance. The difference stems primarily from a large increase in receivables (\$459 million). This increase could indicate that Adidas is loosening its credit terms with its customers to maintain sales levels or that it is struggling to collect its receivables. Because operating cash flow tells a different story than the reported operating income number on the income statement, investors learn that they may want to investigate more closely.

the essential worksheet entries. The consolidated statement of cash flows is prepared from the bottom portion of the worksheet.

Figure 10-2 on page 507 illustrates Peerless' consolidated statement of cash flows for 20X2. The statement is similar to one that would be prepared for a single company. The only item that is different from what would be found in the cash flow statement of a single company relates to subsidiary dividends. The dividends paid to subsidiary noncontrolling shareholders result in an outflow of cash from the consolidated entity even though they are not shown as dividends declared in the consolidated retained earnings statement. Although not viewed as distributions of consolidated retained earnings, dividends to the noncontrolling shareholders use cash in reducing the noncontrolling interest.

| Cash Flows from Financing Activities:    |                   |                      |                      |                     |
| Dividends to Parent Company Shareholders |                   |                      | 60,000 (h)           |                     |
| Dividends to Noncontrolling Shareholders |                   |                      | 8,000 (j)            |                     |
| Increase in Cash                         |                   |                      | 7,000 (a)            |                     |
|  |                   | 405,000              | 405,000              |                     |

- (a) Increase in cash balance.
- (b) Increase in accounts receivable.
- (c) Increase in inventory.
- (d) Sale of land.
- (e) Purchase of buildings and equipment.
- (f) Depreciation charges for 20X2.
- (g) Increase in accounts payable.
- (h) Peerless dividends, \$60,000.
- (i) Consolidated net income, \$229,000.
- (j) Special Foods dividends to noncontrolling interest (\$40,000  $\times$  0.20).

#### Consolidated Cash Flow Statement—Direct Method

Although nearly all major companies use the indirect method of presenting a cash flow statement as illustrated in the previous example, critics have argued that the direct method is less confusing to the reader and more useful. Authoritative bodies have generally expressed a preference for the direct method, even though they have not required its use.

Using the same information as in the illustration of the indirect method, Figure 10–3 shows a worksheet for the preparation of a consolidated cash flow statement using the direct method. The only section of the cash flow statement affected by the difference in approaches is the operating activities section. Under the indirect approach, as in Figure 10-2, the operating activities section starts with net income and, to derive cash provided by operating activities, adjusts for all items affecting cash and net income differently.

Chapter 10 Additional Consolidation Reporting Issues 507

FIGURE 10-2 Consolidated Statement of Cash Flows for the Year **Ended December 31,** 20X2

| PEERLESS PRODUCTS CORPORATION AND SO<br>Consolidated Statement of Cash Flows<br>For the Year Ended December 31, 2007  | 5   |                                  |
|---|---|----------------------------------|
| Cash Flows from Operating Activities: Consolidated Net Income Noncash Expenses, Revenues, Losses, & Gains Included in Income: Depreciation Expense Gain on Sale of Land Increase in Accounts Receivable | \$ 229,000<br>76,000<br>(30,000)<br>(105,000) |                                  |
| Increase in Inventory Increase in Accounts Payable  Net Cash Provided by Operating Activities   | (95,000)<br>30,000                            | \$105,000                        |
| Cash Flows from Investing Activities: Acquisition of Equipment Sale of Land   | \$(100,000)<br>                               | 4.55,555                         |
| Net Cash Used in Investing Activities<br>Cash Flows from Financing Activities:<br>Dividends Paid:<br>To Parent Company Shareholders   | \$ (60,000)                                   | (30,000)                         |
| To Noncontrolling Shareholders  Net Cash Used in Financing Activities   | (8,000)                                       | (68,000)                         |
| Net Increase in Cash Cash at Beginning of Year Cash at End of Year  |   | \$ 7,000<br>269,000<br>\$276,000 |

Under the direct approach in Figure 10–3, the operating activities section of the statement shows the actual cash flows. In this example, the only cash flows related to operations are as follows:

| Cash Flows from Operating Activities:     |           |
|---|-----------|
| Cash Received from Customers              | \$615,000 |
| Cash Paid to Suppliers                    | (510,000) |
| Net Cash Provided by Operating Activities | \$105,000 |

The final number in this section is the same under both approaches, but this method provides a clearer picture of cash flows related to operations than does the indirect approach. Cash received from customers equals the sales revenue (\$720,000) from the consolidated income statement minus the increase in accounts receivable (\$105,000). Cash paid to suppliers equals cost of goods sold (\$340,000), plus other expenses (\$105,000), plus the increase in inventory (\$95,000), minus the increase in accounts payable (\$30,000). The remainder of the cash flow statement is the same under both approaches except that a separate reconciliation of operating cash flows and net income is required under the direct approach. This reconciliation is the same as for the operating section of the cash flow statement under the indirect method.

# CONSOLIDATION FOLLOWING AN INTERIM ACQUISITION

LO 10-2

Make calculations and record journal and worksheet entries related to an interim acquisition.

When one company purchases another company's common stock, the subsidiary is viewed as being part of the consolidated entity only from the time the stock is acquired. Consequently, when a subsidiary is acquired during a fiscal period rather than at the beginning or end, the results of the subsidiary's operations are included in the consolidated statements only for the portion of the year that the parent owned the stock. The subsidiary's revenues, expenses, gains, and losses for the portion of the fiscal period prior

- (a) Increase in cash balance.
- (b) Payments received from customers.
- (c) Payments to suppliers.
- (d) Sale of land.
- (e) Acquisition of equipment.
- (f) Depreciation charges for 20X2.
- (g) Peerless dividends, \$60,000.
- (h) Consolidated net income, \$229,000.
- (i) Special Foods dividends to noncontrolling interest (\$40,000  $\times$  0.20).

to the time at which the parent acquired its controlling financial interest in the subsidiary is excluded from the consolidated financial statements.

To better understand consolidation following an interim acquisition, assume that on July 1, 20X1, Peerless Products purchases 80 percent of Special Foods' common stock for its underlying book value of \$246,400. At the time of acquisition, the \$61,600 fair value of Special Foods' noncontrolling interest is equal to its book value. Special Foods' Common Stock and Retained Earnings balances as of January 1, 20X1, were \$200,000 and \$100,000, respectively.

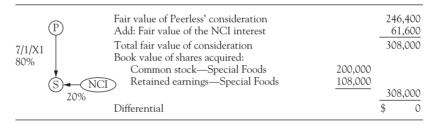

For the year 20X1, Special Foods reports the following items:

|                            | Before Combination<br>(1/1 to 6/30) | After Combination<br>(7/1 to 12/31) | Full Year |
|----------------------------|-------------------------------------|-------------------------------------|-----------|
| Sales                      | 80,000                              | 120,000                             | 200,000   |
| Less: COGS                 | (46,000)                            | (69,000)                            | (115,000) |
| Less: Depreciation Expense | (8,000)                             | (12,000)                            | (20,000)  |
| Less: Other Expenses       | (6,000)                             | (9,000)                             | (15,000)  |
| Net Income                 | 20,000                              | 30,000                              | 50,000    |
| Dividends declared         | 12,000                              | 18,000                              | 30,000    |

The book value of Special Foods' stock that Peerless acquired on July 1, 20X1, is computed as follows:

| Book value of Special Foods on January 1, 20X1:            |                  |
|--|------------------|
| Common stock   | \$200,000        |
| Retained earnings  | _100,000         |
|  | \$300,000        |
| Net income, January 1 to June 30, 20X1                     | 20,000           |
| Dividends, January 1 to June 30, 20X1                      | (12,000)         |
| Book value of Special Foods on July 1, 20X1                | \$308,000        |
| Peerless' ownership interest                               | × 0.80           |
| Book value on July 1, 20X1, of shares acquired by Peerless | <u>\$246,400</u> |
|  |                  |

The ownership situation on July 1, 20X1, is as follows:

# **Parent Company Entries**

Peerless records the purchase of Special Foods stock with the following entry:

Record purchase of Special Foods stock.

During the second half of 20X1, Peerless records its share of Special Foods' income and dividends under the equity method:

| (2) | Investment in Special Foods Stock                            | 24,000 |        |
|-----|--|--------|--------|
|     | Income from Special Foods                                    |        | 24,000 |
|     | Record equity-method income: $$30,000 \times 0.80$ .         |        |        |
|     |  |        |        |
| (3) | Cash   | 14,400 |        |
|     | Investment in Special Foods Stock                            |        | 14,400 |
|     | Record dividends from Special Foods: $$18,000 \times 0.80$ . |        |        |

# **Consolidation Worksheet**

Special Foods' trial balance for 20X1 is essentially the same as the trial balance presented previously in Figure 5–5. Specifically, the preconsolidation financial statements for Peerless are the same as in Figure 5-5 except that Peerless' cash reflects the interim purchase as does the income from Special Foods recognized by Peerless. Because the Special Foods' income and dividends earned and declared, respectively, during the first half of the year belong to the previous owners of the Special Foods' stock, the normal consolidation process would attribute earnings and dividends belonging to the former owners to Peerless. Therefore, in the acquisition year, prior to preparing the basic elimination entry, we include an additional elimination entry to essentially "close out" the income and dividends from the first half of the year (prior to the acquisition) to retained earnings as follows:

#### Preacquisition Income and Dividend Elimination Entry:

| Sales                | 80,000 | ← Close preacquisition sales to RE          |
|----------------------|--------|---|
| COGS                 | 46,000 | ← Close preacquisition COGS to RE           |
| Depreciation expense | 8,000  | ← Close preacquisition depr. exp. to RE     |
| Other expense        | 6,000  | ← Close preacquisition other expenses to RE |
| Dividends declared   | 12,000 | ← Close preacquisition dividends to RE      |
| Retained earnings    | 8,000  | ← Preacquisition net increase in RE         |

After making this worksheet entry to close the preacquisition earnings and dividends to the Retained Earnings account, the beginning balance in Retained Earnings as of the acquisition date is \$108,000.

|       | Retained | Earnings | _                 |  |  |  |  |
|-------|----------|----------|-------------------|--|--|--|--|
| 100,0 |          | 100,000  | Balance 1/1/20X1  |  |  |  |  |
|       |          | 8,000    |                   |  |  |  |  |
|       |          | 108,000  | Balance 6/30/20X1 |  |  |  |  |

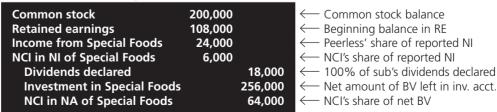

Based on this acquisition date beginning balance, we calculate the postacquisition changes in book value as follows:

#### **Book Value Calculations:**

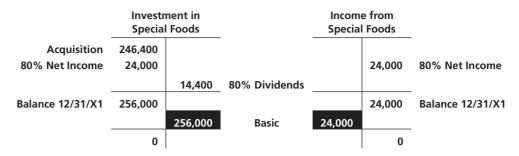

|                             | NCI<br>20% | + | Peerless<br>80% | = | Common<br>Stock | + | Retained<br>Earnings |
|-----------------------------|------------|---|-----------------|---|-----------------|---|----------------------|
| July 1, 20X1, balances      | 61,600     |   | 246,400         |   | 200,000         |   | 108,000              |
| + Net income                | 6,000      |   | 24,000          |   |                 |   | 30,000               |
| <ul><li>Dividends</li></ul> | (3,600)    |   | (14,400)        |   |                 |   | (18,000)             |
| December 31, 20X1, balances | 64,000     |   | 256,000         |   | 200,000         |   | 120,000              |

This leads to the basic elimination entry, following the normal procedure (but based on postacquisition earnings and dividends):

# **Basic Elimination Entry:**

The following T-accounts illustrate how the basic elimination entry zeros out the balances in the Investment in Special Foods and Income from Special Foods accounts:

Again, we include the normal accumulated depreciation elimination entry for \$308,000 (based on the balance in Special Foods' Accumulated Depreciation account as of the acquisition date = \$320,000 ending balance - \$12,000 depreciation expense for the second half of the year):

# **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation Building and equipment | 308,000 | 308.000 | Accumulated depreciation at the<br>time of the acquisition netted |
|---|---------|---------|---|
| building and equipment                          |         | 300,000 | against cost  |

See Figure 10-4 for the consolidation worksheet reflecting the interim acquisition of Special Foods' stock during 20X1.

FIGURE 10-4 December 31, 20X1, Equity-Method Worksheet for Consolidated Financial Statements, Year of Combination; 80 Percent Purchase at Book Value; Interim Acquisition

|   | Peerless  | Special   | Eliminatio       | Elimination Entries |                    |

| Buildings & Equipment                     | 800,000   | 600,000   |                  | 308,000             | 1,092,000          |
| Less: Accumulated Depreciation            | (450,000) | (320,000) | 308,000          |                     | (462,000)          |
| Total Assets                              | 1,204,000 | 520,000   | 308,000          | 564,000             | 1,468,000          |
| Accounts Payable                          | 100,000   | 100,000   |                  |                     | 200,000            |
| Bonds Payable                             | 200,000   | 100,000   |                  |                     | 300,000            |
| Common Stock                              | 500,000   | 200,000   | 200,000          |                     | 500,000            |
| Retained Earnings                         | 404,000   | 120,000   | 218,000          | 98,000              | 404,000            |
| NCI in NA of Special Foods                |           |           |                  | 64,000              | 64,000             |
| Total Liabilities & Equity                | 1,204,000 | 520,000   | 418,000          | 162,000             | 1,468,000          |

The consolidated income statement prepared for the year of the interim acquisition reflects the inclusion of Special Foods in the consolidated entity only from July 1, the date of acquisition. All of Special Foods' revenues and expenses prior to the date of acquisition are excluded, and the statement appears as follows:

| PEERLESS PRODUCTS CORPORATION AND SUBSIDIARY  Consolidated Income Statement  For the Year Ended December 31, 20X1 |                    |                        |
|---|--------------------|------------------------|
| Sales<br>Cost of Goods Sold   |                    | \$520,000<br>(239,000) |
| Gross Margin Expenses: Depreciation & Amortization Other Expenses   | \$62,000<br>49,000 | \$281,000              |
| Total Expenses  |                    | (111,000)              |
| Consolidated Net Income<br>Income Attributable to the Noncontrolling Interest                                     |                    | \$170,000<br>(6,000)   |
| Income Attributable to the Controlling Interest   |                    | <u>\$164,000</u>       |

Consolidated net income is the same following the procedures illustrated as if Special Foods' books had been closed immediately before the combination and a new fiscal period had started on the date of combination.

#### CONSOLIDATION INCOME TAX ISSUES

#### LO 10-3

Make basic calculations and iournal entries related to income taxes in the consoli-

We first briefly introduce the concept of tax allocation and the reporting of tax expense under the cost and equity methods when the companies in the consolidated group file separate tax returns. We then discuss tax allocation when the group files a consolidated tax return.

# Tax Allocation Procedures When Separate Tax Returns Are Filed

Intercompany income accruals and dividend transfers must be considered in computing income tax expense for the period. The impact depends on the level of ownership and the filing status of the companies. Because corporations generally are permitted to deduct 80 percent of the dividends received (100 percent if at least 80 percent of all voting stock is owned), they are taxed at relatively low effective tax rates (20 percent times the marginal tax rate) on those dividends.

# **STOP & THINK**

How does the dividends received deduction affect the implied tax rate on dividends received from a subsidiary corporation?

| Percent<br>Ownership  | Dividends Received<br>Deduction | Implied Tax Rate on<br>Dividends <sup>a</sup> |  |
|---|---------------------------------|---|--|
| < 20%   | 70%                             | $10.5\% = 35\% \times (1 - 70\%)$             |  |
| 20% - 80%   | 80%                             | $7\% = 35\% \times (1 - 80\%)$                |  |
| > 80%   | 100%                            | $0\% = 35\% \times (1 - 100\%)$               |  |
| <sup>a</sup> Assuming a 35% tax rate on dividends received. |                                 |   |  |

When an investor and an investee file a consolidated tax return, intercompany dividends and income accruals are eliminated in determining taxable income. Deferred tax accruals, therefore, are not needed, even though temporary differences occur between the recognition of investment income by the investor and realization through dividend transfers from the investee. Note that temporary "timing differences" between the recognition of revenues, expenses, gains, and losses under book (GAAP) and tax accounting rules lead to situations in which tax expense can be shifted from one year to another. This shifting

of taxes from one period to another is referred to as interperiod tax allocation. Consolidated tax returns may be filed when an investor owns at least 80 percent of a subsidiary's stock and elects to file a consolidated return. Otherwise, an investor and investee must file separate returns.

If an investor and an investee file separate tax returns, the investor is taxed on the dividends received from the investee rather than on the amount of investment income reported. The amount of tax expense reported in the investor's income statement each period should be based on income from its own operations as well as on income recognized from its intercompany investments. ASC 740 specifies those situations in which additional deferred tax accruals are required as a result of temporary differences in the recognition of income for financial reporting purposes and that used in determining taxable income.

### Tax Expense under the Equity Method

If the investment is reported using the equity method and separate tax returns are filed, the investor reports its share of the investee's income in the income statement but reports only its share of the investee's dividends in the tax return. When the amount of the investee's dividends is different from its earnings, a temporary difference arises and interperiod tax allocation is required for the investor. In this situation, deferred income taxes must be recognized on the difference between the equity-method income reported by the investor in its income statement and the dividend income reported in its tax return. Current accounting standards generally require that the investor's reported income tax expense be computed as if all the investment income the investor recognized under the equity method actually had been received. Thus, the investor's tax expense is recorded in excess of the taxes actually paid when the investee's earnings are higher than its dividends and normally is recorded at less than taxes actually paid when dividends are higher than earnings.

#### Tax Expense under the Cost Method

If the investor reports its investment using the cost method, income tax expense recorded by the investor on the investment income and the amount of taxes actually paid are both based on dividends received from the investee. No interperiod income tax allocation is required under the cost method because the income is recognized in the same period for both financial reporting and tax purposes; there are no temporary differences.

Refer to Figure 10–5 for a summary of the requirements for computing the investor's income tax expense on income from intercorporate investments in common stock.

#### Allocation of Tax Expense When a Consolidated Return Is Filed

A parent company and its subsidiaries may file a consolidated income tax return, or they may choose to file separate returns. For a subsidiary to be eligible to be included in a consolidated tax return, at least 80 percent of its stock must be held by the parent company or another company, or combination of companies, included in the consolidated return.

A major advantage of filing a consolidated return is the ability to offset the losses of one company against the profits of another. In addition, dividends and other transfers between the affiliated companies are not taxed. Thus, tax payments on profits from intercompany transfers can be delayed until the intercompany profits are realized through transactions with nonaffiliates. When separate returns are filed, the selling company is required to pay tax on the intercompany profits it has recognized whether or not the

FIGURE 10-5 **Investor Income Tax Expense Computation** 

| Computation of Investor's Income Tax Expense<br>Related to Income from Investee                 |
|---|
| Ordinary tax rate × (Investor's share of investee net income — Dividend deduction) <sup>a</sup> |
| Ordinary tax rate $\times$ (Dividends received $-$ Dividend deduction)                          |
|   |

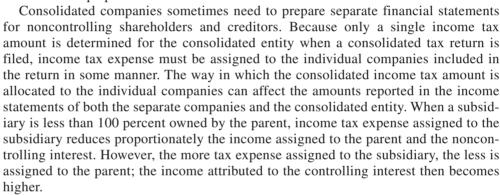

profits are realized from a consolidated viewpoint. Filing a consolidated return also may make it possible to avoid limits on the use of certain items such as foreign tax credits and charitable contributions.

Although consolidated entities can elect to file as a consolidated entity or separately, some state laws require separate income tax returns. For example, in 2011, Surgical Partners, Inc., filed a consolidated federal income tax return. However, it filed state income tax returns separately, combined, and on a consolidated basis, in accordance with relevant state laws and regulations.

An election to file a consolidated income tax return carries with it some limitations. Once an election is made to include a subsidiary in the consolidated return, the company cannot file separate tax returns in the future unless it receives approval from the Internal Revenue Service. The subsidiary's tax year also must be brought into conformity with the parent's tax year. In addition, preparing a consolidated tax return can become quite difficult when numerous compa-

nies are involved and complex ownership arrangements exist between the companies. A consolidated tax return portrays the companies included in the return as if they actually were a single legal entity. All intercorporate transfers of goods and services and intercompany dividends are eliminated and a single income tax figure is assessed when a consolidated return is prepared.

Although no authoritative pronouncements specify the assignment of consolidated income tax expense to the individual companies included in the consolidated tax return, a reasonable approach is to allocate consolidated income tax expense among the companies on the basis of their relative contributions to income before taxes. As an example, assume that Peerless Products owns 80 percent of the stock of Special Foods, purchased at book value, and the two companies elect to file a consolidated tax return for 20X1. Peerless Products reports operating earnings before taxes of \$140,000, excluding income from Special Foods, and Special Foods reports income before taxes of \$50,000. If the corporate tax rate is 40 percent, consolidated income taxes are \$76,000 (\$190,000  $\times$  0.40). Tax expense of \$56,000 is assigned to Peerless Products, and \$20,000 is assigned to Special Foods, determined as follows:

> Peerless Products:  $(\$140,000/\$190,000) \times \$76,000 = \$56,000$ Special Foods:  $($50,000/$190,000) \times $76,000 = 20,000$ Consolidated tax expense \$76,000

Income assigned to the noncontrolling interest is computed as follows:

| Special Foods' income before tax                 | \$50,000 |
|--|----------|
| Income tax expense assigned to Special Foods     | (20,000) |
| Special Foods' net income                        | \$30,000 |
| Noncontrolling stockholders' proportionate share | × 0.20   |
| Income assigned to noncontrolling interest       | \$ 6,000 |

The consolidated income statement for 20X1 shows the following amounts:

| Consolidated Operating Income                | \$190,000 |
|--|-----------|
| Less: Income Tax Expense                     | (76,000)  |
| Consolidated Net Income                      | \$114,000 |
| Income Attributed to Noncontrolling Interest | (6,000)   |
| Income Attributed to Controlling Interest    | \$108,000 |

Other allocation bases may be preferred when affiliates have significantly different tax characteristics, such as when only one of the companies qualifies for special tax exemptions or credits.

# Tax Effects of Unrealized Intercompany Profit Eliminations

The income tax effects of unrealized intercompany profit eliminations depend on whether the companies within the consolidated entity file a consolidated tax return or separate tax returns.

#### Unrealized Profits When a Consolidated Return Is Filed

Intercompany transfers are eliminated in computing both consolidated net income and taxable income when a consolidated tax return is filed. Only sales outside the consolidated entity are recognized both for tax and for financial reporting purposes. Because profits are taxed in the same period they are recognized for financial reporting purposes, no temporary differences arise, and no additional tax accruals are needed in preparing the consolidated financial statements.

#### Unrealized Profits When Separate Returns Are Filed

When each company within a consolidated entity files a separate income tax return, that company is taxed individually on the profits from intercompany sales. The focus in separate tax returns is on the transactions of the separate companies, and no consideration is given to whether the intercompany profits are realized from a consolidated viewpoint. Thus, the profit from an intercompany sale is taxed when the intercompany transfer occurs without waiting for confirmation through sale to a nonaffiliate. For consolidated financial reporting purposes, however, unrealized intercompany profits must be eliminated. Although the separate company may pay income taxes on the unrealized intercompany profit, the tax expense must be eliminated when the unrealized intercompany profit is eliminated in the preparation of consolidated financial statements. This difference in the timing of the income tax expense recognition results in recording deferred income taxes.

For example, if Special Foods sells inventory costing \$23,000 to Peerless Products for \$28,000, and none is resold before year-end, the entry to eliminate the intercorporate transfer in the consolidated statements is:

| Sales              | 28,000 |        |
|--------------------|--------|--------|
| Cost of Goods Sold |        | 23,000 |
| Inventory          |        | 5,000  |

Eliminate intercompany upstream sale of inventory.

Income assigned to Special Foods' shareholders is reduced by \$5,000 as a result of this entry. An adjustment to tax expense also is required in preparing consolidated statements if Special Foods files a separate tax return. With a 40 percent corporate income tax rate, the following elimination entry adjusts income tax expense of the consolidated entity downward by \$2,000 (\$5,000  $\times$  0.40) to reflect the reduction of reported profits:

| Deferred Tax Asset | 2,000 |       |
|--------------------|-------|-------|
| Income Tax Expense |       | 2,000 |

Eliminate tax expense on unrealized intercompany profit.

The debit to the Deferred Tax Asset account reflects the tax effect of a temporary difference between the income reported in the consolidated income statement and that reported in the separate tax returns of the companies within the consolidated entity. Consistent with the treatment accorded to other temporary differences, this tax effect normally is carried to the consolidated balance sheet as an asset. If the intercompany profit is expected to be recognized in the consolidated income statement in the next year, the deferred taxes are classified as current.

#### Unrealized Profit in Separate Tax Return Illustrated

For purposes of illustrating the treatment of income taxes when Peerless and Special Foods file separate tax returns, assume the following information:

- 1. Peerless owns 80 percent of Special Foods' common stock, purchased at book value.
- 2. During 20X1, Special Foods purchases inventory for \$23,000 and sells it to Peerless for \$28,000. Peerless continues to hold the entire inventory at the end of 20X1.
- 3. The effective combined federal and state tax rate for both Peerless and Special Foods is 40 percent.
- 4. Special Foods pays a \$30,000 dividend during 20X1.

Although Special Foods' trial balance includes \$50,000 of income before taxes and tax expense of \$20,000 (\$50,000  $\times$  0.40), consolidated net income and income assigned to the controlling and noncontrolling shareholders are based on realized net income of \$27,000, computed as follows:

| Special Foods' net income<br>Add back income tax expense   | \$30,000<br>20,000            |
|--|-------------------------------|
| Special Foods' income before taxes<br>Unrealized profit on upstream sale   | \$50,000<br>(5,000)           |
| Special Foods' realized income before taxes<br>Income taxes on realized income (40%)   | \$45,000<br>(18,000)          |
| Special Foods' realized net income   | \$27,000                      |
| Special Foods' realized net income assigned to Controlling interest ( $$27,000 \times 0.80$ ) Noncontrolling interest ( $$27,000 \times 0.20$ ) Special Foods' realized net income | \$21,600<br>5,400<br>\$27,000 |

If Peerless accounts for its investment in Special Foods using the fully adjusted equity method, Peerless would make the following journal entries on its books:

| (4) | Investment in Special Foods   | 24,000 |        |
|-----|---|--------|--------|
|     | Income from Special Foods   |        | 24,000 |
|     | Record Peerless' 80 percent share of Special Foods' 20X1 reported income. |        |        |
| (5) | Cash  | 24.000 |        |
| (5) | Investment in Special Foods   | 24,000 | 24.000 |
|     | Record Peerless' 80 percent share of Special Foods' 20X1 dividend.        |        | ,      |

Peerless also defers its 80 percent share of the unrealized profit on intercompany upstream sales (net of taxes). Thus, the \$5,000 of unrealized profit (\$28,000 - \$23,000) net of 40 percent taxes is \$3,000 (\$5,000  $\times$  0.60). Thus, the deferral of Peerless' relative share of the unrealized gross profit is \$2,400 (\$3,000  $\times$  0.80).

| (6) | Income from Special Foods   | 2,400 |
|-----|-----------------------------|-------|
|     | Investment in Special Foods | 2,400 |

Eliminate unrealized gross profit on inventory purchases from Special Foods.

To prepare the basic elimination entry, we first analyze the book value of Special Foods' equity accounts and the related 80 percent share belonging to Peerless and the 20 percent share belonging to the NCI shareholders:

#### **Book Value Calculations:**

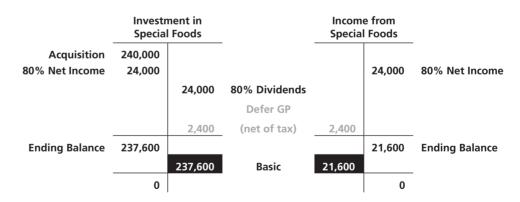

|                             | NCI 20% + | Peerless 80% | = Common Stock + | Retained Earnings |
|-----------------------------|-----------|--------------|------------------|-------------------|
| Beginning book value        | 60,000    | 240,000      | 200,000          | 100,000           |
| + Net income                | 6,000     | 24,000       |                  | 30,000            |
| <ul><li>Dividends</li></ul> | (6,000)   | (24,000)     |                  | (30,000)          |
| Ending book value           | 60,000    | 240,000      | 200,000          | 100,000           |

We note that the book value calculations form the basis for the basic elimination entry, but Peerless' share of income and its investment account must be adjusted for the equity-method entry previously made for \$2,400. In addition, the NCI share of income and net assets is adjusted for the 20 percent share of the unrealized gross profit (net of 40 percent taxes), \$600.

#### **Basic Investment Account Elimination Entry:**

| Common stock                | 200,000 |  |
|-----------------------------|---------|--|
| Retained earnings           | 100,000 | ← Beginning balance in RE                                |
| Income from Special Foods   | 21,600  |  |
| NCI in NI of Special Foods  | 5,400   | $\leftarrow$ NCI % of NI $-$ 20% of Def. GP (net of tax) |
| Dividends declared          |         | <b>30,000</b> ← 100% of sub's dividends declared         |
| Investment in Special Foods |         | 237,600 ← Net BV − 80% of Def. GP (net of tax)           |
| NCI in NA of Special Foods  |         | 59,400 ← NCI % of BV − 20% of Def. GP (net of tax)       |

The following T-accounts illustrate how this entry eliminates the balances in the Investment in Special Foods and Income from Special Foods accounts:

The consolidation worksheet entry to correct for the intercompany sale is identical to the preceding entry.

#### **Eliminate Inventory Purchases from Special Foods**

| Sales              | 28,000 |
|--------------------|--------|
| Cost of Goods Sold | 23,000 |
| Inventory          | 5,000  |

With a 40 percent income tax rate, the following elimination entry adjusts income tax expense of the consolidated entity downward by \$2,000 (\$5,000  $\times$  0.40) to reflect the reduction of reported profits:

| Deferred Tax Asset | 2,000 |       |
|--------------------|-------|-------|
| Income Tax Expense |       | 2,000 |

A temporary difference would normally be included in the consolidated balance sheet and in the computation of consolidated income tax expense. In addition to temporary differences arising from unrealized profits, differences generally exist between subsidiary net income and dividend distributions. Peerless pays income taxes for the period based on its reported dividends from Special Foods but includes in consolidated net income for financial reporting its proportionate share of Special Foods' realized net income. This difference between the amount of income reported in the consolidated income statement and the amount reported in the tax return is considered a temporary difference, and deferred taxes normally must be recognized on this difference. In this example, Special Foods distributes all of its income as dividends, and the only temporary difference relates to the unrealized intercompany profit.

Finally, we include the standard depreciation elimination entry, assuming accumulated depreciation on the date of acquisition was \$300,000:

#### **Optional Accumulated Depreciation Elimination Entry:**

| Accumulated depreciation | 300,000 | Accumulated depreciation at the             |
|--------------------------|---------|---|
| Building and equipment   | 300,000 | time of the acquisition netted against cost |

# Subsequent Profit Realization When Separate Returns Are Filed

When unrealized intercompany profits at the end of one period subsequently are recognized in another period, the tax effects of the temporary difference must again be considered.

If income taxes were ignored, the following elimination entry would be used in preparing consolidated statements as of December 31, 20X2, assuming that Special Foods had \$5,000 of unrealized inventory profit on its books on January 1, 20X2, and the inventory was resold in 20X2:

| Investment in Special Foods<br>NCI in NA of Special Foods | 4,000<br>1,000 |       |
|---|----------------|-------|
| Cost of Goods Sold  |                | 5,000 |

Eliminate beginning inventory profit.

On the other hand, if the 40 percent tax rate is considered, the elimination entry would be modified as follows:

| Investment in Special Foods<br>NCI in NA of Special Foods | 2,400<br>600 |       |
|---|--------------|-------|
| Income Tax Expense  | 2,000        |       |
| Cost of Goods Sold  |              | 5,000 |

Eliminate beginning inventory profit:  $$2,400 = ($5,000 - $2,000) \times 0.80$  $\$600 = (\$5,000 - \$2,000) \times 0.20$  $$2,000 = $5,000 \times 0.40.$ 

Unrealized profit of \$3,000 rather than \$5,000 is apportioned between the controlling and noncontrolling shareholders in this case. Tax expense of \$2,000 is recognized for financial reporting purposes in 20X2 even though the \$5,000 of intercompany profit was reported on Special Foods' separate tax return and the \$2,000 of taxes was paid on the profit in 20X1. This entry recognizes the tax expense in the consolidated income statement in the same year as the income is recognized from a consolidated viewpoint. No worksheet adjustment to the Deferred Tax Asset account is needed at the end of 20X2 because the deferred tax asset was entered only in the consolidation worksheet at the end of 20X1, but not on the books of either company; it does not carry over to 20X2.

#### CONSOLIDATED EARNINGS PER SHARE

LO 10-4

Make calculations related to consolidated earnings per share.

In general, consolidated earnings per share is calculated in the same way as earnings per share is calculated for a single corporation. Consolidated earnings per share is based on the income attributable to the controlling interest and available to the parent's common stockholders. Basic consolidated EPS is calculated by deducting income to the noncontrolling interest and any preferred dividend requirement of the parent company from consolidated net income. The resulting amount is then divided by the weighted-average number of the parent's common shares outstanding during the period.

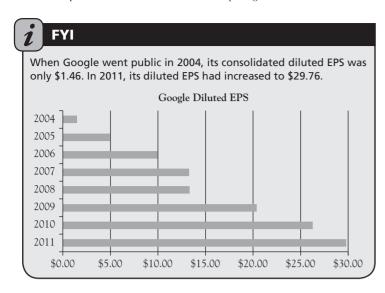

Note that, although consolidated net income is viewed from an entity perspective, consolidated earnings per share follows a parent company approach and clearly is aimed at the parent company's stockholders. The FASB noted this inconsistency but decided that usefulness was increased by following this approach.

The computation of diluted consolidated EPS is more complicated. A subsidiary's contribution to the diluted EPS number may be different from its contribution to consolidated net income because of different underlying assumptions. Both the percentage of ownership held within the consolidated entity and the total amount of subsidiary income available to common shareholders may be different. In the computation of EPS, the parent's percentage of ownership frequently is changed when a subsidiary's convertible bonds and preferred stock are treated as common stock and the subsidiary's options and warrants are treated as if they had been exercised. In addition, income available to the subsidiary's common shareholders changes when bonds and preferred stock are treated as common stock for purposes of computing EPS. Interest expense or preferred dividends, if already deducted, must be added back in computing income available to common shareholders when the securities are considered to be common stock.

# **Computation of Diluted Consolidated Earnings per Share**

The parent's share of consolidated net income normally is the starting point in the computation of diluted consolidated EPS. It then is adjusted for the effects of parent and subsidiary dilutive securities. The following formulation can be used in computing diluted consolidated EPS:

This formula shows the adjustments to the parent's share of consolidated net income and its common shares outstanding that are needed in computing diluted consolidated EPS. In general, the parent company's securities that are convertible or exercisable into parent company shares must be included as shares outstanding if they are dilutive. When convertible bonds are treated as common stock and the additional shares are added in the denominator, the after-tax interest savings must be added back into the numerator. Dividends on preferred stock that continue to be classified as preferred stock are deducted from the numerator, and no deduction is made for dividends on preferred stock considered to be common stock.

The two other adjustments in the numerator relate to the amount of subsidiary income to be included in computing diluted consolidated EPS. First, the parent's portion of the subsidiary's income available to common shareholders is deducted so that an adjusted income number can be substituted. The amount deducted is computed by multiplying the parent's ownership percentage of subsidiary common shares outstanding times the subsidiary's income after preferred dividends have been deducted. The subsidiary's contribution to diluted consolidated EPS is determined by multiplying the subsidiary's number of shares held by the parent and other affiliates (or the number of shares that would be held after exercise or conversion of other subsidiary securities held) times the diluted EPS computed for the

subsidiary. In this way, the effect of the subsidiary's dilutive securities is considered in computing diluted consolidated EPS.

Occasionally, a subsidiary is permitted to issue rights, warrants, or options to purchase the parent's common stock or to issue a security convertible into the parent's common stock. Such rights, warrants, and options of the subsidiary are treated in the same way as if the parent had issued them.

Subsidiary bonds or preferred stock convertible into the parent's common stock are treated in a slightly different manner. If the securities are treated as if converted, income available to common shareholders of the subsidiary is increased as a result of the reduction in interest expense, net of tax, or preferred dividends. The parent's portion of the earnings increase is included in the diluted consolidated EPS computation through the subsidiary EPS component. The number of parent company shares into which the security is convertible is added to the denominator of the diluted consolidated EPS computation.

# Computation of Consolidated Earnings per Share Illustrated

As an illustration of the computation of consolidated earnings per share for Peerless Products and Special Foods, assume the following:

- 1. Peerless Products purchases 80 percent of the stock of Special Foods on December 31, 20X0, at book value. On the date of acquisition, the fair value of Special Foods' noncontrolling interest is equal to its book value.
- 2. Both Special Foods and Peerless Products have effective income tax rates of 40 percent and file a consolidated tax return.
- 3. Special Foods has 20X1 income before taxes of \$50,000, an allocated share of consolidated income taxes of \$20,000, and net income of \$30,000.
- 4. Consolidated net income for 20X1 is computed and allocated as follows:

| Peerless' separate operating income<br>Special Foods' income before taxes               | \$140,000<br>50,000   |
|---|-----------------------|
| Consolidated income before taxes Consolidated income taxes (40%)                        | \$190,000<br>(76,000) |
| Consolidated net income Income to noncontrolling shareholders ( $$30,000 \times 0.20$ ) | \$114,000<br>(6,000)  |
| Income to controlling interest  | \$108,000             |

5. Peerless' capital structure consists of 100,000 shares of \$5 par value common stock and 10,000 shares of \$10 par 10 percent convertible preferred stock. The preferred stock is convertible into 25,000 shares of Peerless' common.

- 6. Special Foods has 20,000 shares of \$10 par value common stock and \$100,000 of 6 percent convertible bonds outstanding. The bonds, issued at par, are convertible into 4.000 shares of Special Foods' common stock.
- 7. On January 1, 20X1, Special Foods grants its officers options to purchase 9,000 shares of Peerless Products' common stock at \$26 per share at any time during the five years following the date of the grant. None is exercised during 20X1. The average market price of Peerless' common stock during 20X1 is \$29 per share. (These options originated from Peerless and were given to Special Foods to be used in compensating its officers.)

#### Special Foods' Earnings per Share

Before consolidated EPS can be calculated, the EPS total for the subsidiary must be computed. Basic and diluted EPS for Special Foods for 20X1 differ because Special Foods has dilutive convertible bonds outstanding.

Basic and diluted EPS for Special Foods for 20X1 are computed as follows:

|  | Basic    | Diluted         |
|--|----------|-----------------|
| Special Foods' net income                              | \$30,000 | \$30,000        |
| Interest effect of assumed conversion of bonds, net of |          |                 |
| taxes ( $$100,000 \times 0.06$ ) $\times$ (1 $-$ 0.40) |          | 3,600           |
| Income accruing to common shares                       | \$30,000 | <u>\$33,600</u> |
| Weighted-average common shares outstanding in 20X1     | 20,000   | 20,000          |
| Additional shares from assumed bond conversion         |          | 4,000           |
| Weighted-average shares and share equivalents          | 20,000   | <u>24,000</u>   |
| Earnings per share:                                    |          |                 |
| \$30,000/20,000 shares                                 | \$ 1.50  |                 |
| \$33,600/24,000 shares                                 |          | \$ 1.40         |

The assumed conversion of the bonds reduces Special Foods' diluted EPS from \$1.50 to 1.40.

#### Consolidated Earnings per Share

Consolidated earnings per share for 20X1 is \$0.98 based on weighted-average common shares outstanding and \$0.84, assuming full dilution. The computations are shown in Figure 10–6 with diluted EPS based on the formula presented earlier.

For diluted EPS, the parent's \$108,000 share of consolidated net income is reduced by Peerless' \$24,000 (\$30,000  $\times$  0.80) proportionate share of Special Foods' net income. Special Foods' contribution to diluted earnings per share is then added back. A total of \$22,400 ( $\$1.40 \times 16,000$  shares) is added for diluted EPS. If Peerless also had purchased a portion of Special Foods' convertible bonds, an equivalent number of shares would be added to Peerless' holdings in computing the amount added back for diluted EPS. The amount of subsidiary earnings added back into the numerator also can be computed by multiplying the revised ownership ratio times the revised earnings contribution. Earnings available to Special Foods' common shareholders in computing diluted EPS increases to \$33,600 (\$30,000 + \$3,600) with the assumed bond conversion, and the number of shares outstanding increases by 4,000. As a result, the revised ownership ratio is reduced to 66% percent (16,000 shares ÷ 24,000 shares). The earnings contribution computed in this manner is  $$22,400 (33,600 \times 0.66667).$ 

Peerless' preferred stock is treated as preferred stock in computing basic EPS, and preferred dividends are deducted in determining the income accruing to common shareholders in the numerator. In computing diluted EPS, the preferred stock is treated as common stock outstanding because it is convertible and dilutive. Therefore, no dividends are deducted in the numerator, and 25,000 shares of common stock are added into the denominator.

| Consolidated net income attributable to parent<br>Less: Peerless' share of Special Foods' net income                                    | \$108,000                   | \$108,000                     |
| (\$30,000 × 0.80) Add: Peerless' share of Special Foods' income-based   |                             | (24,000)                      |
| on separate diluted EPS ( $$1.40 \times 16,000 \text{ shares}$ )  | ( )                         | 22,400                        |
| Less: Preferred dividends   | (10,000)                    |                               |
| Total   | \$ 98,000                   | <u>\$106,400</u>              |
| <b>Denominator</b> Weighted-average shares outstanding Assumed exercise of stock options <sup>a</sup> Preferred stock assumed converted | 100,000                     | 100,000<br>931                |
|   |                             | 25,000                        |
| Total   | 100,000                     | <u>125,931</u>                |
| Earnings per Share  |                             |                               |
| \$98,000/100,000 shares   | \$ 0.98                     |                               |
| \$106,400/125,931 shares  |                             | \$ 0.84                       |

<sup>a</sup>Treasury stock method of assuming exercise of stock options: Shares issued 9,000 Shares repurchased: Proceeds from issuing shares  $(9,000 \text{ shares} \times \$26)$ \$234,000 Repurchase price per share (8,069) Shares repurchased Increase in shares outstanding 931

Stock options for 9,000 shares of parent company stock can be exercised at any time and must be reflected in the computation of diluted EPS. As computed in Figure 10-6 using the treasury stock method, an additional 931 shares are added to the denominator in computing diluted EPS.

# Summary of **Key Concepts**

In addition to an income statement, balance sheet, and statement of retained earnings, a full set of consolidated financial statements must include a consolidated statement of cash flows. The consolidated statement of cash flows is prepared from the other three consolidated statements in the same way as the statement of cash flows is prepared for a single company. Also, dividends to noncontrolling shareholders must be included as a financing use of cash because they do require the use of cash even though they are not viewed as dividends of the consolidated entity.

When a subsidiary is purchased at an interim date during the year, the consolidation procedures must ensure that the subsidiary's operating results are included in the consolidated financial statements for only that portion of the year during which the parent held a controlling financial interest in the subsidiary. All of the subsidiary's revenues, expenses, gains, and losses for the portion of the year prior to the subsidiary's entry into the consolidated entity must be excluded along with its dividends declared before acquisition.

Two major financial reporting issues related to income taxes arise in consolidation. The first is concerns how to allocate income tax expense to individual companies included in a consolidated income tax return. One approach is to allocate the total tax based on the contributions of the individual companies to the total entity income. The issue is important because the allocation impacts the separate financial statements and the amounts assigned to the noncontrolling interests in the consolidated statements. The second tax issue involves the income tax effects of intercorporate transactions. For consolidating companies filing separate tax returns, income tax expense is recognized in the consolidated income statement when the consolidated entity recognizes the associated transaction, not necessarily when an individual company reports it. If an intercompany gain or loss is included in an individual company's tax return in a different period than the one in which it is included in the consolidated income statement, deferred income taxes should be recognized on the temporary difference.

Consolidated earnings per share is calculated largely in the same way it is for a single company. The numerator of the basic EPS computation is based on earnings available to the holders of the parent's common stock, and the denominator is the weighted-average number of the parent's common shares outstanding during the period. Diluted consolidated EPS assumes both the parent's and subsidiary's dilutive securities are converted, and special adjustments to income may be needed to reflect the effect of the assumed conversion on the amount of subsidiary income to include in the EPS numerator.

# Cases

LO 10-4

# C10-1 The Effect of Security Type on Earnings per Share

Stage Corporation has both convertible preferred stock and convertible debentures outstanding at the end of 20X3. The annual cash payment to the preferred shareholders and to the bondholders is the same, and the two issues convert into the same number of common shares.

# Judgment

#### Required

- a. If both issues are dilutive and are converted into common stock, which issue will cause the larger reduction in basic EPS when converted? Why?
- b. If both issues are converted into common stock, which issue will cause the larger increase in consolidated net income when converted?
- c. If the preferred shares remain outstanding, what conditions must exist for them to be excluded entirely from the computation of basic EPS?
- d. If Stage is a subsidiary of Prop Company, how will these securities affect the EPS reported for the consolidated enterprise?

LO 10-1

#### **C10-2 Evaluating Consolidated Statements**

# Research

Cowl Company, a public company, has been reporting losses for the last three years and has been unable to pay its bills from cash generated from its operations. On December 31, 20X4, Cowl's president instructed its treasurer to transfer a large amount of cash to Cowl from Plum Corporation, which is 80 percent owned by Cowl. It appears Cowl will not return to profitability in the near future and may never be able to repay Plum. Cowl's treasurer is concerned that, although cash will appear to be unchanged in the consolidated financial statements, the subsidiary has much less cash than it previously held and Plum's noncontrolling shareholders might learn about the transfer and initiate a lawsuit or other action against Cowl's management.

#### Required

As a member of Cowl's accounting department, you have been asked to determine whether information on the transfer will be shown in the consolidated cash flow statement or other financial statements and to search the FASB's pronouncements and those of other authoritative bodies to see whether information germane to the noncontrolling shareholders of a subsidiary must be disclosed in cases such as this. Prepare a memo indicating your findings, and include citations to or quotations from relevant authoritative pronouncements.

LO 10-3

#### C10-3 Income Tax Expense

Johnson Corporation purchased 100 percent ownership of Freelance Company at book value on March 3, 20X2. Johnson, which makes frequent inventory purchases from Freelance, uses the equity method in accounting for its investment in Freelance. Both companies are subject to 40 percent income tax rates and file separate tax returns.

#### **Understanding**

# Required

- a. When will an inventory transfer cause consolidated income tax expense to be higher than the amount paid?
- b. When tax payments are higher than tax expense, how is the overpayment reported in the consolidated financial statements?
- c. What types of transfers other than inventory transfers will cause consolidated income tax expense to be less than income taxes paid?
- d. What types of transfers other than inventory transfers will cause consolidated income tax expense to be more than income taxes paid?

#### C10-4 Consolidated Cash Flows

The consolidated cash flows from operations of Jones Corporation and its subsidiary Short Manufacturing for 20X2 decreased quite substantially from 20X1 despite the fact that consolidated net income increased slightly in 20X2.

# Analysis

#### Required

- a. What factors included in the computation of consolidated net income may explain this difference between cash flows from operations and net income?
- b. How might a change in credit terms extended by Short Manufacturing explain a part of the difference?
- c. How would an inventory write-off affect cash flows from operations?
- d. How would a write-off of uncollectible accounts receivable affect cash flows from operations?
- e. How does the preparation of a statement of cash flows differ for a consolidated entity compared with that of a single corporate entity?

### Exercises

LO 10-1

#### E10-1 **Analysis of Cash Flows**

In its consolidated cash flow statement for the year ended December 31, 20X2, Lamb Corporation reported operating cash inflows of \$284,000, financing cash outflows of \$230,000, \$80,000 for investing cash outflows, and an ending cash balance of \$57,000. Lamb purchased 70 percent of Mint Company's common stock on March 12, 20X1, at book value. Mint reported net income of \$30,000, paid dividends of \$10,000 in 20X2, and is included in Lamb's consolidated statements. Lamb paid dividends of \$45,000 in 20X2. The indirect method is used in computing cash flow from operations.

#### Required

- a. What was the consolidated cash balance at January 1, 20X2?
- b. What amount was reported as dividends paid in the cash flow from financing activities section of the statement of cash flows?
- c. If the other adjustments to reconcile consolidated net income and cash provided by operations resulted in a \$77,000 increase over net income, what amount was reported as consolidated net income for 20X2?

#### E10-2 Statement of Cash Flows

Becon Corporation's controller has just finished preparing a consolidated balance sheet, income statement, and statement of changes in retained earnings for the year ended December 31, 20X4. Becon owns 60 percent of Handy Corporation's stock, which it acquired at underlying book value on May 7, 20X1. At that date, the fair value of the noncontrolling interest was equal to 40 percent of Handy Corporation's book value. You have been provided the following information:

Consolidated net income for 20X4 was \$271,000.

Handy reported net income of \$70,000 for 20X4.

Becon paid dividends of \$25,000 in 20X4.

Handy paid dividends of \$15,000 in 20X4.

Becon issued common stock on April 7, 20X4, for a total of \$150,000.

Consolidated wages payable increased by \$7,000 in 20X4.

Consolidated depreciation expense for the year was \$21,000.

Consolidated accounts receivable decreased by \$32,000 in 20X4.

Bonds payable of Becon with a book value of \$204,000 were retired for \$200,000 on December 31, 20X4.

Consolidated amortization expense on patents was \$13,000 for 20X4.

Becon sold land that it had purchased for \$142,000 to a nonaffiliate for \$134,000 on June 10,

Consolidated accounts payable decreased by \$12,000 during 20X4.

Total purchases of equipment by Becon and Handy during 20X4 were \$295,000.
